HFS Top 10: Application Modernization Services, 2022

FEBRUARY 2022

AUTHORS:
Joel Martin, Research Leader
Martin Gabriel, Associate Practice Leader
Application modernization is critical for the journey to cloud-native business operations. Many firms actively partner with services providers to accelerate the development, delivery, and distribution of data and insights via “cloudified” workloads and processes. From legacy to micro services architectures, the focus is on experience and value creation. The top vendors shine through vision, execution, and customer excellence.

Joel Martin, Research Lead, HFS

Executive summary
## Executive overview: Application modernization services

<table>
<thead>
<tr>
<th></th>
<th>Application modernization services is experiencing growth of more than 40% as companies modernize legacy systems and build cloud-first solutions.</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Application modernization services is a journey that will result in many firms straddling legacy and cloud-first applications deployment. Agility and co-innovation with partners is essential.</td>
</tr>
<tr>
<td>3</td>
<td>The business, not IT, is the end consumer and often the budget holder for these projects. Providers must consider new pricing models that reflect outcome-based risk and reward.</td>
</tr>
<tr>
<td>4</td>
<td>The OneOffice™, a silo-breaking mindset, is crucial. This mindset must be cultivated and delivered so that the business, technology, and customer realize benefits.</td>
</tr>
<tr>
<td>5</td>
<td>An application modernization value stream should be in place to assess, rationalize, optimize, and create new solutions and lead to a modern software development life cycle.</td>
</tr>
</tbody>
</table>
As cloud becomes a de facto delivery model, the need for application modernization increases dramatically.

Cloud migration has become an absolute necessity post-COVID-19

Q: Please select the most important cloud investment.

Project pricing models for application modernization are increasingly outcome and output based

What pricing model do you use for each of the following business and technology services?

- Input pricing: 31%
- Outcome based: 28%
- Output pricing or consumption based: 39%
- Don't know: 2%

Front-office modernization projects increasingly require services providers to put some skin in the game and price with success-based models that share overall customer objectives.

Keep offering time and materials, fixed fee, and resource utilization pricing models at your own risk! As the business funds more of these projects, expect to be putting more skin in the game. Prepare your account teams with models and methodologies that can support this expectation.

Sample: 800 respondents from Global 2000 enterprises
Source: HFS OneOffice™ Pulse Study, H1 2021
Cloud-native software and service delivery drive our new ways of working

- Technology drives operational changes in the “new ways of working” that deliver experiences internally and externally

- This OneOffice mindset drives culture change at a scale and velocity most organizations are not equipped for

What are the major changes in your organization’s ways of working for the next 12 to 18 months?

Percentage of respondents

- Optimize end-to-end: 40%
- Leverage gig economy or crowdsourcing: 39%
- Improve environmental sustainability: 38%
- Modernize IT to get fully into the cloud: 38%
- Allow our employees work at home or work from anywhere: 34%

Sample: 800 respondents from Global 2000 enterprises

The HFS OneOffice™—digital transformation in action

The HFS OneOffice™ is our vision for actionable digital transformation. At its heart is the core concept that emerging technologies combined with people, process, and data innovation can break down the silos that limit our success, dissolving barriers between the front and back office to create the only office that matters—OneOffice. It represents a mindset shift to collaborative cross-functional enterprise operations powered by an integrated stack of emerging tech that complements your core, natively automates your processes, enables your employees and customers, and powers your decisions—breaking down your legacy silos in the process.

Source: HFS Research, 2022
The HFS application modernization services value chain

**Application modernization services:** The array of services designed to help enterprise technology and business teams in their efforts to create a culture of services, business process information, and workload data via cloud-native models. These include services that rehost, refactor, re-architect, replace, retain, or retire existing software or workflows.

<table>
<thead>
<tr>
<th>Evaluate</th>
<th>Migrate</th>
<th>Improve</th>
<th>Modernize</th>
<th>Simplify</th>
<th>Sunset</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Retain</strong></td>
<td><strong>Rehost</strong></td>
<td><strong>Refactor</strong></td>
<td><strong>Re-architect</strong></td>
<td><strong>Replace</strong></td>
<td><strong>Retire</strong></td>
</tr>
<tr>
<td>- Assessing value reveals that migrating or re-architecting solution will have little or no benefit to the organization and won’t create new business value.</td>
<td>- Migrating via “lift and shift” of an existing software stack from a private data center to a hosted, as-a-service model.</td>
<td>- Restructuring existing software code and changing its external behavior.</td>
<td>- Redeveloping existing software or workflow from a legacy design into a cloud-native solution.</td>
<td>- Reducing the investment and usage of custom or legacy application in favor of an equivalent software-as-a-service (SaaS) option.</td>
<td>- Decommissioning legacy applications that have met the end of their useful life cycle.</td>
</tr>
<tr>
<td><strong>Result:</strong> Application left “as-is” and flagged for decommissioning.</td>
<td>- This can be to a public, private, or hybrid cloud model, depending on the applications, data, and workflow requirements.</td>
<td>- Improves the design, structure, or implementation of the software without impacting functionality.</td>
<td>- Requires the modernization of code design into either a microservices or serverless design.</td>
<td>- Typically results in a new off-the-shelf SaaS solution being used in place of solution with less functionality or business value.</td>
<td><strong>Result:</strong> Removal from service catalog.</td>
</tr>
<tr>
<td></td>
<td>- Result: Migrate technology stack with minimal change to cloud, thus reducing operating costs.</td>
<td>- Result: Transition away from legacy code without impacting functionality.</td>
<td>- Result: Cloud-native code and redesign for new ways of working.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The cloud-native organization: Achieving an intersection of innovation and aspiration at scale for delivering digital assets, domain expertise, and experiences.

- **Cloud**: Platform for compute at scale
- **Apps**: Assembly of workloads and insights at speed
- **Data**: Consumption of information at context
- **Domain**: Expertise of vertical capabilities with knowledge of what matters
- **Platform**: Curating and delivering data and information dynamically to shape experiences
- **Innovation**: Finding new ways to seek truth, execute, and consume in real-time
2

Research methodology
**Service providers covered in this report**

**TOP 10**

- accenture
- Capgemini
- Cognizant
- EY
- HCL
- IBM
- Infosys
- LT1
- TCS
- Tata Consultancy Services
- Tech Mahindra
- Wipro

**Formidable challengers**

- Hitachi Vantara
- Mindtree
- Mphasis
- UST
- Virtusa
- Zensar

* Top 10 study participants have application modernization services revenue of more than $1 billion and diverse, global delivery as minimum requirements. Formidable challenger participants fall below this threshold but offer specialized value to enterprises seeking application modernization services.
About the research

1. We asked services providers to participate in our application modernization services study; however, participation was not mandatory and HFS has not ranked non-participants.

2. Firms that qualified for ranking in the Top 10 had to show the following:
   • Greater than $1 billion in application modernization and services revenues
   • Global delivery capabilities
   • A minimum of three client referrals
   • A minimum of 10 case studies

3. Firms with application modernization services that did not meet this criteria are covered in the Market Analysis: Formidable Challengers report.

4. We executed research from August 2021 to November 2021.

5. We collected data from RFIs completed by each services provider, individual briefings, case studies, client interviews, surveys, vendor websites, publicly available financial data, existing HFS research, and third-party websites.

6. We based rankings on four categories (see page 17).

7. We provided a list of common definitions to all participants (see page 18).
This report relied on myriad data sources to support our methodology and help HFS obtain a well-rounded perspective on the application modernization services capabilities of the providers covered in our study. Sources are as follows:

**Sources of data**

- **RFIs and briefings**
  - Each participating vendor completed a detailed RFI.
  - HFS conducted briefings with executives from each vendor.

- **Reference checks**
  - We conducted reference checks with 60+ active clients of the study participants via detailed surveys and phone-based interviews.

- **HFS vendor ratings**
  - Each year, HFS fields multiple demand-side surveys in which we include detailed vendor rating questions. For this study, we leveraged our fresh from the field HFS Pulse Study data featuring ~800 inputs into adoption of cloud and application services.

- **Other data sources**
  - Public information such as press releases, web sites, etc.
  - Ongoing interactions, briefings, virtual events, etc., with in-scope vendors and their clients and partners.
Scoring methodology

The study evaluates the capabilities of application modernization service providers based on execution, innovation, voice of the customer (VOC), and a new criteria for 2021, alignment with the HFS OneOffice model—our vision for digital transformation. Details include:

**Execution**
- **Breadth and depth of capabilities**: Clarity of offering, capabilities needed to deliver, frameworks and methodologies, and competitive differentiation.
- **Scale and growth of application modernization business**: Development of domain or industry solutions, examples of growth, and mergers and acquisitions to bolster offerings and address gaps.
- **Talent and delivery**: Staffing strategy, use of project methodologies, test and QA capabilities, ability to address impediments.
- **Partner ecosystem**: Partnerships with ISVs, hyperscalers, and cultivation of new partnerships.

**Innovation**
- **Strategy and vision**: Vision for the application modernization business, credibility of growth strategy and roadmap, identifiable investments in strategy, clear articulation of value proposition.
- **Technology innovation**: Cultivation of internal IP, patents, application modernization solution combos, use of best-of-breed partner tech, start-up ecosystem approach, co-innovation and collaboration, investment in R&D.
- **Change agents**: Investments in new partnerships, emerging technologies, and pricing models.

**OneOffice alignment**
- **OneOffice scope**: End-to-end offering that connects front, middle, and back offices.
- **OneOffice skills**: Cultivation of OneOffice skills internally and with clients such as digital fluency or problem solving.
- **OneOffice competencies**: Formalized approaches to data and change management.
- **OneOffice technology platform**: Enabling capabilities that support "straight-to-digital."
- **OneOffice business value creation**: Delivery of expected outcomes, right the first time.

**Voice of the customer**
- **Reference checks**: Direct feedback from enterprise clients via reference check interviews and surveys.
- **HFS voice of the customer vendor rating data**: Ratings by active clients of in-scope service providers.
- **Reference ability**: Provision of references and reference responsiveness.
- **Insights from non-reference clients**: Case studies and HFS survey data.
Useful definitions

- **Agile**: A people-focused, results-focused approach to software development that respects our rapidly changing world. It's centered around adaptive planning, self-organization, and short delivery times.
- **Application orchestration** (or service orchestration): The process of integrating two or more applications or services to automate a process or synchronize data in real-time.
- **Cloud database**: A database that typically runs on a cloud computing platform; access to the database is provided as-a-service. There are two common deployment models. Users can run databases on the cloud independently, using a virtual machine image, or they can purchase access to a database service maintained by a cloud database provider.
- **Cloud native**: An approach in software development using cloud computing to its fullest due to its use of an open-source software stack to deploy applications as microservices on public, private, or hybrid cloud infrastructure.
- **Containers**: Containers are an executable unit of software in which application code is packaged, along with its libraries and dependencies, in common ways so that it can be run anywhere, whether it be on desktop, traditional IT, or the cloud database provider.
- **DevOps** (incl DevSecOps): DevOps is the teaming of people, processes, and technology to continually provide value to customers by creating, testing, and delivering software for an organization.
- **Domain-driven design**: The concept that the structure and language of software code should match the business domain.
- **IaaS**: A form of cloud computing that delivers fundamental compute, network, and storage resources to consumers on-demand, over the internet, and on a pay-as-you-go basis.
- **Kubernetes** (K8S): Kubernetes is an open-source container-orchestration system for automating computer application deployment, scaling, and management.
- **Low code**: If there are prepared data exchanges, defined systems or applications, or some additional development time to create a minimal viable product (MVP). Low code is offered by vendors as tools that often provide a discrete function or service which a business team is responsible for monitoring, analyzing, and adapting to changing business or market requirements with little or no IT support.
- **Microservices**: Builds individual applications to be more agile, scalable, and resilient. Microservices are a true cloud-native architectural approach, and by using them, teams can update code more easily, use different stacks for different functionalities, and scale the component independently of one another, reducing the waste and cost associated with having to scale entire applications because a single feature might be facing too much load.
- **Monolithic application**: A single-tiered software application in which the user interface and data access code are combined into a single program from a single platform.
- **Multi-tier architecture**: A client-server architecture in which presentation, application processing, and data management functions are physically separated. The most widespread use of multi-tier architecture is three-tier architecture.
- **No code** (NC): Does not require additional integration, development, or customization to be configurated for the solution to run. No-code solutions are offered as tools that often provide a discrete function or service which a business team is responsible for monitoring, analyzing, and adapting to changing business or market requirements with little or no IT support.
- **On-premise (software)**: Software that is installed and runs on computers on the premises of the person or organization using the software.
- **Paas**: A category of cloud computing services that allows customers to provision, instantiate, run, and manage a modular bundle comprising a computing platform and one or more applications, without the complexity of building and maintaining the infrastructure typically associated with developing and launching the application, and with allowing developers to create, develop, and package such software bundles.
- **Refactor**: The process of integrating application with automation and real-time customer/user feedback to hasten development and release cycles.
- **Serverless**: Serverless computing enables developers to build applications faster by eliminating the need for them to manage infrastructure. With serverless applications, the cloud service provider automatically provisions, scales, and manages the infrastructure required to run the code.
- **Value stream management**: A lean business practice that helps determine the value of software development and delivery efforts and resources.
- **Workload**: A collection of resources and code that delivers business value, such as a customer-facing application or a backend process.

---

Excerpt for EY
Research insights
Application modernization requires enterprises to assess security, data, DevOps, and tools to deliver value to the OneOffice

In our application modernization research, HFS conducted in-depth interviews, collected qualitative and quantitative insights through a detailed RFIs, and engaged in customer interviews. As part of our due diligence, we delved into how leading services providers articulate their different points of view on important aspects related to application modernization.

The following slides highlight responses on the complementary components of the modernization effort, including security, Agile methodologies, automation, data modernization, and the adoption of a OneOffice™ mindset.

We believe application modernization cannot be a siloed effort about moving software into the cloud without considering these five components. Understanding these points of view provides valuable insights into the offerings and approach services providers have chosen as they help customers accelerate, adopt, and deliver cloud-native solutions.
Top three primary challenges

As part of our data collection, each services provider shared its top three challenges when engaging with customers. In most cases, these represent the impediments faced when working with clients to assess, scope, and drive consensus around reaching desired outcomes.

The three most common themes include customers not understanding the cultural changes, costs of organizational change management, and budget constraints.

Q. What are the three most common challenges your firm faces when working with customers on application modernization projects?

How does application modernization lead to a OneOffice™ mindset?

Cognizant: The modernization of the front end/customer experience layer is a key part of Cognizant’s efforts to bring value to business and technology teams during application modernization. Cognizant employs a Customer Value Management framework; this is an outside-in and inside-out approach, meant to provide the whole team with the understanding of the customer’s desired outcomes. With these insights, their teams can develop a comprehensive transformation roadmap to improve customer experience.

Infosys: As enterprises shift to a cloud-based business, the OneOffice experience will be delivered through context capture and data processing across multiple digital touchpoints. As enterprises undergo this transformation toward a more connected ecosystem underpinned by seamless data flow, they are migrating across three horizons: from disparate legacy systems that are monolithic and have the data trapped into legacy systems (H1) to boundaryless systems that are becoming mainstream (H2) and finally to [a] Live Enterprise [where information is delivered based on immediate] relevance (H3).

IBM: We leverage the IBM Garage to deliver practices, people, and technology to co-create solutions to meet our clients’ needs to respond quickly to disruption and power digital disruption. When modernizing applications, it is imperative to meet the clients where they are on their transformation journey, which means designing personalized experiences by modernizing the front end/customer experience layer to directly map their customer needs to business outcomes.

EY: EY takes a holistic approach to front-to-back transformation for technology and application modernization initiatives. The firm starts by analyzing end-to-end views of customer journeys. EY then brings business and technology teams together across silos to understand how information works for multiple business silos and customer groups. Preparing for the OneOffice outcomes early in the project allows for rapid solution development and co-creation across our projects.

Accenture: Accenture’s business and technology advisory services helps organizations strike the right balance between gaining IT efficiencies through speed, agility, and cost reductions while introducing new business enablement through a product-based culture and applications combined with the power of analytics, AI, and cloud-provider platform services. The firm focuses on de-coupling front and back-office functionality and technology requirements versus business needs and outcomes. Focusing on what people need and how they can use it is core to the OneOffice.
Insights from the firms HFS interviewed…

How are clients aligning application and data modernization?

**Accenture**: Accenture promotes its ability to help clients set the stage by running assessments of their data landscapes, selecting the right target architectures, planning and building a data foundation, and migrating data where necessary. The firm applies automation and optimization tools as part of its core efforts and brings data governance practices to each project.

**Capgemini**: Capgemini believes the alignment of data with application modernization is a critical success factor for organizations. The firm supports its clients in assessing and readying data with application modernization by using a mix of automation, robotics, AI, and analytics at scale in their projects.

**EY**: Data modernization is a key focus area in EY’s application modernization approach, as legacy databases (including mainframe) often no longer meet the needs of our clients in terms of business agility, cost savings, increased productivity, and reduction of technical debt. Data modernization focuses on developing modern database capabilities using cloud database services, transforming existing data to unlock business value that customers invested in their legacy databases.

**Infosys**: Infosys sees data playing a crucial part as enterprises undergo their transformation toward a connected ecosystem underpinned by seamless data flow. Enterprises must address legacy applications while modernizing on cloud. Application modernization, therefore, goes together with data modernization in all our programs. We believe that any modernization to cloud will fail unless the data is also modernized.

**Wipro**: Wipro provides a vertical portfolio for major industries aimed at solving specific business problems while building and developing more solutions to cater to client needs. These solutions, along with cloud enablement capabilities, can help clients in rapid and risk-free modernization journeys while deriving more meaningful insights, streamline their business process, and automating more aspects of their businesses and information workloads.
How do Agile and application modernization fit together in your practice?

**Accenture**: Accenture does not replace Agile, but what differentiates the firm’s offering is how it applies Lean Product methodologies to application modernization. This allows Accenture to offer balanced teams to function more efficiently when building a product roadmap and managing the backlog. Product managers, software engineers, and user-centered designers collaborate to build software in a flat team structure.

**IBM**: For IBM, Agile is about being nimble in this new normal to help customers scale up effectively to meet dynamic market conditions and manage remote workforces efficiently, making the need for agility inevitable. Agile continues to be the core business approach with almost all application management engagements being delivered through an Agile framework.

**TCS**: In the face of the COVID-19 pandemic, TCS’ Location Independent Agile laid the foundation for a swift and seamless transition to remote working through its Secure Borderless Workspaces (SBWS). SBWS is a transformative operating framework that enables remote access for employees and sets up a suitable cybersecurity framework and all project management practices and systems needed to ensure quality and timeliness of client deliveries.

**LTI**: LTI combines design thinking from a strong engineering background with “new ways of working.” It depends on an agile mindset for the partner and the customer. For transformation or modernization to be effective, the technology and business teams must share an ability to co-innovate and act together to design, develop, and deliver a solution.

**Wipro**: Wipro takes the stance that Agile must incorporate Lean design efforts. For Wipro clients, the goal is to deliver the maximum customer value in the shortest sustainable lead-time while providing the highest possible quality. It will help in reducing the risk of building the wrong thing while comfortably changing direction.
How is automation part of the application modernization services effort?

**Cognizant:** Cognizant’s clients desire fast results, and automation is a key part of the approaches to ensure modernization yields faster time to market. Cognizant provides a variety of intellectual property, domain accelerators, frameworks, and methodologies that accelerate the assessment, design, and execution of a project. Having these solutions allows Cognizant to deliver substantial productivity benefits and faster time to market and address the diverse needs of our clients.

**IBM:** Automation is the very foundation that supports all of IBM’s cloud transformation offerings, spanning strategy, discovery, design, build, and management. Our modernization offering strategy is to infuse extreme automation that is open and extensible wherever possible with open source, IBM, and third-party tools.

**EY:** Automation tools and technologies are implemented at various points across all phases of EY’s application modernization life cycle. Our approach for any modernization engagement has an automation-first mindset with a critical focus on adoption and implementation automation practices for CI/CD, container orchestration, management, configuration, scaling, and implementing processes with our customers.

**TCS:** TCS’s approach to automation is underpinned by our Machine First philosophy that gives the first right of refusal to technology with a view to augment human capability to drive exponential business outcomes. TCS MFDM (Machine First Delivery Model) is how we deliver it combining the here and now value of automation, analytics, and AI.

**Capgemini:** In the modernization journey, Capgemini automates activities in every phase. During the initial assessment phase, our firm utilizes both agent-based and agent-less utilities to capture the details of current infrastructure and applications and their interdependencies and inter-communication. Capgemini applies a suite of automated application tech-stack and code analyzers to capture the application tech stack, libraries, and code module details. Automation accelerates success.
Insights from the firms HFS interviewed…

What is the role of security in application modernization?

**Infosys**: Infosys’ CyberSecurity instills trust into the business of our clients by enabling and enhancing their digital ambitions. By driving enterprises’ mindset towards “Secure by Design” at every stage of the business life cycle, we minimize security risks while maximizing the visibility of the security threat, impact, and resolution.

**HCL**: HCL’s CSaaS solution provides a well-rounded approach to its application modernization services comprising strategy and architecture, transformation and integration, and managed security services. By incorporating security throughout DevSecOps, HCL offers customers a dynamic security posture meant to drive confidence in development, deployment, and management.

**Capgemini**: Security is an integral part of the application modernization life cycle. We have a well-defined DevSecOps adoption framework to help our clients mitigate and handle security at all levels: infrastructure, communication, platform, application, data, and access (authentication / authorization) during the application modernization life cycle. The DevSecOps adoption framework is an overarching framework to help organizations release secure software faster.

**Tech Mahindra**: For Tech Mahindra, application modernization is based on multi-tier architectures like containers, Kubernetes, and serverless architectures, where we offer application security services for container and image scanning tools like Qualys and Rapid7 InsightVM. Security is a continuous part of the modernization journey.

**Accenture**: Accenture offers an internally developed tool, the Intelligent Application Security Platform (IASP), created to integrate security into the overall software development life cycle. This platform enables security at speed and scale by performing bulk application onboarding, automated scanning, automated false positive triage, and automated remediation capabilities to address security vulnerabilities and drive risk reduction.

## Other notable performances

- **HCL** has the chops for bringing innovation and change agents needed to deliver application modernization, including key tools in assessment, automation, and management.
- **Capgemini** continues to be a trusted partner to the software development and test and QC teams, providing direction, clear focus, and talent for cloud-native projects.
- **TCS** continues to build customer loyalty and satisfaction as customers with diverse global operations continue to see it as an integral part of their extended teams.
- **Wipro** continues to evolve as a fierce competitor focused on leveraging partnerships to help transform legacy systems into cloud-first services.
- **Tech Mahindra** continues to focus on what it does well. It helps customers rehost and refactor their large systems of record into a cloud-hosted solution.
- **LTI** exhibits a strong vision for how it will bring data and application modernization to market, but it needs to work on developing recognition outside of technology teams.

**Notes:**
- The report “HFS Top 10: Application Modernization Services” includes firms having application modernization revenues of more than $1 billion, global delivery, and diverse clients. They include (in alphabetical order): Accenture, Capgemini, Cognizant, EY, HCL, IBM, Infosys, LTI, TCS, Tech Mahindra, and Wipro.
- In the companion report, formidable challengers have application modernization revenues of less than $500 million and may not offer global service delivery. However, these firms offer specialized value to enterprises and typically have adoption outcome or output-based pricing models as common practice. Companies assessed in this report include (in alphabetical order): Hexaware, Hitachi Vantara, Mindtree, Mphasis, UST, Virtusa, and Zensar. These providers are the focus of this report.

**Strengths**

- **Approach to application modernization services.** EY brings an approach focusing on aiding customers to transform from a current to an aspiration state based on improving applications, workflows, and experiences. Using its business background, it focuses on the experience mindset as a starting point, then works backward from the desired process or workflow to the technology stack.

- **Key differentiators.** EY is smaller than many of its competitors, so it focuses on projects that value improving data flow and experiences. It has built multiple industry accelerators that focus on itself, its partners, and its customers.

- **Ability to help clients drive value with application modernization.** EY led an effort to refactor a UX on top of a mainframe system to rethink how core customer information was accessed and consumed. It created a “single view of guest” application as a universal system of record as a decoupled widget that could be reused for multiple engagement points without retooling.

- **Technology innovation.** EY runs an effective Alliance Hyper-Growth strategy to bring in an ecosystem of partners aligned around delivery. EY leveraging partnerships to augment its ability to deliver is a sign of a true transformation partner and how to rethink how core customer information was accessed and consumed. It created a “single view of guest” application as a universal system of record as a decoupled widget that could be reused for multiple engagement points without retooling.

- **Customer kudos.** EY stood out with its clients on taking a fresh approach to delivering engagements. It consistently brings applications with strong project management, development talent, and focus on the end-state and achieve this with solid migration tools and a suite of automated code conversion solutions.

**Development opportunities**

- **What we’d like to see more of.** Continue leveraging mindshare with customers’ C-suites, driving OneOffice data and experience capabilities, and engaging in high-impact engagements.

- **What we’d like to see less of.** EY must be careful not to over-rotate on its people focus when delivering experience improvements. The firm must ensure broader business outcomes are also addressed.

- **Customer critiques.** Customers were generally engaged and happy with all the talent brought to engagements in North America. However, outside of North America, EY’s team continues to have strong application skills, but infrastructure capabilities are not at the same level.

**Excerpt for EY**

**Acquisitions**
- Zilker (2020)

**Number of application modernization clients:** More than 4,000 engagements

**Key clients**
- Royal Caribbean
- Cariner
- Microsoft
- Nationwide
- International investment management firm
- Renowned US-based oil and gas company
- Australian food product manufacturer
- Agricultural chemical and seed company
- Leading automotive company

**Dedicated headcount for application modernization services:** 18,000+

**R&D centers and innovation labs**
- 9 delivery centers and 50+ Wavepace centers globally

**Geographic delivery spread**
- North America: 29%
- Europe: 30%
- Asia Pacific: 34%
- Middle East/Africa: 4%
- Latin America: 3%

**Flagship internal IP and technologies**
- **EY Nexus for Banking and Insurance:** A cloud-ready acceleration platform enabling leading financial services firms.
- **EY Digital Energy Enablement Platform (DEEP):** Integrates processes in the upstream oil and gas value chain to enhance innovation, support better decision making, and improve efficiency.
- **Microservices Acceleration Platform:** Eclipse-based “one-shot” end-to-end code generator for quickly developing modern applications using microservices architecture.
- **DEP (Digital Enablement Platform):** Offers plug-and-play architecture with integrations that are easy to change without impacting the business domain.
- **DevSecOps Dashboard:** A reporting interface aggregating metrics from multiple tools to provide visibility into the security posture in continuous delivery pipelines, measure DevSecOps maturity, assist compliance, and set up governance around the product engineering process.
- **EY’s UI Express:** An automation solution to accelerate UI application development from scratch to full functional application without writing a single line of code.
About the authors
Martin Gabriel is an Associate Practice Leader at HFS, covering IT services, tracking global outsourcing deals in IT/BPO services, and participating in various research writings. Martin has over 12 years of research, analytics, and market intelligence experience. In his TCS role, he worked on point-of-sale and consumer panel data and on analytical projects, providing business insights to clients. He was responsible for analyzing retailer and consumer behavior for various FMCG/CPR products to address diverse business issues and provide actionable recommendations for the future growth for clients. He performed extensive category reviews, brand management, and trend analysis based on point of sale and homes scan data, along with information from secondary sources. At Xchanging, he was part of the market intelligence team that supports Xchanging’s vertical heads, strategy team, and sales and marketing team.

Joel Martin is Research Leader, Cloud and SaaS Strategies at HFS. Joel’s role is to aid organizations in making crucial decisions on designing, adopting, managing, and governing their growing portfolio of cloud solutions. Executives and business leaders will benefit from concise research on harnessing cloud-based solutions to support the workplace’s rapid, fundamental changes.

Success in the 2020s will depend on an organization’s leadership and understanding about how cloud strategies will deliver results that amplify success, provide reliable services, and reshape interactions with customers, employees, and global markets.

Based on research, insights from across HFS, and professional experiences, Joel will guide conversations about successfully leveraging the workplace native competencies of intelligent automation and the OneOffice™ to optimize investments in people, partnerships, and technology.

Before HFS, Joel held senior roles in global enterprise software, intellectual property, semiconductor, and research firms. Joel has led product programs, built solutions, and led company strategies to adopt solutions based on the cloud. After graduating from the University of Houston, Joel’s career has taken him to New York, San Francisco, Prague, Sydney, and Toronto. He currently resides in Ottawa, Canada with his wife and daughters, where he has taken up electric guitar to annoy his neighbours, family, and friends.
HFS is a unique analyst organization that combines deep visionary expertise with rapid demand side analysis of the Global 2000. Its outlook for the future is admired across the global technology and business operations industries. Its analysts are respected for their no-nonsense insights based on demand side data and engagements with industry practitioners.

HFS Research introduced the world to terms such as “RPA” (Robotic Process Automation) in 2012 and more recently, the HFS OneOffice™. The HFS mission is to provide visionary insight into the major innovations impacting business operations such as Automation, Artificial Intelligence, Blockchain, Internet of Things, Digital Business Models and Smart Analytics.
