#### November 2022 | 60 edition

RECAI Renewable Energy Country Attractiveness Index

## Brazil

Averaging 1GW of new solar PV per month, Brazil now has 19GW of solar installed. Federal lawmakers are considering a draft bill to fill the regulatory gaps that investors believe have slowed the considerable renewables potential.

## 0 China Mainland

China Mainland is set to install a record 156GW of wind and solar capacity by the end of 2022, a 25% uplift on its previously record-breaking 2021 installations.

## Greece

Greece awarded 538MW of capacity in its most recent renewables tender.

## 🕶 Indonesia

Indonesia has issued regulations, including fiscal incentives, to encourage renewable energy investment, and has plans to retire 15GW of coal-powered generation. The high capital cost of decarbonization efforts will be supported by donor countries, including the US and Japan.

## +3 Italy

The government released a draft FER II Decree setting out new price support mechanisms, and announced 5GW of offshore wind power auctions to take place between 2023 and 2026. This follows the completion of its first utilityscale offshore wind farm.

## 😶 Kazakhstan

Set to launch 40 renewable energy projects by 2025 as part of its ambitious decarbonization targets, Kazakhstan has amended its renewable energy auction prices to protect investors from currency devaluation against the US dollar.

See page 4 for RECAI methodology.

# **RECAI** methodology

The index rankings reflect our assessment of the factors driving market attractiveness in a world where renewable energy has gone beyond decarbonization and reliance on subsidies.

We have defined the questions being asked, based on what we see as global market trends affecting investment and deployment priorities, and the challenges and success factors impacting EY clients:

- Is there a long-term need for additional or replacement energy supply? If so, is there a strong case for energy from renewable resources in particular?
- Is policy hindering or helping the ability to exploit renewables opportunities?
- Are essential components in place to ensure project delivery, such as long-term contracts, grid infrastructure (including storage) and availability of finance?
- What does the strength of natural resource, track record and project pipeline reveal about the outlook for particular renewable technologies?
- Even if all other elements are in place, does the macro stability and investment climate enable or impede the ease of doing business?

These index pillars therefore put emphasis on fundamentals such as energy imperative, policy stability, project delivery (including capital availability) and diversity of natural resource – factors that will increasingly become key market differentiators as markets move toward grid parity, and "artificial" motivations, such as government targets or the ring-fencing of technologies, become less critical.

### Determining the rankings

Each parameter within the five pillars comprises a series of data sets that are converted into a score, from one to five, and weighted to generate parameter scores. These are weighted again to produce pillar scores, then an overall RECAI score and ranking. Weightings are based on the EY assessment of the relative importance of each data set, parameter and pillar in driving investment and deployment decisions. Each technology is also allocated a weighting based on its share of historical and projected investment levels.

Separate from the main index, EY technology-specific indices rankings reflect a weighted average score across the technology-specific parameters and a combined score covering our other macro and energy market parameters. This is because some markets may be highly attractive for specific technologies but face other major barriers to entry.

Data sets are based on publicly available or purchased data, EY analysis or adjustments to third-party data. We are unable to publicly disclose the underlying data sets or weightings used to produce the indices.

If you would like to discuss how EY RECAI analysis could help your business decisions or transactions, please contact the RECAI Advisor Lavaanya Rekhi.

#### EY | Building a better working world

EY exists to build a better working world, helping to create long-term value for clients, people and society and build trust in the capital markets.

Enabled by data and technology, diverse EY teams in over 150 countries provide trust through assurance and help clients grow, transform and operate.

Working across assurance, consulting, law, strategy, tax and transactions, EY teams ask better questions to find new answers for the complex issues facing our world today.

EY refers to the global organization, and may refer to one or more, of the member firms of Ernst & Young Global Limited, each of which is a separate legal entity. Ernst & Young Global Limited, a UK company limited by guarantee, does not provide services to clients. Information about how EY collects and uses personal data and a description of the rights individuals have under data protection legislation are available via ey.com/ privacy. EY member firms do not practice law where prohibited by local laws. For more information about our organization, please visit ey.com.
