

**Worldwide
Corporate Tax Guide
2017**

Preface

Governments worldwide continue to reform their tax codes at a historically rapid rate. Taxpayers need a current guide, such as the *Worldwide Corporate Tax Guide*, in such a shifting tax landscape, especially if they are contemplating new markets.

The content is straightforward. Chapter by chapter, from Afghanistan to Zimbabwe, we summarize corporate tax systems in 166 jurisdictions. The content is current on 1 January 2017, with exceptions noted.

Each chapter begins with contact information for the key people in that country's EY offices. Symbols precede the names of individuals who hold the following functions:

- ★ National director of the listed tax specialty
- ◆ Director of the listed specialty in the local office

We then lay out the facts about the jurisdiction's corporate taxes, beginning with an at-a-glance summary. With some variation, the topics covered are taxes on corporate income and gains, determination of trading income, other significant taxes, miscellaneous matters (including foreign-exchange controls, debt-to-equity rules, transfer pricing, controlled foreign companies and anti-avoidance legislation) and treaty withholding tax rates.

At the back of the guide, you will find a list of the names and codes for all national currencies and a list of contacts for other jurisdictions.

For many years, the *Worldwide Corporate Tax Guide* has been published annually along with two companion guides on broad-based taxes: the *Worldwide Personal Tax and Immigration Guide* and the *Worldwide VAT, GST and Sales Tax Guide*. In recent years, those three have been joined by additional tax guides on more-specific topics, including the *Worldwide Estate and Inheritance Tax Guide*, the *Worldwide Transfer Pricing Reference Guide*, the *Global Oil and Gas Tax Guide*, the *Worldwide R&D Incentives Reference Guide*, the *Worldwide Digital Tax Guide* and the *Worldwide Capital and Fixed Assets Guide*.

Each of the guides represents thousands of hours of tax research. They are available free online along with timely *Global Tax Alerts* and other great publications on ey.com or in our EY Global Tax Guides app for tablets.

Please contact us if you need more copies of the *Worldwide Corporate Tax Guide*. You can also keep up with the latest updates at ey.com/GlobalTaxGuides, and find out more about the app at ey.com/TaxGuidesApp.

EY's Global Tax Desk Network

EY has over the last 30 years made a significant investment in building a Global Tax Desk Network. It consists of a highly integrated team of more than 200 professionals spanning approximately 45 countries. The purpose of the Tax Desk Network is to enable home-country tax experience to be integrated within other jurisdictions and provide services across several of our tax disciplines from hubs in the United States, Brazil, Europe, and Asia-Pacific and China. The Global Tax Desk Network offers clients a tremendous resource – accessible, timely and integrated tax-planning advice on cross-border investments, providing them worldwide with a forum for information and idea exchange as well as offering cross-disciplinary tax workshops for multinationals. Our Global Tax Desk Network can be contacted at the numbers listed below.

A. At a glance

Corporate Income Tax Rate (%)	20
Capital Gains Tax Rate (%)	20
Business Receipts Tax Rate (%)	4/5/10 (a)
Withholding Tax (%) (b)	
Dividends	20 (b)
Interest	20 (b)
Royalties from Patents, Know-how, etc.	20 (b)
Commissions	20 (b)
Net Operating Losses (Years)	
Carryback	0
Carryforward	3 (c)

- (a) This tax is imposed on total gross revenue before deductions. It is a deductible expense in computing taxable income.
- (b) This withholding tax is considered a final settlement of the tax liability.
- (c) Losses can be generally carried forward in equal proportions to each of the following three years. Unrestricted loss carryforwards are allowed for specified companies.

B. Taxes on corporate income and gains

Corporate income tax. Companies that are resident in Afghanistan are subject to tax on their worldwide income. Tax is levied on the total amount of income earned during the tax period.

Tax rates. The corporate income tax rate is 20%.

Certain types of income are subject to final withholding taxes. For information regarding these taxes, see *Withholding taxes*.

Business receipts tax. Business receipts tax (BRT) is imposed at various rates on total gross revenue before deductions. BRT is a deductible expense in computing taxable income for the same tax year. As a result of an endorsement of the president's office, the

former BRT rate of 2% was increased to 4%, effective from 23 August 2015. Consequently, BRT is now imposed at rates of 4%, 5% or 10% of the gross receipts, depending on the nature of the business and/or category of the receipt.

In addition, importers of goods are subject to BRT at a rate of 4% at the time of import. The Customs Office collects the BRT. This tax is treated as an advance payment against the BRT paid by the importer based on its receipts from the sale of goods.

The BRT return must be filed and BRT must be paid on a quarterly basis within 15 days after the end of the quarter.

BRT does not apply to the following categories of income:

- Interest income
- Fees earned from banking transactions
- Proceeds of futures contracts whether settled in cash or otherwise
- Insurance or reinsurance premiums
- Distributions received by shareholders with respect to their interests in the company
- Exports of goods and services
- Salaries, dividends, royalties and other payments that are subject to withholding tax
- Income received from the rent or lease of residential property to a natural person if the tenant uses the property for residential purposes for more than six months of the tax year
- Income of persons not having a business license that are taxed at fixed rates (see *Fixed tax scheme*)

Fixed tax scheme. For certain categories of income and persons, the Afghanistan Income Tax Law (AITL) provides for a fixed tax scheme under which taxpayers are required to pay a fixed tax during the year instead of income tax and BRT. The fixed tax applies to income received by importers and contractors that do not hold a business license in Afghanistan for the supply of goods and services, transporters, entertainers and natural persons deriving business income below certain limits. The amount of the tax varies, depending on the category of income and the person deriving the income.

Tax incentives. Some of the significant tax incentives available in Afghanistan are described in the following paragraphs.

Income derived from the operation of aircraft under the flag of a foreign country and income derived by the aircraft's staff is exempt from tax if the foreign country grants a similar exemption to aircraft under the flag of Afghanistan and the aircraft's staff.

Organizations that are established under the laws of Afghanistan and operate exclusively for educational, cultural, literary, scientific or charitable purposes are exempt from income tax.

Income derived from agricultural or livestock production is not subject to income tax.

Grants, gifts and awards of the state, foreign governments, international organizations, or nonprofit organizations for contributions to science, art, literature, social progress or international understanding are exempt from income tax.

Scholarships, fellowships and grants for professional and technical training are exempt from income tax.

The above incentives are subject to a private ruling obtained from the Ministry of Finance (MoF) of the Government of Afghanistan.

Capital gains and losses. Gains arising from the sale, exchange or transfer of capital assets, including depreciable assets, shares of stock and trades or businesses, are included in taxable income. However, gains derived from the sale or transfer of movable or immovable property acquired by inheritance are not included in taxable income.

Legal persons transferring movable or immovable property must pay a 1% tax on the amount received or receivable with respect to the transfer of ownership of such property. The tax paid may be used as a credit against tax payable when the tax return is filed.

Losses incurred on the sale or exchange of capital assets used in a trade or business are deductible from the taxable income in the tax year of the sale or exchange if the gain from such sale or exchange would have been taxable.

Losses incurred on the sale or exchange of shares of stock may be offset only against gains from the sale or exchange of shares of stock in the same year. If the gains exceed the losses from such transactions, the excess is taxable. However, if the losses exceed the gains, the excess is not deductible.

Administration

Standard tax year and special tax years or periods. Afghanistan follows a period of 12 months of the solar year as its tax year (that is, 21 or 22 December in a calendar year to 20 or 21 December of the following calendar year). If a legal person wishes to use a 12-month period other than the solar period as its tax year, it may apply to the MoF in writing and provide the reasons for the change. The MoF may grant such application if it is justifiable and if it fulfills the criteria provided in the income tax manual.

Annual income tax return. The income tax return, together with the balance sheet, must be filed within three months following the end of the tax year (that is, by 20 March 2017 for the current tax year).

Withholding taxes. A withholding tax is an interim tax payment that may or may not be the final tax liability. Amounts withheld that are not final taxes are credited against the eventual tax liability of the taxpayer for the relevant year.

The following are the rates of significant withholding taxes under the Afghanistan income tax law.

Type of payment	Rate (%)
Rent for immovable property used for commercial, industrial and other economic purposes	10/15 (a)
Salaries and wages	2/10/20 (b)
Payments for imports by importers that have a business license	2 (c)
Payments for imports by importers that do not have a business license	3 (d)

Type of payment	Rate (%)
Payment of advance BRT at import stage	4 (e)
Payments for the providing of goods, material, construction and services under contracts to government agencies, municipalities, state entities, private entities and other persons	
To persons having a business license	2 (f)
To persons not having a business license	7 (g)
Dividends	20 (g)
Interest	20 (g)
Royalties	20 (g)
Prizes	20 (g)
Rewards	20 (g)

- (a) The rate depends on the monthly rent.
 (b) The rate depends on the monthly salary.
 (c) The tax is calculated based on the assessed value of the imported goods including customs duty and is collected by the customs office where the customs duty is paid. This is treated as a tax credit against the tax liability for the year. See the discussion of the BRT in *Business Receipts Tax*.
 (d) This 3% tax paid at the import stage on the total cost including customs duties. It is a fixed tax in lieu of an income tax.
 (e) This advance BRT may be credited against the quarterly or annual BRT liability.
 (f) This is an advance tax that may be credited against the ultimate annual corporate tax liability.
 (g) This is a final withholding tax.

Interest and penalties. A legal person that fails to file a tax return by the due date without reasonable cause is subject to additional income tax of AFN100 per day (effective from 23 September 2013).

In addition, if a person fails to pay the tax by the due date, penalties may be imposed at a rate of 0.1% per day of the tax that is delayed or defaulted. If no tax is paid, an additional tax of 10% may be imposed in addition to the 0.1% penalty.

A person that is determined to have evaded income tax may be required to pay the income tax due and the following additional tax:

- In the first instance, additional tax of double the evaded tax
- In the second instance, additional tax of double the evaded tax and termination of the person's business activity by order of the court

A person that fails to withhold tax from payments without reasonable cause may also be subject to additional tax of 10% of the tax liability in addition to disallowance of the expense for the purpose of computation of taxable income.

Dividends. A company paying a dividend must withhold tax at a rate of 20% of the gross amount. Dividends are regarded as Afghanistan-source if they are received from resident companies operating in Afghanistan.

If a branch in Afghanistan of a nonresident person pays or incurs an amount to the head office or any person connected to the nonresident person, that amount is also treated as a dividend.

Dividends paid in cash, from which tax has been deducted at source, are allowed as deductions for the computation of taxable income of the payers of the dividends. However, such deductions are not allowed to branch offices in Afghanistan making payments of dividends to their head offices and other affiliates.

Dividends paid in the form of securities for shares or loans of a similar nature are not deductible from the income of corporations or limited liability companies.

Foreign tax credit. If a resident person derives income from more than one foreign country, proportionate foreign tax credit is allowed against income from each country.

C. Determination of taxable income

General. Taxable income of natural and legal persons equals the total of all receipts less those exemptions and deductions authorized under the law. The determination of taxable income is generally based on the company's financial statements, subject to certain adjustments for the exclusion of exempt income and unallowable expenses.

Business expenses incurred during a tax year or in one of the preceding three tax years are deductible for purposes of calculating taxable income.

Inventories. Inventory for a tax year is valued at the lower of cost or market value of the inventory on hand at the end of the year. All taxpayers engaged in manufacturing, trading or other businesses must value inventories in accordance with the method prescribed by the MoF.

Tax depreciation. Depreciation of movable and immovable property (except agricultural land) used in a trade or business or held for the production of income is allowed as an expense. The total depreciation deductions for property may not exceed the cost of the property to the taxpayer.

A person is not entitled to claim depreciation for that part of the cost of an asset that corresponds to a payment for which the person failed to withhold tax.

Enterprises registered under the Law on Domestic and Foreign Private Investment in Afghanistan are entitled to a deduction for the depreciation of buildings and other depreciable assets over the following time periods:

- Buildings: four years
- Other depreciable assets: two years

Depreciation is calculated using the straight-line method, in equal proportions. However, if a depreciable asset is held by the enterprise for less than half of the year, depreciation is calculated and deducted for half of the year. If a depreciable asset is held for more than half of the year, depreciation is calculated and allowed for one year.

Net operating losses incurred by a taxpayer on account of depreciation may be carried forward by the enterprise until such loss is fully offset. However, to claim such offset, the enterprise must be

an approved enterprise under the Law on Domestic and Foreign Private Investment.

Depreciation and expenditure that relate to a period covered by a tax exemption or to a period before an enterprise becomes an approved enterprise for the first time cannot be included in the calculation of a net operating loss.

Relief for losses. A corporation or limited liability company that incurs a net operating loss in a tax year may deduct the loss from its taxable income of the following three years in equal proportions.

A net operating loss from activities to generate income from a source outside Afghanistan may only be carried forward and deducted from taxable income from such activities and may not be deducted from taxable income from a source in Afghanistan.

Net operating losses incurred by approved enterprises in a tax year based on legal and accounting records may be carried forward as a deduction from taxable income in each subsequent year until the loss is fully set off.

D. Other significant taxes

Afghanistan currently does not impose value-added tax or goods and services tax.

The Afghanistan government has imposed a telecom service fee at a rate of 10% of the amount recharged on all types of telephone service users.

Customs duties apply to the import of goods.

E. Miscellaneous matters

Foreign-exchange controls. In general, remittances in foreign currency are regulated and are required to be converted to afghanis (AFN) at the established rate of the Da Afghanistan Bank, which is the central bank of Afghanistan. In certain cases in which the Da Afghanistan Bank does not trade for a particular currency, the currency is first converted into US dollars and then into afghanis.

Anti-avoidance rules. All transactions between connected persons are expected to be carried out at an arm's length. If transactions are not conducted on an arm's-length basis, the tax authorities may determine the arm's-length standard under prescribed methodologies. These methods are similar to the methods as available under the commentary to the Organisation for Economic Co-operation and Development model convention.

If a person enters into any transaction or arrangement with the intent to cause reduction of liability to pay tax, the MoF may disregard such transaction or arrangement and assess all persons affected by the transaction or arrangement as if the disregarded transaction or arrangement had not taken place.

F. US and North Atlantic Treaty Organization agreements

On 30 September 2014, Afghanistan signed a Bilateral Security Agreement with the government of the United States and a Status of Force Agreement for North Atlantic Treaty Organization

(NATO) forces. These agreements, which entered into force on 1 January 2015, replaced all previous agreements applicable until 31 December 2014 (including the bilateral agreement between Afghanistan and the United States in the form of Diplomatic Notes exchanged between the countries and the Military and Technical Assistance Agreement entered into with International Security Assistance Forces) and amended the previously offered exemptions for NATO foreign and local contractors and subcontractors.

Exemptions available under these agreements are subject to private rulings obtained from the MoF. In addition, the agreements generally do not provide exemptions from the obligation to withhold tax from all payments to employees, vendors, suppliers, service providers, lessors of premises and other persons, as required under the local tax laws.

B. Taxes on corporate income and gains

Corporate income tax. Albanian companies are companies that are incorporated in Albania or have their place of effective management in Albania. Albanian companies are subject to corporate income tax on their worldwide income. Foreign companies are subject to tax on profits generated from activities performed

through a permanent establishment in the country and on income from Albanian sources.

Rates of corporate tax. The corporate income tax rate is 15% for taxpayers with annual turnover exceeding ALL8 million (approximately EUR58,000).

Small businesses (taxpayers with annual turnover ranging from ALL5 million to ALL8 million (approximately EUR36,000 to EUR58,000) are subject to a reduced profit tax rate of 5%. Simplified profit tax of ALL0 applies to micro-businesses with annual turnover below ALL5 million (approximately EUR36,000).

Capital gains and losses. Capital gains derived from the disposal of assets, including shares, are subject to tax at the standard rate of 15%. Capital losses are deductible for tax purposes.

Capital gains derived by a foreign company from the sale of domestic shares are taxed if the gains are attributable to a local permanent establishment or if the buyer of the shares is a domestic entity.

Administration. The tax year is the calendar year.

Taxpayers subject to corporate income tax make advance payments of corporate income tax on a quarterly basis. The payments must be made by 30 March for January through March, by 30 June for April through June, by 30 September for July through September and by 30 December for October through December. However, taxpayers may opt to make monthly advance payments of corporate income tax by the 15th day of each month. Newly established companies involved in production activities are not required to make quarterly advance payments for either a period of six months or the period until the end of the fiscal year, whichever is shorter.

The advance payments for January through March are calculated based on the taxable income of the tax year before the preceding tax year. The advance payments for April through December are calculated based on the taxable income of the preceding tax year. The tax rate for the calculation of the advance payment is 15%. If the company demonstrates to the tax authorities that the taxable income in the current year will be substantially lower than the taxable income of the reference period, the tax authorities may decide to decrease the advance payments. If the tax authorities approve the taxpayer's request for the reduction of the corporate advance payments and at year-end the corporate tax liability exceeds the amount of advance payments by more than 10%, default interest is applied to the difference. If the tax authorities determine that the taxable income of the current year will be increased by more than 10% compared with the taxable income realized in the reference period, they may decide to increase the advance payments. Companies that generated losses in the reference years make advance payments based on their taxable profit projections for the current year.

By 31 March, companies must file the annual tax return and pay the corporate tax due for the tax year less advance payments made. A 10 February deadline applies to taxpayers subject to the reduced profit tax regime.

Taxpayers subject to the reduced profit tax regime make advance payments of profit tax (see *Rates of corporate tax*) on a quarterly basis. The payments must be made by 20 April for January through March, by 20 July for April through June, by 20 October for July through September and by 20 December for October through December. Taxpayers with turnover of ALL5 million to ALL8 million are provided with tax stamps for each payment made during the year (total of four). Taxpayers must place the tax stamps in the upper corner of their National Business Centre (Tax Identification Number) certificate.

Companies not complying with the filing and payment deadlines described above are subject to interest and penalties. Late tax payments are subject to interest at a rate of 120% of the interbanking loan interest rate, published by Bank of Albania. The interest is not deductible for corporate income tax purposes. Late tax payments and inaccurate tax return filings are charged with a penalty of 0.06% of the amount of the unpaid tax liability and contribution for each day of delay, capped at 21.9%. In addition, a penalty of ALL10,000 for taxpayers subject to corporate income tax or ALL5,000 for other taxpayers can be assessed if the tax return is not filed by the due date. If the unreported tax liability results from tax evasion, the penalty is 100% of the unpaid liability.

Dividends. Dividends paid by Albanian companies to resident and nonresident individuals and to foreign entities are subject to withholding tax at a rate of 15% unless the rate is reduced under an applicable double tax treaty (see Section F). Dividends received by Albanian companies are exempt from tax.

Foreign tax relief. Foreign direct tax on income and gains of an Albanian resident company may be credited against the corporate tax on the same profits. The foreign tax relief cannot exceed the Albanian corporate income tax charged on the same profits. If a company receives income from a country with which Albania has entered into a double tax treaty, other forms of foreign tax relief may apply, as stipulated in the provisions of the treaty.

C. Determination of trading income

General. The assessment is based on the financial statements prepared in accordance with the local standards or International Financial Reporting Standards (IFRS), subject to certain adjustments for tax purposes as specified in the Albanian Tax Code and other supplementary legal acts.

All necessary and reasonable expenses incurred for the business activity that are properly documented are deductible, except for the following:

- In-kind compensation.
- Wages and salaries that are not paid through the banking system.
- Write-off of debts if all legal means for their collection have not been exhausted.
- Expenses for cross-border technical services and consultancy and management fees if the corresponding withholding tax (10% through 31 December 2014 and 15% from 1 January 2015) has not been paid by 31 December of the year in which the service is provided. In case of tax treaty protection, the above restriction does not apply, and the provisions of the applicable treaty apply.

Other types of expenses may be deducted up to a ceiling. These expenses include, but are not limited to, the following:

- Representative and entertainment expenses are deductible up to 0.3% of annual turnover.
- Production waste and losses, including losses from impairment, are deductible to the extent provided by the relevant legislation.
- Sponsorships are generally deductible up to 3% of the income before tax and up to 5% for media-related sponsorships.
- Per diems are deductible up to ALL3,000 per day for traveling inside Albania and up to EUR60 per day for traveling abroad.
- Interest is deductible only to the extent that the rate does not exceed the average interest rate published by Bank of Albania and that the amount of the debt does not exceed four times the equity. Such limitation does not apply to banks, insurance companies and leasing companies.
- Costs of improvements and maintenance are fully deductible in the year in which they are incurred to the extent that they do not exceed 15% of the remaining value of the asset.
- Expenses settled in cash are tax deductible if they do not exceed ALL150,000 (approximately EUR1,090).
- Voluntary pension contributions made by employers in favor of their employees to professional pension plans are tax deductible up to an amount of ALL250,000 (approximately EUR1,816) per year.

Inventories. The inventory valuation rules stipulated in the accounting law also apply for tax purposes. Inventory is valued at historical cost, which is determined by using the weighted average, first-in, first-out (FIFO) or other specified methods. The method must be applied consistently. Changes in the method must be reflected in the books of the company.

Provisions. Companies may not deduct provisions, except for certain levels of special reserves specified by regulations regarding insurance companies and provisions of financial service companies created in compliance with International Financial Reporting Standards and certified by the external auditors.

Tax depreciation. Buildings are depreciated separately for tax purposes using the declining-balance method at a rate of 5%. If the remaining value of the asset at the beginning of a tax period is less than 3% of the historic acquisition cost of such asset, the entire remaining balance is recognized as a tax-deductible expense in that tax period.

Intangible assets are depreciated using the straight-line method at a rate of 15%.

Other assets are depreciated in groups, using the declining-balance method. The applicable rates are 25% for computers, information systems and software, and 20% for all other fixed assets. If the remaining value of the asset at the beginning of a tax period is less than 10% of the historic acquisition cost of such asset, the entire remaining balance is recognized as a tax-deductible expense in that tax period.

Relief for losses. Losses may be carried forward for three consecutive years. However, if a change of 50% in the entity's ownership occurs, the remaining losses are forfeited. Loss carrybacks are not allowed.

Groups of companies. Each company forming part of a group must file a separate return. The law does not provide for consolidated tax returns or other group relief.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax; exempt supplies include leases of land, supplies of buildings and financial services	
Standard rate	20%
Exports of goods and supplies of services relating to international transportation	0%
Real estate property tax	
Buildings	ALL5 to ALL400 per square meter
Agricultural land	ALL700 to ALL5,600 per hectare
Plots of land	ALL0.14 to ALL20 per square meter
Social security contributions, on monthly salary up to ALL97,030; paid by	
Employer	15%
Employee	9.5%
Health insurance contributions on monthly gross salary; paid by	
Employer	1.7%
Employee	1.7%
Excise duties imposed on specified goods (tobacco products, coffee, alcoholic beverages, petrol, diesel, fuel, kerosene and lubricants); the tax is calculated as a specific amount per unit	Various
Consumption tax for petrol, gas, oil and coal	ALL27 per liter

E. Miscellaneous matters

Foreign-exchange controls. Albania has a free foreign-exchange market. The Albanian currency, the lek (ALL), is fully convertible internally.

Residents and nonresidents may open foreign-currency accounts in Albanian banks or foreign banks authorized to operate in Albania. Residents may also open accounts in banks located abroad. All entities must properly document all of their money transfers to comply with the regulations of Bank of Albania. No limits are imposed on the amount of foreign currency that may be brought into Albania. Hard-currency earnings may be repatriated after the deduction of any withholding tax.

Transfer pricing. New transfer-pricing rules, which are aligned with the Organisation for Economic Co-operation (OECD) Transfer Pricing Guidelines of 2010, were introduced in June 2014. Under these rules, taxpayers engaged in controlled transactions carried out on or after 4 June 2014 and in recurring transactions continuing after that date are required for the first time to maintain transfer-pricing documentation, which must be submitted within 30 days after a request of the tax authorities. Failure to prepare

transfer-pricing documentation is not sanctioned with penalties, but fulfilling such requirement protects the taxpayer from the assessment of penalties in the event of transfer pricing-related audit adjustments. Such penalties equal 5% of additional tax liability and are applied for each month of delay, capped at 25%.

Only cross-border and controlled transactions are subject to the transfer-pricing rules. Consequently, domestic transactions are not subject to the rules. Controlled transactions are considered to be transactions between related parties, dealings between a permanent establishment and its head office, and transactions with an entity resident in a tax-haven jurisdiction. Two persons are considered related parties if either one of them participates directly or indirectly in the management, control or capital of the other, or the same person(s) participate(s) directly or indirectly in the management, control or capital of the two parties; that is, the same person owns 50% or more of the share capital of the other person or effectively controls the business decisions of the other person.

The new rules refer to the application of the most appropriate method among the OECD transfer-pricing methods, which are comparable uncontrolled price, resale price, cost-plus, transactional net margin and profit-split. If it can be proved that none of the approved methods can be reasonably applied, taxpayers are allowed to use other more appropriate methods.

Taxpayers are required to submit by 31 March of the following year a Controlled Transaction Notice, which lists the intercompany transactions and the transfer-pricing methods applied to these transactions, if their controlled transactions exceed in aggregate ALL50 million (approximately EUR363,000).

Failure to timely submit the Controlled Transaction Notice subjects the taxpayer to a penalty of ALL10,000 (approximately EUR70) for each month of delay.

Debt-to-equity rules. Albanian tax law includes thin-capitalization rules with respect to the deduction of interest on loans, which apply if the debt-to-equity ratio exceeds 4:1. The ratio applies to all debts owed to related and unrelated parties as well as to loans obtained from financial institutions. However, the limitation does not apply to banks and insurance and leasing companies.

F. Treaty withholding tax rates

The rates of withholding tax in Albania's tax treaties are described in the following table.

	Dividends %	Interest %	Royalties %
Austria	5/15 (a)	5 (b)	5
Belgium	5/15 (a)	5	5

Non-treaty countries	15	15	15

- (a) The lower rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 25% of the capital of the payer. The higher rate applies to other dividends.
- (b) Interest on government and central bank loans is exempt from withholding tax.
- (c) The 0% rate applies if the beneficial owner of the dividends is a company that holds at least 50% of the payer and that has invested at least USD250,000 in the capital of the payer. The 5% rate applies if the beneficial owner of the dividends is a company that holds at least 25% of the payer. The 15% rate applies to other dividends.
- (d) The 5% rate applies to interest paid on loans granted by banks or other financial institutions. The 10% rate applies in all other cases.
- (e) The 0% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 75% of the capital of the payer. The 5% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the payer. The 10% rate applies to other dividends.
- (f) The lower rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the payer. The higher rate applies to other dividends.
- (g) The 0% rate applies if the beneficial owner of the dividends is the government or a government institution or agency of the other contracting state. The 5% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the payer. The 10% rate applies to other dividends.
- (h) The 0% rate applies if the beneficial owner of the dividend is the government, a government institution or agency of the other contracting state. The 5% rate applies to other dividends.
- (i) The 5% rate applies if the beneficial owner of the dividend is a company that holds directly at least 25% of the capital of the payer or is a pension scheme. The 10% rate applies to other dividends.

Albania has signed tax treaties with Estonia, India and Luxembourg, but these treaties have not yet entered into force.

(a) For details regarding these rates, see Section B.

(b) The higher rate applies to payments to nonresident individuals or companies.

B. Taxes on corporate income and gains

Corporate income tax. The following companies are subject to corporate income tax (Impôt sur le Bénéfice des Sociétés, or IBS):

- Resident companies (those incorporated in Algeria)
- Nonresident companies that have a permanent establishment in Algeria

In general, IBS is levied on income realized in Algeria, which includes the following:

- Income derived from trading activities carried out by companies
- Income of representative agents of companies
- Income of companies that do not have an establishment or a representative agent but realize a complete cycle of commercial activities

Tax rates. The following are the IBS rates:

- 19% for companies carrying out production activities
- 23% for companies engaged in the construction sector and tourism
- 26% for companies carrying out other activities, such as importation and resale in the same condition

If a company engages in more than one of the above activities, it should prepare an analytical accounting so that it can apply the appropriate rate to each activity.

Tax incentives. Ordinance No. 01-03, dated 20 August 2001, relating to the development of investment, as amended, provides for investment regimes applicable to national and foreign investments made in the production of goods and services, and investments made within the framework of the granting of a license and/or a concession.

For purposes of the above ordinance, investments include the following:

- Acquisition of assets included in the creation of new activities, capacity of production extension, rehabilitation and restructuring
- Participation in the share capital of an Algerian company
- Takeover of an activity within the framework of a partial or total privatization

Before the investments are made, they must be declared to the National Agency for Investment Development (Agence Nationale pour le Développement des Investissements, or ANDI), together with the submission of the application for the granting of the advantages.

The advantages granted by the ANDI to the investors depend on the applicable regime.

General Regime. The General Regime applies to national and foreign investments made in the activities of production of goods and services as well as investments made within the framework of the granting of a license and/or a concession.

During the setting-up of their investments, companies benefit from the following advantages:

- Exemption from value-added tax (VAT) on non-excluded goods and services directly involved in the investment implementation
- Exemption from customs duties on non-excluded imported equipment directly involved in the investment implementation
- Exemption from property transfer tax on all property acquisitions made within the framework of the investment concerned
- Exemption from registration duties, land publication fees and state fee on concession, for granted built and unbuilt property assigned to the investment

When operating, companies may be granted the following advantages for three years:

- IBS exemption
- Tax on professional activity (TAP) exemption

These advantages can be granted for three to five years for investments that create more than 100 jobs at the beginning of the activity.

Derogatory Regime. Under the Derogatory Regime, investments realized in areas in which development requires a contribution of the state, as well as investments relating to a particular interest for the national economy, may benefit from particular advantages.

During the setting-up phase for investments realized in development areas, companies may benefit from the following advantages:

- Exemption from VAT on non-excluded goods and services imported or locally purchased
- Exemption from customs duties on non-excluded imported goods and services
- Registration fees at a reduced rate of 0.2%
- Total or partial payment by the government of costs with respect to infrastructure works necessary for the setting up of the investment
- Exemption from property transfer tax for all property acquisitions
- Exemption from registration duties, land publication fees and state fee on concession, for granted built and unbuilt property assigned to the investment

When operating, companies may be granted the following advantages:

- Exemption from IBS and TAP for a period of 10 years
- Exemption from property tax on property in the framework of the investment for a period of 10 years

During the setting-up phase, for investments involving a particular economic interest for Algeria, companies may benefit from the following advantages for a period not exceeding five years:

- Exemption from duties, taxes and other levies on all goods and services imported or locally purchased
- Exemption from registration fees on the incorporation deed and share capital increases
- Exemption from registration duties and land publication fees on the transfer of property assigned to production
- Exemption from property tax on real estate property assigned to production

When operating, these companies may be granted the following advantages for a period not exceeding 10 years:

- Exemption from IBS
- TAP exemption

Under the Algerian Direct Tax Code, the portion of companies' profits that results from the exemptions from IBS and other taxes under the incentives provided by the investment regulations (in both the General Regime and the Derogatory Regime) must be reinvested in the project within the four tax years following their realization. The obligation to reinvest is limited to benefits granted during the exploitation phase of the investment (particularly, the exemptions from IBS and TAP). Benefits granted during the implementation phase that are related to VAT, registration fees and customs duties are not subject to this requirement.

For a failure to comply with this reinvestment obligation, the amount of the tax advantage (the IBS exemption) and a penalty equaling 30% of this amount must be paid to the tax authorities.

Capital gains. Capital gains are included in ordinary income and taxed at the applicable IBS rate.

Capital gains derived from the sale of fixed assets are taxed differently, depending on whether they are short-term capital gains (on assets held for three years or less) or long-term capital gains (on assets held for more than three years).

The following percentages of capital gains derived from the partial or total sale of assets within the framework of industrial, commercial, agriculture or professional activities are included in taxable profits:

- 35% of long-term capital gains
- 70% of short-term capital gains

Capital gains derived from the sale of shares realized by nationals are taxed at a rate of 15%.

Unless otherwise provided by a double tax treaty, nonresident individuals and companies that derive capital gains from the sale of shares of an Algerian entity are subject to a final withholding tax at a rate of 20%.

Administration. An annual tax return must be filed with the tax administration within four months after the end of the financial year. Foreign companies carrying out activities in Algeria through a permanent establishment are subject to the same filing obligations as companies incorporated in Algeria. These obligations include the filing of an annual corporate tax return (IBS return, named G4 form or G4 Bis form), by 30 April of each year.

The IBS is generally paid in three down payments from 20 February to 20 March, from 20 May to 20 June and from 20 October to 20 November of the year following the financial year, if profit has been realized and used for the base of tax calculation. The amount of each down payment is equal to 30% of the IBS due on profits realized during the last closed financial year.

Permanent establishments of foreign companies must make an IBS down payment equal to 0.5% of the amounts billed every month. When filing the annual IBS return, these IBS down payments are offset against the IBS due.

Certain listed documents must be attached to the IBS return, including the balance sheet and a summary of the profit-and-loss account.

Taxes withheld at source and those paid in cash must be declared on a monthly tax return (“G 50” form). These taxes include the following:

- Personal income tax (Impôt sur le Revenu Global, or IRG)
- Withholding tax due on passive income and remuneration paid to nonresident service suppliers
- TAP
- IBS down payments
- VAT

This form must be filed within 20 days following the end of the month of payment of the relevant remuneration together with the payment of the related taxes.

Dividends. Dividends received by residents are subject to a 10% withholding tax.

Subject to double tax treaties, a 15% withholding tax is imposed on dividends paid to nonresident companies.

Royalties. Unless otherwise provided by double tax treaties, a 24% withholding tax is imposed on royalties and remuneration for services paid to nonresident entities.

For contracts relating to the use of computer software, a tax allowance at a rate of 80% is applicable on the amount of the royalties. Consequently, the effective rate of the withholding tax is 4.8%.

A tax allowance at a rate of 60% is applied to the amount of the rent amount paid under an international leasing contract. As a result, the effective rate of the withholding tax is 9.6%.

For royalties benefiting from allowances, VAT must be paid in addition to withholding tax.

Foreign tax relief. The Algerian Direct Tax Code does not provide for foreign tax relief.

C. Determination of taxable income

General. The computation of taxable income is based on financial statements prepared according to generally accepted accounting principles, provided they are not incompatible with the provisions of the Algerian Direct Tax Code.

Taxable income is determined on the basis of profits and losses. Taxable income includes operating income and “extraordinary income,” such as capital gains, gains from the revaluation of business assets and subventions, subject to certain exclusions and business incentives.

In the determination of taxable income, any expenditure that is wholly, exclusively and necessarily incurred for the purposes of the exploitation of the business and the generation of income is deductible from gross income.

Financial expenses related to overseas loans, royalties, technical assistance fees and other fees payable in foreign currencies may be deducted for tax purposes during only the financial year of their effective payment.

Certain expenses are not deductible for tax purposes, including the following:

- Expenses, costs and rents of any type that are not directly assigned to operations (for example, premises leased for accommodation of members of the company’s management)
- Fines, interest on late payments and penalties, interest and increases in duties as a result of defaults or insufficiencies in tax returns or payments
- Gifts (except those for advertisements, the value of which does not exceed DZD500 per beneficiary)
- Subsidies or donations except those made to humanitarian organizations or associations or those made to nonprofit research organizations up to DZD1 million

- Restaurant, hotel and entertainment expenses not directly linked to the business

Inventories. Inventories are valued at cost in accordance with the new Algerian accounting and financial system.

Provisions. Provisions are generally deductible for income tax purposes if they satisfy the following conditions:

- They are established for losses or charges that are clearly identified and likely to occur.
- They are recorded both in the books and financial statements.
- They are listed on the statement of reserves attached to the annual tax return.

Reserves or the portion of them that are not used in accordance with their intended purposes or no longer have a purpose in the following financial year must be added back to the income in such financial year. Abusive establishment of provisions may result in the provisions being added back to taxable income and related penalties applied.

Depreciation. Under the Algerian Direct Tax Code, depreciation of fixed assets must be calculated in accordance with the following:

- Generally accepted limits
- Applicable practices for each type of industry, business or operations
- Rules provided in tax laws with respect to the depreciation system

The following are the three depreciation methods:

- Straight-line method
- Progressive method
- Declining-balance method

The straight-line method is the standard method, while progressive or declining-balance methods may alternatively be used on election.

Under the Algerian Direct Tax Code, the basis of computation of deductible depreciation is limited for private passenger-type vehicles to a purchase value of DZD1 million. This cap of DZD1 million does not apply if such vehicles constitute the main object of the company's activities.

Relief for losses. Tax losses may be carried forward four years. They cannot be carried back.

Groups of companies. Under the Algerian Direct Tax Code, related companies subject to IBS may elect to form a tax-consolidated group. The parent company must make the election for this regime for a four-year period and the election must be accepted by the affiliated companies.

The group tax consolidation regime is based on the consolidation of the balance sheets of the related companies with the parent company.

A tax consolidation group may consist of an Algerian parent company and Algerian subsidiaries in which the parent company owns directly at least 90% of the capital if both of the following conditions are satisfied:

- The capital of the parent company is not owned partially or totally by the subsidiaries.
- 90% or more of the parent company is not owned by another company eligible to be a parent company.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
VAT; standard rate	19
Tax on professional activity	
General rates	1/2
Transport by pipeline of hydrocarbons	3
Apprenticeship tax	1
Training tax	1
Social security contributions; paid by	
Employer	26
Employees	9
Registration duties	
On sales of shares in stock companies and private limited companies	2.5
On sales of goodwill	5

E. Miscellaneous matters

Foreign-exchange controls. The currency in Algeria is the dinar (DZD).

Foreign-exchange regulations in Algeria are based on the principle of non-convertibility of Algerian dinars outside Algeria.

Payments or transfers made with respect to regular transactions within the meaning of Algerian regulations (including foreign-trade transactions involving goods and services) are free, provided that certain conditions are fulfilled (particularly the bank domiciliation [the procedure under which a local party registers a contract with a local bank] and the delivery of a transfer certificate by the tax authorities). Algerian accredited intermediary banks must operate these transactions.

Dividends, profits and net proceeds from investments or the liquidation of investments can also be freely transferred outside Algeria, subject to compliance with certain requirements (particularly, the delivery of a transfer certificate by the tax authorities).

The realization of foreign investments, directly or in partnership, except for share capital, must be financed through Algerian financing institutions.

Foreign loans from foreign banks are prohibited in Algeria. However, an exception is provided for foreign financing through a current-account contribution by a foreign shareholder. Executive Decree No. 13-320 of 26 September 2013 determines the terms and conditions for a current-account contribution by a foreign shareholder.

Nonresidents may open bank accounts in Algerian dinars and/or in foreign currencies at Algerian accredited intermediary banks. These bank accounts are subject to specific conditions on opening and operation.

Transfer pricing. Under the Algerian tax rules, for Algerian taxpayers that are owned or controlled by an enterprise located in Algeria or outside Algeria or that own or control an enterprise located in Algeria or outside Algeria, the income indirectly transferred to the related enterprise, either through an increase or decrease of purchase or sale price or through any other means, may be added back to the Algerian taxpayer's taxable income. In the absence of any relevant information for the reassessment of tax, the taxable income is determined by comparison with income of similar enterprises that are regularly operated.

Transfer-pricing documentation requirements. On request of the tax authorities, in the framework of a tax audit, enterprises or companies operating in Algeria and undertaking cross-border and domestic transactions with related parties must provide supporting documentation relating to their transfer-pricing policies. Failure to answer or providing an insufficient answer triggers a 25% penalty per fiscal year calculated on the basis of the transfer-pricing reassessments resulting from the tax audit.

In addition, Algerian-based taxpayers that have tax issues are under the responsibility of the Department for Big-sized Enterprises (mainly companies belonging to foreign international groups, legal entities or businesses operating in the hydrocarbon industry) must file transfer-pricing documentation with their annual tax returns to the tax authorities. The lack of documentation or insufficient documentation at the time of the tax return filing triggers a DZD2 million tax penalty, and in the case of a tax audit, an additional penalty of 25% of deemed transferred profits applies.

F. Treaty withholding tax rates

A. At a glance

Corporate Income Tax Rate (%)	30 (a)(b)
Capital Gains Tax Rate (%)	30 (c)
Branch Tax Rate (%)	30 (a)(b)
Withholding Tax (%)	
Dividends	10 (d)
Interest	10/15 (e)
Royalties	10
Payments for Services	6.5 (f)
Branch Remittance Tax	10
Net Operating Losses (Years)	
Carryback	0
Carryforward	3 (g)

- (a) Income from certain activities, such as agriculture, forestry and cattle raising, is subject to tax at a rate of 15%. Mining activities are subject to tax at a rate of 25%. Oil and gas companies are subject to Oil Income Tax rather than Industrial Tax (corporate income tax). See Section B.
- (b) Tax exemptions or tax reductions are available under the Private Investment Law as well as specific legislation for micro, small- and medium-sized companies. For details, see Section B.
- (c) Gains derived from the sale of securities that are not subject to corporate income tax or personal income tax are subject to tax at a rate of 10%. If such gains are derived from treasury bills, treasury bonds and titles issued by the Angolan Central Bank (Banco Nacional de Angola, or BNA) with a maturity of at least three years or from shares of listed companies, a 50% tax relief may apply.

- (d) Certain dividends are exempt from tax (see Section B). A 5% rate applies to dividends paid by listed companies during a five-year period beginning on 19 November 2014.
- (e) In general, interest is subject to a 15% rate. However, certain interest, such as interest on shareholders loans, corporate bonds, bank deposits, treasury bills, treasury bonds and titles issued by the BNA is subject to a 10% rate. Interest on treasury bills and treasury bonds and titles issued by the BNA is subject to a reduced rate of 5% if the maturity is at least three years.
- (f) Some exceptions exist.
- (g) Mining companies may carry forward losses for seven years, up to a limit of 50% of the turnover.

B. Taxes on corporate income and gains

Corporate income tax. Companies carrying out industrial and commercial activities in Angola are subject to Industrial Tax (corporate income tax).

An Angolan company, which is a company that has its head office or effective place of management and control in Angola, is subject to Industrial Tax on its worldwide profits.

Foreign entities with a permanent establishment in Angola are subject to Industrial Tax only on profits imputed to the permanent establishment. The tax law provides a force of attraction principle for permanent establishments.

All companies, regardless of whether they have a permanent establishment in Angola, are subject to withholding tax on payments received for services rendered (for details, see *Rates of corporate tax*).

Rates of corporate tax. The standard Industrial Tax rate is 30%.

Income from certain activities, such as agriculture, forestry and cattle raising, is subject to a reduced tax rate of 15%.

In addition, the new Private Investment Law, which was approved as Law No. 14/15 of 11 August and has already entered into force, establishes that a private investment project may be granted tax benefits by Angola through the reduction of Industrial Tax, Investment Income Tax and Urban Property Transfer Tax rates. The tax benefits depend on the following factors:

- Jobs created for Angolan nationals
- Investment amount (a minimum of USD1 million is required)
- Investment location
- Production to be exported
- Shareholding by Angolan investors
- National added value

For this purpose, Angola is now divided into the following two economic zones:

- Zone A: Province of Luanda, head municipalities of Benguela and Huíla, and municipality of Lobito (in the province of Benguela)
- Zone B: Provinces of Bengo, Bié, Cabinda, Cuando Cubango, Cuanza-Norte, Cuanza-Sul, Cunene, Huambo, Lunda-Norte, Lunda-Sul, Malanje, Moxico, Namibe, Uíje and Zaire, and the remaining municipalities of Benguela and Huíla

The granting of the above benefits is subject to a case-by-case analysis. However, the period of such benefits is defined through specific criteria.

Micro, small- and medium-sized companies covered by special legislation can benefit from the following reductions of the Industrial Tax rate:

- Micro companies: payment of a special tax at a rate of 2% on gross sales for the first two to five years of activity, depending on the localization
- Small- and medium-sized companies: tax rate reduction between 10% and 50% for the first two to five years of activity, depending on the localization

Micro, small- and medium-sized industrial companies benefit from an exemption from consumption tax on raw materials. Micro companies also benefit from a stamp duty exemption.

All companies, regardless of whether they have a permanent establishment in Angola, are subject to withholding tax on payments received for services rendered. The withholding tax applies regardless of whether the services are rendered in or outside Angola. The rate of the withholding tax is 6.5%.

The following services are excluded from withholding tax:

- Teaching and similar services
- Health services
- Services for which the amount paid does not exceed AOA20,000
- Passenger transportation services
- Lease of machinery and equipment subject to Investment Income Tax

A similar exclusion applies to financial and insurance intermediation services, hotel and similar services, and telecommunication services, if the service provider has a taxable presence in Angola. For local service providers, withholding tax does not apply to documented recharges between related parties. The withholding tax base excludes payments for raw materials, parts and other materials, if the service provider has a taxable presence in Angola.

The payer must withhold the tax from each payment and remit the withholding tax to the Angolan government. The tax withheld is considered to be a payment on account if the recipient has a residence, head office or permanent establishment in Angola. Excess withholding tax can be carried forward for five years. Otherwise, the tax is final.

Income from oil and gas extraction is subject to Oil Income Tax at a total rate of 50% (under production-sharing agreements) or 65.75% (under other types of joint ventures). Angolan companies benefit from a reduced Oil Income Tax rate equivalent to that of Industrial Tax. In addition, companies engaged in exploration for and production of oil, gas and similar products must pay Oil Production Tax at a total rate of 20%. Oil Transaction Tax and a Surface Surcharge may also be levied at rates of 70% and USD300 per square kilometer, respectively. Oil Production Tax and Oil Transaction Tax are not payable under production-sharing agreements.

Contracts, such as production-sharing agreements, between oil and gas companies and the Angolan government generally override the Oil Production Tax and Oil Transaction Tax and may set forth different taxes and applicable rates.

Additional taxes and charges apply within the oil and gas and mining industries. Also, specific tax rules apply to the liquefied natural gas project, including withholding tax exemptions on certain interest, dividends, royalties and services income.

Capital gains. Capital gains on profits derived from the sale of fixed assets are subject to Industrial Tax at the regular tax rate of 30%. Capital gains on shares or other instruments generating investment income that is not taxable for Industrial Tax or personal income tax purposes are subject to Investment Income Tax at a rate of 10%.

However, a 50% relief is available for capital gains derived from listed shares or from corporate bonds, other securities, treasury bonds, treasury bills and BNA securities, if they are negotiated in a regulated market and if their maturity is of at least three years.

Administration. The tax year is the calendar year.

All companies engaging in activities in Angola must register with the tax department to obtain a taxpayer number.

Companies, including foreign companies with a permanent establishment in Angola, must file an annual corporate income tax return, together with their financial statements and other documentation, by 31 May in the year following the tax year.

Companies must make an advance payment of Industrial Tax in July or August of the tax year, depending of the type of taxpayer. The tax base is the turnover from the sale of goods computed during the first six months of the tax year. A 2% rate is applied to this amount of turnover to compute the amount of the advance payment.

Penalties are imposed for a failure to file tax returns and other required documents. If, on the final assessment, the tax authorities determine that a further payment is required and that the taxpayer is at fault, interest is imposed on the amount of the additional payment. Fines, which are generally based on the amount of tax due, are also imposed. If the tax due is not paid, additional interest is imposed from the date of the tax authorities' notice that an additional payment is due.

Dividends. Companies are not subject to Industrial Tax on the gross amount of dividends received.

A 10% Investment Income Tax, which is withheld at source, is imposed on dividends.

The Investment Income Tax Code contains a participation exemption measure. Under this measure, the 10% withholding tax exemption applies to dividends received by Angolan parent companies from Angolan subsidiaries, subject to minimum 25% and one-year holding requirements.

Foreign tax relief. In general, no relief is granted for foreign taxes paid by Angolan taxpayers.

C. Determination of trading income

General. Taxable income is the income reported in companies' financial statements, subject to certain adjustments. Expenses considered indispensable in the production of income and the

maintenance of a production unit are deductible. The following expenses, among others, are not deductible for Industrial Tax purposes:

- Representation expenses, such as travel expenses, deemed to be unreasonable by the tax authorities
- Interest on shareholders loans
- Investment Income Tax and Urban Property Tax
- Costs associated with rented property
- Costs related to previous years
- Donations not covered by the Law of Patronage
- Non-documented expenses and improperly documented expenses
- Confidential expenses (an expense is considered a confidential expense if no valid documentation legally supports the expense and if its nature, function or origin are not materially justifiable)
- Fines and penalties

Rental income subject to Urban Property Tax and income subject to Investment Income Tax is excluded from the computation of the Industrial Tax base.

Inventories. Inventories may be valued by any currently acceptable method provided that the method is consistently applied and is based on documented purchase prices.

Provisions. Provisions for the following items are allowable:

- Bad debts up to 4% (for the annual allowance regarding the booking of a new provision or the increasing of a previous balance) or 10% (accumulated balance) of clients' receivables, if, among other requirements, such credits have been legally claimed and are due for more than six months and if steps to collect the claim have been undertaken
- Provisions imposed by the public regulatory authorities of financial, insurance and gambling businesses
- Litigation processes regarding facts underlying the litigation claims that would represent costs of that year
- Depreciation in the value of inventory, provided that it does not exceed 0.5% to 3% in the current year (depending on the nature of the activity), up to a limit that can vary between 2.5% and 12% of the value of the inventory

Tax depreciation. Depreciation rates are provided in the law. The following are some of the applicable rates.

Asset	Rate (%)
Vehicles	16.67 to 25
Office buildings	4
Industrial buildings	4 or 6
Machinery, equipment and devices	12.5 to 33.33
Furniture	8.33 to 50

These rates may vary depending on the industry sector.

Relief for losses. Companies may carry forward tax losses for three years. This period is increased to seven years for mining companies (up to a limit of 50% of the turnover). No carryback is allowed.

Groups of companies. The Large Taxpayers Statute entered into force in October 2013. It establishes that Angolan Large Taxpayers that are integrated in a group of companies may be taxed on the sum of the taxable results obtained by the entities included in the

group. For such purpose, a special request through a specific official form (Modelo 5), still pending approval, must be submitted to the tax authorities by the end of February following the tax year for which the application of this special regime is requested. The Chief of the Large Taxpayer's Tax Office must expressly approve this request and, accordingly, the application of the group taxation regime.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Training levy, on oil and gas exploration and production companies and their subcontractors	
Production companies and companies engaged in refining and processing of petroleum	USD0.15 per barrel
Companies owning a prospecting license	USD100,000 a year
Exploration companies	USD300,000 a year
Subcontractors under a contract with a term exceeding one year (levied on annual gross income) and entities engaged in the storage, transport, distribution and trading of petroleum (levied on revenue derived from such activities)	0.5%
Stamp duty	
On the amount of receipts	1%
On the acquisition of real estate	0.3%
On leasing and subleasing of real estate	0.1%/0.4%
On company's capital	0.1%
On guarantees	0.1% to 0.3%
On financing	0.1% to 0.5%
On financial leasing of real estate	0.3%
On leasing of movable property	0.4%
On imports	1%
On certain exports	0.5%
Consumption tax; rate varies according to type of good and service	2% to 80%
Custom duties on imports	2% to 50%
Customs emoluments	2%
Urban Property Tax; imposed on 60% of the gross rent	25%
Urban Property Transfer Tax	2%
Social security contributions, on salaries and additional remuneration; the contributions are not payable by expatriates working in Angola if they make contributions to the social security scheme or a similar scheme in their home countries; paid by	
Employer	8%
Employee	3%
Special Contribution on Invisible Exchange Transactions; applicable to payments for services provided by nonresident entities under technical assistance or management contracts	10%

E. Miscellaneous matters

Foreign-exchange controls. The Ministry of Economy, together with the BNA, supervises all foreign-exchange operations. Commercial banks usually act as intermediaries of companies to obtain clearance from the BNA.

The BNA issued Bank Order No. 13/13, of 31 July 2013, which was published in the *Official Gazette* of 6 August 2013. This order sets out the new foreign-exchange procedures to be adopted with respect to current invisible operations. Notwithstanding the foreign exchange integrated reporting system (SINOC), to simplify the monitoring procedures regarding the current invisible operations, the order establishes the following new thresholds for transactions that do not require prior approval by the BNA:

- Transactions amounting up to AOA300 million (approximately USD2,200,000) or the equivalent in another currency carried out by oil and gas service providers
- Other transactions up to AOA100 million (USD700,000) or the equivalent in another currency

Operations with a value exceeding the above mentioned thresholds must be cleared in advance by the BNA. No thresholds are provided regarding the transfer of salaries.

In general, repatriation of profits is allowed for approved foreign-investment projects if certain requirements are met. In certain cases, a time schedule for repatriation of profits may be imposed.

However, the oil and gas sector is subject to a specific foreign-exchange control regime, which aims primarily to establish uniform treatment in this sector by replacing the multiple exchange regimes that have been applied to oil and gas upstream companies operating in Angola, thereby providing fair treatment to all investors.

These foreign-exchange control rules cover the trade of goods, current invisible operations (according to the Angolan National Bank Instructive, these operations are services, royalties, interest, travel costs and salaries) and capital movements arising from the prospecting, exploration, evaluation, development and production of crude oil and natural gas.

For purposes of the rules, exchange operations encompass the following:

- Purchase and sale of foreign currency
- Opening of foreign currency bank accounts in Angola by resident or nonresident entities and the transactions carried out through these bank accounts
- Opening of national currency bank accounts in Angola by nonresident entities and the transactions carried out through these bank accounts
- Settlement of all transactions of goods, current invisible operations and capital movements

The National Company of Petroleum of Angola (Sociedade Nacional de Petróleos de Angola, or SONANGOL, the national concessionaire) and domestic or foreign corporate investors must carry out the settlement of foreign-exchange transactions through bank

institutions that are domiciled in Angola and are authorized to conduct foreign exchange business. They must open bank accounts in foreign currency and deposit sufficient funds for tax payments and other mandatory tax payments and for settlement of goods and services provided by residents or nonresident entities.

The BNA has established a phased implementation of the procedures and mechanisms to be adopted by the agents carrying out foreign-exchange transactions. Under this phased implementation, the following regime applies:

- Effective from 1 July 2013, all payments made by oil and gas upstream companies related to the acquisition of goods and services from local suppliers must be carried out through Angolan bank accounts in local currency.
- Effective from 1 October 2013, all payments made to nonresident entities must be carried out through Angolan bank accounts.

Thin-capitalization rules. No thin-capitalization rules are in effect in Angola.

Anti-avoidance legislation. The arm's-length principle applies in Angola. Consequently, the tax authorities may adjust the taxable income derived from transactions between related parties.

Related-party transactions. The Large Taxpayers Statute contains specific rules governing "special relations" between taxpayers, which entered into force in October 2013. Under this regime, a special relationship is deemed to occur if one entity exercises, directly or indirectly, a significant influence on the management decisions of another entity. The law also establishes that a Large Taxpayer that has annual turnover exceeding AOA7 billion (approximately USD52 million) at date of closing the accounts must prepare and submit a transfer-pricing file to the Angolan tax authorities. This transfer-pricing file, which must be prepared on an annual basis, must detail the relationships and prices established by the Large Taxpayers with the companies and entities with which they have "special relations." The transfer-pricing file must be submitted by the end of the sixth month following the year-end to which the file relates. With respect to the economic analysis of the transactions, the new regime provides for the application of the following methods only:

- Comparable uncontrolled price method
- Resale-minus method
- Cost-plus method

Invoice requirements. Effective from 1 December 2013, new requirements are imposed with respect to the keeping and archiving invoices or equivalent documents by individuals or legal entities with their domicile, registered office, effective management or permanent establishment in Angola.

Tax-neutrality regime for mergers and demergers. A tax-neutrality regime for mergers and demergers has been introduced for Industrial Tax purposes at the level of the merged or spun-off companies, but not at the level of the respective shareholders. However, this regime applies only to companies that are classified as Large Taxpayers in the Large Taxpayers Statute (see *Groups of companies* in Section C).

Stand-alone tax. In addition to being nondeductible, certain expenses will be subject to a stand-alone tax, effective from 2017. This tax is expected to apply to improperly documented expenses (2%), non-documented expenses (4%), confidential expenses (30%, or 50% in certain situations) and donations not made in accordance with the Law of Patronage (15%).

F. Tax treaties

Angola does not have any tax treaties in force. Tax treaty negotiations between Angola and Portugal have been suspended. The treaty will follow the United Nations model convention. In addition, it is expected that Angola will implement a tax treaty network with countries with which it has preferential socioeconomic relations, which are Southern Africa Development Community (SADC) countries and member countries of the Community of Portuguese Language Countries (CPLP).

Angola has entered into an agreement with Portugal on the reciprocal promotion and protection of investments. However, this agreement does not provide any specific tax benefits.

A. At a glance

Corporate Income Tax Rate (%)	35 (a)
Capital Gains Tax Rate (%)	15/35 (b)
Branch Tax Rate (%)	35 (a)
Withholding Tax (%)	
Dividends	0/35 (c)
Interest	15.05/35 (d)
Royalties from Patents, Know-how, etc.	21/28/31.5 (d)
Branch Remittance Tax	0/35 (c)
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) A Tax on Minimum Presumed Income is payable to the extent it exceeds regular corporate income tax for the year. For details, see Section B.
- (b) The 15% rate applies to capital gains derived by foreign residents from sales of shares, quotas, and other participations in entities, titles, bonds and other securities. Similar treatment is granted to Argentine individuals. Argentine corporate residents are subject to the regular 35% corporate rate.
- (c) If the amount of a dividend distribution or a profit remittance exceeds the after-tax accumulated taxable income of the taxpayer, a separate final withholding tax of 35% may be imposed on the excess. From September 2013 to July 2016, a 10% dividend withholding tax was in effect. However, Law 27,260 eliminated this tax.
- (d) These are final withholding taxes imposed on nonresidents only. For details concerning the rates, see Section B.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are taxed on worldwide income. Any profits, including capital gains, are taxable. Companies incorporated in Argentina and branches of foreign companies are considered to be resident companies.

Rates of corporate tax. Corporate tax is payable at a rate of 35%.

Tax on Minimum Presumed Income. The Tax on Minimum Presumed Income (TMPI) is imposed on resident companies and branches of foreign companies. The TMPI is payable to the extent it exceeds regular corporate income tax for the year.

The tax base for the TMPI is the resident company's or branch's worldwide assets at the end of the tax year. Certain specified assets are excluded from the calculation of the tax base.

The standard rate of TMPI is 1%, but special rates apply to certain types of companies.

TMPI that is paid may offset regular income tax in the following 10 tax years.

Under Law 27,260, TMPI will be eliminated for fiscal years beginning on or after 1 January 2019.

Capital gains. Capital gains derived by tax-resident companies are included in taxable income and taxed at the regular corporate tax rate. Capital gains derived by non-Argentine companies from the sale, exchange, barter or disposal of shares, quotas, participations in entities, titles, bonds and other securities are subject to a 15% tax. This tax may be calculated on actual net income or on 90% presumed income, thereby resulting in an effective 13.5% tax on the sale price.

Administration. The tax year for a company is its accounting year. Companies are required to make 10 advance payments of corporate income tax. The first payment is equal to 25% of the preceding year's tax and the other payments are each equal to 8.33% of such tax. The payments are due monthly beginning in the sixth month after the end of the accounting year. The due dates depend on the company's taxpayer registration number.

Under certain circumstances, advance payments of TMPI (see *Tax on Minimum Presumed Income*) may be required.

Companies must file their tax returns and pay any balance due by a specified date in the fifth month after their accounting year. If the payment is late, interest is charged.

Dividends. In general, dividends and branch remittances are not subject to tax. However, if the amount of a dividend distribution or a profit remittance exceeds the after-tax accumulated taxable income of the payer (determined in accordance with the income tax law rules), a final withholding tax of 35% may be imposed on the excess.

Withholding taxes on interest and royalties. Final withholding taxes are imposed on interest and royalties paid to nonresidents.

A withholding tax rate of 15.05% applies to the following types of interest payments:

- Interest on loans obtained by Argentine financial entities.
- Interest on loans granted by foreign financial entities located in the following jurisdictions:
 - Jurisdictions listed as cooperators for purposes of fiscal transparency under the Argentine income tax regulations
 - Jurisdictions that have signed exchange-of-information agreements with Argentina and have internal rules providing that no banking, stock market or other secrecy regulations can be applied to requests for information by the Argentine tax authorities
- Interest on loans for the importation of movable assets, except automobiles, if the loan is granted by the supplier of the goods.
- Under certain conditions, interest on investments in Argentine financial entities.

The withholding tax rate for all other interest payments to non-residents is 35%.

The general withholding tax rate for royalties is 31.5%. If certain requirements are satisfied, a 21% rate may apply to technical assistance payments and a 28% rate may apply to certain royalties.

Foreign tax relief. Resident companies may credit foreign income taxes against their Argentine tax liability, up to the amount of the increase in that liability resulting from the inclusion of foreign-source income in the tax base.

Direct and indirect foreign tax credits are available. To qualify for an indirect foreign tax credit, an Argentine company must own directly at least 25% of a first-tier subsidiary's shares. In addition, for a foreign tax credit regarding a second-tier subsidiary, an Argentine company must have an indirect ownership interest of at least 15%. The credit does not apply below the second tier.

C. Determination of trading income

General. Tax is applied to taxable income, which is the accounting profit (not adjusted for inflation) earned in the tax period after adjustments provided for by the tax law. Exemptions are usually insignificant.

Expenses are deductible to the extent incurred in producing taxable income, subject to certain restrictions and limitations, including, among others, those applicable to the following:

- Representation expenses
- Directors' fees
- Royalties for patents and trademarks paid to nonresidents

Depreciation, rental payments and all other automobile expenses, such as license fees, insurance, fuel and maintenance, are also deductible, subject to certain restrictions. In general, certain limitations apply to the deductibility of interest payments to foreign related entities that are not subject to the withholding tax rate of 35% (see Section E).

Any expense incurred by an Argentine company in favor of a foreign related party that is deemed Argentine-source income for the recipient of the payment can be deducted for tax purposes in the year of accrual only if the payment is made by the date when the income tax return for that year is due. Otherwise, such expenses must be deducted in the year of payment. This limitation also

applies to expenses paid to individuals or entities located in tax havens, regardless of whether they are related parties.

Foreign-exchange losses. Non-capital foreign-currency gains and losses arising from customary business transactions are treated as business income or expenses for the year in which the exchange fluctuation occurs.

Inventories. Stock is valued according to procedures established by the tax law, which result in values nearly equal to its market value or replacement cost at the end of the tax period, depending on the type of goods.

Provisions. A provision for bad debts is allowed. However, it must be computed according to rules prescribed by the tax law.

Depreciation. Tangible assets may be depreciated using the straight-line method over the assets' expected lives. A method based on effective use may also be acceptable. In general, buildings are depreciated at an annual rate of 2%. However, a higher rate may be acceptable if it is established that, because of the materials used to construct the building, the expected useful life is less than 50 years. The law does not specify rates for movable assets. Intangible property may be depreciated only if it has a limited life based on its characteristics. Certain assets, such as goodwill and trade names, may not be depreciated.

Relief for losses. Tax losses may be carried forward for five tax periods. Losses resulting from sales of shares or from foreign-source activities may offset only the same type of income. Loss carrybacks are not permitted.

Except for hedge transactions, losses resulting from the rights contained in derivative instruments or contracts may offset only the net income generated by such rights during the fiscal year in which the losses were incurred or in the following five fiscal years. For this purpose, a transaction or contract involving derivatives is considered a hedge transaction if its purpose is to reduce the impact of future fluctuations in market prices or fees on the results of the primary economic activities of the hedging company.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT), on goods delivered and services rendered in Argentina, on services rendered outside Argentina that are used or exploited in Argentina, and on imports	
Standard rate	21
Other rates	2.5/5/10.5/27
Tax on financial transactions; generally imposed on debits and credits with respect to checking accounts; a portion of the tax may be creditable against other taxes	
General rate	0.6
Other rates	0.05/0.075/0.1/ 0.25/0.5/1.2

Nature of tax	Rate (%)
Various local taxes on gross receipts, real estate and other items	Various
Social security taxes (including medical care contributions), on monthly salaries; paid by employer; a portion may be creditable against VAT; the creditable portion varies depending on where the employees render services	23/27
Export duties; general rate; other rates apply to certain exports (oil, grains and others)	0
Tax on personal assets; imposed on all legal persons and individuals domiciled abroad holding ownership interests in Argentine companies; tax is calculated based on the equity value of the Argentine company; tax is paid by the Argentine company, but the company may recover the tax paid from the foreign shareholder	0.25

E. Miscellaneous matters

Foreign-exchange controls. The Executive Branch and the Central Bank have recently issued regulations to provide flexibility for the foreign-exchange controls.

Exporters must continue to repatriate into Argentina the cash derived from exports of goods and services within a specified time period.

Funds derived from loans granted from abroad can be received in Argentina or kept abroad. If it is decided to bring in the funds, the minimum term for repayment is now 120 days (previously 365 days).

The mandatory deposit with respect to currency coming into Argentina has been reduced to 0% (previously 30%).

Various types of payments abroad, including dividends, principal and interest, and payments for services and imports of goods are allowed if certain requirements are met.

Debt-to-equity rules. Under general principles, transactions between related parties must be made on an arm's-length basis.

A debt-to-equity ratio of 2:1 for the deduction of interest applies to loans granted by foreign entities that control the Argentine borrower company (according to the definition provided for transfer-pricing purposes), except for those cases in which interest payments are subject to a withholding tax rate of 35%.

If the debt-to-equity ratio is applicable, interest paid on liabilities in excess of the ratio is nondeductible. The interest expenses disallowed as a deduction as a result of this limitation are treated as dividends and may not be deducted in future years.

Transfer pricing. The Argentine law includes transfer-pricing rules that generally apply to transactions between related parties. In addition, transactions between unrelated parties may also be

subject to these rules. Transactions with entities and individuals located in jurisdictions not considered as cooperators for purposes of fiscal transparency (the federal tax authorities are in charge of creating and updating the list of jurisdictions qualifying as cooperators) are deemed to be not carried out at arm's length. The law provides for the following transfer-pricing methods:

- Comparable uncontrolled price method
- Resale price method
- Cost-plus method
- Profit-split method
- Transactional net margin method

If exports of agricultural commodities and other products with a publicly quoted price are made to related parties and if an international intermediary who is not the effective purchaser of the products participates in the transaction, the appropriate transfer price is deemed to be the higher of the market quote on the day the products are delivered and the price agreed to by the parties. This rule does not apply if the foreign intermediary meets the following requirements:

- It has a real presence and maintains a commercial establishment to manage its own activities in its country of residence, and it has assets, risks and functions (operations) that correspond with the volume of its transactions.
- Its principal source of income is not passive income, income from trading goods to or from Argentina, or income from intra-group trading.
- Its intragroup operations do not exceed 30% of its annual transactions.

A taxpayer must submit the following to the tax authorities to demonstrate the reasonableness of its transfer-pricing policy: special tax returns; and a special report signed by an independent certified public accountant, which is based on a mandatory transfer-pricing study.

F. Treaty withholding tax rates

Some of Argentina's tax treaties establish maximum tax rates lower than those under general tax law. To benefit from a reduced treaty withholding tax rate, certain formal requirements must be met. The following table shows the lower of the treaty rate and the rate under domestic tax law.

	Dividends (a) %	Interest (e) %	Royalties (e) %
Australia	10/15 (b)	0/12	10/15
Belgium	10/15 (b)	0/12	3/5/10/15 (d)
Bolivia	35	15.05/35	21/28/31.5
Brazil	35	15.05/35	21/28/31.5
Canada	10/15 (b)	0/12.5	3/5/10/15 (d)
Chile	10/15 (b)	4/12/15	3/10/15
Denmark	10/15 (b)	0/12	3/5/10/15 (d)
Finland	10/15 (b)	0/15	3/5/10/15 (d)
France	15	15.05/20	18
Germany	15	10/15	15
Italy	15	15.05/20	10/18 (e)
Netherlands	10/15 (b)	0/12	3/5/10/15 (d)

	Dividends (a) %	Interest (e) %	Royalties (e) %
Norway	10/15 (b)	0/12	3/5/10/15 (d)
Russian Federation	10/15 (b)	15	15
Spain	10/15 (b)	0/12	3/5/10/15 (d)
Sweden	10/15 (b)	0/12	3/5/10/15 (d)
Switzerland	10/15 (b)	0/12	3/5/10/15 (d)
United Kingdom	10/15 (b)	0/12	3/5/10/15 (d)
Uruguay	35	15.05/35	21/28/31.5
Non-treaty countries	35	15.05/35 (f)	21/28/31.5 (f)

- (a) The rates shown in the table apply only if the dividend distributions exceed the after-tax accumulated taxable income of the payer.
- (b) These treaties establish maximum rates of 10% or 15%. The 10% rate applies if the beneficial owner of the dividend is a company that controls, directly or indirectly, at least 25% of the voting power of the payer. The 15% rate applies to other cases.
- (c) The rates listed are the lower of the treaty or statutory rates. For details concerning the domestic rates, see Section B.
- (d) In general, the rates apply to the following categories of payments:
- 3% for the use of, or right to use, news
 - 5% for the use of, or right to use, copyrights of literary, dramatic, musical or other artistic works (but not royalties with respect to motion picture films and works on film or videotape or other means of production for use in connection with television)
 - 10% for the use of, or right to use, industrial, commercial or scientific equipment or patents, trademarks, designs, models, secret formulas or processes, or for the use of or information concerning scientific experience, including payments for the rendering of technical assistance
 - 15% for other royalties
- These categories may differ slightly from treaty to treaty.
- (e) The 10% rate applies to royalties for the use of, or right to use, copyrights of literary, artistic or scientific works. The 18% rate applies to other royalties.
- (f) For details concerning these rates, see Section B.

Because of the rapidly changing economic situation in Armenia, changes are expected to be made to the tax law of Armenia. As a result, readers should obtain updated information before engaging in transactions.

A. At a glance

Corporate Income Tax Rate (%)	20

Carryforward	5

B. Taxes on corporate income and gains

Corporate income tax. Resident and nonresident entities pay corporate income tax in Armenia. Resident entities are entities and investment funds established in Armenia except for pension funds and separate subdivisions (branches or representation offices) of foreign organizations. Nonresident entities are entities established in foreign countries, international organizations and organizations established by them outside Armenia. Resident entities are taxed on their worldwide income, which consists of income received from sources in and outside Armenia. Nonresident entities are taxed on Armenian-source income only.

Income earned through a permanent establishment in Armenia, net of tax-deductible expenses, is taxed at the regular corporate income tax rate of 20%. A permanent establishment is defined as

a fixed place of business activities in Armenia recognized by the tax authorities through which the enterprise wholly or partly carries on its business. It generally includes organizations or natural persons who represent foreign legal entities conducting commercial activities in Armenia. Domestic tax law and double tax treaties list activities that do not result in a taxable permanent establishment. Foreign legal entities deriving income from the source in Armenia without a permanent establishment there are subject to withholding tax on their Armenian-source income at a rate of 5%, 10% or 20% (see the withholding tax rates in Section A).

Armenian law allows foreign investment in various forms, including investment through wholly or partially foreign-owned subsidiaries, share participations in joint stock companies and joint ventures with Armenian legal entities and citizens, permanent establishments and other types of presence.

Tax rates. The regular corporate income tax rate is 20%. For investment funds, the corporate income tax rate is 0.01% of net assets.

The profits of resident taxpayers and/or groups of resident taxpayers that are implementing a government-approved exportation program are taxed at a rate of 5% or 2%, if the turnover of goods exported, services provided and works performed for nonresidents outside Armenia exceeds AMD40 billion or AMD50 billion, respectively, during the reporting year and if the following additional conditions are met:

- None of taxpayers from the group is engaged in the extraction of metallic mineral resources and/or the processing thereof, the processing and/or realization of precious stones, the manufacturing and/or realization of jewelry and precious metals, or the production and/or realization of goods that are subject to excise tax.
- Taxpayers of the group have received foreign currency equivalent to at least AMD40 billion in their bank accounts in Armenian resident banks from their operations in the exportation program during the reporting year.
- Taxpayers of the group have not received any income from the delivery of goods, performing of works or provision of services in Armenia during the reporting year.

Profits of resident taxpayers and/or groups of resident taxpayers that are implementing a government-approved program are taxed at a rate of 5% if they carry out an activity in the field of construction or installation exclusively outside Armenia.

Capital gains. No separate capital gains tax is imposed in Armenia. Realized capital gains are included in taxable income and are subject to tax at the regular corporate income tax rate.

Realized capital losses can be carried forward together with other losses and be offset against taxable income of future tax years.

Administration. The tax year is the calendar year.

Both Armenian and foreign legal entities conducting business activities in Armenia through a permanent establishment must make advance payments of corporate income tax during the year. Armenian legal entities must make quarterly advance payments,

in the amount of 18.75% of the actual amount of the corporate income tax for the preceding year, by the 15th day of the last month of the quarter. Permanent establishments of foreign legal entities must make half-yearly advance payments in equal parts, in the amount of 1/4 of the corporate income tax for the preceding year, by 1 July and 31 December of the tax year.

Effective from 1 January 2017, both Armenian and foreign legal entities conducting business activities in Armenia through a permanent establishment can make quarterly advance payments of corporate income tax in the amount of 2% of revenues from the provision of goods and rendering of services during the preceding quarter if, before 20 March of the current tax year, they submit an application to the tax authorities to choose this alternative method for calculating advance payments of corporate income tax.

Permanent establishments of foreign legal entities are not required to make advance payments if their corporate income tax for the preceding year was less than AMD2 million.

If the total sum of advance payments exceeds the tax due for the tax year, the excess shall be refunded to the taxpayer according to the Law of Armenia "On Taxes" if the taxpayer applies for a refund. However, in practice, refunds are rare, and accordingly taxpayers apply overpayments against future tax liabilities.

The annual corporate income tax calculation must be filed and submitted to the Tax Inspectorate by 15 April of the year following the tax year. The corporate income tax must be paid to the state budget by 25 April of the year following the tax year.

Fines are charged on late tax payments at a rate of 0.15% of the tax due for each day of delay, up to a maximum of 365 days. If the taxpayer fails to submit the corporate income tax declaration to the Tax Inspectorate by the due date, a penalty equal to 5% of the total amount of calculated tax is imposed on the taxpayer for each 15-day period. The total amount of the penalties cannot exceed the total amount of the principal tax liability. For the underreporting of taxable income, a penalty equal to 50% of the underreported amount is assessed to the taxpayer. For the overreporting of losses in the corporate income tax calculation filed with the Tax Inspectorate, the taxpayer is subject to a penalty equal to 20% of the overreported loss. If a taxpayer fails to keep accounts or incorrectly prepares accounting reports, calculations, returns, and other documents and information stipulated by the tax law, a penalty equal to 10% of the amount of the reduction in calculated tax resulting from these violations is imposed on the taxpayer.

Dividends. Dividend withholding tax at a rate of 10% is imposed on dividends paid from Armenian sources to nonresident legal entities. Dividends paid to individuals and resident legal entities are not subject to withholding tax. Dividends received by resident taxpayers from participations in the equity of other legal entities or enterprises that do not have the status of a legal entity are not subject to tax.

Dividends declared on or after 1 January 2017 are considered to be paid on the date of the shareholders' decision on the distribution of dividends from the reporting year's net profit, but no later than 30 June of the year following the reporting year.

Interest. Interest withholding tax at a rate of 10% is imposed on interest paid from Armenian sources to individuals and nonresident legal entities. Armenian legal entities receiving interest payments include such payments in their taxable income and are subject to tax on these payments at the normal corporate income tax rate.

Foreign tax relief. The amount of corporate income tax withheld from Armenian residents in foreign countries in accordance with the laws of the foreign countries is credited against the corporate income tax payable in Armenia. However, the amount of the credit may not exceed the amount of the corporate income tax payable in Armenia on the income received in the foreign country. If the amount of the credit exceeds the corporate income tax liability for the tax year, the excess amount may be credited against the corporate income tax in subsequent tax years.

C. Determination of taxable income

General. Taxable income is defined as a positive difference between gross income of the taxpayer and all deductions allowed by the law.

Gross income comprises all revenues of the taxpayer received in the reporting year, except for revenues that are not treated as income according to the law. Gross income includes the following:

- Trading income
- Capital gains
- Income from financial activities
- Gratuitously received assets and income from discounts or remissions of liabilities
- Other items of income

Income received in foreign currency is converted into drams at the daily exchange rate determined by the Central Bank of Armenia for the date of receipt of the income.

Deductible expenses include all necessary and documentary supported expenses that are exclusively and directly related to the conducting of business and the receiving of income. However, certain expenses are nondeductible or partially nondeductible for tax purposes.

Nondeductible expenses include the following:

- Fines, penalties and other proprietary sanctions transferred to the state and municipal budgets
- Assets provided free of charge and remitted debts
- Allocations provided for unions and other structures of non-state administration
- Expenses for the maintenance of servicing units (free provision of buildings and the settling of fees for utilities of public catering enterprises)
- Expenses for services that are not related to the production of goods (for example, planning activities for towns and other populated areas and promotion of agricultural activities)
- Expenses related to the obtaining of income that is deductible from gross income
- For taxpayers other than banks, credit organizations, insurance companies and investment funds, interest paid on loans and

borrowings if such borrowings or loans are provided by the taxpayers to third parties free of interest

- Payments made by taxpayers for leased assets if the assets are provided by them to third parties for free-of-charge use

Partially nondeductible expenses include the following:

- Payments levied by the state for pollution of the environment that exceed 0.5% of gross income for the tax year.
- Expenses for advertisements outside Armenia that exceed 3% of the gross income for the tax year or 20% of the value of goods and services exported by the taxpayer during the tax year.
- Expenses for the training of staff outside Armenia that exceed 4% (but not more than AMD3 million per employee) of the gross income for the tax year.
- Expenses for additional training of staff outside Armenia that exceed 1% (but not more than AMD1 million per employee) of the gross income for the tax year.
- Expenses for marketing outside Armenia that exceed 2% of the gross income for the reporting year, 15% of the value of services and goods exported by the taxpayer during the tax year or 5% of the value of goods imported by the taxpayer during the tax year.
- Expenses for business trips outside Armenia that exceed 5% of the gross income for the tax year.
- Representative expenses exceeding 0.5% (but not more than AMD5 million) of the gross income for the tax year.
- Fees paid by the taxpayer for management services received from nonresident companies, foreign citizens and stateless persons, exceeding 2% of the taxpayer's gross income for the reporting year. This measure does not apply to management services rendered to resident companies by their nonresident founders if the companies are engaged in innovative activities in the information technology and computer technique fields, as well as management services rendered to resident companies within the framework of international credit agreements.
- Payments made by the employer for an employee that are within the terms of voluntary pension insurance in accordance with the legislation and that exceed 5% of the employee's remuneration.
- Other expenses exceeding the rates established by the government of Armenia (daily expenses for local trips, expenses for sponsorship and management services, expenses for special nutrition, uniforms and other equipment for employees as well as other types of compensation defined by the law and expenses for the maintenance of public health institutions, nursing homes for the aged and disabled, nurseries, rehabilitation camps, cultural, educational and sports institutions and objects of the housing fund).
- Interest paid on loans and borrowings to the extent that it exceeds twice the bank interest rate defined by the Central Bank of Armenia (currently the deduction is limited to a rate of 24%).
- Current repair expenses for fixed assets that exceed 10% of the initial (purchase) cost of the corresponding fixed asset. Any excess is subject to capitalization and is included in the base for depreciation purposes.
- For taxpayers other than banks and credit organizations, the amount of interest payable on borrowings from entities other than banks and credit organizations in excess of twice the net assets.

- For banks and credit organizations, the amount of interest payable on borrowings from entities other than banks and credit organizations in excess of nine times the net assets.

To calculate taxable income, the taxpayer must account for income and expenses on an accrual basis. Income and expenses are accounted for, respectively, from the moment of the acquisition of the right to receive such income or to recognize the expenses, regardless of the actual period of the deriving of such income or the making of such payments.

Inventories. Inventories are valued at acquisition cost. Costs for storage and transportation must be included in the value of inventory. The first-in, first-out (FIFO) method may be used to value inventory.

Provisions. Bad debts are deductible in accordance with the procedure established by the government of Armenia. Banks, lending organizations, investment companies and insurance companies may deduct bad debts in accordance with the procedure established jointly by the authorized body of the government of Armenia and the Central Bank of Armenia.

In addition, the gross income of banks, lending organizations, stock funds, investment companies or insurance companies may be reduced by a reserve for possible losses in accordance with the procedure established jointly by the authorized body of the government of Armenia and the Central Bank of Armenia.

Tax depreciation. Depreciation allowances for fixed and intangible assets are deductible for tax purposes in accordance with the terms and conditions provided by the corporate income tax law of Armenia.

Fixed and intangible assets acquired before 1 January 2014. The annual amount of depreciation allowances of fixed assets acquired before 1 January 2014 is calculated by dividing the initial cost or revalued cost (the revaluation is carried out according to the procedure established by the law) by the number of years in the depreciation period for the appropriate group of fixed assets or for intangible assets. The following are the minimum depreciation periods.

Group	Assets	Minimum depreciation period (years)
1	Buildings and constructions of hotels, boarding houses, rest homes, sanitariums and educational institutions	10
2	Other buildings, constructions and transmission devices	20
3	Robot equipment and assembly lines	3
4	Calculating devices and computers	1
5	Other fixed assets, including growing cattle, perennial plants, and investments intended for improving the land	5

For purposes of the determination of taxable income, taxpayers may choose a depreciation period for fixed assets other than the periods mentioned in the above table, but the chosen period may not be less than one of the above-mentioned periods for the appropriate group.

The minimum depreciation period for the buildings, constructions and transmission devices located in a disaster area is one year.

The minimum depreciation period for fixed assets with a value of less than AMD50,000 is one year.

Intangible assets acquired before 1 January 2014 are amortized over their useful economic lives. If it is impossible to determine the useful life of an intangible asset, the minimum amortization period for the asset is set at 10 years, but it may not exceed the period of the taxpayer's activity.

Under the law, land cannot be depreciated.

Fixed and intangible assets acquired on or after 1 January 2014. The annual amount of depreciation allowances of fixed assets acquired after 1 January 2014 is calculated by multiplying the net book (residual) value (as at the last day of reporting period) of each group of fixed assets by the annual depreciation rate for the appropriate group of fixed assets. The following are the annual maximum depreciation rates for each group of fixed assets.

Group	Assets	Maximum annual depreciation rate (%)
1	Buildings and constructions of hotels, boarding houses, rest homes, sanitariums and educational institutions	15
2	Other buildings, constructions and transmission devices	7.5
3	Robot equipment and assembly lines	50
4	Calculating devices and computers	100
5	Other fixed assets, including growing cattle, perennial plants, and investments intended for improving the land	30

For purposes of the determination of taxable income, taxpayers may choose an annual depreciation rate for fixed assets other than the rates mentioned in the above table, but the chosen rates may not exceed one of the above-mentioned rates for the appropriate group.

The maximum annual depreciation rate for buildings, constructions and transmission devices located in a disaster area is 100%.

The maximum annual depreciation rate for a group of fixed assets with a book (residual) value of less than AMD50,000 (as of the last day of reporting period) is 100%.

Intangible assets are amortized over their useful economic lives. If it is impossible to determine the useful life of a group of intangible asset, the maximum annual amortization rate is set 20%, but

it may not be less than the rate calculated based on the period of the taxpayer's activity.

Relief for losses. Enterprises may carry forward a loss incurred in a tax year to the following five years. Losses may not be carried back.

Groups of companies. Armenian law does not contain any measures allowing members of a group to offset profits and losses.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT); imposed on the delivery of goods and rendering of services, free or partially free consumption and the importation of goods through the "Release for Domestic Consumption" customs procedure, with the exception of cases specified by law; reverse-charge VAT is imposed on entrepreneurial activities subject to VAT that are performed in Armenia by foreign entities (including the import of goods to be used by such entities)	0/20
Excise tax; imposed on certain goods (tobacco products, alcoholic beverages, petrol, diesel fuel and motor oils imported or produced in Armenia, as well as natural gas filled in gas stations; the tax is calculated as a specified amount per unit or as a certain percentage of the price of goods subject to excise tax)	Various
Property tax; generally imposed at local (municipal) level	
Buildings and constructions; tax base is cadastral value	0.1 to 1
Vehicles; tax base is traction-motor power	Various

Land tax is also generally imposed at the local level in Armenia.

E. Foreign-exchange controls

The Armenian currency is the dram (AMD). The dram is a non-convertible currency outside Armenia. Enterprises may buy or sell foreign currencies through specialized entities in Armenia (banks, branches of foreign banks operating in Armenia, credit organizations, payment and settlement organizations, foreign-currency dealers and brokers licensed by the Central Bank of Armenia, foreign-currency exchange offices and foreign-currency auction organizers).

Armenia does not impose restrictive currency-control regulations. Individuals and enterprises may open bank accounts abroad without any restriction if they declare such accounts with the tax authorities. In general, all transactions performed in Armenia between resident legal entities or individuals must be performed in Armenian drams. Transactions between resident legal entities or private entrepreneurs and nonresident legal entities or private entrepreneurs may be conducted in other currencies.

F. Treaty withholding tax rates

Armenia has entered into tax treaties with 42 countries. The following table lists the withholding tax rates under these treaties. In general, if the withholding tax rate provided in a treaty exceeds the rate provided by the Law of Armenia on "Corporate income tax," the domestic rate applies.

	Dividends %	Interest (1) %	Royalties %
Austria	5/15 (a)	0/10 (v)	5
Belarus	10/15 (b)	10	10
Belgium	5/15 (a)	0/10 (v)	8
Bulgaria	5/10 (c)	10	10
Canada	5/15 (d)	10	10
Czech Republic	10	5/10 (e)	5/10 (f)
China	5/10 (g)	10	10
Croatia	0/10 (h)	10	5
Cyprus	0/5 (x)	5	5
Estonia	5/15 (i)	10	10
Finland	5/15 (i)	5	5/10 (j)
France	5/15 (k)	0/10 (v)	5/10 (l)
Georgia	5/10 (g)	10	5
Germany	15	5	0
Greece	10	10	5
Hungary	5/10 (g)	10	5
India	10	10	10
Indonesia	10/15 (dd)	0/10 (ee)	10
Iran	10/15 (m)	10	5
Ireland	0/5/15 (bb)	5/10 (cc)	5
Italy	5/10 (n)	0/10 (w)	7
Kazakhstan	10	10	10
Kuwait	5	5	10
Latvia	5/15 (i)	10	10
Lebanon	5/10 (g)	8	5
Lithuania	5/15 (i)	10	10
Luxembourg	5/15 (a)	10	5
Moldova	5/15 (o)	10	10
Netherlands	5/10 (p)	0/5 (v)	5
Poland	10	5	10
Qatar	5/10 (q)	5	5
Romania	5/10 (r)	10	10
Russian Federation	5/10 (s)	0	0
Slovenia	5/10 (g)	10	5
Spain	0/10 (y)	5	5/10 (z)
Switzerland	5/15 (t)	0/10 (v)	5
Syria	10	10	12
Thailand	10	10	10
Turkmenistan	5/15 (u)	10	10
Ukraine	5/15 (u)	10	0
United Arab Emirates	3	0	5
United Kingdom	0/5/10/15 (aa)	5	5
Non-treaty countries	10	10	10

- (1) In several treaties, a 0% rate applies to interest paid to governmental entities, political or administrative-territorial subdivisions, local authorities, central banks or financial institutions owned or controlled by the government. This provision is not reflected in the rates shown in the table.

- (a) The 5% rate applies if the actual owner of the dividends is a company (other than a partnership) that directly holds at least 10% of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (b) The 10% rate applies if the actual owner of the dividends is a company (other than a partnership) that directly holds at least 30% of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (c) The 5% rate applies if the actual owner of the dividends is a company that has invested in the payer more than USD40,000 (or the equivalent amount in Armenian currency). The 10% rate applies in all other cases.
- (d) The lower rate applies if the beneficial owner of the dividends is a company that holds directly at least 25% of the capital of the company paying the dividends and if the capital invested by the beneficial owner exceeds USD100,000 (or the equivalent amount in Armenian currency) on the date of declaration of the dividends. The 15% rate applies in all other cases.
- (e) The 5% rate applies to interest on loans or credits granted by banks.
- (f) The 5% rate applies to royalties for the use of, or the right of use, literary, artistic or scientific works, including television or radio content (films and compact discs). The 10% rate applies in all other cases.
- (g) The 5% rate applies if the actual owner of the dividends is a company (other than a partnership) that directly holds at least 25% of the capital (assets) of the company paying the dividends. The 10% rate applies in all other cases.
- (h) The 0% rate applies if the actual owner of the dividends is a company that directly or indirectly holds at least 25% of the capital of the company paying the dividends for a minimum period of two years before the payment of the dividends and if the dividends are not subject to tax in Croatia. The 10% rate applies in all other cases.
- (i) The 5% rate applies if the actual owner of the dividends is a company (other than a partnership) that directly holds at least 25% of the assets of the company paying the dividends. The 15% rate applies in all other cases.
- (j) The 5% rate applies to the royalties for the use of, or the right of use, computer software, patents, trademarks, designs or models, plans or secret formulas or processes, or for information concerning industrial, commercial or scientific experience (know-how). The 10% rate applies in all other cases.
- (k) The 5% rate applies if the actual owner of the dividends is a company that directly or indirectly holds at least 10% of the assets of the company paying the dividends. The 15% rate applies in all other cases.
- (l) The 5% rate applies to the royalties for the use of, or the right to use, copyrights. The 10% rate applies in all other cases.
- (m) The 10% rate applies if the actual owner of the dividends is a company (other than a partnership) that owns at least 25% of the assets of the company paying the dividends. The 15% rate applies in all other cases.
- (n) The 5% rate applies if the actual owner of the dividends is a company that directly holds at least 10% of the capital of the company paying the dividends for a minimum period of 12 months before the date of declaration of the dividends and if the capital invested by the beneficial owner exceeds USD100,000 or the equivalent amount in Armenian currency. The 10% rate applies in all other cases.
- (o) The 5% rate applies if the actual owner of the dividends is a company (other than a partnership) that holds at least 25% of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (p) The 5% rate applies if the actual owner of the dividends is a company (other than a partnership) that directly holds at least 10% of the capital of the company paying the dividends. The 15% rate applies to dividends in all other cases.
- (q) The 5% rate applies if the capital invested by the actual owner of the dividends exceeds USD100,000. The 10% rate applies in all other cases.
- (r) The 5% rate applies if the actual owner of the dividends is a company that directly holds at least 25% of the assets of the company paying the dividends. The 10% rate applies in all other cases.
- (s) The 5% rate applies if the actual owner of the dividends is a company that directly holds at least 25% of the share capital of the company paying the dividends. The 10% rate applies in all other cases.
- (t) The 5% rate applies if the actual owner is a company (other than a partnership) that directly holds at least 25% of the capital of the company paying the dividends and if the capital invested by the beneficial owner exceeds CHF200,000 (or the equivalent amount in Armenian currency) on the date of receipt of the dividends. The 15% rate applies in all other cases.
- (u) The 5% rate applies if the actual owner of the dividends is a company that owns at least 25% of the capital of the company paying the dividends. The 15% rate applies in all other cases.

- (v) The 0% rate applies to interest connected to sales on credit of industrial, commercial or scientific equipment or business assets, and to interest on loans granted by banking enterprises.
- (w) The 0% rate applies to the interest on loans granted by banking enterprises.
- (x) The 0% rate applies if the capital invested by the actual owner of the dividends exceeds EUR150,000. The 5% rate applies in all other cases.
- (y) The 0% rate applies if all of the following conditions are satisfied:
- The beneficial owner of the dividends is a resident of the other contracting state.
 - The beneficial owner of the dividends has held, directly or indirectly, at least 25% of the capital of the company paying the dividends for at least two years before the date of such payment.
 - Such dividends are not liable to profit tax in the other contracting state.
- (z) The 5% rate applies to royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films or films or tapes used for radio or television broadcasting. The 10% rate applies in all other cases.
- (aa) The 0% rate applies if the beneficial owner of the dividends is a pension scheme. The 5% rate applies if the beneficial owner of the dividends satisfies all of the following conditions:
- It is a company that is a resident of the other contracting state.
 - It holds, directly or indirectly, at least 25% of the share capital of the company paying the dividends at the date of payment of the dividends.
 - It has invested at least GBP1 million (or the equivalent amount in any other currency) in the share capital of the company paying the dividends at the date of payment of the dividends.
- The 15% rate applies if dividends are paid out of income (including gains) derived directly or indirectly from immovable property within the meaning of Article 6 by an investment vehicle that distributes most of this income annually and if such vehicle's income from this immovable property is exempted from tax. The 10% rate applies in all other cases.
- (bb) The 0% rate applies if the beneficial owner is a company (other than a partnership) that satisfies the following conditions:
- It holds directly at least 25% of the capital of the company paying the dividends.
 - It owned the holding for a period of at least two years before it made the claim for the 0% rate.
 - In the contracting state in which the company is resident, the company is relieved from tax on dividends by an exemption or would, but for this measure in the tax treaty, be entirely relieved by a credit for tax paid with respect to dividends paid by the company paying the dividends.
- The 5% rate applies if the beneficial owner is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (cc) The 5% rate applies if interest is paid with respect to loans granted by banking enterprises. The 10% rate applies in all other cases.
- (dd) The 10% rate applies if the beneficial owner of the dividends is a company that holds directly at least 25% of the equity capital of the company paying the dividends. The 15% rate applies in other cases.
- (ee) The 0% rate applies to interest derived by the government including local authorities thereof, administrative-territorial subdivisions, the central bank or any financial institution controlled by the government, the capital of which is wholly owned by the government, as may be agreed upon from time to time between the competent authorities of the contracting states.

A. At a glance

Corporate Income Tax Rate (%)	25
Capital Gains Tax Rate (%)	25
Branch Tax Rate (%)	25
Withholding Tax (%)	
Dividends	0/5/10 (a)
Interest	0
Royalties from Patents, Know-how, etc.	0
Foreign-Exchange Commission	1.3 (b)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) The 0% rate applies to dividends paid to resident holding companies. The 5% rate applies to dividends paid to nonresident publicly traded companies and to dividends paid on qualifying shareholdings under applicable tax treaties. The 10% rate applies in all other circumstances.
- (b) A foreign-exchange commission is imposed on all payments by residents to nonresidents. The commission is withheld by banks on behalf of the Central Bank of Aruba.

B. Taxes on corporate income and gains

Corporate income tax. Corporate income tax is levied on resident and nonresident entities. A domestic entity is an entity that is established in Aruba or incorporated under Aruban law.

Tax is levied on total profits earned from all sources during the company's accounting period. "Profit" means the total of net gains, under any name or in any form. Branches of foreign entities are taxed on Aruban-source income, such as profits earned through a permanent establishment.

Permanent establishment. A permanent establishment is deemed to exist in Aruba in the case of the following:

- A permanent representative in Aruba.
- A foreign enterprise that builds, installs, maintains, cleans or repairs capital assets on Aruba for more than 30 days. These 30 days include, among others, days spent on the technical preparation and cleaning up of the site.

Rates of corporate income tax. As of 1 January 2016, the corporate income tax rate is 25% (before that date, it was 28%).

Special tax regimes for certain companies. Special tax regimes available for certain companies in Aruba are described below.

Free-Zone Companies. Companies operating in the free zone are subject to corporate income tax at a rate of 2% on profits derived from their qualifying activities and to a free-zone facility charge of up to 0.75% on their annual gross turnover. The free zone is a defined territory in which no import duties are levied if the goods are not imported for use in the domestic market. In addition, the following benefits are available to free-zone companies:

- Free-zone companies are not subject to turnover tax with respect to the delivery of goods outside Aruba and the rendering of services to persons outside Aruba.
- Free-zone companies could be exempted from the foreign-exchange commission on request.
- A 0% dividend withholding tax rate applies.

Imputation Payment Companies. Imputation Payment Companies (IPCs) were subject to the regular corporate tax rate (see *Rates of corporate income tax*). Under the IPC regime, part of the corporate income tax paid by a company was remitted to its shareholders in the form of an imputation payment. The IPC regime was available to all companies conducting qualifying activities such as hotel, financing, licensing or investment activities. The IPC regime was abolished as of 2016. However, existing IPCs can continue making use of this regime until 2026.

Special Purpose Companies. Special Purpose Companies (SPCs) were introduced as of 2016. In principle, qualifying SPCs are subject to a corporate income tax rate of 10%. However, for companies performing qualifying hotel operations, the applicable corporate tax rate can be 10%, 12% or 15%. In addition, SPCs are exempt from dividend withholding tax. SPCs may engage only in the following qualifying activities (in some cases, they must meet certain additional requirements):

- Hotel operations
- Aviation operations
- Shipping operations
- Generation of sustainable energy
- Activities that enhance the knowledge economy
- Scientific activities
- Developing, acquiring, holding, maintaining and licensing intellectual and industrial rights, similar rights and usage rights
- Insuring special entrepreneurial risks (activities of captive insurance companies)

- Financing that is different from the financing offered by credit institutions
- Making portfolio investments (other than in real estate)
- Holding of shares and participation rights

Aruba Exempt Companies. An Aruba Exempt Company is exempt from corporate income tax and withholding tax on dividends paid if it performs one of the following activities:

- Financing (if the company does not qualify as a credit institution)
- Investing, other than in real estate
- Holding of shares and participation rights
- Licensing of intellectual and industrial rights, similar rights and usage rights

Fiscal transparency. Aruban limited liability companies can opt for fiscal transparency for Aruban corporate income tax and dividend withholding tax purposes within one month after incorporation. If fiscal transparency is granted, the limited liability company is treated as a partnership for Aruba income tax, corporate income tax and dividend withholding tax purposes; that is, only the partners can be taxed in Aruba on Aruban-source income.

It is also possible to obtain an advance ruling from the local tax authorities on the treatment of the local presence.

Branch profits tax. Branches of foreign companies are taxed at the same rate as resident companies. No additional withholding taxes are imposed on remittances of profits.

Capital gains. Capital gains are taxed as ordinary income. However, certain capital gains are exempt from corporate income tax under the participation exemption (see *Participation exemption*).

Administration. In principle, the corporate income tax return for the preceding accounting period must be filed and the corresponding corporate income tax due must be simultaneously paid within five months after the end of the accounting period.

Dividends. A 10% withholding tax is imposed on dividends distributed to nonresidents. The rate is reduced to 5% for dividends distributed to publicly traded companies. A 0% rate applies to dividends distributed to resident companies that qualify for the benefits of the participation exemption.

The Tax Regulation for the Kingdom of the Netherlands provides for special dividend withholding tax rates (see Section E).

Participation exemption. Aruban resident companies are exempt from corporate income tax on dividends and capital gains derived from shares with respect to qualifying participations. A qualifying foreign participation must satisfy both of the following conditions:

- The shares must not be held as inventory or as a portfolio investment.
- The participation must be subject to a tax on profits.

Foreign tax relief. Foreign tax relief is available through the Tax Regulation for the Kingdom of the Netherlands. Foreign tax relief is also available under the state decree for the avoidance of double taxation.

C. Determination of trading income

General. Commercial profits must be calculated in accordance with “sound business practice” and generally accepted accounting standards.

Inventories. Inventories are generally valued using the historical-cost, first-in, first-out (FIFO) or weighted average methods.

Depreciation. Depreciation may be calculated by the straight-line, declining-balance or flexible methods.

D. Miscellaneous matters

Foreign-exchange controls. The Central Bank of Aruba regulates the foreign-exchange market and carries out the necessary transactions as executor of exchange policy. Remittances abroad require an exchange license issued by the Central Bank of Aruba.

Debt-to-equity rules. Aruba does not impose a debt-to-equity ratio.

Controlled foreign companies. Aruba does not have specific controlled foreign company legislation. However, numerous measures limit tax deductions related to intercompany transactions that are not at arm’s length and intercompany transactions with low-taxed entities.

Transfer pricing. If a company or individual participates, directly or indirectly, in the management, supervision or the capital of two or more corporate entities, the conditions that apply to the supply of goods and the rendering of services between these related entities must be at arm’s length. These conditions are similar to the conditions that would have applied in transactions with unrelated parties. Information to substantiate arm’s-length transactions must include, among other items, the following:

- The agreement between the entities
- Transfer-pricing method that was chosen and why it was chosen
- How the consideration was determined

E. Tax treaties

Provisions for double tax relief are included in the Tax Regulation for the Kingdom of the Netherlands. These provisions avoid double taxation between the countries of the Kingdom of the Netherlands (Aruba, Curaçao, the Netherlands [including Bonaire, Sint Eustatius and Saba; these islands are known as the BES-Islands] and Sint Maarten) regarding taxes on income, capital and other items.

Under the Tax Regulation for the Kingdom of the Netherlands, the general withholding tax rate of 10% on dividend distributions from an entity resident in Aruba may be reduced to the following rates:

- 7.5% if the recipient of the dividends is a company that has capital divided in shares and that has a share interest in the nominal paid-up capital of the Aruba entity of at least 25%
- 5% if such recipient of the dividends is also subject to tax on profit at a rate of at least 5.5%

Effective from 10 October 2010, the Netherlands Antilles (which consisted of five island territories in the Caribbean Sea) was dissolved as a country. As a result, the island territories of Curaçao

and St. Maarten became autonomous countries within the Dutch Kingdom. The island territories of Bonaire, St. Eustatius and Saba (BES-Islands) have become a part of the Netherlands as extraordinary overseas municipalities.

The Tax Regulation for the Kingdom of the Netherlands remains in place until bilateral tax treaties have been concluded between the countries in the Dutch Kingdom.

Aruba has entered into tax information exchange agreements with Antigua and Barbuda, Argentina, Australia, the Bahamas, Bermuda, the British Virgin Islands, Canada, the Cayman Islands, Denmark, the Faroe Islands, Finland, France, Greenland, Grenada, Iceland, Mexico, Norway, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines, Spain, Sweden, the United Kingdom and the United States.

Aruba is recognized by the Organisation for Economic Co-operation and Development as a jurisdiction that has substantially implemented the internationally agreed tax standard and, as such, is white listed.

Australia is reforming its tax system through various tax reviews and government reform initiatives. As a result, various tax settings are changing over time. Because of these developments, readers should obtain updated information before engaging in transactions.

A. At a glance

Corporate Income Tax Rate (%)	30 (a)
Capital Gains Tax Rate (%)	30 (a)
Branch Tax Rate (%)	30
Withholding Tax (%)	
Dividends	
Franked	0 (b)
Unfranked	30 (c)
Conduit Foreign Income	0 (d)
Interest	
General	10 (e)
Interest Paid by Australian Branch of Foreign Bank to Parent	5 (f)
Interest (Debentures, State and Federal Bonds and Offshore Banking Units)	0 (g)
Royalties from Patents, Know-how, etc.	30 (h)
Construction and Related Activities	5 (i)
Fund Payments from Managed Investment Trusts	15 (j)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	Indefinite

- (a) From 1 July 2016, a 27.5% company tax rate applies to companies with less than AUD10 million of turnover. The corporate income tax rate will progressively decrease to 25% by 2026 for companies with less than AUD50 million of turnover.
- (b) Franking of dividends is explained in Section B.
- (c) This is a final tax that is imposed on payments to nonresidents only. A reduced rate (in recent treaties, reduced rates typically are 0%, 5% or 15%, depending on the level of ownership) applies to residents in treaty countries.
- (d) An exemption from dividend withholding tax applies to the part of the unfranked dividends that is declared in the distribution statement to be conduit foreign income.
- (e) In general, this is a final withholding tax that is imposed on payments to nonresidents only. However, withholding tax is imposed in certain circumstances on interest paid to residents carrying on business overseas through a permanent establishment (branch). Modern Australian tax treaties exempt government and unrelated financial institutions from withholding tax.
- (f) Interest paid by an Australian branch of a foreign bank to its parent is subject to a rate of 5% on the notional interest rate based on the London Interbank Offered Rate (LIBOR).

- (g) Unilateral exemptions from interest withholding tax are provided for certain publicly offered debentures, for state and federal government bonds and for offshore borrowing by offshore banking units.
- (h) In general, this is a final withholding tax imposed on royalties paid to non-residents. A reduced rate may apply to residents of treaty countries (the rate is 5% in recent treaties).
- (i) The filing of an Australian tax return to obtain a refund may be required if this withholding results in an overpayment of tax. A variation of the rate to mitigate the adverse cash flow impact is available to certain taxpayers that have previously filed tax returns in Australia.
- (j) Managed investment trusts that hold only energy-efficient commercial buildings constructed on or after 1 July 2012 may be eligible for a 10% withholding tax rate.

B. Taxes on corporate income and gains

Corporate income tax. An Australian resident corporation is subject to income tax on its non-exempt worldwide income. A non-resident corporation is subject to Australian tax only on Australian-source income.

Corporations incorporated in Australia are residents of Australia for income tax purposes, as are corporations carrying on business in Australia with either their central management and control in Australia or their voting power controlled by Australian residents.

Rates of corporate tax. Resident corporations are subject to tax at a rate of 30%. Income of nonresident corporations from Australian sources is similarly taxable at 30% if it is not subject to withholding tax or treaty protection. However, a nonresident corporation not operating in Australia through a permanent establishment is generally subject to tax only on Australian-source passive income, such as rent, interest, royalties and dividends.

A 28.5% rate (reduction of 1.5%) applies for years beginning on or after 1 July 2015 for eligible small business entities (aggregate turnover of less than AUD2 million). For corporations, capital gains are taxed at the relevant corporate income tax rate, with no reduced tax rates.

For business entities with turnover less than AUD10 million in 2016-17, a rate of 27.5% applies. A phased step-down to 25% over 10 years applies to companies with turnover up to AUD50 million.

For corporations, capital gains are taxed at the relevant corporate income tax rate, with no reduced tax rates.

Resource taxation. The Petroleum Resource Rent Tax (PRRT) is imposed at a rate of 40% on project profits from the extraction of non-renewable petroleum resources.

Before 1 July 2012, PRRT applied only to offshore projects (that is, companies undertaking petroleum activities in Commonwealth waters, excluding projects located in the North West Shelf and certain areas within the Australian/East Timor Joint Petroleum Development Area [JPDA]). From 1 July 2012, PRRT applies to all projects, including onshore petroleum projects and projects in the North West Shelf, but still excluding projects in the JPDA. Transitional measures apply to pre-existing projects.

The government initiated a review into the PRRT, crude oil excise and associated Commonwealth royalties. A report with recommendations for reform is due by April 2017.

The Mining Resources Rent Tax (MRRT), before its repeal effective from 1 October 2014, applied to iron ore and coal production, effective from 1 July 2012. The MRRT applied at a rate of 30%, less a 25% extraction allowance (resulting in an effective tax rate of 22.5%) on mining profits after allowance for certain operating and capital expenditure. A credit against MRRT was allowed for state royalties. MRRT was deductible for corporate income tax purposes.

An Exploration Development Initiative may allow mineral exploration companies undertaking greenfield minerals exploration (very broadly, companies with no assessable income from extracting minerals) in Australia to issue tax credits to shareholders for a portion of eligible exploration costs. However, tax credits available for issuance by all eligible companies in Australia are capped at AUD35 million for the 2016 income year and AUD40 million for the 2017 income year.

The cost of exploration rights and information first used for exploration, if the price paid reflects the value of resources already discovered, was (for costs prior to 14 May 2013) immediately deductible. Costs of acquiring exploration rights or information first used for exploration that are not eligible for an immediate deduction are depreciated over the lesser of 15 years or the effective life of the mine. Further rules were enacted to confirm the immediate deduction for farm-out arrangements, and also to clarify the treatment of interest realignments in joint venture common developments.

Carbon-pricing mechanism. Effective from 1 July 2014, the previous carbon-pricing mechanism was replaced by a Direct Action Plan.

Capital gains

Income and capital gains. Australia's tax law distinguishes income (revenue) gains and losses from capital gains and losses, using principles from case law. Broadly, capital gains and losses are not assessable or deductible under the ordinary income tax rules.

However, the capital gains tax (CGT) provisions in the tax law may apply. The CGT provisions apply to gains and losses from designated CGT events. Designated CGT events include disposals of assets, grants of options and leases, and events arising from the tax-consolidation rules (see Section C).

For CGT purposes, capital gains are calculated by identifying the capital proceeds (money received or receivable or the market value of property received or receivable) with respect to the CGT event and deducting the cost base. CGT gains are reduced by amounts that are otherwise assessable.

Special rules apply to assets acquired before 20 September 1985.

CGT deferrals or rollovers. CGT rollover relief may be elected for various transfers, restructures and takeovers, including scrip

takeovers. The effect of the relief is the deferral of taxation until a subsequent disposal or CGT event, if further rollover relief is not available. Transfers within a tax-consolidated group are ignored for tax purposes (see Section C).

Capital losses are deductible only from taxable capital gains; they are not deductible from ordinary income. However, ordinary or trading losses are deductible from net taxable capital gains.

Foreign residents and CGT. Foreign residents are subject to CGT if an asset is “taxable Australian property,” which includes broadly the following:

- Taxable Australian real property: real property located in Australia including a leasehold interest in land, or mining and quarrying or prospecting rights, if the minerals, petroleum or quarry materials are located in Australia.
- Indirect Australian real property interest: broadly, a non-portfolio interest in an Australian or foreign entity if more than 50% of the market value of the entity’s assets relates to assets that are taxable Australian real property. A law change was announced to introduce stricter asset valuation rules for mining rights and mining information, effective from 14 May 2013, to protect the integrity of the principal asset test. Integrity rules to prevent the double counting of intercompany assets apply to consolidated and multiple-entry consolidated groups (see *Tax consolidation* in Section C) from 14 May 2013 and to other entities from 13 May 2014.
- The business assets of an Australian permanent establishment.

Ten percent non-final withholding to support foreign resident CGT regime. Australia introduced a non-final 10% foreign resident CGT withholding obligation with respect to the purchase of certain direct or indirect taxable Australian property from foreign residents, effective from 1 July 2016. The rules apply to direct real property transactions with a value of AUD2 million or more, to certain indirect property transactions including company and trust interests and to options and rights to acquire such property or interests. These rules must be factored into all acquisition and disposal processes and allow for rate variations and declarations in some cases. Australian resident vendors of direct property must provide an Australian Tax Office (ATO) clearance certificate to not be subject to withholding.

CGT participation exemption for disposals of shares in foreign companies. The capital gain or capital loss derived by a company from the disposal of shares in a foreign company may be partly or wholly disregarded to the extent that the foreign company has an underlying active business, if the holder company held a direct voting interest in the foreign company of at least 10% for a period of at least 12 months in the 2 years before the disposal. This participation exemption can also reduce the attributable income arising from the disposal of shares owned by a controlled foreign company in another foreign company (see Section E).

Venture capital. Venture capital investment concessions from 1 July 2016 provide a 20% nonrefundable tax offset on investments in eligible innovation companies, capped at AUD200,000 per investor per year and a CGT exemption up to 10 years (provided that investments are held for at least three years).

Investors receive a 10% nonrefundable tax offset on capital invested in Early Stage Venture Capital Limited Partnerships (ESVCLPs) registered on or after 7 December 2015.

Administration. The Australian tax year ends on 30 June. For corporate taxpayers with accounting periods ending on other dates, the tax authorities may agree to use a substituted accounting period (SAP).

In general, companies with an income year-end of 30 June must file an annual income tax return by the following 15 January. Companies granted permission to adopt a SAP must file their returns by the 15th day of the 7th month after the end of their income year.

Under a pay-as-you-go installment system, companies with turnover of AUD20 million or less continue to make quarterly payments of income tax within 21 days after the end of each quarter of the tax year. The amount of each installment is based on the income earned in the quarter. The installment obligations for larger companies with turnover in excess of AUD20 million involve monthly payments.

Three significant recent developments, which are discussed below, affect certain corporate tax entities with respect to public disclosures of their tax positions.

ATO reporting of selected tax data for larger companies. The ATO is required to publicly report selected tax data for all corporate entities paying MRRT and PRRT and selected income tax data for large corporate entities (turnover exceeding AUD100 million [or AUD200 million for Australian majority-owned private companies]). The ATO reports are made, broadly, in December and cover the data for the tax returns filed in the year ended 30 June of the preceding year. Some companies might want to consider supplementary disclosures in their own communications channels.

Voluntary Tax Transparency Code. In the 2016 budget, the Australian government encouraged larger companies to adopt a Voluntary Tax Transparency Code for income years ending from 3 May 2016. The Board of Taxation proposed that disclosures vary by companies' size with larger businesses to consider, in addition to reconciliations of accounting to tax aggregates, their tax policy, strategy, governance, total tax contribution and foreign related-party dealings. Business groups are encouraging companies to consider compliance; otherwise, statutory disclosure requirements might be introduced.

Requirement for some companies to file General Purpose Financial Statements. Significant companies (global turnover greater than AUD1 billion) with an Australian presence that do not file General Purpose Financial Statements (GPFS) with the Australian corporate regulator (Australian Securities and Investments Commission [ASIC]) are required to file GPFS with the ATO for income years commencing from 1 July 2016. The ATO is then required to forward such GPFS to the ASIC.

Dividends. Dividends paid by Australian resident companies are franked with an imputation credit (franking credit) to the extent that Australian corporate income tax has been paid by the company

on the income being distributed. Tax rules discourage companies from streaming imputation credits to those shareholders that can make the most use of the credits, at the expense of other shareholders.

A company may select its preferred level of franking with reference to its existing and expected franking account surplus and the rate at which it franked earlier distributions. However, under the “benchmark rule” for private companies, all distributions made within a franking period must generally be franked to the same extent.

The franking credit is intended to equal the tax paid by the paying entity. Enacted consequential amendments to the imputation rules for small business entities benefiting from the reduced corporate rate means that these companies must determine whether they frank at 27.5% or 30%, based on the prior year’s turnover. A problem arises in particular for companies with a turnover below AUD10 million in the year ended 30 June 2016 that have already paid dividends in the current year ended 30 June 2017 on the assumption of a 30% franking credit.

The consequences of receiving a franked dividend vary depending on the nature of the recipient shareholder.

A New Zealand company may choose to maintain an Australian franking account and attach Australian franking credits to dividends paid to Australian resident shareholders, for Australian company tax paid on that income.

Resident corporate shareholders. Franked distributions received by resident companies from other Australian resident companies are effectively received free from tax. A resident company receiving franked distributions grosses up the dividend amount received by the amount of its franking credit. The grossed-up amount is included in the assessable income of the recipient company. The recipient company is entitled to a tax offset (rebate) equal to the amount of the franking credit on the distribution that may be used against its own tax payable. In addition, the recipient company is allowed a franking credit in its own franking account, which may in turn be distributed to the company’s shareholders.

A resident company is subject to tax on unfranked dividends received, but special rules apply for certain income passed to non-resident shareholders (see *Nonresident shareholders: corporate and non-corporate*).

If a company’s entitlement to a tax offset exceeds its tax payable, it can convert the excess franking offset into an equivalent amount of tax loss. The tax loss may then be carried forward indefinitely for deduction in subsequent years.

Resident individual shareholders. The shareholder includes the dividend received plus the full imputation credit in assessable income. The imputation credit can be offset against personal tax assessed in the same year. Excess credits relating to dividends received are refunded to the shareholder.

Nonresident shareholders: corporate and non-corporate. Issues relevant to dividends and foreign shareholders include the following:

- Franked dividends paid to nonresidents are free from dividend withholding tax.
- Refunds of imputation credits are not available for nonresidents.
- If unfranked dividends are received and flowed on by an Australian company to its nonresident parent company, special rules may allow a broadly flow-through treatment. If the Australian company receives unfranked non-portfolio dividends (from holdings of at least 10% of the voting power in the company paying the dividends) and in turn pays a flow-on dividend to its nonresident parent company, the Australian company may be eligible for a deduction equivalent to the unfranked non-portfolio dividend. Various conditions must be satisfied.
- “Conduit foreign income” that flows through Australian companies to foreign investors may also achieve flow-through treatment. Broadly, “conduit foreign income” is foreign-source income earned by an Australian company that is not taxed in Australia. A distribution that an Australian corporate tax entity makes to a foreign resident is not subject to dividend withholding tax and is not assessable income, to the extent that the entity declares it to be conduit foreign income.

Foreign tax relief. Australian residents are subject to Australian tax on their worldwide income, but they may receive a foreign income tax offset (FITO) for foreign taxes paid on foreign-source income included in assessable income. FITOs must be used in the year in which the related foreign-source income is included in assessable income. Otherwise, they are lost without having provided any relief from double taxation. For controlled foreign companies (CFCs; see Section E), a modified system applies.

C. Determination of trading income

General. Taxable income is defined as assessable income less deductions. Assessable income includes ordinary income and statutory income (specifically listed in the tax law as being assessable income). Non-cash business benefits may be included as income in certain circumstances.

Australia’s tax law distinguishes income (revenue) gains and losses from capital gains and losses, using principles from case law. Broadly, capital gains and losses are not assessable or deductible under the ordinary income tax rules; however, the capital gains provisions in the tax law may apply (see Section B).

Broadly, the following types of income are not included in assessable income:

- Profits from foreign branches of Australian companies (other than, broadly, income that would be attributable under the CFC rules, see Section E).
- Amounts paid out of income previously taxed under the CFC rules (see Section E).
- Foreign equity distributions received by Australian corporate entities on participation interests. This covers dividends or non-share dividends received from a foreign company with respect to an interest in a company classified as equity under Australian tax rules, subject to a 10% participation requirement. Distributions received through interposed entities, such as trusts and partnerships, may now also be eligible.

Expenses. Expenses are deductible to the extent they are incurred in gaining or producing assessable income or are necessarily incurred in carrying on a business for the purpose of gaining or producing assessable income. However, expenses of a capital nature (except business black hole expenditure; see *Five-year deduction for black hole business expenditure*) and those incurred in the production of exempt income are not deductible. Apportionment of expenses having dual purposes is possible.

Fringe benefits tax (see Section D) is deductible. Entertainment expenses are not deductible unless they represent fringe benefits provided to employees. Penalties and fines are not deductible.

Under commercial debt forgiveness rules, the net amount of debts forgiven during an income year reduces the debtor's accumulated revenue tax losses, capital losses, certain undeducted expenditure and cost bases of assets.

Research and development. A tax credit system applies for research and development (R&D) expenditure. The incentives apply to companies incorporated in Australia for R&D conducted in Australia. The location of ownership of the resulting intellectual property is not a barrier to a tax concession.

Core and supporting R&D activities must be registered under the new R&D tax credit system. Supporting R&D activities must be directly related to core R&D activities. Activities that result in the production of goods or services are eligible only if they are undertaken for the dominant (or sole) purpose of supporting the core R&D activity (the "dominant purpose" test).

Eligible expenditure in excess of AUD20,000 is prima facie not deductible but gives rise to the following:

- Nonrefundable tax credits of 38.5% (formerly 40%) for large companies. Effective from 1 July 2016, R&D expenditure claims are capped at AUD100 million per taxpayer and, for expenditure above AUD100 million, companies can claim a 30% tax offset.
- For companies with group turnover of less than AUD20 million, refundable tax credits of 43.5% (formerly 45%), effective from 1 July 2016.

The above turnover thresholds also apply to local companies conducting foreign-owned R&D.

Debt and equity classification. Specific debt-and-equity rules focus on economic substance rather than on legal form. If the debt test is satisfied, a financing arrangement is generally treated as debt, regardless of whether the arrangement could also satisfy the test for equity. The test is complex and extends well beyond an examination of whether a borrower has a non-contingent obligation to repay an amount of principal.

The debt or equity classification affects the taxation of dividends (including the imputation requirements), payments received from nonresident entities, thin-capitalization regime, dividend and interest withholding taxes and related measures.

The tax debt and equity rules will be affected by Australia's planned adoption of changes recommended under the global Base Erosion and Profit Shifting (BEPS) Action Plan affecting hybrid financing. The 2016–17 Federal Budget announcement set the

start date as the later of 1 January 2018 or six months following the date of Royal Assent of the enabling legislation.

Financial arrangements. Extensive rules deal with the taxation of “financial arrangements” (as defined) for specified taxpayers.

The default methods are accruals and realization methods. These are supplemented by various methods available at a taxpayer’s election, using accounting approaches with respect to certain financial arrangements. The elective accounting methods include hedge treatment, fair-value reporting, retranslation for foreign-currency arrangements and, in certain cases, use of the values in financial reports for the financial arrangements.

Individuals are not mandatorily covered by these rules. Superannuation entities must apply the rules if the value of their assets exceeds AUD100 million. Approved deposit-taking institutions or securitization vehicles must apply the rules if their aggregate turnover exceeds AUD20 million. All other entities must apply the rules if either their aggregate turnover exceeds AUD100 million or if the value of their assets exceeds AUD300 million. Taxpayers not covered by the rules can nevertheless elect to apply the rules.

The rules apply to financial arrangements first held in income years beginning on or after 1 July 2010.

Foreign-exchange gains and losses. Rules for the tax treatment of foreign-currency gains and losses provide broadly the following:

- Foreign-currency gains and losses are brought to account when realized, regardless of whether an actual conversion into Australian currency occurs.
- Foreign-currency gains and losses generally have a revenue character.
- Specific translation rules apply to payments, receipts, rights and obligations denominated or expressed in a foreign currency.
- Functional-currency rules allow an entity that operates predominantly in a particular foreign currency to determine its income and expenses in that currency, with the net results being translated into Australian currency for the purposes of calculating its Australian income tax liability.

Inventories. In determining trading income, inventories may be valued at cost, market-selling value (the current selling value of an article of trading stock in the particular taxpayer’s trading market) or replacement price, at the taxpayer’s option. The last-in, first-out (LIFO) method may not be used. If the cost method is elected, inventories must be valued using the full-absorption cost method.

Provisions for future expenditure. Provisions for amounts not “incurred” during the year, such as leave entitlements of employees, are generally not deductible until payments are made. Similarly, provisions for doubtful trading debts are not deductible until the debt, having been previously brought to account as assessable income, becomes bad and is written off during an income year.

Capital allowances (depreciation)

Uniform capital allowance regime. Capital allowance rules allow a deduction for the decline in value of a “depreciating asset” held during the year.

A “depreciating asset” is defined as an asset with a limited effective life that may be expected to decline in value over the time it is used. Land, trading stock and intangible assets not specifically included in the regime are not considered to be depreciating assets.

The depreciation rate for a depreciating asset depends on the effective life of the asset. Taxpayers may choose to use either the default effective life determined by the tax authorities or their own reasonable estimate of the effective life. A taxpayer may choose to recalculate the effective life of a depreciating asset if the effective life that was originally selected is no longer accurate as a result of market, technological or other factors.

Taxpayer re-estimation of effective life is not available for certain intangible assets; the law prescribes their effective lives (for example, 15 years for registered designs or 20 years for standard patents). A bill before parliament introduces a choice to allow companies to self-assess the effective life of acquired intangible assets that is currently fixed by statute, for assets acquired from 1 July 2016. Statutory life caps that result in accelerated rates are provided for certain assets used in the oil and gas, petroleum, agricultural, and transport industries, and by irrigation water providers as well as for Australian-registered ships.

Taxpayers may choose the prime cost method (straight-line method) or the double diminishing value method (200% of the straight-line rate) for calculating the tax-deductible depreciation for all depreciating assets except intangible assets. For certain intangible assets, the prime cost method must be used.

The cost of a depreciating asset is generally the amount paid by the taxpayer plus further costs incurred while the taxpayer holds the asset. The depreciable cost of a motor car is subject to a maximum limit of AUD58,581 for the 2016–17 income year.

Pooling of assets may be chosen for pool assets costing more than AUD300 but less than AUD1,000 as well as assets that have been depreciated to less than AUD1,000. The pool balance is depreciable at a rate of 37.5% (18.75% for additions during the year), applying the declining-balance method. If the choice is not exercised, the relevant assets are depreciated on the basis of their respective effective lives.

Software development expenditure may be allocated to a software development pool. Beginning in the year following the year of the expenditure, the expenditure is deductible at a rate of 30% per year for three years, followed by a 10% rate in the final year. This change applies to expenditure incurred in income years beginning on or after 1 July 2015.

Construction of buildings. Capital expenditure on the construction of buildings and structural improvements may be eligible for an annual deduction of either 2.5% or 4% of the construction expenditure, depending on the type of structure and the date on which construction began. The 2.5% rate applies to construction begun after 15 September 1987.

Disposals of depreciable assets. For assets other than buildings, if the proceeds received on the disposal of an asset exceed its adjustable value, the excess is included in taxable income. If the

proceeds received on the disposal of an asset are less than its adjustable value, a deductible balancing adjustment is allowed.

Five-year deduction for black hole business expenditure. Certain types of business expenditure of a capital nature may be deducted under the capital allowance regime to the extent that the expenditure is not taken into account elsewhere in the income tax law and is not expressly nondeductible for tax purposes. This type of expenditure is known as “black hole business expenditure.” The deduction is available on a straight-line basis over five years. Expenditure qualifying for the deduction includes expenditure to establish or alter a business structure, expenditure to raise equity and expenditure in an unsuccessful takeover attempt or takeover defense. However, eligible small business taxpayers may be entitled to an immediate deduction for certain start-up costs incurred in income years beginning on or after 1 July 2015 that would have been otherwise classified as “black hole business expenditure.”

Relief for losses. Tax losses may be carried forward indefinitely against assessable income derived during succeeding years. A loss is generated after adding back net exempt income.

To claim a deduction for past losses, companies must satisfy either a continuity of ownership test (more than one-half of voting, dividend and capital rights) or a same business test. A modified continuity of ownership test applies to widely held companies. The modified rules simplify the application of the continuity test by making it unnecessary to trace the ultimate owners of shares held by certain intermediaries and small shareholdings. A bill before parliament introduces an alternative, more flexible “similar business test,” applying with respect to losses incurred in income years beginning on or after 1 July 2015.

Losses are generally not transferable to other group members other than within a tax-consolidated group (see *Tax consolidation*).

Designated infrastructure projects loss concessions. Companies that only carry on activities for certain designated infrastructure projects are not required to test the recoupment of losses incurred in the 2012–13 and following income years under the continuity of ownership or same business tests. The losses are also increased by the long-term government bond rate. Projects must be designated by Infrastructure Australia by 30 June 2017, and a cap of AUD25 billion on the value for all projects applies.

Tax consolidation. Tax consolidation is available for groups of wholly owned companies and eligible trusts and partnerships that elect to consolidate. Australian resident holding (head) companies and their wholly owned Australian resident subsidiary members of the group are taxed on a consolidated basis. Consolidation is desirable because no grouping concessions (such as the ability to transfer losses to other group members) are otherwise provided.

The head company becomes the taxpayer, and each subsidiary member of the group is treated as if it were a division of the head company. Transactions between members of a consolidated group are generally disregarded for Australian income tax purposes. The head company assumes the income tax liability and the associated income tax compliance obligations of the group.

Tax consolidation is also available for Australian entities that are wholly owned by a single foreign holding company. The resulting group is referred to as a multiple-entry company (MEC) group, which includes the Tier-1 companies (Australian resident companies directly owned by a foreign member of the group) and their wholly owned Australian resident subsidiaries. A Tier-1 company is selected as the head company. The types of entities that may be subsidiary members of an MEC group are generally the same as those for a consolidated group.

The consolidation rules are very significant for merger and acquisition and restructuring transactions. If a tax consolidated group acquires a “joining entity,” the tax cost base of the underlying assets of the joining entity is reset, under complex rules, which can affect the tax treatment of those assets (including the calculation of any tax deductions with respect to such assets). If an entity leaves a consolidated group, the group’s cost base of shares in the leaving entity is reset under specific exit rules. MEC groups are subject to cost base pooling rules to determine the cost base of shares in Tier-1 companies.

The tax-consolidation rules have been subject to various complex ongoing changes affecting ongoing tax positions. Notably, the treatment of rights to future income and residual assets when an entity joins a consolidated group was altered in 2010, and these changes were heavily modified in 2012 (transitional rules preserve aspects of the 2010 changes for some groups).

The government has proposed (not yet legislated at the date of writing) the following further integrity measures affecting acquisitions and divestments:

- Certain deductible accounting liabilities held by a “joining entity,” will be excluded from the allocable cost amount (ACA) calculation, relevant for resetting the tax cost of the entity’s assets, applicable from 1 July 2016.
- Deferred tax liabilities will be excluded from ACA calculations, effective from the date the law is introduced.
- “Churning” rules for foreign-owned groups, applicable from 14 May 2013, will prevent the tax cost of a joining entity’s assets from being reset if no tax is payable by a foreign resident owner on the disposal of the joining entity as a result of the application of the nonresident CGT participation exemption (Division 855), provided that no underlying majority change of ownership occurs.
- Intragroup asset tax costs (including financial arrangements) that are recognized when an entity leaves a consolidated or MEC group will be clarified, applicable from 14 May 2013.
- A loss-integrity rule will be introduced for eligible Tier-1 companies that join multiple MEC groups.

Assets that are subject to the taxation of financial arrangements rules (see *Financial arrangements*) are subject to separate tax consolidation interaction rules. These complex rules may affect transactions and reorganizations.

Demergers. Tax relief is available if eligible company or fixed-trust groups divide into two separately owned entities. The demerging company (or fixed trust) must dispose of at least 80% of its ownership interests in the demerged entity, and the underlying ownership interests must not change as a result of the demerger.

The rules provide investors optional CGT rollover relief, as well as dividend exemptions, which are available at the option of the demerging entity. The demerger group is also provided with limited CGT relief.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Goods and services tax	10
Fringe benefits tax on non-cash employee benefits	
From 1 April 2015 (under a Temporary Budget Repair Levy, the highest personal marginal income tax rate applicable for individuals is increased by two percentage points, effective from 1 July 2014 until 30 June 2017; a corresponding increase in the fringe benefits tax rate from 47% to 49% is effective from 1 April 2015 until 31 March 2017)	49
From 1 April 2017	47
Payroll taxes paid by employers (vary by state)	4.75 to 6.85

Customs duty is levied on imports of various products into Australia. Other significant taxes include stamp duty and land tax.

E. Miscellaneous matters

General anti-avoidance regime. Australia's general income tax anti-avoidance regime (GAAR, or Part IVA) complements specific anti-avoidance rules.

Part IVA has been expanded by the following two measures targeting significant multinational businesses:

- The Multinational Anti-Avoidance Law targeting certain schemes for avoidance of Australian permanent establishments
- The Diverted Profits Tax targeting certain international schemes with insufficient economic substance

Part IVA generally applies if, taking into account eight specified matters, it is determined that the dominant purpose of the parties entering into a scheme was to enable the taxpayer to obtain a tax benefit. If the Commissioner of Taxation makes a Part IVA determination, the tax benefit is denied, and significant penalties may be imposed.

Multinational Anti-Avoidance Law. The Multinational Anti-Avoidance Law (MAAL) is effective from 1 January 2016. Broadly, the MAAL targets schemes entered into by significant global entities (SGEs) with global turnover greater than AUD1 billion if all of the following apply:

- A foreign entity makes a supply of certain goods or services to an Australian customer.
- Activities are undertaken directly in Australia in connection with the supply by an Australian entity or permanent establishment that is an associate of or commercially dependent on the foreign entity.
- The foreign entity making the supply derives income, some or all of which is not attributable to an Australian permanent establishment of the foreign entity.

- Taking into account the relevant factors, it can be concluded that a principal purpose of the transaction is the enabling of a relevant taxpayer to obtain an Australian tax benefit and/or reduce tax liabilities arising under foreign law, including some deferrals of foreign taxes. A principal purpose is a lower threshold than the dominant purpose discussed in *General anti-avoidance regime*. Relevant factors include the role of the parties in the value chain and their capacity, staffing and resources to carry out their designated functions (to distinguish the parties from insubstantial parties).

Diverted Profits Tax. The Diverted Profits Tax (DPT), which applies for income years beginning on or after 1 July 2017, targets SGEs diverting profits from Australia. Under the DPT assessment, tax is payable on the amount of the diverted profits at a penalty rate of 40%. The DPT applies, very broadly, if the following conditions are satisfied:

- The relevant Australian entity or permanent establishment is an SGE for the year of income.
- A scheme exists, and the Australian taxpayer obtains a tax benefit in connection with the scheme (considering reasonable alternative situations).
- A foreign entity that is an associate of the relevant taxpayer entered into the scheme or is otherwise connected to the scheme.
- It is concluded that the scheme (or any part of a scheme) was carried out for a principal purpose of enabling the relevant taxpayer (and/or associate) to obtain a tax benefit, or both to obtain a tax benefit and reduce a foreign tax liability of an associate.

Exclusions apply if it is concluded that one of the following tests applies:

- The relevant Australian entity has income of less than AUD25 million.
- The increase of the foreign tax liability is equal to or exceeds 80% of the tax that would have otherwise been paid in Australia.
- The profit derived by each covered entity reasonably reflects the economic substance of the entity's activities in connection with the scheme.

Transfer pricing. Australia's transfer-pricing rules, updated in recent years, include measures to ensure that Australian taxable income associated with cross-border transactions is based on arm's-length prices. Several methods for determining the arm's-length price are available. The ATO provides guidance in a binding tax ruling on the appropriate methods, and taxpayers can enter into Advance Pricing Arrangements.

For transactions with parties entitled to benefit from foreign tax treaties, the law confirms the ATO view that Australia's tax treaties provide a separate and unconstrained transfer pricing taxing power.

The law allows the use of the Organisation for Economic Cooperation and Development (OECD) transfer-pricing guidance material, and it incorporates the 2010 OECD guidelines. The updated OECD Transfer Pricing Guidance, agreed to in October 2015 and arising from the OECD BEPS Action Plan, was incorporated into domestic law from 1 July 2016.

Australia's transfer-pricing rules are integrated into the self-assessment regime and require broad and timely documentation. The risk of transfer-pricing adjustments is magnified for companies that are involved in significant intragroup financing arrangements or business restructurings or that have losses or low levels of profits. Significant aspects include the following:

- The onus is on the Public Officer who signs the income tax return to confirm that the actual conditions are in line with arm's-length conditions. If the actual and arm's-length conditions do not align and if a transfer-pricing benefit is received, the taxpayer must adjust taxable income, tax losses or other tax attributes. Penalties apply for a false or misleading statement.
- As a basic rule, the arm's-length conditions should be based on the form and substance of the actual commercial or financial relations. However, documentation must address reconstruction, which refers to situations in which the transactions or arrangements actually entered into are ignored and (in some cases) other transactions or arrangements are substituted.
- Taxpayers are treated as not having a reasonably arguable position with respect to any international related-party transaction that is not appropriately documented at the time of the filing of the tax return. A transfer-pricing adjustment with respect to such undocumented transactions attracts a penalty of at least 25%. The penalties are doubled for income years beginning on or after 1 July 2015 for tax-avoidance and profit-shifting schemes, with respect to groups that have global turnover of greater than AUD1 billion. It is essential that appropriate transfer-pricing documentation be in place to have a reasonably arguable position.
- Adjustments can only be within seven years of the date on which the ATO gives the notice of assessment.

For business income tax returns, the International Dealings Schedule requires detailed disclosures designed to flag potential risk areas.

Country-by-Country Reporting. Australia is adopting Country-by-Country Reporting (CbCR) to align with recommendations under Action 13 of the OECD BEPS Action Plan, with the enactment of a law and the implementation by the ATO through administrative guidance developed over time. For income years beginning on or after 1 January 2016, certain multinational entities will be required to prepare and file the following with the ATO:

- A Country-by-Country Report in line with the OECD standards
- A Master File in line with the OECD standards
- A Local File with requirements that include providing electronic copies of related-party agreements

Guidance on when the ATO may exempt multinationals from any of the requirements is available, but the criteria are strict and applications will be dealt with on a case-by-case basis only.

Increased penalties for SGEs. Increased penalties for SGEs, which are applicable from 1 July 2017, have been enacted. The base penalty amount for late-filing penalties is multiplied by 500 (instead of much lower multipliers for non-SGE companies). These heavy penalties are designed to ensure compliance with new GPFS requirements (see *Requirement for some companies to file General Purpose Financial Statements* in Section B) or documents required

for CbCR, but the increased penalties are not limited to new reporting obligations for SGEs and can apply to any ATO approved form required to be filed by a SGE (for example, a tax return or activity statement), subject to ATO discretion to remit penalties. For example, if an SGE files an income tax return up to 28 days late, it may be subject to a late filing penalty of AUD105,000, or up to AUD525,000 if it is more than 112 days late (taking into account the proposed increase of the penalty unit amount from AUD180 to AUD210 from 1 July 2017).

Debt-to-equity (thin-capitalization) rules. Thin-capitalization measures apply to the total debt of Australian operations of multinational groups (including foreign and domestic related-party and third-party debt). In addition, the transfer-pricing measures may affect the deductions available for related-party debt.

Thin-capitalization. The thin-capitalization measures apply to the following:

- Foreign-controlled Australian entities and foreign entities that either invest directly into Australia or operate a business through an Australian branch (inward investing entities)
- Australian entities that control foreign entities or operate a business through an overseas branch (outward investing entities)

Exceptions to the thin-capitalization rules apply in either of the following circumstances:

- The total debt deductions of the taxpayer are AUD2 million or less for the year of income, effective from income years beginning on or after 1 July 2014 (previously AUD250,000).
- Australian assets account for 90% or more of total assets of outward investing entities (that are not also inward investing entities).

Debt deductions are partially denied if the company's adjusted average debt exceeds the maximum allowable debt.

In most cases, the maximum allowable debt is calculated by reference to the safe harbor debt amount. The safe harbor debt amount approximates a debt-to-equity ratio of 1.5:1 (or 60% debt-to-total-assets ratio). Separate methodologies apply to financial institutions or consolidated groups with at least one member classified as a financial entity.

Taxpayers can also determine the maximum allowable debt by reference to an arm's-length debt amount that is based on what amount an independent party would have borrowed from an independent lender. This determination requires the consideration of several factors.

Inward investors can also determine the maximum allowable debt of an Australian entity by reference to the group's worldwide gearing debt amount.

Transfer pricing. The transfer-pricing provisions apply to the pricing of related-party debt, even if an arrangement complies with the thin-capitalization rules. The ATO can substitute a hypothetical arm's-length capital structure to set an arm's-length interest rate if the amount of debt is considered not to be arm's length, even if the taxpayer is within the thin-capitalization safe harbor debt levels. The arm's-length interest rate is then applied to the actual amount of debt. ATO guidance on the application of the

transfer-pricing rules to related-party loans with zero interest is under review.

Controlled foreign companies. A foreign company is a CFC if five or fewer Australian residents hold at least 50% of the company or have de facto control of it, or if a single Australian entity holds a 40% interest in the company, unless it is established that actual control does not exist.

The tainted income of a CFC is attributed to its Australian resident owners, which are required to include such income in their assessable income. In general, the tainted income of a CFC is its passive income and income from certain related-party transactions.

Income is generally not attributable if the CFC passes an active-income test. To pass this test, the CFC's tainted income may not exceed 5% of the CFC's gross turnover.

Whether an amount earned by a CFC is attributable to Australian residents depends on the country in which the CFC is resident. The CFC rules identify "listed countries," which have tax systems that are considered to be closely comparable to the Australian system. The following are the "listed countries":

- Canada
- France
- Germany
- Japan
- New Zealand
- United Kingdom
- United States

All other countries are "unlisted countries."

Certain amounts are unconditionally attributed regardless of whether the CFC is resident in a listed or unlisted country.

If a CFC resident in a listed country fails the active-income test, its attributable income includes "adjusted tainted income," which is eligible designated concession income prescribed by the regulations on a country-by-country basis. This income includes items such as income subject to tonnage taxation or concessionally taxed capital gains.

If a CFC resident in an unlisted country fails the active-income test, its attributable income includes all of its adjusted tainted income, such as passive income (including tainted interest, rental or royalty income) and tainted sales or services income.

Income derived by a CFC is exempt from Australian income tax if it is remitted as dividends or non-share dividends made with respect to an interest in the company classified as equity under Australian tax rules to an Australian company.

Foreign investment fund rules. Foreign investment fund (FIF) rules dealing with attribution of income related to certain non-controlling interests were repealed and last applied to the 2009–10 income year. The FIF rules were to be replaced by a narrowly defined anti-avoidance measure targeting "interest-like returns in certain foreign entities," but this project has not progressed.

Value shifting. A general value-shifting regime applies to counter certain transactions involving non-arm's-length dealings between

associated entities that depress the value of assets for certain income tax and CGT purposes.

Withholding taxes. Interest, dividends and royalties paid to non-residents are subject to Australian withholding tax (also, see Section F for treaty withholding tax rates).

The 10% withholding tax rate on interest is generally the same as the rate prescribed by Australia's treaties (see Section F). However, modern treaties provide for a 0% rate for government and unrelated financial institutions. The interest paid by an Australian branch of a foreign bank to its parent is subject to a rate of 5% of the notional interest paid by the branch on internal funds of the foreign bank entity; the notional interest is limited by reference to the LIBOR. Unilateral exemptions from interest withholding tax are provided for certain publicly offered debentures, state and federal government bonds and offshore borrowing by offshore banking units.

For dividends paid, the withholding tax rate of 30% applies only to the unfranked portion of the dividend. A reduced rate applies if dividends are paid to residents of treaty countries. An exemption from dividend withholding tax applies to the part of the unfranked dividends that is declared in the distribution statement to be conduit foreign income.

A final withholding tax at a rate of 30% is imposed on gross royalties paid to nonresidents. The withholding tax rate is typically reduced under a double tax treaty.

A concessional withholding tax regime applies to distributions by eligible managed investment trusts (MIT) to nonresidents, other than distributions of dividends, interest and royalties. The withholding tax rate is 30%, but a reduced 15% rate applies if the nonresident's address or place of payment is in a country that is listed in the regulations as an "information exchange country" (see *Countries listed as "information exchange countries"*). MITs that hold only newly constructed energy efficient commercial buildings may be eligible for a 10% withholding tax rate.

A new taxation system for eligible MITs was introduced, effective from 1 July 2016, with an optional election to apply the rules from 1 July 2015. The new taxation system uses an "attribution model" to determine tax distributions from MITs that meet certain criteria. Specific rules deal with how this new system interacts with withholding tax obligations.

Australian investment manager regime (IMR) rules (including a third installment known as IMR3) allow certain foreign managed funds that have wide membership or use Australian fund managers, and their nonresident investors to qualify for income exemptions for certain income from qualifying investments (in particular, the income exemptions do not apply to income subject to withholding taxes). The IMR applies to conduit foreign income and to Australian-source income from certain passive investments and other financial arrangements for the 2015–16 income year and subsequent income years.

Countries listed as "information exchange countries." The concessional withholding tax rates for eligible MITs are restricted to investors in countries listed in the relevant regulation as an

“information exchange country.” At the time of writing, the regulation listed 60 countries, including the countries that have entered into double tax treaties with Australia, but the treaty countries of Austria, Chile, the Philippines, Switzerland and Turkey had not yet been listed.

Common Reporting Standard. Australia is adopting the international Common Reporting Standard (CRS) to apply to financial institutions, such as banks, asset managers, funds, custodians and certain insurance companies, from 1 July 2017 and to later calendar years. The initial exchange of information with foreign tax authorities is planned for 2018. Australia has begun bilateral talks with Singapore and Switzerland, but has not yet entered into any agreements for automatic exchange of CRS information.

Foreign-exchange controls. The Financial Transaction Reports Act 1988 requires each currency transaction involving the physical transfer of notes and coins in excess of AUD10,000 (or foreign-currency equivalent) between Australian residents and overseas residents, as well as all international telegraphic and electronic fund transfers, to be reported to the Australian Transaction Reports and Analysis Centre. This information is then available to the Commissioner of Taxation, Federal Police, Australian Customs Service and other prescribed law enforcement agencies.

Stronger focus of the Foreign Investment Review Board on tax issues. The Foreign Investment Review Board (FIRB) approval process for relevant foreign investments involves tax issues, and the ATO is playing a greater role. For approvals since 22 February 2016, the national interest test contains eight standard tax conditions plus possible additional conditions that may be imposed if a significant tax risk is identified by the FIRB and ATO. The expanded requirements do not only affect new foreign investment; they may also affect current inbound investors undertaking certain reorganizations. They increase the role of tax discussions in FIRB approval processes and may add time, particularly if the ATO requires further actions.

F. Treaty withholding tax rates

The table below provides treaty withholding tax rates for dividends, interest and royalties paid by Australian companies to non-residents.

Under Australian domestic law, certain dividends and interest payments to nonresidents are exempt from withholding tax.

For dividends, Australian domestic law provides that no withholding tax is imposed on dividends to the extent they are franked under Australia’s imputation system introduced in 1987 (see Sections B and E). Some of Australia’s double tax treaties specifically refer to withholding taxes imposed on franked dividends in some circumstances but, under the domestic tax law, dividend withholding tax is not imposed with respect to franked dividends.

For interest, Australia does not impose withholding tax on interest paid to nonresidents on certain publicly offered company debentures or on interest paid on state and federal government bonds. No withholding tax is imposed on interest paid on off-shore borrowings by offshore banking units.

	Unfranked dividends	Interest	Royalties
	%	%	%
Argentina	10/15 (b)	12	10/15 (c)

Non-treaty countries	30	10	30

- (a) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the rate is 0% or 5%, if the beneficial owner of the dividends is a company that holds at least 80% or 10%, respectively, of the voting power in the payer. In all other cases, the rate is generally 15%.
- (b) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a rate of up to 10% for franked dividends paid to a person holding directly at least 10% of the voting power in the payer). To the extent dividends are unfranked, the withholding tax rate is 15%, regardless of voting power.
- (c) The 10% rate applies to specified types of royalties.

- (d) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the rate is 25%, or 15% if a tax rebate or credit is granted against Australian tax to the beneficial owner of the dividends.
- (e) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a rate of up to 5% for dividends paid out of fully taxed profits if the recipient is a company that holds directly at least 10% of the capital of the payer). To the extent dividends are unfranked, the withholding tax rate is 15%, regardless of voting power.
- (f) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the 20% rate applies to dividends paid to a company that holds directly at least 25% of the capital of the payer of the dividends. The 15% rate applies if the condition described in the preceding sentence is satisfied and if the payer is engaged in an industrial undertaking.
- (g) The 0% rate applies to government institutions and unrelated financial institutions.
- (h) The 10% rate applies if any of the following conditions are satisfied:
- The recipient is a bank or insurance company.
 - The interest is derived from bonds and securities traded on a recognized securities market.
 - The payer is a bank or the purchaser of machinery and equipment with respect to a sale on credit.
- (i) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the 0% rate applies if the recipient of the dividends is a company holding directly at least 10% of the voting power in the payer, and the 15% rate applies in all other cases.
- (j) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a rate of up to 5% for dividends paid out of fully taxed profits to a company that holds at least 10% of the capital of the payer and that has invested at least AUD700,000 [or the equivalent in Russian rubles] in the payer). To the extent dividends are unfranked, the withholding tax is 15%, regardless of voting power.
- (k) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a rate of up to 5% for franked dividends if the beneficial owner of the dividends is a company that controls at least 10% of the voting power in the payer). To the extent dividends are unfranked, the rate is 15%, regardless of voting power.
- (l) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a rate of up to 5% for franked dividends). To the extent dividends are unfranked, the rate is 15%.
- (m) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a rate of up to 10% for franked dividends). To the extent dividends are unfranked, the rate is 15%.
- (n) The 10% rate applies to interest derived by financial institutions or insurance companies.
- (o) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the rate is 0% or 5% if the recipient holds at least 80% or 10%, respectively, of the voting power in the payer and 10% in other cases. However, a 15% withholding tax rate applies to fund payments from managed investment trusts but, under Australian law, this rate is reduced to 10% for funds payments by clean building managed investment trusts.
- (p) The withholding tax rates listed in the table apply to income derived by non-residents on or after 1 January 2015.
- (q) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a 0% rate if the dividends paid out of profits that have borne the full company tax and if the recipient is a company that holds directly at least 10% of the voting power of the payer). To the extent dividends are unfranked, the rate is 15%, or it is 5% if the dividends are paid to a company that holds at least 10% of the voting power of the payer.
- (r) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the rate on unfranked dividends is 15%, or 5% if the beneficial owner of the dividends is a company that holds directly at least 10% of the voting power of the company paying the dividend.
- (s) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the 5% rate applies to dividends paid by a company that is resident in Australia to a company (other than a partnership) that holds directly at least 10% of the voting power in the company paying the dividends. The 15% rate applies in all other cases.

- (t) Australia is renegotiating its double tax treaty with the United Kingdom. An exemption from withholding tax for interest payments to related financial institutions is one area for potential change. However, further details are not yet available.
- (u) These countries are not currently listed as “information exchange countries” (see Section E).
- (v) Interest derived from the investment of official reserve assets by the government of a contracting state, its central bank or a bank performing central banking functions in that state is exempt from tax in the other contracting state. The 10% rate applies in all other cases.
- (w) Australia has most-favored-nation clauses in its treaties with Austria, Finland, France, Italy, Korea (South), Malaysia, the Netherlands, Norway and Switzerland. Under the most-favored-nation clause, Australia and the other treaty country must try to renegotiate their tax treaties if the withholding tax rates in another of Australia’s tax treaties are lower.
- (x) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the 0% rate applies if the recipient holds at least 80% of the payer or if the dividends are paid with respect to portfolio investments by government bodies including government investment funds. The 5% rate applies if the recipient holds at least 10% of the payer. The 15% rate applies to other dividends.
- (y) The 0% rate applies to interest paid to government institutions and unrelated financial institutions. The 10% rate applies in all other cases.
- (z) The withholding tax rates listed in the table apply to income derived on or after 1 April 2013.
- (aa) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the 5% rate applies if the recipient beneficially owns at least 10% of the voting power in the company paying the dividends. The 15% rate applies in all other cases.
- (bb) The 5% rate applies if the recipient is a financial institution that is unrelated to and dealing wholly independently with the payer. The 10% rate applies in all other cases.
- (cc) The 5% rate applies to royalties paid for the use of, or the right to use, industrial, commercial or scientific equipment. The 10% rate applies to other royalties.
- (dd) An amending protocol to the treaty signed on 16 December 2011 entered into force on 2 April 2013. It updates various aspects of the agreement including cross-border services, source-country taxation and assistance in collection of taxes. However, it does not contain any changes to withholding tax rates.
- (ee) Australia and Switzerland signed a revised tax treaty, which entered into force on 14 October 2014. It applies to withholding taxes on income that is derived by a resident of Switzerland on or after 1 January 2015.
- (ff) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, a 0% rate applies to dividends paid to the following:
- Publicly listed companies or subsidiaries thereof, and unlisted companies in certain circumstances, that hold 80% or more of the paying company
 - Complying Australian superannuation funds and tax-exempt Swiss pension schemes that did not hold more than 10% of the direct voting power or capital in the company, respectively, during the preceding 12-month period
- The 5% rate applies to dividends paid to companies that hold 10% or more of the paying company. The 15% rate applies in all other cases.
- (gg) Under the revised treaty, the 0% rate applies to interest paid to the following:
- Bodies exercising governmental functions and banks performing central banking functions
 - Banks that are unrelated to, and dealing independently with, the payer
 - Complying Australian superannuation funds and tax-exempt Swiss pension schemes
- The 10% rate applies in all other cases.
- (hh) Under the revised treaty, royalties are taxed in the source (of the royalty) country at a rate of up to 5%. The revised definition of “royalties” in the revised tax treaty excludes the right to use industrial, commercial or scientific equipment from the definition, and accordingly, may lower the costs for companies that lease such equipment.
- (ii) The revised treaty between Australia and Germany entered into force on 7 December 2016 and applies for withholding taxes from 1 January 2017.
- (jj) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the rates are 0% if the recipient holds at least 80% of the voting power in the payer for at least 12 months, 5% if the recipient holds at least 10% for at least 6 months

(including the date of payment) and 10% in other cases. However, a 15% withholding tax rate applies to fund payments from managed investment trusts but, under Australian law, this rate is reduced to 10% for funds payments by clean building managed investment trusts.

- (kk) The 0% rate applies if the interest is derived by bodies exercising governmental functions or performing central banking functions or by financial institutions unrelated to and dealing wholly independently with the payer. The 10% rate applies in all other cases.

Bilateral negotiations between Australia and Israel are set to begin in 2017.

A. At a glance

Corporate Income Tax Rate (%)	25 (a)
Capital Gains Tax Rate (%)	25
Withholding Tax (%)	
Dividends	25/27.5 (b)
Interest (from Bank Deposits and Securities only)	0/25 (c)
Royalties from Patents, Know-how, etc.	20 (d)
Net Operating Losses (Years)	
Carryback	0
Carryforward	Unlimited (e)

- (a) This rate applies to distributed and undistributed profits.
 (b) In general, this withholding tax applies to dividends paid to residents and nonresidents. An Austrian corporation is generally required to withhold tax at a rate of 27.5%. However, if the distributing company has evidence of the corporate status of the investor, it may withhold tax at a rate of 25% (see Section B). Certain dividends paid to Austrian and European Union (EU) companies are exempt from tax (see Section B). In addition, a reduction in or relief from dividend withholding tax may be possible under double tax treaties.
 (c) For details, see Section B.
 (d) This withholding tax applies to nonresidents.
 (e) The offset of loss carryforwards against taxable income is limited to 75% of taxable income in most cases (see Section C).

B. Taxes on corporate income and gains

Corporate income tax. In general, all companies resident in Austria and foreign companies with Austria-source income are subject to corporate income tax. (For the scope of income subject to tax, see *Foreign tax relief*.) A company is resident in Austria if it has its legal seat or its effective place of management in Austria.

Rates of corporate income tax. The corporate tax rate is generally 25%.

All companies, including those incurring tax losses, are subject to the minimum tax. In general, the minimum tax is EUR1,750 for an Austrian private limited company (Gesellschaft mit beschränkter Haftung, or GmbH), EUR3,500 for a stock corporation (Aktiengesellschaft, or AG) and EUR6,000 for a European stock

corporation (*Societas Europea*, or SE). For banks and insurance companies, the minimum tax is EUR5,452. Minimum tax may be credited against corporate tax payable in future years.

A reduced minimum tax applies to newly formed Austrian private limited companies incorporated after 30 June 2013. For such companies, the minimum tax is EUR500 per year for the first five years and EUR1,000 for the following five years. This is known as the “foundation privilege.”

Participation exemptions. The Austrian tax law provides for national and international participation exemptions.

National. Dividends (including hidden profit distributions) received by an Austrian company from another Austrian company are exempt from corporate income tax (no minimum holding is required). Capital gains derived from the sale of shares in Austrian companies are treated as ordinary income and are subject to tax at the regular corporate tax rate. In general, capital losses on and depreciation of the participation may be deducted from taxable income, spread over a period of seven years.

International participation. An Austrian company is entitled to the international participation exemption if it holds at least 10% of the share capital of a foreign corporation that is comparable to an Austrian corporation for more than one year. The one-year holding period begins with the acquisition of the participation. The international participation exemption applies to dividends and capital gains.

A decrease in the value of an international participation is generally not tax deductible, but an Austrian company can irrevocably opt for such tax deductibility in the annual tax return for the year of acquisition. If this irrevocable option is exercised, capital gains are subject to tax, and decreases in value and capital losses are tax deductible. In general, capital losses and depreciation of the participation may then be deducted from the taxable income, spread over a period of seven years. In the event of insolvency or liquidation, final losses may be deducted even if the option for tax effectiveness was not exercised. The option does not affect the tax treatment of dividends.

According to an anti-abuse rule, the international participation exemption does not apply if both of the following conditions are met:

- The subsidiary earns primarily specified types of passive income, which are interest, income from leasing property other than land and buildings and capital gains (active business test).
- The subsidiary is not subject to income tax at an effective rate of more than 15% in its home country (low taxation test).

To determine whether a company is a passive company, the Austrian corporate income tax guidelines refer to the company’s focus. The focus is determined from an economic perspective, based on the use of capital, employees and the character of the revenues. A company is considered to be a passive company if it derives more than 50% of its revenues from passive operations.

If the passive income and low taxation tests described above are not met, dividends and capital gains are taxed at the general Austrian corporate tax rate of 25%. For dividends, income taxes

paid by the foreign subsidiary (underlying tax), as well as withholding taxes imposed, are credited against the income tax payable by the Austrian parent company (this represents a switchover from the exemption method to the credit method). Abuse may also be assumed if one of the criteria is “strongly given” and the second element is “almost given.” “Strongly given” means that the statutory threshold is exceeded by more than 25%. “Almost given” means that the company fails to meet the statutory threshold by less than 25% of such threshold. If the creditable foreign tax exceeds the amount of tax to be paid in Austria, the excess amount of foreign tax can be carried forward and credited in future tax periods.

International portfolio participation. Dividends from participations that do not meet the criteria for international participations are subject to the general corporate income tax rate of 25%. However, shareholdings in EU corporations, certain European Economic Area (EEA) corporations (currently only Liechtenstein and Norway) and corporations that are resident in third countries and that have agreed to exchange tax information qualify as international portfolio participations. Dividends from such international portfolio participations are exempt from tax. Capital gains (and losses) are tax-effective (the treatment corresponds to the treatment of national participations).

If a foreign entity is subject to no corporate income tax, an exemption from corporate income tax or a tax rate lower than 15%, the exemption for dividends from portfolio participations does not apply. Instead, dividends are taxed at the general Austrian corporate income tax rate of 25%. Income taxes paid by the foreign subsidiary (underlying tax), as well as withholding taxes imposed, are credited against the income tax payable by the Austrian parent company (this represents a switchover from the exemption method to the credit method). If the creditable foreign tax exceeds the amount of tax to be paid in Austria, the excess amount of foreign underlying tax can be carried forward and be credited in future tax periods.

Hybrid financing. Dividends from international participations (including portfolio participations) are not exempt from tax in Austria if such payments are deductible for tax purposes in the country of the distributing company.

Expenses. Business expenses are generally deductible. However, an exception applies to expenses that are related to tax-free income. Although dividends from national and international participations and portfolio participations are tax-free under the Austrian participation exemption, interest incurred on the acquisition of such participations is deductible for tax purposes. However, interest from debt raised to finance the acquisition of participations from affiliates is generally not deductible. In addition, interest and royalty payments to domestic and foreign-affiliated corporations are not tax deductible if the income of the recipient corporation is not subject to tax or taxed at a (nominal or effective) rate of less than 10%. If the recipient corporation is not the beneficial owner, the taxation of the beneficial owner is relevant. An exception applies to payments to entities that meet the EU law privileges for risk capital measures, which are contained in Regulation (EU) No. 345/2013 of the European Parliament and

of the Council of 17 April 2013 on European venture capital funds. If these specific rules of EU law are fulfilled and if the income of the recipient corporation is taxed at a rate of less than 10%, interest and royalty payments to domestic and foreign affiliated corporations remain deductible for tax purposes.

Capital gains. Capital gains derived from sales of shares in Austrian companies are treated as ordinary income and are subject to tax at the regular corporate tax rate. Capital gains derived from sales of shares in non-Austrian companies may be exempt from tax under the international participation exemption; otherwise, they are treated as ordinary income and subject to tax at the regular corporate tax rate.

Withholding taxes on dividends and interest

Dividends. Effective from 1 January 2016, the general withholding tax rate for dividends is 27.5% if the distribution does not constitute a repayment of capital. The withholding tax rate may be reduced to 25% if the investor is a corporation. In practice, this means that if the distributing entity lacks information on the status of an investor (corporate or individual), the 27.5% rate applies. In general, the 27.5% rate applies to dividends paid with respect to portfolio investments, including those paid to corporate investors. If the person required to withhold has information that the investor is a corporation, the 25% tax rate can be applied at source (for example, intercompany dividends). If 27.5% is withheld, corporate investors may reduce their tax burden in Austria to 25% in an assessment and refund procedure, based on their corporate status.

However, this withholding tax does not apply to dividends (other than hidden profit distributions) paid to either of the following:

- An Austrian parent company (fulfilling certain criteria) holding directly or indirectly an interest of at least 10% in the distributing company.
- A parent company (fulfilling certain criteria) resident in another EU country holding directly or indirectly an interest of at least 10% in the distributing company for at least one year.

Furthermore, the withholding tax rate may be reduced for dividends paid to foreign shareholders in accordance with double tax treaties. Depending on the situation, this reduction may be in the form of an upfront reduction at source or a refund of withholding tax.

For dividends paid to parent companies resident in the EU or EEA (if the EEA country grants full administrative assistance; currently only Liechtenstein and Norway meet this condition) that are subject to tax in Austria, Austrian withholding tax is refunded if the shareholder can prove that the withholding tax cannot be credited in the state of residence of the shareholder under tax treaty law.

Interest. Interest paid on loans (for example, intercompany loans) is generally not subject to withholding tax in Austria. A 27.5% withholding tax is imposed on interest income paid by Austrian banks, Austrian branches of foreign banks or Austrian paying agents. An exception from the 27.5% rate applies to interest on bank savings and other non-securitized loans from banks (except for compensation payments and lending fees), which are subject

to a 25% tax rate. Interest paid to nonresident companies is generally exempt from Austrian withholding tax if certain evidence is provided. In addition, interest income is exempt from withholding tax if the debtor has neither an ordinary residence nor a registered office in Austria and if it is not a domestic branch of a foreign bank. EU withholding tax is abolished, effective from January 2017.

Interest income earned by a company engaged in business in Austria through a permanent establishment is considered business income and must be included in the taxable income of the permanent establishment. For such companies, the withholding tax (if due) is credited against the corporate income tax. If the withholding tax exceeds the tax due, it is refunded. The withholding tax is not imposed if a declaration of exemption stating that the interest is taxed as business income is filed with the Austrian bank.

Administration. In principle, the Austrian tax year corresponds to the calendar year. However, other fiscal years are possible. The tax base is the income earned in the fiscal year ending in the respective calendar year. Annual tax returns must be filed by 30 April (30 June, if submitted electronically) of the following calendar year. Extensions may be granted. A general extension to 31 March (or 30 April) of the second following year is usually granted if a taxpayer is represented by a certified tax advisor (tax returns may be requested earlier by the tax office).

Companies are required to make prepayments of corporate income tax. The amount is generally based on the (indexed) amount of tax payable for the preceding year, and payment must be made in equal quarterly installments on 15 February, 15 May, 15 August and 15 November.

Interest is levied on the amount by which the final tax for the year exceeds the total of the advance payments if this amount is paid after 30 September of the year following the tax year. To prevent interest, companies may pay the amount due as an additional advance payment by 30 September of the year following the tax year.

Foreign tax relief. In general, resident companies are taxed in Austria on their worldwide income, regardless of where that income is sourced. However, the following exceptions exist:

- The Finance Ministry may, at its discretion, allow certain types of income that have their source in countries with which Austria has not entered into a double tax treaty to be excluded from the Austrian tax computation, or it may allow foreign taxes paid to be credited against Austrian corporate income tax. Under a decree of the Ministry of Finance, an exemption is granted in case of active income and taxation of at least 15%. Otherwise, only a credit of foreign taxes is allowed.
- Income earned in countries with which Austria has a double tax treaty is taxable or exempt, depending on the treaty.
- Dividends and capital gains derived from participations of 10% or more in foreign subsidiaries can be exempt from corporate income tax under the international participation exemption (see *Participation exemptions*).

- Dividends from foreign portfolio shareholdings in companies resident in countries that have agreed to exchange tax information are exempt from tax unless the subsidiary is low-taxed (see *Participation exemptions*).

C. Determination of trading income

General. In general, taxable income is based on the profit or loss shown in the financial statements prepared in accordance with Austrian generally accepted accounting principles. The financial statement profit or loss must be adjusted in accordance with special rules set forth in the tax acts. Taxable income is calculated as follows.

Profit per financial statements	X
+ Nondeductible taxes (such as corporate income tax)	X
+ Nondeductible expenses (such as donations, lump-sum accruals and certain interest)	X
– Special allowances and non-taxable income (intercompany dividends and loss carryforwards*)	<u>(X)</u>
= Taxable income	<u>X</u>

* The offset of loss carryforwards against taxable income is limited to 75% of taxable income in most cases.

Inventories. In determining trading income, inventories must be valued at the lower of cost or market value. Cost may, at the taxpayer's option, be determined using any of the following methods:

- Historical cost
- Average cost
- First-in, first-out (FIFO)
- Under certain circumstances, last-in, first-out (LIFO)

The highest-in, first-out (HIFO) method is not allowed.

Provisions. Accruals for severance payments and pension costs are allowable to a limited extent. Accruals for corporate income tax and lump-sum accruals are not deductible for tax purposes. Provisions with a term of 12 months or more are subject to a mandatory fixed discounting rate of 3.5%, except for accruals for severance payments and pension costs, which are tax deductible to the extent of 100% of their tax value.

Depreciation. In general, depreciable assets are depreciated over the average useful life. For certain assets, such as buildings and passenger cars, the tax law provides depreciation rates. The following are some of the applicable annual rates.

Asset	Rate (%)
Buildings	2.5
Office equipment	10 to 25
Motor vehicles	12.5
Plant and machinery	10 to 20

Research and development. Companies may claim a research and development (R&D) bonus (cash payment) equal to 12% of certain expenses for research and experimental development (according to the Frascati manual, these expenses consist of

material costs, labor costs, energy costs and attributed interest). The R&D must be conducted by an Austrian company in Austria or by an Austrian permanent establishment of a foreign company.

Relief for losses. Losses incurred by resident companies may be carried forward without time limit. The offset of loss carryforwards against taxable income is in most cases limited to 75% of the taxable income. The remaining balance of the loss carryforward may be offset against income in future years, subject to the same 75% limitation.

The loss carryforward is attributable to the corporation, not to the shareholders. Consequently, a change in shareholders does not affect the loss carryforward, provided no corresponding substantial change in the business and management of the company occurs. Losses may not be carried back. Foreign companies with permanent establishments in Austria may claim tax losses only under certain circumstances.

Groups of companies. The group taxation regime allows parent and subsidiaries to consolidate their taxable income. Under the Austrian law, the head of the tax group must be an Austrian corporate entity or branch of an EU/EEA corporate entity that has held more than 50% of the capital and voting rights in the subsidiary since the beginning of the subsidiary's fiscal year. The shareholding can be direct, or it can be held indirectly through a partnership or a group member. Only corporations (not partnerships) qualify as group members. If the holding requirement is satisfied, 100% of the taxable income (profit or loss) of domestic group members is allocated to the taxable income of the group parent, regardless of the percentage of the shareholding in the subsidiary. No actual profit or loss transfer takes place (only an agreement on the split of the tax burden is required). The tax group must exist for at least three full financial years. Otherwise, retroactive taxation on a stand-alone basis applies.

Group taxation also allows a cross-border tax consolidation if the foreign subsidiary is directly held by an Austrian parent (first foreign tier) and if the type of entity is comparable to an Austrian corporation from a company law perspective. Effective from 1 March 2014, certain companies are excluded from the group taxation regime. Only corporations resident in the EU and in countries with which Austria has agreed on comprehensive administrative assistance can be included in a tax group. The Austrian Ministry of Finance has published a list of all qualifying third countries.

Existing foreign group members that are resident outside the EU or in countries without a comprehensive administrative assistance agreement are suspended from the group tax regime as of 1 January 2015, as a matter of law. If, based on this rule, the three-year minimum holding period cannot be fulfilled, no retroactive reversal of group taxation tax effects will occur. The recapture of foreign prior year losses of the suspended group members may be spread over three years (see below for details regarding the recapture of foreign losses).

Foreign losses must be recalculated under Austrian tax law. In addition, the deductibility of foreign losses is limited to the lower of the amount according to Austrian tax law and actual losses

calculated under foreign tax law. Losses from foreign group members can be deducted from the Austrian tax base in proportion to the shareholding only. Beginning with the 2015 tax year, the utilization of losses of foreign group members is limited to 75% of the domestic group income. Excess losses are included in the loss carryforwards for subsequent years. Profits of a foreign group member are generally not included in the Austrian group parent's income.

To avoid double utilization of losses of a foreign group member, foreign losses that have been deducted from income of the Austrian group shareholder are added to the Austrian profit if the losses can be offset in the foreign jurisdiction at a subsequent time. Consequently, if the foreign country uses the losses in subsequent years (as part of a loss carryforward), the tax base in Austria is increased by that amount in order to prevent a double dip of losses. Foreign losses must also be added to the Austrian income tax base if the foreign subsidiary leaves the group. A recapture is also required if a significant reduction occurs in the size of the foreign subsidiary's business. This measure is designed to prevent dormant foreign entities from remaining in the group to avoid the recapture of foreign losses. Relief for capital losses is provided only in the event of a liquidation or insolvency.

If an Austrian participation is acquired and if the acquired company becomes part of the group, goodwill depreciation (from a share deal) over a period of 15 years is possible. The goodwill is computed as the spread between the equity of the acquired company (pro rata to the acquired shares) and the acquisition price for the shares. This spread is reduced by hidden reserves attributable to non-depreciable long-term assets (primarily real estate). The basis for the goodwill depreciation is capped at 50% of the acquisition cost. Acquisitions of participations after 28 February 2014 are no longer entitled to goodwill amortization. Remaining amortization amounts (1/15 per year) from past acquisitions basically remain deductible for tax purposes under certain requirements in accordance with the rules discussed above. The European Court of Justice has held that the requirement that only Austrian participations qualify for the goodwill depreciation is incompatible with the fundamental freedoms of the EU.

Depreciation to the fair market value of a participation within the group is tax-neutral.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax	
Standard	20
Reduced	10/13
Payroll taxes, paid by employer	
Family allowance fund; varies by state	4.86 to 4.94
Community tax	3
Real estate sales tax (including 1.1% registration fee)	4.6
Stamp duties, on certain legal transactions, such as leases and hire contracts	0.8 to 2

Nature of tax	Rate (%)
Stability tax for banks on adjusted balance sheet total; these rates, which are effective from 1 January 2017, represent a significant reduction, with additional limitations (caps and floors) imposed; the additional stability tax surcharge is abolished; however, in return, qualifying credit institutions must pay a one-time tax, which is payable in four regular installments from 2017 through 2020, on the basis of the balance sheet of the year that ends in 2015	0.024 to 0.029

E. Miscellaneous matters

Foreign-exchange controls. No restrictions are imposed on the transfer of nominal share capital, interest and the remittance of dividends and branch profits. Royalties, technical service fees and similar payments may be remitted freely, but routine documentation may be required.

Debt-to-equity rules. Austrian tax law does not provide special debt-to-equity rules. Although, in general, shareholders are free to determine whether to finance their company with equity or loans, the tax authorities may reclassify loans granted by shareholders, loans granted by group companies, and loans granted by third parties guaranteed by group companies as equity, if funds are transferred under legal or economic circumstances that typify equity contributions, such as the following:

- The equity of the company is insufficient to satisfy the solvency requirements of the company, and the loan replaces equity from an economic point of view.
- The company's debt-to-equity ratio is significantly below the industry average.
- The company is unable to obtain any loans from third parties, such as banks.
- The loan conveys rights similar to shareholder rights, such as profit participations.

If a loan is reclassified (for example, during a tax audit), interest is not deductible for tax purposes and withholding tax on hidden profit distributions may become due. Capital duty was abolished, effective from 1 January 2016.

Transfer pricing. Austria has accepted the Organisation for Economic Co-operation and Development (OECD) transfer-pricing guidelines and published a summary of the interpretation of the OECD guidelines by the Austrian tax administration in 2010. Under these guidelines, all transactions with related parties must be conducted at arm's length. If a transaction is considered not to be at arm's length, the transaction price is adjusted for corporate income tax purposes. This adjustment may be deemed to be a hidden profit distribution subject to withholding tax or a capital contribution.

F. Treaty withholding tax rates

The following summary is intended purely for orientation purposes; it does not reflect the various special provisions of individual treaties or the withholding tax regulations in domestic tax law.

	Dividends		Interest (a)		Royalties

- A General.
- B Dividends received from subsidiary company. Shareholding required varies from 10% to 95%, but generally is 25%.
- C General.
- D Mortgages.
- E General.
- F Royalties from 50% subsidiary.
- (a) Under domestic tax law, a 25% withholding tax is imposed only on interest income from bank deposits and securities. However, interest paid to nonresidents is generally not subject to withholding tax. For details, see Section B.
- (b) No reduced rate applies.
- (c) No withholding tax is imposed, but the income is subject to tax at the regular corporate rate.
- (d) Austria is honoring the USSR treaty with respect to the republics comprising the Commonwealth of Independent States (CIS), except for those republics that have entered into tax treaties with Austria. Austria has entered into tax treaties with Armenia, Azerbaijan, Belarus, Kazakhstan, Kyrgyzstan, Moldova, the Russian Federation, Tajikistan, Turkmenistan, Ukraine and Uzbekistan. The withholding tax rates under these treaties are listed in the above table.
- (e) Interest paid by banks is subject to a 4.95% withholding tax.
- (f) Trademark royalties are subject to a 25% withholding tax. The withholding tax rate is 15% for royalties paid for literary, artistic and scientific items.
- (g) The rate is 10% for royalties paid for the use of films or other means of production used for radio or television.
- (h) The 5% rate applies if the participation of the recipient of the dividends exceeds USD250,000. The 10% rate applies if the participation of the recipient of the dividends exceeds USD100,000 but does not exceed USD250,000.
- (i) The rate is 5% for royalties paid for technologies not older than three years.
- (j) The rate is 0% for royalties paid for literary, artistic and scientific items.
- (k) Royalties paid for computer software, patents and know-how are exempt if the royalties are taxed in the state of residence of the recipient.
- (l) The rate is 5% for royalties paid to licensors engaged in industrial production.
- (m) This rate applies to dividends received from a 10%-subsidiary.
- (n) The rate is 2% for amounts paid for the use of commercial or scientific equipment.
- (o) The rate is 20% for dividends paid by non-industrial Pakistani corporations.
- (p) The rate is 10% for royalties paid for literary, artistic and scientific items.
- (q) The 5% rate applies to amounts paid for the use of industrial or scientific equipment.
- (r) The 5% rate applies to dividends received from a 25%-subsidiary; the 10% rate applies to dividends received from a 10%-subsidiary.
- (s) The rate is 10% for interest paid to a bank if the interest arises from the transacting of bank business and if the recipient is the beneficiary of the interest.
- (t) The 5% rate applies to participations of at least 70%. The 10% rate applies to participations of at least 25%.
- (u) The rate is 7.5% for technical services.
- (v) The rate is reduced to 10% for interest received from a bank. Interest on loans granted by the Österreichische Kontrollbank to promote exports or similar institutions in Turkey is subject to a withholding tax rate of 5%.
- (w) A shareholding of at least 5% is required.
- (x) The 10% rate applies to industrial royalties.
- (y) See Section B.

The tax treaty with Argentina was suspended by Argentina, effective from 1 January 2009.

Because of the rapidly evolving economic situation in Azerbaijan, readers should obtain updated information before engaging in transactions.

A. At a glance

Corporate Profits Tax Rate (%)	20
Capital Gains Tax Rate (%)	20
Permanent Representation Tax Rate (%)	20
Withholding Tax (%)	
Dividends	10 (a)
Interest or Financial Lease Payments	10 (b)
Royalties from Patents, Know-how, etc.	14 (a)
Management Fees	10 (c)
Income from International Transportation and Telecommunication Services	6 (c)
Insurance Payments	4 (c)
Payments of other Azerbaijani-Source Income to Foreign Companies	10 (c)
Branch Remittance Tax	10 (c)
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) These are final withholding taxes applicable to payments to Azerbaijani and foreign legal entities.
- (b) This is a final withholding tax applicable to payments to Azerbaijani and foreign legal entities, excluding Azerbaijani banks and leasing entities, and foreign banks and leasing entities operating in Azerbaijan through a permanent representation.
- (c) This is a final withholding tax applicable to payments to foreign legal entities.

B. Taxes on corporate income and gains

Corporate profit tax. Enterprises carrying on activities in Azerbaijan, including enterprises with foreign investment, joint ventures and legal entities operating through a permanent representation, are subject to tax.

Azerbaijani resident legal entities are subject to tax on their worldwide income. For tax purposes, Azerbaijani resident legal

entities are entities incorporated in Azerbaijan and entities that have their effective management located in Azerbaijan, including 100%-owned subsidiaries of foreign companies.

Nonresident legal entities are subject to tax on profits earned through a permanent representation only. A permanent representation is defined as the following:

- Persons who are performing the function of a permanent establishment of a nonresident legal entity or natural person and who are authorized to conclude contracts on behalf of such nonresident entity or natural person
- A bureau, office or agency
- A location where activities are carried out relating to the development of natural resources
- The rendering of consultation services
- A fixed base used for entrepreneurial activities for a cumulative amount of 90 days during any 12-month period

The Azerbaijan Law on the Protection of Foreign Investments allows foreign investment in various forms, including investment through 100% foreign-owned subsidiaries, share participations in joint stock companies and in joint ventures with Azerbaijani legal entities and citizens, permanent representations and other types of participations.

Tax rate. All entities operating in Azerbaijan are subject to corporate profit tax at a rate of 20%.

Capital gains. Capital gains are included in taxable income and taxed at the regular rate.

Administration. The tax year is the calendar year. The tax year for newly created enterprises or permanent representations of foreign legal entities runs from the date of formation through 31 December of the year of formation.

All entities operating in Azerbaijan must make advance payments of corporate profit tax by the 15th day following the end of each quarter. Each advance payment must equal at least one-quarter of the profit tax liability for the prior tax year. Alternatively, the amounts of the advance payments may be determined by multiplying the company's revenues for the quarter by the company's effective tax rate for the prior year. The effective tax rate is equal to tax as a percentage of revenues.

If, at the end of the tax year, it is determined that the total of the advance payments exceeds the tax due for the year, the excess may be credited against future tax obligations or refunded. In practice, however, the tax authorities rarely, if ever, issue refunds. Consequently, entities generally credit overpayments against future taxes.

Dividends. Dividends paid are subject to income tax withholding at a rate of 10%. This is considered a final tax and companies do not include the dividends in taxable profits.

Foreign tax relief. Foreign income tax paid by taxpayers in Azerbaijan on income derived from sources outside Azerbaijan may be credited against Azerbaijani tax imposed on the same income, limited to the amount of Azerbaijani tax imposed on such income. In determining the amount of the allowable foreign tax credit, it is unclear if a limitation based on the country of source is imposed or if all foreign-source income is pooled.

C. Determination of trading income

General. Taxable profit is determined by computing the profit or loss from business activities and then adding income from non-trading operations, such as leasing income and capital gains, but excluding dividends received. Income received in foreign currency is converted into manats (AZN) at the daily exchange rate determined by the Central Bank of Azerbaijan.

Statutory norms limit the deductions for certain categories of expenses, such as business travel expenses, repair expenses, interest paid on foreign borrowings and interest paid between related parties. Expenses for meals and entertainment as well as for the providing of food and housing to employees are disallowed except for companies providing therapeutic nourishment items, milk and similar products to their employees. Such deductions will be allowed within norms, which have not yet been introduced by the government.

Foreign legal entities doing business through a permanent representation in Azerbaijan are taxed on actual profits. If actual profits cannot be determined, the tax authorities may determine taxable profits based on either income or expenses, with a deemed profit margin of 20%.

Tax depreciation. Fixed assets, other than buildings, are subject to depreciation by a group method. Under this method, fixed assets are allocated to groups, and the groups are depreciated in aggregate. Depreciation rates, which are specified by law, are applied to the aggregate book values for each of the groups. The depreciable balance for a group is reduced by the depreciation accrued for the year by the group. If any assets of a group are sold during the year, the depreciable balance of the group is reduced by the residual value of such assets. The profit or loss on the sale of such assets is separately determined.

An acquisition of assets under a finance lease is treated as a loan from the lessor to the lessee and a purchase of assets by the lessee. The lessee may then claim depreciation on the assets.

Relief for losses. An enterprise incurring a loss in a tax year may carry forward the loss to the following five years, without limitation on the amount, to offset the profit in such following years.

Groups of companies. There are no provisions permitting related enterprises to offset profits and losses among members of a group.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT), on goods sold and services rendered, in Azerbaijan; the tax law contains specific rules for determining when services are deemed to be provided in Azerbaijan; Azerbaijani taxpayers that make payments to entities that are not registered taxpayers in Azerbaijan for services provided in Azerbaijan must calculate VAT on the payments	18

Nature of tax	Rate (%)
Assets tax, on the annual average net book value of fixed assets or the market price of the asset if the insurance value of assets exceeds the net book value	1
Import tariffs	0 to 15

E. Foreign-exchange controls

The manat (AZN) is a non-convertible currency outside Azerbaijan. Enterprises may buy or sell foreign currency through authorized banks or foreign-exchange offices in Azerbaijan.

To receive foreign-currency income in Azerbaijan, an enterprise must obtain a license issued by the Central Bank of Azerbaijan.

F. Treaty withholding tax rates

Azerbaijan currently considers none of the tax treaties of the former USSR to be in force. Azerbaijan has entered into tax treaties with various countries.

The withholding rates under Azerbaijan's ratified treaties are listed below. Because of recent reductions in domestic withholding tax rates, the tax treaties may now specify rates that are the same as, or in excess of, domestic rates and, consequently, offer little or no savings with respect to withholding taxes. The rates in the table reflect the lower of the treaty rate and the rate under domestic tax law.

	Dividends %	Interest %	Royalties %

A. At a glance

Corporate Income Tax Rate (%)	0
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	0
Withholding Tax (%)	0

B. Taxes on corporate income and gains

No taxes are levied on corporate income or capital gains.

C. License fees and other duties

Business license fees. For corporations designated as residents for exchange-control purposes, their business revenue in the Bahamas is subject to an annual license fee, which varies according to annual revenue or turnover. Businesses that have annual turnover not exceeding BSD50,000 are required to pay a business license fee of BSD100. If the turnover exceeds BSD50,000 per year, the fee varies from 0.5% to 1.5%, based on the business annual revenue or turnover. However, for most professional businesses, the business license fee equals 1% of revenue.

As an anti-tax avoidance measure, a subsidiary in the Bahamas is subject to the same business license tax rate as is its parent in the Bahamas.

Business license fees must be paid by 31 March each year, and proof of payment of real property tax must be produced before the license is issued.

Corporations regulated by specific legislation may not be subject to this fee.

Bank and trust company license fees. Offshore banks and trust companies licensed under the Bank and Trust Companies Regulation Act are subject to business license fees, which vary

depending on the value of the assets under management. The annual business license fees range from BSD450,000 to BSD3,750,000 per license.

International business companies. International business companies (IBCs) pay an annual license fee based on authorized capital. Government fees related to the creation of an IBC equal BSD330. The annual license fee is BSD350 if turnover is less than BSD50,000, and the fee is BSD1,000 if turnover is BSD50,000 or more. IBCs are exempt from all other taxes (except potentially value-added tax (VAT), effective from 1 January 2015; see Section G) and stamp duties for a period of 20 years from the date of incorporation, except for transactions involving real estate in the Bahamas. IBCs are normally created through service providers that charge separate fees for their services.

Limited duration companies. Limited duration companies (LDCs) pay an application fee of BSD850 and an annual license fee based on authorized capital. LDCs may be classified as partnerships for US tax purposes. By complying with certain formalities, an existing IBC may change its status to an LDC.

Insurance companies. Insurance companies that are incorporated in the Bahamas pay stamp tax on authorized capital (for details, see Section D). They also pay the fees described below.

Resident insurance companies that write local business pay an initial registration fee of BSD1,000.

Restricted offshore insurance companies pay an initial registration fee of BSD2,500 and an annual fee of BSD2,500 in subsequent years. Unrestricted companies pay an initial registration fee of BSD3,500 and an annual fee of BSD3,500 in subsequent years. Offshore insurance companies also pay an annual fee of BSD1,000 for each licensed resident insurance manager who provides underwriting as a service. Offshore insurance companies are exempt from all other taxes for a period of 20 years from the date of registration.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax (VAT); charged on any taxable supply of goods and services, as well as importations; applied at the standard rate, unless an exception applies such as a zero-rating or a VAT exemption; standard and zero-rated supplies allow input VAT recovery on purchases made, but VAT exemption results in input VAT being a cost; the legislation provides limited exceptions; VAT registration is mandatory for a person or business making taxable supplies or taxable importations and having turnover exceeding BSD100,000 in any period of 12 months or less; the legislation also provides for voluntary registration; standard rate	7.5%

Nature of tax	Rate
Customs duties, on imported items; exemptions may be granted to businesses licensed under certain legislation; rate varies by type of item	Various
Stamp tax	
On property conveyances; rate depends on selling price (because of the implementation of VAT, the rate is a combination of VAT and stamp duty)	2.5% to 10%
On imported items	0% to 35%
On authorized capital of a domestic limited company (payable at time of incorporation)	
First BSD5,000	2%
Each additional BSD1,000	0.5%
Repatriation out of the Bahamas of substantial profits by trading concerns; tax is imposed on each transfer of funds exceeding BSD500,000 per year if the transfer represents dividends, profits or payments for services rendered by a related party	
Repatriated foreign currency	5%
Repatriated Bahamian dollars	1.5%
Leasing, subleasing or licensing of marina slips; tax rate applied to value	
BSD0 to BSD20,000	4%
BSD20,001 to BSD50,000	6%
BSD50,001 to BSD100,000	8%
BSD100,001 and above	10%
Real property tax; application of tax varies depending on appraised value, location, nationality of owner and development of property	2%
National insurance contributions on weekly wages up to BSD650 or on monthly wages up to BSD2,817; paid by	
Employer	5.9%
Employee	3.9%

E. Foreign-exchange controls

Corporations doing business in the Bahamas fall into the categories of resident or nonresident.

A resident company is a company that deals in or holds assets in the Bahamas. Business is carried out in Bahamian dollars. All transactions requiring foreign currency need prior approval of the Central Bank of the Bahamas to convert Bahamian dollars into another currency.

A nonresident company is one whose shareholders are not designated residents of the Bahamas and whose principal business activity takes place outside the Bahamas. Bank accounts in all currencies other than the Bahamian dollar can be operated free of any exchange controls. Shares of nonresident companies incorporated under the Companies Act cannot be transferred without the prior permission of the Central Bank of the Bahamas.

Exchange-control regulations generally do not apply to companies incorporated under the International Business Companies Act.

Nonresident companies are subject to an annual fee of BSD300.

F. Tax treaties

The Bahamas does not have any existing tax treaties. The Bahamas has entered into tax information exchange agreements with various countries.

On 3 November 2014, the Bahamas and the United States signed and released a Model 1 Intergovernmental Agreement (IGA) for the implementation of the US Foreign Account Tax Compliance Act (FATCA).

The Bahamas has committed to adopting the Organisation for Economic Co-operation and Development Common Reporting Standard (CRS) and is expected to report for the first time in 2018 for the reporting year ended 31 December 2017.

Bahamas institutions will be required to comply with both FATCA and CRS in accordance with the Bahamas tax law regulations that are enacted.

Corporate Income Tax Rate (%)	0*
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	0
Withholding Tax (%)	0

* Oil and gas companies are subject to a special income tax (see Section B).

B. Taxes on corporate income and gains

Except for the income tax levied on oil and gas companies, no taxes are levied on corporate income or gains. Oil and gas companies are subject to tax on income derived from the sale of finished or semifinished products manufactured from natural hydrocarbons in Bahrain and from the sale of such raw materials if produced from the ground in Bahrain. The rate of tax is 46%.

C. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Customs duties; effective from 1 January 2003, the customs duties of the Gulf Cooperation Council (GCC) countries (Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and the United Arab Emirates) are unified; the guidelines	

Nature of tax	Rate
<p>for implementation of the unified tariff are being developed; Bahrain applies the unified tariff in accordance with the Harmonized System codes, issued by the World Customs Organization (WCO); under the unified customs tariff, for all products, except for tobacco and tobacco-related products, customs duties are calculated by applying percentage rates; for tobacco and tobacco-related products, the customs duty equals the higher of an amount calculated by applying a rate of at least 100% to the value of the product or an amount based on the quantity or weight; in general, products are divided into four groups</p> <p>Rates for the four groups</p>	Free duty/ 5%/100%/125%
Social insurance contributions; payable on compensation of up to BHD4,000 per month for each employee	
Pension fund contributions; applicable to base salaries of Bahraini nationals	
Employer	9%
Employee	6%
Insurance against employment injuries; payable by employers; applicable to base salaries of Bahraini nationals and expatriates	3%
Unemployment insurance; payable by employees; applicable to Bahraini nationals and expatriates	1%
Municipal tax; payable by companies and individuals renting property in Bahrain; the tax rate varies according to the nature of the property and the payer of the utilities (that is, landlord or tenant)	7% to 10%
Foreign workers levy; payable monthly by all private and public companies with respect to each employed expatriate	BHD5 for the first five expatriate employees and BHD10 for each additional expatriate employee

D. Foreign-exchange controls

Bahrain does not impose foreign-exchange controls.

E. Tax treaties

Bahrain has entered into tax treaties with Algeria, Austria, Barbados, Belarus, Belgium, Bermuda, Brunei Darussalam, Bulgaria, China, Cyprus, the Czech Republic, Egypt, Estonia, France, Georgia, Hungary, Iran, Ireland, Isle of Man, Jordan, Korea (South), Lebanon, Luxembourg, Malaysia, Malta, Mexico, Morocco, the Netherlands, Pakistan, Philippines, Portugal, Seychelles, Singapore, Sri Lanka, Sudan, Syria, Tajikistan, Thailand, Turkey, Turkmenistan, the United Kingdom, Uzbekistan and Yemen.

Bahrain has signed tax treaties with Bangladesh and Portugal, but these treaties are not yet in force.

Bahrain has also initiated tax treaty discussions with Guernsey, the Hong Kong Special Administrative Region, Jersey, Kyrgyzstan, Latvia, Liechtenstein, Spain and Switzerland.

* This is a final tax.

B. Taxes on corporate income and gains

Corporate income tax. Companies and societies with restricted liability that are resident in Barbados are subject to corporation tax. Resident and domiciled companies are subject to corporation tax on their worldwide income, regardless of whether the income is remitted to Barbados. Resident companies that are not domiciled in Barbados are subject to corporation tax on income derived from Barbados and income from foreign sources to the extent that such foreign income is remitted to Barbados. Nonresident companies carrying on business through a branch pay tax on Barbados-source income only. Income is considered to be Barbados-source if the property that constitutes the source is physically located in Barbados.

A company is considered to be resident in Barbados if its management and control are located in Barbados. The domicile of a company is based on the country of incorporation. Consequently, a company incorporated in Barbados is domiciled there.

Rates of corporate tax. All domestic companies, including branches of nonresident companies, are subject to tax at a basic rate of 25%. A 15% rate applies to manufacturing companies and to net income derived from the rental of residential property. Income derived from Barbados government securities by domestic companies is taxed at a rate of 12.5%.

A branch operating in Barbados pays an additional 10% on its after-tax profits if those profits are remitted or deemed to be remitted.

The following are the tax rates for companies established in the International Business and Financial Services Sector.

Types of companies	Rate (%)
International Business Companies	2.5 reducing to 0.25 (a)
International Banks	2.5 reducing to 0.25 (a)
International Societies with Restricted Liability	2.5 reducing to 0.25 (a)
Exempt Insurance Companies	0
Exempt Insurance Management Companies	0
Qualifying Insurance Companies	
General insurance	1.75 (b)
Life insurance	0.35 (b)

(a) These rates are effective for the 2013 income year and subsequent income years.

(b) This is the minimum effective tax rate.

No tax is required to be withheld from the payment of dividends, interest, royalties, management fees and rents if paid to nonresidents by companies operating in the International Business and Financial Services Sector.

Foreign-currency earnings credit. Companies subject to the Income Tax Act may claim a tax credit with respect to foreign-

currency earnings derived from qualifying overseas construction projects or qualifying overseas professional services, including qualifying insurance activities. The tax credit may reduce the effective tax rate to 0.35% or 1.75%, depending on the company's activities.

Tax incentives. Tax incentives available in Barbados are described below.

Small Business Development Act. Under the Small Business Development Act, small businesses qualify for the following tax benefits:

- Corporation tax rate of 15%
- Exemption from withholding tax on dividends or interest paid
- Exemption from import duty on plant and equipment
- Exemption from stamp duty on the execution and registration of financial documents

Only income directly related to the business qualifies for the above tax benefits.

To qualify as a small business, a company must meet the following requirements:

- Its authorized capital does not exceed BBD1 million.
- Its annual sales do not exceed BBD2 million.
- It does not have more than 25 employees.
- It is not a wholly owned or majority-owned subsidiary in a group of companies.

Tourism Development Act. Under the Tourism Development Act, duty-free and income tax concessions are available for approved tourism projects and certain tourism entities. These concessions include the following:

- Exemption from the payment of customs duty on specified items
- Tax deduction equal to 100% of expenditure incurred with respect to the development of a tourism product, tourism research, an apprenticeship scheme or the organization and hosting of tourism exhibitions and trade fairs
- Offset of approved capital expenditure against assessable income
- An investment tax credit (subject to conditions)
- Exemption from withholding tax on dividends paid to shareholders

Fiscal Incentives Act. A business that manufactures approved products may be deemed to be an approved enterprise under the Fiscal Incentives Act. An approved enterprise may be eligible for several tax incentives, including the following:

- An income tax holiday for up to 11, 13 or 15 years
- Relief from withholding tax on dividends paid during the tax holiday
- Exemption from the payment of customs duty on imported items (including plant and machinery) for the manufacturing of an approved product

Special Development Areas Act. Under the Special Development Areas Act, persons carrying out work in designated special development areas in Barbados, as well as persons financing such work, are entitled to certain tax relief. An approved developer is

entitled to a reduced corporation tax rate of 15% and exemption from certain taxes, such as the following:

- Import duty, environmental levy and value-added tax on inputs for the construction of new buildings and the renovation or refurbishment of existing buildings
- Charges on the repatriation of interest and capital
- Land tax on the improved value of land
- Property transfer tax on the initial purchase of property

Renewable Energy Incentives. Persons engaged in the development, manufacturing, installation or repair of renewable energy systems and energy-efficient products may be entitled to one or more of the following tax benefits if the required criteria are met:

- Ten-year income tax holiday
- Tax deduction of 150% for the following expenditure with respect to the generation, supply and sale of renewable energy, or the installation or supply of renewable energy systems or energy-efficient products:
 - Interest paid on loans with respect to the construction or upgrading of a property
 - Expenditure on the training of staff
 - Expenditure on the marketing of products
 - Expenditure on research and development
- Ten-year exemption from withholding tax on dividends paid to shareholders

In addition, interest earned by financial intermediaries from financing the development, manufacturing and installation of renewable energy systems and energy-efficient products is exempt from tax for 10 years.

Capital gains. Capital gains are not taxed in Barbados.

Administration. The fiscal (income) year is the period for which the accounts of the business are normally prepared. Tax is calculated on the profits for the accounting period that ends during the fiscal year.

A corporation is required to determine its own tax liability and to prepare and file a corporation tax return. Corporations with year-ends from 1 January to 30 September must prepay tax by 15 September and file their returns by 15 March of the following year. If the year-end is after 30 September, the tax must be prepaid on 15 December of the income year and on the following 15 March. The return is filed 15 June of the year following the income year. Each tax prepayment must be 50% of the previous year's tax. Any balance of tax due is paid when the return is filed. Tax returns may be filed using the Barbados Revenue Authority's electronic filing system.

The Revenue Commissioner of the Barbados Revenue Authority may levy a penalty of BBD500 plus 10% of tax payable and interest of 1% a month for failure to file a return and pay tax due, and a penalty of 10% and interest of 0.5% a month for failure to prepay corporation tax.

Dividends. Dividends received by a resident company from another resident company are not taxable.

Dividends received from a nonresident company are not subject to tax in Barbados if the Barbados company owns 10% or more of the share capital of the nonresident company and if the shareholding in the nonresident company is not held as a portfolio investment.

Foreign tax relief. A tax credit is allowed for taxes paid to foreign jurisdictions by Barbados resident companies on profits, income or gains earned from such foreign jurisdictions, regardless of whether Barbados has entered into a double tax treaty with the foreign jurisdiction. This credit is allowed up to the amount of the Barbados taxes payable on the income. An underlying tax credit is also allowed with respect to foreign dividends if the Barbados company owns at least 10% of the capital of the foreign company. Some form of unilateral relief may be granted on income arising from British Commonwealth countries that provide reciprocal relief.

C. Determination of trading income

General. Taxable income is determined on the basis of accounts prepared in accordance with International Financial Reporting Standards, subject to specific adjustments identified in the Income Tax Act.

Inventories. The authorities generally accept a method of valuation of inventory that conforms to standard accounting practice in the trade or business, provided it is applied consistently. Average cost or first-in, first-out (FIFO) are the generally accepted methods.

Provisions. Reserves or provisions of a general nature for doubtful accounts receivable are not allowable. However, write-offs of specific amounts or balances are generally allowed.

Tax depreciation. Depreciation and amortization reported in the financial statements are not allowed as deductions in calculating taxable income. However, a company may claim capital allowances. Annual allowances of between 5% and 33 $\frac{1}{3}$ % are given on the original cost of fixed assets, calculated on a straight-line basis. An annual allowance of 100% is granted with respect to capital expenditure on software. An initial allowance of 20% is given on the cost of equipment. Industrial buildings qualify for an initial allowance of 40% and an annual allowance of 4% of the cost. An allowance of 1% is given on the improved value of commercial buildings. Fifty percent of expenditure on intellectual property is deductible over a 10-year period. In addition, 20% of expenditure on energy audits and the retrofitting of buildings or on the installation of systems to provide electricity from sources other than fossil fuels is deductible over a period of 5 years.

An investment allowance of 20% is granted on the cost of capital expenditure on new plant and machinery to be used in a basic industry. A 40% investment allowance is granted for new plant and machinery to be used in manufacturing and refining sugar and in manufacturing products from clay and limestone. In addition, manufacturing companies are allowed an annual allowance of 150% for assets used in the industry.

Persons who export products outside the Caribbean Community and Common Market (CARICOM) also qualify for an investment

allowance of 40% of the cost of new plant and machinery purchased during the tax year.

The investment allowance is not deductible from the cost of the asset for the purpose of determining the annual allowance.

Relief for losses. Effective from the 2015 income year, losses may be carried forward seven years to offset income derived in those years. Losses may not be carried back.

Groups of companies. Group relief is no longer available, effective from the 2015 income year. Group consolidated returns may not be filed with the tax authorities.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT), on the supply of goods and services in Barbados and on goods imported into Barbados	
Standard rate	17.5
Hotel accommodation and supplies related to tourism	7.5
Basic food items	0
Excise tax, on imports of vehicles; this tax is imposed in addition to the VAT	46.95 to 120
Import duty	5 to 20
National insurance contributions, on monthly insurable earnings up to BBD4,650; paid by	
Employer	11.25
Employee	10.1
Self-employed individual	16.1

E. Miscellaneous matters

Foreign-exchange controls. Foreign-exchange controls in Barbados are administered by the Central Bank, which considers all applications. Certain transactions and routine commercial matters are delegated to the commercial banks. The Central Bank generally allows the repatriation of funds previously registered as an investment if it has been established that all local tax liabilities have been met. Certain types of entities operating in the International Business and Financial Services Sector, such as offshore banks, exempt (captive) insurance companies, international business companies and international societies with restricted liability, are effectively exempt from foreign-exchange regulations with respect to their offshore activities.

Debt-to-equity rules. No thin-capitalization rules are imposed in Barbados.

Anti-avoidance legislation. Anti-avoidance provisions may be applied to transactions between related persons that are not carried out at arm's length and to artificial transactions if the primary purpose of the transaction is the reduction of taxable income.

F. Treaty withholding tax rates

The withholding tax rates in the table below apply to payments made to nonresidents of Barbados under the various treaties entered into by Barbados. However, no tax is withheld from dividends, interest, royalties and management fees paid to nonresidents by International Business Companies or International Societies with Restricted Liability. In addition, International Banks and Exempt (Captive) Insurance Companies are exempt from the payment of withholding tax on dividends and interest.

	Dividends %	Interest %	Royalties %
Austria	15 (a)	0	0
Bahrain (w)	0	0/15	0
Botswana	12 (b)	10	10

Switzerland	15	– (n)	0
United Kingdom	0	0	0 (o)
United States	15 (a)	5	5
Venezuela	10 (h)	15 (p)	10
Non-treaty countries	15 (q)	15	15

- (a) The rate is reduced to 5% if the beneficial owner of the dividends is a company that owns at least 10% of the capital of the payer of the dividends.
- (b) The rate is reduced to 5% if the beneficial owner of the dividends is a company that owns at least 25% of the capital of the payer of the dividends.
- (c) The Caribbean Community and Common Market (CARICOM) multilateral treaty has been entered into by 10 member states of CARICOM. The treaty follows a source-based model of taxation, with double tax relief typically provided in the form of an income exemption in the state of residence.
- (d) The rate is reduced to 5% if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 25% of the capital of the company paying the dividends.
- (e) This treaty has been ratified by Barbados only. Consequently, the provisions of the treaty are not yet in effect.
- (f) The rate is reduced to 5% if the interest is derived by a bank that is resident in Ghana.
- (g) The rate is reduced to 0% if the beneficial owner is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends for an uninterrupted period of at least 12 months before the decision to distribute the dividends.

- (h) The rate is reduced to 5% if the beneficial owner of the dividends is a company that owns at least 5% of the capital of the payer of the dividends.
- (i) The term "royalties" includes payments derived from the alienation of rights or property that are contingent on the productivity, use or disposition of such property.
- (j) The rate is reduced to 0% if the beneficial owner of the dividends is a company that owns at least 10% of the capital of the payer of the dividends and if the recipient of the dividends is a company resident in the Netherlands that is not subject to Netherlands company tax on the dividends.
- (k) The rate is reduced to 0% for royalties paid for the use of, or the right to use, literary, artistic or scientific works, including royalties with respect to cinematographic films, and films, discs or tapes for radio or television broadcasting.
- (l) The rate equals 75% of the statutory nominal rate applicable at the time of the dividend distribution. It is reduced to 5% if the beneficial owner of the dividends is a company that owns at least 25% of the capital of the payer of the dividends.
- (m) The rate is reduced to 5% if the interest is derived by a bank that is resident in Panama.
- (n) The treaty does not contain an interest article. Consequently, the normal tax rate applies.
- (o) The rate is 15% for royalties paid for motion picture or television films.
- (p) The rate is reduced to 5% for interest paid to banks.
- (q) The rate is reduced to 0% if the dividends are paid out of income earned from foreign sources.
- (r) This treaty has been signed by both parties, but it has not yet been ratified. Consequently, the provisions of the treaty are not yet in effect.
- (s) The rate is reduced to 5% if the beneficial owner of the dividends is a company that directly owns at least 25% of the capital of the company paying the dividends.
- (t) The rate is reduced to 0% if the beneficial owner of the dividends is a company that directly owns at least 25% of the capital of the company paying the dividends.
- (u) The rate is reduced to 5% for royalties paid for copyrights of literary, artistic or scientific works, including cinematographic films, and films or tapes for radio or television broadcasting.
- (v) The rate is reduced to 0% if the interest is paid to the government of the other contracting state or any agency or instrumentality thereof, including the central bank of that contracting state (subject to certain restrictions).
- (w) The treaty language is unclear and may be read either as providing an exemption from Barbados withholding tax, or as providing no restriction of Barbados withholding tax. The government has not yet issued guidance as to the correct interpretation.

Carryforward	10

- (a) The 18% rate is the standard profits tax rate. The 25% rate applies to profits of banks and insurance companies. Certain activities are subject to special tax rates and tax incentives are available. For details, see Section B.
- (b) The 18% rate is the standard profits tax rate. The 25% rate applies to profits of banks and insurance companies.
- (c) Withholding tax applies to income derived from sources in Belarus by foreign legal entities that do not carry out business activities in Belarus through a permanent establishment. Withholding tax rates may be reduced or eliminated under applicable double tax treaties. For a table of treaty withholding tax rates, see Section F.
- (d) This withholding tax applies to income derived from debt obligations, such as borrowings or loans, that are not formalized by securities. Exemption is available for certain public debts and certain types of bonds. Interest from certain loans is exempt from withholding tax in 2017. This exemption applies to companies whose permanent location is confirmed by the Bankers Almanac (except for residents of offshore zones).
- (e) The Tax Code specifies the types of income subject to withholding tax.

B. Taxes on corporate income and gains

Corporate profits tax. Companies incorporated in Belarus are subject to corporate profits tax on their worldwide income. Non-residents that carry out business activities in Belarus through a permanent establishment are subject to the corporate profits tax only on the income derived from their activities carried out in Belarus through such permanent establishment.

Income derived from sources in Belarus by nonresidents that do not carry out business activities in Belarus through a permanent establishment is subject to withholding tax. For withholding tax rates, see Sections A and F.

Rates of corporate profits tax. The standard corporate profits tax rate is 18%. A 25% rate applies to profits of banks and insurance companies.

Reduced tax rates apply to the following types of income:

- Profits of producers of high-technology products: 10%
- Dividends paid to Belarusian companies: 12%
- Profits of science and technology parks, technology-transfer centers, and residents of science and technology parks (except for corporate profits tax that is calculated, withheld and remitted by a tax agent): 10%

Tax exemptions and reductions. Belarus offers various tax exemptions and reductions. Some of these exemptions and reductions are summarized below.

Certain types of income are not subject to tax, including dividends accruing to the following:

- Belarusian societies of disabled people, Belarusian societies of deaf people, Belarusian societies of sight-disabled people (for dividends received from unitary enterprises [commercial organizations that do not have shares or participatory interests] owned by these Belarusian societies)
- Venture organizations and Belarusian innovation funds (for dividends received from innovation organizations)

If certain conditions are met, profits subject to tax can be decreased by amounts used to finance state social objects (including educational, health care, sports and religious organizations) or used for construction or reconstruction of sports facilities, up to 10% of taxable profits.

Profits derived from certain business activities are exempted from the tax, including the following:

- Manufacturing of food products for infants
- Sales of high-technology goods produced by the company according to the list issued by the government, as agreed to by the President of Belarus, if the revenue from these sales is more than 50% of the company's gross revenue
- Sales of innovative goods produced by the company according to the list issued by the government
- Transactions with government securities, securities of the national Bank of the Republic of Belarus and some other securities
- Investment of insurance reserves on voluntary life insurance agreements if the profit is used to increase funds accumulated in the personal accounts of the policyholders

All the benefits described above can be claimed only if special conditions and procedures are met and, in certain circumstances, if special state permits are received.

Free-economic zones. A free-economic zone (FEZ) is located in each of the six regional centers of Belarus (Brest, Gomel, Grodno, Minsk, Mogilev and Vitebsk). An FEZ resident registered after 31 December 2011 is exempt from profits tax for 10 years beginning on the date on which profits are declared for the first time.

Other FEZ residents are exempt from corporate profits tax from 2017 through 2021 and for five years beginning on the date on which profits are declared for the first time. After the end of these periods, the FEZ resident pays corporate profits tax at 50% of the standard rate, but the tax rate may not exceed 12%.

The benefits mentioned above are provided to an FEZ resident with respect to profits received from goods (works and services) that are manufactured by the FEZ resident and satisfy one of the following additional conditions:

- They are sold to other FEZ residents.
- They are exported outside Belarus.
- They are sold from storage sites or exhibitions located outside Belarus.

Special tax regimes. Belarus has several tax regimes, which are summarized below.

Simplified system of taxation. Business entities may pay a unified tax under a simplified system of taxation. Business entities that pay the unified tax are not subject to corporate profits tax, and under certain conditions, to VAT (and some other taxes). Under this system, the tax due is either 5% of gross revenues or, if the business entity continues to pay VAT, 3% of gross revenues. Certain types of non-operating income are subject to a 16% rate.

Unified tax on agricultural producers. Agricultural producers may pay a unified tax at a rate of 1% of gross revenues from the sale of goods (works and services) and other property and income derived from non-sales transactions. An agricultural entity can pay the unified tax if its annual gross revenue consists of at least 50% of revenue from the sale of its own manufactured crop products (excluding flowers and ornamental plants), livestock products, fish breeding and bee breeding products.

Tax on gambling industry. Gambling (except for lotteries) is subject to fixed tax rates, depending on the number of items of operational equipment used (for example, gambling tables, slot machines and gambling equipment used to register betting). The positive difference between the amount of received bids and the composed winning fund (fund to be paid to the winner) is subject to additional gambling tax at a rate of 4%.

Tax on income generated by lottery sales. Lottery sales are subject to an 8% tax rate on the gross revenue less the awarded prize fund.

Tax on electronic interactive games. The tax base for the tax on electronic interactive games equals the difference between the amount of revenue from electronic interactive games and the composed winning fund (fund to be paid to the winner). The tax rate is 8%. Revenue from electronic interactive games is exempt from corporate profits tax. Turnover received from stakes (bets) with respect to the holding of electronic interactive games is exempt from VAT.

Tax on imputed income. Providers of car maintenance and repair services are subject to 5% tax on imputed income. The tax base for the tax on imputed income is calculated by multiplying the average monthly number of employees by the monthly basic profitability of car maintenance and repair services per employee.

Taxation of commercial organizations and individual entrepreneurs engaged in medium-sized or small towns and rural areas. Commercial organizations and individual entrepreneurs engaged in business in medium-sized or small towns and rural areas may qualify for exemption from the following taxes, duties and other obligations:

- Corporate profits tax and personal income tax, respectively, during the seven-year period after the registration of the business
- Real estate tax on assets located in medium-sized or small towns and rural areas during the seven-year period after the registration of the business
- State duties for obtaining special permissions (licenses) and the introduction of changes into special permissions

They may apply for the above tax incentives if special conditions are met and special procedures are followed. They may also receive other benefits.

Taxation of residents of the High Technologies Park. The High Technologies Park was established in 2005 for a period of 15 years. Park residents are exempt from taxes and other obligatory payments to the state budget and state non-budget funds with respect to revenue derived from the sale of goods (works, services and property rights for intellectual property). Business entities operating in the park may engage only in the high technology activities set forth in the Decree of the President of Belarus “Concerning the Park of High Technologies.”

Taxation of the members of the Infopark Science and Technology Association. The members of the Infopark Science and Technology Association are exempt from taxes and other obligatory payments to state non-budget funds with respect to revenue derived from the sale of information technologies and services for the development of such technologies, except for profits tax and Social Fund contributions.

China-Belarus Industrial Park (The Great Stone). The China-Belarus Industrial Park (The Great Stone; CBIP) was created in 2012 as a territory with a special regime for entrepreneurial activity. Residents of the CBIP may benefit from tax incentives, such as a 10-year exemption from the following taxes:

- Corporate profits tax from the realization of their own manufactured goods (works and services) produced in the CBIP territory
- Real estate tax on buildings and constructions located in the CBIP
- Land tax on land located in the CBIP territory

Personal income tax at a rate of 9% applies to the income of a CBIP resident’s employees, and social security contributions are calculated on the basis of an amount that is not more than the average salary in Belarus for the preceding month. Other benefits are also available.

Capital gains. Capital gains derived from the alienation of equity interests in the charter capital of Belarusian companies are taxed at a standard corporate profits tax rate of 18%. A 25% rate applies to profits of banks and insurance companies.

Capital gains derived by nonresidents without a permanent establishment in Belarus are subject to a 12% withholding tax, unless otherwise provided in a double tax treaty.

Administration. The basic tax reporting period is the calendar quarter. The tax return for the first, second and third quarters must be filed by the 20th day of the month following the respective reporting quarter. The tax return for the fourth quarter must be filed by 20 March of the year following the tax period (calendar year). In general, the corporate profits tax must be paid by the 22nd day of the month following the reporting quarter.

Corporate profits tax for the fourth quarter must be paid by 22 December in an amount equal to two-thirds of the tax payable in the third quarter, with subsequent additional payment or reduction not later than 22 March of the year following the tax period (calendar year).

Non-payment or incomplete payment of tax is subject to a fine of 20% of the unpaid tax but not less than 10 basic units (approximately EUR100 or USD110). A fine for late submission of the tax return can be up to 10% of the unpaid tax but not less than 10 basic units. In addition to these fines, a penalty is applied for every day of delay in tax payment. The penalty is assessed on the basis of the refinance rate established by the National Bank of the Republic of Belarus (currently, 18%).

Dividends. Dividends paid to foreign legal entities without a permanent establishment in Belarus are subject to a 12% withholding tax, unless otherwise provided by a double tax treaty. The distribution of dividends to resident companies is subject to corporate profits tax.

Foreign tax relief. A tax credit for foreign tax paid by, or withheld from, a Belarusian taxpayer is granted on submission to the local tax authorities of a certificate issued by the competent authorities of the foreign country that confirms the amount of tax paid (withheld) in that foreign state.

C. Determination of taxable profits

General. Taxable profits are based on the financial statements prepared according to the accounting standards of Belarus. The taxable profits are determined by adjusting the profits reported in the financial statements by items stipulated by the Tax Code. Adjustments relate to special income and expense items and usually act to restrict tax-deductible expenses. For example, travel expenses are deductible within certain limits. The list of deductible expenses is open, but may include only economically justified expenses.

Expenses are not economically justified and nondeductible in the following cases:

- The taxpayer does not actually receive goods (works and services), intangible assets or property rights.
- The taxpayer purchases works and services from an individual entrepreneur who is an employee of the taxpayer and whose job duties include these works and services.
- The taxpayer (excluding a stock company) purchases works and services from another company (excluding a stock company) that is a founder (participant) of the taxpayer or vice versa, if the job duties of an employee of the taxpayer include these works and services.

Special rules determine the taxable profits of banks and insurance companies.

Inventories. Inventories are carried at actual cost. The allowed accounting methods for determining cost value are cost of each unit, average cost and valuation price, including first-in, first-out (FIFO).

Provisions. Banks can establish deductible provisions for unrecoverable loans and securities. The National Bank of the Republic of Belarus regulates the establishment of such provisions.

Tax depreciation. The amount of depreciation reported in the financial statements may be deducted for tax purposes if the fixed assets are used in an entrepreneurial activity.

Investment deduction. On the acquisition and/or reconstruction of tangible assets, a taxpayer can immediately deduct a percentage of the initial value of the assets (value of investments for reconstruction) for corporate profits tax purposes. The following are the percentages:

- Buildings and structures: not more than 10%
- Machinery and equipment and certain transport vehicles: not more than 20%

The investment deduction does not reduce the base for calculation of the depreciation deduction for tax purposes, which is defined as the initial cost of the asset.

Relief for losses. Belarusian tax law contains loss carryforward rules under which losses can be carried forward to the following 10 years, beginning with those incurred in 2011. Losses are carried forward in groups of operations against identical types of income. The following are the groups:

- First group: operations with financial derivatives and securities
- Second group: alienation of fixed assets, construction-in-progress sites and uninstalled equipment

The remaining losses are carried forward regardless of the operations and activities in which they were incurred. To apply the loss carryforward rules, a company must maintain separate accounting and keep documents confirming the amount of losses.

The Belarusian tax law does not provide for loss carrybacks.

Groups of companies. The Belarusian tax law does not provide for tax groups. Each legal entity is a separate taxpayer.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT)	
Standard rate	20
Sales of specified products (for example, goods for children and foods)	10
Exports of goods and services	0
Excise duties; imposed at fixed amounts per unit of goods (specific rates) or as a percentage of the value of goods (ad valorem rates); levied on various products (alcohol, tobacco products, certain types of fuel and other items)	Various

Nature of tax	Rate (%)
Payroll taxes	
Social fund contributions	
Paid by the employer	34
Withheld from employee	1
Personal income tax; withheld from employee	13
Land tax; annual tax imposed at fixed amount per hectare of land area	Various
Ecological tax; imposed at fixed amount per units of various contaminants	Various
Asset tax; annual tax imposed on real estate, including construction-in-progress	1 to 2
Local taxes and duties	Various
Offshore levy; imposed on payments or transfers of cash by residents to nonresidents registered in tax havens; paid by residents	15

E. Miscellaneous matters

Foreign-exchange controls. The Belarusian ruble (BYN) has limited convertibility. The Council of Ministers of the Republic of Belarus, the National Bank of the Republic of Belarus, The State Control Committee and State Customs are the currency regulation and control bodies in Belarus.

Belarus imposes detailed and severe currency control regulations. These regulations impose restrictions, controls and special reporting with respect to transactions involving the use of foreign and national currency, as well as to settlements with nonresidents.

Debt-to-equity ratios. Domestic thin-capitalization rules limit the deductibility of expenses relating to controlled debt owed to a foreign or Belarusian founder (participant).

Foreign founder (participant). Controlled debt to a foreign founder (participant) is subject to thin-capitalization rules if the debt-to-equity ratio is 3:1. This ratio is 1:1 for Belarusian companies manufacturing excisable goods. Controlled debt to a foreign founder (participant) includes the total indebtedness, which consists of, among other items, amounts with respect to marketing, consulting, information services, loans received, fines and other sanction charges.

A foreign founder (participant) is a foreign company or individual owning (directly or indirectly) more than 20% of the shares (participatory interests), a related party of this foreign founder (participant) or other persons specified by the Tax Code.

Belarusian founder (participant). Controlled debt to a Belarusian founder (participant) is subject to thin-capitalization rules if the debt-to-equity ratio is 1:1. Controlled debt to a Belarusian founder (participant) includes the total indebtedness, which consists of, among other items, amounts with respect to marketing, consulting and information services. However, it does not include indebtedness under loans received, fines and other sanction charges. A Belarusian founder (participant) is a Belarusian company or individual owning (directly or indirectly) more than 20% of the shares (participatory interests), a related party of this Belarusian founder (participant) or other persons specified by the Tax Code.

Thin-capitalization rules do not apply to banks or insurance companies or to lessors or landlords if they receive rental payments (lease payments) exceeding 50% of their total revenue from the sale of goods (works and services) and property rights, as well as income from renting and leasing operations.

Transfer pricing. The tax authorities may control prices set in the following types of transactions:

- Transactions related to the sale or purchase of immovable property if the price of the transaction deviates by more than 20% from the market price for identical (homogeneous) immovable property
- The following trade transactions, if the total value of the transactions with one counterparty exceeds BYN100,000 (excluding indirect taxes) in a calendar year:
 - Foreign-trade transactions with related parties or offshore zone residents
 - Foreign-trade transactions with related parties or offshore zone residents undertaken through a chain of transactions with an intermediary third party that is not a related party to the companies involved in the controlled transactions (intermediary transactions)
 - Trade transactions with Belarusian related parties including intermediary transactions if these related parties are exempted from taxation as a result of the application of a special tax regime or similar rulings
- The following foreign-trade transactions, if the total value of the transactions with one counterparty exceeds BYN1 million (excluding indirect taxes) in a calendar year (large-scale transactions):
 - Transactions of large taxpayers
 - Transactions related to sale or purchase of strategic goods on the list approved by the government

Trade transactions are subject to control of the tax authorities if the price of the transaction differs by more than 20% from the market price on the date of acquisition or sale. The comparability of prices to market prices is reviewed only for the purpose of calculating corporate profits tax, and the prices are adjusted only if this will increase the tax. The following methods are used to determine for tax purposes the conformity of transaction prices to market prices:

- Comparable market price method
- Resale price method
- Cost-plus method
- Comparable profits method
- Profit-split method

Taxpayers must inform the tax authorities regarding transactions performed by them in the tax period that are subject to the control of the tax authorities by entering data on the transactions into electronic VAT invoices that are submitted to the tax authorities.

Taxpayers that completed large-scale transactions (see above) must prepare and, on notification of the tax authorities, provide such tax authorities with the documentation supporting the economic justification of the applied price. Taxpayers that completed other controlled transactions must, on notification of the tax

authorities, provide only supporting documentation evidencing that the price applied by the taxpayer is in line with the market price.

The documentation described in the preceding paragraph must be submitted within the period prescribed in the tax authorities' request. However, such period may not be less than the following:

- Ten working days from the date of receipt of notification under a desk tax audit
- Five working days from the date of receipt of notification under a field tax audit

F. Tax treaties

Belarus has entered into double tax treaties with Armenia, Austria, Azerbaijan, Bahrain, Bangladesh, Belgium, Bulgaria, China, Croatia, Cyprus, the Czech Republic, Egypt, Estonia, Finland, Georgia, Germany, Hungary, India, Iran, Ireland, Israel, Italy, Kazakhstan, Korea (North), Korea (South), Kyrgyzstan, Kuwait, Laos, Latvia, Lebanon, Lithuania, Macedonia, Moldova, Mongolia, the Netherlands, Oman, Pakistan, Poland, Qatar, Romania, the Russian Federation, Saudi Arabia, Singapore, the Slovak Republic, Slovenia, South Africa, Sri Lanka, Sweden, Switzerland, Syria, Tajikistan, Thailand, Turkey, Turkmenistan, Ukraine, United Arab Emirates, Uzbekistan, Venezuela, Vietnam and Yugoslavia (applied to Serbia).

Belarus has also signed double tax treaties with the Hong Kong Special Administrative Region (SAR), Indonesia and Libya, but these treaties have not yet entered into force.

Belarus honors several of the double tax treaties entered into by the former USSR, including treaties with Denmark, France, Japan, Malaysia, Spain, the United Kingdom and the United States. The Ministry of Taxes and Duties has indicated that the treaties with Canada and Norway are no longer effective.

The following table presents the withholding tax rates under Belarusian tax treaties and under the former USSR's treaties honored by Belarus.

	Dividends	Interest	Royalties
	%	%	%
Armenia	10/12 (a)	0/10 (v)	10/15 (tt)

- (a) The 10% rate applies if the recipient is the actual owner of the dividends and owns at least 30% of the capital of the company that pays the dividends. Otherwise, a 12% rate applies.
- (b) The 5% rate applies if the recipient is the actual owner of dividends and owns at least 30% of the capital of the company that pays the dividends. The 10% rate applies in other cases if the recipient is the actual owner of dividends. Otherwise, the 12% rate applies.
- (c) The 3% rate applies if the recipient is the actual owner of royalties paid for the use of or grant of the right to use patents or secret formulas or processes, or for information on industrial, business or scientific experience. The 5% rate applies if the recipient is the actual owner of royalties for the use of or grant of the right to use of industrial, business or scientific equipment. In all other cases, the 10% rate applies if the recipient is the actual owner of the royalties. Otherwise, the 15% rate applies.
- (d) The 5% rate applies if the recipient is the actual owner of the dividends and has invested at least ECU200,000 in the equity of the company that pays the income. The 10% rate applies if the recipient is the actual owner of the dividends and owns at least 25% of the capital of the company that pays the dividends. Otherwise, the 12% rate applies.
- (e) The 5% rate applies if the recipient of income is the owner of at least 25% of the capital of the company that pays the dividends. Otherwise, the 12% rate applies.
- (f) The 3% rate applies to amounts paid for the use of or grant of the right of use of patents, trademarks, designs, models, plans, or secret formulas or processes, or for information on industrial, business or scientific experience. The 5% rate applies to amounts paid for the use of or grant of the right to use industrial, business or scientific equipment (including road transport vehicles). The 10% rate applies to amounts paid for the use of or grant of the right to use copyrights of works of literature, art or science, including cinematographic films, as well as for films or recordings used in television or radio programs. Otherwise, the 15% rate applies.
- (g) The 10% rate applies if the recipient is the actual owner of the dividends and owns at least 25% of the capital of the company that pays the income. Otherwise, the 12% rate applies. Under the Pakistan and Turkey treaties, the recipient does not need to be the actual owner of the dividends to apply the 10% rate.
- (h) The 8% rate applies if the recipient is the actual owner of the interest. Otherwise, the 10% rate applies.
- (i) The 5% rate applies to amounts paid for the use of copyrights of works of literature, art or science, including cinematographic films, as well as for films or recordings and other means for the transmission of images or sound. The 10% rate applies to amounts paid for patents, trademarks, designs, charts, models, plans or secret formulas or processes, for information on industrial, business or scientific experience, for the use of or cession of the right to use industrial, business or scientific equipment, or for transport vehicles. Otherwise, the 15% rate applies.
- (j) The 5% rate applies if the actual owner of the dividends is a company owning USD100,000 or more in the company that pays the dividends. The 10% rate applies in all other cases if the recipient is the actual owner of dividends. Otherwise, the 12% rate applies.
- (k) The 5% rate applies to amounts paid for the use of or grant of the right to use copyrights of scientific works, patents, trademarks, designs, models, plans, or secret formulas or processes, for the right to use information on industrial, business or scientific equipment or transport vehicles, or for information on industrial, business or scientific experience. The 10% rate applies to amounts paid for the use of or grant of the right to use copyrights for works of literature or art, including cinematographic films as well as films or recordings used in television or radio programs. Otherwise, the 15% rate applies.
- (l) The 0% rate applies if the recipient of the interest income is the government, a government body or a company that is fully owned by the state. The 5% rate applies if the recipient of the interest income is a bank or other financial institution. Otherwise, the 10% rate applies.
- (m) The 5% rate applies if the recipient is the actual owner of the royalties paid for industrial, business or scientific equipment or transport vehicles. The 10% rate applies in all other cases if the recipient is the actual owner of the royalties. Otherwise, the 15% rate applies.
- (n) The 0% rate applies to amounts paid for the use of or grant of the right to use copyrights of works of literature, art or science, including cinematographic films, as well as for films or recordings used in television or radio programs. The 10% rate applies to amounts paid for the use of or grant of the right to use patents, trademarks, designs, charts, models, plans or secret formulas or processes, for information on industrial, business or scientific experience, and for the use of or grant of the right to use industrial, business or scientific equipment. Otherwise, the 15% rate applies.

- (o) The 10% rate applies if the recipient is the actual owner of royalties paid for the use of or grant of the right to use patents, trademarks, designs, models, plans, secret formulas or processes, or copyrights of scientific works, for the use of or grant of the right to use industrial, business or scientific equipment, and for the use of or grant of the right to use information on industrial, business or scientific experience. Otherwise, the 15% rate applies.
- (p) The 0% rate applies if any of the following circumstances exist:
- The interest income is derived from the sale on credit of industrial, commercial or scientific equipment.
 - The recipient of the interest income is the government, the central bank, local government bodies or financial institutions performing state functions, or the interest is paid on loans that are guaranteed or indirectly financed by such bodies or institutions.
- (q) Belarus abides by the double tax treaty between the former USSR and this state. The table shows the tax rates under such treaty.
- (r) The 0% rate applies to interest on bank and commercial loans. Otherwise, the 10% rate applies.
- (s) The 0% rate applies to interest on government-guaranteed loans.
- (t) The 0% rate applies if the recipient of the interest income recipient is a government, a local government body or the central bank. The 5% rate applies if the recipient and the actual owner of interest income is a bank or other financial institution or if the interest is paid with respect to sale on credit of industrial, business or scientific equipment. Otherwise, the 10% rate applies.
- (u) The 0% rate applies if the recipient of the interest income is a government, local government body, central bank or other financial institution that is wholly owned by the state. Otherwise, the 10% rate applies.
- (v) The 0% rate applies if the recipient of the interest income is the government or the central bank (in the case of Turkey, the 0% rate also applies to interest accruing in Belarus and paid by Eximbank of Turkey on loans for the purchase of industrial, business, commercial, medical or scientific equipment. Otherwise, the higher rates apply).
- (w) The 0% rate applies if either of the following conditions is met:
- The dividend recipient owns more than 50% of the dividend-paying company's capital, provided that the dividend recipient's contribution to the company's capital is at least ECU250,000.
 - The dividend recipient owns over 25% of the dividend-paying company's capital, and its contribution to the company's capital is guaranteed or insured by the government.
- (x) The 0% rate applies if the actual owner of the dividends is the government, the central bank, other government agencies or financial institutions. The 5% rate applies if the recipient is the actual owner of dividends. Otherwise, the 12% rate applies.
- (y) The 0% rate applies to amounts paid for the use of or cession of the right to use copyrights of works of literature, music, art or science, except for cinematographic films, as well as for films or recordings used in television or radio programs. Otherwise, the 5% rate applies.
- (z) The 0% rate applies if one of the following circumstances exist:
- The loan is approved by the government.
 - The interest is charged with respect to the sale on credit of industrial, medical or scientific equipment and related services.
 - A loan intended to promote exports that involves the delivery of industrial, medical or scientific equipment and related services is granted, insured or guaranteed by the state.
- Otherwise, the 10% rate applies.
- (aa) The 0% rate applies if one of the following requirements is met:
- The loan is approved by the government.
 - The interest is received with respect to the sale on credit of industrial, commercial, medical or scientific equipment.
 - The interest is paid on state securities.
- The 5% rate applies to interest income relating to bank loans. The 8% rate applies if the recipient is the actual owner of the interest income. Otherwise, the 10% rate applies.
- (bb) The 0% rate applies if the loan is approved by the government.
- (cc) The 5% rate applies to amounts paid for the use of copyrights of works of literature, art or science (except for cinematographic films) or for the right to use industrial, commercial or scientific equipment or transport vehicles. The 10% rate applies if the recipient is the actual owner of the royalties. Otherwise, the 15% rate applies.
- (dd) The 5% rate applies if the recipient is the actual owner of the income, owns over 20% of the dividend-paying company's capital and has made a contribution of at least EUR81,806.70. Otherwise, the 12% rate applies.

- (ee) The 0% rate applies if any of the following circumstances exist:
- The interest originates in Belarus and is paid to the government of Germany, the Deutsche Bundesbank, the Kreditanstalt für Wiederaufbau or the Deutsche Finanzierungsgesellschaft für Beteiligungen in Entwicklungsländern.
 - The interest income is received with respect to loans secured by export loan guarantees (Hermes-Deckung) provided by the German government.
 - The recipient of the interest income is the government or central bank of Belarus.
 - The recipient is the actual owner of interest that is paid with respect to the sale on credit of industrial, business or scientific equipment.
- The 5% rate applies if the recipient is the actual owner of the interest income. Otherwise, the 10% rate applies.
- (ff) The 3% rate applies if the recipient is the actual owner of royalties paid for the use of or cession of the right to use copyrights of scientific works, patents, trademarks, designs, models, plans or secret formulas or processes, or for the right to use information regarding industrial, commercial or research experience. The 5% rate applies if the recipient is the actual owner of royalties for the use of or cession of the right to use copyrights of works of literature and art, including cinematographic films, as well as films or recordings used in television or radio programs, or for the use of or cession of the right to use all types of equipment and transport vehicles. Otherwise, the 15% rate applies.
- (gg) The 0% rate applies if any of the following circumstances exist:
- The loan is approved by the government.
 - The recipient of the interest income is the government, local authorities or the central bank.
 - The interest is paid with respect to a lending or a loan guaranteed or insured by state companies with a view to promoting exports and is associated with the delivery of industrial, commercial, medical or scientific equipment (including Österreichische Kontrollbank Aktiengesellschaft).
- The 5% rate applies if the recipient is the actual owner of the interest income. Otherwise, the 10% rate applies.
- (hh) The 0% rate applies if the recipient of the interest income is the government, the central bank, the Finnish Fund for Industrial Cooperation (FINNFUND) or the Finnish export credit agency (FINNVERA). The 5% rate applies if the recipient of the interest income is the actual owner of the interest income. Otherwise, the 10% rate applies.
- (ii) The 0% rate applies if the income recipient is the government, the central bank, the State General Reserve Fund of Oman or a company that fully or largely belongs to the state. The 5% rate applies if the recipient is the actual owner of the income. Otherwise, the higher rate applies.
- (jj) The 5% rate applies if the recipient of the dividends is the actual owner of the income and owns at least 25% of the capital of the company paying the income. The 10% rate applies in all other cases if the recipient is the actual owner of income. Otherwise, the 12% rate applies.
- (kk) The 0% rate applies if the recipient is the actual owner of the interest income and if one of the following requirements is met:
- The recipient of the interest income is the government, a state body, the central bank or a company that fully or largely belongs to the state.
 - The interest is paid on a government-guaranteed loan.
 - The interest is paid on a loan that is intended to promote exports and that is connected with the delivery of equipment and transport vehicles by an enterprise of the other treaty state.
 - The interest is paid with respect to the sale on credit of equipment and transport vehicles.
- Otherwise, the higher rate applies.
- (ll) The 5% rate applies if the recipient is the actual owner of royalties received for the use of or cession of the right to use copyrights of works of science or computer applications, or for the use of or cession of the right to use equipment and transport vehicles. The 10% rate applies if the recipient is the actual owner of the royalties. Otherwise, the 15% rate applies.
- (mm) The 0% rate applies any of the following circumstances exist:
- The interest is paid by the government or a state body.
 - The interest is paid to the government, a government body, a local agency or body (including a financial institution) that fully belongs to the state or a government body.
 - The interest is paid to another agency or body (including a financial institution) on a loan granted due to the application of an interstate treaty.
- The 8% rate applies if the recipient is the actual owner of the interest income. Otherwise, the 10% rate applies.

- (nn) The 0% rate applies to interest on loans granted to the government or the central bank. Otherwise, the 10% rate applies.
- (oo) The 0% rate applies to dividends paid to any of the following:
- The National Treasury Management Agency of Ireland
 - The National Reserve Pension Fund of Ireland
 - A company, including an agency or an institution, that fully or partially belongs to the state
- The 5% rate applies if the recipient is the actual owner of the dividends and owns at least 25% of the dividend-paying company's capital. The 10% rate applies in all other cases if the recipient is the actual owner of the dividends. Otherwise, the 12% rate applies.
- (pp) The 0% rate applies if the payer or the payee of the interest income is the government, a political and administrative division, a local government body or the central bank. Otherwise, the 5% rate applies.
- (qq) The 0% rate applies to interest paid to the government, the central bank or institutions whose capital belongs fully to the state or local government bodies. Otherwise, the 10% rate applies.
- (rr) The 0% rate applies if any of the following circumstances exists:
- The payer or the payee of the interest income is the government, a political and administrative division, a local government body or the central bank.
 - The loan is approved by the government.
 - The loan is granted and guaranteed by the state financial body to promote exports and the lending is provided or guaranteed on preferential terms.
 - The loan is granted by a bank to promote exports.
 - The interest is paid on a debt that arises with respect to the sale on credit of industrial, business or scientific equipment.
- The 5% rate applies if the recipient is the actual owner of the interest income. Otherwise, the 10% rate applies.
- (ss) The 0% rate applies if either of the following circumstances exists:
- The interest is paid to the state, a local government body, the central bank or a financial institution that fully belongs to the state.
 - The interest is paid on a loan that is guaranteed, insured or indirectly financed by the government, a local government body, the central bank or a financial institution that fully belongs to the state.
- Otherwise, the 10% rate applies.
- (tt) The 10% rate applies if the recipient is the actual owner of the royalties. Otherwise, the 15% rate applies.
- (uu) The 5% rate applies if the recipient is the actual owner of the royalties. Otherwise, the 15% rate applies.
- (vv) The 0% rate applies if the recipient of the interest income is the government, a local government body, the central bank or other government company or financial institution. Otherwise, the higher rate applies.
- (ww) The 10% rate applies if the recipient is the actual owner of dividends. Otherwise, the 12% rate applies.
- (xx) The 5% rate applies if the recipient is the actual owner of the interest income. Otherwise, the 10% rate applies.
- (yy) The 0% rate applies if any of the following circumstances exists:
- The payer or the payee of the interest income is the government, a political and administrative division, a local government body or the central bank.
 - A loan is approved by the government.
 - A loan is provided, guaranteed or insured by the government, the central bank or other body under state control.
 - A loan is provided or guaranteed by a financial institution to promote development.
 - The interest is paid on a loan or lending with respect to the acquisition of industrial, business, commercial, medical or scientific equipment.
- Otherwise, the higher rate applies.
- (zz) The 6% rate applies if the recipient is the actual owner of the royalties. Otherwise, the 15% rate applies.
- (aaa) The 5% rate applies if the actual owner of the dividends is a company that directly owns at least 20% of the capital of the company paying the dividends. The 10% rate applies if the recipient is the actual owner of dividends. Otherwise, the 12% rate applies.
- (bbb) The 0% rate applies if the actual owner of interest income is one of the following:
- The government of Belarus
 - National Bank of Belarus
 - A Belarusian local government body
 - The government of Laos

- Bank of Laos
- A Laotian local government body

The 8% rate applies if the recipient is the actual owner of the interest income. Otherwise, the 10% rate applies.

(ccc) The 0% rate applies to dividends received by the following:

- The government of Belarus.
- National Bank of Belarus.
- A legal body in Belarus.
- An institution wholly or predominantly owned by the government of Belarus. A list of such institutions may be approved from time to time by the government of Belarus or bodies authorized thereby and by a competent Singaporean body.
- The government of Singapore.
- Monetary Authority of Singapore (central bank).
- Government of Singapore Investment Corporation.
- A legal body in Singapore.
- An institution wholly or predominantly owned by the government of Singapore. A list of such institutions may be approved from time to time by a competent Singaporean body, the government of Belarus or bodies authorized by the government of Belarus.

The 5% rate applies to dividends received by the actual owner of the dividends. Otherwise, the 12% rate applies.

(ddd) The 0% rate applies to dividends received by the following:

- The government of Belarus.
- National Bank of Belarus.
- A legal body in Belarus.
- A bank in Belarus.
- An institution wholly or predominantly owned by the government of Belarus. A list of such institutions may be approved from time to time by the government of Belarus or bodies authorized thereby and by a competent Singaporean body.
- The government of Singapore.
- Monetary Authority of Singapore (central bank).
- Government of Singapore Investment Corporation.
- A legal body in Singapore.
- A bank in Singapore.
- An institution wholly or predominantly owned by the government of Singapore. A list of such institutions may be approved from time to time by a competent Singaporean body and the government of Belarus or bodies authorized thereby.

The 5% rate applies to interest received by the actual owner of the interest income. Otherwise, the 10% rate applies.

(eee) The 7.5% rate applies if the actual owner of the dividends is a company that directly owns at least 25% of the capital of the company paying the dividends. The 10% rate applies if the recipient is the actual owner of dividends. Otherwise, the 12% rate applies.

(fff) The 0% rate applies if the actual owner of the interest income is one of the following:

- The government or a local government body.
- The national (central) bank.
- Financial organizations (institutions) that are wholly owned by the government. A list of such organizations (institutions) may be approved from time to time by the governments of the treaty states or bodies authorized thereby.

Otherwise, the 10% rate applies.

(ggg) The 10% rate applies if the recipient is the actual owner of the dividends and owns at least 10% of the capital of the company paying the dividends. Otherwise, the 12% rate applies.

(hhh) The 0% rate applies to interest received by the government or a local government body, the national bank or an organization or institution wholly or predominantly owned by the government. The 5% rate applies to interest received by the actual owner of the interest income. Otherwise, the 10% rate applies.

(iii) The 5% rate applies if the recipient is the actual owner of the dividends. Otherwise, the 12% rate applies.

(jjj) The 7.5% rate applies if the recipient is the actual owner of the income. Otherwise, the higher rate applies.

(kkk) The 0% rate applies if the interest is paid to the actual owner of the interest income and if one of the following circumstances exists:

- The interest is paid to the government, central bank or any other organization that fully or largely belongs to the state, including an agency or institution.

- The interest is paid to the National Treasury Management Agency of Ireland.
 - The interest is paid to the National Pension Reserve Fund of Ireland.
 - The interest is paid on a debt that arises from a loan approved by the government.
 - The interest is paid on a debt that arises with respect to a sale on credit of any items or industrial, business, medical or scientific equipment.
- The 5% rate applies if the recipient is the actual owner of the interest. Otherwise, the 10% rate applies.

(III) The 0% rate applies if the recipient is the actual owner of the income. Otherwise, the higher rate applies.

(a) For further details, see Section B.

(b) In addition, a 3% surtax (crisis contribution) is imposed.

(c) Certain capital gains are exempt from tax (see Section B).

(d) The standard withholding tax rate for dividends is 30%. For further details, see Section B.

(e) The standard withholding tax rate for interest is 30%.

(f) For further details, see Section C.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are subject to tax on their annual worldwide income. Nonresident companies are subject to tax on their annual Belgian-source income only. A company is resident in Belgium if its central management or its registered address is located in Belgium.

Rates of corporate income tax. The normal corporate income tax rate is 33% for both resident companies and branches. If the income of a company or a branch is below EUR322,500, it is taxed at rates ranging from 24.25% to 34.5%. The reduced rates apply only if the company pays annual remuneration of at least EUR36,000 to at least one director. The reduced rates also do not apply to a company if any of the following circumstances exist:

- The company is a holding company.
- 50% or more of the company is owned by another company.
- The company makes a dividend distribution exceeding 13% of the paid-in capital.

In addition to the applicable rates, a 3% surtax (crisis contribution) is levied.

Notional interest deduction. Belgian companies and foreign companies with a Belgian permanent establishment or real estate in Belgium may benefit from a tax deduction equal to a percentage of the “risk capital.” This notional interest deduction (NID) is not reflected in the financial accounts. The “risk capital” equals the total equity, including retained earnings, as reported in the non-consolidated closing balance sheet of the financial year preceding the tax year (upward or downward adjustments of the risk capital are taken into account on a pro rata basis). To avoid potential abuse and duplication of tax benefits, the following items must be deducted from the equity:

- The fiscal net value of own shares and other shares recorded as financial fixed assets

- The fiscal net value of shares, the income from which is eligible for the Belgian participation exemption
- The net book value of tangible fixed assets to the extent that costs relating to such assets unreasonably exceed the needs of the business
- The book value of tangible fixed assets that are held as a portfolio investment and that are by their nature not intended to generate periodic income
- The book value of real estate assets or other real property rights used by directors, their spouses or children
- The tax-exempt portion of revaluation gains, capital subsidies and tax credits for research and development (R&D)

Equity allocated to foreign branches and foreign real estate qualifies for the NID. However, in such case, this portion of the NID must be imputed first on that foreign-source income. Only excess NID relating to branches and real estate located in the European Economic Area (EEA) can be effectively used against Belgian taxable income.

The tax deduction is computed by multiplying the risk capital by the average interest rate on risk-free, long-term Belgian state bonds (the 10-year *obligations linéaires – lineaire obligaties*, or OLO) during the third quarter.

The average OLO rate in the third quarter of 2015 was 1.131%, and the rate in the third quarter of 2016 was 0.237%. For the 2017 tax year, the rates are 1.131% for large companies and 1.631% for small companies. For the 2018 tax year, the NID rate is set at 0.237% (0.737% for small companies). The maximum notional interest deduction rate is capped at 3% (3.5% for small companies) if the above calculation method would result in a higher percentage. The deduction may not be carried forward in the event of a loss.

Tax regime for the diamond industry. Belgian tax law provides for a special lump-sum tax regime for the diamond industry.

The gross taxable result of the company equals 2.1% of the diamond trade turnover. This taxable result is subsequently subject to the application of the common corporate tax rules.

However, the net taxable result cannot be lower than 0.55% (0.65% in the 2017 tax year) of the diamond trade turnover.

The special tax regime is subject to the condition that the company manager's salary paid during the tax period be higher than a certain threshold (also depending on the diamond trade turnover of the company).

Tax incentive for audiovisual investments. Belgian tax law includes a tax incentive to attract investments of Belgian companies or branches in audiovisual productions.

Framework agreements concluded after 31 December 2014 are subject to a legal regime, under which investors may deduct 310% of their investment from their tax base. Therefore, the investor can recover 105.37% (310% x 33.99%) of the investment directly through a reduction of its corporate income tax. As a result, the new tax incentive provides for an immediate, but conditional,

return of the invested amount increased by a fixed margin of 5.37%.

The new incentive requires a tax-shelter certificate issued by the tax authorities, which is to be requested by the production company as soon as the production is finalized. The certificate provides the following:

- It guarantees that the invested amounts flow to the production company to a maximum extent.
- It confirms that the production company complies with all legal conditions.
- It guarantees the tax exemption on behalf of the investor.
- It determines the “tax value” of the project.

Companies planning to invest in a European audiovisual production (to be recognized by the competent departments of the French, Flemish or German communities) and who want to benefit from the tax incentive must conclude a framework agreement with a qualifying audiovisual production company. In this framework agreement, the expected tax value for the production, which is based on the budgeted production expenses (including expenses incurred up to six months before the conclusion of the framework agreement), needs to be included. The estimated tax exemption is based on this tax value. The framework agreement needs to be notified to the tax authorities within one month after it is signed.

The investors are entitled to an exemption of 310% of the invested funds. The invested amounts do not create a receivable, nor exploitation rights linked to the underlying project. The invested amount is irrevocably paid to the production company (as an expense; the expense as such is not tax deductible) and is not regarded as an asset. Except for commercial gifts with limited value (under reference of value-added tax [VAT] legislation), no other economic or financial benefit can be granted to the investor.

However, the exemption in a given tax year remains limited to a maximum of 50% of the investor’s increase of taxable reserves (mainly the net accounting profit before application of the tax-shelter exemption but after deduction of distributed dividends and other tax corrections) during that same tax year, with an absolute maximum of EUR750,000.

In principle, the exemption is granted in the year in which the framework agreement is concluded or the payments are made. Excess exemptions (exemptions that could not be used based on the above maximum) can be carried forward to the end of the fourth tax period following the year in which the framework agreement is signed. The invested amounts must be effectively paid to the production company within three months after the contract has been signed.

The initial exemption is granted in conditionally and provisionally. In addition to the conditions mentioned above, the following are the most noteworthy conditions:

- In the financial statements of the investor, the exempt amounts must be recorded in an “unavailable reserve,” which needs to be maintained until the date the tax-shelter certificate is received.
- For a specific project, the exemption is limited to 150% of the expected final tax value of the tax-shelter certificate as specified in the framework agreement.

The exemption only becomes final when the tax-shelter certificate confirming the tax value of the investment is issued and sent to the tax authorities of the investor as an enclosure to the investor's corporate income tax return. The certificate needs to be received by the investor by 31 December of the fourth year following the year in which the framework agreement is signed.

In addition, the final exemption is only granted to the extent that the tax value of the certificate corresponds to the value that was included in the agreement and to the extent that the limits and maximum amounts per tax period are respected. If the tax-shelter exemption is claimed incorrectly, corporate income tax on the difference becomes due, increased with late payment interest.

For the period between the first payment after the conclusion of the framework agreement and the receipt of the tax-shelter certificate, interest can be granted. This period is legally limited to 18 months, and the maximum interest rate that is allowed is fixed at the 12-month Euribor (increased by 450 basis points).

Tax incentives for start-ups. Within the framework of the government program, "Digital Belgium," the government tries to assist young innovative undertakings with the development of a start-up plan. The program offers the tax incentives described below.

Tax shelter regime for equity investments in start-ups. The tax shelter for equity investments in start-ups is designed to encourage individuals to invest in new shares of start-ups on incorporation or within four years after incorporation, as well as in shares in qualifying regulated starter funds. For investments in start-ups that qualify as small companies and for investments in starter funds, the personal income tax reduction amounts to 30% of a maximum investment of EUR100,000 per tax period. The rate is 45% for investments in start-ups that qualify as "micro-undertakings," as defined in EU accounting directive 2013/34. The total amount of qualifying investments may not exceed EUR250,000 per start-up. The incentive applies only to cash investments that represent a maximum of 30% of the capital of the start-up. The shares must be held for at least four years. The incentive does not apply to investments by the start-up's management. The tax-shelter regime for investments in start-ups applies to shares issued on or after 1 July 2015.

Tax exemption for loans to start-ups through crowdfunding. Individuals benefit from a tax exemption for interest on loans through a regulated crowdfunding platform for a maximum amount of loans per taxpayer per year of EUR15,000. The loan must have a maturity of at least four years. The exemption applies to loans to companies as well as to individuals who meet the criteria for small companies and who are registered for maximum of 48 months at the Crossroads Bank for Enterprises. The tax exemption does not apply to refinancing loans. The tax exemption applies to loans granted on or after 1 August 2015.

Partial payroll tax exemption for start-ups. Belgian law provides for a partial payroll tax exemption to decrease the wage costs for start-ups. The incentive applies to companies and to individual employers who are registered for a maximum of 48 months at the Crossroads Bank for Enterprises, starting from the first day of the month following the registration. If the start-up meets the criteria

for small companies, the exemption rate is 10%. The exemption rate is 20% for “micro-undertakings,” as defined in EU accounting directive 2013/34. The partial payroll tax exemption for start-ups applies to salaries paid as on or after 1 August 2015.

Capital gains. Capital gains on the disposal of tangible and intangible assets are taxed at the ordinary rate. If the proceeds are reinvested in depreciable fixed assets within three years (or a longer period in certain circumstances) and if certain other conditions are satisfied, the taxation of the capital gains is deferred over the depreciation period of the newly acquired assets.

Capital gains on shares are taxed at a reduced rate of 0.412% (or exempt from tax if the company is a small company), subject to conditions (subject-to-taxation test and holding period requirement of one year [see *Dividends*]). If the taxation test is met, but the holding period requirement is not met, a 25.75% tax rate applies. If the taxation test is not met, the ordinary rate applies. The reduced rates also apply to capital gains on shares in companies holding real estate (unless the general anti-avoidance rule applies). Any capital losses on these shares are generally not tax deductible, except to the extent of the loss of fiscally paid-up capital in a liquidation.

Capital gains realized on an exchange of shares in a tax-neutral restructuring are exempt from tax under certain conditions.

Administration. A tax year refers to the year following the financial year if the financial year ends on 31 December. If the financial year ends before 31 December, the tax year refers to the year in which the financial year closes. Consequently, the 2017 tax year relates to a financial year ending between and including 31 December 2016 and 30 December 2017.

To avoid a surcharge, tax must be paid in advance in quarterly installments. For the 2018 tax year, the percentage of the surcharge is 2.25%. For a calendar-year taxpayer, the quarterly installments in 2017 are due on 10 April, 10 July, 10 October and 20 December.

The balance of tax payable is due within two months after receipt of the notice of assessment.

Reporting obligation for payments to tax havens. Both resident and nonresident companies are required to report all direct or indirect payments (regardless whether these payments are expenses) in excess of EUR100,000 made to beneficiaries with an address or financial account in “tax havens” or low-tax jurisdictions that do not “effectively or substantially” meet the Organisation for Economic Co-operation and Development (OECD) standard on transparency and exchange of information (so-called “non-compliant jurisdictions”). For the purpose of this obligation, “tax havens” are defined as non-EEA countries that meet any of the following conditions:

- They have a nominal corporate tax rate below 10%.
- They do not levy corporate income tax on domestic income or on foreign income (offshore tax regimes).
- They have an effective corporate tax rate on foreign income of less than 15%.

Payments to non-compliant jurisdictions must be reported if they were made during the period in which the jurisdiction was non-compliant. The rules apply to payments to the following:

- Branches located in a tax haven, but with a head office in a listed state
- Permanent establishments located in such jurisdictions
- Bank accounts managed by or held with individuals or permanent establishments located in such jurisdictions
- Accounts managed by or held with credit institutions or their permanent establishments located in such jurisdictions

A specific reporting obligation for financial institutions requires financial institutions to automatically and periodically notify their operations with and payments to tax havens.

The payments must be reported on a special form, which must be annexed to the annual corporate income tax return. These payments are tax deductible only if they relate to real and genuine transactions and if they are made to persons that are not artificial constructions.

Advance rulings. An advance decision in tax matters (tax ruling) is a unilateral written decision by the Belgian tax authorities at the request of a (potential) taxpayer about the application of the tax law in a specific situation that has not yet occurred, as described by the taxpayer. The purpose of such a ruling is to provide upfront certainty to the taxpayer.

The tax authorities must respond to a ruling request within a three-month period, which may be extended by mutual agreement. A ruling may be valid for a period of five years.

However, advance rulings are not issued in certain circumstances such as the following:

- Transactions that have already been implemented or that are in a tax litigation phase
- Transactions that lack economic substance in Belgium
- Transactions, essential parts of which involve tax havens that do not cooperate with the OECD

Ruling requests filed with the Belgian tax authorities that relate to multinational investments and transactions must disclose other ruling requests filed in EU or treaty countries regarding the same matters.

In principle, the advance rulings are published.

Dividends. Under the dividend participation exemption, 95% of the dividends received by a qualifying Belgian company or Belgian branch is exempt from tax. The participation exemption applies only if a minimum participation test and a taxation test are satisfied. To satisfy the minimum participation test, the following requirements must be met:

- The recipient company must own a minimum participation of 10% of the share capital or a participation with an acquisition value of at least EUR2,500,000.
- The shares must be held for at least one year.

The minimum participation thresholds and the one-year holding period requirement do not apply to dividends received by qualifying investment companies.

In the case of insufficient profits, the excess participation exemption can be carried forward indefinitely to the extent that it relates to qualifying dividends (that is, dividends from companies established in the EEA or in a country with which Belgium has entered into a double tax treaty that has an equal treatment clause for dividends). Non-qualifying dividends can give rise to the participation exemption, but in the case of insufficient profits, the excess participation exemption cannot be carried forward.

Specific exclusion rules apply under the taxation test. However, certain of these exclusion rules contain exceptions or transparency rules.

The standard statutory withholding tax rate for dividends paid by Belgian companies is 30%. A reduced rate applies to dividends paid by small companies on nominative shares issued on or after 1 July 2013 if these shares are received in exchange for a contribution of cash into the company and if an ownership requirement and a holding period requirement are met. A 20% rate applies to dividends distributed during the third year following the contribution, and a 15% rate applies to dividends paid in or after the fourth year following the contribution.

Exemptions and reduced rates are available under Belgium's tax treaties or domestic legislation. For example, withholding tax is not imposed on dividends distributed to a qualifying treaty parent. This is a company that holds or commits itself to hold a shareholding of at least 10% in a Belgian company for an uninterrupted period of 12 months.

A tax reduction or refund of withholding taxes is also provided for dividends paid by Belgian companies to Belgian companies that hold a participation of less than 10% but with an acquisition value of at least EUR2,500,000. If the receiving company is an EEA company or a company in a jurisdiction with which Belgium has concluded a double tax treaty, a 1.6995% withholding tax applies. A 30% withholding tax is imposed in the event of the liquidation of a company.

Effective from the 2015 tax year, small companies may allocate all or a part of their taxed profits to a liquidation reserve, booked to a separate account, at a tax charge of 10%. If the liquidation reserve is maintained until the liquidation of the company, no additional tax is levied on these funds. The distribution of the funds to the shareholders before the liquidation of the company is subject to an additional but favorable withholding tax rate of 5% (distribution of a dividend after five years following the last day of the tax period in which the reserve is formed) 17% or 20% (distribution within five years). Legislation has also extended this liquidation reserve regime to the 2013 and 2014 tax years.

Fairness tax. A separate minimum corporate tax of 5.15% (including 3% surtax) applies to all Belgian companies that do not qualify as a small company under the Belgian company code and to permanent establishments of nonresident companies. It is levied in the event of a dividend distribution if any part of the distributed profits has not been effectively taxed at the Belgian corporate income tax rate of 33.99%. The fairness tax is triggered when dividends are declared and the tax base is reduced by the

application of the notional interest deduction or tax losses carried forward. The tax base for this tax is determined based on a formula in which the “untaxed” part of distributed profits is multiplied by a proportionality factor.

Foreign tax relief. Income derived from a permanent establishment abroad may be exempt under the provisions of a tax treaty. A Belgian company that receives foreign-source interest income and royalties subject to a foreign withholding tax can claim a foreign tax credit in Belgium if certain conditions are satisfied. The maximum foreign tax credit that may be claimed equals $15/85$ of the net income at the border.

C. Determination of trading income

General. Taxable income is based on income reported in the annual financial statements and includes all gains, profits, costs, dividends, interest, royalties and other types of income.

Certain business expenses are not deductible for tax purposes, such as certain car expenses, 31% of restaurant expenses and 50% of entertainment expenses.

Inventories. Stock values may not exceed the lower of cost or market value; cost is defined as the purchase price of raw materials plus direct and indirect production costs. However, the inclusion of indirect production costs is optional. Accepted valuation methods are first-in, first-out (FIFO); last-in, first-out (LIFO); and weighted average. Valuation of stocks at replacement cost is not allowed.

Provisions. Provisions are tax deductible only if they are accounted for and if they relate to specific charges that are probable taking into account events occurring during the applicable financial year.

Depreciation. In principle, depreciation rates are determined based on the anticipated useful economic life of the assets. The following straight-line rates are generally accepted.

Asset	Rate (%)
Office buildings	3
Industrial buildings	5
Chemical plants	8 to 12.5
Machinery and equipment (including information technology)	10 to 20
Office furniture and equipment	10 to 15
Rolling stock (motor vehicles)	20 to 33
Small tools	33 to 100

The declining-balance method and accelerated depreciation are also allowed under certain circumstances. For assets with an amortization period of less than five years, the annual depreciation rate under the declining-balance method may not exceed 40% of the acquisition value.

Audiovisual investments must be amortized using the straight-line or declining-balance method, with no minimum amortization period. R&D investments must be amortized for tax purposes using the straight-line method over a period of at least three years.

All other intangible assets must be amortized for tax purposes using the straight-line method over a period of at least five years.

Investment deduction. A 13.5% investment deduction is available for investments during the 2017 tax year in environmentally friendly R&D, energy savings and related patents by resident and nonresident companies. A company can opt for a spread investment deduction of 20.5% (2017 tax year) and accordingly deduct each year 20.5% of the annual amortization. For security-related investments made by qualifying small companies, a 20.5% investment deduction (2017 tax year) is available.

For investments made on or after 1 January 2016, qualifying small companies can apply an 8% investment deduction. Effective from the 2016 tax year, these small companies are also entitled to an investment deduction of 13.5% with respect to investments in fixed digital assets, such as payment systems and cybersecurity systems.

For investments made on or after 1 January 2016 that relate to high-technology products, a spread investment deduction of 20.5% is allowed to all companies (not only small companies).

If the company has insufficient taxable income, the investment deduction may be carried forward.

For investments in R&D, a company can irrevocably opt for a tax credit instead of a deduction at the same rate as the investment deduction. As opposed to the investment deduction, this tax credit is effectively paid out if a company has insufficient taxable income for five consecutive tax years.

Tax incentives exist for investment in Belgian audiovisual works (see Section B) and for the shipping industry.

Innovation deduction. The OECD required Belgium to abolish the patent income deduction and replace it with a Base Erosion and Profit Shifting (BEPS)-compliant regime. The new innovation deduction was introduced by the law of 2 February 2017 and applies retroactively as of 1 July 2016. It contains an important grandfathering clause for patent income earned up to 30 June 2021 with respect to self-developed patents requested before 1 July 2016 and improved patents and patent licenses acquired before 1 July 2016.

Under the new regime, the taxpayer should be owner, co-owner, licensee, usufruct or (economic) rights holder of intellectual property (IP) rights. The regime (under conditions) applies to, among others, patents, medicinal products, software and plant-variety rights.

The income derived from the qualifying IP should be included in the Belgian tax base and should be at arm's length. The following is the equation for calculating the innovation deduction:

$$\text{Innovation deduction} = \text{Net IP income} \times \text{nexus ratio} \times 85\%$$

In the above equation, "net IP income" means the income after deduction of overall expenditures incurred for the development or acquisition of the IP right to the extent included in expenses. In addition, a recapture of prior year expenses (incurred after 30 June 2016) up to seven years is possible.

The following is the “nexus ratio”:

$$\frac{\text{Qualifying expenditures} \times 130\%}{\text{Overall expenditures}}$$

“Qualifying expenditures” relate to R&D expenditures incurred by the taxpayer, including outsourcing to unrelated parties and excluding expenditures for the acquisition of IP or outsourcing to related parties.

The following are other significant features of the innovation deduction:

- Carryforward of unused innovation deductions to subsequent taxable periods
- Tax neutrality in the context of reorganizations
- Possible combination with other R&D incentives
- No R&D center requirement
- No limitations in time or amounts

Relief for losses. In general, companies may carry forward tax losses without limitations. However, certain limitations may apply in cases of restructurings and changes of control.

Tax losses cannot be carried back.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, standard rate	21
Social security contributions, on gross salary	
Employer (approximately)	35
Employee	13.07
Real estate tax; rate depends on location (allowed as a deductible expense for corporate income tax purposes)	Various
Environmental tax; rate depends on the location and the activity or product; tax is not deductible for corporate income tax purposes	Various
Registration duties, on contributions to companies	0
Registration duties on the transfer of immovable property	10/12.5

E. Miscellaneous matters

Foreign-exchange controls. Payments and transfers do not require prior authorization. However, for statistical purposes, financial institutions are required to report all transactions with foreign countries to the National Bank of Belgium. Resident individual enterprises are also subject to this reporting obligation if they conclude the transactions through nonresident institutions or directly.

Transfer pricing. The Belgian Income Tax Code (ITC) contains anti-avoidance provisions that relate to specific aspects of transfer pricing. “Abnormal and gratuitous advantages” granted by a Belgian enterprise are added to the tax base of the Belgian enterprise, unless the advantages are directly or indirectly part of the taxable income of the recipient in Belgium. The ITC also contains

anti-avoidance provisions concerning royalties, interest on loans and other items, as well as a provision on the transfer of certain types of assets abroad. Under these provisions, the taxpayer must demonstrate the bona fide nature of the transaction.

The Program Law of 1 July 2016 aims at implementing transfer-pricing obligations in line with the three-tiered standardized approach provided for by Action 13 of the OECD's BEPS project. This approach consisting of a Master File, a Local File and Country-by-Country Reporting (CbCR). The new rules apply to financial years beginning on or after 1 January 2016.

F. Treaty withholding tax rates

The rates in the table below reflect the lower of the treaty rate and the rate under domestic tax law on outbound dividends. Effective from 1 January 2007, Belgium introduced an exemption from dividend withholding tax for companies located in countries with which Belgium has entered into a tax treaty. The exemption is subject to the same conditions as those contained in the EU Parent-Subsidiary Directive (see footnote [f]). However, the treaty must contain an exchange-of-information clause. As a result, certain countries are excluded (see footnote [k]).

In reaction to the OECD's position regarding the application of Article 26 (exchange of information) of the model convention in treaties entered into by Belgium, Belgium began renegotiating all treaties in 2009. This has resulted in more than 40 new treaties (the vast majority of which have not yet become effective). It is expected that most of these treaties will enter into effect in the upcoming years. In some cases, the negotiations are limited to the exchange of information only. For certain treaties, other articles are also included in the negotiations.

	Dividends (a)(k) %	Interest (b) %	Royalties (c) %

- (a) The domestic withholding tax rate for certain dividends is reduced (see Section B).
- (b) The standard withholding tax rate under Belgian domestic tax law is 27%. Please consult the relevant treaty for details concerning a possible exemption (Ukraine: exemption or 2% rate). Various exemptions under Belgian domestic tax law are available. Belgium also applies the EU Directive on Royalties and Interest between related companies (Council Directive 2003/49/EC). Under this directive, interest payments between companies located in the EU are exempt from withholding tax if one of the companies has a direct or indirect participation of 25% or more in the other company. The list of companies covered by this directive is more limited than the list contained in the EU Parent-Subsidiary Directive.
- (c) Royalties are subject to a withholding tax of 27% under Belgian domestic tax law. Various exemptions under Belgian domestic tax law are available. Belgium also applies the Directive on Royalties and Interest (Council Directive 2003/49/EC). Under this directive, royalties paid between companies located in the EU are exempt from withholding tax if one of the companies has a direct or indirect participation of 25% or more in the other company. The list of companies covered by this directive is more limited than the list contained in the EU Parent-Subsidiary Directive.
- (d) Belgium is honoring the Yugoslavia treaty with respect to Bosnia and Herzegovina, Macedonia, Montenegro and Serbia.
- (e) A lower rate applies to royalties for the use of works of art, science or literature, other than motion pictures. The lower rate is 5% under the Algeria and Azerbaijan treaties and 0% under the Israel treaty.
- (f) Under the EU Parent-Subsidiary Directive, which has been incorporated in Belgian domestic law, no withholding tax is imposed on dividends paid by a Belgian subsidiary to a parent company in another EU state if the recipient owns at least 10% of the capital of the payer for at least one year.
- (g) A 10% rate applies if the recipient owns more than 50% of the capital of the Belgian company.
- (h) A 0% rate applies to copyright royalties.
- (i) Please consult the treaty for further details.
- (j) A 0% rate (Algeria and Thailand, 5%) applies to copyright royalties other than for motion pictures.
- (k) Belgium has extended the application of the EU Parent-Subsidiary Directive to all companies located in a country with which Belgium has entered into a tax treaty. In addition to the conditions that must be met under the directive (10% participation for at least one year and qualifying company), the treaty must contain an extended exchange-of-information clause.
- (l) The EU and Switzerland entered into an agreement that contained, among other items, a measure providing that the EU Parent-Subsidiary Directive also applies to relations between EU member states and Switzerland. Consequently, a withholding tax exemption may be claimed for dividends paid by a Belgian company to a Swiss company if, at the time of payment of the dividends, the recipient of the dividends has held a 25% participation in the payer for at least two years and if certain other conditions are satisfied.
- (m) The following lower rates apply to dividends paid by Belgian subsidiaries if the recipient holds the indicated level of participation.

	Lower rate %	Level of participation

- (1) Dividends may qualify for the 5% rate if the recipient holds any of the three listed levels of participation.
 - (2) As a result of the most-favored nations clause in the treaty, this lower rate applies.
 - (3) The 5% rate does not apply to dividends distributed by an Icelandic company if such dividends are deductible from the tax base in Iceland or if they can be carried forward as an operating loss of the company in Iceland.
 - (4) The 0% rate applies if the beneficial owner of the dividends is a company that has owned directly shares representing at least 25% of the capital of the payer of the dividends for a 12-month period ending on the date on which the dividend is paid.
 - (5) The 0% rate applies if the beneficial owner of the dividends is a company that has owned directly shares representing at least 10% of the capital of the payer of the dividends for a 12-month period ending on the date on which the dividend is declared. The 5% rate applies if the beneficial owner is a company that owns directly at least 10% of the voting shares of the payer of the dividends.
- (n) A 5% rate applies to royalties paid for the use of, or the right to use, industrial, commercial or scientific equipment.
- (o) Belgium is honoring the USSR treaty with respect to Kyrgyzstan, Moldova, Tajikistan and Turkmenistan.
- (p) A 0% rate applies to interest paid by a company to another company if the recipient has a direct or indirect participation in the payer of less than 25%.

Belgium has signed new double tax treaties, additional treaties or protocols that have not yet become effective with Austria, Canada, Congo (Democratic Republic of), Greece, Iceland, Ireland, Isle of Man, Japan, Korea (South), Macau SAR, Macedonia, Malaysia, Malta, Mexico, Moldova, New Zealand, Norway, Oman, Poland, Qatar, the Russian Federation, Rwanda, San Marino, Spain, Switzerland, Tajikistan, Turkey, Uganda, Uruguay, the United Kingdom and Uzbekistan.

A. At a glance

Corporate Income Tax Rate (%)	0
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	0
Withholding Tax (%)	0

B. Taxes on corporate income and gains

Bermuda does not impose income, withholding or capital gains taxes.

C. Fees and other taxes

Annual fee. An annual government fee, based on the assessable capital, is imposed on companies. The following is a schedule of the fees for exempted companies (see Section D).

Capital of company		Annual fee BMD
Exceeding BMD	Not exceeding BMD	
0	12,000	1,995
12,000	120,000	4,070
120,000	1,200,000	6,275
1,200,000	12,000,000	8,360
12,000,000	100,000,000	10,455
100,000,000	500,000,000	18,670
500,000,000	—	31,120

Certain types of entities are not subject to the annual fee described above. These entities are required to pay the following annual fees.

Entity	Annual fee (BMD)
Overseas (Permit) company whose principal business is	
Finance, insurance or operation of an open-end mutual fund	4,125
Any other business	1,995

Entity	Annual fee (BMD)
Exempt company parent of a wholly owned exempted company carrying on insurance business	1,995
Unit trust management company	2,905
Exempted and overseas partnerships	2,235
Segregated accounts companies	250

Payroll taxes. Payroll tax is imposed on all employers on the remuneration paid in their business. Taxable remuneration equals the sum of wages, salaries and benefits paid in cash or in kind to employees for services rendered during the tax period. Graduated rates are imposed according to, in general, the annual payroll level of the taxpayer. Employers may withhold a statutory percentage of up to 6% from an employee's salary to pay the payroll tax.

The following are the payroll tax rates:

- A 15.5% rate applies to taxpayers with an annual payroll of greater than BMD1 million and to exempt undertakings.
- A 14.25% rate applies to taxpayers with an annual payroll of greater than BMD500,000 and up to BMD1 million.
- A 12.25% rate applies to taxpayers with an annual payroll of at least BMD200,000 and up to BMD500,000.
- An 11.25% rate applies to taxpayers operating a hotel or restaurant with an annual payroll of BMD200,000 or greater.
- An 8.25% rate applies to remuneration paid to employees in special situations. These are persons on jury duty, persons on duty with the Bermuda Regiment or Bermuda Volunteer Reserve, hotel employees in December, January and February, employees of retail establishments in the quarter of January through March, and persons employed as farmers, fishermen or horticulturists.
- An 8.75% rate applies to the Bermuda Hospitals Board and the corporations of Hamilton and St. George's.
- A 7.25% rate applies generally to employers with an annual payroll of less than BMD200,000, and educational, sporting or scientific institutions, associations or societies that, in the Minister of Finance's opinion, are operated for purposes other than for the purpose of gain by the entity's individual members.
- A 6% rate applies to the government and various government agencies, registered charities, religious and cultural organizations, the Bermuda Festival Ltd., and employers who establish a business that is located in an Economic Empowerment Zone (designated under Section 2A of the Economic Development Act 1968) and that are registered by the Bermuda Small Business Development Corporation under Section 4(1)(c) of the Bermuda Small Business Development Corporation Act 1980. However, such employers may not be subject to tax at the 6% rate for a period exceeding nine tax periods beginning in and including the tax period in which the business is established. The 6% rate also applies to remuneration paid to certain construction workers employed on development projects that are deemed to be of national importance and that are approved by the Economic Development Committee, provided that the remuneration paid to the employee is for direct construction labor for the approved development project only and that employer is not in arrears with respect to the payment of payroll.

Items exempted from the payroll tax base include employers' contributions to social insurance, the Hospital Insurance Plan, approved retirement plans, hospital or health schemes, life insurance schemes and workers' compensation schemes.

The following persons are exempt from payroll tax:

- A person under 16 years of age or employed by an employer for 16 hours or less in any one calendar month
- Students engaged in weekend or vacation employment
- Employees on training schemes
- Employees who care for a person with a physical or mental disability at that person's home (a letter seeking this exemption must be submitted to the Office of the Tax Commissioner together with specific supporting documents)

Taxpayers must report actual remuneration up to a maximum annual remuneration of BMD750,000 per employee. However, taxpayers paying at the rates of 11.25%, 12.25%, 14.25% or 15.5% are allowed a quarterly reduction in remuneration of BMD600 per employee if the employee is on the payroll at the end of the tax period and if the employee has worked for the employer for a minimum of 180 hours during the relevant quarter.

Social security. All employers and employees must contribute to the national insurance scheme. The social insurance contribution rate is BMD64.14 per employee per week (based on a 52-week year). The cost is typically shared equally between the employee and the employer. As a result, BMD160.35 is generally deducted from each employee's monthly paycheck in a five-week month and BMD128.28 is deducted from each employee's monthly paycheck in a four-week month. This amount, together with the employer's matching contribution, is remitted to the Bermuda Social Insurance Department.

Incorporation fees. The Bermuda Monetary Authority charge for an application to register a company is BMD305. The government fee for registering a memorandum of association is BMD90.

General Services Tax. Under a proposal, a General Services Tax (GST) would be levied on turnover from the provision of most services by service providers to the public. It is proposed that the GST would be levied at a rate of 5%. This proposed tax would not be implemented until 1 April 2017, at the earliest. Notable exceptions to the GST would be in the sectors of banking, insurance and health care. Small service providers would also be exempt from GST.

D. Stamp duty

Stamp duty is charged on various legal instruments, including those detailed below.

Conveyance or transfer on sale of land or property. The following are the rates of stamp duty for the sale of Bermuda land or property:

- On the first BMD100,000 of the amount or value, or any part thereof: 2%
- On the next BMD400,000 of the amount or value, or any part thereof: 3%
- On the next BMD500,000 of the amount or value, or any part thereof: 4%

- On the next BMD500,000 of the amount or value or any part thereof: 6%
- Amount in excess of BMD1,500,000: 7%

For non-Bermuda property, the rate is 1%.

Lease or agreement for lease. If property is granted in consideration for rent, the following are the amounts of stamp duty:

Monthly amount or value in rent BMD	Stamp duty BMD
Under 1,200	75
1,200 or more but under 1,500	100
1,500 or more but under 2,500	150
2,500 or more but under 3,500	200
3,500 or more but under 5,000	300
5,000 or more	400

E. Miscellaneous matters

Types of companies. The limited liability company is the most common form of business entity in Bermuda. Limited liability companies may be local, exempted or permit, as described below.

Local companies. Local companies are required to have at least 60% of their issued share capital beneficially owned and controlled by Bermudians. Because this type of company is usually formed for the benefit of residents of Bermuda, the local companies may transact business worldwide or in Bermuda only.

Exempted companies. An exempted company is the most common form used by international businesses to transact business from Bermuda. Exempted companies are exempted from the requirement imposed on local companies that at least 60% of the equity be owned and controlled by Bermudians, as provided for by the Companies Act of 1981. In general, exempted companies may not compete with local companies in the Bermuda market nor own real estate in Bermuda. However, they may carry on business outside Bermuda or with other exempted undertakings in Bermuda. Examples of exempted companies include investment holding companies, trading companies, mutual fund companies, insurance companies and foreign sales corporations.

Permit overseas companies. Permit overseas companies are companies incorporated in jurisdictions other than Bermuda, but have a permit to transact business from Bermuda. Permits are obtained through a license granted by the Ministry of Finance. An example of a permit overseas company is a ship-owning company that is incorporated and has ships registered in another country, but by permit conducts business from Bermuda.

Exempted Undertakings Tax Protection Act, 1966. Under the Exempted Undertakings Tax Protection Act, 1966, as amended, all exempted undertakings in Bermuda, such as exempted and permit companies, partnerships and unit trusts, may apply for an undertaking by the government that taxation introduced in Bermuda will not apply to the exempted company until 28 March 2016. Under a recent amendment to this act, the assurance of tax-neutrality is extended from 28 March 2016 until 31 March 2035 if proper application is made with the Registrar of Companies and if a fee of BMD160 is paid.

Foreign-exchange controls. Exempted companies and permit companies are designated as nonresident for exchange control purposes. The nonresident designation allows these entities to operate free of exchange control regulations and enables them, without reference to the Bermuda Monetary Authority, to make payments of dividends, distribute capital, open and maintain foreign bank accounts, maintain bank accounts in any currency and purchase securities. However, the issuance and transfer of shares and the change of beneficial ownership of shares in a Bermuda exempted company must be approved by the Bermuda Monetary Authority. The remittance and repatriation of funds by exempted companies and permit companies are not subject to exchange controls. Similarly, trust settlements on behalf of nonresidents are generally free from exchange controls. Under the Exchange Control Act 1972 and the Exchange Control Regulations 1973, certain exchange controls apply to Bermuda residents and to local companies. No capital or exchange control regulations apply to nonresidents.

The Bermuda dollar (BMD) is pegged to the US dollar at an equal exchange rate, and the two currencies are used interchangeably in Bermuda.

The Bermuda-dollar accounts of residents and local companies are subject to a 1% tax on the purchase of a foreign currency.

Transfer of shares. Although the consent of the Bermuda Monetary Authority is ordinarily required for the issue or transfer of any share or security, blanket permission for share issues and transfers may be granted, such as for publicly traded securities.

A. At a glance

Corporate Income Tax Rate (%)	25
Capital Gains Tax Rate (%)	25 (a)
Branch Tax Rate (%)	25
Withholding Tax (%) (b)	
Dividends	12.5
Interest	12.5
Royalties	12.5
Professional Services	12.5 (c)
Branch Remittance Tax	12.5
Net Operating Losses (Years)	
Carryback	0
Carryforward	3/5 (d)

(a) See Section B.

(b) A 12.5% withholding tax is imposed on all payments of Bolivian-source income to foreign beneficiaries (see Section B).

- (c) This withholding tax applies to services fees received for specified professional services, including consulting, expert services, and technical, commercial or other advice.
- (d) A Bolivian-source loss incurred in a year may be carried forward to offset taxable income derived in the following three years. Loss carryforwards are not subject to inflation adjustment. For the oil and mining production sector and new projects with a minimum capital investment of BOB1 million, the carryforward period is five years. On the reorganization of companies, the carryforward period is four years.

B. Taxes on corporate income and gains

Corporate income tax. Bolivian companies and foreign companies with permanent establishments in Bolivia are subject to income tax on their Bolivian-source income.

Rates of corporate tax. The standard rate of corporate income tax is 25%.

Mining operations. Act No. 535 (New Mining Code), dated 28 May 2014, confirms the additional rate of corporate income tax of 12.5% (previously established by Act. No. 3787, dated 24 November 2007). This additional rate applies to additional taxable profits resulting from favorable price conditions for minerals and metals. The following are significant aspects of this additional rate:

- The 12.5% tax rate applies if mineral and metal quotations are equal or higher than the base quotations established by law.
- The 12.5% tax does not apply to taxable profits attributable to sales that have lower quotations than the base quotations.

The tax referred to above must be paid on a monthly basis. The date of payment depends on the last digit of the Tax Identification Number. The monthly payments are considered advance payments of the tax determined at the end of the year. If the total of the advance payments is less than the amount determined at the end of the year, this difference must be paid. If the total of the advance payments exceeds the amount determined at the end of the year, the difference can be claimed as a tax credit against the standard corporate income tax for the year or the additional amount of corporate income tax for the following year.

Surtax. A 25% surtax is imposed on net income derived from mining, reduced by the following two special deductions:

- A percentage of up to 33%, which varies according to the type of business, of accumulated investment in exploration, development, assets that qualify for environmental incentives and environmental protection, which is directly related to mining extractive activities performed after the 1991 tax year.
- 45% of net income derived from non-renewable natural resource extractive activities. This deduction is limited to BOB250 million. The amount of BOB250 million is adjusted annually to reflect changes in the Unidad de Fomento de Vivienda (UFV) for each extracting operation. The UFV is an index published by the Statistics National Institute (INE) that reflects changes in Consumer Prices Index (IPC).

For mineral-producing companies, the net income for an extraction operation is the value of the commercialized product in the mining market.

Hydrocarbon Direct Tax. The Hydrocarbon Direct Tax is imposed at a rate of 32% on hydrocarbon production in oil wells located in Bolivia. The Hydrocarbon Direct Tax is calculated and paid in the same manner as the 18% royal prerogatives, which apply to all extractive fields. The 18% royal prerogatives consist of the following:

- A regional royal prerogative equal to 11% of the gross hydrocarbon production from oil wells, which is paid to the region where the hydrocarbons are produced
- A national royal prerogative equal to 1% of the gross hydrocarbon production, which is paid to Beni and Pando
- An amount equal to 6% of the gross hydrocarbon production in oil wells, which is paid to the National Treasury after the deduction of the necessary amounts for the management of the contracts

Capital gains. In general, capital gains are taxed in Bolivia. However, capital gains derived from transactions on the Bolivian Stock Exchange are exempt from tax.

Administration. The law specifies the following tax year-ends, which vary according to the type of business.

Business	Tax year-end
Industry (including oil and gas)	31 March
Agriculture and agribusiness	30 June
Mining	30 September
All other businesses	31 December

Annual tax returns and financial statements must be filed with the Internal Revenue Service (IRS) and income tax paid within 120 days after the end of the tax year. Advance payments are not required except for mining companies, which must make payments of income tax when they export minerals or metals.

Debts owed to and credits due from the state are adjusted to reflect changes in the UFV (see *Rates of corporate tax*).

Fines and interest charges apply to late tax payments and other non-compliance with tax obligations. The IRS publishes interest rates for late tax payments.

The tax code provides that fraud exists if a tax debt exceeds an amount equal to 10,000 UFV, calculated as of the date of determination of the fraud.

Under Act No. 812, dated 30 June 2016, the statute of limitation for tax audits is eight years.

The statute of limitation period may be increased by three years if the entity does not comply with the obligation to register or registers under a different tax regime.

Withholding taxes. Local entities, including Bolivian permanent establishments of foreign companies, that pay Bolivian-source income to foreign beneficiaries must withhold 12.5% of the amounts paid. For this purpose, Bolivian-source income includes all dividends, interest payments, branch remittances, royalties, professional service fees (includes consulting, expert services, and technical, commercial or other advice), commissions and other

income. In general, Bolivian-source income is income that is derived from assets located, placed or economically used in Bolivia, or from activities developed in Bolivia. This rule applies regardless of the nationality, address, or residence of the recipient of the income or the parties involved in the activities, or where the relevant contract is executed.

For dividends paid by Bolivian companies, the withholding tax is payable when the dividends are actually paid, remitted or credited. However, branch profits are deemed remitted when the corporate income tax return is due (120 days after the end of the tax year; see *Administration*).

Dividends. The 12.5% withholding tax on payments to foreign beneficiaries applies to dividends paid by Bolivian companies (see *Withholding taxes*). Dividends received from Bolivian companies subject to Bolivian corporate income tax are not taxed.

Foreign tax relief. The Bolivian tax code does not provide foreign tax relief.

C. Determination of taxable income

General. Taxable income is the income reported in the companies' financial statements prepared in accordance with generally accepted accounting principles in Bolivia, subject to certain adjustments for tax purposes. In general, all expenses necessary to generate income and to maintain the existence of the company (for example, contributions to regulatory-supervisory organizations, contributions for social benefits and certain national and municipal taxes) are deductible. Donations and other gratuitous transfers to nonprofit organizations that are exempt from income tax may be deducted up to a maximum limit of 10% of taxable income derived in the year of the donation or gratuitous transfer.

Certain expenses are not deductible, including the following:

- Personal withdrawals by owners or partners
- Corporate income tax
- Bonuses and other benefits that are not paid to employees within the time period in which the annual form must be presented for the year of payment
- Interest paid to related parties, to the extent it exceeds, for foreign loans, the London Interbank Offered Rate, plus 3%, or, for local loans, the official lending rate. In addition, interest paid to related parties may not exceed 30% of the interest paid to third parties

Royalties paid with respect to mining activities are creditable or deductible, depending on the price of the minerals and subject to certain limits established by law.

Revenue and expenses are reflected in the year they are accrued.

Documentation for deduction of expenses. To deduct expenses in an amount of BOB50,000 or greater, the taxpayer must have payment supports issued by a financial intermediation entity regulated by the Authority of Supervision of the Financial System (Autoridad de Supervisión del Sistema Financiero, or ASFI). These documents must have the following information:

- Financial institution (issuer) business name

- Transaction or operation number
- Transaction date
- Transaction amount

In June 2015, the IRS issued Normative Rule No. 10-0017-15, which states that payment supports of transactions equal or greater than BOB50,000 (the Banking Report) must be prepared on an annual basis and must be sent to the IRS between the fifth and ninth day of the following February; the due date depends on the last digit of the taxpayer's Tax Identification Number. Until June 2015, these reports were filed on a monthly basis. Exceptionally for the period from July 2015 to December 2015, the Banking Report must cover a semester (six-month) period. For 2016 and subsequent years, the Banking Report must be prepared for the entire year.

Inventories. Inventories are valued at the lower of market value or replacement cost.

Provisions. Provisions and reserves are not deductible for tax purposes, with the exception of the following:

- Technical reserves in insurance companies
- Mandatory provisions for financial entities
- Severance provisions
- Bad debt provisions
- Provisions for environmental restoration

To claim deductions, certain conditions must be satisfied.

Depreciation and amortization. Fixed assets are generally depreciated using the straight-line method at rates specified by law. The following are some of the annual depreciation rates.

Assets	Rate (%)
Buildings	2.5
Machinery, equipment and installations	12.5
Vehicles	20
Furniture and office equipment	10
Computer equipment	25

Trademarks and similar intangible assets may be amortized in five years if they are valued using the purchase price.

Depreciation charges resulting from changes in value based on professional appraisals carried out after 31 December 1994 are not deductible for tax purposes.

Groups of companies. Groups of companies may not file consolidated returns in Bolivia.

Relief for losses. A Bolivian-source loss incurred in a year may be carried forward to offset taxable income derived in the following three years. Loss carryforwards are not subject to inflation adjustment. For the oil and mining production sector and new projects with a minimum capital investment of BOB1 million, the carry-forward period is five years. On the reorganization of companies, the carryforward period is four years.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax (VAT), on all sales of goods and services and on imports; VAT on capital goods imported by companies in the agriculture and cattle raising industries and non-extractive industries that will be used to produce goods for export may be deferred for up to 3 years if an advance payment of 10% is made	13%
Transactions Tax, on gross revenue; corporate income tax from the preceding year may be credited against Transactions Tax; sales of a limited liability partnership's capital quota are exempt	3%
Real estate tax, imposed annually on the assigned value of real property and vehicles	Various
Excise tax, on the production or importation of specified goods	
Beer	BOB3.50 per liter plus 1%
Wine	BOB3.22 per liter plus 5%
Tobacco products; rate applied on the price	50% to 55%
Vehicles; rate applied on the price	10% to 18%
Special Tax on Hydrocarbons and Derived Products; maximum rate of BOB7.17 per liter (2016 rates)	
Premium gasoline	BOB2.18 per liter
Special gasoline	BOB1.23 per liter
National diesel oil	BOB1.25 per liter
Aviation gasoline	BOB1.85 per liter
Kerosene	BOB0.29 per liter
National jet fuel	BOB0.32 per liter
Fuel oil	BOB0.39 per liter
Mining royalty; imposed on gross revenue; rates vary according to the type of mineral	Various
Financial Transactions Tax (ITF); imposed on the amounts of debits and credits to savings and checking accounts; ITF is not deductible for purposes of any other tax; the ITF Act was effective from 13 April 2012 for a period of three years; however, in July 2015, the Bolivian government issued Act No. 713, which extended the term of the ITF until 31 December 2018 and introduced increasing rates for each year; certain items are exempt including transactions regarding savings accounts in US dollars if the available balance is not greater than USD2,000, savings accounts in local currency or in UFV, securities transactions and payments resulting from foreign	

Nature of tax	Rate
remittances; tax is withheld by banks and other financial institutions and other entities carrying out transactions in payment system; rates under Act No. 713	
2015	0.15%
2016	0.20%
2017	0.25%
2018	0.30%
Additional financial aliquot (tax rate) for corporate income tax; applicable to banking and nonbanking institutions regulated by the ASFI; tax applicable if return on equity exceeds 6%; tax is neither offsettable nor deductible	22%
Social security contributions	
Employer	
Health care; on monthly gross revenue per employee	10%
Housing fund; on monthly gross revenue per employee	2%
Professional risk insurance; on monthly gross revenue per employee	1.71%
Solidarity Fund	3%
Solidarity Fund for mining entities	2%
Employees	
Retirement fund	10%
Common risk insurance	1.71%
Solidarity Fund (fixed contribution)	0.5%
Solidarity Fund (variable and cumulative contribution)	
Difference between the total salary and BOB35,000	10%
Difference between the total salary and BOB25,000	5%
Difference between the total salary and BOB13,000	1%
Christmas bonus (Aguinaldo); general paid between 1 December and 20 December each year; if employment is less than a year, the bonus is reduced pro rata	One month's salary
Second Christmas bonus (second Aguinaldo); must be paid if Bolivian gross domestic product increases by more than 4.5%	One month's salary
Termination compensation; bonus for termination of employment; amount depends on length of employment and whether the employee was fired or resigned	Various

E. Miscellaneous matters

Foreign-exchange controls. The Bolivian currency is the boliviano (BOB).

No restrictions are imposed on foreign-exchange transactions, including the repatriation of capital and the remittance of dividends

and royalties abroad. A system of free-floating exchange rates exists in Bolivia. No special registration requirements apply to foreign investment.

The current exchange rate is BOB6.96 = USD1.

Transfer pricing. In July 2014, Act No. 549 introduced a transfer-pricing regime in Bolivia, effective from the 2015 fiscal year. Under this regime, commercial and/or financial transactions performed between related parties must be valued using the arm's-length principle. The transactions must be valued as if they were performed between unrelated parties in comparable markets.

The following methods may be used to value transactions between related parties:

- Comparable uncontrolled price
- Resale price
- Cost-plus
- Profit-split
- Transactional net margin
- Notorious price in transparent markets (applicable to the import or export of commodities)

For this purpose, the IRS may verify if the transactions are valued according to the above methods and make any adjustments or re-valuation if the agreed value, regardless of the adopted legal form, does not conform to the economic reality or causes lower taxation in Bolivia.

In April 2015, the IRS issued Normative Rule No. 10-008-15, which imposes the following obligations:

- If annual operations with related parties are greater than BOB15 million (USD2,155,172), a transfer-pricing study and Form No. 601 must be delivered to the IRS.
- If annual operations with related parties are between BOB7,500,000 (USD1,077,586) and BOB15 million (USD2,155,172), only Form No. 601 must be delivered to the IRS.
- If annual operations with related parties are less than BOB7,500,000 (USD1,077,586), the company must retain information to demonstrate that the operations were made at market values.

Reorganizations. Profits arising from company reorganizations, which are mergers, divisions or transformations, are not subject to corporate income tax. Regulations on reorganizations are expected to be issued in the near future.

F. Tax treaties

Bolivia has entered into tax treaties with Argentina, France, Germany, Spain, Sweden and the United Kingdom. It has also signed the Andean Pact, which includes a tax treaty, with Colombia, Ecuador and Peru. However, the government is reviewing these treaties to determine whether they accomplish new government policies. As a result, these treaties may be ratified or revoked.

Bonaire, Sint Eustatius and Saba (BES-Islands; extraordinary overseas municipalities of the Netherlands)

On 10 October 2010, the country Netherlands Antilles, which consisted of five island territories in the Caribbean Sea (Bonaire, Curaçao, Saba, Sint Eustatius and Sint Maarten), was dissolved. On dissolution of the Netherlands Antilles, the islands of Bonaire, Sint Eustatius and Saba (BES-Islands) became part of the Netherlands as extraordinary overseas municipalities. Curaçao and Sint Maarten have both become autonomous countries within the Kingdom of the Netherlands. A new tax regime applies to the BES-Islands, effective from 1 January 2011. The following chapter provides information on taxation in the BES-Islands only. Chapters on Curaçao and Sint Maarten appear in this guide.

A. At a glance

Profit Tax	– (a)
Capital Gains Tax	– (a)
Real Estate Tax Rate (%)	10/17.5 (b)
Yield Tax Rate (%)	5 (c)

- (a) The BES-Islands do not have a profit tax or capital gains tax.
- (b) The profit is fixed at 4% of the fair market value of the real estate. The standard rate of the real estate tax is 17.5% of the fixed profit. Consequently, in principle, the effective annual tax rate is 0.7% of the fair market value of the real estate. A reduced rate of 10% applies to hotels, unless the hotel is owned by an individual. Consequently, the effective annual tax rate with respect to

hotels is 0.4%. This real estate tax applies if an entity using the real estate, by virtue of ownership, possession or a limited right, is deemed to be resident in the BES-Islands. If the entity is deemed to be resident in the Netherlands, the Dutch corporate income tax and the Dutch dividend withholding tax apply instead. For further details, see Section B.

- (c) This tax applies if the entity from which distributions of profits are derived is deemed to be resident in the BES-Islands. If the entity is deemed to be resident in the Netherlands, the Dutch corporate income tax and the Dutch dividend withholding tax apply instead. For further details, see Section B.

B. Taxes on corporate income and gains

New BES-Islands tax regime. Effective from 1 January 2011, a new tax regime applies in the BES-Islands. This tax regime does not include a profit tax. A yield tax and a real estate tax have been introduced in the BES-Islands to replace the profit tax.

Residency fiction. The yield tax and real estate tax mentioned above are not automatically applicable as a result of a residency fiction. In principle, all entities established on the BES-Islands are deemed to be established in the Netherlands for tax purposes and accordingly subject to Dutch corporate income tax (up to 25%) and Dutch dividend withholding tax (in principle, 15%). For details on the Dutch taxes, see the chapter on the Netherlands in this guide.

However, on request, entities that have sufficient nexus with the BES-Islands may be subject to the fiscal system of the BES-Islands. In such case, no Dutch corporate income tax applies, but the yield tax and real estate tax apply. Entities are deemed to have sufficient nexus with the BES-Islands if any of the following circumstances exist:

- The entity is a foundation or trust that is a resident of the BES-Islands.
- The entity has been admitted to a special trade and service depot.
- On request, the entity has obtained a ruling from the tax authorities that, for tax purposes, the entity is deemed to be a resident of the BES-Islands. A request for such a ruling should be made with the tax authorities within six months after the beginning of the calendar year.

The ruling referred to above is issued in the following cases:

- The assets of the entity in the BES-Islands consist of less than 50% of mobile assets, including, among other portfolio investments, participations and cash.
- An entity that does not meet the requirement above can still obtain a ruling if it employs at least three residents of the BES-Islands that manage the entity's assets and if it has at its disposal business premises in the BES-Islands for a period of at least 24 months with a value of at least USD50,000.
- The entity is a holding company that holds at least 95% of the shares in an entity that is admitted to a special trade and service depot or already has obtained such a ruling.
- The entity has a small business with a turnover of no more than USD80,000, the assets of the company in general do not exceed USD200,000, and the company does not carry out financial services, insurance or trust (fiduciary) activities.

Yield tax. The yield tax is levied on distributions (in whatever form) of profits by entities resident in the BES-Islands. The rate

of the yield tax is 5%. The entity making the distribution acts as withholding agent. Interest and royalty payments are not subject to the yield tax. The yield tax is not levied on the remittances of profits by branches to their foreign head offices.

Real estate tax. The real estate tax is levied on gains derived from real estate located in the BES-Islands. The real estate tax is levied on a taxpayer (person or entity) that, at the beginning of the year, has the use of real estate by virtue of ownership, possession or a limited right.

The profit is fixed at 4% of the fair market value of the real estate. The rate of the real estate tax is 17.5% of the fixed profit. Consequently, the effective annual tax rate is 0.7% of the fair market value of the real estate. A reduced rate of 10% applies to hotels, unless the hotel is owned by an individual. Consequently, the effective annual tax rate with respect to hotels is 0.4%. The value of the real estate is determined by the Tax Inspector. The value is set at the beginning of the period for which the value is determined and is in principle determined for five consecutive calendar years.

Real estate tax is not levied on owner-occupied homes, real estate included in the business assets of a privately run enterprise (that is not operating in the form of an entity) and real estate with a value of less than USD50,000, if the person having use of the real estate is a resident of the BES-Islands.

In addition, entities that are deemed to be residents of the Netherlands (see *Residency fiction*) are exempt from real estate tax.

Administration

Real estate tax. The real estate tax is levied over a period of one calendar year. The Tax Inspector imposes a tax assessment, and the filing of a tax return is not required.

Yield tax. The withholding agent must withhold the yield tax at the time the profit distribution is put at the disposal of the recipient. The withholding agent must file a quarterly tax return and remit the yield tax due within 15 days after the end of the quarter. The tax return does not need to be filed for periods in which no distributions take place.

C. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
General expenditure tax; levied on the delivery of manufactured goods in the BES-Islands by a manufacturer as part of its business, on the rendering of services in the BES-Islands by an entrepreneur as part of its business and on imports of goods	
Bonaire	
Delivery of goods (different rates apply to passenger cars)	8
Insurance	7
Other taxable activities	6

Nature of tax	Rate (%)
St. Eustatius and Saba	
Delivery of goods (different rates apply to passenger cars)	6
Insurance	5
Other taxable activities	4
Real estate transfer tax	5
Customs duties	0

D. Tax treaties

The Dutch treaty network does not apply to entities deemed to be residents of the BES-Islands. However, the Dutch standard treaty does not exclude entities deemed to be residents of the Netherlands (by the residency fiction) from the application of the treaty.

Provisions for double tax relief are included in the Tax Regulation for the Netherlands. Under a measure in the Tax Regulation for the Netherlands, on request, dividend distributions by a qualifying Dutch subsidiary to its BES-Islands parent company can be exempt from Dutch dividend withholding tax.

A. At a glance

Corporate Income Tax Rate (%)	22 (a)
Capital Gains Tax Rate (%)	22 (b)
Branch Tax Rate (%)	30
Withholding Tax (%)	
Dividends	7.5
Interest	15
Royalties	15
Management and Technical Fees	15
Payments under Construction Contracts	3 (c)
Brokerage Commission	10 (d)
Rent Paid for Use of Buildings and Land	5 (d)
Purchases of Livestock	4 (e)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0 (f)
Carryforward	5

- (a) For approved manufacturing companies, the rate is 15%.
 (b) See Section B.
 (c) This tax is imposed on gross receipts derived from construction contracts. This tax is an advance payment that may be offset against the actual tax due.
 (d) This tax is an advance payment that may be offset against the actual tax due.

- (e) This withholding tax applies to payments for purchases of livestock for slaughter or for feeding for slaughter.
- (f) Farming enterprises may carry back losses for two years.

B. Taxes on corporate income and gains

Corporate income tax. All companies operating in Botswana are subject to tax on earnings in Botswana.

Rates of corporate tax. The corporate tax rate for companies other than manufacturing companies is 22%. Approved manufacturing companies are subject to tax at a reduced tax rate of 15%.

The tax rate for a branch is 30%. Botswana does not impose a branch remittance tax.

International Financial Services Centre (IFSC) companies (as defined) are taxed at a rate of 15%.

Diamond-mining companies are taxed in accordance with tax agreements entered into by the companies with the government. Other mining companies are taxed at a rate of 22% or at a rate determined by a formula, whichever is higher. The following is the formula:

$$70 - \frac{1,500}{x}$$

$$x = \frac{\text{Taxable income}}{\text{Gross income}} \times 100$$

Capital gains. The capital gains tax applies to gains on the sale of capital assets of a business carried on in Botswana and on the sale of corporate shares and debentures of private companies.

For computing gains on sales of immovable property acquired before 1 July 1982, the cost of acquisition and improvements is first increased by a 10% rate, compounded for each complete 12-month period from the date of acquisition to 1 July 1982. It is then indexed for inflation from 1 July 1982 to the date of sale. For computing gains on immovable property acquired on or after 1 July 1982, the cost of acquisition and improvements is indexed for inflation during the period of ownership.

Only 75% of the gain derived from the sale of shares is subject to capital gains tax. Gains on the sale of shares held for at least one year that are listed on the Botswana Stock Exchange are exempt from capital gains tax if the seller holds no more than 49% of the shares. Sales of shares in IFSC companies are exempt from capital gains tax.

Taxable capital gains are subject to tax at a rate of 22% for resident companies and 30% for nonresident companies.

Administration. The tax year ends on 30 June. Companies are taxed on the profits reported in their latest completed accounting period.

Under an advance payment of tax and self-assessment system, companies must estimate their tax in advance and pay the estimated tax in four equal quarterly installments. The first payment is due three months after the beginning of the accounting period and the subsequent payments are due at the end of every subsequent three-month period. Tax returns must be filed, and any balance of tax

due must be paid, within four months of the end of the tax year, or in the case of a company with an accounting period that is different from the tax year, within four months from the end of such accounting period. Underpayments and late payments are subject to interest at a rate of 1.5% per month or part of a month (compounded).

Dividends. A withholding tax of 7.5% is imposed on dividends paid to residents and nonresidents. It is a final tax.

Dividends distributed by investment or similar companies are exempt from tax if they are paid out of dividends received that suffered withholding tax.

C. Determination of trading income

General. Taxable income is net income reported in the financial statements, modified by certain provisions of the tax law. Expenses are deductible to the extent incurred in producing assessable income.

The rules for determining taxable income for an IFSC company are different from those for a normal company.

Collective-investment undertakings (as defined) are subject to tax on their undistributed income only.

Inventories. For tax purposes, inventory is valued at the lower of cost or net realizable value.

Provisions. Specific identifiable provisions are allowable for tax purposes; general provisions are not allowed.

Depreciation. Depreciation is computed using the straight-line method. Official rates vary according to the type of asset. The following are some of the official straight-line rates.

Asset	Rate (%)
Industrial buildings	2.5*
Commercial buildings	2.5
Office equipment	10
Motor vehicles	25
Plant and machinery	15 to 25

* An initial allowance of 25% is also granted.

Capital allowances are subject to recapture on the sale of an asset to the extent that the sales proceeds exceed the tax value after depreciation.

Mining companies may deduct 100% of their mining capital expenditure (as defined) in the year in which the expenditure is incurred.

Relief for losses. In general, tax losses may be carried forward for five years. Mining, prospecting and farming losses may be carried forward indefinitely. In general, losses may not be carried back. However, farming enterprises may carry back losses to the preceding two years.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on almost all supplies of goods and services consumed in Botswana	12
Capital transfer tax, paid by the recipient on all gratuitous receipts of property, corporate shares and inheritances, less allowable deductions	12.5

E. Foreign-exchange controls

No foreign-exchange controls are imposed in Botswana. However, certain forms must be completed for statistical purposes.

F. Treaty withholding tax rates

	Dividends %	Interest %	Royalties %	Management and technical fees %
Barbados	5/7.5 (e)	10	10	10 (f)
France	5/7.5 (a)	10	10	7.5
India	10 (c)	10	10	10
Mauritius	5/7.5 (b)	12	12.5	15
Mozambique	10/12 (c)	10	10	10
Namibia	10 (c)	10	10	15
Russian Federation	5/10 (i)	10	10	10
Seychelles	5/7.5 (g)	7.5	10	10
South Africa	10 (c)	10	10	10
Sweden	7.5 (d)	15 (d)	15 (d)	15
United Kingdom	5/7.5 (h)	10	10	7.5
Zimbabwe	5/7.5 (g)	10	10	10
Non-treaty countries	7.5	15	15	15

- (a) The 5% rate applies if the recipient is a company that holds at least 25% of the share capital of the payer.
- (b) The 5% rate applies if the recipient holds at least 25% of the shares of the payer.
- (c) The domestic rate of 7.5% applies because the treaty rate is higher than the domestic rate.
- (d) If a lower rate is negotiated with any other state in a future treaty, such rate also applies under the Sweden treaty.
- (e) The 5% rate applies if the recipient is a company that holds at least 25% of the capital of the payer of the dividends. The 7.5% rate applies in all other cases.
- (f) If a lower rate is negotiated with any other state in a future treaty, such rate also applies under the Barbados treaty.
- (g) The 5% rate applies if the recipient is a company that holds at least 25% of the capital of the payer of the dividends. The 7.5% rate applies in all other cases.
- (h) The 5% rate applies if the beneficial owner of the dividends is a company that controls directly or indirectly at least 25% of the voting power in the company paying the dividends. The 7.5% rate applies in all other cases.
- (i) The 5% rate applies if the recipient holds at least 25% of the shares of the payer. A 7.5% rate applies in all other cases (although the treaty provides for a 10% rate in all other cases, the domestic rate of 7.5% applies because it is lower than the treaty rate of 10%).

A. At a glance

Corporate Income Tax Rate (%)	15 (a)
Capital Gains Tax Rate (%)	15 to 25 (a)(b)
Branch Tax Rate (%)	15 (a)
Withholding Tax (%)	
Dividends	0
Interest	15 (c)(d)
Royalties from Patents, Know-how, etc.	15 (c)(d)(e)
Services	15 (c)(d)(e)(f)(g)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	Unlimited (h)

- (a) A 10% surtax is also levied (see Section B).
- (b) Under Law 13,259/16, which applies to capital gains derived by Brazilian individuals, effective from 2017, the capital gains tax rate is increased from a 15% flat rate to a progressive rate system with rates ranging from 15% to 22.5%. Although the Brazilian tax authorities have not yet provided any express guidance, this increase would potentially also apply to capital gains derived by nonresident companies and individuals, because they are generally subject to the same taxation applicable to Brazilian individuals. A 25% rate applies to nonresidents located in low-tax jurisdictions.
- (c) The withholding tax is imposed on payments, credits, deliveries or remittances abroad, and on the use of amounts in Brazil for the benefit of non-residents.
- (d) The withholding tax rate may increase to 25% if the recipient is resident in a black-listed jurisdiction, which means a jurisdiction that taxes income at a rate lower than 20% (or 17% if the jurisdiction or regime complies with the international standards of tax transparency).
- (e) A 10% Contribution for Intervention in the Economic Domain (Contribuição de Intervenção no Domínio Econômico, or CIDE) is imposed on royalties and on technical and administrative service payments.
- (f) The withholding tax rate may increase to 25%, depending on the type of service rendered.
- (g) Based on recent interpretations of tax treaties by the Brazilian tax authorities, it may be possible to claim that withholding income tax is not due on payments for technical services to Austria, Finland, France, Japan and Sweden.
- (h) For details, see Section C.

B. Taxes on corporate income and gains

Corporate income tax. Brazilian resident companies are subject to corporate income tax (CIT) on their worldwide income. Companies resident in Brazil are those incorporated under the Brazilian laws and managed in Brazil.

Foreign branches, agencies or representative offices of Brazilian companies are also subject to Brazilian tax on their income earned overseas. In general, foreign-source losses may not offset Brazilian-source income. A foreign tax credit is available (see *Foreign tax relief*).

In addition to CIT, Social Contribution Tax (SCT) is imposed on worldwide income (see *Rates of tax*).

Rates of tax

Corporate income tax. The basic rate of CIT is 15%, increased by a surtax of 10% on annual taxable profits exceeding BRL240,000 (approximately USD73,000).

Exemption from, or reduction of, CIT is granted to businesses in certain underdeveloped areas.

Social Contribution Tax. SCT is levied at a general rate of 9%. For financial institutions, private insurance companies and capitalization companies, the SCT rate is 20% until 2018, while for credit unions, the SCT rate is 17% until 2018.

SCT is not deductible in calculating CIT. The tax bases for SCT and CIT are basically the same. The total effective tax rate on corporate profits is 34% (25% CIT [including the 10% surtax] plus 9% SCT).

Losses for SCT purposes are subject to the same tax rules applicable to losses for CIT purposes.

Capital gains. Capital gains are treated as ordinary income for Brazilian resident companies and, accordingly, are subject to CIT and SCT.

Until 2016, capital gains derived by nonresidents on shares and other assets located in Brazil were subject to capital gains tax at a rate of 15%.

Law 13,259/16 increases the capital gains tax rate for Brazilian individuals from a 15% flat rate to a progressive rate system with rates ranging from 15% to 22.5%, effective from 2017.

Nonresident companies and individuals are generally subject to the same taxation applicable to Brazilian resident individuals. Although the Brazilian tax authorities have not yet provided any guidance, the increase to the capital gains tax rate under Law 13,259/16 would potentially also apply to capital gains realized by nonresident companies and individuals, effective from 2017.

A 25% rate applies to nonresidents located in low-tax jurisdictions.

Administration

Filing and payment. The fiscal year is the calendar year. In general, companies must file returns in an electronic format by the last working day of June of the following year. Extensions to file returns are generally not available.

Effective from the 2014 calendar year, income tax returns were replaced by a new electronic filing called Escrituração Contábil-Fiscal (ECF), which must be submitted to by the end of June of the following calendar year.

Companies may elect to pay CIT and SCT on an annual or quarterly basis. In general, this election may not be changed during the calendar year. Companies that elect the annual basis must make advance monthly payments of CIT and SCT. The advance payments are equal to the income tax applicable to either the company's actual taxable income or the company's income calculated in accordance with an estimated method, whichever is lower.

For monthly payments of CIT that are calculated based on the estimated method, the tax base is generally 8% of the company's gross income. Different percentages apply to specific industries, such as the following:

- 16% for financial institutions and transportation services
- 32% for services in general
- 1.6% for gas distribution

For the purpose of computing the advance income tax payments, the applicable rate is 15%. An additional 10% rate is applied to monthly taxable income in excess of BRL20,000 (approximately USD6,100).

The difference between the tax shown on the annual tax return and the amounts paid in advance must be paid by the last working day of March following the end of the fiscal year. If the amounts paid in advance exceed the tax shown on the annual tax return, the excess may be used to offset the tax due in a month following the fiscal year-end. A refund may be requested from the tax authorities within five years of the tax payment.

Alternatively, companies may pay tax quarterly based on actual quarterly income, computed under the accrual method.

The tax base for monthly estimated payments of SCT is generally 12% of gross income plus capital gains and other income, including financial income. This percentage is increased to 32% for service companies. SCT payments must be made at the same time as the income tax payments. The applicable tax rate is generally 9%.

Interest and penalties for late payments. The late payment of taxes is generally subject to the following:

- Interest calculated at the rate applicable to the Special Liquidation and Custody System (Sistema Especial de Liquidação e Custódia, or SELIC), which is published each month by the government
- A daily fine of 0.33% of the tax due, up to a maximum penalty of 20% of the tax due (excluding interest)

In general, assessments resulting from a tax audit are subject to a penalty of 75% on the tax due. The penalty increases to 150% in the case of fraud. These penalties can be reduced by 50% if the payment is made by the last day of the appeal period (other penalty reductions are available during the appeal process). In such case, the effective penalty is 37.5%.

Dividends. Withholding tax is not imposed on dividends paid to residents and nonresidents out of profits generated on or after 1 January 1996.

For earnings recognized in 2014, the excess of dividends paid based on the statutory financial statements over the dividends determined under a "tax balance sheet" is subject to tax. A 15% withholding tax applies to such excess dividends paid to nonresidents. Dividends generated before 2014 are not subject to tax even if they are in excess of the dividends determined under the "tax balance sheet." Dividends generated after 2014 are not subject to tax because the concept of "tax balance sheet" has ceased to exist.

Brazilian companies are allowed to pay a "deductible dividend," which is called interest on net equity (INE), to their shareholders. INE is calculated by applying a benchmark interest rate called

Taxa de Juros de Longo Prazo (TJLP) to the net equity of the Brazilian company, followed by certain adjustments provided by the tax law. INE is treated as deductible interest for tax purposes, which is subject to a 15% withholding tax when paid to residents and nonresidents. A 25% rate applies to nonresidents located in low-tax jurisdictions. Payments to Brazilian residents are fully taxable and are also subject to the Social Integration Program (PIS) tax and the social security financing contribution (COFINS). (For details regarding the PIS tax and COFINS, see Section D.)

Foreign tax relief. A foreign tax credit is available to Brazilian companies on income taxes paid overseas. In general, the foreign tax credit is limited to the amount of Brazilian CIT and SCT on the foreign-source income.

C. Determination of taxable income

General. CIT and SCT are due on a company's taxable income, which is the net book income, as adjusted by the tax law. In general, operating expenses are deductible if the following conditions are satisfied: they are necessary, usual and common to the company's activity; they are actually incurred; and they are supported by proper documentation. However, the following expenses, among others, are not deductible:

- Expenses related to fixed assets, including financial and operating lease payments, depreciation and amortization, if the assets are not directly used in the production or commercialization of products and services.
- Fringe benefits furnished to shareholders and officers if the beneficiaries are not identified and individualized (a 35% [effective rate of 53.84%] withholding tax is imposed on such payments). Neither the fringe benefits nor the withholding tax is deductible.
- Donations in general, gifts and other non-compulsory payments.

Simplified methods are available for calculating the tax liability applicable to small businesses.

Inventories. Companies that have an integrated cost system must value inventory for tax purposes at the lower of cost or market value, using either the average cost or the first-in, first-out (FIFO) method. Direct cost and last-in, first-out (LIFO) methods cannot be used. In general, companies that do not have an integrated cost system must value finished products at 70% of the highest sales price of the product sold in the tax period. Work-in-process must be valued at either 80% of the finished product cost or 1.5 times the highest cost of the material content. Supermarkets and similar enterprises that sell a large number of goods may use a specific system for inventory valuation based on periodic and simplified counting.

Provisions. In general, the only deductible provisions are those for vacation pay and the 13th month salary (annual bonus).

Depreciation. Fixed assets may be depreciated using the straight-line method at rates provided by the Brazilian tax authorities. The following are some of the annual depreciation rates:

- Real estate assets: 4%
- Machinery and equipment: 10%
- Vehicles: 20%
- Computer hardware and software: 20%

Companies that operate two work shifts per day may depreciate machinery and equipment at 1.5 times the normal rate. If the company operates three shifts, it may double the normal rate.

For accounting purposes, companies may calculate depreciation at different rates (taking into account International Financial Reporting Standards [IFRS] criteria, which can affect, in addition to depreciation rates, inventory and other items).

Tax losses. Tax losses may be carried forward indefinitely, but can only offset up to 30% of the company's taxable income for a tax period. No carryback is allowed.

Tax losses may be jeopardized if a company experiences a change in business activity and ownership control between the period in which losses were generated and the period in which losses would otherwise be used to offset taxable income. In general, non-operating tax losses can be offset only against non-operating gains if certain conditions are met. In a corporate restructuring involving a merger, the tax losses of the merged company must be forgone.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
State value-added tax (ICMS)	0 to 25
General rate for intrastate transactions	17/20
General rate for interstate transactions	12
General rate for interstate resale transactions involving imported goods	4
Transactions in which taxpayers located in the South or Southeast (except for Espírito Santo State) regions that remit goods and services taxable under ICMS to taxpayers resident in the states of the North, Northeast or Centre-West regions or Espírito Santo State	7
Exports	Exempt
Federal value-added tax (IPI); the top rate applies to luxury or superfluous goods, such as alcoholic beverages and cigarettes	0 to 330
Tax on Financial Operations (IOF); imposed on credit transactions, foreign-exchange transactions, insurance operations and financial investments	
Loan operations	
Daily rate (maximum annual rate of 1.5%)	0.0041
Additional rate	0.38
Foreign-exchange transactions	0.38 to 6.38
Insurance operations	0.38 to 7.38
Financial investments	Various
Social Integration Program (PIS) tax; levied on gross income at a rate of 1.65%; the tax is a non-cumulative (VAT-type) tax for certain taxpayers; certain companies, including local financial institutions and companies that manufacture goods in the Manaus Free Trade Zone, are subject to the cumulative regime	

Nature of tax	Rate (%)
and make the contribution at a 0.65% rate; the tax is also levied on imports of goods at a rate of 2.1% and on services at a rate of 1.65%, in most cases; however, for certain imported goods, different rates apply; in certain cases, the rate is reduced to 0%	0/0.65/1.65/2.1 to 3.52
Social security financing contribution (COFINS); levied on gross income at a rate of 7.6%; the tax is a non-cumulative (VAT-type) tax for certain taxpayers; certain companies, including local financial institutions and companies that manufacture goods in the Manaus Free Trade Zone, are subject to the cumulative regime and make the contribution at a 3% rate; the tax is also levied on imports of goods at a rate of 9.65% and on services at a rate of 7.6%, in most cases; however, for certain imported goods, different rates apply; in certain cases, the rate is reduced to 0%	0/3/7.6/9.65 to 16.48
Municipal Service Tax (ISS)	2 to 5
Social security contributions (INSS), on monthly salary; paid by Employer	Up to 28.8
Employee; rate varies depending on amount of remuneration (amount of employee contribution may not exceed BRL570.88 [USD174] a month)	8 to 11
Severance Pay Indemnity Fund (FGTS), on monthly salary	8
Withholding tax on local payments of professional service fees (creditable by the recipient against income tax)	Up to 27.5
Contribution for development of cinematographic and video phonographic works (Condecine); in general, tax rate applied to amounts paid to producers, distributors and intermediaries abroad for the exploitation of cinematographic and video phonographic works	11

E. Miscellaneous matters

Foreign investment. All foreign investments, such as equity or debt investments, must be registered with the Central Bank of Brazil (BACEN) to assure the payment of dividends and interest, or the repatriation of capital. Nonresidents holding assets and rights in Brazil, such as equity investments, portfolio investments and debt investments, must be registered with the Brazilian tax authorities. On registration, the nonresidents obtain a tax identification number (CNPJ). Failure to comply with the foreign-exchange regulations and associated requirements is subject to significant penalties. This particularly applies to evasion, false statements and private offsetting transactions. Changes to the registration of foreign investments with the BACEN will enter

into force on 30 January 2017. They will include a release from providing certain currently required information, such as the registration of dividends and INE (see *Dividends* in Section B) as a condition for the remittance abroad of such amounts.

Contracts for the supply of technology and technical services, and for the use of trademarks and patents between residents and non-residents must also be registered with BACEN and the National Institute of Industrial Property (INPI). The registration allows Brazilian companies to pay and deduct the royalties up to the amounts prescribed by law.

Transfer pricing. Brazilian transfer-pricing rules apply only to cross-border transactions entered into between Brazilian companies and foreign related parties. A transaction entered into between a Brazilian company and a resident of a low-tax jurisdiction or a resident in a jurisdiction with a privileged tax regime is also subject to the transfer-pricing rules, even if the parties are not related. In general, Brazilian transfer-pricing rules do not follow the transfer-pricing guidelines outlined in the Organisation for Economic Co-operation and Development (OECD) Model Convention and the US rules. For example, Brazilian transfer-pricing rules adopt fixed-profit margins on transactions carried out between related parties. Safe harbor measures may be applied to Brazilian exports.

Low-tax jurisdiction and privileged tax regime. The Brazilian low-tax jurisdiction (LTJ) list (black list) and privileged tax regime (PTR) list (gray list) are contained in regulations issued by the Brazilian tax authorities. New definitions of LTJ and PTR have been introduced. New definitions of LTJ and PTR were introduced in 2015 and in 2016. As a result, Ireland was added to the black list, and Austria and the Netherlands holding companies without substantial economic activity were added to the gray list.

Thin-capitalization. Under thin-capitalization rules, interest expense arising from a financial arrangement with a related party is deductible only if the related Brazilian borrower does not exceed a debt-to-net equity ratio of 2:1. In addition, interest expense arising from a financing arrangement executed with a party established in a LTJ or benefiting from a PTR is deductible only if the Brazilian borrower does not have a debt-to-net equity ratio of greater than 0.3:1.

Controlled foreign companies. Profits realized by a controlled foreign company (CFC) of a Brazilian company are subject to income taxation on 31 December of each year regardless of any actual distribution by the CFC. Law 12,973/2014 introduced a new CFC regime. Under the new regime, qualifying CFCs are taxed on an entity-by-entity basis (that is, individually regardless of the design of the corporate structure outside of Brazil). If certain conditions are met, a tax consolidation of CFCs can be performed at the level of the Brazilian shareholder, through which the accounting losses of a qualifying CFC may offset taxable income of another CFC.

The earnings of CFC entities whose business is connected to oil and gas activities are exempt from tax in Brazil. Foreign tax credits of CFCs can be used against Brazilian corporate income tax, limited to the Brazilian corporate income tax due on CFC income.

Under regulations issued by the Brazilian tax authorities (Ordinance 1,520/2014), the Brazilian shareholder can elect which non-Brazilian entities are subject to tax consolidation. Qualifying non-CFC entities are subject to tax in Brazil on an actual or deemed dividend distribution to a Brazilian shareholder. A deemed credit of 9% of the CFC income subject to tax in Brazil is available for qualifying entities.

The Brazilian corporate income tax on CFC income may be subject to installment payments over a period of eight years (12.5% payment per year), but the deferred tax liability is subject to adjustment based on London Interbank Offered Rate plus the US dollar currency exchange variation.

Digital bookkeeping. The Public System of Digital Bookkeeping (Sistema Público de Escrituração Digital, or SPED) is a unified electronic storage of accounting and tax bookkeeping. It is intended to replace bookkeeping prepared on paper and to unify the preparation, storage, and certification requirements of the Board of Trade and of the tax authorities at the municipal, state and federal levels. Most companies are now required to comply with the SPED.

International Financial Reporting Standards. Law 11,638/07 introduced changes to the Brazilian Corporate Law (Law 6,404/76) with respect to the preparation of financial statements for corporations as well as for large companies, regardless of whether they are organized as corporations. This law represents a major step in the process toward harmonization of Brazilian GAAP with IFRS. Under this law, which took effect on 1 January 2008, large companies must prepare their financial statements under new Brazilian GAAP, which is consistent with IFRS principles.

This harmonization process was not intended to generate any tax consequences in Brazil. Consequently, the Brazilian IRS issued guidance on achieving such tax neutrality (called the Transitional Tax Regime). Effective from 2015, Law 12,973/2014 revokes the Transitional Tax Regime by realigning the income tax rules with the accounting rules (Brazilian GAAP), unless otherwise prescribed by the tax law. The early adoption of Law 12,973/2014 for the 2014 calendar year was optional.

Foreign trade of services integrated system. The Brazilian tax authorities require the reporting of inbound and outbound services and intangible transactions outlined in Brazilian Services Codification (Nomenclatura Brasileira de Serviços, Intangíveis e Outras Operações que Produzam Variações no Patrimônio, or NBS) through an integrated system with the Brazilian IRS, named Integrated Foreign Trade System for Foreign Services, Intangibles and other Transactions (Sistema Integrado de Comércio Exterior de Serviços, Intangíveis e Outras Operações que Produzam Variações no Patrimônio, or SISCOSERV).

Special tax benefits. The Brazilian government has issued laws providing tax incentives to increase investments in Brazil. The following are the main programs:

- Law 11,196/2005: tax benefits for investments in infrastructure and research and development (R&D)
- Special Tax Regime for the Renewal and Expansion of Port Structures (Regime Tributário para Incentivo à Modernização e

à Ampliação da Estrutura Portuária, or REPORTO): suspension of IPI, PIS, COFINS and import tax for investments in ports, warehousing and surveillance and monitoring systems

- Reduction of employer social security contribution in some industries, such as hospitality information technology and air and sea transportation: a contribution of 2.5% to 4.5% of gross income replaces the contribution as a percentage of payroll

F. Treaty withholding tax rates

The rates reflect the lower of the treaty rate and the rate under domestic tax law.

	Dividends %	Interest %	Royalties (k) %
Argentina	0	15 (d)	15 (n)
Austria	0	15 (d)	15 (b)(l)(r)
Belgium	0	15 (a)(d)	15 (c)(m)

Korea (South)	0	15 (a)(d)	10 (l)(p)
Luxembourg	0	15 (a)(d)	15 (l)
Mexico	0	15 (d)	10
Netherlands	0	15 (a)(d)	15 (l)
Norway	0	15 (d)	15 (l)
Peru	0	15 (d)	15
Philippines	0	15 (d)	15 (l)
Portugal	0	15 (d)	15
South Africa	0	15 (d)	10 (p)
Spain	0	15 (d)(f)	10 (o)(p)
Sweden	0	15 (d)	15 (l)(r)
Trinidad and Tobago	0	15 (d)	15
Turkey	0	15 (q)	15 (i)
Ukraine	0	15 (d)	15
Venezuela	0	15 (d)	15
Non-treaty countries	0	15 (j)	15 (j)

- (a) The withholding rate is 10% for interest on certain bank loans with a minimum term of seven years.
- (b) The withholding rate is 10% for royalties for the use of, or the right to use, copyrights of literary, artistic or scientific works, excluding cinematographic films and films or tapes for television or radio broadcasting, produced by a resident of a contracting state.
- (c) The withholding rate is 10% for royalties for the use of, or the right to use, copyrights of literary, artistic or scientific works or for the use of, or the right to use, cinematographic films or television or radio films or tapes produced by a resident of a contracting state.
- (d) Interest paid to the government of the other contracting state, a political subdivision thereof or an agency (including a financial institution) wholly owned by that government or political subdivision is exempt from tax.
- (e) The withholding rate is 15% for royalties with respect to copyrights of cinematographic films and films or tapes for radio or television broadcasting.

- (f) The withholding rate is 10% for interest on certain long-term (at least 10 years) bank loans.
- (g) The withholding rate is 10% for interest on certain long-term (at least eight years) bank loans.
- (h) Brazil is honoring the Czechoslovakia treaty with respect to the Czech and Slovak Republics.
- (i) This rate applies to royalties related to the use of, or the right to use, trademarks. For other royalties, including payments for technical assistance and technical services, the rate is 10%.
- (j) The withholding tax rate may increase to 25% if the recipient is resident in a low-tax jurisdiction or benefits from a privileged tax regime (see Section E).
- (k) The tax treaties do not apply to the CIDE (see footnote [d] to Section A).
- (l) The withholding tax rate is 25% for royalties paid for the use of trademarks.
- (m) The withholding tax rate is 20% for royalties paid for the use of trademarks.
- (n) The treaty does not provide a maximum rate for royalties, but provides that the domestic rate applies.
- (o) The withholding rate is 15% for royalties for the use of, or the right to use, trademarks.
- (p) The withholding tax rate applicable to royalties was reduced as a result of the most favorable clause contained in the protocol to the treaty. This clause provides for a rate reduction if a future treaty establishes a lower rate. Because of the treaty between Brazil and Israel, the withholding tax rate on royalties was reduced to 10% (except for trademark royalties).
- (q) Interest paid from Turkey to the Brazilian government, Central Bank of Brazil or the National Economic and Social Development Bank (BNDES) are exempt from Turkish tax. Interest paid from Brazil to the Turkish government, the Central Bank of the Republic of Turkey (Türkiye Cumhuriyet Merkez Bankası) or the Turkish Bank of Exportation and Importation (Eximbank) are exempt from Brazilian tax.
- (r) The protocols of these treaties do not expressly classify payments for technical services as royalties. Based on recent interpretations of the Brazilian tax authorities, it may be possible to claim that technical services fees paid to beneficiaries located in these countries are not subject to withholding income tax.

Brazil has signed a tax treaty with the Russian Federation, but the treaty has not yet been ratified.

Branch Tax Rate (%)	0
Withholding Tax (%)	0

B. Taxes on corporate income and gains

The BVI Business Companies Act, 2004 (BVI BC Act) entered into force on 1 January 2005. Under the BVI BC Act, companies incorporated under the British Virgin Islands (BVI) Companies Act are exempt from all taxes provided under the BVI Income Tax Ordinance. The BVI BC Act is essentially an amalgamation of the International Business Companies (IBC) Act and the BVI Companies Act, which contained a regime under which all domestic companies incorporated in the BVI were governed. In addition, on 1 January 2007, all International Business Companies on the companies register in the BVI were automatically reregistered under the BVI BC Act and, consequently, the IBC Act was repealed in full.

All Business Companies (BCs) are statutorily exempt from BVI taxes. However, such companies must pay an annual license fee (see Section C). In general, a BC may not transact business with persons resident in the BVI or own interests in real property located in the BVI unless it obtains the relevant trade license from the BVI government. In addition, a BC may not carry on business as a bank, trust company, insurance company or reinsurance company without a license from the BVI Financial Services Commission.

C. Other taxes

Payroll tax. Payroll tax is imposed on every employer and self-employed person who carries on business in the BVI. The tax rates are 10% for Class 1 employers and 14% for Class 2 employers. The tax is applied to the remuneration paid or deemed to be paid, 8% of which may be reclaimed and paid by the employees

or deemed employees. Class 1 employers are those meeting the following conditions:

- Payroll during the financial year that does not exceed USD150,000
- Annual turnover that does not exceed USD300,000
- A total of seven or less employees and deemed employees

All employers not falling within the Class 1 category are deemed to be Class 2 employers.

The first USD10,000 of actual remuneration paid to an employee, deemed employee or self-employed person is exempt from tax.

Social tax. Social tax requires both the employer and employee contribute to the mandatory National Insurance Scheme. The total contribution rate is 8.5%, of which 4.5% is paid by the employer and the remaining 4% can be passed on to the employees. These contributions are based on the amount of weekly wages of up to a maximum of USD775 or monthly wages up to a maximum of USD3,358. The maximum insurable earnings is USD40,300.

National health insurance. BVI implemented a new national health insurance regime, effective from 1 January 2016. This regime requires employers and employees to pay 3.75% each on the employees' monthly income. The maximum income on which national health insurance premiums is assessed is two times the upper wage limit for social security contributions, which currently equals USD6,717 per month. Consequently, the maximum amount payable monthly by employees and employers is USD252 each. Employees are also required to contribute an additional 3.75% on behalf of an unemployed spouse.

D. Fees and stamp duties

The following table summarizes the fees and stamp duties payable in the BVI.

Nature of fees and duties	Rate
Annual license fees	
BCs incorporated under the BVI BC Act, with authorized share capital of	
Up to USD50,000 or foreign-currency equivalent or authorized to issue up to 50,000 shares	USD350
Exceeding USD50,000 or foreign-currency equivalent or authorized to issue more than 50,000 shares	USD1,100
Restricted Purpose Company	USD5,000
General banking license	USD50,000
Restricted Class I banking license	USD32,000
Restricted Class II banking license	USD32,000
Insurance company license	Up to USD10,000
Class I trust license	USD16,000
Class II trust license	USD14,000
Class III trust license	USD12,000
Restricted Class II trust license	USD1,000 to USD3,000
Restricted Class III trust license	USD500
Stamp duties, on various instruments and transfers of ownership	

Nature of fees and duties	Rate
Real estate, on higher of consideration or market value	
Sales to belongers (individuals born in the BVI or those granted BVI status and BVI companies that are at least 67% owned by such persons and do not have any non-belongers as directors)	4%
Sales to non-belongers	12%
Other instruments and transfers	0.2% to 5%

E. Miscellaneous matters

Foreign-exchange controls. The BVI does not have any foreign-exchange control regulations.

European Union Savings Tax Directive. As a result of the BVI's status as a British Overseas Territory, it is required to comply with the requirements of the European Union (EU) Savings Tax Directive (the Directive). Banks and other paying agents in the BVI must exchange certain information pertaining to EU residents.

Under the Mutual Legal Assistance (Tax Matters) (Automatic Exchange of Information) Order, 2011, effective from 1 January 2012, the former 35% withholding option under the Directive is no longer applicable because the BVI transitioned to the automatic exchange-of-information option instead of the withholding-tax option under the Directive. This order provides that BVI-based paying agents are no longer subject to the withholding tax option as a means of complying with the Directive. Instead, BVI institutions must disclose the minimum information to the BVI Inland Revenue, which in turn complies with the information-exchange policy under the Directive.

On 24 March 2014, the EU revised the Directive to strengthen the existing rules on exchange of information on savings income. The principal changes to the Directive are the following:

- A look-through approach based on "customer due diligence," which prevents individuals from circumventing the Directive by using an interposed legal person located in certain non-EU countries
- Enhanced rules aimed at preventing individuals from circumventing the Directive by using an interposed legal person located in an EU member state
- Extending the scope of the Directive to include financial products that have similar characteristics to debt claims
- Inclusion of income obtained through undertakings for collective investment in transferable securities authorized by Directive 85/611/EEC (UCITS)

F. Tax treaties

Although the United Kingdom's double tax treaties with Japan and Switzerland have been extended to the BVI, these treaties are not used in practice. The BVI has not entered into any other tax treaties. However, the BVI has entered into 28 tax information exchange agreements with various jurisdictions, including Canada, China, Japan and the United States, and with 16 European countries, including France, Germany, Ireland, the Netherlands and the United Kingdom.

On 28 November 2013, the BVI and the United Kingdom signed an intergovernmental agreement (IGA) to enable the exchange of information for tax purposes, including on an automatic basis.

On 30 June 2014, the BVI and the U.S. Treasury signed and released a Model 1 IGA for the implementation of the US Foreign Account Tax Compliance Act (FATCA).

All BVI institutions must comply with FATCA and UK Crown Dependencies and Overseas Territories regulations. In addition, if required, they must report to the BVI International Tax Authority via the authority's Automatic Exchange of Information website.

The BVI was also an early adopter of the Common Reporting Standard (CRS). BVI recently issued its initial CRS regulations, which took effect on 1 January 2016. The first reporting for the 2016 tax year is likely due by the end of May 2017, but the government could push back the due date. All BVI institutions must comply with the CRS.

Interest	15
Royalties	10
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	6

(a) This is the standard rate. The rate of petroleum income tax is 55%.

(b) For a listing of withholding taxes, see Section D.

B. Taxes on corporate income and gains

Corporate income tax. Limited companies, regardless of whether they are incorporated overseas or locally or are registered as a branch of a foreign company, are subject to a tax on income accruing in, derived from or received in Brunei Darussalam.

Branches of foreign companies are taxed on their profits arising in Brunei Darussalam at the same rates as corporations.

Rate of corporate income tax. The income tax rate is 18.5% for resident and nonresident companies, except for those engaged in petroleum operations. The rate of petroleum income tax is 55%.

The first BND100,000 of chargeable income is taxed at a reduced rate of one quarter of the full rate, while the next BND150,000 is taxed at half the full rate. The balance of chargeable income is taxed at the full rate. For a new company, the first BND100,000 of chargeable income is exempt from tax. This exemption applies for a company's first three consecutive years of assessment.

Certain enterprises and industries may be exempted from taxation if they are considered essential for the development of the country.

Companies that have gross sales or turnover of BND1 million or less are exempted from corporate income tax or charged with a 0% corporate income tax.

Capital gains. Capital gains are not taxed. Capital losses are not deductible. However, if assets have been acquired for resale rather than for a company's use, any profit from the sale is regarded as taxable income.

Administration. The tax year is the calendar year.

Tax returns must be filed by electronic means.

Corporations must file an annual tax return by 30 June of each year and pay any tax due by the same date. Corporations must also file an Estimated Chargeable Income (ECI) return within three months after their accounting year-end if they are unable to file their annual tax return within this period. Any tax due under an ECI return must be paid by the due date for filing the ECI return. If tax is paid under an ECI return, the tax is adjusted accordingly in the annual tax return. In general, extensions of time are not granted.

Foreign tax relief. Foreign income that is not received in Brunei Darussalam is free from tax. Brunei Darussalam has entered into double tax treaties with Bahrain, China, Hong Kong Special Administrative Region (SAR), Indonesia, Japan, Kuwait, Laos, Malaysia, Oman, Pakistan, Singapore, the United Arab Emirates, the United Kingdom and Vietnam. Brunei Darussalam has signed double tax treaties with other countries, but these treaties have not yet been ratified. Both resident and nonresident companies may also apply for unilateral relief on income arising from British Commonwealth countries offering reciprocal relief. However, the maximum relief cannot exceed half the Brunei Darussalam rate.

C. Determination of trading income

General. The following sources of income are subject to tax:

- Gains or profits from any trade, business, profession or vocation
- Gains or profits from employment
- Net annual value of land and improvements occupied or used rent-free for residential or enjoyment purposes
- Dividends, interest or discounts
- Pensions, charges or annuities
- Rents, royalties, premiums and any other profits arising from property

In computing taxable income, normal business expenses may be deducted.

Interest expenses are allowed as a deduction only if the loan generating the charge is used for the production of taxable income.

Provisions. Provisions for debts are generally tax-deductible only if they are made against specific bad debts.

Tax depreciation. Depreciation charged in the financial accounts is not deductible for tax purposes. Instead, capital allowances (tax depreciation) are permitted.

Industrial buildings. An initial allowance of 20% of the qualifying expenditure is given on industrial buildings in the year of expenditure, with a further annual allowance of 4% of qualifying expenditure provided on a straight-line basis until the total expenditure is written off.

Effective from 1 January 2014, the rates of the initial allowance and annual allowance were increased to 40% and 20%, respectively.

Plant and machinery. An initial allowance of 40% of the cost of plant or machinery is given on expenditure incurred on or after 1 January 2009, and an annual allowance is given on the declining value of the asset. The rates depend on the type of asset and range from 3% to 25%. Alternatively, a company may choose to write off such expenditure over three years on a straight-line basis. For plant and machinery not exceeding BND2,000 per item, a company may choose to write off such expenditure fully in the year of acquisition subject to an aggregate cap of BND30,000 per year. For computer and office automation equipment, a company may also choose to write off such assets fully in the year of acquisition.

Effective from 1 January 2014, the capital allowance rate was increased to 150% for assets categorized as plant and machinery for companies in the manufacturing sector. This capital allowance applies only to plant and machinery installed between 1 January 2014 and 31 December 2019.

Mining. All expenditure incurred in connection with the working of a mine or other source of mineral deposit of a wasting nature is considered qualifying mining expenditure. An initial allowance of 10% of the qualifying expenditure is given in the year of expenditure, with annual depletion allowances deductible over the life of the mine. These are determined by multiplying the residue of the capital expenditure by the greater of 20% and the following fraction:

$$\frac{\text{Output for the year}}{\text{Output for the year plus estimated future output}}$$

Disposals. When an asset is sold, scrapped or destroyed, a balancing allowance or charge is made, based on the difference between the disposal price and the depreciated value on disposal. The balancing charge may be deferred if the plant and machinery disposed of are replaced by similar assets.

Relief for losses. Losses may be carried forward for up to six years to offset future profits. Continuity of trade or ownership is not required to carry forward losses. Losses in one trade or business may be set off against other sources of income for the same year of assessment.

Unabsorbed capital allowances may be carried forward indefinitely, provided the company continues to carry on the same trade or business.

Groups of companies. No special rules or reliefs apply to groups of companies; each company is taxed on its own income as appropriate.

D. Domestic and treaty withholding tax rates

Brunei Darussalam's domestic tax law imposes withholding tax on various payments made to nonresident persons, which include companies and bodies of persons. A company is considered to be a nonresident company if the control and management of its business are not exercised in Brunei Darussalam. The following are the withholding tax rates.

Type of payment	Rate (%)
Interest, commissions, fees or other payments with respect to loans or indebtedness	15
Royalties or other lump-sum payments for the use of movable properties	10
Payments for the use of, or the right to use, scientific, technical, industrial or commercial knowledge or information	10
Technical assistance and service fees	20
Management fees	20
Rent or other payments for the use of movable properties	10
Nonresident directors' remuneration	20

The above withholding tax rates may be reduced under tax treaties. Brunei Darussalam has entered into double tax treaties with Bahrain, China, the Hong Kong SAR, Indonesia, Japan, Kuwait, Laos, Malaysia, Oman, Pakistan, Singapore, the United Arab Emirates, the United Kingdom and Vietnam.

Brunei Darussalam has signed tax treaties with Korea (South), Luxembourg, Qatar and Tajikistan, but these treaties have not yet been ratified.

A. At a glance

Corporate Income Tax Rate (%)	10
Capital Gains Tax Rate (%)	10 (a)
Branch Tax Rate (%)	10
Withholding Tax (%) (b)	
Dividends	5 (c)(d)
Interest	0/10 (e)(f)(g)
Royalties from Patents, Know-how, etc.	0/10 (e)(f)
Fees for Technical Services	10 (f)
Rent and Payments Under Lease, Franchising and Factoring Agreements Derived from Sources in Bulgaria	10 (f)
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) Capital gains derived from the sale of shares and government bonds through the Bulgarian stock market or stock exchanges in European Union (EU) or European Economic Area (EEA) countries are exempt from tax.
- (b) An EU/EEA recipient of Bulgarian-source income that is subject to withholding tax may claim a deduction for expenses incurred in earning that income by filing an annual corporate income tax return. The return must be filed by 31 December of the year following the year of accrual of the income.
- (c) This tax does not apply to payments to entities that are resident for tax purposes in Bulgaria or EU/EEA countries. However, under the general anti-tax avoidance rule provided in the domestic corporate income tax law, no exemption from withholding tax is granted to an arrangement or a series of arrangements that, taking into account all of the relevant facts and circumstances, are not genuine and result in tax avoidance.

- (d) This rate may be reduced by tax treaties for dividends distributed to entities not resident for tax purposes in EU/EEA countries.
- (e) The zero rate applies to EU associated companies (a minimum holding of 25% of the share capital must be maintained for at least two years).
- (f) This tax applies to payments to nonresidents only and may be reduced in accordance with an applicable tax treaty.
- (g) Interest on debt (other than government or municipality bonds) extended to the Bulgarian state or a municipality is exempt from withholding tax. Interest income on bonds or other debt instruments issued by Bulgarian resident companies, the Bulgarian state or municipalities on a regulated EU/EEA market is exempt from withholding tax. The exemptions mentioned in the two preceding sentences are granted to all corporate investors, regardless of their tax residency. Interest income paid to nonresident issuers of bonds or other debt instruments is not subject to withholding tax in Bulgaria if all of the following conditions are met:
 - The issuer of these bonds or debt instruments is a tax resident of an EU/EEA member state.
 - The purpose for the issuance of the bonds or other debt instruments is that the proceeds will be used for granting a loan to a Bulgarian tax resident company.
 - The bonds or other debt instruments are issued on a regulated market in Bulgaria or another EU/EEA member state.

B. Taxes on corporate income and gains

Corporate income tax. Bulgarian companies are subject to corporate tax on their worldwide income. Bulgarian companies are companies incorporated in Bulgaria. Foreign companies are taxed in Bulgaria on their profits generated from activities conducted through a permanent establishment in the country and on income from Bulgarian sources.

Rates of corporate tax. The corporate tax rate is 10%.

A 10% tax is imposed on certain expenses, such as employee-related, in-kind fringe benefits and representation-related expenses, thereby increasing the effective tax rate for companies incurring such expenses (see Section D).

Capital gains and losses. Capital gains from disposals of assets, including shares, are included in the current year tax base and are subject to tax at the standard corporate tax rate of 10%. No roll-over relief is provided. Capital losses are deductible for tax purposes.

Capital gains derived from the sale of shares and government bonds through the Bulgarian stock market or stock exchanges in EU/EEA countries are exempt from tax. Similarly, losses from sale of shares through such stock exchanges are not deductible for tax purposes.

Administration. The tax year is the calendar year. Annual tax returns must be filed by 31 March of the year following the tax year.

Companies subject to tax must make advance payments of tax. Only persons that have net sales revenue from the preceding year in excess of BGN3 million must make monthly advance payments. Newly established companies and companies with sales of less than BGN300,000 for the preceding tax year are not required to make advance payments. These taxable persons may opt for quarterly advance payments. Companies with sales ranging from BGN300,000 to BGN3 million for the preceding tax year are subject to quarterly advance corporate tax payments. The tax base for the monthly advance payments is one-twelfth of the company's forecasted annual taxable income for the tax year. The tax

base of the quarterly advance payments is one-fourth of the company's forecasted annual taxable income for the tax year. The tax rate for calculating the advance payments is 10%. No quarterly payment is required for the last quarter.

The monthly advance payments for January, February and March are due on 15 April of the current tax year. For the months from April through December, the monthly advance payments are due on the 15th day of the respective month. The quarterly advance payments for the first and second quarters are due on the 15th day after the end of the respective quarter. For the third quarter, the advance payment is due on 15 December. Companies must pay the corporate tax due for the tax year, less the advance installments, by 31 March of the following year.

Beginning in 2017, in the case of errors (including accounting errors) related to the prior year for which the tax return was filed, companies can file a one-off corrective corporate income tax return by 30 September of the year.

The tax on certain expenses (see Section D) is payable on an annual basis by 31 March of the following year.

Dividends. A 5% withholding tax is imposed on dividends paid by Bulgarian companies to companies resident for tax purposes in non-EU/EEA countries, as well as on hidden profit distributions to residents of EU/EEA countries.

Remittances of profits by branches to their home countries are not subject to withholding tax.

Foreign tax relief. Bulgarian companies are entitled to a tax credit for identical or similar foreign taxes imposed abroad. The tax credit is limited to the amount of the Bulgarian tax that would have been paid in Bulgaria on the income subject to the foreign tax. In addition, a per-country limitation applies. Bulgarian tax treaties normally provide an exemption from Bulgarian taxation for income from foreign real estate and foreign permanent establishments.

C. Determination of taxable income

General. Taxable income is based on annual accounts prepared in accordance with International Financial Reporting Standards (IFRS) or, for small and medium-sized enterprises, Bulgarian accounting standards. However, taxable income does not equal the profit shown in the accounts, because certain adjustments to revenue and expenses are required for tax purposes with respect to items such as accrual for bonuses, unused leave, depreciation and impairment of assets.

The write-down of assets as a result of impairment is not deductible for tax purposes. The loss is deductible on realization.

Inventories. All cost methods that are applicable under IFRS may be used for tax purposes. For manufacturing entities, the quantity of raw material exceeding the usual quantity of raw materials required for the production of a particular unit is treated as avoidance of taxation and is subject to adjustment for tax purposes.

Provisions. Impairments and write-offs of receivables are not deductible for tax purposes until their materialization or the expiration of the five-year statute of limitation to pursue the claim at

court. This rule does not apply to financial institutions, which may deduct impairments and write-offs of receivables in the year in which they are booked. Provisions for payables are not deductible for tax purposes until their materialization.

Tax depreciation. Tax depreciation of fixed assets is determined using the straight-line method. The law provides the following maximum tax depreciation rates for categories of assets.

Category	Assets	Rate (%)
1	Buildings, facilities, communication devices, electricity carriers and communication lines	4
2	Machines, manufacturing equipment and other equipment	30 (a)
3	Transportation vehicles, excluding automobiles, road coverings and aircraft runways	10
4	Computers, software and the right to use software, and mobile phones	50
5	Automobiles	25
6	Intangibles and other tangible assets that are legally protected for a limited time period	– (b)
7	Other tangible assets	15

(a) The rate may increase to as high as 50% for new machines for investment purposes.

(b) The depreciation rate is determined by dividing 100 by the number of years of the legal restriction. The maximum rate is 33⅓%.

The Corporate Income Tax Act contains measures requiring companies to prepare tax depreciation plans.

Goodwill arising from business combinations is not treated as a depreciable asset for tax purposes.

Relief for losses. Tax losses may be carried forward for five years. Losses may not be carried back.

Groups of companies. Bulgarian law does not include measures for filing consolidated returns or relieving losses within a group.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax; imposed on all domestic supplies of goods and services, imports and intra-EU acquisitions in Bulgaria	20
Tax on expenses; imposed on payers for representation and social expenses and for fringe benefits resulting from the provision of company assets and personnel to employees, directors and shareholders; the amount of the representation and social expenses is not subject to tax in the hands of the recipient; companies have the option to apply the 10% tax	

Nature of tax	Rate (%)
on corporate expenses triggered by the personal use of company assets and personnel by employees, directors and shareholders or to treat them as fringe benefits taxed at the personal level; companies must choose the method for taxation in their annual corporate tax return	10
Real estate property tax; rate varies by municipality	0.01 to 0.45
Real estate transfer tax; rate varies by municipality	0.1 to 3

E. Miscellaneous matters

Foreign-exchange controls. The Bulgarian currency is the leva (BGN). The exchange rate of the leva against the euro (EUR) is fixed at BGN1.95583 = EUR1.

Bulgaria does not impose foreign-exchange controls. However, some reporting requirements exist.

Each business transaction between local and foreign persons that involves financial credits or direct investment of a local company or sole proprietor abroad, must be declared for statistical purposes to the Bulgarian National Bank (BNB) within 15 days after the date of the transaction.

Under the act, bank payments of up to BGN30,000 may be made freely after the payer declares the purpose of the payments. For payments over BGN30,000, certain requirements must be satisfied, including the submission of certain documents to the bank.

The act does not restrict the amount of foreign currency that may be purchased or imported into Bulgaria. Bulgarian and foreign individuals may export foreign currency of up to the equivalent of EUR10,000 without filing a declaration. The individual must file a declaration for exports exceeding EUR10,000. For exports of cash exceeding EUR15,000 or the equivalent in another currency, the individual must provide to the customs authorities a certificate from the tax authorities stating that he or she has no outstanding tax liabilities.

Debt-to-equity rules. Thin-capitalization provisions regulate the deductibility of interest expenses related to certain transactions such as the following:

- Nonbank loans from related and unrelated parties
- Financial leases entered into with related parties
- Bank loans obtained from related parties or guaranteed by related parties

If the total amount of debt of a company exceeds three times the company's equity, the thin-capitalization restrictions on tax deductibility are triggered. The tax deductibility for the net amount of the interest expenses subject to the thin-capitalization provisions (after deduction of any interest income) is limited to 75% of Earnings Before Interest and Tax (EBIT). If the financial result before taking into account the interest expense is a loss, the entire amount of the interest expense is nondeductible.

The add-back under the Bulgarian thin-capitalization rules may be a timing difference because the thin-capitalization rules allow for a five-year carryforward of disallowed interest expenses, subject to the application of the limitations described above.

Hidden distributions of profit. Adjustments to taxable income as a result of violations of the arm's-length principle are treated as hidden distributions of profit. The definition of hidden profit distribution also includes the following:

- Amounts not related to the business activity
- Amounts exceeding the customary market levels for both expenses accrued and amounts paid or distributed in any form in favor of shareholders, partners or persons related to them, excluding dividends
- Interest on certain hybrid instruments (debt contracts that, subject to a specific test provided for in the Corporate Income Tax Act, seem to be more akin to equity)

Hidden distributions are treated like dividends and are accordingly subject to 5% withholding tax (if distributed to nonresidents). In addition, an administrative sanction in the amount of 20% of the distributed amount is imposed. However, voluntary disclosure of hidden profit distributions in the annual corporate income tax return relieves taxpayers of this penalty.

F. Treaty withholding tax rates

The rates of withholding tax in Bulgaria's tax treaties are described in the following table.

	Dividends (y) %	Interest (ss) %	Royalties %
Albania	5/15 (h)	10	10
Algeria	10	10	10
Armenia	5/10 (m)	5/10 (ll)	5/10 (mm)
Austria	0/5 (tt)	0/5 (uu)	5 (vv)
Azerbaijan	8	0/7 (dd)	5/10 (ee)

- (a) The 7% rate applies to royalties for the right to use industrial, commercial and scientific equipment; the 10% rate applies to other royalties.
- (b) The 5% rate applies if the beneficial owner is a company, other than a partnership, holding directly more than 25% of the capital of the payer.
- (c) This rate applies to dividends paid from Finland to Bulgaria. The treaty does not provide a withholding rate for dividends paid from Bulgaria to Finland.
- (d) The 5% rate applies to royalties for specified types of intellectual property. The rate for other royalties is 0%.
- (e) The 5% rate applies if the beneficial owner of the dividends is a company, other than a general partnership, that holds directly at least 15% of the capital of the payer; the 15% rate applies to other dividends.
- (f) The 10% rate applies if the recipient is a legal person owning at least 25% of the voting shares of the payer for at least six months before the end of the accounting period for which the distribution of profits is made. The 15% rate applies to other dividends.

- (g) The rate is 0% for dividends paid from Bulgaria to Malta. For dividends paid from Malta to Bulgaria, the withholding tax is the lower of 30% of the gross dividend or the tax imposed on the profits out of which the dividends are paid.
- (h) The 5% rate applies if the recipient is a company owning directly at least 25% of the capital of the payer; the 15% rate applies to other dividends.
- (i) The 5% rate applies if the recipient is a company, other than a general partnership, owning directly at least 25% of the payer. The 15% rate applies to other dividends.
- (j) The 5% rate applies if the recipient is a company that is the beneficial owner of the dividends and holds at least 15% of the capital of the payer. The 10% rate applies to other dividends.
- (k) The 10% rate applies if the beneficial owner of the dividends is a company that holds at least 25% of the capital of the payer. The 20% rate applies to other dividends.
- (l) Interest paid to the government, a political subdivision or local authority or on loans guaranteed by a governmental institution is exempt.
- (m) The 5% rate applies if the beneficial owner of the dividends has invested at least USD100,000 or an equivalent amount in another currency in the capital of the payer. The 10% rate applies to other dividends.
- (n) The rate of 10% applies to dividends paid by a Canadian investment company, of which at least 10% of the voting shares are controlled directly or indirectly by a foreign company. The 15% rate applies to other dividends.
- (o) The 10% rate applies if the beneficial owner of the dividends is a company, other than a general partnership, that holds at least 25% of the payer. The 15% rate applies to other dividends.
- (p) The 5% rate applies if the beneficial owner of the dividends is a company, other than a partnership, holding directly at least 25% of the payer. The 15% rate applies to other dividends.
- (q) The 7% rate applies if the beneficial owner of the dividends is a company, other than a partnership, holding directly at least 15% of the capital of the payer. The 10% rate applies to other dividends.
- (r) The 5% rate applies if the recipient is a company owning directly at least 25% of the payer. The 10% rate applies to other dividends.
- (s) The 10% rate applies to interest paid to financial institutions, including insurance companies. The 15% rate applies to other interest payments.
- (t) The 5% rate applies to royalties received for the use of, or the right to use, copyrights. The 15% rate applies to other royalties.
- (u) The 5% rate applies to interest on loans from banks or financial institutions. The 10% rate applies to other interest payments.
- (v) The 0% rate applies if the beneficial owner is a company, other than a partnership, holding directly more than 25% of the capital of the payer.
- (w) The 7% rate applies to royalties received for the use of, or the right to use, copyrights, patents, logos, models, plans, secret formulas or processes. The 5% rate applies to other royalties.
- (x) The 5% rate applies to royalties received for the use of, or the right to use, copyrights (except for cinematographic movies), or scientific, commercial or industrial equipment. The 10% rate applies to other royalties.
- (y) A 0% rate applies to dividends paid to entities from EU countries if certain conditions are satisfied.
- (z) The 5% rate applies to copyright royalties and other similar payments with respect to the production or reproduction of cultural, dramatic, musical or other artistic works (but not including royalties with respect to motion picture films and works on film or videotape or other means of reproduction for use in connection with television) and to royalties paid for the use of industrial, commercial or scientific equipment. The 10% rate applies to other royalties.
- (aa) The 0% rate applies if the beneficial owner of the dividends is a company, other than a general partnership, that holds at least 10% of the payer. The 10% rate applies to other dividends.
- (bb) The 5% rate applies if the beneficial owner is a company that owns directly at least 10% of the voting stock of the company paying the dividends. The 0% rate applies if the beneficial owner is a pension fund resident for tax purposes in the United States. Other conditions must also be observed.
- (cc) The 0% rate applies if any of the following circumstances exist:
- The beneficial owner is an institution wholly owned by the state.
 - The beneficial owner is a financial institution, provided the interest is not paid with respect to a back-to-back loan.
 - The beneficial owner is a pension fund, provided that the interest is not derived from the carrying on of a business, directly or indirectly, by such pension fund.
 - The interest concerns debt claims guaranteed, insured or financed by the state.

The 10% rate applies to the following payments:

- Contingent interest arising in the United States that does not qualify as portfolio interest under US law
- Interest arising in Bulgaria that is determined with reference to receipts, sales, income, profits or other cash flow of the debtor or a related person, to a change in the value of any property of the debtor or a related person or to a dividend, partnership distribution or similar payment made by the debtor or a related person

The 5% rate applies to other cases.

(dd) The 0% rate applies if either of the following applies:

- The payer or the recipient of the interest is the government, an administrative territorial subdivision or a local authority thereof, the national bank of either contracting state, the state or the State Oil Fund of Azerbaijan.
- The interest is paid with respect to a loan guaranteed by any of the institutions mentioned in the first bullet.

The 7% rate applies to other cases.

(ee) The 5% rate applies to royalties received for the use of patents, designs or models, plans, secret formulas or processes, or for information, regarding industrial, commercial and scientific experience (know-how). The 10% rate applies in all other cases.

(ff) The 0% rate applies if the beneficial owner of the dividends is a company holding directly at least 10% of the capital of the payer. The 5% rate applies in all other cases.

(gg) The 0% rate applies if any of the following circumstances exists:

- The interest is paid to the government, local authority or the central bank of a contracting state.
- The interest is paid on a loan granted, insured or guaranteed by any of the institutions mentioned in the first bullet.
- The interest is paid with respect to the sale on credit of industrial, commercial or scientific equipment.
- The interest is paid on a loan granted by a bank.

(hh) The 0% rate applies to interest originating from one of the contracting states that is paid to the government or the central bank of the other state.

(ii) The 0% rate applies if the beneficial owner of the income derived from one of the contracting states is any of the following:

- The other state or a political subdivision, local government, local authority or the central bank of the other state
- The Abu Dhabi Investment Authority, Abu Dhabi Investment Council, International Petroleum Investment Company or any other institution created by the government, a political subdivision, a local authority or a local government of the other state, which is recognized as an integral part of the government, as agreed in an exchange of letters between the competent authorities of the contracting states

(jj) The 0% rate applies to income originating from one of the contracting states that is paid to any of the following:

- The other state, a political subdivision, a local government, a local authority or the central bank of the other state
- The Abu Dhabi Investment Authority, Dubai Investment Office, International Petroleum Investment Company, Abu Dhabi Investment Council or any other institution created by the government, a political subdivision, a local authority or a local government of the other state, which is recognized as an integral part of the government, as agreed through the exchange of letters between the competent authorities of the contracting states

(kk) The 0% rate applies if any of the following circumstances exists:

- The interest is paid with respect to the sale on credit of industrial, commercial or scientific equipment.
- The interest is paid with respect to the sale on credit of goods or merchandise delivered by an enterprise to another enterprise.
- The interest is paid on a loan, not represented by bearer shares, granted by a financial institution or by the government.

(ll) The 5% rate applies to interest paid on loans granted by banks or financial institutions.

(mm) The 5% rate applies to royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films, and films or tapes for television or radio broadcasting.

(nn) The 0% rate applies to dividends paid to the government, a local authority, statutory body, agency, the national bank or a wholly owned company of a contracting state.

(oo) The 0% rate applies to royalties paid to the government, a local authority, statutory body, agency, the national bank or a wholly owned company of a contracting state.

- (pp) The 0% rate applies as long as the Netherlands' tax laws do not levy a tax at source on royalties.
- (qq) The 5% rate applies if the recipient of the income owns at least 10% of the capital of the company paying the dividends.
- (rr) The 0% rate applies to interest paid on the following loans:
- Loans granted or guaranteed by the Bulgarian government or municipal and state institutions
 - Loans guaranteed by Germany with respect to exports or foreign direct investment or granted by the government of Germany, the Deutsche Bundesbank, the Kreditanstalt für Wiederaufbau or the Deutsche Investitions- und Entwicklungsgesellschaft
 - Loans related to the sale on credit of equipment and merchandise
 - Loans granted by banks
- (ss) A 0% rate (unless explicitly indicated otherwise in the table) broadly applies to interest paid to governments, statutory bodies or central banks. Under certain treaties, it may also extend to other financial institutions and/or local authorities, subject to explicit reference in the respective double tax treaty.
- (tt) A 0% rate applies to dividends distributed to Austrian companies. A 5% rate applies to distributions to partnerships and in all other cases.
- (uu) A 0% rate applies to interest paid on the following loans:
- Loans granted by banks
 - Loans granted to the government of Austria or to the government of Bulgaria
 - Loans granted, insured or guaranteed by the Oesterreichische Kontrollbank AG or any comparable Bulgarian institution for purposes of promoting exports
 - Loans granted in connection with the sale on credit of industrial, commercial or scientific equipment.
- A 5% rate applies in all other cases.
- (vv) A 5% rate applies to royalties.
- (ww) The 0% rate applies to interest paid on loans granted by the Bulgarian National Bank, the Qatar Central Bank, the Qatar Investment Fund, the capital pension authority of Qatar, administrative authorities, the Qatar Development Bank, other financial institutions wholly owned by the government of Qatar and other banks or institutions mutually agreed on by the contracting states.
- (xx) A 0% rate applies to dividends distributed to the following beneficial owners:
- Resident companies holding directly at least 10% of the capital in the company paying the dividend for at least one year before the payment of the dividend
 - Pension schemes
 - The central bank of the other contracting state
- A 10% rate will apply to distributions to partnerships and in all other cases.
- (yy) A 0% rate applies to interest paid on loans granted by the Bulgarian National Bank or, in the case of Uzbekistan, by the Central Bank or the National Bank of the Foreign Economic Activity of the Republic of Uzbekistan, or any other similar financial institution as agreed through an exchange of letters between the competent authorities of the contracting states.
- (zz) A 0% rate applies to interest paid on the following loans:
- Loans related to the sale on credit of equipment, merchandise or services
 - Loans granted by financial institutions
 - Loans granted to pension schemes
 - Loans granted to the government of Bulgaria or the government of Switzerland, a political subdivision or local authority, or the central bank of Bulgaria or Switzerland
 - Loans granted by a company to a company of the other contracting state if such company has directly held 10% of the capital for at least one year before the payment of the interest or if both companies are held by a third company and such company has directly held at least 10% of the capital of the first company and 10% of the capital of the second company, for at least one year before the payment of the interest
- (aaa) The 0% rate applies to interest paid on the following loans:
- Bonds or similar obligations of the government, political subdivisions or local authorities
 - Loans granted by the government or state-owned central banks
 - Loans and credits made, guaranteed or insured by the Export Development Corporation
 - Loans made, guaranteed or insured by the Bulgarian National Bank, the Bulgarian Foreign Trade Bank or other entity as agreed through an exchange of letters between the competent authorities of the contracting states

- (bbb) The 0% rate applies to interest paid on the following loans:
- Loans granted by the government, political subdivisions, local authorities or the central banks
 - Loans and credits extended or endorsed by the Bulgarian Foreign Trade Bank and the Export-Import Bank of India (Exim Bank) to the extent such interest is attributable to financing of exports and imports only, as well as by other institutions in charge of public financing of external trade
 - Loans and credits extended or endorsed by other persons to the extent that the loan or credit is approved by the government
- (ccc) The 15% rate applies to royalties relating to copyrights of literary, artistic or scientific works, other than cinematographic films or films or tapes used for radio or television broadcasting. The 20% rate applies to other royalties and technical service fees.
- (ddd) The 10% rate applies if the beneficial owner held directly 25% of the capital of the paying entity for an uninterrupted period of at least two years before the payment of the dividend.
- (eee) The 0% rate applies to interest paid on the following loans:
- Loans granted by the government, political subdivisions, local authorities or the central banks
 - Loans or credits made or guaranteed by the Export Import Bank of Korea and Korea Development Bank, as well as by the Bulgarian Foreign Trade Bank, or any other institution as agreed through an exchange of letters between the competent authorities of the contracting states
 - Loans related to the sale on credit of industrial, commercial or scientific equipment
- (fff) The existing treaty is being renegotiated. A copy of the official text is not yet available.
- (ggg) The new treaty with Norway for the avoidance of double taxation with respect to taxes on income, which was signed in July 2014, entered into force and applies to income accrued on or after 1 January 2016.
- (hhh) These are the rates under a new income and capital tax treaty with Romania, which is effective from 1 January 2017.
- (iii) The new treaty with the United Kingdom for the avoidance of double taxation and prevention of fiscal evasion with respect to taxes on income and on capital gains entered into force and applies to income accrued on or after 1 January 2016. The treaty contains special provisions limiting the treaty benefits if the main purpose or one of the main purposes of the relevant transaction is to gain a tax advantage.
- (jjj) The rate is 5% if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends. The rate is 15% in all other cases.
- (kkk) The rate is 5% for interest on loans other than loans granted by banks, the government, a political subdivision or local authority, loans granted, insured or guaranteed by a governmental institution for the purposes of promoting exports or loans in connection with the sale on credit of industrial, commercial or scientific equipment.
- (lll) The rate is 5% for royalties received for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films, and films, tapes or other means of image or sound reproduction for radio or television broadcasting, patents, trademarks, designs or models, plans, secret formulas or processes, or for information (know-how) concerning industrial, commercial or scientific experience.
- (mmm) A tax exemption applies to dividends distributed to companies and pension funds. The withholding tax rate is 15% if the dividends are paid out of income (including gains) derived directly or indirectly from immovable property by an investment vehicle. In all other cases, the withholding tax rate is 5%.
- (nnn) The rate is 5% for interest on loans other than loans granted by financial institutions or pension schemes, the government, a political subdivision or local authority, loans to the central bank, loans between associated companies (that is, a direct holding relationship of at least 10% was maintained for at least one year before the payment of the interest) and loans in connection with the sale on credit of any equipment, merchandise or services.

A treaty between Bulgaria and Bosnia and Herzegovina with respect to taxes on income has been initialed. A copy of the official text is not yet available.

A. At a glance

Tax on Profit Rate (%)	20
Capital Gains Tax Rate (%)	20
Withholding Tax (%) (a)	
Dividends	14
Interest	14
Technical, Management and Service Fees	14
Royalties	14
Net Operating Losses (Years)	
Carryback	0
Carryforward	5 (b)

- (a) The listed withholding tax rates apply to payments to nonresident taxpayers. For a listing of withholding taxes applicable to payments to resident taxpayers and further details regarding withholding taxes applicable to nonresident taxpayers, see Section B.
- (b) See Section C.

B. Taxes on corporate income and gains

Tax on profit. Tax on Profit (ToP) is calculated on taxable income inclusive of capital gains and passive income, such as interest, royalties and rent.

The ToP is imposed on the worldwide income of resident taxpayers. It is imposed on the Cambodian-source income of nonresident taxpayers. For companies, resident taxpayers are enterprises organized, managed or having a principal place of business in Cambodia. A company that is not a resident taxpayer and that receives income from a Cambodian source is considered to be a nonresident taxpayer.

ToP rates. The standard rate of ToP for legal persons is 20%.

A tax rate of 30% applies to income derived from oil or natural gas production sharing contracts and from the exploitation of natural resources including timber, ore, gold and precious stones.

A tax rate of 5% is imposed on the gross premium income of insurance companies engaged in the providing of insurance or reinsurance for life, property or other risks.

Minimum tax. Minimum tax is a separate annual tax imposed at a rate of 1% of annual turnover inclusive of all taxes, except value-added tax (VAT). If the ToP liability exceeds the amount of the minimum tax, the taxpayer is not liable for the minimum tax.

Additional Profit Tax on Dividend Distribution. Additional Profit Tax on Dividend Distribution (APTDD) is imposed on the distribution of retained earnings to local and overseas shareholders. APTDD is payable by the distributing company. The APTDD rate varies according to the rate of ToP that was imposed on the retained earnings. The following are the rates of APTDD.

Rate of ToP (%)	Amount of APTDD
0	Dividend x 20/100
20	0
30	0

Investment incentives. A Qualified Investment Project (QIP) registered and approved by the Council for the Development of Cambodia is entitled to the incentives described below.

An exemption from the ToP applies to the trigger period plus three years plus the priority period. The maximum trigger period is the QIP's first year of profits or the third year after the QIP earns its first revenue, whichever is earlier. The priority period, which is specified in the Finance Law and varies by project, may have a duration of up to three years. The taxpayer is also entitled to an exemption from the minimum tax (see *Minimum tax*) for as long as it retains its QIP status.

QIPs are also eligible for import duty exemption with respect to the importation of production equipment, construction materials, raw materials, intermediate goods and accessories that serve production.

Capital gains. All realized gains (including capital gains) are considered to be income. Tax on capital gains is not separately imposed in Cambodia. Capital gains derived from the disposal of fixed assets are treated as ordinary income and generally taxed at the standard ToP rate of 20%.

Administration. Resident taxpayers must file annual ToP or minimum tax returns within three months after the end of the tax year.

Resident taxpayers must make monthly prepayments of ToP, which are each equal to 1% of monthly turnover inclusive of all taxes, except VAT. The prepayments must be made by the 15th day of the month following the month in which the tax liability arose. The tax payment can be used to offset the annual ToP or minimum tax liability. Prepayments of ToP are not required during the period of exemption from the ToP.

Dividends. Dividends paid to nonresident taxpayers are subject to withholding tax at a rate of 14%.

Withholding taxes

Payments to resident taxpayers. Resident taxpayers carrying on business in Cambodia must withhold tax from payments made to other resident taxpayers at the following rates.

Payment	Rate (%)
Interest paid to recipients other than domestic banks and saving institutions	15
Interest paid on non-fixed term saving accounts by domestic banks or saving institutions	4
Interest paid on fixed-term saving accounts by domestic banks or saving institutions	6
Royalties	15
Rent paid for movable and immovable property	10
Payments to individuals for services, including management, consulting and similar services	15

Payments to nonresident taxpayers. Resident taxpayers must withhold tax at a rate of 14% on the following payments to nonresident taxpayers:

- Dividends
- Interest
- Royalties, rent and other income connected with the use of property
- Compensation for management or technical services (not defined)

Deemed interest. Interest expense is not deemed by the tax authorities with respect to loans recorded in the enterprise's balance sheet for withholding tax purposes, regardless of whether a record of interest expense appears in the income statement of the enterprise.

In general, the above withholding taxes are considered to be final taxes. However, the withholding tax on rent paid to registered resident taxpayers may be offset against the ToP liability.

If withholding tax is not withheld from the recipient, it is borne by the payer. Accordingly, the withholding tax is not deductible for purposes of the ToP.

Withholding tax returns and payments. Resident taxpayers must submit withholding tax returns and remit withholding taxes to the tax authorities by the 15th day of the following month.

Tax on Salary and Tax on Fringe Benefits. Employers must withhold and declare in their monthly tax return the Tax on Salary and the Tax on Fringe Benefits of their employees to the tax authorities by the 15th day of the following month.

Foreign tax relief. Cambodia allows a credit against the ToP for foreign taxes paid on foreign-source income if supporting documentation exists.

C. Determination of trading income

General. Taxable profit equals the difference between total income and allowed expenses that are incurred to carry on the business.

Allowable deductions include most expenses incurred in the course of carrying on a business enterprise with certain limitations. These limitations include the following:

- The deduction of charitable contributions to specified organizations is limited to 5% of taxable profit before deducting the amount of the charitable contributions.
- Depreciation is allowed as a deduction in accordance with rates and methods set forth in the tax regulations.
- Deductions for interest are limited to interest income plus 50% of taxable profit excluding interest income and expenses. The disallowed interest may be carried forward to subsequent years and deducted subject to the same limitations (also, see *Special rules for loans*).

Non deductible expenses include the following:

- Expenses incurred on activities generally considered to be amusement, recreation, entertainment or on the use of any means with respect to such activities
- Losses on direct or indirect sales or exchanges of property between related parties
- Penalties, additional tax and late payment interest imposed for violation of the tax regulations
- Donations, grants or subsidies made to other than specified organizations

Special rules for loans. Loans that are interest-free or that have below-market interest rates are allowed. In assessing the taxable income of an enterprise, the tax authorities do not deem a subsidy with respect to a loan without interest or with interest below the market rate.

For above-market-interest loans, limitations are imposed on deductible interest expenses claimed by Cambodian taxpayers. The following are the applicable rules:

- For third-party loans, the interest rate may not exceed 120% of the market rate at the time of borrowing.
- For related-party loans, the interest rate may not exceed the market interest rate at the time of borrowing.

For purposes of the above rules, the market interest rate is the annual market interest rate issued by the General Department of Taxation (GDT), which is based on the average interest rate of at least five major commercial banks. On 5 February 2015, the GDT determined that the market interest rate for loans for the 2014 tax year was 10.15% per year. In addition, on 26 February 2015, the GDT determined that the market interest rate for loans denominated in riel for the 2014 tax year was 13.52% per year. Interest expense that is higher than the above is adjusted and the excess amount is excluded from the deductible interest expense for tax purposes.

In addition, the annual deductible interest expense is capped at the sum of 50% of the taxpayer's non-interest income and 100% of its interest income for a tax year.

An enterprise is required to notify the GDT no later than 30 days after a loan transaction occurs, and all loan agreements or documentation certifying the loan transaction must be attached to the notification. If the enterprise fails to notify the GDT about a loan transaction or no proper documentation is provided, the loan is considered a loan without supporting documents, and the loan proceeds are included in taxable income subject to the 20% ToP.

Provisions. Provisions for losses or expenses that have not occurred are not allowed for tax purposes even if the incurrence of such losses or expenses is probable. However, domestic banks or savings institutions may establish provisions for bad debts.

Tax depreciation and amortization. The tax regulations divide fixed assets into four classes for purposes of depreciation and specify the depreciation methods and rates for the classes. The following are the classes.

Classes	Assets	Method	Rate (%)
1	Building and structures	Straight-line	5
2	Computers, electronic information systems, software and data handling equipment	Declining-balance	50
3	Automobiles, trucks, and office furniture and equipment	Declining-balance	25
4	Other tangible property	Declining-balance	20

A QIP (see Section B) may apply a special depreciation rate of 40% in the year of purchase or in the first year the tangible assets are placed into operation, if later. If the enterprise elects to use the exemption period for the ToP, the special depreciation rate does not apply.

Intangible assets with a limited useful life, such as patents, copyrights, drawings, models, and franchises, can be amortized over their useful life on a straight-line basis. If the life of intangible assets cannot be determined, the assets are amortized using the straight-line method at a rate of 10%.

Relief for losses. Losses can be carried forward to offset future taxable profit for the following five years. The carryback of losses is not allowed.

The carryforward of losses is subject to restrictions including continuity of ownership and conducting the same business activities.

Groups of companies. Cambodia does not allow consolidated tax filing or provide other group tax relief.

D. Other significant taxes

Value-added tax. Resident taxpayers providing taxable supplies must register for value-added tax (VAT). Taxable supplies include supplies of goods or services by taxable persons in Cambodia.

The standard rate of VAT is 10%. A 0% rate of VAT applies to exports of goods and services including international transportation of passengers and goods and services with respect to such transportation. It also applies to enterprises in supporting industries and subcontractors that supply certain goods and services to exporters.

The tax law specifies certain non-taxable supplies.

A resident taxpayer must complete the registration for VAT within 30 days after the date on which it becomes a taxable person. The filing of the VAT returns and payment of VAT must be made by the 20th day of the following month.

Other taxes. Cambodia imposed various other taxes, including the following:

- Specific Tax on Certain Merchandises and Service
- Tax for Public Lighting
- Accommodation Tax
- Patent Tax
- Registration Tax (property transfer tax)
- Fiscal Stamp Tax
- Tax on Immovable Property
- Tax on Unused Land
- Tax on Means of Transportation

E. Foreign-exchange controls

The Cambodian currency is the Khmer riel (KHR).

Cambodia does not impose any restrictions on the purchase of foreign currencies through authorized financial institutions.

F. Tax treaty

Cambodia recently signed a double tax treaty with Singapore, which has not yet been ratified. After ratification, the treaty will reduce the withholding tax rate from 14% to 10% on dividends, interest and royalties paid to Singaporean residents.

- (a) The minimum tax is generally 2.2% or 5.5% of turnover, or 15.4% of the gross margin. For further details, see Section B.
- (b) In certain circumstances, the tax is deferred or reduced (see Section B).
- (c) This withholding tax also applies to directors' fees, nondeductible expenses and adjustments of profits following a tax examination. The withholding tax also applies to allowances granted to members of commissions, ad hoc or permanent committees and to members of public, semipublic, regional or local bodies.
- (d) This withholding tax applies to residents and nonresidents.
- (e) Interest on savings of up to XAF10 million is exempt from withholding tax. Interest on state bonds is exempt from corporate income tax and the tax on movable capital (this tax is withheld at a rate of 16.5% from income on shares and negotiable bonds and from certain other income). The 2014 Financial Law confirms that interest on loans paid to nonresident lenders or creditors is

exempt from withholding tax. Special income tax applies to all types of deliveries that are part of public contracts or orders and that are paid for by state, regional or local authorities, public institutions, public corporations or semi-public companies, or that are paid for through external financing. The rate is 15%, which is withheld at source.

- (f) An optional final withholding tax is available for petroleum contractors and subcontractors of oil companies (foreign companies in Cameroon that have contracted with petroleum companies established in Cameroon). The rate of this special tax (TSR) is fixed at 15% of turnover. The 2011 Financial Law extended this tax regime to foreign individuals or companies that carry out activities on a casual (day-to-day) basis in Cameroon, subject to the prior authorization of the Director General of Taxation, issued on written request of the service providers (companies) or authorized clients. The 2016 Financial Law extended this tax regime to remuneration for technical assistance services, equipment rental and equipment, and all services provided to oil companies during the research and development (R&D) phase, with the exception of services provided at cost by an affiliated company during the R&D phase. Petroleum subcontractors admitted to the TSR regime must maintain supporting documentation that enables the tracing of the relevant tax bases. They must also display on all of their bills the gross amounts of the transactions, the TSR to be deducted at source, their customers and the net amount to be paid.
- (g) This withholding tax applies to nonresidents. The 2012 Financial Law provides that this tax also applies to “software,” which is defined as computer applications and programs relating to the operation or functioning of an enterprise. The 2017 Finance Law provides that the general rate of 15% applies to all remuneration subject to this tax except for the following:
- Remuneration for ad hoc material services (defined in the 2011 Finance Law) paid to non-domiciled companies without a permanent establishment in Cameroon carrying out economic activities there, which is subject to an average rate of 10%
 - Remuneration under public procurement for successful bidders not domiciled in Cameroon, which is subject to a reduced rate of 5%
- (h) This withholding tax applies to fees, commissions, emoluments and remuneration for services that are paid to resident individuals or companies. These payments include the following:
- Payments made to persons in the self-employed professions, such as consultants, experts, architects, physicians, auditors in charge of damages, trade intermediaries and salesmen
 - Payments made to magistrates and representatives of the law (attorneys, bailiffs and notaries)
 - Payments made to forwarding agents, customs brokers, stevedores, accounting firms and internet service providers.

The withholding tax does not apply to payments made for services related to transport, bank interest, insurance premiums and commissions, air ticket expenses and commissions, and water, electricity and telephone expenses. The 10% surtax applies to the withholding tax rate of 5%, resulting in a total withholding tax rate of 5.5%.

B. Taxes on corporate income and gains

Corporate income tax. Income tax in Cameroon is imposed on undertakings deemed to be operating in Cameroon, which are the following:

- Undertakings headquartered in Cameroon or with an effective management office in Cameroon
- Undertakings that have a permanent establishment in Cameroon
- Undertakings that have a dependent representative in Cameroon

The profits of undertakings that do not fulfill the conditions referred to above are taxed in Cameroon if they carry out activities that form a full business cycle in Cameroon.

Tax rates. The regular corporate income tax rate is 30% (plus a 10% additional council tax). For companies operating under the real earnings tax regime, the minimum tax payable is 2% (plus 10% additional council tax) of monthly gross sales (turnover). However, for companies subject to the real earnings tax regime

that are in the administered margin sectors, which are the distribution of petroleum, domestic gas, milling, pharmaceutical and press products, the minimum tax payable is 14% (plus 10% additional council tax) of the gross margin. The minimum tax payable is 5.5% for companies under the simplified tax regime. The minimum tax is creditable against corporate tax due for the current financial year.

Profits realized in Cameroon by branches of foreign companies are presumed to be distributed and are consequently subject to a branch withholding tax of 16.5% on after-tax income. This rate is subject to reduction by treaty.

Deductions at source or advance payments apply to all purchases and importations by traders, including the following:

- Purchases and importations by traders subject to the flat-rate tax system
- Purchases of goods by traders from manufacturers, farmers, importers, wholesalers, retail-wholesalers and forestry operators
- Purchases of petroleum products by petrol station owners
- Purchases of staple products by exporters
- Purchase of goods with a regulated profit margin
- Purchases and importations by enterprises that do not hold the taxpayer's card (non-registered enterprises)

Exceptions to the advance payment rule apply to the following:

- Importation of goods by traders under the Specialized Management Units of the Directorate General of Taxation
- Purchases of goods by the state, councils and persons living abroad
- Purchases by registered industrialists for the operation of their enterprises if they are assessed under the real earnings tax system

The following are the applicable tax rates for advance payments:

- 0.5% for purchases of petroleum products by petrol station owners.
- 2% of the amount of operations realized by traders under the real earnings tax regime.
- 5% of the amount of operations realized by registered traders subject to flat rate tax.
- 5% of the amount of operations realized by traders under the simplified tax system.
- 10% of the amount of operations realized by registered importers that are subject to the simplified tax system and by enterprises without a taxpayer's card.
- 14% of the gross margin for the purchase of goods with a regulated profit margin
- 15% of the amount of operations realized by taxpayers engaging in import operations that do not have a taxpayer's card. This rate is increased to 20% if the taxpayer makes sales under customs.

The above rates are added to the sales price or customs value of the goods purchased. The advance payments are calculated without the council surtax of 10%. For companies, advance payments are creditable against their future monthly tax installments or minimum tax.

Corporations may apply for various categories of priority status and corresponding tax exemptions. The priority status varies depending on the nature of the project and the level of investments.

Investment incentives. The law of 18 April 2013 introduced investment incentives, which are summarized below.

Installation phase. Incentives that are available during the installation phase (five years after the issuance of the approval) include exemption from registration duties, transfer duties, customs duties and value-added tax for certain items.

Operational phase. Incentives available during the operational phase (10 years for all companies qualifying for the incentives) include exemptions or reductions with respect to minimum tax, corporate tax, customs duties on certain items and other specified taxes and fees.

In addition, companies may carry forward losses to the fifth year following the year in which the losses are incurred.

Capital gains. Capital gains are taxed at a rate of 16.5%, subject to tax treaties. Capital gains include gains on the sale of real estate, corporate shares and business assets. The tax, however, can be deferred or eliminated in the event of a merger.

Capital gains realized in Cameroon or abroad from the direct or indirect transfer of stocks, bonds and other capital shares of enterprises located in Cameroon are subject to tax.

If the business is totally or partially transferred or discontinued (such as in the event of a merger, liquidation or sale of the business), only one-half of the net capital gains is taxed if the event occurs less than five years after the start-up or purchase of the business, and only one-third of the gains is taxed if the event occurs five years or more after the business is begun or purchased.

Capital gains realized on the Cameroonian stock market are exempt from corporate income tax and the tax on movable capital. However, under the 2014 Financial Law, capital gains realized in Cameroon or abroad that are derived from the sale of shares by an individual or corporate entity holding an exploitation or exploration permit for natural resources extracted from the Cameroonian subsoil are subject to income tax on the gains.

Administration. The fiscal year runs from 1 January to 31 December. However, companies that started operating during the six-month period before the prescribed closing date can report their first results at the end of the fiscal year following the fiscal year in which they began activities.

Corporate income tax must be paid by the deadline for filing the tax return. Companies must file their income tax return by 15 March of the year following the fiscal year. The late filing of a nil monthly or annual return or a return with credit after an official warning is subject to a fixed fine of XAF1 million.

Late returns are subject to interest of 1.5% of the tax due per month of delay. In addition, late payments are subject to a penalty of 10% per month of delay, up to a maximum of 30% of the tax due. This penalty applies only if payments are made at the initiative of the taxpayers. It does not apply in the case of a tax audit.

Tax receivables that are at least five years old from the date of issuance of the assessment notices and for which administrative redress procedures have been exhausted may be the subject of a

negotiated settlement request a period of one year beginning on 1 January 2015.

The minimum tax is paid in accordance with the same rules applicable to the payment of corporate income tax. Manufacturers, farmers, wholesalers, retail-wholesalers, forestry operators, petrol station owners and exporters must pay to the tax authorities the advance payment of tax on purchases by the 15th day of the month following the month of the purchase (for further details regarding advance payments, see *Tax rates*).

Dividends. Dividends paid to residents in Cameroon are subject to a 16.5% withholding tax (15% plus the 10% council surtax). Resident recipients must include the gross dividend in taxable income, but they receive a corresponding 16.5% tax credit to prevent double taxation. Dividends paid to nonresidents are subject to a 16.5% withholding tax, which is a final tax.

A parent corporation may exclude up to 90% of the dividends received from a 25%-owned subsidiary if the parent company and the subsidiary have their registered office in a Central African Economic and Monetary Community (CEMAC) country (Cameroon, Central African Republic, Chad, Congo, Equatorial Guinea and Gabon). In this case, however, no withholding tax credit is allowed. Instead, the tax can be offset against any withholding tax due on its own dividend distributions.

Foreign tax relief. In general, foreign tax credits are not allowed; income of residents and nonresidents subject to foreign tax that is not exempt from Cameroonian tax under the territoriality principle is taxable, net of the foreign tax. The French tax treaty, however, provides a tax credit that corresponds to withholding tax on passive income.

C. Determination of trading income

General. Taxable income is based on financial statements prepared according to generally accepted accounting principles and the OHADA (organization for the harmonization of business law in French-speaking Africa) standard statements.

Business expenses are generally deductible unless specifically excluded by law or by the provisions of an international convention. Expenses that are not deductible include the following:

- Head office overhead, research costs and technical, financial and administrative assistance fees paid to residents or nonresidents that exceed any of the following:
 - 5% of taxable profits for ordinary law companies before their deduction
 - 2.5% of turnover for public works projects
 - 7.5% of turnover for design and engineering services
- Royalties from patents, brands, models or designs paid to a non-CEMAC corporation participating directly or indirectly in the management of, or owning shares in, the Cameroonian corporation are the deductible up to an overall limit of 2.5% of taxable income before the deduction of the expenses.
- Rent expense for movable equipment paid to a shareholder that manages the company in fact or by right and holds, directly or indirectly, more than 10% of the capital.
- Losses related to bad debts that do not comply with the enforcement measures provided in the OHADA Uniform Act relating

- to the organization of simplified procedures for collection and enforcement.
- Losses related to damages noted and validated in the presence of approved tax agent.
 - Liberalities, gifts and subsidies exceeding 0.5% of the turnover of research, philanthropic, development, educational, sports, scientific, social and family institutions or bodies.
 - Gifts and subsidies exceeding 5% of turnover of clubs participating in official national competitions and the bodies in charge of organizing these competitions.
 - Interest paid to shareholders in excess of the central bank annual rate plus two points. Under the 2014 Financial Law, the deductibility of interest paid to shareholders owning directly or indirectly at least 25% of the capital or voting rights of the company is subject to the following two cumulative conditions:
 - Interest paid may not exceed one and one-half of the amount of real capital for all shareholders.
 - Interest paid to such affiliates may not exceed 25% of the income before income tax and deduction of such interest and depreciation.
 - Commissions and brokerage fees for services on behalf of companies located in Cameroon that exceed 5% of purchased imports and sales of exports.
 - Remuneration granted to wage earners that are excessive in comparison to the services rendered and that do not correspond to effective work and conventional norms.
 - Amounts set aside for self-insurance.
 - Certain specific charges (such as contributions other than those for retirement paid to a foreign social security organization, which are deductible up to a limit of 15%, and premium insurance paid to companies located in Cameroon for employees' retirement indemnities), gifts, subsidies and penalties (to some extent).
 - Expenses paid in cash of XAF500,000 or more. The XAF500,000 limit is assessed with respect to the total amount of specific expenses recorded in the expenditures account. Accordingly, splitting an expense worth XAF500,000 into two equal parts of XAF250,000 each and paying them in cash does not result in the deductibility of the expenses. Under the 2014 Financial Law, all reimbursements of loan advances to shareholders paid in cash are treated as dividends and are accordingly subject to dividend withholding tax.
 - Expenses paid to local suppliers without reference to a Cameroonian tax identification number and without an invoice that complies with the standard requirements for the deductibility of expenses.
 - Remuneration paid to liberal professionals in violation of the regulations governing their respective professions.
 - Expenses for services and certain purchases paid to natural persons or nonresident legal entities established in territories or states considered to be tax havens.
 - Disbursements from tax havens invoiced to local companies by other companies located in or outside tax havens.

Inventories. Inventory is normally valued at the acquisition cost or at the lower of cost or market value. Cost must be determined on a weighted average cost-price method. The first-in, first-out (FIFO) method is also generally acceptable.

Provisions. In determining accounting profit, companies must establish certain provisions, such as a provision for a risk of loss or for certain expenses. These provisions are normally deductible for tax purposes if they provide for clearly specified losses or expenses that are probably going to occur and if they appear in the financial statements and in a specific statement in the tax return.

Insurance companies may deduct technical provisions provided by the Conférence Interafricaine des Marchés d'Assurance (CIMA) Code.

Capital allowances. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at rates specified by the tax law. Small equipment and other items that have a value not exceeding XAF500,000 without tax are directly accounted for as charges and considered deductible expenses.

Legal revaluation of fixed assets. The 2011 Financial Law established a regime for the legal revaluation of tangible and intangible fixed assets, regardless of whether the assets are depreciable. The revaluation must occur by 31 December 2013. The capital gain resulting from revaluation is subject to a withholding tax at a rate of 5%. This is a final tax. The 5% withholding tax is not due if the amount of the capital gain is reinvested within two financial years.

Relief for tax losses. Losses may be carried forward for four years; losses attributable to depreciation may be carried forward indefinitely. Losses may not be carried back.

Groups of companies. The Cameroonian tax law does not provide for the fiscal integration of Cameroonian companies equivalent to a consolidated filing position.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on transactions carried out in Cameroon; certain transactions are exempt	
Standard rate	19.25
Exports	0
Business license; rate varies depending on the amount of turnover	Various
Radio-television tax, equal to the business license; payable by companies subject to the business license	Various
Registration duties, on transfers of real property or businesses	1 to 15
Payroll taxes, paid by employer	2.5
Social security contributions on an employee's annual gross salary, limited annually to XAF9,000,000, with a minimum of XAF750,000 per month	
Family allowances, paid by employer	3.7 to 7
Old age, disability and survivor's pension; paid by	
Employer	4.2
Employee	4.2

Nature of tax	Rate (%)
Social security contributions on an employee's annual gross salary for job-related accidents and diseases; paid by employer	1.75 to 5

E. Miscellaneous matters

Foreign-exchange controls. Exchange control regulations exist in Cameroon for financial transfers outside the franc zone, which is the monetary zone including France and its former overseas colonies. A CEMAC rule (No. 0200/CEMAC/UMAC/CM, dated 29 April 2000) applies to all of the CEMAC countries.

Transfer pricing. In 2012, Article M19 bis in Book II of the General Tax Code on Manual of Tax Procedures was introduced to increase the regulation and control of transfer pricing.

Under the new rules, if in the course of an accounts auditing, the administration has evidence that a company has indirectly transferred profit, the administration may request that the company provide information and documents with respect to certain items, including the following:

- Relationships between the company and one or more companies or groups established outside Cameroon
- The pricing method for industrial, commercial or financial operations in which the company engages with the related parties mentioned in the first bullet and justification for this method and the agreed consideration in these operations
- The activities carried out by the related parties mentioned in the first bullet
- The tax treatment for the company and related parties mentioned in the first bullet with respect to the operations performed with the related parties

The 2014 Financial Law requires “a detailed statement of transactions with companies which control or which are controlled by them up to 25%, in addition to other existing disclosure and documentation requirements.”

Companies in the large taxpayers unit must transmit the following information to the tax authorities by 15 March of each year at the same time of the filing of the annual tax return:

- A statement of their shareholdings in other companies if the holdings exceed 25% of the share capital
- A detailed statement of intergroup transactions

F. Treaty withholding tax rates

	Dividends %	Interest %	Royalties %
Canada	15/20 (a)	15/20 (a)	15/20 (a)
Central African Republic	– (c)	16.5 (b)	– (d)
Chad	– (c)	16.5 (b)	– (d)
Congo	– (c)	16.5 (b)	– (d)
Equatorial Guinea	– (c)	16.5 (b)	– (d)
France	15	16.5 (b)	7.5/15 (e)
Gabon	– (c)	16.5 (b)	– (d)
Morocco	10 (f)	10 (f)	10 (f)
Tunisia	12	15	15
Non-treaty countries	16.5	0 (g)	15

- (a) The 15% rate applies to payments from a Cameroonian source. The 20% rate applies to payments from a Canadian source.
- (b) If from a Cameroonian source, the payments are subject to withholding tax under Cameroonian domestic tax law. See Section A.
- (c) Withholding rates are determined under the domestic tax law of the state of domicile of the payer.
- (d) Withholding tax is not imposed. The income is subject to tax in the state of the recipient.
- (e) The 7.5% rate applies to payments for financial services, accounting services and technical assistance. The 15% rate applies to other royalties.
- (f) The 10% rate applies to the gross amount of the payments.
- (g) See footnote (e) to Section A.

A. At a glance

Federal Corporate Income Tax Rate (%)	15 (a)
Federal Capital Gains Tax Rate (%)	7.5 (a)(b)
Branch Tax Rate (%)	15 (a)
Withholding Tax (%)	
Dividends	25 (c)
Interest	0/25 (d)
Royalties from Patents, Know-how, etc.	25 (c)
Branch Remittance Tax	25 (e)

Net Operating Losses (Years)

Carryback	3
Carryforward	20

- (a) These 2017 rates are applied to general income that is not eligible for the manufacturing and processing deduction or the small business deduction. The calculation of the rate is discussed in Section B. Additional tax is levied by the provinces and territories of Canada, and the combined federal and provincial or territorial rates on general income may vary from approximately 25% to 31%.
- (b) 50% of capital gains is subject to tax.
- (c) Final tax applicable only to nonresidents. This rate may be reduced by a tax treaty (see Section F).
- (d) In general, no withholding tax is imposed on interest paid to payees who are dealing at arm's length with the payer. However, withholding tax at a rate of 25% typically applies to interest paid or credited to related nonresidents (the rate may be reduced by a tax treaty). Other specific exemptions or specific inclusions may apply to change the general rules noted above.
- (e) This tax is imposed in addition to the regular corporate income tax. For details, see Section B. The rate may be reduced by a tax treaty.

B. Taxes on corporate income and gains

Corporate income tax. Corporations resident in Canada (whether owned by Canadians or nonresidents) are taxed on their worldwide income from all sources, including income from business or property and net taxable capital gains. Nonresident corporations are taxed only on certain Canadian-source income. In general, a corporation is deemed to be resident in Canada if it is incorporated in Canada or has its central mind and management located there.

If a tax treaty exists between Canada and the country in which a nonresident corporation is resident, the determination of whether a nonresident is taxable in Canada may be restricted or modified, and lower rates may apply. In general, Canada's tax treaties provide that a nonresident that is resident in a treaty country is subject to Canadian tax on income derived from carrying on business in Canada only if the nonresident has a Canadian permanent establishment.

Rates of income tax. Corporations are taxed by the federal government and by one or more provinces or territories. The basic rate of federal corporate tax for 2017 is 38%, but it is reduced to 15% by an abatement of 10 percentage points on a corporation's taxable income earned in a province or territory and a general rate reduction of 13 percentage points on a corporation's full-rate taxable income. Provincial and territorial tax rates are added to the federal tax and generally vary between 10% and 16% of taxable income.

The federal government and the provincial and territorial governments may apply lower rates of tax to active small business earnings and earnings derived from manufacturing and processing.

Nonresident corporations carrying on business in Canada through a branch are taxable at the full corporate tax rate on their net business income earned in Canada, and they must pay an additional tax (branch tax) of 25% on after-tax income, subject to an allowance for investment in Canadian property. This branch tax may be reduced by treaty.

Capital gains and losses. The taxable portion of capital gains and the deductible portion of capital losses is 50%. See Section E for details concerning the taxation of capital gains of nonresidents.

The deductible portion of capital losses (other than allowable business investment losses) in excess of taxable capital gains is termed “net capital loss” and may be carried back three years and carried forward indefinitely, but may be applied only against taxable capital gains.

Proceeds from the disposition of capital property that exceed the tax cost of such property are generally taxed as capital gains. For depreciable property, tax depreciation previously claimed that is recovered on disposition is generally fully included in income.

If control of a corporation is acquired by a person or group of persons, net capital losses incurred before the change of control cannot be deducted in a year after the acquisition of control. Also, the carryback of capital losses to years prior to such change of control is prohibited. A flow through of net capital losses is provided for on certain amalgamations and liquidations.

If a sale of what might otherwise be capital property is regarded as a sale in the course of a taxpayer’s business (such as dealers in real estate, securities or art) or as an undertaking in the nature of normal trading, any resulting gain or loss is fully taxable or deductible.

Administration. A corporation’s tax year usually ends on the same date as the financial statement year-end. If an acquisition of control occurs, the corporation is deemed to have a tax year ending immediately before the acquisition of control.

Corporate income tax returns are required to be filed within six months following a corporation’s tax year-end. Subject to certain exceptions, nonresident corporations must file a Canadian income tax return if they carry on business in Canada or dispose of taxable Canadian property during the tax year. Nonresident corporations claiming relief from Canadian tax under a tax treaty with another country must disclose detailed information regarding their activities in Canada.

A penalty is levied on returns that are filed late, equal to 5% of the unpaid tax at the required filing date, plus an additional 1% per month (not exceeding 12 months) of such unpaid tax for each month that the return remains unfiled. Repeat offenders may be liable for additional penalties. Nonresident corporations that are required to file Canadian tax returns may be subject to another penalty of up to CAD2,500 even if no tax is payable.

Federal and provincial corporate tax installments must be made monthly during the corporation’s tax year. The remaining balance of taxes owed must be paid by the end of the second month following the tax year-end (third month for Canadian-controlled private corporations that carry on an active business and claim a small business deduction).

Interest is charged on late or deficient tax payments based on the prescribed rate. The prescribed rate can vary each quarter. A penalty may apply to late or deficient tax installments.

Dividends. In general, dividends received by one Canadian corporation from another are fully deductible. However, to prevent the use of private companies to obtain significant tax deferrals on portfolio dividend income, such corporations are subject to a

special 33⅓% refundable tax on dividends received from portfolio investments. Additional taxes may be imposed on dividends paid on certain preference-type shares.

Dividends paid by a Canadian corporation to a Canadian resident individual are generally taxable, but the individual also receives a tax credit because the income has already been taxed within the corporation. A dividend received from a nonresident corporation that is a foreign affiliate of a Canadian taxpayer may be exempt from tax (see Section E).

Foreign tax relief. In general, taxpayers resident in Canada may deduct from their Canadian tax liability a credit for income or profits tax and for withholding tax paid to another country. The foreign tax credit is calculated separately for foreign business tax and foreign nonbusiness tax on a country-by-country basis.

If a Canadian corporation receives dividends from a foreign affiliate, the normal foreign tax credits are replaced by either a complete or partial deduction for such dividends (see Section E).

C. Determination of taxable income

General. Taxable profits are computed in accordance with generally accepted commercial principles, modified by certain statutory provisions in the Canadian Income Tax Act.

In general, only 50% of meal and entertainment expenses is deductible for income tax purposes.

Inventories. For tax purposes, inventories may be valued at the lower of cost or fair market value. The last-in, first-out (LIFO) basis is not permitted for tax purposes, despite its acceptability for accounting purposes in certain instances. Corporations may use a different inventory valuation method for tax purposes than the one used for accounting purposes.

Provisions. In general, provisions, such as warranty reserves, are not deductible for income tax purposes. Only actual expenses incurred are tax-deductible.

Depreciation and amortization. Depreciation or amortization included in financial statements is added back, and tax depreciation, generally calculated on a declining-balance basis at prescribed rates, beginning when the asset is available for use, is deducted for tax purposes. The deduction is generally limited in the first year the asset is available for use. Tax depreciation may be fully or partially claimed at the taxpayer's option.

The following are the depreciation rates under the declining-balance method for major categories of assets.

Asset	Rate (%)
Commercial and industrial buildings	4 (a)
Computers	55
Office equipment	20
Motor vehicles	30
Machinery and equipment	20 (b)

- (a) Certain eligible nonresidential buildings may qualify for a rate of 6% or 10% (election required).
- (b) For machinery and equipment used primarily in manufacturing and processing, the rate is generally 30%. A straight-line rate of 50% applies if the machinery and equipment is acquired after 18 March 2007 and before 2016.

Capital assets are generally pooled into various classes, but, in certain cases, a corporation may elect to include individual pieces of certain types of equipment in separate classes. In general, if an asset is disposed of, the balance of the assets in the class is reduced by the proceeds from the disposition. However, if the proceeds from the disposition of an asset exceed the tax value of the class after depreciation, the excess is recaptured and is subject to tax at the regular corporate tax rates. If the asset is the only asset in the class and if a balance remains after the proceeds are charged to the class, the balance may be deducted as a terminal loss.

Groups of companies. Canada does not allow consolidated tax reporting for related companies and does not provide relief for group losses.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Goods and Services Tax (GST), a value-added tax, applies to a broad range of goods and services	5
Harmonized Sales Tax, a value-added tax, applies to a broad range of goods and services in certain provinces	Up to 15
Part VI tax on financial institutions, effectively a minimum tax, which is reduced by income taxes paid; applies on a non-consolidated basis to capital in excess of CAD1 billion	1.25
Provincial/territorial income taxes, on taxable income allocated to jurisdictions in which corporations have permanent establishments (lower rates may apply to manufacturing or processing earnings and active small business earnings)	10 to 16
Provincial payroll taxes; varies by province; paid by employers	Up to 4.3
Canada Pension Plan, on pensionable earnings between CAD3,500 and CAD53,600 (amounts in effect for 2017)	
Employer	4.95
Employee	4.95
Self-employed individual	9.9
(The Province of Quebec offers a similar plan for residents of Quebec.)	
Employment Insurance, on insurable earnings up to a maximum of CAD51,300 (amount in effect for 2017)	
Employee	1.63
Employer (1.4 times the employee rate)	2.28
(Employment Insurance premiums for residents of the Province of Quebec are reduced, because residents of Quebec also must pay premiums for Quebec Parental Insurance. The aggregate amount for both is similar to the total Employment Insurance premiums computed with respect to persons resident outside Quebec.)	

E. Miscellaneous matters

Foreign-exchange controls. Canada does not impose foreign-exchange control restrictions.

Debt-to-equity rules. Canada imposes a thin-capitalization rule limiting the ability of nonresidents to withdraw profits through deductible interest charges. In general, these rules restrict the deductibility of interest paid or payable by a Canadian resident corporation to a specified nonresident shareholder (or to a nonresident person who does not deal at arm's length with a specified shareholder) on debts exceeding 1.5 times the Canadian resident corporation's "equity." A specified shareholder is a shareholder who, either alone or together with persons with whom the shareholder does not deal at arm's length, owns shares that satisfy either of the following conditions:

- They give the shareholder 25% or more of the votes that could be cast at an annual meeting of shareholders.
- They have a fair market value representing 25% or more of the fair market value of all of the issued and outstanding shares of the corporation.

Canada's thin-capitalization rule applies to Canadian resident corporations, trusts, nonresidents' Canadian branches and partnerships of which a Canadian resident corporation is a member. The thin-capitalization rules may also apply to certain back-to-back (BTB) loan arrangements that would otherwise circumvent the application of the thin-capitalization rules.

In general, the BTB rules apply to arrangements whereby a nonresident corporation (parent), or a person related to the parent, of a corporation resident in Canada (Canco) grants a loan (intermediary debt) or a specified right in a particular property (specified right) to an intermediary and the intermediary debt and/or specified right is "connected to" a debt owed by Canco to the intermediary (primary debt), provided that the amount of the intermediary debt and/or fair market value of the property subject to the specified right is not less than 25% of the amount of the primary debt. When applicable, the new rules deem the primary debt to be a debt between Canco and the parent for thin-capitalization purposes. The rules also deem interest payments from Canco to the intermediary to be interest payments from Canco to the parent.

Following the 2016 budget, the BTB rules were extended to royalties and similar payments.

Foreign affiliates. A nonresident corporation is considered a foreign affiliate of a Canadian corporation if the Canadian corporation directly or indirectly owns at least 1% of any class of shares of the nonresident corporation and if the Canadian corporation and related persons directly or indirectly own together at least 10% of any class of shares of that nonresident corporation. Dividends received by a Canadian corporation from a foreign affiliate are fully deductible in Canada if the dividends are derived from active business profits earned in a country with which Canada has entered into a tax treaty or a Tax Information Exchange Agreement (TIEA). Dividends are taxable in Canada if they are derived from passive operations (with certain exceptions) or any operations in a non-treaty or non-TIEA country, with relief for foreign tax on such income.

Foreign affiliate dumping rules. Rules, commonly known as the “foreign affiliate dumping (FAD) rules,” are aimed at “surplus stripping” on the part of a corporation resident in Canada (CRIC) that is controlled by a nonresident corporation. The FAD rules broadly apply to certain investments in foreign affiliates. They apply to an “investment” in a nonresident corporation (subject corporation) by a CRIC if the following two conditions are met:

- The subject corporation must be a foreign affiliate of the CRIC or a foreign affiliate of another corporation resident in Canada that deals at non-arm’s length with the CRIC immediately after the investment is made.
- The CRIC must be controlled by a nonresident corporation (parent) at the time the investment is made.

The concept of “investment” is broadly defined and includes equity and debt investments in foreign affiliates, as well as the acquisition of shares of another corporation resident in Canada if the fair market value of all of the foreign shares owned directly or indirectly by the Canadian corporation comprises more than 75% of the total fair market value of all the properties owned by the Canadian corporation.

If applicable, the FAD rules deem dividends to have been paid to the parent by the CRIC or will cause the paid-up capital (PUC) of the shares of the CRIC to be reduced. The rules also contain certain provisions to reduce PUC instead of triggering a deemed dividend, as well as a PUC reinstatement rule if the shares of the subject corporation (or substituted property) are later distributed (or sold) by the CRIC.

Certain exemptions limit the application of the FAD rules. For example, the rules do not apply if, broadly speaking, the business activities of the CRIC are more “closely connected” to the subject corporation than the business activities carried on by any related nonresident corporation, and if officers of the CRIC have and exercise the principal decision-making authority with respect to the investment. In addition, for the exception to apply, additional conditions need to be met regarding the officers of the CRIC. In particular, these conditions require that the officers be residents of Canada and that they work principally in Canada. In addition, the rules do not apply to certain internal reorganizations. The rules also do not apply if the debt owed by the foreign affiliate is a pertinent loan or indebtedness (PLOI). To qualify as a PLOI, the CRIC and the parent need to jointly elect to treat the debt obligation as a PLOI. In addition, the PLOI needs to generate a minimum amount of income for the CRIC in Canada (namely, interest computed based on the current government of Canada three-month Treasury bill rate plus 4%).

In view of the complex nature of the rules, taxpayers are advised to reach out to their tax advisor to determine whether they could be affected by the rules.

Passive income of controlled foreign affiliates. Any Canadian taxpayer that controls (as defined) a foreign affiliate is taxed on its share of that entity’s passive investment income (with certain exceptions) in the year such income is earned, regardless of whether such income is currently paid to the shareholder, except in certain

specified circumstances. In addition, any taxpayer is taxed on its shares of any other type of income if the income is earned through a permanent establishment located in a non-treaty or non-TIEA country (except a country with which Canada has entered into negotiations for a TIEA or has sought to enter into such negotiations within the last 60 months).

Upstream loans from foreign affiliates. The upstream loan rules are essentially anti-avoidance measures that are intended to prevent taxpayers from making synthetic dividend distributions from foreign affiliates to avoid what would otherwise be an income inclusion in Canada that would not be fully offset by a corresponding dividends-received deduction as described in *Foreign affiliates*.

The rules have a very broad application. In general, Canadian taxpayers may be required to include in their income a portion of the principal amount (referred to as the “specified amount”) of loans made to them by their foreign affiliates. In addition, Canadian taxpayers may be required to include in their income a portion of the principal amount of loans made by their foreign affiliates to certain non-arm’s-length persons (other than controlled foreign affiliates that are effectively Canadian controlled). If loans are made to other foreign affiliates, taxpayers may be required to include in their income the portion of such loans to the extent that the taxpayer’s surplus entitlement percentage (SEP) in the creditor affiliate exceeds its SEP in the borrowing affiliate. Accordingly, a loan from one foreign affiliate to another foreign affiliate that is not a Canadian controlled foreign affiliate results in an income inclusion only to the extent that the taxpayer has a lower SEP in the borrowing affiliate than in the creditor affiliate.

Similar to the domestic shareholder loan rule, exceptions exist for indebtedness repaid within two years after the date on which the indebtedness arose, provided that the repayment is not part of a series of loans or other transactions and repayments, and for indebtedness arising in the ordinary course of business of the creditor. The new rules contain further transitional relief with respect to indebtedness that existed before 19 August 2011, which essentially extends the effective date of the rules with respect to such indebtedness to 19 August 2016 (because any 19 August 2011 indebtedness still outstanding at 19 August 2014 is deemed to have arisen on 19 August 2014, thereby extending the two-year period to 19 August 2016).

New upstream loan continuity rules apply to reorganizations of corporations or partnerships. These new continuity rules apply to transactions and events that occur on or after 16 September 2016. However, it is possible to elect to have the rules apply as of 20 August 2011.

The income inclusion arising under the new upstream loan rule may essentially be offset in whole or in part by a deduction if the taxpayer demonstrates that a hypothetical dividend paid the year the loan is made would have enjoyed a full deduction from the income of the Canadian taxpayer with respect to the exempt surplus and/or taxable (and hybrid) surplus of a foreign affiliate of the taxpayer. In addition, the rules provide for a deduction equal to amounts previously included in income in the year that the loan

is eventually repaid. The new rules also extend the application of the reserve mechanism in certain circumstances to include a deduction for pre-acquisition surplus dividends (essentially equivalent to returns of tax basis), but only to the extent of the taxpayer's Canadian tax basis in the shares of the top-tier foreign affiliate. However, this particular deduction is not available if the borrower under the relevant loan is a nonresident person with whom the taxpayer does not deal at arm's length, which for example, includes a foreign parent or sister company. As a result, this deduction is normally only available regarding upstream loans from the foreign affiliate to the Canadian taxpayer.

Cross-border cash redeployment and pooling using PLOI. As noted in *Foreign affiliate dumping rules*, the FAD rules include an elective exception for certain foreign affiliate indebtedness (PLOI). Under a corresponding amendment to the shareholder loan rules, loans will be allowed to be made without triggering deemed dividends and withholding taxes, if they result in interest income inclusions at the higher of the prescribed rate (the prescribed rate for PLOI is equal to the three-month government of Canada treasury bill rate plus 4%) and essentially, any funding costs incurred by the CRIC to make the loan. The rules are relevant to all CRICs that are part of a foreign-based multinational group, not only to CRICs having foreign affiliates. In many cases, these proposals should facilitate commercially efficient and tax-neutral cross-border redeployments and pooling of cash among members of foreign-based multinational groups that include CRICs.

BTB rules and interest payments. As discussed in *Debt-to-equity rules*, the BTB rules apply to interest, royalties and similar payments between a person resident in Canada (Canco) and an intermediary if the following conditions are met:

- A nonresident (parent) grants a loan (intermediary debt) or a specified right with respect to a particular property (specified right) to the intermediary.
- The intermediary debt or specified right is "connected to" an outstanding debt owed by Canco.
- The amount of intermediary debt and/or fair market value of the property subject to the specified right is not less than 25% of the amount of primary debt.
- The amount of withholding tax payable by Canco is less than the amount of withholding tax that would have been payable had the interest payment been made to the parent rather than the intermediary.

If the above conditions are met, the new rules will generally deem the interest payments to have been made to the parent rather than to the intermediary. In addition, specific rules will apply for determining the amount of interest deemed to have been paid to the parent.

Corporate reorganizations. In general, transactions between related corporations must be recognized at fair market value. However, some common types of domestic and foreign corporate reorganizations may be accomplished with little or no immediate Canadian tax cost.

Anti-avoidance legislation. The Canada Revenue Agency (CRA) may apply a general anti-avoidance rule to challenge transactions

that it perceives to be abusive. This rule does not apply to a transaction that may reasonably be considered to have been undertaken or arranged primarily for bona fide purposes other than to obtain a tax benefit. The application of the rule may cause certain transactions to be ignored or recharacterized.

Transfer pricing. Under Canada's transfer-pricing rules, acceptable transfer-pricing methods are those recommended by the Organisation for Economic Co-operation and Development (OECD). These methods include comparable uncontrolled price, resale price and cost-plus. Other methods may be used if the result obtained is similar to the result that would be obtained from an arm's-length transaction. It is possible to enter into advance-pricing agreements with the CRA.

Following the OECD's Base Erosion and Profit Shifting project, a Country-by-Country Report will need to be filed in a prescribed form with the Minister of National Revenue by entities of multinational enterprises (more than EUR750 million in consolidated group revenue) for their fiscal years beginning in 2016 and future years.

Acquisition of control considerations. If control of a corporation has been acquired, the target corporation is deemed to have a year-end immediately before the acquisition of control. A new tax year begins immediately thereafter, and a new year-end may be selected by the target corporation. If an acquisition of control occurs, special rules apply to the determination and treatment of capital losses, business losses, and certain tax attributes with respect to foreign affiliates.

Capital gains realized by nonresidents. Subject to applicable tax treaties, nonresidents must pay Canadian tax on their net taxable capital gains derived from the disposition of "taxable Canadian property" (TCP). Such property includes, but is not limited to, the following:

- Real property located in Canada
- Shares of private corporations, interests in partnerships or interests in trusts that, within the preceding 60 months, derived their value principally from real or immovable property located in Canada
- Canadian resource property and timber resource property, or interests in such properties
- Shares of Canadian public corporations (in limited circumstances)
- Property used in a business carried on by the nonresident in Canada

The above definition of TCP applies for determination of TCP status after 4 March 2010.

A nonresident vendor of TCP (other than property that qualifies as excluded property) must obtain a tax clearance certificate from the CRA. To obtain such certificate, the nonresident vendor must provide the CRA with acceptable security or must pay tax on the disposition at the time of sale. For dispositions of TCP occurring after 2008, excluded property includes, among other items, property that is treaty-protected property of the vendor. In the case of a disposition between a purchaser and a seller not dealing at arm's

length, for treaty-protected property to qualify as excluded property, a notice in a prescribed form must be sent to the CRA.

The purchaser must generally withhold and remit to the Receiver General up to 25% (50% in certain circumstances) of the amount by which the cost to the purchaser of the property (other than excluded property) exceeds the amount stipulated in the CRA clearance certificate on account of the nonresident's potential tax liability resulting from the disposition. In the absence of a clearance certificate, the purchaser must generally withhold and remit 25% of the purchase price (50% in certain circumstances). The withholding and remittance obligation is referred to as the "source deduction." Similar requirements apply for the province of Quebec.

The purchaser remains liable for any source deduction not made in the event it is later determined that the property disposed of does not qualify as excluded property, unless one of the safe harbor rules described below applies. The first safe harbor rule provides that a purchaser is not liable for any source deduction if the purchaser had no reason to believe that the vendor was not resident in Canada after reasonable inquiry. Similarly, a purchaser is not held liable for any source deduction if the property (disposed of after 2008) is acquired from a nonresident vendor and if all of the following conditions are satisfied:

- After reasonable inquiry, the purchaser concludes that the vendor is a resident of a country with which Canada has a tax treaty.
- The property is treaty-protected property of the vendor under the tax treaty with the particular treaty country.
- The purchaser sends a notice in a prescribed form to the CRA within 30 days after the acquisition, setting out the date of acquisition, the name and address of the nonresident vendor, a description of the property, the amount paid or payable by the purchaser of the property and the name of the particular treaty country.

In addition, the requirement for the nonresident vendor to file a Canadian tax return may be removed. In general, a nonresident vendor is exempt from filing a Canadian tax return with respect to taxable Canadian properties if the following criteria are satisfied:

- No Canadian "corporate income tax" is payable for the tax year.
- The nonresident is not currently liable to pay any Canadian tax with respect to any previous tax year.
- Each TCP that is disposed of during the year is "excluded property," which now includes treaty-protected property in certain circumstances (see above) and property with respect to which the Minister of National Revenue has issued a nonresident clearance certificate.

Functional currency reporting. Canada has introduced new rules with respect to functional currency reporting. These new rules are intended to address the concerns of Canadian corporations that are required to use a currency other than the Canadian dollar as their "functional currency" for financial statement reporting purposes and the Canadian dollar for tax purposes.

In general, all Canadian taxpayers are required to use the Canadian dollar as their reporting currency for tax purposes. However,

“qualifying corporations” may now elect to determine their “Canadian tax results” in their “functional currency.” In general, a “qualifying corporation” is a corporation resident in Canada (with some exceptions) that has a “functional currency” and makes an election in prescribed form. For these purposes, the taxpayer’s “functional currency” is defined as the currency of a country other than Canada if the following conditions are satisfied:

- The currency is a “qualifying currency.” A “qualifying currency” includes the US dollar, the euro, the British pound, and the Australian dollar. This is not an exhaustive list. A prescribed currency could also qualify.
- The currency is the primary currency in which the taxpayer maintains its records and books of account for financial reporting purposes.

F. Treaty withholding tax rates

As noted in Section A, in general, Canada’s domestic tax law provides exemptions from Canadian withholding tax on interest paid or credited to arm’s-length nonresident persons, regardless of their country of residence. In addition, withholding tax does not apply to interest that is considered “fully exempt interest,” regardless of the recipient’s relationship to the payer. “Fully exempt interest” generally includes the following:

- Interest paid by a government body or crown corporation
- Interest on a mortgage or hypothecary obligation with respect to real property located outside of Canada (certain conditions apply)
- Interest paid to a prescribed international institution or agency
- Deemed interest amounts pertaining to securities lending arrangements (certain conditions apply)

However, regardless of the above general rules, a 25% withholding tax applies to all “participating debt interest.” “Participating debt interest” is generally interest, other than fully exempt interest, which satisfies either of the following conditions:

- It is paid or payable on an obligation, other than a prescribed obligation, and all or any portion of the interest is contingent or dependent on the use of or production from property in Canada.
- It is computed by reference to revenue, profit, cash flow, commodity price or any other similar criterion or by reference to dividends paid or payable to shareholders of any class of shares of the capital stock of a corporation.

Similarly, withholding tax applies to the following:

- Interest that is not “fully exempt interest” and is paid or payable to a person with whom the payer is not dealing at arm’s length
- Interest with respect to a debt or other obligation to pay an amount to a person with whom the payer is not dealing at arm’s length

The rates in the table below generally reflect the lower of the treaty rate and the rate under domestic tax law for dividends, interest and royalties paid from Canada to residents of various treaty countries. Certain exceptions or conditions may apply, depending on the terms of the particular treaty. The following table includes tax treaties currently in force and tax treaties that are signed but not yet in force.

Residence of recipient	Dividends %	Interest %	Royalties (b)(c) %
Algeria	15	15/0	15/0 (ii)
Argentina	15/10 (qq)	12.5/0	15/10/5/3 (sss)

Zimbabwe	15/10 (u)	15/0	10
Non-treaty countries (k)	25	0	25

- (a) A 0% rate generally applies to royalties relating to computer software.
- (b) The lower rate usually applies to royalties on cultural works or to royalties relating to computer software, patents and know-how.
- (c) Withholding tax of 25% applies if the royalties relate to the use of real or immovable property, including resource property.
- (d) The treaty provides that the lower rate applies to dividends paid to a company that controls directly or indirectly at least 10% of the voting power in the payer. Interest on certain government-assisted debt and certain other categories of interest are exempt from withholding tax.

- (e) Belarus is honoring the USSR treaty, and consequently that treaty continues to be in force with respect to Belarus. Canada has entered into tax treaties with Estonia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, the Russian Federation, Ukraine and Uzbekistan. Canada has signed tax treaties with Azerbaijan and Armenia, but these treaties have not yet been ratified. The withholding rates under these treaties are listed in the above table. Tajikistan and Turkmenistan have announced that they are not honoring the USSR treaty, but negotiations for new treaties with these countries have not yet begun.
- (f) Mortgage interest on Egyptian property is not eligible for reduced rates under the treaty. As a result, the higher rate applies if such interest is not exempt under Canadian domestic law.
- (g) The 0% rate applies to certain copyright royalties and to royalties for the use of, or the right to use, computer software, patents or information concerning industrial, commercial or scientific experience. The 10% rate applies to other royalties.
- (h) The 5% rate applies to dividends paid to corporate shareholders owning at least 10% of the voting shares of the Canadian company. The 15% rate applies to other dividends.
- (i) The fifth protocol to the 1980 tax treaty between Canada and the United States, which entered into force on 15 December 2008, generally provides for a gradual reduction to the withholding tax rate on interest paid or credited to non-arm's-length US residents. Under the protocol, the following withholding tax rates apply:
- 7% for interest paid during the 2008 calendar year
 - 4% for interest paid during the 2009 calendar year
 - 0% for interest paid after the 2009 calendar year
- The reduced rates retroactively apply for the entire calendar year in which the protocol was ratified (that is, effective for interest paid as early as 1 January 2008). For further information regarding the protocol, see footnote (dddd). Withholding tax is not imposed on interest paid or credited to arm's-length nonresidents after the 2007 calendar year.
- (j) The 5% rate applies if the beneficial owner of the dividends is a company that controls directly or indirectly at least 20% of the voting power in the payer.
- (k) In general, no withholding tax is imposed on interest paid to payees who are dealing at arm's length with the payer. However, withholding tax at a rate of 25% typically applies to interest paid or credited to related nonresidents (the rate may be reduced by a tax treaty). Other specific exemptions or specific inclusions may apply to change the general rules. In addition, most copyright royalties are exempt from withholding tax.
- (l) The 6% rate applies to royalties paid on cultural works, copyrights, computer software, patents and certain types of information.
- (m) The 5% rate applies if the dividends are paid by a Canadian corporation to a French corporation that controls directly or indirectly at least 10% of the votes of the payer.
- (n) The 5% rate applies to dividends paid to corporations owning at least 10% of the voting shares and capital of the payer. The 15% rate applies to other dividends. A protocol amending the tax treaty between Canada and Switzerland entered into force on 19 December 2011. The protocol provides that no tax will be withheld if a dividend is paid by a resident of a contracting state to a resident of the other contracting state that operates or administers pension or retirement plans for individuals who are resident in that other contracting state and if the dividend is not derived from the carrying on of a trade or a business.
- (o) The general rate is 15%, and payments for the use of, or the right to use, certain industrial, commercial or scientific equipment may qualify for a 10% rate.
- (p) The 0% rate applies to royalties on cultural works as well as to payments for the use of, or the right to use, computer software, patents and information concerning industrial, commercial and scientific experience.
- (q) The 5% rate applies if the beneficial owner of the dividends is a corporation that holds directly at least 25% of the capital of the payer. The 10% rate applies if the dividends are paid by a nonresident-owned investment corporation that is a resident of Canada to a beneficial owner that is a resident of Denmark and that holds directly or indirectly at least 25% of the capital of the company paying the dividend. The 15% rate applies in all other cases.
- (r) The 5% rate applies if the beneficial owner of the dividends is a company that controls directly or indirectly at least 10% of the voting power of the payer.
- (s) The 5% rate applies if the beneficial owner of the dividends controls at least 70% of the voting power of the payer. The 10% rate applies if the beneficial owner of the dividends controls at least 25% but less than 70% of the voting power of the payer.
- (t) The 10% rate applies if the recipient of the dividends is a company that controls directly or indirectly at least 10% of the voting power of the payer.

- (u) The 10% rate applies if the beneficial owner of the dividends is a corporation that controls directly or indirectly at least 25% of the voting power of the payer.
- (v) The 12.5% rate applies if the recipient is a company that controls directly or indirectly at least 10% of the votes of the payer.
- (w) The 5% rate applies to dividends paid to a resident of Croatia that controls at least 10% of the voting power of the payer or that holds at least 25% of the capital of the payer.
- (x) The 5% rate applies if the beneficial corporate owner of the dividends controls directly at least 25% of the voting power of the payer of the dividends.
- (y) The 0% rate generally applies to royalties for certain cultural works and copyrights. It also applies to royalties for computer software, patents and information concerning industrial, commercial and scientific experience, if the payer and recipient are not associated persons (as defined).
- (z) The 10% rate applies to dividends paid to a company holding at least 25% of the capital of the payer.
- (aa) The 5% rate applies if the recipient of the dividends controls directly or indirectly at least 10% of the voting power of the payer. The 10% rate applies to dividends that are paid by a nonresident-owned investment corporation resident in Canada to a company that is a resident of Hungary and that controls at least 25% of the voting power in the company paying the dividends and the beneficial owner of such dividends. The 15% rate applies to all other cases.
- (bb) The 5% rate applies if the beneficial owner of the dividends is a corporation that controls directly at least 10% of the voting power of the payer or that holds directly at least 25% of the capital of the payer. The 10% rate applies to dividends paid by a nonresident-owned investment corporation resident in Canada to a beneficial owner resident in Sweden that controls directly at least 10% of the voting power, or holds at least 25% of the capital, of the corporation paying the dividends. The 15% rate applies to other dividends.
- (cc) The 0% rate applies to copyright royalties and similar payments with respect to cultural, dramatic, musical or other artistic works.
- (dd) The 5% rate applies to dividends paid to a company that owns at least 25% of the voting shares of the payer for the last six months of the accounting period for which the distribution of profits takes place.
- (ee) The 10% rate applies if the recipient is a company that controls at least 10% of the votes of the payer.
- (ff) The treaty was signed on 29 December 1998, but it is not yet in force. The 5% rate for dividends will apply if the recipient is a company that controls at least 10% of the votes of the payer. The 5% rate for royalties will apply to royalties for certain cultural works, and royalties for certain computer software, patents and know-how if the payer and the payee are not related.
- (gg) The 10% rate applies if the recipient is a company that controls at least 25% of the voting power of the payer directly or indirectly.
- (hh) The 5% rate applies if the recipient is a company that controls at least 10% of the voting power in the payer.
- (ii) The 0% rate generally applies to royalties relating to computer software or patents.
- (jj) The lower rate applies to royalties for certain cultural works, and generally to royalties for computer software, patents and know-how.
- (kk) The 5% rate applies if the beneficial owner of the dividends owns at least 25% of the capital or controls, directly or indirectly, 10% of the voting power of the payer. The 10% rate applies to dividends paid by a nonresident-owned investment corporation that is a resident of Canada to a beneficial owner that is a company (other than a partnership) resident of the Netherlands and that owns at least 25% of the capital of, or controls directly or indirectly at least 10% of the voting power in, the company paying the dividends. The 15% rate applies to other dividends.
- (ll) The 5% rate applies to dividends if the beneficial owner of the dividends is a company that controls at least 10% of the voting power in the payer.
- (mm) The 5% rate applies if the recipient is a company that controls directly or indirectly at least 25% of the voting power in the payer.
- (nn) The 10% rate applies if the recipient is a company that controls directly or indirectly at least 10% of the voting power in the payer.
- (oo) The 5% rate applies if the recipient is a company holding directly or indirectly at least 10% of the capital of the payer.
- (pp) The 5% rate for dividends applies if the recipient is a company that controls directly or indirectly at least 10% of the voting power in the payer.
- (qq) The 10% rate applies if the recipient of the dividends is a company that holds directly 25% of the capital of the payer. The 15% rate applies in all other cases.

- (rr) The 5% rate applies to dividends if the beneficial owner of the dividends is a company that controls at least 10% of the voting power in the payer. The 15% rate applies in all other cases.
- (ss) The 5% rate applies if the recipient of the dividends is a company that owns at least 10% of the voting shares, or at least 25% of the value of the shares, of the payer.
- (tt) The 5% rate applies if the dividends are paid to a company that controls at least 10% of the voting power in the payer.
- (uu) The 5% rate applies to dividends if the beneficial owner of the dividends is a company that owns directly at least 10% of the voting stock of the payer. The 15% rate applies to other dividends.
- (vv) The 5% rate for dividends applies if the beneficial owner of the dividends is a company that controls directly or indirectly at least 10% of the voting power in the payer.
- (ww) Under the fourth protocol to the treaty, which was signed on 21 July 2014 but is not yet in force, interest paid to an arm's-length party is exempt from withholding tax.
- (xx) The 5% rate applies to dividends if the beneficial owner is a company that holds directly at least 10% of the voting power in the company paying the dividends.
- (yy) The 5% rate applies to dividends paid to a company (other than a partnership) that is a beneficial owner and controls directly at least 25% of the voting power in the payer.
- (zz) The 5% rate for dividends applies if the beneficial owner of the dividends is a company that controls at least 25% of the voting power in the payer.
- (aaa) The 10% rate applies to royalties for the use of, or the right to use, industrial, commercial, or scientific equipment.
- (bbb) The 5% rate applies to dividends paid to a company holding directly or indirectly at least 10% of the voting power of the payer. The 15% rate applies to other dividends.
- (ccc) This treaty was signed on 14 November 2002, but it has not yet been ratified.
- (ddd) The 5% rate applies to dividends paid to a company that controls at least 10% of the voting power of the payer.
- (eee) The 0% rate applies to royalties pertaining to certain cultural works, computer software, patents or know-how.
- (fff) Payments for the use of computer software, patents and certain know-how are exempt.
- (ggg) The 10% rate applies if the recipient is a company holding directly or indirectly at least 10% of the voting power of the payer.
- (hhh) The 5% rate applies to certain royalties pertaining to certain computer software, patents or know-how.
- (iii) The general withholding tax rate for royalties is 10%. A 5% rate applies to royalties pertaining to certain cultural works, computer software, patents and know-how.
- (jjj) The general withholding tax for royalties is 10%. Royalties pertaining to certain cultural works, computer software, patents and know-how are exempt.
- (kkk) The general withholding tax rate is 10%. Royalties pertaining to certain cultural works, computer software, patents and know-how are exempt.
- (lll) The general withholding tax rate for royalties is 10%. Royalties pertaining to certain cultural works, computer software, patents and know-how are exempt from withholding tax.
- (mmm) The 5% rate applies to dividends paid to a company holding directly or indirectly at least 10% of the voting power of the payer. The 15% rate applies to other dividends.
- (nnn) The 5% rate applies to dividends paid to a company holding directly or indirectly at least 10% of the voting power of the payer. The 15% rate applies to other dividends.
- (ooo) The 15% rate applies if the recipient is a company that holds an equity percentage of at least 10% in the payer of the dividends.
- (ppp) The 10% rate applies if the recipient is a company that controls directly or indirectly at least 25% of the voting power in the payer.
- (qqq) The 5% rate applies to royalties with respect to certain cultural works, and to royalties for certain computer software, patents and know-how if the payer and payee are not related.
- (rrr) The general withholding tax for royalties is 10%. Royalties pertaining to certain cultural works and computer software and royalties for information concerning industrial, commercial or scientific experience are exempt.
- (sss) The 3% rate applies to royalties paid for rights to use news. The 5% rate applies to royalties pertaining to certain cultural works. The 10% rate applies to royalties pertaining to patents, trademarks, designs or models, plans, secret formulas and technical assistance.

- (ttt) The general rate for royalties is 15%. The 25% rate applies to royalties pertaining to the use of trademarks.
- (uuu) The 10% rate applies if the beneficial owner of the dividends is a company that owns at least 10% of the voting power in the payer of the dividends.
- (vvv) A protocol between Canada and Spain entered into force on 29 September 2015. The rates under the protocol are reflected in the above table.
- (www) The 15% rate applies if the beneficial owner of the dividends is a company that controls directly or indirectly at least 10% of the voting power in the payer.
- (xxx) The 15% rate applies to dividends paid to a company that owns at least 10% of the voting shares of the payer during the six-month period immediately preceding the date of payment of the dividend.
- (yyy) The 5% rate applies to royalties pertaining to cultural works.
- (zzz) The 20% rate applies if the beneficial owner of the dividends is a company that controls directly or indirectly at least 15% of the voting power in the payer.
- (aaaa) The 20% rate applies to the following:
- Patent royalties
 - Royalties for the use of, or the right to use, trademarks, motion picture films and films or videotapes for use in connection with television
 - Payments for the use of, or the right to use, industrial, commercial, scientific or harbor equipment
- (bbbb) The 7.5% rate applies to fees for technical services.
- (cccc) The 5% rate applies if, at the time the dividend is declared, the recipient is a company holding directly at least 25% of the capital of the payer and if the capital invested by the recipient exceeds USD100,000. The 15% rate applies in all other cases.
- (dddd) On 15 December 2008, the fifth protocol to the 1980 tax treaty between Canada and the United States entered into force. The following are amendments contained in the protocol that affect cross-border payments:
- The withholding tax on cross-border interest payments will be eliminated. The protocol provides that the withholding tax rate on interest payments is reduced to 0% (phased out over a three-year period with respect to debt between parties that are “related”). For further details, see footnote (i).
 - A “Hybrid Entity Clause” is introduced with respect to income, profits or gains derived through or from certain “fiscally transparent” entities. The protocol can extend treaty relief to income earned through certain “fiscally transparent” entities, such as limited liability corporations and certain other hybrid entities. The protocol may also deny treaty benefits with respect to income derived through or from certain “fiscally transparent” entities.
 - The protocol provides that the existing limitation on benefits (LOB) provisions, which are currently applicable for US tax purposes only, will also become operative for Canadian tax purposes. The comprehensive LOB article, designed to counter “treaty shopping” abuses, is a significant development in the Canadian tax landscape and could operate to deny treaty benefits in many situations in which treaty entitlement had never come under question, including situations in which treaty shopping was not a consideration. Consequently, an analysis is required in each case in which payments are made to an entity that may have non-qualifying US or Canadian owners or owners that are residents of other countries, including in certain circumstances, public companies.
- (eeee) The 0% rate applies to copyright royalties and similar payments with respect to the production or reproduction of literary, dramatic, musical or artistic works.
- (ffff) A new tax treaty between Canada and Israel was signed on 21 September 2016 and entered into force on 21 December 2016. In general, for withholding taxes, the treaty is generally effective in Canada for amounts paid or credited to nonresidents on or after 1 January 2017; for other taxes, the treaty is effective for tax years beginning on or after 1 January 2017. The new tax treaty replaces the tax treaty signed on 21 July 1975.
- (gggg) The 5% rate applies if, at the time the dividend is declared, the recipient is a company holding directly or indirectly at least 10% of the voting power of the payer. The 15% rate applies in all other cases.
- (hhhh) The withholding tax rate is 5% for copyright royalties and other similar payments with respect to literary, dramatic or artistic works and royalties for right-to-use patents or know-how. A 10% rate applies to royalties in all other cases.
- (iiii) The 5% rate applies if, at the time the dividend is declared, the recipient is a company holding directly or indirectly at least 25% of the capital of the payer. The 15% rate applies in all other cases.

- (jjjj) The 0% rate applies to copyright royalties and similar payments with respect to the production or reproduction of cultural or artistic works (excluding royalties with respect to motion picture films and royalties with respect to works on film or videotape or other means of reproduction for use in connection with television broadcasting).
- (kkkk) This treaty was signed on 25 March 2010, but it is not yet in force.
- (llll) The 5% rate applies if the recipient of the dividends is a company that owns directly at least 25% of the shares, or controls directly or indirectly 25% of the voting power, of the payer.
- (mmmm) A protocol to the tax treaty between Canada and Switzerland entered into force on 19 December 2011. It provides that interest payments made to a beneficiary in the other contracting state are not subject to withholding tax if the beneficiary is not related to the payer.
- (nnnn) The general withholding tax rate for royalties is 10%. The 5% rate applies to certain royalties pertaining to computer software and information concerning industrial, commercial or scientific experience. The withholding tax rate is 0% for copyright royalties and for similar payments with respect to literary, dramatic or artistic works.
- (oooo) The 15% rate applies if the beneficial owner of the dividends is a company that owns at least 10% of the voting power in the payer of the dividends.
- (pppp) The 0% rate applies to royalties pertaining to certain cultural works.
- (qqqq) The last paragraph of the royalties article contains a most-favored nation clause in favor of Canada.
- (rrrr) The 5% rate applies if the beneficial owner of the dividends is a corporation that holds directly at least 10% of the voting power of the payer. The 10% rate applies if the dividends are paid by a nonresident-owned investment corporation that is a resident of Canada to a beneficial owner that is a company (other than a partnership) resident in Luxembourg and that holds directly or indirectly at least 25% of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (ssss) Tax treaty negotiations with the government of China began on 6 December 2010. The tax treaty is currently being renegotiated.
- (tttt) Negotiations to update the tax treaty with the United Kingdom began on 1 October 2011. On 21 July 2014, the fourth protocol to the treaty was signed, but it is not yet in force.
- (uuuu) The withholding tax rate for dividends is 5% if the beneficial owner of the dividends is a company that holds directly at least 10% of the capital of the company paying the dividends. A 15% rate applies to dividends in all other cases.
- (vvvv) A new tax treaty between Canada and New Zealand was signed on 26 June 2015 and entered into force on 1 August 2015. The rates under the new treaty are reflected in the above table.
- (wwww) The 5% rate applies to dividends with respect to a direct holding of 10% or more of the voting power. The 15% rate applies to other dividends.
- (xxxx) The 5% rate applies to dividends if the beneficial owner of the dividends is a company that controls at least 10% of the voting power in the payer. A 15% rate applies to other dividends.
- (yyyy) Interest on certain government or government-assisted debt is exempt from withholding tax.
- (zzzz) The 0% rate applies to copyright royalties and other similar payments with respect to the production or reproduction of literary, dramatic, musical or other artistic works, but not including royalties with respect to the following:
 - Computer software
 - Motion picture films
 - Works on film or videotape or other means of reproduction for use in connection with television broadcasting
- (aaaaa) The 5% rate applies to dividends paid with respect to holdings of 10% or more of the voting power. The 15% rate applies to other dividends.
- (bbbbb) The 5% rate applies to royalties for literary works, computer software, patents and information concerning industrial, commercial or scientific experience. The 10% rate applies to other royalties.

- (a) Corporate income tax (Imposto sobre o Rendimento das Pessoas Colectivas, or IRPC) applies to resident companies and nonresident companies with permanent establishments (PEs) in Cape Verde. Micro- and small-sized companies can benefit from a 4% reduced rate, which is applied to their turnover. See Section B for details of other rates.
- (b) See Section B.
- (c) These rates may be reduced or eliminated by tax treaties.
- (d) The 0% rate applies to dividends distributed by companies subject to and not exempt from IRPC.
- (e) Income must be declared and is subject to the normal tax rates. Amounts withheld may be credited against IRPC due. See Section B.
- (f) A withholding tax exemption is available regarding interest from shareholder loans and corporate bonds if the shareholder is a pure holding company (*sociedade gestora de participações sociais*, or SGPS) holding a stake of at least 10% for at least one year in the affiliated company.
- (g) The 20% rate applies to most services and commissions and may be eliminated under a tax treaty.
- (h) The amount deductible each year is capped at 50% of the taxable profit for the year.

B. Taxes on corporate income and gains

Corporate income tax. Corporate income tax (Imposto sobre o Rendimento das Pessoas Colectivas, or IRPC) is levied on resident and nonresident entities.

Resident entities. Companies and other entities, including non-legal entities, whose principal activity is commercial, industrial or agricultural, are subject to IRPC on worldwide profits, but a foreign tax credit may reduce the amount of IRPC payable (see *Foreign tax relief*).

A 50% IRPC exemption applies to entities exclusively engaged in agricultural and fishing activities.

Companies and other entities, including non-legal entities, that do not carry out commercial, industrial or agricultural activities, are generally subject to tax on their worldwide income (for details regarding the calculation of the taxable profit of these entities, see Section C).

Nonresident entities. Companies or other entities that operate in Cape Verde through a PE are subject to IRPC on their profits attributable to the PE.

Companies or other entities without a PE in Cape Verde are subject to IRPC on their income deemed to be derived in Cape Verde.

For tax purposes, companies or other entities are considered to have a PE in Cape Verde if they have a fixed installation or a permanent representation in Cape Verde through which they engage in a commercial, industrial or agricultural activity. Under rules that generally conform to the Organisation for Economic Co-operation and Development (OECD) model convention, a PE may arise from, among others, the following:

- A building site or installation project, including coordination, oversight, inspection and supervision activities
- The performance of services (including consultancy) that last for more than 183 days
- The existence of a dependent agent

Double tax treaties may limit the scope of a PE in Cape Verde.

Tax rates. For 2017, IRPC is levied at the following rates.

Type of enterprise	Rate (%)
Companies or other entities with a head office or effective management control in Cape Verde, whose principal activity is commercial, industrial or agricultural	25
Micro- and small-sized companies with a head office or effective management control in Cape Verde	4
Entities other than companies with a head office or effective management control in Cape Verde, whose principal activity is not commercial, industrial or agricultural	25
PEs	25
Nonresident companies or other entities without a head office, effective management control or a PE in Cape Verde	
Income subject to withholding tax	10/20
Income not subject to withholding tax	25

Certain types of income earned by companies in the last category of companies listed above are subject to the following withholding taxes.

Type of income	Rate (%)
Interest payments	10/20
Royalties	20
Technical assistance	20
Income from shares (dividends)	0/10
Income from government bonds	10
Revenues derived from the use of, or the right to use, equipment	20
Other revenues from the application of capital	20
Payments for services rendered or used in Cape Verde	20

Applicable double tax treaties may reduce the above withholding tax rates.

A fire brigade surcharge (*imposto de incêndio*) is imposed on resident companies and nonresident companies with a PE in the municipalities of Mindelo (Island of São Vicente) and Praia (Island of Santiago). The fire brigade surcharge is applied at a rate of 2% to the taxable profit determined for IRPC purposes.

Companies licensed under the Cape Verdean International Business Centre (IBC) regime benefit from a reduced rate of IRPC. This tax benefit applies until 2030 and depends on the creation of a minimum of five jobs at the International Industry Center (CII) and the International Trade Center (CIC). The following are the reduced rates of IRPC:

- 5% for entities with 5 or more dependent workers
- 3.5% for entities with 20 or more dependent workers
- 2.5% for entities with 50 or more dependent workers

For companies operating in the International Services Center, the IRPC rate is 2.5% if the entity has at least two dependent workers.

The shareholders of the companies that are licensed under the IBC regime may benefit from exemptions on dividends received and on interest derived from shareholder loans. Customs duties exemptions may also be available to entities licensed under the IBC regime.

Significant incentives are also available for qualifying investment projects under the Investment Law. Qualifying projects may enjoy the following tax benefits:

- A tax credit equal to 50% of relevant investments made in the health sector, the environmental sector, creative industries, tourism or tourism promotion industry and tourism property development, air and sea transportation services and port and airport services, renewable energy production, manufacturing and installation of renewable energy equipment, scientific research and investigation, and information and communication technology development
- A tax credit equal to 30% of relevant investments made in other areas
- An exemption from municipal real estate holding tax for buildings used in the project

- An exemption from property transfer tax for buildings used in the project
- An exemption from stamp duty with respect to financing necessary for the investment project
- An exemption from customs duties for certain goods and equipment

The above-mentioned tax credits can be used in the year of investment for up to 50% of the IRPC liability. Any excess can be carried forward for 10 years.

Further incentives may be available for investment projects that have a value exceeding CVE550 million, create at least 10 jobs and are relevant for the promotion and acceleration of the development of the Cape Verdean economy.

Cape Verdean tax law also provides for significant tax exemptions and deductions concerning investments toward internationalization (reduction of IRPC rate by 50%, as well as exemptions for stamp duty, value-added tax, customs duties, property transfer tax and legal costs, incentives in the savings and financial sector, incentives for the creation of jobs and incentives regarding training and culture.

Profits not distributed by financial institutions to strengthen their equity may benefit from an IRPC credit.

Certain customs duties incentives are also available for fishing and industry activities, as well as for, among others, transportation activities and social communication activities.

In addition, tax benefits (IRPC, stamp duty and property transfer tax exemptions) are also available with respect to recovery and insolvency processes.

To promote the regular registration of immovable property in Cape Verde, significant stamp duty and real estate tax exemptions have been introduced.

Limitation of benefits. The amount of tax payable cannot be lower than 90% of the amount that would be assessed if the taxpayer did not benefit from certain tax incentives and deduction of tax losses carried forward.

Simplified regime of taxation. Micro- and small-sized resident companies that have annual turnover not exceeding CVE10 million or no more than 10 employees and that meet certain other conditions may opt to be taxed under a simplified regime of taxation. Companies under the simplified regime of taxation are subject to a rate of 4% levied on the turnover.

Capital gains. Capital gains derived from the sale of investment properties, tangible fixed assets, intangible assets, non-current assets held for sale and financial assets are included in taxable income subject to IRPC. The capital gain equals the difference between the sales value, net of expenses incurred on the sale, and the acquisition value, adjusted by depreciation, impairment relevant for tax purposes and an official index.

Fifty percent of the capital gains derived from disposals of certain assets held for more than one year may be exempt if the sales

proceeds are invested in tangible fixed assets, intangible assets, investment property and shares during the period beginning one year before the year of the disposal and ending two years after the year of the disposal. A statement of the intention to reinvest the gain must be included in the annual tax return for the year of disposal. The remaining 50% of the net gain derived from the disposal is subject to tax in the year of the disposal.

If only a portion of the proceeds is reinvested, the exemption is reduced proportionally. If, by the end of the second year following the disposal no reinvestment is made, the net capital gain that remains untaxed (50%) is added to taxable profit for that year, increased by 15% and compensatory interest applies. A similar adjustment occurs if the assets in which reinvestment is made are not maintained by the taxpayer for at least two years from year-end of the tax year in which the reinvestment is made.

Losses from the transfer for consideration of shareholdings in tax-haven entities are not allowed as deductions. Losses resulting from shares are also not deductible if the seller has resulted from a transformation, including a change of the business purpose, of an entity for which such losses would not be deductible and if less than three years have elapsed since the date of transformation.

A pure holding company (*sociedade gestora de participações sociais*, or SGPS) may benefit from special rules. Under these rules, capital gains may be fully exempt, while capital losses and interest expenses associated with the acquisition of shares are deductible for tax purposes only in certain circumstances.

Nonresident companies that do not have a head office, effective management control or a PE in Cape Verde are taxed at a 1% rate on the sales proceeds derived from disposals of real estate, shares and other securities. In general, the tax due is paid through withholding tax. Certain gains may be taxed at a 25% rate and require filing of a tax return.

Administration. The tax year is the calendar year.

All companies engaging in activities in Cape Verde must register with the tax department to obtain a taxpayer number. Companies, including foreign companies with a PE in Cape Verde and foreign companies without a PE that had not been subject to withholding tax, must file an annual tax return, together with their financial statements and other documentation, by 31 May in the year following the tax year.

Companies with a head office, effective management control or a PE in Cape Verde must make advance payments of IRPC. Companies whose principal activity is commercial, industrial, agricultural or fishing must make payments in March, July and November of the current tax year. The tax base for the payments is 30%, 30% and 20%, respectively, of the preceding year's tax liability. The tax rate of 25% is applied to this tax base to compute the amount of the advance payment. Each advance payment cannot be lower than CVE50,000.

Companies with a head office, effective management control or a PE in Cape Verde that have adopted a tax year other than the calendar year must make estimated payments as outlined above, but in the 3rd, 4th, 7th and 10th months of their tax year. They

must file a tax return by the end of the fifth month following the end of that year.

Companies under the simplified regime of taxation must make advance payments at the end of April, at the end of July, at the end of October and at the end of January of the following year. The IRPC rate of 4% is applied to the preceding quarter's turnover.

If the total amount of the advance payments exceeds the tax due for the tax year, the excess may be carried forward as a tax credit against the tax payable in the following four years or refunded on the occurrence of certain events.

A nonresident company without a PE in Portugal must appoint an individual or company, resident in Cape Verde, to represent it with respect to its tax liabilities.

Penalties are imposed for the failure to file tax returns and satisfy other compliance obligations. If, on the final assessment, the tax authorities determine that a further payment is required and that the taxpayer is at fault, interest is imposed on the amount of the additional payment. Fines, which are generally based on the amount of tax due, are also imposed. If the tax due is not paid, additional interest is imposed from the date of the tax authorities' notice that an additional payment is due.

Binding rulings. The General Tax Code provides the taxpayer the possibility of obtaining a binding ruling. The binding ruling is limited to a certain time period, which is determined on a case-by-case basis by the tax authorities. The ruling is subject to the payment of a fee.

Dividends. Dividends paid by companies to residents and non-residents are generally subject to withholding tax at a rate of 10%.

On distributions to resident parent companies, the 10% withholding tax is treated as a payment on account of the final IRPC due.

A resident company or a nonresident company with a PE subject to and not exempt from IRPC may deduct 100% of dividends received from another resident company.

The above regime also applies, under similar conditions, to dividends distributed by foreign affiliates if the underlying profits have been subject to and not exempt from income tax.

If the recipient benefits from a reduced IRPC rate, the recipient may deduct only 50% of the dividends.

If a recipient qualifies for the 100% deduction, the payer of the dividends does not need to withhold tax.

A withholding tax exemption applies to dividends distributed to nonresident companies if the requirements described above are met.

Positive liquidation proceeds are treated as deemed dividends in the portion corresponding to the difference between the liquidation proceeds attributed and the associated capital contributions. Any excess is treated as a capital gain. If the amount is negative, it is treated as a capital loss. Losses from the liquidation of subsidiaries are deductible only if the shares have been held for at least three years.

Foreign tax relief. Foreign-source income is taxable in Cape Verde. However, direct foreign tax may be credited against the Cape Verdean tax liability, limited to the lower of the following amounts:

- The amount of tax incurred in the foreign country
- The amount of IRPC attributable to the foreign-source income

If an applicable double tax treaty reduces the withholding tax rates, the tax credit is limited by the applicable treaty clause. The foreign tax credit cannot be carried forward.

C. Determination of trading income

General. Taxable profit is determined according to the following rules:

- For companies with a head office or effective management control in Cape Verde that are principally engaged in commercial, agricultural or industrial activities, the taxable profit is the net accounting profit calculated in accordance with Cape Verdean generally accepted accounting principles, as adjusted by the IRPC Code.
- For companies with a head office or effective management control in Cape Verde that do not principally engage in commercial, industrial or agricultural activities, the taxable profit is the net total of revenues from various categories of income described in the Personal Tax (Imposto sobre o Rendimento das Pessoas Singulares, or IRPS) Code, less expenses.
- For PEs, the taxable profit is determined as outlined in the first bullet above. In calculating taxable profit, general administrative expenses that are attributable to the PE may be deducted as a cost if justified and acceptable to the tax authorities.

Expenses that are considered essential for the generation or maintenance of profits are deductible. However, certain expenses are not deductible for IRPC purposes including, but not limited to, the following:

- Illicit expenses
- Depreciation and amortization claimed that exceed the rates fixed in the Cape Verdean tax law
- Provisions and impairments (except for those contained in the Cape Verdean tax law)
- IRPC, stand-alone taxes and surcharges
- Penalties and interest charges
- Improperly documented expenses
- Health or personal injury insurance premiums, and expenses or losses with respect to life insurance, contributions to pension funds or supplementary social security systems, except when they are taxed under the IPRS Code or when they are mandatory by law or contracts
- Real estate taxes (except for companies engaged in real estate trading activities)
- Expenses concerning pleasure boats and tourism airplanes, except for those allocated to public transportation companies or used for rental purposes as part of the company's normal activities

Assets under financial leases are deemed to be owned by the lessee. Consequently, the lessee may deduct only applicable tax depreciation and any interest included in the rent payments. Special rules apply to sale-and-leaseback transactions.

Thirty percent of expenses related to passenger or mixed-use vehicles, which are depreciation, rent, insurance, repairs and fuel, and 50% of representation expenses, are not deductible for tax purposes.

Although representation expenses and expenses related to private cars are deductible with some limits, they are subject to a special stand-alone tax at a rate of 10% (this stand-alone tax may not apply in certain cases).

A 10% stand-alone tax rate also applies to tax-deductible daily allowances and compensation for costs incurred by employees when traveling in their own vehicles at the service of the employer if these amounts are not charged to clients and not subject to IRPS.

Undocumented expenses are not deductible. In addition, these expenses are subject to a special stand-alone tax rate of 40%.

A 10% stand-alone tax rate also applies to certain fringe benefits attributed to the employer (if the amount exceeds CVE15,000), which are gifts made to employees, sales of vehicles to employees below market value, travel expenses paid to employees if not related to the company's activities and interest-free or low-interest-rate loans to employees.

The above stand-alone taxes are imposed regardless of whether the company earns a taxable profit or suffers a tax loss in the year in which it incurs the expenses. In addition, all stand-alone tax rates are increased by 10 percentage points if the taxpayer benefits from a privileged tax regime or incurs a tax loss in two consecutive years (with some exceptions).

Inventories. Inventories must be consistently valued by any of the following criteria:

- Effective cost of acquisition or production
- Standard costs in accordance with adequate technical and accounting principles
- Cost of sales less the normal profit margin
- Cost of sales of products cropped from biological assets, which is determined at the time of cropping, less the estimated costs at the point of sale, excluding transportation and other costs required to place the products in the market

Changes in the method of valuation must be justifiable and acceptable to the tax authorities.

Provisions. The following provisions, among others, are deductible:

- Bad and doubtful debts, based on a judicial claim or on an analysis of the accounts receivable
- Inventory losses (inventory values in excess of market value)
- Technical provisions imposed on insurance companies and financial institutions by the competent Cape Verdean regulatory authorities

Depreciation. In general, depreciation is calculated using the straight-line method. The declining-balance method may be used for new tangible fixed assets other than buildings, office furniture and automobiles not used for public transport or rental. Maximum depreciation rates are established by law. If rates that are less than

50% of the official rates are used, total depreciation will not be achieved over the life of the asset. The following are the principal official straight-line rates.

Asset	Rate (%)
Commercial buildings	3
Industrial buildings	5
Office equipment	12.5 to 33.33
Motor vehicles	12.5 to 20
Plant and machinery	6.6 to 20

Companies may request the prior approval of the tax authorities for the use of depreciation methods other than straight-line or declining-balance or rates up to double the official rates. Approval is granted only if the request is justified by the company's business activities.

Relief for losses. Tax losses may be carried forward for seven years. The amount deductible each year is capped at 50% of the taxable profit for the year. Loss carrybacks are not allowed.

Companies under the simplified tax regime cannot benefit from the relief for losses. Tax loss carryforwards are forfeited if the taxpayer states a zero annual turnover and does not obtain any income from its normal business activity for two consecutive tax years.

Groups of companies. The Cape Verdean Tax Law does not provide a special tax regime for groups of companies.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax; levied on goods and services, other than exempt services	15%
Excise duties	
General rate	10%
Other rates	0% to 40%
Social security contributions; on salaries; paid by	
Employer	16%
Employee	8.5%
Self-employed workers	11%/19.5%
Property transfer tax; payable by purchaser	1.5%
Municipal real estate holding tax; local tax; imposed annually on the assessed tax value of the property on 31 December; tax payable by the owner of the property	1.5%
Stamp duty	
Credit operations	0.5%
Interest on bank loans	3.5%
Guarantees	0.5%
Insurance premiums	3.5%
Bills of exchange, promissory notes and other negotiable debt securities	0.5%
Corporate operations	0.5%
Notarial acts of registrations and procedures	15%

Nature of tax	Rate
Touristic contribution; for every overnight stay in a touristic establishment, up to a maximum of 10 nights; children under 16 years old are not subject to this contribution	CVE220 per night
Ecologic charge; imposed on some products imported or produced domestically that are non-biodegradable or made out of metal, glass or plastic; charge varies depending on the quantity or weight of the goods; payable by the local producer or importer; exemptions are available, including packing material used in medicine or for packing essential food, such as corn, rice, sugar, flour and milk	CVE2 to CVE200 per kilogram

E. Foreign-exchange controls

Foreign-exchange controls. The currency in Cape Verde is the escudo (CVE).

Cape Verde imposes foreign-exchange controls in certain situations.

Mergers and reorganizations. Mergers and other type of corporate reorganizations may be tax neutral in Cape Verde if certain conditions are met.

Controlled foreign entities. A Cape Verdean resident owning, directly or indirectly, at least 25% in the capital, voting rights or rights to income or estate of a controlled foreign entity (CFE) is subject to tax on its allocable share of the CFE's net profit or income. For computing the 25% threshold, the capital and rights owned, directly or indirectly, by related parties are also considered.

Several rules, which are based on the nature of the activity and whether the activity is predominantly directed to the Cape Verdean market, may result in the non-imputation of profits or income.

Payments by residents to nonresidents subject to a more favorable tax regime. In general, payments made by Cape Verdean residents to nonresidents subject to a more favorable tax regime as provided by the General Tax Code are not deductible for tax purposes, and the payers are subject to a stand-alone tax rate of 60%. However, these payments may be deducted and are not subject to stand-alone taxation if the payer establishes the following:

- The payments were made in real transactions.
- The payments are normal.
- The amounts of the payments are not unreasonable.

Related-party transactions. For related-party transactions (transactions between parties with a special relationship), the tax authorities may make adjustments to taxable profit that are necessary to reflect transactions on an arm's-length basis.

A special relationship is deemed to exist if one entity has the capacity, directly or indirectly, to influence in a decisive manner the management decisions of another entity. This capacity is deemed to exist in the following relationships:

- Between one entity and its shareholders, or their spouses, ascendants or descendants, if they possess, directly or indirectly, 20% of the capital or voting rights of the entity
- Between two entities in which the same shareholders, their spouses, ascendants or descendants hold, directly or indirectly, a participation of not less than 20% of the capital or voting rights
- Between any entities bound by dominance relations
- Between a nonresident entity and its Cape Verdean PE
- Between a resident entity and an entity located in territory with a favorable tax regime according to the General Tax Code

Foreign PE profits. Transactions between the head office and a foreign PE must respect the arm's-length principle.

Debt-to-equity rules. A limitation to the deduction of interest expenses (net of interest revenues) applies. The tax deduction for net financial expenses is capped by the higher of the following amounts:

- CVE110 million
- 30% of the earnings before interest, taxes, depreciation and amortization

The nondeductible excess, as well as the unused fraction of the 30% threshold, may be carried forward to the following seven years.

F. Treaty withholding tax rates

	Dividends %	Interest %	Royalties %
Macau SAR	10	10	10
Portugal	10	0/10*	10
Non-treaty countries	0/10	10/20	20

* The 0% rate applies to interest paid by the state of one contracting country or derived by the state of the other contracting country.

A. At a glance

Corporate Income Tax Rate (%)	0
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	0
Withholding Tax (%)	
Dividends	0
Interest	0
Royalties from Patents, Know-how, etc.	0
Branch Remittance Tax	0

B. Taxes on corporate income and gains

The Cayman Islands does not impose taxes on income, profits, wealth or capital gains.

C. Corporate license fees

Ordinary resident company. An ordinary resident company may transact foreign and domestic business from within the Cayman Islands. A Trade and Business License is required if business is to be conducted within the Cayman Islands unless the business is exempted (see Section D). If Caymanians or persons with Cayman status do not own at least 60% of the issued share capital, hold 60% of board positions or otherwise control such a company, the company must also obtain a Local Companies (Control) Law License before it can do business in the Cayman Islands, unless the business is exempt from this requirement.

Incorporation fees range from a minimum of KYD300 to a maximum of KYD500. Annual fees range from a minimum of KYD300 to a maximum of KYD500. The fees are based on authorized capital.

Ordinary nonresident company. An ordinary nonresident company is similar to a resident company, but it is not permitted to conduct business within the Cayman Islands. However, it may transact within the Islands all matters necessary to conduct its business outside the Islands; for example, it can negotiate contracts or open bank accounts.

Incorporation fees range from a minimum of KYD575 to a maximum of KYD815. Annual fees range from a minimum of KYD675 to a maximum of KYD915. The fees are based on authorized capital.

Exempted company. An exempted company is the most common form of company used by the offshore investor. An exempted company, similar to an ordinary nonresident company, may not conduct business within the Cayman Islands, but may transact from within the Islands all the matters necessary to conduct its business outside the Islands. An exempted company has certain advantages over an ordinary resident or nonresident company, including the availability of a Tax Exemption Certificate, which make the exempted company attractive to an offshore investor. A Tax Exemption Certificate provides that no law enacted in the Cayman Islands imposing any tax on income, profits, capital gains or appreciations will apply to the exempted company and that no such tax, estate duty or inheritance tax will be payable on or with respect to the shares, debentures or other obligations (or the income derived from such instruments) of the exempted company. The exemptions provided in the certificate are for a renewable 20-year period.

Incorporation fees range from a minimum of KYD600 to a maximum of KYD2,468. Annual fees range from a minimum of KYD700 to a maximum of KYD2,568. The minimum fee applies to companies with authorized capital of up to KYD42,000; the fee increases on a sliding scale for authorized capital in excess of this amount until it reaches the maximum of KYD2,568, which applies to companies with authorized capital exceeding KYD1,640,000.

An exempted company, through its memorandum and articles of association, may be established as a company limited by shares, a company limited by guarantee or a limited duration company (LDC). LDCs may be treated by the authorities of the United States and other jurisdictions as partnerships for tax and other purposes. An exempted company is classified as an LDC if its corporate existence terminates on the happening of one or more specified events and if it has a maximum life of 30 years. If a company limited by shares has more than one share class, it may be established on the basis that some of its classes will have limited liability and some will have unlimited liability. LDCs must pay a fee of KYD200 on registration in addition to the regular fees described above.

D. Miscellaneous matters

Foreign-exchange controls. The currency of the Cayman Islands is the Cayman Islands dollar (KYD). The exchange rate of the US dollar against the Cayman Islands dollar is fixed at USD1.2 = KYD1.

The Cayman Islands has no foreign-currency exchange control regulations.

Business licenses. Unless exempted, every person or company carrying on a trade or business must have an annual license for each place where such trade or business is carried on. The amount of the fee depends on the type and location of the business, as well as on the number and type of employees.

Companies that engage in certain types of business, such as banking and insurance, may be required to be licensed or registered under relevant laws. These laws may expressly eliminate the requirement that a company obtain a Trade or Business License or a Local Companies (Control) Law License.

The following are the annual license renewal fees payable by insurance companies and banks registered in the Cayman Islands.

Insurance companies (KYD)

Class A (locally incorporated)	75,000
Class A (approved external insurer)	75,000
Class B(I) (at least 95% of the net premiums written originate from the insurer's related business)	8,500
Class B(II) (over 50% of the net premiums written originate from the insurer's related business)	9,500
Class B(III) (50% or less of the net premiums written originate from the insurer's related business)	10,500

Banking and trust companies (KYD)

Class A (unrestricted)	1,000,000
Class A (restricted)	300,000 or 350,000
Class B (unrestricted)	60,000 to 100,000
Class B (restricted)	37,000 or 40,000

The fees for Class B banking and trust licenses depend on the corporate structure of the relevant bank (the structures are branches, subsidiaries and private/affiliated companies) and slightly higher fees may be payable on the application and grant of the license. Restricted trust companies must pay an annual fee of KYD7,000 for a restricted trust license alone.

Mutual funds registered or licensed under the Mutual Funds Law must pay an annual license fee of KYD3,500. Mutual fund administrators must pay the following license renewal fees:

- Restricted license: KYD7,000
- Unrestricted license: KYD30,000 or KYD35,000 (depending on the number of funds under administration)

Company managers and corporate service providers licensed under the Companies Management Law must pay an annual license fee. For managers, the annual license fee ranges from KYD750 to KYD20,000 (depending on the number of companies under management), plus KYD150 per managed company. For corporate service providers, the annual license fee ranges from KYD500 to KYD10,000, plus KYD75 per company.

Stamp duties. Stamp duties are charged on transfers of real property, leases, mortgages and the execution of various other documents within the Cayman Islands. Transfer duty is payable on

transfers of shares in Cayman Islands companies that hold real property in the Cayman Islands, subject to certain exemptions.

Common Reporting Standards. On 16 October 2015, the Cayman Islands published The Tax Information Authority (International Tax Compliance) (Common Reporting Standards) Regulations, 2015, for the implementation of the Common Reporting Standards (CRS) Regulations. The CRS Regulations entered into force on 1 January 2016.

E. Tax treaties

As of October 2016, the Cayman Islands has entered into bilateral tax information arrangements with Argentina, Aruba, Australia, Belgium, Brazil, Canada, China, Curaçao, the Czech Republic, Denmark, the Faroe Islands, Finland, France, Germany, Greenland, Guernsey, Iceland, India, Ireland, Isle of Man, Italy, Japan, Malta, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, Qatar, Seychelles, Sint Maarten, South Africa, Sweden, the United Kingdom and the United States.

The Cayman Islands has also entered into a double tax treaty with the United Kingdom.

On 5 November 2013, the Cayman Islands and the United Kingdom signed an intergovernmental agreement (IGA) to enable the exchange of information for tax purposes, including on an automatic basis.

On 29 November 2013, the Cayman Islands and the United States signed and released a Model 1 IGA for the implementation of the US Foreign Account Tax Compliance Act.

A. At a glance

Corporate Income Tax Rate (%)	35 (a)
Capital Gains Tax Rate (%)	35 (b)
Branch Tax Rate (%)	35 (a)(c)
Withholding Tax (%)	
Dividends	20 (d)(e)
Interest	20
Royalties from Patents, Know-how, etc.	25
Fees for Technical Services, Professional Activities and All Other Services Paid Abroad	25 (f)
Certain Payments to Resident Individuals	20 (g)
Rent under Leases Paid to Individuals	15 to 30 (h)
Branch Remittance Tax	20 (i)
Net Operating Losses (Years)	
Carryback	0
Carryforward	3

- (a) The minimum tax equals 1.5% of turnover. For further details, see Section B.
- (b) In certain circumstances, the tax is deferred or reduced (see Section B).
- (c) An optional final withholding tax is available for CIE Petroleum Contractors and Subcontractors (foreign companies that have entered into subcontracts with oil companies registered in Chad). The rate of this final withholding tax is 12.5% of the net amount of the contract.
- (d) This withholding tax also applies to directors' allowances, nondeductible expenses and adjustments or reinstatements following a tax reassessment.
- (e) This withholding tax applies to residents and nonresidents.
- (f) This withholding tax applies to payments by Chadian resident companies to nonresidents.
- (g) This withholding tax applies to payments made to individuals in the self-employed professions, trade intermediaries, door-to-door salespersons and representatives of the law (attorneys, bailiffs and notaries).

(h) The withholding tax rate is determined in accordance with the following table.

Taxable income		Rate for residents	Rate for nonresidents
Exceeding XAF	Not exceeding XAF	%	%
0	1,000,000	15	20
1,000,000	4,000,000	20	25
4,000,000	—	25	30

(i) The income subject to tax corresponds to the net profit after corporate income tax.

B. Taxes on corporate income and gains

Corporate income tax. Chadian companies are taxed on the territoriality principle. As a result, Chadian companies carrying on a trade or business outside Chad are not taxed in Chad on their foreign-source profits. Chadian companies are those registered in Chad, regardless of the nationalities of their shareholders or where they are managed and controlled. Foreign companies with activities in Chad are subject to Chadian corporate tax on Chadian-source profits.

Tax rates. Under the General Tax Code, the standard corporate income tax rate applicable to all companies is a flat rate of 35% of taxable income. Corporate income tax is calculated by applying the tax rate to taxable income, which is based on income reported in the audited financial statements.

Oil and gas contractors are subject to higher rates.

The minimum tax is paid on a monthly basis at a rate of 1.5% of the turnover of the previous month. The payment must be made by the 15th day of the month following the month of realization of the turnover.

Sales made by wholesale dealers to individuals are subject to withholding tax at a rate of 4%. Wholesale dealers must pay the amount due to the tax authorities by the 15th day of the following month. Purchases made by companies from individuals are also subject to withholding tax at the same rate.

Profits realized in Chad by branches of foreign companies are subject to a branch withholding tax of 20% levied on the net profit after corporate income tax.

Newly incorporated companies or new businesses conducted by existing companies can be exempt from corporate income tax for five years if they satisfy the following conditions:

- The newly incorporated company or new business must be created after 1967 and must be operating in specific sectors, which are the industry, mining, agriculture, forestry and real estate sectors.
- The newly incorporated company or new business must demonstrate a particular interest for Chad development.
- The newly incorporated company or new business must not compete in any way with existing companies.
- The newly incorporated company must have a regular accounting conducted in Chad.

If the above-mentioned conditions are met, the application can be submitted to the Ministry of Finance and Budget.

Capital gains. Capital gains are taxed at the regular corporate rate. Capital gains include gains on the sale of real estate, corporate shares and business assets. However, the tax can be deferred or eliminated in the event of a merger under certain conditions.

For a business that is totally or partially transferred or discontinued (such as through a liquidation or sale of the business), only one-third of the net capital gains is taxed if the event occurs more than five years after the beginning or purchase of the business, and only one-half of the gains is taxed if the event occurs within the five years following the beginning or purchase of the business.

Administration. The fiscal year runs from 1 January to 31 December.

Companies must file income tax returns by 30 April of the year following the fiscal year. Late returns are subject to a penalty of 1.5% per month, up to 50% of the tax due. An additional penalty of 100% or 150% applies in case of bad faith or in case of fraud discovered through a tax audit. Corporate income tax must be paid by the deadline for filing tax returns. Late payments are subject to a penalty of 2% per month of delay, excluding the application of an additional penalty.

Dividends. Dividends paid to resident individuals in Chad are subject to a 20% withholding tax. Resident individuals must include the gross dividend in taxable income, but they receive a corresponding 20% tax credit to prevent double taxation. Dividends received by resident companies are included in their taxable income and are subject to corporate income tax at the regular rate of 35%. Dividends paid to nonresidents are subject to a final 20% withholding tax.

The participation exemption regime may exempt up to 90% of the dividends received from a 50%-owned subsidiary if the parent company and the subsidiary have their registered offices in a Central African Economic and Monetary Community (Commission de la Communauté Économique et Monétaire de l'Afrique Centrale, or CEMAC) member state. The CEMAC member states are Cameroon, Central African Republic, Chad, Congo (Republic of), Equatorial Guinea and Gabon.

Foreign tax relief. In general, foreign tax credits are not allowed. The income of residents and nonresidents subject to foreign tax that is not exempt from Chadian tax under the territoriality principle is taxable, net of the foreign tax.

C. Determination of trading income

General. Taxable income is based on financial statements prepared according to generally accepted accounting principles and the Organization for the Harmonization of Business Law in Africa (L'Organisation pour l'Harmonisation en Afrique du Droit des Affaires, or OHADA) standard statements.

Business expenses are generally deductible unless specifically excluded by law. Expenses that are not deductible include the following:

- Head office overhead, research costs, and technical, financial and administrative assistance fees paid to nonresidents that exceed 10% of taxable profits before their deduction. This limitation

does not apply to technical assistance fees related to the assembly of a factory, which are deductible in their entire amount.

- Rent expenses for movable equipment paid to a shareholder that manages the company in fact or by right and holds, directly or indirectly, more than 10% of the capital.
- Interest paid to shareholders in excess of the central bank annual rate plus two points.
- Commissions and brokerage fees for services on behalf of companies located in Chad that exceed 5% of purchased imports and sales of exports.
- Amounts set aside for self-insurance.
- Certain specific charges (such as contributions other than those for retirement paid to a foreign social security organization, which are deductible up to 15%, and health insurance premiums paid to companies located abroad), gifts, subsidies and penalties (to some extent).
- Expenses paid to local suppliers without reference to a Chadian tax identification number.
- Disallowed expenses, such as personal expenses, family expenses, nonbusiness-related expenses, provisions for redundancy for economic purposes and for self-insurance and unsupported expenses.

Inventories. Inventory is normally valued at the acquisition cost or at the lower of cost or market value. Cost must be determined on a weighted-average cost-price method. The first-in, first-out (FIFO) method is also generally acceptable.

Provisions. In determining accounting profit, companies must establish certain provisions, such as a provision for a risk of loss or for certain expenses. These provisions are normally deductible for tax purposes if they provide for clearly specified losses or expenses that are probably going to occur and if they appear in the financial statements and in a specific statement in the tax return.

Insurance companies may deduct technical provisions provided by the Conférence Interafricaine des Marchés d' Assurance (CIMA) Code to the extent that the General Tax Code does not contain any limitation for such deduction.

Credit institutions may deduct provision for bad debts. Such deduction is limited to 25% for the first year, 50% for the second year and 25% for the third year, if the concerned debt is not covered by a guarantee. If the bad debt is covered by a real guarantee, the deductibility is limited to 15% for the first year, 30% for the second year, 30% for the third year and 25% for the fourth year.

Capital allowances. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at rates specified by the tax law. Accordingly, if the rates used for accounting purposes are greater than the prescribed rates, the excess is disallowed for tax purposes.

Relief for tax losses. Losses may be carried forward for three years. However, losses attributable to depreciation may be carried forward indefinitely. Losses may not be carried back.

Groups of companies. The Chadian tax law does not provide for the fiscal integration of Chadian companies equivalent to a consolidated filing position.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on transactions carried out in Chad; certain transactions are exempt	
Standard rate	18
Exports	0
African Union Tax; on imports from outside Africa	0.2
Business license; rate varies depending on the amount of turnover	Various
Registration duties, on transfers of real property or businesses	3 to 10
Social security contributions on an employee's annual gross salary, limited to XAF6 million	
Family allowances, paid by employer	7.5
Old age, disability and survivor's pension; paid by	
Employer	5
Employee	3.5
For job-related accidents; paid by employer	4
Inclusive tax; on gross salary and effective value of benefits in kind; paid by employer	7.5
Training tax; on gross salary and effective value of benefits in kind; paid by employer	1.2

E. Foreign-exchange controls

Exchange-control regulations exist in Chad for financial transfers outside the franc zone, which is the monetary zone including France and its former overseas colonies. A CEMAC rule (No. 0200/CEMAC/UMAC/CM, dated 29 April 2000) applies to all of the CEMAC countries.

F. Treaty withholding tax rates

Chad has a limited tax treaty network. Chad has only entered into the CEMAC multilateral tax treaty, dated 13 December 1966. Under this treaty, the following are the withholding tax rates.

	Dividends %	Interest %	Royalties %
Cameroon	20 (a)	20 (a)	– (b)
Central African Republic	20 (a)	20 (a)	– (b)
Congo (Republic of)	20 (a)	20 (a)	– (b)
Equatorial Guinea	20 (a)	20 (a)	– (b)
Gabon	20 (a)	20 (a)	– (b)
Non-treaty countries	20	20	25

(a) Payments from a Chadian source are subject to withholding tax under Chadian domestic tax law.

(b) Withholding tax is not levied. The income is subject to tax in the state of the recipient.

Net Operating Losses (Years) (h)	
Carryback	0
Carryforward	Unlimited

- (a) See Section B.
- (b) The tax applies to payments to nonresidents.
- (c) The 35% tax applies to the amount of the grossed-up dividend. Up to 100% of the corporate tax paid by the company is creditable against the withholding tax, depending on the tax regime of the company.
- (d) A reduced rate of 4% applies to certain interest payments including, but not limited to, interest paid on loans granted by foreign banks, insurance companies, financial institutions, and interest paid with respect to import operations.
- (e) No withholding tax is imposed on payments related to standard software if certain requirements are met. A reduced withholding tax rate of 15% applies to payments with respect to the following:

- Invention patents
- Models
- Industrial drawings and designs
- Layout sketches or layouts of integrated circuits
- New vegetable patents
- Use or exploitation of computer programs (software)

The reduced tax rate does not apply to payments made to related entities or to companies resident in countries included in a list prepared by the Chilean Ministry of Finance containing the territories considered to be tax havens. As a result, the withholding tax rate for such payments is 30%. Two companies are considered to be related if one of the following conditions is satisfied:

- Either company owns 10% or more of the other company's capital.
- Either company participates in 10% or more of the other company's revenues.

- A shareholder or owner owns 10% or more of each company or participates in 10% or more of its revenue.

A reduced withholding tax rate of 20% applies to payments for television broadcasting and cinematographic materials.

- (f) A 15% rate applies to payments for engineering, technical assistance, professional and other technical services rendered in Chile or abroad. However, if the parties are related (see footnote [e] above) or if the payments are being made to a company domiciled in a country included in the tax-haven list (see footnote [e] above), the withholding tax rate is 20%.
- (g) The 35% tax applies to the amount of the grossed-up dividend. Up to 100% of the corporate tax paid by the branch is creditable against the withholding tax, depending on the tax regime of the branch.
- (h) See Section C.

B. Taxes on corporate income and gains

Corporate income tax. Chilean resident corporations and branches of foreign entities are subject to income tax on their worldwide income. A resident corporation is one that is incorporated in Chile. The corporate income tax is applied to accrued net income, with the exception of foreign-source income, which is computed on a cash basis.

Rates of corporate tax. The corporate income tax rate is 25% or 25.5%, depending on the tax regime elected by the company. The corporate tax paid by the company is creditable against the withholding tax applicable to the distribution of profits to the company's partners or shareholders.

Dividends. Dividends or profit distributions between resident entities are not subject to tax. Dividends received from foreign subsidiaries are taxed as ordinary income. A foreign tax credit is available with respect to such dividends.

Dividends paid by a Chilean company to a nonresident entity or individual are subject to a 35% withholding tax. However, the 25% or 25.5% corporate tax is creditable against the withholding tax (up to 100% of the corporate tax may be creditable depending on the tax regime of the company). This withholding tax rate is not reduced by tax treaties.

Tax regimes. Two different corporate tax regimes are available. New companies must notify the Internal Revenue Service (IRS) of their election at the moment of the start-up of their business and must remain under the elected regime for at least five years.

Attributed Income Regime. Under the Attributed Income Regime (Regime A), income received or accrued by a company is annually attributed to its shareholders or partners, regardless of the effective dividend distributions. Companies are subject to a 25% corporate income tax. The corporate income tax paid by the company is fully creditable against the tax imposed on the shareholders, resulting in a 35% overall rate in the case of nonresident owners.

Distributed Income Regime. Under the Distributed Income Regime (Regime B), shareholders or partners are taxed only on the actual distribution of dividends or profits by the company. Companies are subject to a 25.5% corporate income tax, which will be increased to 27%, effective from 2018. Under Regime B, shareholders or partners are able to use 65% of the corporate income tax paid by the company as a credit against the withholding tax. As a result, nonresident shareholders are taxed at a 44.45% overall rate unless they are domiciled in a treaty country, in which case the corporate income tax is fully creditable.

Mining tax. A special tax on mining activities is imposed on individuals or legal entities that extract minerals subject to concession and sell these minerals in any state of production. The tax is imposed at progressive rates ranging from 0% to 14%, depending on the amount of the sales and the operational margin of the taxpayer. The tax base is corporate income with certain adjustments.

Sales made by related mining entities are attributed to the taxpayer for purposes of determining the tax rate.

The mining tax is imposed in addition to the income tax. However, the mining tax may be deducted as an expense for income tax purposes for the year in which the tax is due.

Chilean Holding Company regime. Under the Chilean Holding Company (CHC) regime, a participation exemption is granted with respect to dividends distributed by the CHC's foreign subsidiaries or capital gains derived by the CHC from the disposal of such entities. To apply for the regime, the requirements contained in Article 41 D of the Income Tax Law must be met.

Capital gains. In general, capital gains realized by foreign investors are subject to a 35% overall tax.

Sales of shares of companies listed on the stock exchange are exempt from income tax under certain conditions. Under certain double tax treaties, the tax rate on capital gains may be reduced to 20%, 17% or 16%.

Indirect transfers of Chilean shares are subject to capital gains tax at a rate of 35% if either of the following circumstances exists:

- Chilean assets represent more than 20% of the fair market value of the foreign company that is transferred.
- The fair market value of the Chilean assets is greater than approximately USD180 million.

The above measure may also apply if a tax haven resident entity is transferred under certain conditions. Limitations apply to the measure if the indirect transfer is made within a group reorganization process and if no capital gains are triggered.

Administration. All accounting periods in Chile must end on 31 December. Income taxes must be paid during the month of April.

Provisional monthly payments on account of final annual income tax are due on the 12th day of each month.

Foreign tax relief. A foreign tax credit may be claimed up to a limit of 25%, 25.5%, 32% or 35% of the foreign-source income, depending on the nature of the income and the existence of a double tax treaty.

C. Determination of trading income

General. Taxable income, determined in accordance with generally accepted accounting principles, includes all profits, with the exception of specified items that are not considered income for tax purposes.

In general, all necessary expenses for producing income, sustained and justified, may be deducted to determine taxable income. However, expenses related to automobiles are not deductible. Interest

associated with investment in Chilean companies is deductible for corporate tax purposes.

Payments to related parties of royalties and interest, for freight, insurance, and leases and of the types of income indicated in Article 59 of the Income Tax Law can only be deducted on a cash basis if the following requirements are met:

- The applicable withholding tax, if any, is declared and paid.
- The remittance of funds abroad is effectively made.

Inventories. For inventory valuation, the first-in, first-out (FIFO) method and the weighted average cost method are accepted by law. A corresponding monetary correction must be added to cost.

Monetary correction. The Income Tax Law contains monetary adjustment rules. These rules, known as monetary correction, require taxpayers to revalue certain assets and liabilities annually based on the changes reflected in the consumer price index (CPI) and in foreign-exchange rates. The different indices that are used to adjust assets and liabilities may result in taxable profits or losses.

The following adjustments must be made for monetary correction purposes:

- The initial net value of fixed tangible assets is restated based on the change in the CPI, which is fixed monthly by the National Statistical Service. Depreciation is computed on the value of the assets after restatement.
- Inventories existing at the balance-sheet date are restated to their replacement cost.
- Credits, rights and liabilities that are in a foreign currency or linked to price indices are adjusted based on the change in the foreign-exchange rate or the relevant index. Investments in foreign entities are treated as foreign-currency denominated assets.

Depreciation. Depreciation must be calculated using the straight-line method. The tax authority has established the following normal periods of depreciation.

Manufacturing industry and trade	Years
Machinery	15
Heavy tools	8
Light tools	3
General installations	10
Trucks	7
Cars, pickups, station wagons and buses	7
Computers, computer systems, peripherals and similar items	6
 Building and mining industries	 Years
Solid buildings	80
Semisolid buildings	20 to 50
Buildings of light materials	10
Bulldozers, tractors, Caterpillars and other machines employed in heavy construction	8
Drilling equipment, internal combustion engines, soldering equipment and similar equipment	6
Machines employed in mining activities (general rate)	9

Annual depreciation rates must be applied after the revaluation of fixed assets according to the rules of monetary correction (see

Monetary correction). Accelerated depreciation may be applied to new or imported fixed assets and to imported fixed assets with normal useful lives of three years or more. The accelerated method allows the calculation of depreciation based on a useful life for an asset equivalent to one-third of the normal useful life established by the Chilean tax authorities. However, accelerated depreciation may be used only in determining trading income for corporate tax purposes.

Immediate depreciation is available for micro-companies and small-sized companies, while medium-sized companies can benefit from depreciation rates of up to 1/10 of the useful life.

Relief for losses. Losses may be carried forward without a time limit. If a qualified change of ownership occurs, accumulated tax losses may not be deducted from income generated after the ownership change.

The carryback of losses is not allowed, effective from 1 January 2017.

D. Value-added tax

Value-added tax (VAT) applies to sales and other transactions regarding tangible personal property, as well as to payments for certain services. It also applies to the habitual sale of real estate. The general tax rate is 19%. VAT is imposed under a credit-debit system.

E. Miscellaneous matters

Foreign-exchange controls. The Central Bank of Chile must be informed of all transactions exceeding USD10,000. Other annual information requirements are imposed.

Taxpayers must report annually their permanent investments in foreign companies, investments in foreign branches and details regarding their foreign-source income.

Individuals or entities domiciled or resident in Chile must inform the Chilean IRS if they become trustees or administrators of trusts created in accordance with foreign law.

Transfer pricing. Changes to the transfer-pricing regulations are designed to conform the Chilean rules to the Organisation for Economic Co-operation and Development (OECD) guidelines and to introduce tax filing obligations.

Acceptable transfer-pricing methods include the following:

- Comparable uncontrolled price
- Resale price
- Cost-plus
- Profit-split
- Transactional net margin

Any other method may be used if none of the above methods applies to the transaction. The most suitable method should be used, taking into account the facts and circumstances of each related-party transaction.

Taxpayers must file an annual sworn statement identifying related-party transactions and transfer-pricing methods, and providing

other information requested by the Chilean IRS through regulations. In addition, taxpayers must keep all relevant information supporting compliance with the transfer-pricing rules.

Debt-to-equity rules. Excess indebtedness exists if the “debt” of a Chilean entity exceeds three times its “equity.” For this purpose, “equity” equals the tax equity (*capital propio tributario*) with certain adjustments. “Debt” includes all debt, regardless of whether it is foreign or local or related or unrelated, as well as the debt at the level of the company’s permanent establishments abroad. If excess indebtedness exists, a 35% tax (with a credit for any withholding tax paid) applies to the foreign related-party debt subject to a withholding tax of 4% or lower, as a penalty tax to the debtor. The concept of relationship also includes any type of guarantee.

Controlled foreign corporations. In general, foreign-source income is taxed on a cash basis. However, under the controlled foreign corporation (CFC) rules, Chilean resident taxpayers are taxed on an accrual basis on passive income received or accrued by a CFC.

Under the CFC rules, passive income includes the following:

- Dividends or profit distributions
- Interest (unless the controlled entity is a bank or financial institution)
- Royalties
- Capital gains
- Income from the lease of real property (unless the exploitation of real property is the principal activity of the controlled entity)
- Income from the assignment of certain assets
- Specified Chilean-source income

Control of a foreign entity is deemed to exist in any of the following circumstances:

- 50% or more of the capital, profit or voting rights is directly or indirectly owned by a Chilean taxpayer.
- The Chilean taxpayer has a decisive influence on the administration of the foreign entity.
- The foreign entity is domiciled in a country or territory with a preferential tax regime, unless proven otherwise (that is, a foreign entity is deemed controlled if it is domiciled in a tax haven or preferred jurisdiction, unless the Chilean taxpayer demonstrates that it does not control it).

F. Treaty withholding tax rates

The table below lists the withholding tax rates under the Chilean treaties in force. All of these treaties are based on the OECD model convention.

	Dividends %	Interest (f) %	Patent and know-how royalties %
Australia	15 (a)	4/15 (b)	5/10 (c)
Austria	15 (a)	4/15	5/10
Belgium	15 (a)	4/15 (b)	5/10 (c)
Brazil	10/15 (a)	4/15	15
Canada	10/15 (a)	4/15 (b)	15 (c)

Switzerland	15 (a)	4/15 (b)	5/10 (c)
Non-treaty countries	35 (e)	4/35 (d)(f)	15/30 (g)

- (a) With respect to Chile, the treaty withholding tax rates for dividends do not apply to the 35% withholding tax applicable under domestic law as long as the corporate tax is creditable against the withholding tax.
- (b) These treaties have a most-favored nation (MFN) clause with respect to interest.
- (c) These treaties have an MFN clause with respect to royalties. In the case of the Peru treaty, the clause applies after a five-year period beginning on the effective date of the Chile-Peru treaty.
- (d) From a Chilean standpoint, the Chile-Argentina treaty no longer applies as of 1 January 2013. Consequently, any payment made on or after that date is taxed under local law (that is, the non-treaty country rates apply). Also, see the paragraph below after the footnotes.
- (e) The 35% tax applies to the amount of the grossed-up dividend. Up to 100% of the corporate tax paid by the Chilean company is creditable against the withholding tax borne by the nonresident shareholder, depending on the tax regime of the Chilean company.
- (f) Under Chilean domestic law, a reduced 4% tax rate applies to the following interest payments:
- Interest paid on loans granted by foreign banks, financial institutions and insurance companies
 - Interest paid on bonds
 - Interest paid with respect to import operations
- (g) The withholding tax rate is reduced to 15% for payments with respect to the following:
- Invention patents
 - Models
 - Industrial drawings and designs
 - Layout sketches or layouts of integrated circuits
 - New vegetable patents
 - The use or exploitation of computer programs (software)
- The reduced tax rate does not apply to payments made to related parties or to companies resident in countries included in a list prepared by the Chilean Ministry of Finance containing the territories that are considered to be tax havens. The withholding tax rate for such payments is 30%.

Chile has signed tax treaties with Argentina, China, the Czech Republic, Italy, Japan, South Africa, the United States and Uruguay, which are awaiting ratification by Chile.

This chapter refers only to the taxation of entities under the tax laws of Mainland China. The tax laws in the Special Administrative Regions (SARs) of Hong Kong and Macau and in Taiwan are separate sets of rules that are completely distinct from those in Mainland China. For information concerning the tax laws in Hong Kong, Macau and Taiwan, see the chapters concerning such jurisdictions in this guide.

Effective from 1 January 2008, a unified China Enterprise Income Tax Law applies to both domestic enterprises and business operations with foreign investment. The unified law replaces the previous Enterprise Income Tax Law (applicable to domestic enterprises) and Foreign Investment Enterprise and Foreign Enterprise Income Tax Law (applicable to business operations with foreign investment). Under the unified law, differences no longer exist between the taxation of domestic-owned enterprises and the taxation of foreign-owned enterprises.

A. At a glance

Corporate Income Tax Rate (%)	25
Capital Gains Tax Rate (%)	25 (a)
Branch Tax Rate (%)	25
Withholding Tax (%) (b)	
Dividends	10
Interest	10
Royalties from Patents, Know-how, etc.	10
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

(a) Capital gains derived by foreign enterprises from disposals of interests in foreign investment enterprises are subject to a final withholding tax of 10% instead of income tax. This rate may be reduced by applicable tax treaties.

- (b) The statutory rate is 20%, which is reduced to 10% by the Enterprise Income Tax Law Implementation Regulations.

B. Taxes on corporate income and gains

Corporate income tax. On 16 March 2007, China enacted the new China Enterprise Income Tax Law (the New Law), which took effect on 1 January 2008. Before the enactment of the New Law, two separate tax laws, one for domestic enterprises and the other for foreign-owned business operations, including foreign investment enterprises (FIEs) and foreign enterprises, were in effect for more than 15 years. The New Law applies to all business operations regardless of their ownership, except for sole proprietorships and partnerships to which the individual income tax law applies. FIEs that were incorporated (that is, obtained their business license) before 16 March 2007 are entitled to a five-year transitional period beginning 1 January 2008. During this transitional period, entitlement to tax incentives under the prior tax law can be grandfathered.

Corporate residents of China are taxed on their worldwide income, including income from business operations, investment and other sources. A foreign tax credit is allowed for income taxes paid in other countries. This credit is capped at the China income tax payable on the same income calculated under the New Law.

In general, a company is regarded as tax resident in China if it is incorporated in China or effectively managed in China. “Effective management” is defined as overall management and control over the production, business, personnel, accounting, and assets of a company.

Nonresident companies are taxed on China-source income only. However, if the nonresident company has an establishment in China, non-China source income effectively connected with the China establishment is also taxed.

The term “establishment” is broadly defined to include the following:

- A place of management
- A branch
- An office
- A factory
- A workshop
- A mine or an oil and gas well or any other place of extraction of natural resources
- A building site
- A construction, assembly, installation or exploration project
- A place for the provision of labor services
- Business agents

Rates of corporate tax. The statutory rate of enterprise income tax is 25%, effective from 1 January 2008. The withholding tax rate on passive income (including dividends, interest, royalties and capital gains) of non-China tax residents is 10%.

A reduced tax rate applies to the following enterprises, subject to the satisfaction of certain conditions:

- 20% rate and 50% reduction of annual taxable income for qualifying small and less-profitable enterprises, provided that they

have annual taxable income not exceeding CNY300,000 for the period of 1 October 2015 through 31 December 2017. The threshold before 1 October 2015 was CNY200,000.

- 15% for High and New Technology Enterprises (HNTEs).
- 15% for Technologically Advanced Service Companies in select cities (from 2009 to 2018).
- 15% for qualifying integrated circuit production enterprises.
- 10% for key software enterprises, key animation and comics enterprises and integrated circuit designing enterprises.
- 15% for western region enterprises and enterprises in Ganzhou in Jiangxi Province engaging in and deriving 70% of their total income from certain encouraged industries as stipulated in a new western region catalog (from 1 October 2014 to 2020).
- 15% for qualifying enterprises that are registered in the Guangdong Hengqin New Area (Hengqin), the Fujian Pingtan Comprehensive Pilot Zone (Pingtan) or the Qianhai Shenzhen-Hong Kong Modern Service Industry Cooperation Zone (Qianhai) (for further details, see below).

Tax incentives. A five-year tax holiday (exemption for the first two years and 50% reduction for the next three years) is granted to newly established and qualified HNTEs that are incorporated after 1 January 2008 and that are located in the Shanghai Pudong New Area or one of the five Special Economic Zones (SEZs), which are Hainan Province, Shantou, Shenzhen and Zhuhai in Guangdong Province, and Xiamen in Fujian Province. A five-year tax holiday also applies to qualifying software enterprises, animation and comics enterprises, integrated circuit designing enterprises and integrated circuit production enterprises. For qualified integrated circuit production enterprises, the tax holiday can be extended to 10 years (exemption for the first 5 years and 50% reduction for the next 5 years) under certain conditions. The above 5-year or 10-year tax holiday starts from the tax year when a qualifying enterprise begins making profits. If a software enterprise, animation and comics enterprise or integrated circuit designing or production enterprise cannot satisfy the relevant requirements in a profit-making tax year, the enterprise enjoys the remaining tax holiday from its initial tax year in which it satisfies the relevant requirements.

During the period from 2010 to 2020, certain specified industries in selected areas of Xinjiang, such as agriculture and forestry, irrigation, coal production and related industries, electricity, new energy, oil and gas, production of certain metals and related industries, petrochemical, pharmaceutical, transportation, modern logistics, environmental protection and resources conservation, can also benefit from a five-year tax holiday based on the statutory rate of 25%. A five-year exemption applies to qualifying enterprises located in the Kashi and Huoerguosi Special Economic Development Zones of Xinjiang.

During the period of 1 January 2014 through 31 December 2020, enterprises that are established in Hengqin, Pingtan or Qianhai (the covered areas) and that engage in encouraged industries can be subject to a reduced corporate income tax rate of 15%. Enterprises engaging in encouraged industries are enterprises that satisfy the following conditions:

- They have their core businesses in the covered area.

- Their businesses relate to industries and projects stipulated in preferential corporate income tax catalogs.
- Their income derived from such core businesses account for more than 70% of their total income.

If enterprises have establishments both inside and outside the covered areas, only the income attributable to establishments inside the covered areas is eligible for the preferential corporate income tax rate of 15%. In determining whether enterprises meet the above-mentioned conditions for preferential corporate income tax rates, only their establishments inside the covered areas are counted; their establishments outside the covered areas are not considered.

Effective from 1 January 2016, China provides pretax super deductions of 150% on an expanded scope of qualifying research and development expenditures (RDEs) actually incurred by China tax resident enterprises during the year; alternatively, if related qualifying RDEs were incurred for developing intangible assets, the companies may amortize the capitalized intangible assets based on 150% of the actual cost incurred on developing the intangible assets.

Other tax incentives are available to enterprises engaged in industries, projects, or activities encouraged by national policies. The incentives granted to these encouraged industries, projects and activities typically include the following:

- Income from agriculture, forestry, animal husbandry and fishery projects is eligible for a full tax exemption or 50% reduction of tax, depending on the type of projects.
- Income from infrastructure projects is eligible for a full tax exemption for the first three years and a 50% reduction of tax for the next three years beginning with the first income-generating year. If certain requirements are met, enterprises that invest in a qualifying public infrastructure project and are approved to perform the project in phases are allowed to calculate the corporate income tax based on the taxable income of each phase and enjoy the tax holiday for different phases of the project separately.
- Income from environmental protection or water or energy conservation projects is eligible for a full tax exemption for the first three years and 50% reduction of tax for the following three years.
- Income from technology transfer is eligible for a tax exemption for the first CNY5 million and a 50% reduction for the amount over that threshold.
- 150% of qualified costs incurred for the research and development of new technologies and products can be tax deductible.
- 200% of qualified wages for disabled people can be tax deductible.
- Venture capital companies investing in the equity of unlisted small or medium-sized High and New Technology Companies can use 70% of its investment cost to offset the taxable income for the year in which the holding period reaches two years.
- Income derived from recycling business is eligible for a 10% reduction in calculating taxable income.
- 10% of the cost incurred in purchasing environmental protection, water and energy saving or production safety equipment can be credited against income tax payable for the year of the purchase.

Capital gains and losses. In general, capital gains and losses are treated in the same manner as other taxable income and losses, and are taxed at the normal income tax rate of 25%. However, China-source capital gains derived by nonresident enterprises, such as gains from the disposal of an FIE, are subject to a 10% withholding tax. In addition to income tax, real property gains tax is imposed on gains derived from transfers of real properties (see Section D).

Administration. The tax year in China is the calendar year.

An annual corporate income tax return, together with audited financial statements issued by a certified public accountant registered in China and a set of annual reporting forms for related-party transactions, is due within five months after the end of the tax year. Enterprises must settle all outstanding tax liabilities within the same period.

In addition, enterprises must also file quarterly provisional corporate income tax returns within 15 days after the end of each quarter, together with payments of provisional tax based on actual profits. If an enterprise has difficulty in filing a provisional tax return based on the actual quarterly profits, it may pay tax based on estimated profits. The estimated profits are normally computed by reference to one-quarter of the enterprise's actual taxable profits for the preceding year. Otherwise, they are computed under other methods approved by the tax bureau.

Late filing or late payment triggers a surcharge of 0.05% per day and a discretionary penalty of 50% to 500% of the unpaid tax liabilities. For adjustments made under anti-avoidance provisions, such as adjustments with respect to transfer pricing, thin capitalization and controlled-foreign corporations (see Section E), an interest charge is imposed on a daily basis, beginning on 1 June of the year following the tax year to which the tax underpayment is related and ending on the day the tax underpayment is settled. This charge is based on the renminbi yuan (CNY) loan base rate published by the People's Bank of China (PBOC) plus 5%. If related-party transaction annual reporting forms and other prescribed documentation are provided or if relevant documents, such as contemporaneous documentation, can be provided in accordance with the new China State Administration of Taxation (SAT) Announcement [2014] No. 54 during a monitoring and administration period of special tax adjustments (the five-year period beginning with the year following the year in which such special adjustments are made), the interest charge may be reduced to an amount based only on the CNY loan-based rate published by the PBOC.

Effective from 1 January 2015, the administrative approval requirements for tax incentives are removed and replaced by a record-filing mechanism.

Dividends. Profits of FIEs distributed as dividends are subject to withholding tax at a rate of 10% (this rate may be reduced under a tax treaty or arrangement) when remitted from China. Effective from 1 November 2015, the investor may determine and enjoy the treaty benefits itself when filing a tax return or making a withholding declaration through a withholding agent, and accept the

subsequent post-filing administration from the in-charge tax authorities. Dividends paid between qualified resident companies may be exempted. For this purpose, resident companies are qualified if one tax resident has made a direct investment in the other tax resident. Dividends attributable to publicly traded shares are also treated as tax-exempt investment income if the holding period of the shares is longer than 12 months.

Foreign tax relief. A tax credit is allowed for foreign income taxes paid, or indirectly borne, by China resident enterprises, but the credit is generally limited to the amount of China corporate income tax payable on the foreign-source portion of an enterprise's worldwide taxable income. A nonresident enterprise with an establishment or place of business (generally referred to as a permanent establishment [PE]) in China that derives foreign-source income effectively connected to the PE can also claim a tax credit for income taxes paid in foreign jurisdictions, but the credit is limited to China corporate income tax payable on such income. Excess foreign tax credits may be carried forward for a period of five years. The tax credit limit mentioned above must be calculated on a country-by-country basis with an exception for Chinese oil companies, which are allowed to select either the country-by-country method or the general deduction method. Under the general deduction method, the tax credit limit is calculated based on the taxable income derived from all foreign countries. This method applies only to a specific class of worldwide income, which is foreign-source income relating to the exploration of crude oil and relevant technical services (upstream-related activities). Under the country-by-country method, the tax credit limit for each country is calculated by apportioning the total income tax on worldwide taxable income through the application of an apportionment ratio of the taxable income sourced in the relevant country to worldwide taxable income.

C. Determination of trading income

General. Taxable income is defined as total revenue less the following:

- Non-taxable income
- Tax-exempt income
- Allowable deductions
- Tax losses

No major differences exist between tax and accounting methods for income computation purposes. Dividends, bonuses, interest, royalties, rent and other income are included in taxable income.

In general, all necessary and reasonable expenses incurred in carrying on a business are deductible for tax purposes. However, specified limits apply to the deductibility of advertisement expenses, entertainment expenses, union fees, employee welfare costs, employee education expenses, commissions and handling fees, supplementary pensions and supplementary medical insurance. Charitable donations of up to 12% of the total annual profit are deductible.

Management fees paid between enterprises, rental and royalty fees paid between business units of an enterprise, and interest paid between business units of nonbank enterprises are not deductible.

Interest paid on related-party borrowing that does not meet debt-to-equity ratio rules (see Section E) may not be deductible. Other nondeductible expenses include the following:

- Sponsorship expenses
- Dividends and returns on equity investments
- Income tax payments including penalties and surcharges
- Donations not fulfilling prescribed requirements
- Provisions not yet approved
- Other expenses not related to production or business operations

For an establishment in China of an enterprise that is not a resident for tax purposes, reasonable expenses allocated from the overseas head office are deductible if these expenses are incurred by the head office for the production or business operations of such establishment and are supported by proper documents issued by the head office.

Inventories. For tax purposes, the cost of inventories is determined in accordance with the following rules:

- The cost of inventories that are paid for in cash is the sum of the purchase price and the related taxes and charges actually paid.
- The cost of inventories that are not paid for in cash is determined based on the fair market value of the consideration and the related taxes and charges actually paid.
- The cost of agricultural products generated from biological assets (for example, animals or woods) is determined based on the necessary raw material, labor and relevant overhead expenditure actually incurred.

Cost may be determined on a first-in, first-out (FIFO), weighted average, or specific identification basis. The last-in, first-out (LIFO) basis is not acceptable for tax purposes. The method chosen must be applied consistently.

Provisions. Provisions that have not been approved by the tax authorities are generally not deductible. These include various provisions and allowances for asset impairment and risk reserves.

Tax depreciation. Depreciation of tangible assets is generally computed using the straight-line method. The following are minimum useful lives for various assets.

Asset	Years
Buildings and structures	20
Aircraft, trains, vessels, machinery, equipment and other production plants	10
Appliances, tools, furniture and other assets related to production and business operations	5
Means of transport other than aircraft, trains and vessels	4
Electronic equipment	3
Productive biological assets in the nature of trees	10
Productive biological assets in the nature of livestock	3
Acquired software (subject to approval)	2

Accelerated depreciation is allowed with respect to certain fixed assets subject to rapid technological obsolescence and fixed assets exposed to constant shock and erosion. A qualified company can follow either the general depreciation rule or the accelerated depreciation rule.

Effective from 1 January 2014, accelerated depreciation or a shortened depreciation life is available with respect to specific industries, research and development (R&D) projects, and fixed assets with a unit value not exceeding CNY5,000. Effective from 1 January 2015, accelerated depreciation or a shortened depreciation life applies to four newly added specific industries.

Intangible assets, including technical know-how, patents and trademarks, are amortized over the contractual term or over a period of no less than 10 years if a time period is not specified. Self-developed goodwill cannot be amortized or deducted. Acquired goodwill is deductible only if the entire business is transferred or liquidated.

Relief for losses. Tax losses may be carried forward for up to five years. Carrybacks are not allowed.

Groups of companies. In general, consolidated returns of enterprises are not allowed, and all companies must file separate tax returns, unless specifically approved by government authorities. Tax resident enterprises in China must adopt combined filing for units (branches and establishments without legal person status) operating in different areas of China. On approval by the relevant tax authorities, nonresident enterprises that have two or more establishments in China may select a main establishment to file a combined tax return.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT)	
Standard rate	17
Rate on specified products (primarily basic necessities), agricultural products and utility services	13
Nationwide VAT pilot reform, effective from 1 May 2016, with expanded scope to cover the construction industry, real estate industry, finance industry and lifestyle services industry (China Business Tax has been phased out)	
Leasing of tangible properties	17
Transportation services, postal services, basic telecommunication services, construction services, immovable property (operating and financial) leasing services, sales of immovable property and transfers of land rights	11
Modern services (including R&D and technology services, information and technology services, cultural and creative services, logistics auxiliary services, identification and consulting services, radio, film and television services, business supporting services and other modern services), value-added telecommunication services, financial services (including loan services, financial services with direct service charges, insurance services and trading of financial instruments), lifestyle services (including	

Nature of tax	Rate (%)
cultural and sports services, education and medical services, tourism and entertainment services, catering and accommodation services, residents, daily services and other life services) and sales of intangible assets	6
Other reduced rates (applicable to small-scale VAT payers or general VAT payers who choose to adopt the simplified computation method; a rate of 5% applies to the supply of certain services)	3/5
International transportation and space transportation services, cross-border VAT-payable supplies conducted by domestic entities or individuals that are consumed entirely outside China	0
Postal and collection and delivery services and insurance services provided for the exportation of goods, specified supplies of services and intangible assets that are provided to foreign entities and consumed entirely outside China, international transportation services provided by non-transport operating carriers (transportation operators that enter into transportation service agreements with their customers, charging freight and assuming carriers' responsibilities, and then subcontract the transportation services to real carriers that perform the transportation services for the customers), financial services with direct service charges provided between foreign entities that are not related to any goods, intangible assets or real estate in China	Exempt
(VAT previously paid on the purchase of raw materials, parts and taxable services that are used in the production of export goods or in the provision of certain export services is refundable; applicable refund rates depend on types of goods or services that are exported.)	
Consumption tax (CT); on the production and importation of certain luxury items, such as cigarettes, gasoline, alcoholic beverages, jewelry, high-end cosmetics (including high-end beauty and makeup cosmetics, high-end skin care cosmetics and cosmetics sets), motor vehicles, motor vehicle tires, golf balls and equipment, luxury watches and yachts	Various
Real property gains tax; imposed on real property transfers (after various deductions)	30 to 60
City construction tax; based on indirect taxes (including VAT and CT) actually paid	
Taxpayers located in urban areas	7
Taxpayers located in county or township areas	3
Taxpayers located in rural areas	1
Education surcharge (ES); based on indirect taxes (including VAT and CT) actually paid	3
Local education surcharge (LES); based on indirect taxes (including VAT and CT) actually paid	2

E. Miscellaneous matters

Foreign-exchange controls. In general, the Chinese government permits the free convertibility of current account items of China incorporated enterprises. Current account items are defined as transactions occurring daily that involve international receipts and payments. Current account foreign-exchange receipts and payments include trading receipts and payments, service receipts and payments, unilateral transfers and dividends paid from after-tax profits.

Recently, China has been relaxing its foreign-exchange controls in phases by permitting settlement in renminbi yuans (CNY) for cross-border trading transactions, including cross-border trades in commodities, services and other current account items, on a nationwide basis and then extending the CNY settlement to both inbound and outbound investments. Remittances of dividends to foreign investors and other items including income derived from share transfers, capital reductions, liquidations and early withdrawals of investments may be settled in renminbi yuans.

Remittances of dividends and profits. Remittances of after-tax profits or dividends to foreign investors in FIEs must be supported by written resolutions of the board of directors and audited financial statements, and may not be made until a tax clearance is issued by the tax authorities.

Remittances of interest and principal. Interest payments on foreign loans are considered current account items. In general, after performing a tax-record filing with the tax authorities, these payments may be made through the enterprise's special foreign-exchange bank account or through conversion at designated foreign-exchange banks.

Since 13 May 2013, enterprises are not required to submit any formal application to the State Administration for Foreign Exchange for the approval of principal repayments. In general, the enterprise may repay the principal from its special foreign-exchange bank account or through conversion at designated foreign-exchange banks.

Remittances of royalties and fees. Instead of applying for tax clearance for settling outbound payments that exceed USD50,000, effective from 1 September 2013, enterprises can file a record with the responsible state tax authorities by submitting copies of contracts (stamped by the official seal) together with registration forms before making payments of royalties and fees, either out of the enterprise's special foreign-exchange bank account or through currency conversion and payment at a designated foreign-exchange bank. With respect to royalties, the investor may determine and enjoy the treaty benefits when filing a tax return or making a withholding declaration through a withholding agent, and accept the subsequent post-filing administration from the in-charge tax authorities. Proper documentation (such as royalty agreements, invoices and other tax and business documents) is required for all payments of royalties and fees.

Debt-to-equity requirements. For FIEs in China, the following debt-to-equity ratios are applicable for the purpose of obtaining

foreign-currency loans from foreign parties (including foreign related parties) and meeting corporate law requirements:

- For investment projects of up to USD3 million, the capital contribution must equal or exceed 70% of the total investment.
- For investment projects of over USD3 million but not exceeding USD10 million, the minimum capital requirement is 50% of the total investment, but not less than USD2,100,000.
- For investment projects of over USD10 million but not exceeding USD30 million, the minimum capital requirement is 40% of the total investment, but not less than USD5 million.
- For investment projects in excess of USD30 million, the minimum capital requirement is 33.3% of the total investment, but not less than USD12 million.

The New Law provides for a separate set of debt-to-equity rules for tax purposes. Subject to certain exceptions, in general, the debt-to-equity ratio for financial institutions is 5:1 and the ratio for non-financial institutions is 2:1. The interest expense on funds loaned by a related party that exceed the maximum debt calculated under the debt-to-equity ratio is not deductible for tax purposes.

In addition, the deduction of expenses on a loan from an investor may be limited if the investor has not yet paid up its committed investment capital. The nondeductible interest expense is calculated by apportioning the total interest expenses based on the ratio of the outstanding capital commitment to the total loan balance.

Transfer pricing. China has introduced transfer-pricing rules under which all amounts paid or charged in business transactions between related parties must be determined based on an arm's-length standard. If the parties fail to meet this requirement, the tax bureau may make reasonable adjustments by using one of the following methods:

- Comparable uncontrolled price (CUP)
- Resale price method (RPM)
- Cost-plus method (CPM)
- Transactional net margin method (TNMM)
- Profit split method (PSM)
- Other methods that are consistent with the arm's-length principle

On 29 June 2016, the SAT issued SAT Notice [2016] No. 42 (Bulletin 42), replacing the following items of 2009's Implementation Measures for Special Tax Adjustments (Trial Version; Guoshuifa [2009] No. 2 (Circular 2):

- Chapter 2: Related-Party Transaction (RPT) Reporting
- Chapter 3: Documentation Requirements
- Article 74: Cost Sharing Agreements (CSAs) Documentation
- Article 89: Thin Capitalization Documentation

It also replaced the Annual RPT Forms of Enterprises of the People's Republic of China (Guoshuifa [2008] No. 114), governing RPT disclosure in annual income tax filings. The provisions in Bulletin 42 apply for the 2016 fiscal year and thereafter.

Chinese enterprises must disclose RPTs in RPT forms, which should be submitted to the in-charge tax bureau together with the annual tax return by the due date for the annual return (that is, before 31 May of the following year).

Bulletin 42 replaces Circular Guoshuifa [2008] No. 114 and introduces significant new disclosure requirements with respect to RPTs. The major changes introduced by Bulletin 42 are described below.

Additions to disclosure. Bulletin 42 increases the number of disclosure forms from 9 to 22, and the new required forms include the following:

- Reporting Entity Information Form
- Financial Assets Transaction Form
- Equity Investment Form
- CSA Form
- Overseas Related Party Information Form
- Financial Analysis Form of Annual Affiliated Transactions between Enterprises (unconsolidated)
- Financial Analysis Form of Annual Affiliated Transactions between Enterprises (consolidated)
- Three forms related to Country-by-Country Reporting (CBCR); the CBCR forms need to be completed in both Chinese and English)

Adjustments to disclosure requirements. Amended forms combine the previous Form 3 (Sales and Purchases), Form 5 (Transfer of Intangible Assets) and Form 6 (Transfer of Tangible Assets) into a form on Transfers of Ownership or Right to Use of Intangible or Tangible Assets.

The disclosure threshold is adjusted from 10% of the total transaction volume to the top five by transaction volume. The amended forms also reduce the items to be disclosed in Form 9 (Outbound Payment Form) from 17 disclosure items to 9 disclosure items.

Reductions in disclosure requirements. The previous Form 8 (Outbound Investment Form) is deleted.

Disclosures regarding corporate income tax withheld and preferential tax treatment from the previous Form 9 (Outbound Payment Form) are removed.

Disclosure requirements regarding the transfer-pricing policy are removed, as well as overseas unrelated-party names and relevant transaction volumes.

Documentation structure. Bulletin 42 adopts the three-tiered documentation structure set out in the final reports under Action 13 of the Organisation for Economic Co-operation and Development (OECD) Base Erosion Profit Shifting (BEPS) Action Plan.

CBCR (disclosed as part of the RPT Forms) consists of a master file and a local file. In addition, special item files are required for taxpayers entering or implementing CSAs or falling under the thin-capitalization requirements.

Taxpayers that meet the conditions outlined below need to prepare a master file and a local file.

A master file is required if annual RPTs exceed CNY1 billion, if any cross-border RPTs occur and the entity's ultimate parent already prepares a master file.

A local file is required if RPTs during the year meet any of the following conditions:

- Annual RPTs of physical goods exceed CNY200 million (in the case of toll manufacturing [toll manufacturing refers to an arrangement under which raw materials or component parts are mainly purchased in the name of a foreign principal for use by a Chinese manufacturer in the production of finished goods], the value is based on annual import and export prices for customs purposes)
- Annual RPTs involving the transfer of financial assets exceed CNY100 million
- Annual RPTs involving the transfer of rights to intangibles exceed CNY100 million
- Annual RPTs of other types (for example, related-party service transactions, royalties for use of intangibles and related-party financing transactions) in aggregate exceed CNY40 million

Taxpayers that only deal with domestic related parties can be exempted from preparing the master file, the local file and any special item file.

Local files and special item files are not required for RPTs that are covered under an Advance Pricing Agreement (APA). Furthermore, the amount of these covered transactions is not included when calculating local file thresholds.

Bulletin 42 provides that resident enterprises that meet one of the following criteria should submit CBCR:

- The resident enterprise is the ultimate holding company of the multinational enterprise group, and total revenue of all kinds from the last fiscal year's consolidated financial statement was over CNY5,500,000.
- The resident enterprise is designated to submit CBCR by the multinational enterprise group.

If multinational enterprises are required to prepare CBCR according to relevant provisions of other countries' laws, the Chinese tax authorities can ask for CBCR from the Chinese subsidiaries when undertaking a special tax investigation under the following circumstances:

- The multinational enterprise has not submitted a CBCR to any country.
- The multinational enterprise has submitted a CBCR to another country, but China has not established an Information Exchange Mechanism with the country.
- The multinational enterprise has submitted a CBCR to another country, and China has established an Information Exchange Mechanism with that country, but CBCR has not in fact been exchanged with China.

Bulletin 42 stipulates the deadline for the master file is 12 months after the close of the financial year of the ultimate parent company; the deadline for the local file and any special item file is 30 June of the year following the close of the taxpayer's year.

Bulletin 42 provides that contemporaneous documentation should be submitted to the tax authorities within 30 days on the request of the tax authorities.

Taxpayers may apply for APAs in China. An APA is an agreement between a taxpayer and one or more tax authorities regarding how transfer prices will be calculated in the future. Effective from 1 December 2016, SAT Bulletin Gonggao [2016] No. 64 (Bulletin 64) governs the administration of APAs in China. The APA process has the following six steps:

- Pre-filing meeting
- Intention discussion
- Analysis and evaluation
- Formal application
- Negotiation and conclusion of the arrangement
- Execution monitoring

In contrast to Circular 2, Bulletin 64 does not allow the pre-filing meeting to be anonymous and does not specify the time periods between each of the steps. It is noteworthy that extensive interactions between the taxpayer and the tax authorities occur well before the APA application is formally accepted. Taxpayers must be prepared to perform significant analysis and provide extensive documentation during the process.

Bulletin 64 makes numerous references to the analysis of the value chain and of Location Specific Advantages (LSAs), such as location savings and market premiums. This is in keeping with the contemporaneous documentation requirements that the SAT put in place under Bulletin 42. Bulletin 64 provides that the role of LSAs is one of the topics for discussion at pre-filing meetings. Both value-chain analysis and analysis of LSAs are required elements of the draft application materials submitted before the intention discussion.

Anti-avoidance rules. The general anti-avoidance rules (GAAR) apply to transactions if the transactions may be considered to have been undertaken or arranged primarily for other than bona fide purposes and if the sole and dominant purpose for a company to enter into such transactions was the obtaining of tax benefits. The Administration Measures of GAAR, which are procedural guidelines on the application of the GAAR, are effective from 1 February 2015.

Controlled foreign corporations. The New Law introduces controlled foreign corporation (CFC) rules, which are designed to counter income deferral strategies. A resident company that holds an interest in a CFC incorporated in a jurisdiction with an effective tax rate of lower than 12.5% may be taxed on its share of profits of the CFC, regardless of whether a dividend has been declared. A non-resident company is considered to be controlled by a China resident company if either of the following conditions is satisfied:

- The China resident company directly or indirectly holds 10% or more of the voting shares in the nonresident company and jointly holds an interest of 50% or more in the nonresident company.
- The China resident company exercises effective control over the nonresident company by means of shares, capital, business operations, purchases and sales or other mechanisms.

China has issued a white list showing jurisdictions that are not subject to CFC rules, including Australia, Canada, France, Germany, India, Italy, Japan, New Zealand, Norway, South Africa,

the United Kingdom and the United States. The CFC rules do not apply if one of the following conditions is satisfied:

- The CFC is located in one of the jurisdictions in the white list.
- The CFC carries out substantial and positive business activities.
- The CFC reports an annual profit of CNY5 million or less.

F. Treaty withholding tax rates

The following table provides Chinese withholding tax rates for dividends, interest and royalties paid from Mainland China to residents of various treaty countries and arrangement jurisdictions (Hong Kong and Macau SARs). The rates reflect the lower of the treaty rate and the rate under domestic law. The following table is for general guidance only.

	Dividends	Interest	Royalties

- (a) The 5% rate applies if the beneficial owner of the dividends is a company that holds directly at least 25% of the capital of the company paying the dividends. The 10% rate applies to other dividends.
- (b) The 5% rate applies if the beneficial owner of the dividends is a company that holds directly at least 10% of the capital of the company paying the dividends. The 10% rate applies to other dividends.
- (c) The 5% rate applies if the beneficial owner of the dividends is a company that holds directly at least 25% of the voting shares of the company paying the dividends. The 10% rate applies to other dividends.
- (d) The 7% rate applies if the beneficial owner of the dividends is a company that holds directly at least 25% of the voting shares of the company paying the dividends. The 10% rate applies to other dividends.
- (e) The 0% rate applies if the beneficial owner of the dividends is a company that holds directly or indirectly at least 50% of the capital of the company paying the dividends and that has invested more than EUR2 million in the capital of the company paying the dividends. The 5% rate applies if the beneficial owner of the dividends is a company that holds directly or indirectly at least 10% of the capital of the company paying the dividends and that has invested more than EUR100,000 in the capital of the company paying the dividends. The 10% rate applies to other dividends.
- (f) The 5% rate applies if the beneficial owner of the dividends is a company that, before the moment of the payment of the dividends, directly held for an uninterrupted period of at least 12 months at least 25% of the capital of the company paying the dividends. The 10% rate applies to other dividends.
- (g) The 5% rate applies to interest paid to banks. The 10% rate applies to other interest payments.
- (h) The 7% rate applies to interest paid to banks or financial institutions. The 10% rate applies to other interest payments.
- (i) Payments for the use of industrial, commercial or scientific equipment are taxed on the basis of 60% of the gross payments. Consequently, the effective rate for such payments is 6%.
- (j) Payments for the use of industrial, commercial or scientific equipment are taxed on the basis of 70% of the gross payments. Consequently, the effective rate for such payments is 7%.
- (k) The 7% rate applies to royalties paid for the use of, or the right to use, industrial, commercial and scientific equipment. The 10% rate applies to other royalties.
- (l) The 5% rate applies to royalties paid for technical or economic studies or for technical assistance. The 10% rate applies to royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works including cinematographic films, films or tapes for radio or television broadcasting, patents, trademarks, designs or models, plans, or secret formulas or processes, or for the use of, or the right to use, industrial, commercial or scientific experience.
- (m) China is honoring the Czechoslovakia treaty with respect to the Slovak Republic until a new treaty is signed.
- (n) After the partition of the former Yugoslavia, China is honoring the double tax treaty with the former Yugoslavia with respect to Bosnia and Herzegovina.
- (o) China entered into a treaty with the Federal Republic of Yugoslavia. It has been indicated that China considers Serbia to have inherited the Yugoslavia treaty and that China is also honoring the treaty with respect to Montenegro. However, it is suggested that taxpayers check with the relevant tax authorities before relying on this treaty.
- (p) The new treaty with Germany entered into force on 6 April 2016 and applies to income derived on or after 1 January 2017.
- (q) On 4 July 2016, China signed a new tax treaty with Romania, which has not yet been ratified.
- (r) The new protocol with Bahrain enters into force on 1 April 2016 and applies to income derived on or after 1 January 2017.

-
- (s) On 10 March 2014, the SAT released SAT Announcement [2014] No. 16, which announced that the new tax treaty with Ecuador and its protocol, which were signed on 21 January 2013, entered into force on 6 March 2014. The Ecuador treaty and its protocol apply to income derived on or after 1 January 2015. The withholding tax rates under the new treaty are reflected in the table. In addition, the protocol states that the term “interest” also includes other income treated as income from money lent by the tax law of the contracting state in which the income arises if the income is from some type of debt-claim. In the case of divergence of interpretation, the contracting states must resort to the mutual-agreement procedure.
 - (t) The 5% rate applies to royalties paid to aircraft and ship leasing businesses. The 7% rate applies to other royalties.
 - (u) The tax treaty with Chile enters into force on 8 August 2016 and applies to income derived on or after 1 January 2017.
 - (v) The 4% rate applies to interest paid to banks, insurance companies and other financial institutions. The 10% rate applies to other interest payments.
 - (w) The 2% rate applies to the royalties for the use of, or the right to use, industrial, commercial or scientific equipment. The 10% rate applies to other royalties.
 - (x) The new treaty with the Russian Federation entered into force on 9 April 2016 and applies to income derived on or after 1 January 2017.
 - (y) The 5% rate applies if the beneficial owner of the dividends is a company that holds directly at least 25% of the capital, valued at least EUR 80,000, of the company paying the dividends. The 10% rate applies to other dividends.
 - (z) The tax treaty with Zimbabwe entered into force on 29 September 2016 and applies to income derived on or after 1 January 2017.
 - (aa) The 2.5% rate applies if the beneficial owner of the dividends is a company that controls directly or indirectly at least 25% of the company paying the dividends. The 7.5% rate applies to dividends in all other cases.

China has signed tax treaties with Uganda (11 January 2012), Botswana (11 April 2012) and Cambodia (13 October 2016), but these treaties have not yet been ratified. On 25 August 2015, China signed a double tax agreement with Taiwan, which has not yet been ratified.

A. At a glance

Corporate Income Tax Rate (%)	34 (a)
Corporate Income Tax Surtax (%)	6 (b)
Capital Gains Tax Rate (%)	10
Branch Tax Rate (%)	34 (c)
Withholding Tax (%)	
Dividends	0/5/10 (d)
Interest	0/5/15 (e)
Royalties	
Software	26.4
Other	15
Technical Services, Technical Assistance and Consulting Services	15
Management and Direction (Overhead) Charges	15
Branch Remittance Tax	5 (f)
Net Operating Losses (Years)	
Carryback	0
Carryforward	12 (g)

- (a) The income tax rate for 2017 is 34%. It will be reduced to 33%, effective from 2018 (for details, see Section B).
- (b) The income tax surtax applies to taxable income in excess of COP800 million. The income tax surtax rate for 2017 is 6%. It will be reduced to 4% in 2018 and will not apply as of 2019 (for details, see Section B).
- (c) Branches and permanent establishments (PEs) are also subject to the income tax surtax on their taxable income in excess of COP800 million.
- (d) Dividends paid to nonresidents are subject to a 5% dividend withholding tax. In the case of dividends paid to individual residents, the dividend tax rate can be 0%, 5% or 10%, depending on the amount distributed. This dividend withholding tax applies only to the distributions of profits generated in 2017 and onward. In addition, if the dividends are paid to nonresidents out of profits that were not subject to tax at the corporate level, a 35% recapture tax applies; in this case, the dividend tax is applied to the amount of the distribution after it is reduced by the 35% tax. Dividends paid between domestic corporations are not subject to tax if the company generating the profits out of which the dividends are paid is taxed on these profits in Colombia. Otherwise, the dividends are subject to a 20% withholding tax, and the dividends must be included in the taxable income of the Colombian recipient of the dividends.
- (e) Interest paid or accrued on loans payable to foreign entities is generally subject to a 15% withholding tax. Interest paid on loans that have a term equal or greater than eight years and that are related to certain infrastructure projects are subject to a 5% withholding tax. Interest paid by Colombian financial institutions and interest paid by Colombian residents to foreign entities with respect to international trade operations are deemed to be foreign-source income and are accordingly exempt from withholding tax. Certain qualified loans executed before 31 December 2010 do not generate Colombian-source income. As a result, interest on such loans is exempt from withholding tax.

- (f) The remittances of profits out of a branch are subject to the same tax treatment as dividends. Consequently, if the distribution is made out of profits that were not subject to tax at the entity level, a 35% recapture tax applies; in this case, the dividend tax (5%) is applied to the amount of the distribution after it is reduced by the 35% tax.
- (g) For net operating losses generated until 2016, a grandfathering rule allows an unlimited carryforward.

B. Taxes on corporate income and gains

Corporate income tax. National corporations are taxed on worldwide income and capital gains. National corporations are corporations that have their principal domicile in Colombia or are organized under Colombian law or that during the respective tax year or period have their effective place of management in Colombia (holding board meetings in Colombia is not enough to qualify as a national company).

Foreign companies that obtain more than 80% of their income (other than passive income) in the jurisdiction of incorporation are not considered to have their effective place of management in Colombia. These companies are known as “80% Foreign Income Companies.” Foreign companies that have issued stock or bonds in the Colombian stock exchange or in a recognized foreign stock exchange are not considered to have their effective place of management in Colombia. The subsidiaries of such companies are also not considered to have their effective place of management in Colombia to the extent they are consolidated in the financial statements of its parent; however, such subsidiaries can elect to be treated as a national corporation unless they are 80% Foreign Income Companies.

Branches of foreign corporations and PEs are taxed on Colombian-source income and capital gains only. Attribution is based on domestic tax accounting records, which should be supported by an analysis of functions, assets, risks and personnel.

Corporate income tax rates. The standard corporate income tax rate is 34% for 2017 and 33% for 2018 and future years. In addition, an income tax surtax applies to taxable income in excess of COP800 million. The income tax surtax rate for 2017 is 6%. It will be reduced to 4% in 2018 and will not apply as of 2019.

Foreign companies receiving Colombian-source income that is not attributable to a branch office or PE and that is not fully taxable through withholding tax are subject to income tax at the above-mentioned rates.

A reduced corporate income tax rate of 20% applies to legal entities qualified as Industrial Users of Goods and/or Services in a free-trade zone. No surtax applies to these taxpayers. Commercial Users in a free-trade zone are subject to the general corporate income tax rate.

A special reduced rate of 9% applies to certain activities that in the past had some tax benefits or exemption, such as certain services in new or refurbished hotels, eco-tourism activities and some leasing agreements with respect to housing, as well as for publishers of scientific and cultural content.

Certain tax credits are available (see *Foreign tax relief*).

Capital gains. The following gains are considered capital gains, which are subject to tax at a rate of 10%:

- Gains on the transfer of fixed assets owned for more than two years
- Gains resulting from the receipt of liquidation proceeds of corporations in excess of capital contributed if the corporation existed for at least two years

Administration. The tax year is the calendar year.

Each year, the Colombian government sets the due dates for the filing of income tax returns and payment of taxes due. Tax payments are made in three installments between February and October for Larger Taxpayers (large corporations, according to conditions set by the tax authorities) and in two installments between April and June for other legal entities. Advance payments for the current tax year, which generally represent 20% of the income tax payable for the prior tax year after withholdings, must be made with these installments.

Interest on the late payment of taxes is accrued at the daily effective rate of usury certified by the Superintendency of Finance for the consumption credits, less two points. A penalty for late filing is levied on the amount of tax assessed in the corresponding tax return at a rate of 5% or 10% for each month or a fraction thereof. The penalty for late filing cannot exceed 100% or 200% of the difference of the tax to be paid or the balance in favor, depending on the timing of the filing. The penalty for amending a return may be 10% or 20% of the difference between the amount shown on the original tax return and the correct amount, depending on the timing of the amendment.

Under certain circumstances, the applicable tax penalty can be reduced.

Dividends. Distributions of dividends to nonresidents are subject to dividends tax at a rate of 5%. The dividends tax rate for resident individuals is 0%, 5% or 10%, depending on the amount of the distribution. No dividend tax applies to distributions to resident companies. The dividends tax applies to the distribution of profits generated in 2017 and future years.

In addition, if the dividend distribution is made out of profits that were not taxed at the entity level, the distribution to nonresidents is subject to a 35% withholding tax (recapture tax). In this case, the 5% dividends tax applies to the distributed amount after it is reduced by the 35% tax.

A 20% withholding tax is imposed on dividends paid to residents (including companies and individuals) out of profits not taxed at the corporate level if the taxpayer is required to file an income tax return.

If the profits subject to tax at the corporate level in a given year are higher than the commercial profits of that year, the difference can be carried back for two years or carried forward for five years to offset the profits of such periods, in order to reduce or eliminate the amount of the distribution subject to the 35% withholding tax (or the 20% withholding tax on payments to residents). This carryforward or carryback should not reduce the amount of

the distribution to nonresidents subject to the dividends tax of 5% (or the 5% or 10% dividends tax applicable for distributions to resident individuals).

Foreign tax relief. For national corporations and resident individuals, a credit for foreign taxes paid on foreign-source income is granted, up to the amount of Colombian corporate income tax payable on the foreign-source income.

An indirect tax credit is also granted for foreign taxes paid on income at the level of the foreign company that is distributing corresponding dividends to Colombian shareholders or quota holders. This tax credit equals the amount resulting from the application of the income tax rate of the foreign company to the amount of distributed dividends. If the foreign company distributing the dividends has received dividends from other companies domiciled in the same or other jurisdictions, the tax credit equals the amount resulting from the application of the income tax rate of the foreign company to the amount of the dividends received by the Colombian taxpayer. The sum of the direct tax credit and indirect tax credit may not exceed the corporate income tax payable in Colombia on such dividends.

To be entitled to the direct and indirect tax credit, the domestic taxpayer must prove that the corresponding tax was effectively paid in each relevant jurisdiction. In addition, for the indirect tax credit, the investments must be qualified as fixed assets for the taxpayer and possessed for a minimum of two years.

The tax credit may be claimed in the tax year in which the foreign tax is paid or in any of the following four years.

C. Determination of taxable income

General. Taxable income is determined in accordance with the following calculation: gross income, minus non-taxable income, returns, rebates and discounts, equals net income, minus costs and expenses, equals taxable income. In the first instance, such values must be determined in accordance with the Colombian generally accepted accounting principles, which generally follow International Financial Reporting Standards and are subject to several adjustments provided in the tax rules.

In general, to be deductible, expenses must be related to the activity that generates taxable income and must be proportional and necessary with respect to the productive activity of the taxpayer. Some limitations and prohibitions may apply to the deductibility of certain expenses.

Payments to entities resident outside Colombia are deductible if they meet the general rules above and, for expenses related to Colombian-source income, if the applicable withholding tax is paid. In general, if no withholding tax applies, the expenses are allowed as deductions, up to a maximum of 15% of the taxpayer's net income before taking into account all costs and expenses abroad not subject to Colombian withholding tax. Costs or expenses incurred abroad that are related to foreign-source income subject to income tax in Colombia are deductible if the general requirements are met, even if withholding tax is not imposed, and the 15% limitation mentioned above does not apply.

Royalty payments between related parties for the use of intangibles that were formed in Colombia and royalty payments related to the acquisition of finished goods are not deductible.

Interest and other financial expenses resulting from liabilities owed to foreign related companies are deductible if they comply with the transfer-pricing rules (see Section E) and thin-capitalization provisions.

Payments made to foreign related parties that comply with the transfer-pricing rules (see Section E) may be deductible even if no income tax withholding is required. However, the 15% limitation described above applies to such payments.

Management and direction (overhead) expenses are deductible for Colombian tax purposes if all of the following conditions are satisfied:

- They are related to services rendered.
- The withholding tax has been applied.
- They are supported by transfer-pricing studies.

Income generated from the following activities is exempt from income tax:

- Income received from another country in the Andean Community (Bolivia, Ecuador and Peru)
- Fluvial transportation services
- Certain new forest plantations
- Energy generated from wind and biomass sources, and agriculture disposal
- Construction and financing of low-income housing

Presumptive income. Under the Colombian tax law, the tax base for corporate income tax purposes is the higher of actual taxable income (see *General*) or minimum presumptive income, which is equal to 3.5% of the net equity as of 31 December of the preceding tax year. Certain assets may be excluded from this calculation, and certain taxpayers are not required to calculate presumptive income.

The amount of income tax payable after tax credits may not be less than 75% of the income tax determined under the presumptive income rules, before taking into account tax credits.

Inventories. Inventories are generally valued using the permanent or periodic inventory methods.

Provisions. Provisions are not allowed as deductions in determining taxable income, except for provisions for accounts receivables, which are subject to special tax rules.

Depreciation. Depreciation for tax purposes should follow the depreciation for accounting purposes. However, the annual depreciation rate for tax purposes cannot exceed certain percentages, depending on the type of asset.

If machinery and equipment are used daily in 16-hour shifts, the taxpayer may request an additional 25% on the depreciation rate. If the use exceeds 16 hours, proportional additional depreciation can be requested. Land is generally not depreciable or amortizable.

The balance of the assets pending to be depreciated as of 31 December 2016 should be depreciated under the old rules applicable before 2017.

Amortization. In general, amortization of ordinary and necessary investments used for the purposes of the business is allowed under certain requirements. The amortization of the investments should be made during the time that the related income is expected to be earned, but the amortization period may not be less than five years.

Advance payments should be amortizable as the prepaid services are received.

Identifiable intangibles can be generally amortized to the extent they have a useful limited life. Certain limitations on amortization may apply to identifiable intangibles acquired from related parties.

Goodwill is not amortizable.

Amortizable costs and expenses for the oil industry can be amortized using the units-of-production method. If investments in exploration are unsuccessful, the costs and expenses may be claimed as deductions in the year in which this is determined or in the following two years. Investments made between 2017 and 2027 with respect to the evaluation and exploration stages are amortizable using a five-year, straight-line method.

Assets and investments pending to be amortized as of 31 December 2016 should be amortized under the old rules applicable before 2017.

Relief for tax losses. Tax losses may be carried forward for 12 years. Tax losses generated up to 2016 can be carried forward with no time limitation.

Restrictions apply to the transfer of losses in mergers or spin-offs (tax-free events for the participating companies for Colombian tax purposes if certain requirements are observed). The surviving entity can offset losses originated in the merged entities, but only up to the percentage of the equity participation of the merged entity in the surviving entity's equity. Similar rules apply to spin-offs of companies.

The special treatment of tax losses in mergers and spin-offs applies only if the economic activity of the companies involved remains the same after the merger or spin-off occurs.

Tax losses generated do not affect the entity's presumptive income for the respective tax year.

Inflation adjustment. An optional tax readjustment of fixed assets may be applied. This readjustment is calculated by applying the percentage certified by the government for the adjustment of the tax unit. The readjustment affects the tax basis for the transfer of fixed assets, presumptive income and the determination of taxable net equity. Although the inflation adjustments were eliminated, the accumulated inflation adjustments can be depreciated.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax; imposed, unless expressly excluded by law, on sales of tangible assets and intangibles related to industrial property, on imports of movable tangible assets and on most services rendered in Colombia or from abroad to a Colombian recipient of the services	
General rate	19%
Basic products, such as coffee and wheat	5%
National consumption tax, imposed on, among others items, food services in restaurants, mobile phone services and certain cars; the tax paid is deductible for income tax purposes	4% to 16%
Wealth tax; applicable between 2015 and 2017 for companies; and between 2015 and 2018 for individuals; the tax is due if the net equity for tax purposes (gross equity less debts measured in tax terms) as of 1 January 2015 is equal or greater than COP1,000,000,000 (approximately USD300,000); the tax is also payable by foreign companies and individuals who have equity in Colombia, regardless of whether they file tax returns and pay other taxes in Colombia; the tax base is the net equity for tax purposes as of 1 January of each year; however, for 2016, 2017 and 2018, the tax base is the 2015 tax base increased or decreased by a percentage equal to 25% of the inflation of the preceding year; shares or quotas in Colombian companies are excluded from the tax base; other exclusions apply; the tax is neither deductible nor creditable; 2017 rates for companies, which vary according to the amount of net equity	
COP0 to COP2,000,000,000	0.05%
COP2,000,000,000 to COP3,000,000,000	0.10%
COP3,000,000,000 to COP5,000,000,000	0.20%
COP5,000,000,000 or more	0.40%
Industry and commerce tax; a municipal tax on annual or bimonthly net revenue (other tax periods may apply, depending on the jurisdiction); rates vary depending on the company's activity and municipality; tax effectively paid during the year is 100% deductible for income tax purposes	
Bogotá	0.414% to 1.38%
Municipalities other than Bogotá	0.2% to 1%
Signs and Posters Tax; imposed on enterprises with advertisements in public places; tax rate applied to the industry and commerce tax due; tax effectively paid during the year is 100% deductible for income tax purposes	15%

Nature of tax	Rate
Tax on Visible Advertisement Hoardings; imposed on each advertisement on hoardings or billboards with a size equal to or larger than 8 square meters (86,111 square feet); for the 2017 tax year, a minimum wage equals COP737,717 (approximately USD246)	5 minimum wages
Debit tax (financial transactions tax); imposed on the amount of each financial transaction, such as disposals of funds from savings accounts, current bank accounts and deposit accounts, which involve cash withdrawals by checks and through other mechanisms, and on the amount of certain accounting entries; tax effectively paid during the year is 50% deductible for income tax purposes	0.4%
Social security contributions and payroll taxes	
Pension (foreigners who remain in Colombia in accordance with an employment agreement may voluntarily enroll in the pensions system); contributions calculated on the monthly ordinary salary of the employee; if the monthly salary is more than 25 times the minimum wage, contributions to the social security regime are calculated on a maximum base of 25 minimum wages (COP18,442,925 [approximately USD6,150] per month); for employees earning integral (all-inclusive) salary, 70% of the salary is the base, but the maximum limit described above applies	
Employer	12%
Employee	4%
Health; contribution calculated on the monthly ordinary salary of the employee; subject to the same maximum limitation and integral salary rules as the pension contributions	
Employer	8.5%
Employee	4%
(Employers are not required to pay the 8.5% health contribution for employees earning less than 10 minimum legal wages [COP7,377,170; approximately USD2,460])	
Solidarity Fund; payable by employer on the monthly ordinary salary of the employee; contribution required only for employees who earn a monthly salary greater than 4 minimum wages (COP2,950,868 [approximately USD984]); subject to same maximum limitation and integral salary rules as pension contributions; rates vary according to the amount of monthly salary earned by employee	
Employees earning up to 16 minimum wages (COP11,803,472 [USD3,935])	1%

Nature of tax	Rate
Employees earning between 16 and 17 minimum wages (COP11,803,472 to COP12,541,189 [USD3,935 to USD4,180])	1.2%
Employees earning between 17 and 18 minimum wages (COP12,541,189 to COP13,278,906 [USD4,180 to USD4,426])	1.4%
Employees earning between 18 and 19 minimum wages (COP13,278,906 to COP14,016,623 [USD4,426 to USD4,672])	1.6%
Employees earning between 19 and 20 minimum wages (COP14,016,623 to COP14,754,340 [USD4,672 to USD4,918])	1.8%
Employees earning between 20 and 25 minimum wages (COP14,754,340 to COP18,442,925 [USD4,918 to USD6,148])	2%
Labor risk; payable by employer on monthly ordinary salary; rate depends on a legally established scale based on the degree of risk represented by the economic activity of the company; the Social Security office makes the classification at the time of enrollment; subject to same maximum limitation and integral salary rules as pension contributions	0.348% to 8.7%
Payroll taxes to National Learning Service (SENA), Colombian Family Welfare Institute (ICBF) and Family Compensation Fund; payable by employer on the monthly ordinary salary earned by the employee; no ceiling applies; subject to same integral salary rules as pension contributions; reduced and progressive rates apply to small businesses (Employers are not required to pay the SENA [2%] and ICBF [3%] contributions with respect to employees earning less than 10 minimum legal wages [COP7,377,170; approximately USD2,460]. However, for these employees, employers are still required to pay the Compensation Fund contribution [4%.])	9%
Custom duty, on Cost, Insurance, Freight (CIF) value; general rates	0% to 15%
Real estate tax; municipal tax imposed on the ownership of land or immovable property; tax rate is applied to the commercial value of the property; rate set by the municipality and varies according to the location and use of the property; the tax effectively paid during the tax year is 100% deductible for income tax purposes; general range of rates	0.4% to 3.5%

E. Miscellaneous matters

Foreign-exchange controls. A controlled exchange market and a free market exist. The controlled exchange market primarily covers foreign-trade operations (imports and exports of goods), external indebtedness, foreign investment in Colombia and Colombian investment abroad. Commercial banks and financial institutions administer the controlled exchange market.

Exchange operations that are not covered by the controlled market are conducted through the free market. These operations include the purchase of foreign currency that is used to open free-market bank accounts abroad.

Foreign investors may receive abroad, without limitation, annual profits derived from an investment that is registered with the Colombian Central Bank (Banco de la República de Colombia).

Effective from October 2011, Colombian residents may receive foreign loans from non-Colombian residents without any restriction. However, nonresident individuals are authorized to do so only under certain circumstances (for work capital and pre-financing of exports). Before October 2011, only financial institutions recognized as such by the Colombian Central Bank could lend money to Colombian residents.

Controlled foreign companies. The controlled foreign company (CFC) regime applies to Colombian tax residents (individuals or entities) that directly or indirectly hold an interest equal to or greater than 10% of the capital or of the profits of a foreign entity that is considered a CFC.

CFCs are corporations, as well as investment vehicles, such as trusts, collective-investment funds, and private interest foundations, which meet the conditions to be considered a related party for transfer-pricing purposes.

For income tax purposes, Colombian taxpayers should immediately recognize the net profits of the CFC derived from passive income, in proportion to their participation in the CFC's capital or profits, without the need to wait to receive a distribution of profits in Colombia.

Under this regime, passive income generally includes the following:

- Dividend and profit distributions from a company or investment vehicle
- Interest
- Income derived from the exploitation of intangibles
- Income originated from the sale of assets that generates passive income
- Income from the sale or lease of immovable property
- Income derived from the sale or purchase of tangible goods acquired from (or sold to) a related party if the manufacturing and consumption of the goods occurs in a jurisdiction different from the one in which the CFC is located or is tax resident
- Income from the performance of certain services in a jurisdiction different from the one in which the CFC is located or is tax resident

A Colombian tax resident that recognizes taxable income under the application of the CFC regime may request a tax credit for taxes paid abroad with respect to the passive income.

Dividends and benefits that are distributed by a CFC and that have been already taxed in Colombia, should be considered non-taxable income for the Colombian taxpayer.

Debt-to-equity rules. Interest paid on loans (with third parties or related parties) that in average exceeds a 3:1 debt-to-equity ratio is not deductible. For this purpose, the equity taken into account is the taxpayer's net equity for the preceding year, and the debt taken into account is debt that accrues interest.

Transfer pricing. The transfer-pricing regime includes several of the methods contained in the Organisation for Economic Co-operation and Development (OECD) rules. However, as a result of rulings of the Constitutional Court, the OECD guidelines may not be directly referred to for purposes of interpretation of the Colombian transfer-pricing rules and are considered auxiliary criteria for interpretation. Significant aspects of the transfer-pricing system in Colombia include the following:

- All events that create economic linkage are specifically mentioned in the tax code.
- The rules do not cover local operations between related companies established in Colombia, except for transactions between local entities and free-trade zone users.
- Parties that have gross equity exceeding 100,000 tax units as of the last day of the tax year or gross revenues for the year in excess of 61,000 tax units must prepare contemporaneous documentation and file transfer-pricing information returns. In addition, information regarding comparables must be sent to the tax authorities in electronic form.
- For supporting documentation purposes, transactions exceeding 32,000 tax units by type of transaction are subject to transfer-pricing analysis if the total amount of intercompany transactions exceeds 61,000 tax units. For financing transactions with related parties, the amount of the debt must be considered when determining the total transaction amount.
- Transactions with residents or those domiciled in tax havens are subject to transfer-pricing analysis if the total amount of such transactions exceeds 10,000 taxable units. The tax haven jurisdiction list was first issued in October 2013 and updated in October 2014.
- Penalties are imposed for not meeting filing requirements, submitting erroneous or incomplete reports or failing to meet other requirements.

Local transfer-pricing documentation must include a Master File with the multinational group's global relevant information.

In addition, for multinational groups with a Colombian parent entity, a Country-by-Country Report (CbCR) must be completed under the following circumstances:

- The parent is resident in Colombia.
- The parent has affiliates, subsidiaries, branches or PEs abroad.
- The parent is not a subsidiary of another entity resident abroad.
- The parent is required to prepare, submit and disclose consolidated financial statements.
- The parent has annual consolidated revenue equal to or exceeding 81 million tax units.

A non-Colombian parent can designate an entity resident in Colombia or a resident abroad with a PE in Colombia as the responsible party for providing the CbCR to the Colombian tax authority.

Anti-abuse rules. Under anti-abuse rules, tax abuse is defined as the use or implementation of a transaction or several transactions without apparent commercial or economic purpose and with the aim of obtaining a tax benefit.

The tax authority can recharacterize any abusive transaction. It is understood that a transaction has no commercial or economic purpose if the following circumstances exist:

- The transaction is developed in a way that is not economically or commercially reasonable.
- The transaction gives rise to a high tax benefit that is not in line with the economic or business risks assumed by the taxpayer.
- The legal agreement is not aligned with the real will of the parties.

F. Tax treaties

Colombia has entered into a multilateral tax treaty with Bolivia, Ecuador and Peru, which follows the source criteria. In addition, Colombia has double tax treaties in effect with Canada, Chile, the Czech Republic, India, Korea (South), Mexico, Portugal, Spain and Switzerland, which are based on the OECD model convention.

Colombia has entered into tax treaties covering certain international air transportation services with several countries, including Argentina, France, Germany, Italy, Panama, Turkey, the United States and Venezuela.

Colombia has also signed double tax treaties with France and the United Kingdom, which are not yet in effect.

The following table presents the withholding tax rates for dividends, interest and royalties under the Canada, Chile, Czech Republic, India, Korea (South), Mexico, Portugal, Spain and Switzerland treaties.

	Dividends %	Interest %	Royalties %
Canada	5/15	5/10	10
Chile	0/7/35 (a)	5/15	10
Czech Republic	5/15/25	0/10	10
India	5/15	0/5/10	10
Korea (South)	5/10/15	0/5/10	10
Mexico	0/33	5/10	10
Portugal	10/33	0/10	10
Spain	0/5/35 (a)	0/5/10	10
Switzerland	0/15	0/5/10	10
Non-treaty countries (b)	5/35	0/5/15	15/26.4 (c)

(a) Dividends that are not taxed at a corporate level are subject to a tax rate of 35% at the shareholder level. However, the 35% rate may be reduced if the dividends are exempt from income tax at the corporate level and are reinvested for a three-year term.

(b) For details regarding these rates, see Section A.

(c) The 26.4% rate applies to software.

A. At a glance

Corporate Income Tax Rate (%)	35 (a)
Capital Gains Tax Rate (%)	35
Branch Tax Rate (%)	35
Withholding Tax (%) (b)	
Dividends	20 (b)
Interest	20 (c)
Royalties	20 (d)
Services	14 (e)
Net Operating Losses (Years)	
Carryback	0
Carryforward	Unlimited (f)

- (a) The corporate income tax rate is 30% for mining companies.
- (b) The rate of dividend withholding tax for mining companies is 10%. A notional dividend withholding tax applies to branches. The rates of this tax are 8% for public limited liability companies and 10% for other limited liability companies.
- (c) Interest on loans abroad to mining companies is not subject to withholding tax.
- (d) The net amount of royalties is subject to tax. For this purpose, net royalties equal gross royalties minus professional expenses, or 30% of gross royalties (resulting in an effective tax rate of 14%).
- (e) This withholding tax applies to payments for services provided to Congolese companies by foreign companies and individuals without a permanent establishment in the Democratic Republic of Congo. The tax base is the gross amount of the applicable invoice.
- (f) See Section C.

B. Taxes on corporate income and gains

Corporate income tax. Congolese companies are taxed on the territoriality principle. As a result, companies carrying on a trade or business outside the Democratic Republic of Congo (DRC) are not taxed in the DRC on the related profits. Congolese companies are those registered in the DRC, regardless of the nationality of the shareholders or where the company is managed and controlled. Foreign companies (for example, branches) engaged in activities in the DRC are subject to Congolese corporate tax on Congolese-source profits only.

A company is considered to have a permanent establishment in the DRC if it satisfies either of the following conditions:

- It possesses a fixed or permanent place (for example, head office, branch office, factory, plant, workshop, or buying and selling counter).
- In the absence of such place, it carries out a professional activity under its corporate name for at least six months in the DRC.

Rates of corporate tax. The regular corporate income tax rate is 35%.

The minimum tax payable is 1% of the annual turnover for larger corporations.

For small corporations with annual revenues of less than CDF10 million, the corporate income tax is set at CDF50,000. For average-sized corporations with annual revenues between CDF10 million and CDF200 million, the corporate income tax rate is 1% of the annual revenue for sales of goods and 2% for the provision of services.

The corporate income tax rate is 30% for companies holding mining or quarry titles.

Capital gains. Increases resulting from capital gains and depreciation that are realized and either realized or expressed in the accounts or inventories are included in profits and are subject to tax at a rate of 35%.

Increases resulting from unrealized capital gains that are expressed in the accounts or inventories and that are not treated as profits are not yet taxable. This rule applies only if the taxpayer holds a regular accounting and if it fulfills its declarative obligations.

Increases resulting from realized capital gains on buildings, tools, materials and movable assets (regardless of whether they result from rent payments), as well as on participations and portfolios, are taxable to the extent that the sales price exceeds the acquisition price or cost. A deduction is made from the amount of the depreciation that has already been claimed for tax purposes.

Administration. The fiscal year extends from 1 January to 31 December. Tax returns must be filed by 30 April.

Corporate tax must be paid in two installments before 1 August and 1 December. Each installment must equal 40% of the preceding year's tax (increased by any tax reassessment received by the tax office during the current year). The balance of tax due must be paid by the following 30 April.

A penalty of 4% per month is assessed for late payment of tax. Tax is fixed automatically if a tax return is not filed.

Dividends. In general, dividends paid are subject to a 20% withholding tax. The rate of dividend withholding tax for mining companies is 10%. A notional dividend withholding tax applies to branches. The rates of this tax are 8% for public limited liability companies and 10% for other limited liability companies.

Foreign tax relief. In general, foreign tax credits are not allowed. Income subject to foreign tax that is not exempt from Congolese tax under the territoriality principle is taxable.

C. Determination of trading income

General. Taxable income is based on financial statements prepared in accordance with principles set by the Organization for the Harmonization of Business Law in Africa (Organisation pour l'Harmonisation en Afrique du Droit des Affaires, or OHADA) Accounting Act, except for banks and insurance companies. The net amount of income is taxed. This amount equals gross income minus business expenses incurred during the tax year to acquire and retain the income. Business expenses are generally deductible unless specifically excluded by law. The following expenses are not deductible:

- Head office, remuneration or management fees for services paid to nonresidents that are not justified
- Head office overhead or remuneration for certain services (studies and technical assistance) paid to nonresidents
- Expenditure of a personal nature, such as maintenance of household, appraisal fees, holidays and other expenses not necessary for the profession
- Corporate income tax, as well as real tax (tax on movable assets, tax on vehicles or tax on mining concessions), to the extent that the real tax does not constitute an operating expense
- All judicial or administrative fines, and fees and charges relating to breaches by income beneficiaries
- Certain specific charges, gifts, subsidies and penalties
- Directors' fees allocated under the Corporations Act to members of the General Council
- Expenditures on leased property, including depreciation of the property
- Provisions for losses, expenses or depreciation of assets, excluding provisions for the recovery of mineral deposits and provisions for the recovery of bank capital
- Commissions and brokerage fees if it cannot be proven that the tax on turnover (see Section D) has been paid for these items
- Most liberalities (payments that do not produce a compensatory benefit, such as excessive remuneration paid to a director)

Inventories. Inventories are normally valued at their historical cost or acquisition cost.

Provisions. In determining accounting profit, companies must implement certain provisions, such as a provision for risk of loss or for certain expenses. These provisions are not deductible for tax purposes. However, provisions for recovery of bank capital and provisions for the recovery of the mineral deposit are deductible for tax purposes.

Tax depreciation. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at rates specified by tax law. The following are some of the specified annual rates.

Asset	Rate (%)
Buildings	2 to 5
Office equipment	10
Motor vehicles	20 to 25
Plant and machinery	10

Companies can also opt for a regressive method for tax depreciation of specific assets with an annual rate of two to three times the straight-line rate.

Relief for tax losses. Tax losses incurred in a tax year may be carried forward indefinitely. However, the deduction of the available tax losses is capped at 60% of the annual taxable income.

Groups of companies. The DRC does not have a fiscal integration system equivalent to a consolidated filing position.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax	16
Payroll taxes	
Annual income not exceeding CDF22,956,000; progressive rates	0 to 40
Annual income exceeding CDF22,956,000; flat rate	30
Exceptional income tax for expatriates (IERE)	
Mining companies	10
Other companies	25
Social Security National Institute (Institut national de sécurité sociale, or INSS) contributions; payable monthly	
Employers	5
Employees	3.5
National Institute for Professional Preparation (Institut national de préparation professionnelle, or INPP); payable monthly by employers	1 to 3
National Agency for Labor (Office National de l'Emploi or ONEM); payable monthly by employers	0.2

E. Miscellaneous matters

Foreign-exchange controls. The currency in the DRC is the Congolese franc (CDF). The exchange rate is variable.

In the DRC, the Central Bank of Congo regulates foreign-exchange controls. It also supervises the regulation on the transfer of currency. Cash transfers from or into the DRC are not subject to restrictions if they do not exceed the equivalent of USD10,000. An exchange control fee of 0.2% is levied on payments to or from abroad.

Debt-to-equity rules. The DRC does not have any thin-capitalization rules, but several measures may apply to related-party transactions (see *Transfer pricing*).

Transfer pricing. The DRC has several measures applicable to related-party transactions that are not conducted on an arm's-length basis.

The 2014 Finance Law introduced tighter provisions for deductions with respect to cross-border transactions carried out with related parties.

These provisions include the disallowance of loan interest with respect to rates exceeding those offered on the international finance market (for example, the London Interbank Offered Rate [LIBOR]) and the repayment of principal beyond five years.

Management fees paid to a related party may be deducted from the corporate income tax base if the following conditions are satisfied:

- The services rendered can be clearly identified (that is, they are genuine services that are effectively rendered and directly related to operating activities).
- The services cannot be rendered by a local company (that is, overhead expenses recharged to the local entity are excluded).
- The amount paid for the services is not exaggerated in view of the nature of the services.

These arm's-length requirements are consistent with those set forth in the Mining Code.

The 2015 Finance Law introduced transfer-pricing documentation requirements. As a result, companies must put at the disposal of the tax administration during a tax audit, general and specific information on an affiliated group of companies (Master File and Local File), including the following:

- General description of the deployed activity, including changes that occurred during the year
- A general description of the legal or operational structures of the affiliated group of companies, including identification of the related companies engaged in transactions involving the company established in the DRC (local company)
- A general description of the function performed and risk assumed by the affiliated companies as soon as they affect the local company
- A list of the main intangible assets owned, including patents, trademarks, trade names and know-how, relating to the local company
- A general description of the group's transfer-pricing policy
- A description of transactions made with other affiliated companies, including the nature and amount of cash flows, such as royalties
- A listing of the cost-sharing agreement, copies of preliminary agreements related to transfer pricing that are concluded under the conditions of the regulation, and the prescription relating to the determination of transfer pricing, affecting the results of the local company
- Presentation of the method or methods for determining transfer pricing, in compliance with the arm's-length principle, including an analysis of the functions performed, assets used and risks

assumed, and an explanation concerning the selection and application of the methods used

- An analysis of comparative elements considered as relevant by the company if the selected method requires it.

In addition, the corporate income tax law disallows branches from deducting overhead charges incurred by the parent company and charged back to the branch.

F. Tax treaty

The DRC has entered into double tax treaties with Belgium and South Africa. The following are the withholding tax rates under the treaties.

	Dividends %	Interest %	Royalties %
Belgium	10/15 (a)	10	10
South Africa	5/15 (b)	10	10
Non-treaty countries (c)	20	20	20

- (a) The 10% rate applies if the Belgian recipient company was eligible under the Investment Code or another investment incentive and if it holds at least 25% of the capital of the payer. Otherwise, the rate is 15%.
- (b) The 5% rate applies if the South African recipient company holds at least 25% of the capital of the payer. Otherwise, the rate is 15%.
- (c) For further details, see Section A.

A. At a glance

Corporate Income Tax Rate (%)	30 (a)
Capital Gains Tax Rate (%)	30 (b)
Branch Tax Rate (%)	15 (c)
Withholding Tax (%)	
Dividends	15 (d)
Interest	20
Royalties from Patents, Know-how, etc.	20
Payments for Non-commercial Services and Activities	5

Revenues Earned by Certain Foreign Companies	7.7/20 (e)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	3

- (a) The minimum tax is 1% of turnover. The corporate income tax rate is 25% for agricultural companies.
- (b) In certain circumstances, the tax is deferred or reduced (see Section B).
- (c) The branch tax is calculated on the basis of the net profit decreased by the amount of the corporate income tax, to which a tax rebate of 30% is applied.
- (d) This tax also applies to directors' fees, nondeductible expenses and adjustments of profits following a tax examination. For directors' fees, the rate is 22%.
- (e) For details, see Section B.

B. Taxes on corporate income and gains

Corporate income tax. Congolese companies are taxed on the territoriality principle. As a result, Congolese companies carrying on a trade or business outside Congo are not taxed in Congo on the related profits. Congolese companies are those registered in Congo, regardless of the nationality of the shareholders or where the company is managed and controlled. Foreign companies engaged in activities in Congo are subject to Congolese corporate tax on Congolese-source profits only.

Tax rates. The regular corporate income tax rate is 30%.

The minimum tax payable is 1% of the annual turnover and cannot be less than XAF1 million (or XAF500,000 if turnover is less than XAF10 million a year). A 2% minimum tax is payable by companies that incur tax losses in two consecutive years. It appears that the 2% rate is applied to the sum of gross turnovers and products and benefits realized by the company in the most recent year in which it earned a profit. In general, the 2% tax is not deductible for corporate income tax purposes. However, in the company's first profit-making year after incurring the losses, one-half of the 2% tax is deductible.

The corporate income tax rate is 25% for agricultural companies, micro-finance companies and private educational institutions registered as companies.

The corporate income tax rate is 30% for mining companies and real estate companies.

The branch tax is imposed at a rate of 15%. It is calculated on the basis of the net profit decreased by the amount of the corporate income tax, to which a tax rebate of 30% is applied.

A withholding tax at a rate of 7.7% is imposed on the turnover of foreign companies without a registered branch in Congo that are engaged in legally authorized activities there. A 20% withholding tax is imposed on income sourced in Congo that is derived by foreign companies not engaged in activities in Congo.

Corporations may apply for various categories of priority status and corresponding tax exemptions. The priority status varies depending on the nature of the project and the level of investments.

The Charter of Investments may grant a tax exemption for a three-year period for new activities in industry, agriculture, forestry and mining. In addition, under the General Tax Code, a tax exemption for a two-year period may be granted for such new activities.

Capital gains. Capital gains are taxed at the regular corporate rate. The tax, however, can be deferred if the proceeds are used to acquire new fixed assets in Congo within three years or in the event of a merger.

If the business is totally or partially transferred (directly or indirectly) or discontinued, only one-half of the net capital gains is taxed if the event occurs less than five years after the start-up or purchase of the business, and only one-third of the gains is taxed if the event occurs five years or more after the business is begun or purchased. The total gain is taxed, however, if the business is not carried on in any form by any person.

Capital gains derived by natural or legal entities domiciled abroad on the sale of all or part of their shares in the capital of companies registered under Congolese law are subject to a special tax at a rate of 20%. This withholding tax is payable at the time of registration of the deed of assignment.

Administration. The fiscal year extends from 1 January to 31 December. Tax returns must be filed by 20 May.

Companies must pay the minimum tax between 10 March and 20 March, and corporate tax must be paid in four installments between the 10th and 20th days of February, May, August and November. Each installment must be equal to 20% of the preceding year's tax. The balance of tax due must be paid by the following 20 May.

A 50% penalty is assessed for late payment of tax.

Dividends. Dividends paid are subject to a 15% withholding tax. Resident corporations are taxed on the gross dividend; a corresponding 15% tax credit is available for double tax relief.

After three years, profits credited to the non-compulsory reserve are considered to be dividends and are accordingly subject to the 15% withholding tax on dividends.

A parent corporation may exclude the net dividends received from a Congolese or foreign subsidiary if the following conditions are satisfied:

- The parent company is a Congolese joint stock company or limited liability company that holds 30% or more of the capital of the subsidiary, which is also a joint stock company or limited liability company.
- The subsidiary carries on only industrial, agricultural, mining, forestry, large-scale fishing or stock-breeding activities.

No withholding credit is allowed if the net dividends are excluded.

A Congolese joint stock company or limited liability company may exclude 90% of the net dividends received from a joint stock company or limited liability company located in Congo or another Central African Economic and Monetary Community (CEMAC)

country if the parent company holds 25% or more of the capital of the payer of the dividends.

Foreign tax relief. In general, foreign tax credits are not allowed; income subject to foreign tax that is not exempt from Congolese tax under the territoriality principle is taxable net of the foreign tax. A tax treaty with France, however, provides a tax credit on dividends.

C. Determination of trading income

General. Taxable income is based on financial statements prepared according to generally accepted accounting principles and the standard statements of the Organization for Harmonization of Business Law in Africa (OHADA) treaty. The members of OHADA are Benin, Burkina Faso, Cameroon, Central African Republic, Chad, Comoros, Congo (Democratic Republic of), Congo (Republic of), Côte d'Ivoire, Equatorial Guinea, Gabon, Guinea, Guinea-Bissau, Mali, Niger, Senegal and Togo.

Business expenses are generally deductible unless specifically excluded by law. The following expenses are not deductible:

- Head office overhead or remuneration for services paid to non-residents that exceeds 20% of taxable income before the deduction of such items
- Head office fees or remuneration for certain services (studies and technical assistance) paid to nonresidents by companies engaged in building and public works, by engineering firms and by accounting firms, to the extent that the expenses exceed 2% of turnover
- Royalties from patents, brands, models or designs paid to a non-resident corporation participating in the management of, or owning shares in, the Congolese corporation
- Interest paid to a shareholder in excess of the central bank annual rate plus two points and, if the shareholder is in charge of management, interest on the portion of the loan exceeding one-half of the capital stock
- Commissions and brokerage fees exceeding 5% of purchased imports
- Certain specific charges, gifts, subsidies and penalties
- Most liberalities (payments that do not produce a compensatory benefit, such as excessive remuneration paid to a director)
- Corporate income tax

Inventories. Inventory is normally valued at the lower of cost or market value.

Provisions. In determining accounting profit, companies must establish certain provisions, such as a provision for a risk of loss or for certain expenses. These provisions are normally deductible for tax purposes if they provide for clearly specified losses or expenses that are likely to occur and if they appear in the financial statements and in a specific statement in the tax return.

Tax depreciation. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at rates specified by tax law. The following are some of the specified annual rates.

Asset	Rate (%)
Commercial and industrial buildings	5
Office equipment	15
Motor vehicles	20 to 33.33
Plant and machinery	10 to 33.33

Heavy new assets acquired for manufacturing, transformation, transport and handling qualify for a special depreciation allowance at a rate of 40% in the year of acquisition if all of the following conditions are satisfied:

- The assets are used only in industrial, forestry or agricultural activities.
- The assets can be used for a period exceeding three years.
- The total value of the assets exceeds XAF40 million.
- The assets will be intensively used.

Relief for tax losses. Losses may be carried forward for three years. Losses attributable to depreciation may be carried forward indefinitely, but they must be reported on the depreciation table. Losses may not be carried back.

Groups of companies. The Congolese tax law provides for a fiscal integration system and a fiscal regime for holding companies with tax exemptions, particularly with respect to capital gains, dividends and interest on loans.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax	18.9
Business activity tax (<i>patente</i>); calculated based on annual turnover according to sliding scale	0.040
Registration duties, on transfers of real property or businesses	4 to 10
Tax on salaries (TUS)	7.5
Social security contributions, on annual salaries; paid by	
Employer	
Family allowance contribution	10.035
Work accident insurance	2.25
Old-age pension	8
Employee	
Old-age pension	4

E. Miscellaneous matters

Foreign-exchange controls. The Congolese currency is the CFA franc BEAC (XAF). The fixed exchange rate for the CFA franc BEAC is XAF655,957 = EUR1.

Exchange-control regulations exist in Congo for financial transfers outside the franc CFA zone (XAF zone), which is the monetary zone including France and its former overseas colonies.

Transfer pricing. The Congolese tax law contains the transfer-pricing measures described below.

Amounts paid by a Congolese company to a company or a group of companies located outside Congo are considered indirect transfers or profits if the payer is dependent *de jure* or *de facto* on the recipient of the payments and if the tax authorities establish that the payments are excessive or unjustified. This measure applies to certain transactions, including the following:

- Overcharges for purchases
- Payments of excessive royalties
- Loans that are interest-free or have unjustifiable rates
- Discounts of debts
- Advantages granted out of proportion with the benefit provided by a service provider

Payments for the use of patents, marks, drawings and models, interest payments and payments for services made by a Congolese company to a nonresident company located in a country with low or no taxation, are considered indirect transfers of benefits unless the Congolese company proves that the payments correspond to real operations and that they are not excessive.

F. Treaty withholding tax rates

The withholding rates under a treaty with France are listed in the following table.

	Dividends	Interest	Royalties
	%	%	%
France	15	0 *	15
Non-treaty countries	15	20	20

* Interest is subject to tax in the recipient's country. Withholding tax is not imposed in the country of source.

- (a) The 30% rate is reduced to 10% or 20% for companies whose annual gross income does not exceed specified amounts (see Section B).
- (b) See Section B.
- (c) This withholding tax applies to dividends paid to non-domiciled business entities and to domiciled and non-domiciled individuals (see Section B). The withholding tax is considered a final tax.
- (d) This is a final withholding tax that is imposed on non-domiciled companies and non-domiciled individuals.
- (e) For detail regarding interest withholding tax, see Section B.
- (f) Non-domiciled companies engaged in these types of activities through a permanent establishment in Costa Rica that do not comply with requirements to report income or to file an income tax return may be subject to an imputed amount of taxable income equivalent to 15% of their total gross income derived in Costa Rica. Imputed taxable income is subject to the ordinary corporate income tax rate. For further details, see Section C.
- (g) Resolution DGT-R-036-2014 established a 2% withholding requirement for debit or credit card payments processed by financial institutions in Costa Rica. The amounts withheld by the financial institutions are treated as advance payments of the recipient's final income tax liability. The 2% withholding requirement applies only to 88% of the amount of the transaction made with a debit or credit card. The following persons are exempted from this withholding requirement:

- Entities not subject to income tax
 - Companies under the simplified tax regime
 - Transporters of persons or goods
 - Gas stations
 - Taxpayers engaged in agricultural activities that do not have an obligation to make partial income tax payments
 - Taxpayers that generally do not have an obligation to make partial income tax payments
- (h) Resolution DGT-R-35-2014 established that financial entities must withhold 2% on payments made for “professional services” used during the formalization process for financial products.
- (i) Industrial companies may carry forward net operating losses incurred in the first five years of operations for five years. They may carry forward net operating losses incurred in subsequent years for three years. Agricultural companies may carry forward net operating losses for five years.

B. Taxes on corporate income and gains

Corporate income tax. The Costa Rican tax system is a territorial regime; consequently, income derived from Costa Rican sources is subject to tax.

Corporate income tax rates. The corporate tax rate for the 2017 fiscal year is 30% for resident and nonresident companies. However, companies with annual gross income of up to CRC52,634,000 (approximately USD93,714) are subject to an income tax rate of 10%. Companies with annual gross income between CRC52,634,001 and CRC105,872,000 (approximately USD188,505) are subject to an income tax rate of 20%. These tax brackets are adjusted annually.

Companies operating under the Free Trade Zone Regime that are located in the Great Extended Metropolitan Area (GEMA) benefit from an income tax exemption of 100% for the first eight years and of 50% for the next four years. Companies located outside the GEMA benefit from an income tax exemption of 100% for the first 12 years and of 50% for the next 6 years. The Ministry of National Planning and Economic Policy specifies which areas are considered part of the GEMA.

On 13 July 2007, the World Trade Organization Committee on Subsidies and Countervailing Measures agreed to adopt the text of a draft decision of the General Council to continue procedures for the extension until 2015 of the transition period for the elimination of the export subsidy programs of 19 developing countries, including Costa Rica. Based on the above action and to comply with Costa Rica’s commitments as a member of the World Trade Organization, on 22 January 2010, the executive branch of the Costa Rican government published Law 8794, which amends and adds certain sections to the Free Trade Zone Regime Law No. 7210. This law created a new category of companies that can apply for the Free Trade Zone Regime. This category is for companies that produce or process goods, regardless of whether the goods are for exportation. Companies in this category are subject to income tax at reduced rates (0%, 5%, 6% or 15%) for a specified number of years depending on whether the company is located inside or outside the GEMA or depending on the amount of the investment.

Capital gains. Capital gains are taxable and capital losses are deductible if they result from the transfer of depreciable assets or from the transfer of non-depreciable assets in the ordinary course of a trade or business. Taxable capital gains are treated as ordinary

income and are subject to tax at the normal corporate income tax rate.

Administration. The statutory tax year runs from 1 October through 30 September. Companies must file annual corporate income tax returns and pay any tax due within 2 months and 15 days after the end of the tax year. Some entities may request to use the calendar year as their tax year (for example, subsidiaries of foreign companies).

The current year tax liability must be paid in quarterly installment payments, which are based on the preceding year's income tax paid or the average of the last three years' tax liability, whichever is higher. If a company did not file a return for the last three years, the installment payments are calculated based on the tax liability from the last year a return was filed. New companies must make quarterly payments based on their first-year projected income, which must be reported to the tax authorities on or before the last day of January. If no projected income is reported, the tax authorities determine the quarterly tax payments based on an imputed income amount.

Companies defined by the tax authorities as National Large Taxpayers or Large Territorial Companies must file audited financial statements on request from the tax authorities. The audited financial statements must be submitted within three months after the request of the tax authorities. The period to respond may be extended by three months if approved by the tax authorities.

In addition, Resolution No. DGT-R-30-2014 requires National Large Taxpayers to update their relevant tax information using a web-based platform called AMPO within 10 business days after information changes. Taxpayers that become classified as National Large Taxpayers must submit the tax information within 15 days after being notified of their National Large Taxpayer status by the tax authorities. The relevant tax information to be provided includes, among other items, the following:

- Agencies
- Branches or commercial premises
- Mergers
- Royalty payments for the use of intangible assets
- Equity participation in other entities
- Participations in economic groups

Dividends. Dividends paid between resident corporations, limited liability companies and partnerships with stock are not taxable. A 15% withholding tax is imposed on dividends paid to domiciled and non-domiciled individuals or to non-domiciled business entities. If the shares on which dividends are paid were purchased through a local stock exchange, the withholding tax rate is reduced to 5%. Distributions by companies of their own shares are not taxable. Under the Income Tax Law, domiciled companies include companies incorporated in Costa Rica and companies that have a permanent establishment in Costa Rica.

Interest. Interest, commissions, financial expenses and lease payments of capital assets paid to non-domiciled individuals or legal entities are subject to a 15% withholding tax rate. Interest, commissions, financial expenses and lease payments for capital assets

paid to foreign banks that are part of a Costa Rican financial group or conglomerate regulated by the Costa Rican Financial System (Consejo Nacional de Supervisión del Sistema Financiero, or CONASIFF) are subject to a withholding tax rate of 5.5% during the first year of application of a law that entered into force on 27 November 2014, 9% during the second year, 13% during the third year and 15% beginning with the fourth year. Interest, commissions and financial expenses paid by entities regulated by the Superintendence of Financial Entities (Superintendencia General de Entidades Financieras, or SUGEF) to foreign entities that are also regulated and supervised in their jurisdictions are subject to a 5.5% withholding tax rate. An exemption applies to interest, commissions and financial expenses paid to multilateral development banks and other institutions of multilateral or bilateral development, as well to other nonprofit entities that are not subject to tax.

Foreign tax relief. The current position of the tax authorities is that Costa Rican taxpayers cannot deduct foreign taxes paid abroad in calculating their taxable income.

C. Determination of trading income

General. Income tax is determined in accordance with International Accounting Standards (IAS), subject to adjustments required under the Costa Rican Income Tax Law and general resolutions issued by the tax authorities. Taxable income includes all income derived from Costa Rican sources, such as income from industrial, agricultural and trade activities in Costa Rica, income from services rendered in Costa Rica and income derived from real estate transactions, assets, capital, goods and rights invested or used in Costa Rica.

Imputed income. The tax authorities may assess imputed income in the cases described below.

Non-domiciled companies that do not file tax returns. Non-domiciled companies engaged in certain types of activities in Costa Rica through a permanent establishment that do not comply with requirements to report income or file income tax returns are subject to an imputed income assessment equal to a specified percentage of their Costa Rican gross income, unless they provide evidence of a lower amount of actual income. For example, documentation supporting an allocation of income between Costa Rica and other countries would prove that all income is not Costa Rican source. The amount of the imputed income assessment is subject to tax at the normal income tax rate. The following are some of the presumed amounts of taxable income:

- Transport and telecommunications: 15% of gross income
- Reinsurance: 10.5% of the net value of the reinsurance undertakings, guarantees and premiums of any type
- Media, cinema and international news: 30% of gross income

Airlines, maritime shipping and transportation companies. Airlines, maritime shipping and transportation companies may enter into an agreement with the tax authorities to compute Costa Rican taxable income using a special formula based on the company's worldwide and local revenues.

Loan and financing transactions. Unless the taxpayer provides evidence to the contrary, loan and financing transactions are

deemed to derive a minimum amount of interest based on the highest active interest rate fixed by the Banco Central de Costa Rica (central bank) for lending and financial transactions or, if this rate is not available, on the average market rate being charged in the Costa Rican banking system. The tax authorities do not allow any exceptions to this rule unless the parties entered into a formal written loan or financing agreement.

Inventories. The Costa Rican Income Tax Regulations provide that acquisition cost must be used to record assets. The acquisition cost may be computed using several valuation methods, such as the first-in, first-out (FIFO) and weighted average cost methods. The tax authorities eliminated last-in, first-out (LIFO) as a valid inventory valuation method for tax purposes as of 3 February 2015.

Provisions. In general, provisions, including provisions for contingent liabilities such as doubtful accounts and severance pay, are not deductible expenses. However, actual payments of such liabilities are considered to be deductible expenses.

Tax depreciation. Depreciation may be computed using the straight-line or the sum-of-years' digits method. The tax authorities may allow a special accelerated depreciation method in certain cases. The tax authorities may authorize other methods based on the type of asset or business activity. The method chosen must be applied consistently. Depreciation is computed based on the useful life of the asset as specified in the Income Tax Regulations. The following are some of the straight-line rates.

Asset	Rate (%)
Buildings	2/4/6
Plant and machinery	7/10/15
Vehicles	10/15/34
Furniture and office equipment	10
Tools	10

Relief for losses. Industrial companies may carry forward net operating losses incurred in their first five years of operation for five years and they may carry forward net operating losses incurred in subsequent years for three years. Agricultural companies may carry forward net operating losses for five years. Net operating losses may not be carried back.

Groups of companies. Costa Rican law does not allow the filing of consolidated income tax returns or provide any other tax relief to consolidated groups of companies.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Sales tax	13%
Real estate transfer tax; the definition of "transfer" includes indirect transfers in addition to direct transfers of immovable property; indirect transfers are the transfer of control over the legal owner of immovable property	1.5%
Vehicle transfer tax	2.5%

Nature of tax	Rate
Customs duties	
Agricultural products; average rate	12.72%
Industrial products; average rate	4.69%
Certain raw materials and machinery and equipment (Certain specified goods and merchandise are subject to higher rates of customs duty.)	0
Real estate tax (assessed and collected by the municipalities)	0.25%
Payroll taxes; withheld by employers; paid by employee; rate depends on compensation level	0%/10%/15%
Social security contributions	
Employer	26.33%
Employee	9.34%
Municipal taxes (varies by municipality)	Various
Solidarity Tax for the Strengthening of Housing Programs; (Solidarity Tax) contained in Law No. 8683; effective from 1 October 2009 through 1 October 2019; purpose of the tax is to finance public housing programs; tax applicable to residential property that is used habitually or occasionally or for recreational purposes, that the taxpayer owns or has the right to use and that is located in Costa Rica; taxpayers are subject to the tax if the value of the infrastructure (permanent structures, such as houses, swimming pools and parking lots) exceeds CRC126 million (approximately USD224,343); the value of the infrastructure must be updated every 3 years during the first 15 calendar days of the corresponding tax year in accordance with the parameters established by the tax authorities; if the taxpayer is subject to the tax (that is, meets value threshold for the infrastructure) the tax base is computed as the total value of the infrastructure (not just the excess of CRC126 million) plus the value of the land as of 1 January, based on a specific zoning model determined by tax authorities; hotel businesses may be subject to the tax depending on their operating model and the type of infrastructure; the tax is paid annually and is due on 15 January of the current tax year (for example, for a fiscal year-end of 31 December 2016, the tax is due by 15 January 2017); Solidarity Tax is independent from the other real estate taxes and is not deductible for income tax purposes; the tax rates are progressive	0.25% to 0.55%

E. Foreign-exchange controls

The currency in Costa Rica is the colón (CRC). As of 10 November 2016, the exchange rate of the colón against the US dollar was CRC561.64 = USD1.

No restrictions are imposed on foreign-trade operations or foreign-currency transactions.

F. Tax treaties

Costa Rica has entered into income tax treaties with Germany and Spain.

The tax treaty with Spain took effect on 1 January 2011. The tax treaty with Germany is effective from 1 January 2017 for withholding taxes. It is effective for other taxes for tax periods beginning on or after 1 January 2017.

Costa Rica signed an income tax treaty with Mexico on 12 April 2014. It will enter into effect after both countries complete their respective legislative approval processes.

The following are the withholding tax rates under Costa Rica's tax treaties with Germany and Spain.

	Dividends	Interest	Royalties
	%	%	%
Germany	5/15 (a)	5 (b)	10
Spain	5/12 (a)	5/10 (c)	10
Non-treaty countries (d)	15	15	25

- (a) The 5% rate applies if the beneficial owner of the dividends is a company that owns directly at least 20% of the capital of the entity paying the dividends.
- (b) Interest paid from Germany to the Costa Rican government is exempt from German taxes. Interest paid from Costa Rica under a loan guaranteed by Germany for exportation or foreign direct investment or paid to the German government, the Deutsche Bundesbank, the Kreditanstalt für Wiederaufbau or the Deutsche Investitions-und Entwicklungsgesellschaft is exempt from Costa Rican taxes. Interest can only be taxed in the contracting state of which the recipient is a resident if the interest is paid in connection with any of the following:
- The sale of commercial or scientific equipment on credit
 - The sale of goods by an enterprise to another enterprise on credit
 - A loan of any type made by a bank resident in one of the contracting states
- (c) The 5% rate applies if the term of the loan agreement under which the interest is derived is five years or longer.
- (d) For further details, see Section A.

A. At a glance

Corporate Income Tax Rate (%)	25 (a)
Capital Gains Tax Rate (%)	25 (b)
Branch Tax Rate (%)	25 (a)
Withholding Tax (%)	
Dividends	2/10/15 (c)
Directors' Fees and Nondeductible Expenses	12
Interest	18 (d)
Royalties from Patents, Know-how, etc.	20
Payments for Services	20 (e)
Branch Remittance Tax	7.5 (f)
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

(a) For details concerning the minimum tax, see Section B.

(b) See Section B.

(c) For details concerning these rates, see Section B.

- (d) The withholding tax rate is 6.75%, 8.25%, 13.5% or 16.5% in certain cases if the income is received through a bank or if the income is deposited by a holding company. The withholding rate on "lots" (exceptionally high bond discounts given only for certain specified bonds selected at random) is 25%. The withholding tax is imposed on the amount of the discount.
- (e) This withholding tax applies to payments by resident companies for services rendered by nonresidents who do not maintain a professional office in Côte d'Ivoire. For premiums paid to nonresident reinsurance companies, the rate is 12.5%.
- (f) On one-half of the before-tax profit (18% if the profit is exempt from corporate tax). See Section B.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are taxed on the territoriality principle. As a result, companies carrying on a trade or business outside Côte d'Ivoire are not taxed in Côte d'Ivoire on the related profits. Resident companies are those registered in Côte d'Ivoire, regardless of the nationality of the shareholders or where they are managed and controlled. Foreign companies with activities in Côte d'Ivoire are subject to corporate tax on local-source profits if they have a permanent establishment in Côte d'Ivoire.

Tax rates. The regular corporate income tax rate is 25%.

The minimum tax is 0.5% of turnover. For oil-producing, electricity and water-producing companies, the rate is reduced to 0.1%. The rate is reduced to 0.15% for banks and financial companies and for insurance companies. The minimum tax may not be less than XOF3 million or more than XOF35 million. New corporations are exempt from the minimum tax for their first fiscal year, and mining companies are exempt from the minimum tax during the exploration phase.

Profits realized in Côte d'Ivoire by branches of foreign companies are deemed to be distributed and therefore are subject to a branch withholding tax on one-half of the before-tax profit at a rate of 15% (effective rate of 7.5%).

Corporations may apply for various categories of priority status and corresponding tax exemptions. Priority status varies depending on the nature of the project and the level of investments. Corporate tax reductions and temporary tax exemptions are granted to new industrial businesses for investments in industrial buildings and building sites, land for development, and industrial and agricultural establishments.

Capital gains. Capital gains are taxed at the regular corporate rate. The tax, however, can be deferred if the proceeds are used to acquire new fixed assets in Côte d'Ivoire within three years or in the event of a merger (or other acquisition).

If the business is totally or partially transferred or discontinued, only one-half of the net capital gain is taxed if the event occurs less than five years after the start-up or purchase of the business, and only one-third of the gain is taxed if the event occurs five years or more after the business is begun or purchased.

The total gain is taxed, however, if the business is not carried on in any form by any person.

Capital gains derived by holding companies are exempt or are taxed at a rate of 12% if certain conditions are satisfied.

Administration. The financial year is from 1 January to 31 December. Corporate financial statements and corporate results must be filed by 15 April of the year following the financial year.

Companies must pay corporate income tax in three equal installments, which are due on 15 April, 15 June and 15 September of the year following the financial year.

Most companies must provide an audited financial statement to the tax authorities.

The tax center with which taxpayers must file tax returns depends on the company's turnover. The following are the relevant rules:

- Taxpayers with annual turnover below XOF400 million must file with their local tax center.
- Taxpayers with turnover ranging from XOF400 million to XOF3 billion must file with the medium-sized enterprises center (CME).
- Taxpayers with turnover exceeding XOF3 billion must file with the large corporation tax center (DGE).

Companies must use a unified tax form to file their tax return. This tax return includes in one form all of the taxes to which the company is subject. The deadline to file the unified tax return for companies reporting to the CME or DGE depends on the company's industry. The following are the deadlines:

- Manufacturing, oil and mining companies: 10 April
- Commercial companies: 15 April
- Service companies: 20 April

Late payments are subject to a penalty of 5% for the first month, plus 0.5% for each additional month or part of a month.

Late submissions of financial statements are subject to a penalty of XOF1 million plus XOF100,000 for each month or part of a month of the delay.

If the lateness of a submission exceeds three months, the penalty is XOF2 million plus XOF200,000 for each month or part of a month of the delay.

Dividends. Dividends paid by listed companies out of profits taxed at the 25% corporate tax rate are subject to a 10% withholding tax. A 15% withholding tax is imposed on dividends paid by other companies out of profits taxed at the 25% corporate tax rate. A special withholding tax rate of 2% applies to certain types of bonds issued in Côte d'Ivoire.

A parent company may exclude up to 95% of dividends received from a 10%-owned subsidiary (regime of holding companies and subsidiaries). If less than a 10% interest is held, a listed company may exclude 90% of the dividends received while an unlisted company may exclude 50%.

Foreign tax relief. In general, foreign tax credits are not allowed; income subject to foreign tax that is not exempt from tax in Côte d'Ivoire under the territoriality principle is taxable, net of the foreign tax. However, a tax treaty may provide for a tax credit.

C. Determination of trading income

General. Taxable income is based on financial statements prepared according to the Accounting System of the Organization for African Business Law Harmonization. Business expenses are generally deductible unless specifically excluded by law. The following expenses are not deductible:

- Gifts (except those granted to certain associations engaged in social, sporting, scientific or cultural development)
- Most liberalities (payments that do not produce a compensatory benefit, such as excessive remuneration paid to a director)
- Subsidies
- Corporate tax
- Penalties

Services fees and royalties paid by Ivorian companies to resident and nonresident parent companies are deductible if the following conditions are satisfied:

- The payer proves that the payments are related to real operations and that the amount of the payments is normal.
- The amount of the payments does not exceed 5% of the turnover and 20% of the overhead of the payer.

Payments to resident companies are also subject to the same two conditions mentioned above.

Under certain tax treaties of Côte d'Ivoire, amounts paid to nonresident companies are deductible for tax purposes based on the same conditions as those applicable to payments to resident companies. Even if such treaties apply, the payer must satisfy the two conditions mentioned above in order to deduct the payments.

The deduction of services fees and royalties paid by resident companies to other resident companies is subject to the second condition mentioned above (5% of the turnover and 20% of the overhead). As a result, the non-discrimination clause provided for by certain tax treaties does not apply, and services fees and royalties paid by resident companies to nonresident companies are deductible under the conditions mentioned above.

Inventories. Inventory is normally valued at the lower of cost or market value. Cost must be determined on a weighted average cost price method. A first-in, first-out (FIFO) basis is also generally acceptable.

Provisions. In determining accounting profit, companies must establish certain provisions, such as a provision for a risk of loss or for certain expenses. These provisions are normally deductible for tax purposes if they provide for clearly specified losses or expenses that are probably going to occur and if they appear in the financial statements and in a specific statement in the tax return.

Capital allowances. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at the following rates.

Asset	Rate (%)
Buildings	5
Light construction	10
Loud machinery	10

Asset	Rate (%)
Stationary machinery	20
Fixtures	10
Office and home chattels	10
Office equipment	20 to 25
Motor vehicles	33.33
Other specified vehicles and engines	20 to 25
Computers and software	20 to 50

Relief for tax losses. Losses may be carried forward five years. Losses attributable to depreciation may be carried forward indefinitely. Losses may not be carried back.

Groups of companies. The law does not contain any provision for the fiscal integration of related companies equivalent to a consolidated filing position. However, a parent-subsidiary tax regime exempts dividends and capital gains from tax under certain conditions.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT), on goods and services sold in Côte d'Ivoire	18
Turnover tax (tax on banking operations), on interest paid to and services rendered by banks and financial companies	10
Special tax on equipment; based on turnover; applicable to all companies	0.1
Business activity tax (<i>patente</i>), based on the turnover and the rental value of tangible assets	Various
Withholding tax, on amounts invoiced by importers, producers and sellers to persons subject to commercial or agriculture tax (entitles the buyer to a credit against withholding tax or VAT payable on its sales)	Various
Registration duties, on transfers of real property or businesses	1 to 10
Special tax on subcontractors of petroleum companies; a global tax including income tax, payroll taxes, a tax on shares, a national solidarity tax and an insurance tax; on taxable turnover	5.786
Payroll tax, paid by employers on salaries of	
Employees from Côte d'Ivoire	2.8
Expatriates	12
Social security contributions	
Retirement, on monthly salaries up to XOF1,647,315; paid by	
Employer	7.7
Employee	6.3
Family allowances, on monthly salaries up to XOF70,000; paid by employer	5.75
Industrial injuries, on monthly salaries up to XOF70,000; paid by employer	2 to 5

E. Miscellaneous matters

Foreign-exchange controls. Exchange control regulations apply to financial transfers outside the franc zone, which is a monetary zone including France and its former overseas colonies.

Transfer pricing. Côte d'Ivoire does not have transfer-pricing regulations, but it has provisions addressing tax avoidance.

F. Treaty withholding tax rates

Côte d'Ivoire has signed a multilateral tax treaty with the other members of the West African Economic Community (Communauté Economique de l'Afrique de l'Ouest, or CEAO), which are Burkina Faso, Mali, Mauritania, Niger and Senegal.

The country also signed a multilateral tax treaty in the framework of the Common African and Mauritian Organization (Organisation Commune Africaine et Mauricienne, or OCAM). This treaty was also signed by Benin, Burkina Faso, Cameroon, Central African Republic, Chad, Congo (Democratic Republic of), Congo (Republic of), Gabon, Madagascar, Mauritius, Niger, Rwanda, Senegal and Togo.

The two international organizations mentioned above have been dissolved. However, the Ivorian tax administration considers the above multilateral tax treaties to be still applicable, provided that reciprocity exists.

Côte d'Ivoire has signed a new treaty with the countries of the West African Economic and Monetary Union (WAEMU). This tax treaty has applied for some tax items since 2009. It is wholly applicable, effective from 1 January 2010. The members of WAEMU are Benin, Burkina Faso, Côte d'Ivoire, Guinea-Bissau, Mali, Niger, Senegal and Togo.

	Dividends	Interest	Royalties
	%	%	%

Norway	15	16	10
Rwanda	15	18	0
Senegal	10	15	15
Switzerland	15	15	10

	Dividends	Interest	Royalties
	%	%	%
Togo	10	15	15
United Kingdom	15	15	10
WAEMU countries	10	15	15
Non-treaty countries	2/10/15 (a)	18 (b)	20

(a) See Section B.

(b) See footnote (d) in Section A.

On 3 June 2015, Côte d'Ivoire ratified tax treaties with Morocco and Tunisia, but these treaties are not yet in force.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are subject to tax on their worldwide income. A company is resident in Croatia if its

legal seat or its place of management and supervision is located in Croatia. Branches of foreign companies are subject to tax only on their profits derived from Croatia.

Tax rates. The standard rate of corporate income tax is 18%. A lower corporate income tax rate of 12% applies to taxpayers that realized revenue of less than HRK3 million in the preceding tax period.

Tax incentives. Tax exemptions and other tax reliefs are available in accordance with the Croatian Corporate Income Tax Act and special legislation regulating incentives. For example, the Investment Promotion Act provides incentives for investments in new business activities and new workplaces.

Capital gains and losses. Capital gains and losses from the sale of assets are considered regular taxable income and tax-deductible expenses, respectively. No separate capital gains tax applies; capital gains are subject to the regular corporate income tax rates of 18% or 12%. Specific rules apply to unrealized gains and losses on certain types of assets. Depending on the type of asset, such gains or losses may be not taxable or not tax deductible, and may be recognized for tax purposes in the period of the realization of the asset.

Administration. The regular tax year is the calendar year, but a company may apply for a different tax year.

Annual tax returns must be filed by the end of the fourth month following the tax year.

Companies must make monthly advance payments of tax. In principle, each monthly advance payment is equal to $\frac{1}{12}$ of the tax due for the preceding year before the decrease of the tax base for tax incentives (excluding multiyear tax incentives). The balance of tax due must be paid by the end of the fourth month following the tax year. If the total of the advance payments exceeds the tax due for the year, the company may claim a refund.

Dividends. Dividends are taxable at a rate of 12%.

Foreign tax relief. A foreign tax credit is available to resident companies for foreign tax paid on income earned directly or through permanent establishments abroad. The amount of the credit is the lower of the Croatian corporate tax payable on the foreign income and the foreign tax paid.

C. Determination of trading income

General. The corporate income tax base is determined in accordance with the accounting regulations (Croatian Financial Reporting Standards [CFRS]/International Financial Reporting Standards [IFRS]), adjusted for certain items that increase or decrease the tax base.

The following items decrease the tax base:

- Revenues from dividends and profit shares under certain conditions
- Unrealized profits from value adjustments of shares if they were previously taxed
- Revenues from collected written-off receivables that were taxed in previous periods
- Depreciation expenses carried forward from previous periods

- Tax incentives in accordance with special laws
- Expenses from previous tax periods that were previously taxed (that is, expenses that had been nondeductible)

The following items increase the tax base:

- Depreciation expenses exceeding the maximum allowable amounts (excess may be carried forward).
- Penalty interest paid between related parties.
- Privileges and other benefits granted to individuals and legal persons to execute certain actions in favor of the company.
- Nondeductible interest on loans between related parties.
- The costs of forced collection of tax and other levies.
- Unrealized losses from value adjustments of shares, if these were included in the expenses.
- Unrealized losses from value adjustments of depreciable assets except in the case of extraordinary damages.
- Fifty percent of entertainment expenses resulting from a business relationship with a business partner, including related value-added tax (VAT). These expenses include the following:
 - Gifts, regardless of whether they include the mark of the company or product
 - The cost of holidays, sports, recreation and leisure
 - Rental of airplanes, automobiles, vacation homes and vessels
- Fines imposed by competent bodies.
- Thirty percent (50%, effective from 1 January 2018) of expenses, including related VAT but not including insurance and interest costs, incurred with respect to owned or rented motor vehicles or other means of personal transportation (for example, personal car, vessel, helicopter and airplane) used by managerial, supervisory and other employees, if the personal use of the means of personal transportation is not taxed as a benefit in kind.
- Inventory shortages above the amount prescribed by the Croatian Chamber of Economy, if the shortages are not subject to personal income tax.
- Donations in cash or in kind exceeding 2% of the preceding year's revenue. The limitation does not apply to donations made in accordance with the competent ministry's decisions on special programs and actions undertaken outside the regular business activities of the beneficiary. The donations also include financing of health care expenses (surgery, and purchases of medicines or orthopedic devices) for individuals who are not covered by primary, additional or private health insurance. The donations can also include donations of food producers or traders that donate food for social, humanitarian and other helpful purposes or that donate food to people hit by natural disasters. The food donations must be in line with special provisions of the Ministry of Agriculture.
- Expenses identified in the course of a tax audit, including VAT personal income tax, city tax and obligatory contributions incurred with respect to hidden profit payments, including payments of private costs of shareholders, company members and individuals and persons related to these individuals.
- Other expenses not incurred for the purpose of earning profit.

The expenses mentioned above, except privileges and other benefits granted to individuals and legal persons to execute certain actions in favor of the company and expenses identified in a tax audit, do not increase the tax base if they are subject to personal income tax.

New legislation that is in force from 2017 introduces the possibility of determining the tax base based on the cash principle for taxpayers that realized revenue of less than HRK3 million in the preceding tax period. The Corporate Income Tax Act provides detailed rules for determining such tax base. Corporate income taxpayers that are also VAT taxpayers may also determine the tax base based on the cash principle if they have, based on VAT rules, already chosen to pay VAT based on realized income.

Inventories. Inventories are valued in accordance with CFRS or International Accounting Standards (IAS)/IFRS. In general, inventories are valued at the lower of cost or net realizable value. Costs include all acquisition costs, conversion costs and other costs incurred in bringing inventories to their current location and condition. In general, the cost of inventories must be determined using the first-in, first-out (FIFO) or weighted average method.

Losses from value adjustments of inventories are recognized as tax-deductible expenses at the time of disposal of the inventories.

Specific rules deal with allowable limits of inventory shortages.

Provisions. The following provisions are deductible for tax purposes:

- Provisions for severance payments to be paid in the following year according to the prepared restructuring plan
- Provisions for costs of renewing natural resources
- Provisions for costs incurred during guarantee periods
- Provisions for costs related to court disputes that have already been initiated against the taxpayer (excluding interest)
- Provisions for the risk of potential loss in banks, up to the amount prescribed by the Croatian special regulations
- Provisions in insurance companies, up to the obligatory amount prescribed by the law governing the insurance
- Accruals for the unused vacation in accordance with accounting principles

Trade receivables. Value adjustments of trade receivables are deductible if the receivables are overdue for more than 60 days as of the end of the tax year and if they are not collected by the 15th day before the filing of the tax return. However, if a taxpayer does not take measures for debt collection (for example, sue the debtor) before the receivables are barred by the statute of limitations, the receivables treated as deductible for tax purposes in prior years must be included in taxable income. In addition, value adjustments are deductible for tax purposes in the following circumstances:

- The receivables do not exceed HRK5,000 (approximately EUR656) per debtor (corporate income taxpayers, subject to specific provisions in case of bankruptcy, arbitration and mediation) or HRK2,000 (approximately EUR262) per unrelated individual if the total receivables per individual do not exceed this amount on the last day of the tax period and if the receivable is written off by 31 December 2013.
- The receivables do not exceed HRK200 (approximately EUR26) per unrelated individuals or craftsmen (and/or individuals engaged in similar business activities) if the total receivables per individual do not exceed this amount on the last day of the tax period and do not derive such business activities.
- The company is suing the debtor or a foreclosure is being conducted.

- The receivables are reported in a bankruptcy proceeding of the debtor.
- The debt has been settled in the pre-bankruptcy or bankruptcy proceedings of the debtor.
- The taxpayer proves that costs of initiating certain collection procedures exceed receivables or the taxpayer proves it used the duty of care to initiate collection of the debt (which ultimately could not be collected).
- The debt is written off based on special provisions related to the consumer's bankruptcy.

Credit institutions may treat as tax deductible the write-off of receivables from unrelated individuals and legal entities that are related to housing provisions and entrepreneurial loans, respectively. This is possible if it can be determined that the write-off is done with the goal of protecting the basic life needs of the individual (for example, prevention of foreclosure on the only real estate in which the loan recipient lives) or not jeopardizing investment developments and entrepreneurial activities of legal entities.

Credit institutions writing off uncollectable receivables from loan principal and interest may be entitled to take the following actions if certain requirements are met.

- They can treat the cost of receivable write-off that is higher than the previously tax deductible write-off amount as a tax deductible expense.
- They can treat the decrease in cost of previously tax deductible receivable write-off as a taxable amount and include it in the tax base.

The following are the requirements for taking the above actions:

- The written-off receivable is disclosed in the accounts of the credit institution as partially or completely irrecoverable before 31 December 2015.
- The credit institution provides a written statement about the debtor's (and guarantor's) written-off debt, which includes the amount of the write-off, and the debtor consents to such statement.
- The debtor is not a related party based on the Corporate Income Tax Act and special credit institutions' regulations.
- The expense is stated in the income statement in the period in which the receivable is written off.

Tax depreciation. Depreciation is calculated by using the straight-line method. The following are the maximum annual depreciation rates prescribed by the Corporate Income Tax Act.

Asset	Rate (%)
Buildings and ships over 1,000 gross registered tons	10
Primary herd and personal cars	40
Intangible assets, equipment, vehicles (except personal cars), and machinery	50
Computers, computer hardware and software, mobile telephones and computer network accessories	100
Other assets	20

The deduction for tax depreciation cannot exceed the expense for accounting depreciation. If maximum allowable tax depreciation exceeds accounting depreciation, the accounting depreciation

prevails for tax purposes. If accounting depreciation exceeds maximum allowable tax depreciation, the excess may be deducted in future periods.

Depreciation expenses for personal cars and other vehicles used for personal transportation are deductible up to the amount calculated on the purchase cost of HRK400,000 (approximately EUR52,452) per vehicle. The limitation does not apply to vehicles used exclusively for rental or transportation activities.

Depreciation of assets that are not used in the performance of ordinary business activities is not deductible for tax purposes.

If the accounting records of a taxpayer include vessels, airplanes, apartments or resort houses and if the taxpayer uses these assets in its regular business activities, the depreciation of such assets may be claimed as deductible expenses for tax purposes if the following conditions are met:

- The taxpayer is registered for the activity of renting such assets.
- The revenue realized from the use of the vessels and airplanes is at least 7% of the purchased value of the vessels or airplanes.
- The revenue from the use of apartments and resort houses is at least 5% of the purchase value of the apartments or resort houses.

Relief for losses. Tax losses may be carried forward for five years, but they may not be carried back.

The legal successor may lose the right to a loss carryforward after a legal change (business combination) and/or change in ownership of the company of more than 50% if one of the following circumstances exists:

- The taxpayer did not perform its business activity for the two tax periods before the occurrence of the legal change and/or change in ownership.
- Within two tax periods after the occurrence of the legal change and/or change in ownership, the business activity of the taxpayer substantially changes.

Groups of companies. Croatia does not allow consolidated returns or provide any other tax relief for groups of companies. Each company within a group is taxed separately.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax	5/13/25
Real estate tax, on the value determined by the tax authorities	5
Social security contributions; paid by	
Employer	17.2
Employee	20
Personal income tax; the withholding liability lies with the employer	
Up to HRK17,500 per month	24
In excess of HRK17,500 per month	36
Municipal surcharge; varies among cities; the rate for Zagreb (the capital city) is 18%	0 to 18

E. Miscellaneous matters

Foreign-exchange controls. The Croatian currency is the kuna (HRK).

The Croatian National Bank is responsible for foreign-exchange regulations.

The Foreign Exchange Act generally imposes restrictions on payments abroad that do not have a legal basis. No restrictions are imposed on transfers of paid-in share capital, dividends, profits, interest, royalties, fees for know-how and similar payments.

Under the Foreign Exchange Act, Croatian resident companies may acquire foreign securities, provide long-term and short-term loans to nonresident companies, acquire real estate abroad and engage in certain other specified transactions. Such transactions are allowed if they are reported to the Croatian National Bank.

Natural persons may make direct investments abroad, acquire foreign securities, provide long-term loans to nonresidents, acquire real estate abroad and provide short-term loans to nonresidents who are related parties (family members).

Transfer pricing. Croatia has transfer-pricing rules that apply to transactions between Croatian residents and nonresidents. Under these rules, the tax authorities may adjust the taxable income of Croatian taxpayers derived from transactions with foreign related companies if they deem the prices and agreed conditions to be different than arm's-length prices and conditions. In such circumstances, taxable income is increased (or expenses decreased) by the difference between prices stated in the financial statements and arm's-length prices. These rules also apply to transactions between two Croatian residents if one of the related parties has special tax status (pays corporate income tax at reduced rates) or has a tax-loss carryforward.

A company may apply one of the following methods for establishing an arm's-length price:

- Comparable uncontrolled price method
- Resale price method
- Cost-plus method
- Profit-split method
- Transactional net margin method

Under the Croatian excessive interest rate rule, the deduction of interest on a loan received by a Croatian taxpayer from a related party is limited to a maximum deductible interest rate published by the Croatian Minister of Finance before the beginning of the relevant tax year (4.97% per year for 2017).

The above-mentioned interest rate is calculated as the average of the interest rates on the outstanding balances of loans that are granted for a period longer than one year to non-financial companies and that are published by the Croatian National Bank in the current calendar year.

Instead of the rate prescribed by the Minister of Finance, taxpayers can apply the above-mentioned transfer pricing methods for establishing an arm's-length interest rate, subject to the condition that such method apply to all agreements.

New legislation has introduced Advance Pricing Agreements (APAs). Taxpayers can enter into an agreement in the area of transfer pricing and contractual relations between related companies with the Croatian tax authorities and tax authorities in other jurisdictions if applicable (resident jurisdictions of related companies or permanent establishments through which the business activities are carried out). APAs enable parties to determine a set of criteria for determining transfer prices (for example, methods, adjustments and key assumptions) before beginning related-party transactions during a tax period.

Debt-to-equity ratios. Under thin-capitalization rules, interest on loans received from foreign shareholders owning 25% or more of the shares, capital or voting rights of the borrower, on loans guaranteed by such shareholders or on loans received from related parties, is not deductible if the loan balance exceeds four times the shareholders' share in the equity of the borrower.

Prepayments of dividends. If the dividends or profit shares are prepaid to an individual during a tax year and if the realized profit at the end of a tax year is insufficient to cover such prepayment, the prepayment is considered to be income subject to personal income tax. The taxpayer must maintain documentary evidence of dividend prepayments and submit it with the tax return.

F. Tax treaties

Croatia has entered into double tax treaties on avoidance of double taxation with many countries (see the withholding rate table below).

Croatia has signed a tax treaty with Egypt, but this treaty is not yet effective.

Croatia has adopted the double tax treaties entered into by the former Yugoslavia with Finland, Norway and Sweden.

The withholding tax rates for payments by Croatian companies under Croatia's double tax treaties and under the former Yugoslavia's double tax treaties adopted by Croatia are listed in the table below.

Croatia became a member of the European Union (EU) on 1 July 2013. As of that date, provisions of the Interest and Royalty Directive and Parent-Subsidiary Directive adopted by Croatian corporate income tax legislation became applicable to payments to recipients within the EU.

(a) The 0% rate applies if the recipient (beneficial owner) is an entity that directly or indirectly holds at least 25% of the payer. The 10% rate applies to other dividends.

(b) The 0% rate applies if the recipient (beneficial owner) is an entity that directly holds at least 10% of the payer. The 15% rate applies to other dividends.

- (c) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer. The 15% rate applies to other dividends.
- (d) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly or indirectly at least 10% of the payer. The 15% rate applies to other dividends.
- (e) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer. The 10% rate applies to other dividends.
- (f) The 5% rate applies if the recipient (beneficial owner) is an entity that directly or indirectly controls at least 10% of the voting power of the payer, or holds directly at least 25% of the payer. The 15% rate applies to dividends paid by investment corporations that are resident in Canada but are owned by non-residents and in all other cases.
- (g) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 20% of the payer. The 15% rate applies to other dividends.
- (h) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer or if the recipient (beneficial owner) is a pension fund or similar institution that provides insurance services or pension benefits. The 10% rate applies to other dividends.
- (i) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 10% of the payer. The 15% rate applies to other dividends.
- (j) The 0% rate applies if the recipient (beneficial owner) is an entity that directly or indirectly holds at least 10% of the payer. The 15% rate applies to other dividends.
- (k) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 10% of the payer. The 15% rate applies to other dividends.
- (l) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer. The 10% rate applies to other dividends.
- (m) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 10% of the payer. The 10% rate applies to other dividends.
- (n) The 5% rate applies if the recipient (beneficial owner) is an entity that directly controls at least 10% of the voting power of the payer. The 10% rate applies to other dividends.
- (o) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer. The 10% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 10% of the payer and if the entity is a resident of Israel. The 15% rate applies to other dividends.
- (p) The 5% rate applies if the recipient (beneficial owner) is an entity that holds at least 25% of the payer and if this ownership is not achieved for the purposes of exploiting these provisions. The 10% rate applies to other dividends.
- (q) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 10% of the payer. The 15% rate applies to other dividends.
- (r) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 10% of the payer. The 10% rate applies to other dividends.
- (s) The 5% rate applies if the dividends are paid by a Croatian resident to a Maltese resident (beneficial owner). If dividends are paid by a Maltese resident to a Croatian resident (beneficial owner), the applicable rate is the rate used to tax the profits out of which the dividends are paid.
- (t) The 0% rate applies if the recipient is an entity that holds directly at least 25% of the payer. The 15% rate applies to other dividends.
- (u) The 5% rate applies if the recipient is an entity that directly holds at least 25% of the voting power of the payer. The 15% rate applies to other dividends.
- (v) This treaty applies to Montenegro and Serbia.
- (w) The 8% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer. The 10% rate applies to other dividends.
- (x) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer and its respective share in capital amounts to at least EUR150,000. The 10% rate applies to other dividends.
- (y) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer and its respective share in capital amounts to at least USD100,000. The 10% rate applies to other dividends.
- (z) The 5% rate applies if the recipient (beneficial owner) is an entity that controls directly or indirectly at least 25% of the payer. The 15% rate applies if the dividends are paid out of income (including gains) derived directly or indirectly from immovable property by an investment vehicle that distributes most of this income annually and if this income is exempt from tax. The 10% rate applies to other dividends.
- (aa) This treaty is effective from 1 January 2017.

On 10 October 2010, the country Netherlands Antilles, which consisted of five island territories in the Caribbean Sea (Bonaire, Curaçao, Saba, Sint Eustatius and Sint Maarten), was dissolved. On dissolution of the Netherlands Antilles, the islands of Bonaire, Sint Eustatius and Saba (BES-Islands) became part of the Netherlands as extraordinary overseas municipalities. Curaçao and Sint Maarten have both become autonomous countries within the Kingdom of the Netherlands. The former Netherlands Antilles tax laws remain applicable to Curaçao, with the understanding that references in the laws to “the Netherlands Antilles” should now read “Curaçao.” The following chapter provides information on taxation in Curaçao only. Chapters on BES-Islands and Sint Maarten appear in this guide.

A. At a glance

Corporate Income Tax Rate (%)	22
Capital Gains Tax Rate (%)	22
Branch Tax Rate (%)	22
Withholding Tax (%)	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	10 *

* Losses incurred by certain companies during their first four years of business may be carried forward indefinitely. Losses incurred during the first six years by an entity that has the objective of engaging in business in the shipping or aviation industry may be carried forward indefinitely. Companies under the Curaçao offshore tax regime may carry forward tax losses for five years.

B. Taxes on corporate income and gains

Corporate income tax. Corporate income tax is levied on resident and nonresident entities. Resident entities are those incorporated under former Netherlands Antilles or current Curaçao laws, even if their management is located abroad, as well as entities incorporated under foreign law, but effectively managed in Curaçao. For resident entities, corporate income tax is, in principle, levied on the aggregate amount of net profits earned from all sources during the entity's accounting period. Nonresident entities are subject to tax on specific Curaçao income items, such as profits earned through a permanent establishment and income related to real estate property in Curaçao, including interest derived from a mortgage on such real estate property.

Tax rates. Resident and nonresident entities, including branches of foreign companies, are taxed at a standard rate of 22%. However, different rates may apply to companies qualifying for tax holidays, E-zone companies, offshore companies, tax-exempt companies and companies applying the export facility.

Withholding taxes are not imposed on remittances of profits by branches to their foreign head offices.

Tax incentives. Reduced tax rates and other tax incentives (tax holidays) are available to new business enterprises that engage in certain activities, including tourism and land development.

E-zone companies. Incentives are available under E-zone legislation. These incentives replaced the incentives that were previously available under the free-zone legislation. The E-zone legislation offers tax incentives to e-commerce companies and trading companies with an e-strategy that are located in a designated location of an E-zone. In principle, the activities of these companies must be focused on trading with, or providing services to, companies or persons located outside Curaçao. Profits derived by E-zone companies from sales of goods or services to companies or individuals located in Curaçao may not exceed 25% of the total annual turnover. In general, E-zone companies are taxed at a rate of 2%. However, for profits derived from sales of goods or services to companies or individuals located in Curaçao (up to a maximum of 25% of the total turnover), the standard corporate income tax rate of 22% applies. In principle, tax losses may be

carried forward to offset taxable profits in the following 10 years. No turnover tax or import duties are imposed on the following:

- Goods entering the E-zone
- Services rendered by Curaçao companies to E-zone companies
- Products delivered by E-zone companies, or services rendered to individuals or companies that are not resident in Curaçao or to companies that are located in the E-zone
- The export of goods

Offshore companies. The offshore regime was abolished in 2001. However, under grandfathering rules, special incentives are available for qualifying offshore companies in existence before 1 January 2002. Offshore companies are resident companies owned by nonresidents that perform their business activities abroad; that is, they mostly earn foreign-source income. Income derived by offshore companies (for example, from royalty, financing, holding, portfolio investment, mutual fund, real estate and service activities) is taxed at corporate income tax rates of 2.4% to 3%. For trading and service companies, offshore status may result in the application of reduced effective rates. Capital gains on securities, loans, intellectual property and immovable property are exempt from corporate income tax. In addition, advance tax rulings can be obtained for determining the offshore tax status and method of calculating the tax base of offshore companies. Profits derived from real estate located outside Curaçao are exempt from corporate income tax. The offshore tax rates are guaranteed through 2019.

Tax-exempt companies. Tax-exempt companies (TECs) are exempt from Curaçao corporate income tax. Private and public limited liability companies incorporated under former Netherlands Antilles or current Curaçao laws may qualify as TECs. TECs are allowed to entirely or almost entirely (more than 90%) engage in extending of loans, investing in securities and deposits and licensing of intellectual and industrial property rights and similar property rights. To qualify as a TEC, a company must submit a written request to the Tax Inspector and certain conditions must be satisfied. TECs are not eligible for benefits under the bilateral regulation for the avoidance of double taxation between the Netherlands and Curaçao or the Tax Regulation for the Kingdom of the Netherlands or for benefits under any other double tax treaty of the former Netherlands Antilles or Curaçao. However, exchange-of-information provisions in the tax regulation, tax treaties and tax information exchange agreements apply to TECs. If a TEC loses its tax-exempt status, it is treated as a regularly taxed company subject to tax on its worldwide income, and it receives a tax-free step-up.

Export facility. The Curaçao export facility provides an effective profit tax rate of approximately 3.2%. One of the requirements for the application of the export facility is that at least 90% of the profits must be derived from activities oriented abroad. In addition, the company must have real presence in Curaçao that is suitable for the nature and extent of the company's activities.

Taxed private foundations and trusts. The 2011 tax reform of the Curaçao corporate income tax legislation introduced the option for

private foundations and trusts to be subject to a reduced effective corporate income tax rate of 10%. In principle, Curaçao private foundations and trusts are fully exempt from corporate income tax if they do not conduct an enterprise. After the option is exercised, the reduced effective rate of 10% applies for a period of at least three full fiscal years. After this three-year period, the private foundation can request to discontinue being subject to the reduced effective rate of 10%.

Transparent companies. Curaçao public limited liability companies or private limited liability companies can opt for fiscal transparency for Curaçao corporate income tax and individual income tax purposes. To qualify as a transparent company, a written request must be filed and certain conditions must be satisfied. If fiscal transparency is elected, the limited liability company is treated for tax purposes as a partnership; that is, only the partners can be taxed in Curaçao on Curaçao sources of income. If a transparent company loses its transparent status, it is treated as a regularly taxed company subject to tax on its worldwide income. In addition, as of January 2015, rules were introduced regarding the valuation of assets and liabilities of a company that acquires or loses tax transparent status.

Ruling policy. Curaçao has an extensive advance tax ruling practice. These rulings include the following:

- Cost-plus (informal capital) rulings for intercompany activities
- Minimum gross margin rulings for finance activities
- Royalties and dividends (holding activities) rulings

These rulings are usually valid for a three-year period, with the option for extension every three years.

Other incentives. Curaçao also offers other incentives for specific activities, such as the international use of aircraft and ships and the insurance of risks outside Curaçao.

Capital gains. Under the current corporate income tax rules, in general, except for offshore companies, no distinction is made between the taxation of capital gains and the taxation of other income. All income is taxed at the applicable corporate tax rate (22%). Taxation of capital gains on qualifying share interests (participation exemption) is discussed in Section C.

Administration. The standard tax year is the calendar year. However, on request and under certain conditions, a company may use a different financial accounting year as its tax year.

Companies must file a provisional tax return within three months after the end of the financial year. In principle, this return must show a taxable profit that is at least equal to the taxable profit shown on the most recently filed final tax return. Any tax due must be paid at the time of filing of the provisional tax return. An extension of time to file the provisional return and pay the tax is not granted. On request of the company, the Tax Inspector may consent to the reporting of a lower taxable profit than the taxable profit shown on the most recently filed final tax return.

The final tax return must be filed within six months after the end of the financial year. Any difference between the tax due based on the provisional return and the tax due based on the final return

must be settled at the time of the filing of the final return. An extension for filing the final tax return on a later date can be obtained.

To ensure compliance with the rules described above, penalties may be imposed. The tax authorities may impose arbitrary assessments if the taxpayer fails to file a tax return. Additional assessments, including a penalty, may be imposed if insufficient tax is levied. A penalty of up to 100% of the additional tax due may be imposed. Depending on the degree of fault, this penalty may vary from 25% to 100%.

In general, offshore companies must file their tax returns within six months following the end of the financial year. An extension of the due date for the filing can be obtained.

Dividends. Curaçao does not levy dividend withholding tax on dividend distributions.

Foreign tax relief. A 100% exemption from Curaçao corporate income tax is available for foreign business profits. For this purpose, foreign profits are profits earned in another country through a permanent establishment or a permanent representative in the other country, or profits earned from immovable property located in a foreign country, including the rights related to the property that is part of the business activities of the taxpayer but is deemed to be part of the foreign business. If foreign profits are derived from a business that can be considered a low-taxed portfolio investment, these foreign profits are taxed at an effective rate of 10%.

C. Determination of taxable income

General. Taxable profit must be calculated in accordance with “sound business practices.”

All expenses incurred with respect to conducting a business are, in principle, deductible. However, if expenses exceed normal arm’s-length charges and are incurred directly or indirectly for the benefit of shareholders or related companies, the excess is considered to be a nondeductible profit distribution (dividend). In addition, certain expenses, such as fines, penalties and expenses incurred with respect to crimes, are not deductible. The costs of representation, including receptions, festive meetings and entertainment, excursions, and study trips (including the related costs of travel and accommodation), are no longer deductible. Only 80% of expenses incurred on food, beverages and goodies (for example, tobacco) is deductible. Costs of donations, promotional gifts, courses, conferences, seminars and symposiums are 100% deductible. However, travel expenses related to these items are 80% deductible.

In principle, interest expenses are deductible for tax purposes if the interest rate is determined on an arm’s-length basis. However, certain restrictions apply to the deduction of interest on loans connected to certain tax-driven transactions and intragroup reorganizations. Under thin-capitalization rules, the deductibility of interest accrued or paid directly or indirectly to an affiliated TEC may be restricted. As of 1 January 2015, the thin-capitalization rules were extended to loans received from nonresident TECs belonging to the same “concern” (“concern” is specifically defined in the tax law).

Participation exemption. In principle, a 100% participation exemption applies for all qualifying share interests held by Curaçao corporate taxpayers.

In general, a shareholding qualifies for the participation exemption if it represents at least 5% of the share capital or voting power in a company or if the amount paid for the shareholding amounts to at least USD500,000. In addition, any member of a cooperative association can apply for the participation exemption. Effective from 1 January 2015, the participation exemption was extended to participations in mutual funds that are considered to be special-purpose capital and to participations in nonresident mutual funds that are subject to profit tax in their country of residency.

For dividend income, additional requirements are imposed for a participation to be considered a qualifying participation. To apply the 100% exemption on dividends, either of the following conditions must be met:

- The qualifying participation is subject to a (nominal) profit tax rate of 10% (subject-to-tax clause).
- Dividends, interest or royalties received from sources other than the business of the participation do not account for 50% or more of the gross income of the participation (non-portfolio-investment clause).

These conditions may be met on a consolidated basis. If neither of the above conditions is met, a lower limited participation exemption applies to dividends. The limited participation exemption was amended as of 1 January 2015. Instead of calculating an exemption on the reported income, a formula is used to calculate the income to be reported. The income to be reported is calculated using the following formula:

$$\text{Income} \times \frac{10}{T}$$

For purposes of the above formula, “T” represents the tax rate applicable for the year in which the income is reported. Consequently, an effective tax rate of 10% applies to non-qualifying participations.

The subject-to-tax clause and the non-portfolio-investment clause do not apply to the 100% participation exemption on capital gains and income received from participations that exclusively or almost exclusively hold immovable property.

Expenses that are connected with the participation, including financing expenses, are deductible if the expenses are directly or indirectly related to income that is taxable in Curacao.

Tax depreciation. In general, assets are depreciated using the straight-line method, with the residual value taken into consideration. The following are some of the applicable rates.

Asset	Rate (%)	Residual value (%)
Buildings	2 to 2.5	50
Office equipment	10 to 50	Nil
Motor vehicles	10 to 33	15
Plant and machinery	10	10

The rates listed above provide a general overview of the depreciation rates. The actual depreciation rate depends on the type of asset used by the company. The depreciation of buildings is limited. Buildings can be depreciated to 50% of the value of the building as stipulated in the assessment for the National Ordinance on Immovable Property Tax (Landsverordening onroerende zaakbelasting). For pre-owned buildings that have been depreciated by 1 January 2016 for less than three years, the limitation on the depreciation will become effective in the fourth year. For buildings that have already been depreciated to an amount that exceeds the aforementioned limit, no claw-back occurs. In such case, the depreciated value is respected.

An investment allowance deduction of 10% is granted for acquisitions of fixed assets exceeding approximately USD2,800. The allowance is deducted from taxable income in the year of the investment. The investment allowance deduction is recaptured in the year of sale if the asset is sold within 6 years (15 years for buildings) after the date of the investment. For investments in the maintenance and restorations of monuments listed in the Curaçao Monuments Ordinance, the allowance is increased to a one-time investment deduction of 25%.

Groups of companies. On written request, Curaçao resident companies may form a fiscal unity (tax-consolidated group) for corporate income tax purposes. To qualify for a fiscal unity, the parent company must own at least 99% of the shares in the subsidiary. A fiscal unity may include, among others, a company incorporated under Dutch law that has its place of effective management in Curaçao. The whole group is taxed for corporate income tax purposes as if it were one company and, as a result, the subsidiaries in the fiscal unity are no longer individually subject to corporate income tax. The Tax Inspector must decide on the request within two months after the receipt of the request.

Advantages for corporate income tax purposes of fiscal unity treatment include the following:

- Losses of one subsidiary may be offset against profits of other members of the fiscal unity.
- Reorganizations, including movements of assets with hidden reserves from one company to another, have no direct tax consequences for corporate income tax purposes.
- Intercompany profits may be fully deferred.

The fiscal unity does not apply for turnover tax purposes.

Relief for losses. Losses in a financial year may be carried forward for 10 years. No carryback is available.

Losses incurred by certain companies during their first four years of business may be carried forward indefinitely. Losses incurred during the first six years by an entity that has the objective of engaging in business in the shipping or aviation industry may be carried forward indefinitely. Companies under the Curaçao off-shore tax regime may carry forward tax losses for five years.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Turnover tax in Curaçao; a general consumption tax on goods delivered, imports, and services rendered by entrepreneurs (legal entities or individuals) in Curaçao and services rendered in Curaçao by foreign entrepreneurs; primary life goods and certain imports are exempt	
Standard rate	6
Insurance	7
Hotel accommodation	7
Specific goods and services listed as luxurious or unhealthy	9
Real estate transfer tax	4
Import duties	0 to 62

E. Miscellaneous matters

Foreign-exchange controls. The currency in Curaçao is the Antillean guilder (ANG).

For foreign investors that obtain a foreign-exchange license from the Central Bank of Curaçao and Sint Maarten, no restrictions are imposed on the movement of funds into and out of Curaçao and Sint Maarten. In general, the Central Bank automatically grants foreign-exchange licenses for remittances abroad. Residents are subject to several foreign-exchange regulations imposed by the Central Bank. However, residents may be granted nonresident status for foreign-exchange control purposes. Some reporting requirements exist for statistical purposes.

Transfer pricing. In general, intercompany charges should be determined on an arm's-length basis. Entities must keep transfer-pricing documentation on file that shows how the intercompany conditions were agreed upon and whether these conditions are at arm's length.

F. Tax treaties

Provisions for double tax relief are contained in the tax treaty with Norway and in the Tax Regulation for the Kingdom of the Netherlands (consisting of Aruba, Curaçao, the Netherlands and Sint Maarten). The Tax Regulation for the Kingdom of the Netherlands applied between Curaçao and the Netherlands up to 31 December 2015. From 1 January 2016, the Tax Regulation for the Kingdom of the Netherlands applies only between Curaçao and Aruba and Sint Maarten until these jurisdictions negotiate and sign another agreement with Curaçao.

In June 2014, Curaçao and the Netherlands entered into a new bilateral regulation for the avoidance of double taxation. This tax arrangement, which essentially functions as a tax treaty, was approved by the Dutch parliament and was formally published on 9 October 2015. It took effect as of January 2016. The tax arrangement includes, among other measures, a 0% Dutch dividend withholding tax rate that applies under certain conditions. Under a temporary provision, which applies until 31 December 2019, a 5% Dutch dividend withholding tax rate applies to distributions to companies in Curaçao that do not meet the criteria for 0% withholding under the new rules. Curaçao does not impose withholding tax on payments from Curaçao to residents of other countries.

The former Netherlands Antilles has entered into tax information exchange agreements with Antigua and Barbuda, Australia, Bermuda, British Virgin Islands, Canada, Cayman Islands, Denmark, Faroe Islands, Finland, France, Germany, Greenland, Iceland, Italy, Mexico, New Zealand, St. Lucia, St. Vincent and the Grenadines, Spain, Sweden, the United Kingdom and the United States. As a result of the constitutional reform of the Kingdom of the Netherlands, the tax treaties entered into by the Netherlands Antilles became automatically applicable to the surviving countries, which are the legal successors of the Netherlands Antilles.

Curaçao has negotiated tax treaties with Jamaica and Malta, which have not yet been ratified by the Curaçao government. Curaçao is also negotiating several double tax treaties and additional tax information exchange agreements.

An intergovernmental agreement between Curaçao and the United States implementing the US Foreign Account Tax Compliance Act (FATCA) entered into force as of 3 August 2016. Financial institutions in Curaçao must file the required FATCA reporting through a portal set up by the Curaçao government.

Under the latest published Organisation for Economic Co-operation and Development (OECD) list, Curaçao qualifies as a white-listed jurisdiction.

Curaçao signed the multilateral agreement on automatic exchange of information and will begin the exchange of information based on the Common Reporting Standard in 2017.

The Kingdom of the Netherlands has entered into many bilateral investment treaties that also apply to Curaçao.

Curaçao also signed the OECD Convention on Mutual Administrative Assistance in Tax Matters.

Net Operating Losses (Years)

Carryback	0
Carryforward	5

- (a) A Special Contribution to the Defence Fund at a rate of 17% is withheld from dividends paid to resident and domiciled individuals.
- (b) A Special Contribution to the Defence Fund at a rate of 30% is withheld from interest paid to resident companies and resident and domiciled individuals, if the interest is not considered to arise in the ordinary course of their business or to be closely connected to their ordinary course of business.
- (c) Cyprus levies withholding tax at a rate of 10% on the gross amount of royalty payments that are connected with the economic utilization of intellectual property rights in Cyprus and technical assistance payments made by tax resident persons to nonresident persons that do not carry on any business in Cyprus. A 5% rate applies to royalties paid with respect to films and television. A 5% withholding tax is also imposed on payments made to nonresident persons in consideration for services performed in Cyprus with respect to activities connected with the exploration or exploitation of the seabed or subsoil or their natural resources or with respect to activities relating to the installation and exploitation of pipelines and other installations on the soil, seabed or sea surface, if such payments are not connected with a permanent establishment in Cyprus. Withholding tax may be reduced or eliminated on the basis of the European Union (EU) Interest and Royalty Directive and/or on the basis of a double tax treaty.

B. Taxes on corporate income and gains

Corporate income tax. Companies resident in Cyprus are subject to income tax on their worldwide income. A company is resident in Cyprus if its control and management are exercised in Cyprus. Nonresident companies are taxed only on income derived from a permanent establishment in Cyprus and on rental income from property located in Cyprus.

Rate of corporate tax. The standard rate of company tax is 12.5%.

Capital gains. A capital gains tax of 20% is levied on gains derived from the disposal of the following:

- Immovable property located in Cyprus
- Shares in companies whose assets include, among others, immovable property located in Cyprus
- Shares in companies that participate (either directly or indirectly) in a company or companies that own immovable property located in Cyprus and at least 50% of the market value of such shares is derived from the relevant property

The disposal of shares of companies listed on a recognized stock exchange is exempt from capital gains tax.

The gain subject to tax is the difference between the sales proceeds and the original cost, adjusted to take into account increases in the cost-of-living index.

Gains from the disposal of immovable property that consists of land or land and buildings is exempt from capital gains tax if the property is acquired between 16 July 2015 and 31 December 2016 from an independent third party and not through an exchange of property or through a donation or gift.

Administration. The income year in Cyprus is the calendar year. Tax is payable on 1 August following the income year. However, an estimate of tax due is made by 31 July of the income tax year, and provisional tax is payable in two equal installments by 31 July and 31 December.

Overdue tax is subject to interest beginning on the due date. In addition, a flat 5% penalty is imposed on the tax due in the event of a delay in payment.

Dividends. Dividends paid are not subject to withholding tax.

A 17% Special Contribution to the Defence Fund is withheld from dividends paid to resident and domiciled individuals. This is a final tax. Also, see Section D.

If a company does not distribute as dividends at least 70% of its after-tax accounting profits within two years after the end of the relevant income year, a 17% Special Contribution to the Defence Fund is imposed on a deemed distribution of 70% of the profits. For the purposes for determining the amount of profit subject to deemed distribution, any capital expenditure incurred in the acquisition of plant and machinery (excluding private saloon cars) and buildings during the period of 2012 through 2014 is deducted from the after-tax profits. If a company distributes more than 0% but less than 70% of its profits, the amount of the deemed distribution subject to tax is reduced by the amount of the actual distribution. The tax on a deemed distribution is reduced proportionally by the percentage of shares held directly or indirectly by nonresidents and non-domiciled residents.

Deemed distribution does not apply to profits that are directly or indirectly attributable to shareholders that are nonresidents of Cyprus and to shareholders that are resident but do not have a domicile in Cyprus.

Non-domicile rule. A Cyprus resident individual who is not domiciled in Cyprus is effectively not subject to the Special Contribution to the Defence Fund in Cyprus on interest, rents or dividends regardless of whether such income is derived from sources within Cyprus and regardless of whether such income is remitted to a bank account or economically used in Cyprus (see *Dividends* and Section D). This rule took effect on 16 July 2015.

Foreign tax relief. Foreign tax on profits and gains of a Cyprus resident company is credited against Cyprus tax payable. Such foreign tax relief cannot exceed Cyprus tax payable on the same profits or gains. Any unused foreign tax relief is wasted.

C. Determination of trading income

General. The determination of taxable income is based on accounts prepared in accordance with generally accepted accounting principles, subject to certain adjustments and provisions of the tax law. Expenses must be incurred wholly and exclusively for the production of income.

Inventories. Inventory is generally valued at the lower of cost or net realizable value. Cost must be determined under the first-in, first-out method. The last-in, first-out method is not acceptable.

Depreciation and amortization allowances

Plant and machinery. A straight-line allowance of 10% a year is given on capital expenditures for plant and machinery. For machinery and plant acquired during the period of 2012 through 2016, a deduction for wear and tear at 20% per year is allowed.

Industrial buildings. A straight-line allowance of 4% a year is available for industrial buildings. For industrial and hotel buildings acquired during the period of 2012 through 2016, a deduction for wear and tear at 7% is allowed.

Commercial buildings. A straight-line allowance of 3% a year is allowed for commercial buildings.

Office equipment. A straight-line allowance of 20% a year is allowed for computers. Other office equipment is depreciated under the straight-line method at an annual rate of 10%. For other office equipment acquired during the period of 2012 through 2016, a deduction for wear and tear at a rate of 20% per year is allowed.

Motor vehicles. In general, a straight-line allowance of 20% a year is allowed for motor vehicles (except for private saloon cars).

Sales of depreciable assets. On the disposal of an asset, if the sale proceeds are less than the remaining depreciable base, a further allowance equal to the amount of the difference is granted. If the sale proceeds exceed the depreciable base, the excess (up to the amount of allowances claimed) is included in taxable income.

Taxation of intangible assets

New Intellectual Property Box regime. The provisions of the Intellectual Property (IP) Box regime have been aligned with the recommendations of the Organisation for Economic Co-operation and Development (OECD) Action 5 of the Base Erosion and Profit Shifting (BEPS) Plan on Countering Harmful Tax Practices More Effectively, Taking into Account Transparency and Substance. The new legislation took effect on 1 July 2016.

The new IP Box regime is based on the OECD-recommended nexus approach. This approach limits application of the IP Box regime if research and development (R&D) is being outsourced to related parties. The approach links the benefits of the regime with the R&D expenses incurred by the taxpayer. Under the new IP Box regime, qualifying taxpayers can claim a tax deduction equaling 80% of qualifying profits resulting from the business use of the qualifying assets. A taxpayer may elect not to claim the deduction or only claim a part of it. The following is the calculation for qualifying profits:

$$\frac{\text{Qualifying expenditure} + \text{Uplift expenditure}}{\text{Overall expenditure}} \times \text{overall income}$$

The cost of the acquisition or development of intangible assets of a capital nature is amortized in a reasonable manner over its useful economic life, which is determined based on accounting standards, with a maximum period of 20 years.

Old IP Box regime. The current IP Box regime has been grandfathered for a five-year transitional period beginning on 1 July 2016 and ending on 30 June 2021, provided certain conditions are satisfied. The grandfathered IP assets continue to generate the full tax benefits of the existing IP Box regime until 30 June 2021, without the need to apply the nexus ratio shown above.

In general, no new entrants are permitted into the existing regime after 2 January 2016. However, certain exceptions allow entrance to the existing regime if the IP asset is acquired before 30 June 2016 and if certain other conditions are met.

Under the existing IP Box regime, a deemed deduction of 80% is applied to net income and gains derived from patents, copyrights and trademarks, as defined in the relevant Cypriot law. The cost of the acquisition or development of intangible assets of a capital nature is amortized equally over a five-year period.

Relief for losses. Effective from 1 January 2012, losses can be carried forward to the following five years. Loss carrybacks are not allowed.

Groups of companies. Group loss relief for losses incurred in the income year is allowed between resident group companies that meet certain conditions.

Effective from 1 January 2015, the group loss relief provisions are extended to cases in which the surrendering company is registered in and is a tax resident of another EU member state, provided that it has exhausted all possibilities available for using the losses in its respective country of tax residency or in the country where its intermediary holding company has its legal seat. In such circumstances, the tax losses are calculated based on the provisions of the Cypriot tax laws.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on any supply of goods or services, other than an exempt supply, made in Cyprus by a taxable person (taxable if annual supplies exceed EUR15,600) in the course of business	0/5/9/19
Payroll taxes	
Social insurance contribution, levied on each employee's gross salary, up to EUR4,533 a month; payable by both employer and employee	7.8
Special Cohesion Fund, levied on gross salary; payable by employer	2
Human Resource Development Authority and Redundancy Fund, levied on gross salary, up to EUR4,533 a month; paid by employer	1.7
Leave Fund, levied on gross salary, up to EUR4,533 a month; paid by employer in lieu of holiday pay (employer may obtain exemption from contribution to this fund)	8
Special Contribution to the Defence Fund	
On rents received (after allowing for a 25% deduction)	3
On interest received (except for interest earned in the ordinary course of business)	30
On dividends received by resident and domiciled individuals	17

E. Miscellaneous matters

Foreign-exchange controls. Cyprus does not impose foreign-exchange controls.

Transfer pricing. The arm's-length principle is codified in the Cyprus tax law with language similar to that of Article 9 of the OECD Model Tax Convention. Consequently, all transactions entered into with related and/or connected parties must be concluded on an arm's-length basis; otherwise, the tax authorities have the statutory right to make adjustments to taxable income (that is, the arm's-length price must be applied on transactions between related parties in their commercial or financial relations). However, Cyprus does not have specific rules regarding transfer pricing or transfer-pricing documentation requirements.

Mergers and demergers. No taxes arise in mergers and demergers with respect to transfers of businesses, assets or shares.

- (a) The rate is 10% for dividends paid to a company holding directly at least 25% of the capital of the payer. The rate is 5% if the recipient of the dividends has invested at least EUR200,000 in the share capital of the payer.
- (b) The rate is 0% for interest paid to the government of the other contracting state.
- (c) The rate is 0% for royalties paid for literary, artistic or scientific works, as well as for film and television royalties.
- (d) The lower rate applies to dividends paid to a company holding directly at least 25% of the capital of the payer.
- (e) The rate is 0% for interest paid to the government of the other contracting state and for interest paid on bank loans or with respect to credit sales of industrial, commercial or scientific equipment or merchandise.
- (f) The rate is 10% for dividends paid to a company holding directly at least 10% of the share capital of the payer.
- (g) The rate is 5% for film and television royalties.
- (h) The rate is 5% for dividends paid to a company holding directly at least 25% of the share capital of the payer.
- (i) The rate is 0% for interest paid to a government, bank or financial institution.
- (j) The 0% rate applies if the beneficial owner is a company (other than a partnership) holding at least 10% of the capital of the company paying the dividends. The 5% rate applies in all other cases.
- (k) The rate is reduced to 5% if the recipient has invested at least EUR100,000 in the share capital of the payer.
- (l) The 5% rate applies if the beneficial owner is a company (other than a partnership) holding at least 10% of the voting power of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (m) The 5% rate applies if the recipient of the dividends is a direct beneficial owner of at least 10% of the capital of the company paying the dividends. The 15% rate applies to other dividends.
- (n) The rate is 10% for royalties paid for literary, artistic or scientific works, or for films or television. The rate is 15% for payments for the use of industrial, commercial or scientific equipment.
- (o) The rate is 7% for interest paid to banks and financial institutions.
- (p) The 0% rate applies to interest paid to the government. The 10% rate applies to interest paid to banks. The 15% rate applies in other cases.
- (q) The rate is 5% for royalties paid for literary, artistic or scientific works, or for film or television. The rate is 10% for payments for the use of industrial, commercial or scientific equipment.
- (r) The rate is 0% for royalties paid for literary, dramatic, musical or artistic works.

- (s) The 0% rate applies if any of the following circumstances exists:
- The beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends if such holding has been maintained for an uninterrupted period of at least 12 months.
 - The beneficial owner of the dividends is the other contracting state, the central bank of the other contracting state or a national agency or other agency (including a financial institution) owned or controlled by the government of the other contracting state.
 - The beneficial owner of the dividends is a pension fund or similar institution providing pension schemes in which individuals may participate to secure retirement benefits if such pension fund or similar institution is established, recognized for tax purposes and controlled in accordance with the laws of the other contracting state. The 15% rate applies to other dividends.
- (t) A 5% rate applies to royalties paid with respect to films and television. A 10% rate applies to other royalties if the asset for which the royalties are paid is used in Cyprus.
- (u) A 5% rate applies if the beneficial owner of the dividends has invested in the capital of the payer company less than the equivalent of EUR150,000 at the time of the investment.
- (v) A 0% rate applies if the interest is paid to the government, a local authority or a central bank.
- (w) The 5% rate applies if the dividend recipient holds at least 20% of the capital of the dividend paying company or has invested at least EUR100,000 in such company. The 15% rate applies in all other cases.
- (x) The 5% rate applies to royalties paid with respect to copyrights of scientific works, patents, trademarks, secret formulas or processes, or information concerning industrial or commercial experience. The 10% rate applies to other royalties, particularly for literary works, music works, films and software.
- (y) The 0% rate applies if the beneficial owner is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends and if such holding is maintained for an uninterrupted period of at least one year. The 5% rate applies in all other cases.
- (z) The treaty between Cyprus and the USSR still applies.
- (aa) The treaty between Cyprus and the Socialist Republic of Yugoslavia still applies.
- (bb) The treaty between Cyprus and Czechoslovakia still applies.
- (cc) The 0% rate applies if the beneficial owner of the dividends is a company that holds at least 10% of the capital of the company paying the dividends for a continuous period of at least 24 months.
- (dd) The withholding tax rate on dividends is 5% if the beneficial owner of the dividend is a company (other than a partnership) that holds at least 10% of the dividend paying company. In all other cases, the rate is 10%.
- (ee) The 0% rate applies if the recipient of the income is a qualifying pension fund, the government of the other state or a company that holds directly at least 10% of the capital of the company paying the dividends for an uninterrupted period of at least one year. In all other cases, the rate is 15%.

Cyprus has signed treaties with, Ethiopia, Iran, Jersey and Latvia, but these treaties have not yet been ratified.

This chapter does not reflect the potential effects of the recently approved European Union (EU) directive (Council Directive (EU) 2016/1164 of 12 July 2016), which provides rules against tax-avoidance practices that directly affect the functioning of the internal market. EU member states are generally expected to incorporate the provisions of this directive into their national laws by 31 December 2018. At the time of writing, the draft of the relevant Czech legislation was not yet available. Because of the expected changes to the law resulting from the directive, readers should obtain updated information before engaging in transactions.

A. At a glance

Corporate Income Tax Rate (%)	19 (a)
Capital Gains Tax Rate (%)	0/19 (b)
Branch Tax Rate (%)	19
Withholding Tax (%)	
Dividends	0/15/35 (c)(d)(e)
Interest	0/15/35 (c)(e)(f)(g)
Royalties	0/15/35 (c)(e)(g)(h)
Rental Income from Leases	5/15/35 (c)(e)(g)(i)
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) Basic investment funds (see Section B) are subject to tax at a rate of 5%. A 0% rate applies to pension funds.
- (b) Capital gains derived by Czech or EU/European Economic Area (EEA) parent companies on transfers of shares in their subsidiaries are exempt from tax if certain conditions are satisfied (see Section B).
- (c) The rates may be reduced by applicable tax treaties.
- (d) Dividends are subject to a final withholding tax at a rate of 15%. Under the principles of the EU Parent-Subsidiary Directive (No. 2011/96/EU), dividends paid by Czech companies to parent companies (as defined in the directive and Czech law) located in EU/European Free Trade Association (EFTA) countries are exempt from withholding tax if the parent company maintains a holding of at least 10% of the distributing company for an uninterrupted period of at least one year (further conditions apply). Dividend distributions between two Czech companies or between foreign subsidiaries and their Czech parents are exempt from tax under similar conditions. The tax exemption does not apply if any of the following circumstances exist (further conditions may apply):
- The parent company or the subsidiary is exempt from corporate income tax or similar tax applicable in its jurisdiction.
 - The parent or subsidiary may opt for an exemption (or a similar relief) from corporate income tax or similar tax applicable in its jurisdiction.
 - The parent or subsidiary is subject to zero corporate income tax or similar tax applicable in its jurisdiction.
 - The subsidiary treats the dividend payments as tax deductible.
- (e) The 35% withholding tax generally applies to Czech-source income arising to Czech tax nonresidents from countries outside the EU/EEA that have not entered into a double tax treaty with the Czech Republic or a bilateral or multilateral tax information exchange agreement that is binding on both the Czech Republic and the respective foreign country. The 35% withholding tax rate also applies if the Czech income payer is unable to prove the tax residency status of the respective beneficial income owner. If applicable, the 35% rate affects all types of income subject to withholding tax (for example, dividends, interest, royalties or rental income). It does not affect rental income from financial leases if the 5% withholding tax rate applies (see footnote [i]).
- (f) Interest payments to nonresidents are subject to withholding tax at a rate of 15%. Under the principles of the EU Directive 2003/49/EC, interest paid by Czech companies to related companies (as defined in the directive) located in EU/EFTA countries is exempt from withholding tax if certain additional conditions are met.
- (g) For certain types of income, EU/EEA tax residents may choose to include the income in their tax return and have it taxed at the standard corporate income tax rate after deduction of associated expenses (while claiming a credit for the withholding tax paid against tax liability stated in the tax return) or they may choose to treat the withholding tax as a final tax on the income.
- (h) This withholding tax applies to nonresidents. Under the principles of EU Directive 2003/49/EC, royalties paid by Czech companies to companies located in EU/EFTA countries are exempt from tax if certain additional conditions are met.
- (i) A 5% withholding tax is imposed on gross rent if the lease contract stipulates that the lessee takes over the ownership of the leased asset (tangible asset only) for a purchase price or for free at the end of the lease term or if the lease contract stipulates such a right or option for the lessee (further conditions may apply). Other rental payments are subject to a 15% withholding tax. Some rental payments may be considered royalties for Czech tax purposes.

B. Taxes on corporate income and gains

Corporate income tax. Resident enterprises are subject to tax on their worldwide income. An enterprise is considered to be a resident enterprise if it is incorporated in the Czech Republic or if its management is located there. Nonresident enterprises are subject to income tax on their Czech-source income only.

Rates of corporate tax. The standard corporate income tax rate for Czech enterprises and branches of foreign enterprises is 19%. Basic investment funds are subject to a preferential tax rate of 5%. Under the Czech Income Taxes Act, the following are considered basic investment funds:

- An investment fund whose shares are accepted for trading on a European regulated market
- Mutual fund
- Investment fund and subfund of a joint stock company with variable registered capital if it invests (in line with its prospectus) more than 90% of its assets in prescribed instruments (for example, certain securities, money market instruments, financial derivatives, receivables and loans)
- A foreign investment fund comparable to funds as described in the above three bullets if it satisfies all of the following conditions:
 - Its home country is an EU/EEA member state.
 - It can prove that it is administered or managed based on an authorization comparable to the authorization issued by the Czech National Bank and its administrator or manager is subject to supervision comparable to the Czech National Bank's supervision.
 - It has statutes or a document comparable to a prospectus based on which it can be determined whether the fund is comparable to a fund described in the above three bullets.
 - It can prove that according to the laws of its home country none of its income is attributable to other persons (meaning it is not tax transparent).

A preferential corporate income tax rate of 0% applies to pension funds.

No differences exist between the taxation of 100% Czech-owned enterprises and those with foreign investment.

Investment incentives. Investment incentives are available to investors launching or expanding the following:

- Manufacturing production
- Technology centers
- Business support services centers, which are shared-services centers, software-development centers, high-technology repair centers, data centers and call centers

Investment incentives can be obtained in the following forms:

- Corporate income tax relief for 10 years
- Job-creation grants
- Grants for training and retraining of employees
- Cash grants on capital expenditures for strategic investments
- Real estate tax exemption

The total value of the incentives can be as much as 25% of total eligible costs. No incentives are provided in Prague. The cap is

increased by 10% for midsized enterprises and 20% for small enterprises. The cap applies to the total of tax relief, job-creation grants, cash grants on capital expenditures and real estate tax exemption. Training and retraining grants are provided on top of this cap.

For investments in manufacturing industry, eligible costs equal the value of long-term tangible and intangible assets. For investments in technology centers and business support services centers, eligible costs can be either the value of long-term tangible and intangible assets or the value of employment costs for two years.

Corporate income tax relief and cash grants on capital expenditures are offered throughout the entire Czech Republic with the exception of Prague. Job-creation grants, training and retraining grants are offered only in regions with high unemployment. Job-creation grants are also available in special industrial zones. Real estate tax exemption is offered only in special industrial zones. The special industrial zones are Holešov, Most-Joseph and Ostrava-Mošnov. In addition, new special industrial zones are planned in Cheb, Moravske Budejovice and Veselí nad Moravou.

Further details regarding the incentives are provided below.

Manufacturing industry. The following are general qualification conditions for the incentives for manufacturing industry:

- The investor must invest at least CZK100 million in long-term tangible and intangible assets. The CZK100 million requirement may be reduced to CZK50 million in selected regions.
- The investment must be in a manufacturing sector, and at least 50% of the total investment must be invested in qualifying production machinery. Machinery must be acquired for an arm's-length price. It must have been produced no more than two years before the acquisition and must not have been previously subject to tax depreciation.
- Intangible assets must be acquired from unrelated third parties for arm's-length prices.
- The proposed production must meet Czech environmental standards.
- At least 20 new jobs must be created.
- All requirements must be met within three years after the date of granting the incentives.
- The investment project may not begin until the filing of an application with CzechInvest (the Czech governmental agency collecting, reviewing and processing investment incentives applications).
- Acquired assets and created jobs must be maintained for the duration of the incentives-utilization period (10 years) and for at least 5 years from the completion of the investment project or creation of the first job.

Technology centers. The following are general qualification conditions for the incentives for technology centers:

- The investor must invest at least CZK10 million in long-term tangible and intangible assets.
- At least 50% of the total investment must be invested in qualifying machinery. Machinery must be acquired for an arm's-length price, must be produced no more than two years before the acquisition and must not have been previously subject to tax depreciation.

- At least 20 new jobs must be created.
- The proposed investment must meet Czech environmental standards.
- All requirements must be met within three years after the date of granting the incentives.
- The investment project may not begin until the filing of an application with CzechInvest.
- Acquired assets and created jobs must be maintained for the duration of the incentives-utilization period (10 years) and for at least 5 years from the completion of the investment project or creation of the first job.

Business support services centers. The following are general qualification conditions for the incentives for business support services centers:

- The minimum number of newly created jobs is 20 for software-development centers and data centers, 70 for shared-services centers and high-technology repair centers, and 500 for call centers.
- The proposed investment must meet Czech environmental standards.
- All requirements must be met within three years after the date of granting the incentives.
- The investment project may not begin until the filing of an application with CzechInvest.
- Acquired assets and created jobs must be maintained for the duration of the incentives-utilization period (10 years) and for at least 5 years from the completion of the investment project or creation of the first job.

Strategic investment. Cash grants on capital expenditures for strategic investments can be provided for up to 10% of eligible costs. Strategic investment can be either investment in manufacturing industry or technology centers meeting specific conditions.

For investments in manufacturing industry and technology centers that are carried out simultaneously, cash grants on capital expenditures can be provided for up to 12.5% of the eligible costs.

Strategic investment in manufacturing industry must meet the following conditions:

- The investor must invest at least CZK500 million in long-term tangible and intangible assets.
- At least CZK250 million of the total investment must be invested in qualifying production machinery.
- At least 500 new jobs must be created.

Strategic investment in the area of technology centers must meet the following conditions:

- The investor must invest at least CZK200 million in long-term tangible and intangible assets.
- At least CZK100 million of the total investment must be invested in qualifying machinery.
- At least 100 new jobs must be created.

Special conditions. In addition to the general conditions listed above, investors claiming the income tax relief must satisfy certain special conditions, including, among others, the following:

- They must reduce their tax base by claiming maximum tax depreciation, deducting all available tax-effective bad debt provisions and using all available tax losses carried forward, in accordance with the tax law.
- They must be the first user of tangible assets (excluding real estate) that are acquired for the purposes of the investment in the Czech Republic.
- They may not cease to exist, terminate their activities or declare bankruptcy.
- They may not increase their tax base through related-party transactions that are not at arm's length.

Mergers are allowed to some extent; that is, tax relief claimed before the merger is not lost, but investors are not able to claim tax relief in subsequent tax periods.

Specific conditions apply to job-creation, retraining and training grants and to grants on capital expenditures for strategic investments.

The incentives are provided based on the Investment Incentives Act. In practice, the government grants the incentives if the conditions are satisfied.

Capital gains. In the Czech Republic, realized and unrealized capital gains are recognized.

Capital gains realized by a Czech or another EU/EEA parent company (also, see below) on the transfer of shares in a subsidiary established in the Czech Republic or another EU/EEA country are exempt from tax if the parent company maintains a holding of at least 10% of the subsidiary for an uninterrupted period of at least one year (further conditions apply).

Capital gains realized by a Czech or EU/EEA parent company on the transfer of shares in a subsidiary in a contracting country (that is, a third country that has entered into a tax treaty with the Czech Republic) are also exempt from tax if the following conditions are satisfied:

- The subsidiary has a legal form comparable to a Czech joint-stock company (*akciová společnost*, or a.s.), a limited liability company (*společnost s ručením omezením*, or s.r.o.) or a cooperative (*družstvo*).
- The parent company has held an ownership interest of at least 10% in the subsidiary for at least one year (this condition may be fulfilled subsequent to the date of the transfer).
- The subsidiary is liable to a tax similar to corporate income tax at a rate of at least 12% in the tax period in which the parent company accounts for the respective capital gain and in the preceding tax period.

The exemption for capital gains does not apply if any of the following circumstances exists:

- The subsidiary entered liquidation proceedings.
- The shares in the subsidiary were acquired through the acquisition of a going concern.
- The parent company or the subsidiary is exempt from corporate income tax or similar tax applicable in its jurisdiction.

- The parent company or the subsidiary may opt for an exemption (or a similar relief) from corporate income tax or similar tax applicable in its jurisdiction.
- The parent company or the subsidiary is subject to zero corporate income tax or similar tax applicable in its jurisdiction.

Other realized capital gains are included with other taxable income and taxed at the regular corporate income tax rate. Capital losses on certain assets may be deducted from ordinary income, while capital losses on other assets (including capital losses on assets that qualify for exemption) are not deductible, even from other capital gains.

Unrealized capital gains and losses, which result from revaluation to fair value, are taxable or deductible only with respect to certain assets. Unrealized gains on shares that qualify for exemption are not taxable and unrealized losses on such assets are nondeductible for tax purposes.

Capital gains realized by nonresidents on the following are considered Czech-source income and are consequently generally taxable:

- Sales of rights registered in the Czech Republic or investment instruments to Czech taxpayers or Czech permanent establishments
- Sales of shares (securities or share interests) in Czech companies, regardless of the tax residence of the purchaser

However, capital gains realized by EU/EEA parent companies on sales of shares may be exempt from tax (see above).

Administration. Companies may select a calendar year or a fiscal year as its tax year. If a company uses a tax year other than the calendar year, it must file a notification with the tax authorities.

Tax returns must be filed within three months after the end of the tax year. On application of the company, an extension of three months to file a tax return may be granted at the discretion of the tax authorities. Companies that are subject to a statutory audit are automatically granted the three-month extension.

A company with tax liability of more than CZK150,000 for the preceding year must make quarterly advance payments of tax, each equal to 25% of the preceding year's tax liability. The payments must be made by the 15th day of the third, sixth, ninth and twelfth month of their tax year. Any balance of tax due must be paid by the due date for filing the tax return.

If a company's liability for the preceding year exceeded CZK30,000, but did not exceed CZK150,000, installments that are each equal to 40% of the tax liability for the preceding year must be paid by the 15th day of the sixth and twelfth months of their tax year. If the preceding year's tax liability was CZK30,000 or less, only a single payment is required on filing the annual return.

Late payments and late filings incur penalty charges at a rate established by law. Overpayments are generally refunded within 30 days of the taxpayer's application.

Dividends. Dividends are subject to a final withholding tax at a rate of 15%. The tax rate is increased to 35%, effective from 2013,

for dividends paid to Czech tax nonresidents from countries outside the EU/EEA that have not entered into a double tax treaty with the Czech Republic or a bilateral or multilateral tax information exchange agreement that is binding on both the Czech Republic and the respective foreign country.

Under the principles of the EU Parent-Subsidiary Directive (No. 90/435/EEC), dividends paid by Czech companies to parent companies (as defined in the directive) that are located in EU/EFTA countries (also, see below) are exempt from withholding tax if the parent company maintains a holding of at least 10% of the distributing company for an uninterrupted period of at least one year (further conditions apply). The condition described in the preceding sentence may be fulfilled subsequent to the date of distribution of the dividend. Dividend distributions between two Czech companies and between foreign subsidiaries and their Czech parents are exempt from tax under similar conditions.

In addition, dividends distributed by subsidiaries in a contracting country are also exempt from taxation under rules similar to those applicable to capital gains (see *Capital gains*).

The tax exemption for dividends does not apply if any of the following circumstances exists (further conditions may apply):

- The parent company or the subsidiary is exempt from corporate income tax or similar tax applicable in its jurisdiction.
- The parent or subsidiary may opt for an exemption (or a similar relief) from corporate income tax or similar tax applicable in its jurisdiction.
- The parent or subsidiary is subject to zero corporate income tax or similar tax applicable in its jurisdiction.
- The subsidiary has an option to treat the dividend payments as tax deductible in its jurisdiction.

Foreign tax relief. Foreign tax relief (through credit or exemption) is available only under tax treaties. If foreign tax relief is not available under a treaty, the income tax paid abroad may be deducted as an expense in the following year if it is imposed on income included in taxable income in the Czech Republic.

C. Determination of trading income

General. Taxable income is calculated according to Czech accounting regulations, with adjustments for tax purposes.

All expenses incurred to generate, assure and maintain taxable income that relate to the given period are generally deductible, subject to the limits specified in the corporate income tax and related laws, if documented by the taxpayer. The following are some of the expenses that may be deducted:

- Depreciation of tangible and intangible assets (see *Depreciation*).
- Cost of insurance if related to taxable income (except for insurance paid on behalf of an executive or member of the board of directors for damage caused by the performance of his or her functions).
- Membership contributions paid to selected chambers and associations under certain conditions.
- Damages resulting from natural disasters. The amount of the damage must be documented by evidence submitted by an expert

from an insurance company. Damages caused by unknown perpetrators can be tax deductible if confirmed by the police.

- Real estate tax paid in accordance with the Czech law, road tax and selected other taxes and fees (subject to exceptions), if related to activities that generate taxable income.
- Specified expenses related to the provision of proper working, social and health care conditions of the employees.
- Payments on leases, including financial leases, under certain conditions.
- Travel expenses related to work in the Czech Republic and abroad.
- Donations valued at CZK2,000 or more for various social and charitable purposes. In general, the maximum amount of this deduction is 10% of the tax base.

In general, taxpayers must increase their tax base by the amount of any overdue liability accounted for in their books that represented a tax-deductible expense and that remains unsettled for 36 months (30 months for liabilities due in 2015 or later; grandfathering rules apply).

Inventory. Inventory is valued at acquisition or production cost. Costs include all costs necessary to convert the inventory to its current condition and to transport it to its current location. No deduction is allowed for inventory provisions or for other decreases in inventory value. Under certain circumstances, the liquidation of inventory may be deductible for tax purposes.

Provisions. Provisions are not deductible unless a special tax law permits their creation for tax purposes.

Tax relief is provided with respect to overdue trading debts (as defined in the law). A special regime applies to unpaid receivables that were due before 31 December 1994.

Rules applicable as of 1 January 2014. Taxpayers may generally create the following tax-deductible provisions for overdue debts (with certain limitations):

- 50% of the unpaid book value of the debt if more than 18 months have elapsed since the agreed due date
- 100% of the unpaid book value of the debt if more than 30 months have elapsed since the agreed due date

For overdue debts exceeding CZK200,000 that were acquired from the previous creditor, deduction of the above provisions is allowed only if a court or arbitration proceeding was initiated and the taxpayer (creditor) participates in the proceeding.

Rules applicable until 31 December 2013 (for receivables with a due date before 2014). For overdue debts not exceeding CZK200,000 that were due after 31 December 1994, if between 6 and 12 months had elapsed since the agreed due date for the debt, 20% of the book value of the debt was deductible (grandfathering rules apply). This deduction was allowed regardless of whether court or arbitration proceedings had commenced against the debtor. If the debt was more than 12 months overdue, a court or arbitration proceedings needed to be commenced by the creditor against the debtor to claim a larger tax deduction for the debt. The deduction was calculated by applying the following specified percentages to the book value of the debt.

Months elapsed since agreed due date		Deductible percentage of book value
Exceeding	Not exceeding	%
12	18	33
18	24	50
24	30	66
30	36	80
36	—	100

For debts exceeding CZK200,000 that were overdue more than six months, the rules described above applied if the creditor had commenced court or arbitration proceedings against the debtor.

The above deductions (under the rules applicable until 31 December 2013 and the rules applicable after that date) must be recorded in the accounting books. The deductions may not be claimed for debts from related parties and other specified debts.

A 100% provision can be created for receivables up to CZK30,000, subject to certain conditions. A 100% provision for overdue receivables may also be created if insolvency proceedings have been initiated with respect to the debtor's property and if the creditor makes a timely claim for such receivables against the debtor in the respective court. This deduction may not be claimed for debts from related parties.

Reserves. Taxpayers may create tax-deductible reserves for the repair of tangible assets included in Categories 2 through 6 for tax depreciation purposes (see *Depreciation*). The reserves must be created for a minimum of two tax periods and for the maximum number of tax periods specified for each asset category.

Reserves for repairs of tangible assets may be created tax-effectively only if cash equal to the amount of the reserve created is deposited in a specific bank account. This measure applies to reserves that are created after 2008.

Depreciation. The corporate income tax law includes specific provisions concerning the depreciation of tangible and intangible assets. Depreciable tangible assets are divided into six categories, each of which specifies a period (a specified number of years) over which all assets in the category are depreciated.

The following are the six categories of depreciation, the time periods for depreciation of assets in each category and representative assets included in each category.

Category	Asset	Years
1	Office machines and some light machinery	3
2	Passenger cars, buses, airplanes, tractors, lorries, furniture and specified production machinery	5
3	Heavy machinery	10
4	Wooden buildings, pipelines, buildings for the production of energy, and buildings and halls built near mines	20
5	Buildings	30
6	Specified buildings	50*

* This category includes hotels, stores and office buildings.

Assets other than buildings that cannot be classified in any of the above categories are considered to be in Category 2. Category 5 covers buildings that are not covered by Categories 4 or 6.

Taxpayers may elect to depreciate assets using the straight-line or the accelerated method. The method chosen, however, does not affect the period of depreciation. Under the accelerated method, depreciation for the first year is calculated by dividing the cost of the asset by the applicable coefficient (see table below). For subsequent years, accelerated depreciation is calculated by multiplying the residual tax value of the asset by two and then dividing by the applicable coefficient, which is reduced by the number of years for which the asset has already been depreciated.

The following are the depreciation rates and coefficients for the six categories under the straight-line and accelerated methods.

Category	Straight-line rate	Accelerated-depreciation coefficient
1	20% for first year and 40% for subsequent years	3 for first year and 4 for subsequent years
2	11% for first year and 22.25% for subsequent years	5 for first year and 6 for subsequent years
3	5.5% for first year and 10.5% for subsequent years	10 for first year and 11 for subsequent years
4	2.15% for first year and 5.15% for subsequent years	20 for first year and 21 for subsequent years
5	1.4% for first year and 3.4% for subsequent years	30 for first year and 31 for subsequent years
6	1.02% for first year and 2.02% for subsequent years	50 for first year and 51 for subsequent years

Taxpayers may elect to use lower than the maximum straight-line depreciation rates. Additional rules apply to assets that were technically improved.

An initial depreciation acceleration (additional 10% to 20% of input price; in general, the input price is the acquisition cost, including related costs) is granted in the year of acquisition for certain tangible assets if other conditions are met.

Effective from 2010, the component depreciation of assets method may be used for accounting purposes. For tax purposes, the accounting result is adjusted as if this method was not used.

Specified tangible assets used in solar energy production are depreciated proportionally for a period of 240 months.

Depreciable intangible assets are divided into two categories — intangible assets that may be used for a definite time period and those that may be used for an indefinite time period. Intangible assets that may be used for a definite period are depreciated proportionally during such period. If the period for use is indefinite,

the intangible asset is depreciated proportionally over the following periods (also see next paragraph).

Category	Period (months)
Audiovisual works	18
Software	36
Foundation expenses	60
Other intangible assets	72

Under a recent amendment, the above periods are set as minimum depreciation periods. Under transitory provisions, this modification applies to assets that begin to be depreciated after the effective date of the amendment.

Relief for losses. Losses may be carried forward for five years. The carryforward may be lost if a “substantive change” in persons participating in the equity or control of the taxpayer occurs and if the same activity test is not met. A “substantive change” is considered to be one of the following:

- A change in more than 25% equity ownership
- A change resulting in a shareholder receiving decisive influence

The same activity test is met if 80% of the revenues generated in the period in which the substantive change occurs and in the following tax-loss utilization periods is from the same activities that were performed in the period in which the tax loss was generated.

Groups of companies. Czech tax law does not provide for consolidated tax returns or other types of group relief.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax (VAT), levied on all taxable supplies (goods and services), acquisitions of goods from other EU member states and imports of goods; certain supplies are exempt	
Standard rate; applicable to most goods and services	21%
Reduced rate applicable to specified goods and services (for example, food products and public transport)	15%
Reduced rate applicable to books, pharmaceuticals and baby food	10%
Social security and health insurance contributions; the social security contributions are paid only up to the maximum assessment base	
Health insurance	
Employer	9%
Employee	4.5%
(No maximum assessment base applies.)	
Old-age pension	
Employer	21.5%
Employee	6.5%
(The maximum assessment base is CZK1,355,136.)	

Nature of tax	Rate
Sickness	
Employer	2.3%
Employee	0%
(The maximum assessment base is CZK1,355,136.)	
Unemployment	
Employer	1.2%
Employee	0%
(The maximum assessment base is CZK1,355,136.)	
Real estate transfer tax; levied on the acquisition of real estate	4%
Excise tax, imposed on entities that produce or import certain goods, including hydrocarbon fuels and lubricants, alcohol and spirits, beer, wine and tobacco products; tax based on the quantity of goods expressed in specific units; tax may be levied only once on a particular good	Various
Road tax, imposed on entities that use vehicles; based on engine capacity and number of axles	Various
Environmental tax; imposed on electricity, natural gas and solid fuel when delivered to final consumers; tax is based on the quantity of goods expressed in specific units; tax is administered and paid by the distributor which charges it to the final customer as a price increase	Various
Tax stamps for the use of highways	
Small vehicles (up to 3.5 tons; annual stamp)	CZK1,500
Large vehicles	Electronic road tolls

E. Miscellaneous matters

Foreign-exchange controls. The only legal tender valid in the Czech Republic is the Czech crown (CZK). Other currencies may be used for domestic transactions, but the use of the Czech crown is prevalent.

The Czech crown is fully convertible. Several financial transactions, such as direct investments or acceptance of credit from abroad, are subject to a reporting requirement.

Anti-avoidance legislation. In applying the tax law, the tax authorities may consider the substance of a transaction if the form of the transaction conceals the actual facts. In addition, the Czech courts have developed the abuse-of-law concept. The concept is similar to the one developed by the European Court of Justice (for example, *Halifax* [No. C-255/02]).

Transfer pricing. If prices in a transaction involving related parties vary from the current market prices and if the difference cannot be justified, the market prices are used for tax purposes. Related parties include companies related through capital (that is, the same legal or natural persons directly or indirectly manage, control or

own more than 25%) and companies related in a different manner. In addition, related parties are persons who establish a business relationship for the principal purpose of decreasing taxable income or increasing a tax loss.

Binding rulings. Taxpayers may apply to the tax authorities for advance pricing agreements and for binding opinions on transfer prices, technical improvements of long-term assets, the allocation of expenses to taxable and non-taxable income, expenses incurred on research and development projects, expenses incurred on buildings that are also used for private purposes, and the application of VAT rates.

A recent amendment introduced a new ruling regarding the determination of the tax base of a tax nonresident from activities carried on by a permanent establishment. Requests for this ruling may be submitted beginning in January 2018.

Financing expenses. The tax deductibility of financing expenses (interest and associated expenses) with respect to related-party loans (including back-to-back loans) is limited by a debt-equity ratio of 4:1 (6:1 for banks and insurance companies). In addition, financing expenses with respect to profit-participating loans are nondeductible for tax purposes. Also, limitations are imposed on the deductibility of financing expenses related to shareholdings.

Foreign investment. Similar rules apply to both Czech investors and foreign investors.

F. Treaty withholding tax rates

The Czech Republic honors bilateral tax treaties of Czechoslovakia. It has also entered into tax treaties with many other jurisdictions. The following table lists the withholding rates under the bilateral treaties currently honored by the Czech Republic.

	Dividends %	Interest %	Royalties %
Albania	5/15 (b)	0/5 (g)	10
Armenia	10	0/5/10 (g)	5/10 (a)
Australia	5/15 (e)	10	10

- (a) The lower rate applies to royalties paid for copyrights. The higher rate applies to royalties paid for patents, trademarks, designs or models, plans, secret formulas or processes, or industrial, commercial or scientific equipment or information.
- (b) The lower rate applies if the receiving company (other than a partnership) owns at least 25% of the capital of the payer. Under the Belgium treaty, dividends paid to partnerships may also qualify for the lower rate. Under the United Kingdom treaty, the lower rate applies if the receiving company controls at least 25% of shares with voting rights of the payer. Under the Japan treaty, the lower rate applies if the receiving company holds at least 25% of shares with voting rights of the payer for at least six months preceding the payment of dividend. Under the Colombia treaty, the 25% rate applies to dividends paid by a Colombian resident that are derived from profits that were not under the law subject to Colombian tax, and the 15% rate applies to dividends not subject to the 5% or 25% rates.
- (c) The lower rate applies if the receiving company (other than a partnership) owns at least 10% of the capital of the payer. Under the Canada and Nigeria treaties, the lower rate applies if the receiving company controls at least 10% of the voting rights of the payer (except for dividends paid by a Canadian investment corporation). Under the United States treaty, the lower rate applies if the receiving company owns at least 10% of the shares with voting rights of the payer (exceptions applies to dividends paid by investments companies and real estate investment trusts located in the United States). Under the Norway treaty, the 0% rate also applies to dividends paid to the government or specified institutions. Under the Cyprus, Liechtenstein, Luxembourg and Switzerland treaties, the 0% rate applies if at least 10% of share capital of the payer is held by an entity (other than a partnership) for at least one year. Under the Denmark treaty, the 0% rate applies if the recipient of the dividends is a pension fund. Under the Switzerland treaty, the 0% rate also applies if the recipient of the dividends is a central bank or a pension fund.
- (d) Interest on mutual deposits with banks in the interbank market is exempt from tax for recipients from non-treaty countries (subject to reciprocal treatment). For all Czech tax nonresidents (that is, recipients from treaty and non-treaty countries), interest on bonds issued by Czech taxpayers or the Czech Republic outside the Czech Republic is exempt from tax. The 15% rate applies to other interest but see also footnote (x).
- (e) The lower rate applies if the receiving company (other than a partnership) owns at least 20% of the capital of the payer. Under the Australia treaty, the lower rate applies to dividends paid from the Czech Republic to Australia if the receiving company owns at least 20% of the capital of the payer and to dividends paid from Australia to the Czech Republic if special requirements are met.
- (f) The 5% rate applies if the receiving company (other than a partnership) owns more than 15% of the capital of the payer.
- (g) The 0% rate applies to interest paid to (or by) the government (or specified institutions), subject to further conditions. Under the Albania treaty, the 0% rate also applies to interest paid to an agency, including banks and financial institutions, wholly owned by the contracting state. Under the Georgia treaty,

the 0% rate also applies to interest on loans and credits guaranteed by governments or related to sales of industrial equipment that are financed by loans. Under the Armenia and Azerbaijan treaties, the 5% rate applies to interest on bank loans. Under the Ethiopia treaty, the 0% rate also applies to, among other items, interest paid to institutions owned or controlled by the government whose sole purpose is the promotion of export or foreign investment. Under the Thailand treaty, the 10% rate applies to interest paid to financial institutions or insurance companies; otherwise, the rate of the source country applies. Under the Pakistan and Syria treaties, the 0% rate also applies to interest paid to the central bank or any financial institution wholly owned by the government and to interest on loans and credits guaranteed by the government or specified institutions. Under the China treaty, the 0% rate also applies if the interest paid to selected government agencies or the central bank or if the receivable is financed, guaranteed or pledged by the government, the central bank or a selected government agency. Under the Barbados, Colombia, Iran, Tajikistan and Uzbekistan treaties, the 0% rate also applies to interest from the sale on credit of merchandise or equipment or from a loan or credit granted by a bank or guaranteed by the government (or specified institutions). Under the Belarus treaty, the 0% rate also applies to interest on bank loans. Under the Poland treaty, the 0% rate also applies to interest from a loan or credit granted by a bank or guaranteed by the government (or specified institutions). Under the Belgium treaty, the 0% rate applies to interest from suspended payments for goods and services, loans guaranteed by public institutions aimed to support the export and bank loans and deposits (except in the form of securities). Under the Brazil treaty, interest from securities, bonds and promissory notes issued by the government (or specified institutions) is subject to tax in the state of residence of the issuer. Under the Bulgaria and Panama treaties, the 0% rate also applies to interest from suspended payments for equipment or goods or from certain loans guaranteed by public institutions. Under the Canada treaty, the 0% rate also applies to, among other items, interest paid to institutions established to manage and pay out benefits from pension, retirement or employee schemes (other limitations apply). Under the Korea (South) treaty, the 0% rate also applies to interest paid in connection with sales on credit of industrial, commercial or scientific equipment or in connection with sales on credit of goods between commercial entities. Under the Kazakhstan treaty, the 0% rate also applies to interest from loans guaranteed by the government (or specified institutions). Under the Malaysia treaty, the 0% rate also applies to interest from approved loans if the beneficial owner of the interest is a Czech tax resident.

- (h) The 5% rate applies to royalties for copyrights. The 10% rate applies to royalties for patents, trademarks, designs or models, plans, secret formulas and processes. The 15% rate applies to other royalties.
- (i) The 10% rate applies to loans and credits granted by a bank for a period of at least 10 years in connection with the following:
 - Sales of industrial equipment or studies
 - Installation or furnishing of industrial or scientific units
 - Public works
- (j) The 10% rate applies if the receiving company owns at least 25% of the payer for at least two years preceding the payment of the dividend.
- (k) The 0% rate applies to a dividend paid to the government of a contracting state (or a government institution) or to a company that is at least 25% owned by the government of the contracting state.
- (l) The 0% rate applies to a dividend paid by a tax resident of Malaysia to a Czech tax resident who is the beneficial owner of the dividends.
- (m) The 0% rate applies to royalties paid for copyrights. The 1% rate applies to royalties paid for finance leases of equipment. The 5% rate applies to royalties paid for operating leases of equipment and for the use of, or right to use, software. The 10% rate applies to other royalties.
- (n) The lower rate applies to royalties for copyrights, with the exception of royalties for cinematographic films and films or tapes for television broadcasting. The higher rate applies to other royalties.
- (o) The lower rate applies to dividends paid by a tax resident of Sri Lanka to a Czech tax resident (except with respect to investments made after the effective date of the treaty).
- (p) The treaty provides for a rate of 10%, but a protocol to the treaty provides for a rate of 5% until Swiss domestic law imposes a withholding tax on royalties.
- (q) In addition to treaty protection, royalties paid by Czech companies or permanent establishments of companies from EU member states to related-party companies located in other EU/EEA member states or Switzerland is exempt from tax if the conditions stated in provisions implementing EU Directive 2003/49/EC, as amended, are satisfied and if an advance ruling is issued by

the Czech tax authority. If a Czech withholding tax applies to outbound royalties, EU/EEA tax residents may choose to include the income in their tax return and have it taxed at the standard corporate income tax rate after deduction of associated expenses (while claiming a credit for the withholding tax paid against tax liability stated in the tax return), or to treat the withholding tax as a final tax on the income.

- (r) The 10% rate applies to royalties paid for patents, trademarks and industrial, commercial, or scientific equipment or information. The 15% rate applies to royalties paid for films.
- (s) In addition to treaty protection, dividends paid by Czech companies to parent companies (as defined in the EU Parent-Subsidiary Directive 2011/96/EU) that are located in other EU member states, or in Iceland, Liechtenstein, Norway or Switzerland, are exempt from withholding tax if the parent company maintains a holding of at least 10% of the distributing company for an uninterrupted period of at least one year (this condition may be met subsequently). Further conditions apply.
- (t) In addition to treaty protection, interest from qualified instruments paid by Czech companies or permanent establishments of companies from EU member states to related-party companies (as defined in EU Directive 2003/49/EC) located in other EU/EEA member states is exempt from withholding tax if the conditions stated in the provisions implementing EU Directive 2003/49/EC, as amended, in the Czech tax law are satisfied and if an advance ruling is issued by the Czech tax authority. In addition, if Czech withholding tax applies to outbound interest, EU/EEA tax residents may choose to include the income in their tax return and have it taxed at the standard corporate income tax rate after deduction of associated expenses (while claiming a credit for the withholding tax paid against tax liability stated in the tax return), or to treat the withholding tax as a final tax on the income.
- (u) The 0% rate applies to royalties paid for copyrights. The 5% rate applies to payments for industrial, commercial or scientific equipment. The 10% rate applies to royalties paid for patents, trademarks, designs or models, plans, secret patterns or production procedures and software, as well as for information relating to experience acquired in the areas of industry, commerce or science.
- (v) The 25% rate applies to royalties paid for trademarks. The 15% rate applies to other royalties.
- (w) The 5% rate applies to royalties paid for industrial, commercial or scientific equipment.
- (x) A 35% tax rate applies to payments to tax residents in countries with which the Czech Republic has not entered into a double tax treaty or a treaty on exchange of information in tax matters. For further details, see footnote (e) in Section A.
- (y) The 5% rate applies to business profits after taxation transferred by a permanent establishment in one contracting state to its head office in the other contracting state.
- (z) The 5% rate applies to interest paid to specified financial institutions, such as banks and insurance companies.
- (aa) The 0% rate applies to copyright royalties paid from the Czech Republic to Belgium. The 5% rate applies to royalties paid for use of industrial, commercial or scientific equipment.

New tax treaties that affect withholding rates with Kosovo and Turkmenistan are in the ratification process.

A. At a glance

Corporate Income Tax Rate (%)	22
Capital Gains Tax Rate (%)	22
Branch Tax Rate (%)	22

Withholding Tax (%)	
Dividends	0/27 (a)
Interest	22 (b)
Royalties from Patents, Know-how, etc.	22 (c)
Branch Remittance Tax	0 (d)
Net Operating Losses (Years)	
Carryback	0
Carryforward	Unlimited

- (a) The general withholding tax rate is 27%, and the recipient can apply for a refund depending on the final tax rate. A withholding tax of 0% normally applies to dividends paid to group companies. See Section B.
- (b) The 22% rate applies to payments between related parties. See Section B.
- (c) The rate is 0% for royalties paid for copyrights of literary, artistic or scientific works, including cinematographic films, and for the use of, or the right to use, industrial, commercial or scientific equipment. In addition, the rate may be reduced or eliminated if certain conditions are met under the European Union (EU) Interest-Royalty Directive or a double tax treaty entered into by Denmark.
- (d) A Danish branch office or a tax-transparent entity may be re-characterized as a Danish tax-resident company if the entity is controlled by owners resident in one or more foreign countries, the Faroe Islands, or Greenland and if either of the following circumstances exists:
- The entity is treated as a separate legal entity for tax purposes in the country or countries of the controlling owner(s).
 - The country or countries of the controlling owner(s) are located outside the EU and have not entered into a double tax treaty with Denmark under which withholding tax on dividends paid to companies is reduced or renounced.

B. Taxes on corporate income and gains

Corporate income tax. A resident company is a company incorporated in Denmark. In addition, a company incorporated in a foreign country is considered a resident of Denmark if its day-to-day management is in Denmark.

All tax-resident companies that are part of the same group must be included in a Danish mandatory joint taxation arrangement, regardless of whether these companies are subject to full or limited tax liability in Denmark. This mandatory joint taxation comprises all Danish affiliated companies as well as permanent establishments and real estate located in Denmark (for details, see Section C).

The income of resident companies that is generated in a foreign permanent establishment or real estate located outside Denmark is not included in the statement of the taxable income in Denmark, unless Denmark is granted the right to tax such income under an applicable double tax treaty or other international agreement, or the income is subject to controlled foreign company (CFC) taxation (see Section E).

Branches of foreign companies located in Denmark are taxed only on trading income and on chargeable capital gains derived from the disposal of trading assets that are located in Denmark and related to a Danish permanent establishment.

Rate of corporate tax. For the 2017 income year, resident and non-resident companies are taxed at a rate of 22%.

Capital gains. Capital gains are taxed as other income at a rate of 22%.

Capital gains derived from a disposal of shares in a group company (group shares), shares in a subsidiary (subsidiary shares) and

own shares (shares issued by the company) are exempt from tax regardless of the ownership period, while losses incurred on such shares are not deductible.

The following are considered group shares:

- Shares in a company that is subject to mandatory joint taxation under Danish rules together with the shareholder of the company
- Shares in a company that is eligible for inclusion in an international joint taxation arrangement under Danish rules (see Section C)

Shares are considered subsidiary shares if all of the following conditions are met:

- The shares are in a company in which the shareholder directly owns at least 10% of the share capital.
- The company is in a legal form that is similar to a Danish limited liability company.
- The company is subject to corporate tax in its home country (without exemption).
- The company is located in a country that has an agreement with Denmark on exchange of information.

Certain anti-avoidance rules apply if shareholders that do not each meet the requirements of holding group shares or subsidiary shares set up an intermediate holding company that by itself is able to meet the requirements.

In certain cases, capital gains may be reclassified as dividends. The reclassification of capital gains to dividends applies under specific circumstances only.

In general, capital gains derived from a disposal of shares that are not own shares, group shares or subsidiary shares (known as portfolio shares) are taxable at the statutory corporate income tax rate of 22%, while losses are deductible, regardless of the ownership period. However, capital gains derived from the disposal of portfolio shares do not trigger taxation if all of the following conditions are satisfied:

- The shares relate to a Danish limited liability company or a similar foreign company.
- The shares are not publicly listed.
- A maximum of 85% of the book value of the portfolio company is placed in publicly listed shares.
- The company disposing of the portfolio shares does not buy new portfolio shares in the same company within six months after the disposal.

The current rules regarding taxation of portfolio shares are based on the mark-to-market method, under which gains and losses are computed on the basis of the market value of the shares at the beginning and end of the income year. It is possible to opt for taxation based on the realization method with respect to unlisted portfolio shares only. Listed portfolio shares must be taxed according to the mark-to-market method. Special rules apply to the carryforward of unused losses on portfolio shares.

Gains on the sale of goodwill and intellectual property rights are subject to tax.

Recaptured depreciation (see Section C) is taxed as ordinary income at a rate of 22%.

Administration. In general, the income year for companies is the calendar year. Companies may select a staggered income year, which is an income year other than the calendar year. They may change their income year if justified by special circumstances.

In general, tax returns for companies must be filed within six months after the end of the companies' income year. For companies with income years ending from 1 February to 31 March, tax returns must be filed by 1 September. Companies pay corporate tax on a current year basis at a rate of 22%, with half payable on 20 March and the remainder on 20 November.

Dividends paid. In general, dividends paid are subject to withholding tax at a rate of 27%. However, withholding tax is normally not imposed on dividends paid to group companies if the Danish shares qualify as either group shares or subsidiary shares (see *Capital gains*) and if the withholding tax must be reduced or eliminated under the EU Parent-Subsidiary Directive or a double tax treaty. For a company owning Danish shares that are group shares rather than subsidiary shares, it is required that the withholding tax would have been reduced or eliminated under the EU Parent-Subsidiary Directive or a double tax treaty if the shares had been subsidiary shares. In both cases, the recipient of the dividends must be the beneficial owner of the dividends and, accordingly, is entitled to benefits under the EU Parent-Subsidiary Directive or a double tax treaty.

The final tax rate for nonresident companies is generally 22%, with a rate of 15% for certain portfolio shares. The applicability of the 15% tax rate is described under *Capital gains* (conditions for deriving tax-exempt capital gains on portfolio shares). The 15% rate applies for corporations resident in jurisdictions with which Denmark has entered into a treaty on double taxation or exchange of information (if the shareholding meets the requirements described under *Capital gains*). A claim for a refund for the difference between the withholding tax of 27% and the final tax rate may be filed with the Danish tax authorities.

Withholding tax on dividends from a Danish subsidiary to a foreign company applies in the case of a redistribution of dividends if the Danish company itself has received dividends from a more-than-10%-owned company in another foreign country and if the Danish company cannot be regarded as the beneficial owner of the dividends received. Correspondingly, it applies if the Danish company has received dividends from abroad through one or more other Danish companies. Such dividends are generally subject to withholding tax at a rate of 27%, unless all of the following circumstances exist:

- The rate is reduced under a double tax treaty with Denmark or the recipient is covered by the EU Parent-Subsidiary Directive.
- The recipient is considered the beneficial owner of the dividends.
- The general anti-avoidance rule does not apply.

Interest paid. In general, interest paid to foreign group companies is subject to withholding tax at a rate of 22%. The withholding tax is eliminated if any of the following requirements are satisfied:

- The interest is not subject to tax or taxed at a reduced rate under the provisions of a double tax treaty. For example, if withholding

tax on interest is reduced to 10% under a double tax treaty, the withholding tax is eliminated completely.

- The interest is not subject to tax in accordance with the EU Interest/Royalty Directive. Under the directive, interest is not subject to tax if both of the following conditions are satisfied:
 - The debtor company and the creditor company fall within the definition of a company under Article 3 in the EU Interest/Royalty Directive (2003/49/EEC).
 - The companies have been associated (as stated in the directive) for at least a 12-month period.
- The interest accrues to a foreign company's permanent establishment in Denmark.
- The interest accrues to a foreign company, and a Danish parent company, indirectly or directly, is able to exercise control over such foreign company (for example, by holding more than 50% of the voting rights). Control must be fulfilled for a period of 12 months during which the interest is paid.
- The interest is paid to a recipient that is controlled by a foreign parent company resident in a country that has entered into a double tax treaty with Denmark and has CFC rules and if, under these foreign CFC rules, the recipient may be subject to CFC taxation.
- The recipient company can prove that the foreign taxation of the interest income amounts to at least $\frac{3}{4}$ of the Danish corporate income tax and that it will not in turn pay the interest to another foreign company that is subject to corporate income tax amounting to less than $\frac{3}{4}$ of the Danish corporate income tax.

The withholding tax and exceptions also apply to non-interest-bearing loans that must be repaid with a premium by the Danish debtor company.

C. Determination of trading income

General. Taxable income is based on profits reported in the annual accounts, which are prepared in accordance with generally accepted accounting principles. For tax purposes, several adjustments are made, primarily concerning depreciation and write-offs of inventory.

Expenses incurred to acquire, ensure and maintain income are deductible on an accrual basis. Certain expenses, such as certain gifts, income taxes and formation expenses, are not deductible. Only 25% of business entertainment expenses is deductible for tax purposes. Expenses incurred on advisor fees are not deductible if they are incurred with respect to investments in shares that have the purposes of a full or partial acquisition of one or more companies and of the exercise of control over or participation in the management of these companies.

Inventories. Inventory may be valued at historical cost or at the cost on the balance sheet at the end of the income year. Inventory may also be valued at the production price if the goods are produced in-house. Indirect costs, such as freight, duties and certain other items, may be included.

Dividends received. Dividends received with respect to shares that qualify as group shares or subsidiary shares (see *Capital gains*) are exempt from tax if no tax deduction is claimed for the distribution by the entity making the distribution.

Dividends received by a Danish permanent establishment may be exempt from tax if the permanent establishment is owned by a foreign company that is tax resident in the EU, European Economic Area (EEA) or in a country that has entered into a double tax treaty with Denmark.

Dividends received on a company's own shares are exempt from tax.

Dividends that are not covered by the above tax exemption, such as dividends from portfolio shares, must be included in the taxable income of the dividend receiving company and taxed at the normal corporate income tax rate of 22%. A tax credit is normally available to the dividend receiving company for foreign withholding taxes withheld by the dividend distributing company.

Depreciation

Immediate deductions. For the 2017 income year, new acquisitions not exceeding DKK13,200 (2017 amount) or with a lifetime not exceeding three years are 100% deductible in the year of purchase. Computer software, operating equipment and ships for research and development, except operating equipment and ships used for exploration of raw materials, are also 100% deductible in the year of purchase.

Asset classes. Certain depreciable assets must be allocated among four asset classes:

- Operating equipment (including production facilities, machinery, office equipment, hardware and certain software that may not be written off immediately) may be depreciated at an annual rate of up to 25%, using the declining-balance method.
- Certain ships (weighing more than 20 tons and leased out without a crew) may be depreciated at an annual rate up to 12%, using the declining-balance method.
- Certain operating equipment with a long economic life (certain ships transporting goods or passengers, aircraft, rolling railway material, drilling rigs and facilities for producing heat and electricity) may be depreciated at an annual rate of up to 15%, using the declining-balance method. Facilities for producing heat and electricity with a capacity of less than 1 MW and wind-turbine generators (regardless of the capacity) may be depreciated at an annual rate of up to 25%, using the declining-balance method.
- Infrastructural facilities (facilities used for purposes, such as transporting, storing and distributing electricity, water, heat, oil, gas and wastewater and facilities with respect to radio, telecommunications and data transmissions) may be depreciated at an annual rate of up to 7%, using the declining-balance method.

It is important to distinguish between building installations and infrastructural facilities.

Buildings. Buildings used for commercial and industrial purposes may be depreciated at an annual rate of up to 4%, using the straight-line method based on the purchase price, excluding the value of the land. Office buildings, financial institutions, hotels, hospitals and certain other buildings may not be depreciated. However, office blocks or office premises adjacent to buildings used for commercial purposes may be depreciated if the office blocks are used together with the depreciable buildings.

Others. Acquired goodwill, patent rights and trademarks may be amortized over seven years. Costs incurred in connection with the improvement of rented premises and properties (not used for habitation or other commercial or non-industrial purposes) on leased land may be depreciated at an annual rate of up to 20%. If the tenancy is entered into for a fixed number of years, the annual depreciation rate cannot exceed a rate that results in equal amounts of depreciation over the fixed number of years.

Recapture. The amount of depreciation claimed on an asset may be recaptured on the disposal of the asset. Recaptured depreciation is subject to tax at a rate of 22%. For assets depreciated under the declining-balance method, however, the consideration received is deducted from the collective declining-balance account, and, consequently, the recapture is indirect.

Advance depreciation. Advance depreciation is available on ships. A total of 30% (with a maximum of 15% in any single year) of the expenditure exceeding DKK1,505,300 (2017 amount) may be written off in the years preceding the year of delivery or completion. The relief is given if a binding contract has been concluded for construction or purchase of a ship. If a partnership enters into the contract, each partner must meet the DKK1,505,300 (2017 amount) requirement. If a ship is intended for lease, advance depreciation is not allowed in the year of acquisition, unless permission is obtained from the local tax authorities. This rule does not apply to the ships included in the new asset classes (see *Depreciation*).

Relief for trading losses. Trading losses and interest expenses may be set off against other income and chargeable gains for income years beginning on or after 1 July 2012. Losses incurred may be set off in full against the portion of the year's taxable income not exceeding an amount of DKK8,025,000 (2017 amount). Losses exceeding DKK8,025,000 (2017 amount) may be set off against 60% of the taxable income for the year. As a result, a company may not reduce its taxable income to less than 40% of the taxable income exceeding DKK8,025,000 (2017 amount).

Losses, including prior-year losses, that cannot be set off against the taxable income for the year may be carried forward infinitely.

Losses may not be offset against interest and other capital income, net of interest paid, if more than 50% of the shares in the company changed ownership since the beginning of the year in which the loss was incurred. In addition, tax losses are forfeited by companies that are not engaged in an activity at the date of change of ownership.

Groups of companies. Joint taxation of Danish affiliated companies, Danish permanent establishments of foreign affiliated companies and real properties of foreign affiliated companies that are located in Denmark is compulsory. The jointly taxed income equals the sum of the net income of the jointly taxed companies, permanent establishments and real properties. An affiliation generally exists if a common shareholder (Danish or foreign) is able to control the company (for example, by holding more than 50% of the voting rights).

Joint taxation with foreign companies is voluntary. If a Danish company elects to be jointly taxed with a foreign company, all foreign affiliated companies must be included in the Danish joint taxation arrangement. These include all subsidiaries, permanent establishments and real estate owned by the Danish company. If the Danish company is owned by a foreign group, the ultimate foreign parent company and all foreign companies affiliated with the ultimate foreign parent company are also included.

A company is considered to be an affiliated company if a controlling interest exists.

A 10-year period of commitment applies if a Danish company elects to be jointly taxed with its foreign affiliated companies.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax (VAT)	25%
Labor market supplementary pension scheme (ATP); approximate annual employer contribution for each full-time employee	DKK2,160
Payroll tax (Loensumsafgift)	
Banks, insurance companies and other financial businesses; levied on total payroll	14.1%
Other VAT-exempt businesses, including some public bodies; levied on total payroll plus taxable profits, adjusted to exclude financial income and expenses	4.12%
Lotteries and information activities performed by tourist offices, other organizations and some public bodies; levied on total payroll	6.37%
Publishers or importers of newspapers; levied on the value of newspapers sold	3.54%

E. Miscellaneous matters

Foreign-exchange controls. Denmark does not impose foreign-exchange controls.

Debt-to-equity rules. Under thin-capitalization rules, interest paid by a Danish company or branch to a foreign group company is not deductible to the extent that the Danish company's debt-to-equity ratio exceeds 4:1 at the end of the debtor's income year and that the amount of controlled debt exceeds DKK10 million (2017 amount). Limited deductibility applies only to interest expenses relating to the part of the controlled debt that needs to be converted to equity to satisfy the debt-to-equity ratio of 4:1 (that is, a minimum of 20% equity). The thin-capitalization rules also apply to third-party debt if the third party has received guarantees and similar assistance from a group company of the borrower.

The Danish thin-capitalization rules are supplemented through an "interest ceiling rule" and an Earnings Before Interest and Tax (EBIT) rule. These rules apply to both controlled and non-controlled debt. Only companies with net financial expenses exceeding DKK21,300,000 (2017 amount) are subject to these

supplementary rules. For jointly taxed companies, the DKK21,300,000 threshold applies to all of these companies together.

Under the “interest ceiling rule,” a company may only deduct net financial expenses corresponding to 3.2% (2017 rate) of the taxable value of certain qualified assets. Deductions for any excess net financial expenses are lost, except for capital losses, which may be carried forward for three years.

Under the EBIT rule, a company may reduce its taxable income through the deduction of financial expenses by no more than 80%. Net financial expenses exceeding this limit are nondeductible but, in contrast to the interest ceiling rule, the excess expenses can be carried forward to be used in future years (if not restricted again by the EBIT rule). The calculation must be made after taking into account a possible restriction under the interest ceiling rule.

Under the interest ceiling rule and EBIT rule, a safe harbor of net financial expenses up to DKK21,300,000 exists. These expenses are always deductible, subject to restriction under the thin-capitalization rules.

If a company establishes that it could obtain third-party financing on similar terms, it may be allowed to deduct the interest that would normally be disallowed under the ordinary thin-capitalization rules described above. No arm’s-length principle can be applied to help the company escape the interest ceiling rule or the EBIT rule.

Danish tax law does not recharacterize the disallowed interest or impose withholding tax on it.

Anti-avoidance legislation. A general anti-avoidance rule has been implemented in the Danish domestic tax law. It is contained in the new Article 3 of the Danish Tax Assessment Act.

The anti-avoidance rule seeks to restrict the benefits of certain EU Directives (EU Parent/Subsidiary Directive [2011/96/EEC], the Interest/Royalty Directive [2003/49/EEC] and the EU Merger Tax Directive [2009/133/EEC]) or a double tax treaty claimed by a taxpayer that participates in an arrangement, or a series of arrangements, that has the primary purpose (or has as one of its primary purposes) to achieve a tax benefit that is contrary to the contents or purpose of the EU Directive or double tax treaty in question.

In addition, certain recharacterization rules exist, such as a rule that recharacterizes debt as equity if the debt is treated as an equity instrument according to the tax rules in the country of the creditor.

Although a Danish company or taxable legal entity may change its domicile to another country, this would normally be considered a liquidation with the same tax effect as a taxable sale. The company can transfer its activities abroad, but, to prevent tax avoidance, such a transfer is considered a taxable disposal of the activities.

Controlled foreign companies. Under the CFC legislation, a Danish company, together with other group member companies, holding more than 50% of the voting power of a foreign company

must include in taxable income 100% of the taxable income of the subsidiary if the subsidiary is primarily engaged in financial activities. For this purpose, a subsidiary is considered to be primarily engaged in financial activities if more than 50% of the subsidiary's taxable income consists of net financial income and if more than 10% of the subsidiary's assets are "financial assets" (calculated according to modified Danish tax rules). The CFC rules apply to branches only if the branch is directly held by the Danish company. The income of indirectly held branches is included in the income of its head office.

Anti-hybrid mismatch rules. Denmark has several anti-hybrid mismatch rules.

Under Section 2A of the Danish Corporate Tax Act (anti-"check-the-box" rule), if a Danish company is considered to be transparent according to foreign tax rules (for example, the company is taxed as a branch in a foreign country), in principle, the company is also considered transparent according to Danish tax rules. The rule may imply that a Danish company owned by a US parent company that has "checked the box" on the Danish company cannot deduct interest expenses, royalty expenses or other internal expenses paid to the US parent company because it is treated as a branch office of the parent company. Certain exceptions exist, and case-by-case evaluation is suggested.

Under Section 2B of the Danish Corporate Tax Act, if a Danish entity owes debt to a foreign entity, which according to foreign tax rules is considered equity, the debt for Danish purposes is re-characterized as equity. This implies that the rules for withholding tax on dividends must be observed for interest payments and that no deduction is allowed on such interest payments. Certain exceptions exist, and case-by-case evaluation is suggested.

Under Section 2C of the Danish Corporate Tax Act, branches of entities that are required to register in Denmark may be treated as separate entities for Danish tax purposes if certain conditions are met. This treatment may apply if the parent of the branch is located in a non-EU/non-treaty country and if the Danish branch is considered a separate entity for tax purposes in the parent's country. Certain exceptions exist, and case-by-case evaluation is suggested.

Under Section 5G of the Danish Tax Assessment Act, a Danish company cannot deduct costs that under foreign tax law are deducted from income not subject to Danish taxation. Case-by-case evaluation is suggested.

Transfer pricing. Transactions between affiliated entities must be determined on an arm's-length basis. In addition, Danish companies and Danish permanent establishments must report summary information about transactions with affiliated companies.

Danish tax law requires entities to prepare and maintain written transfer-pricing documentation for transactions that are not considered insignificant. Enterprises can be fined if they have not prepared any transfer-pricing documentation or if the documentation prepared is considered to be insufficient as a result of gross negligence or deliberate omission. The documentation can be

prepared in Danish, English, Norwegian or Swedish, and must be submitted to the tax authorities within 60 days on request. For a particular income year, such request may be made after the company has filed its tax return for the income year.

The fine for failure to prepare satisfactory transfer-pricing documentation consists of a basic amount of DKK250,000 per year per entity for up to five years plus 10% of the income increase required by the tax authorities. The basic amount may be reduced to DKK125,000 if adequate transfer-pricing documentation is filed subsequently.

Fines may be imposed for every single income year for which satisfactory transfer-pricing documentation is not filed.

In addition, companies may be fined if they disclose incorrect or misleading information for purposes of the tax authorities' assessment of whether the company is subject to the documentation duty.

The documentation requirements for small and medium-sized enterprises apply only to transactions with affiliated entities in non-treaty countries that are not members of the EU/EEA. To qualify as small and medium-sized enterprises, enterprises must satisfy the following conditions:

- They must have less than 250 employees.
- They must have an annual balance sheet total of less than DKK125 million or annual revenues of less than DKK250 million.

The above amounts are calculated on a consolidated basis (that is, all group companies must be taken into account).

Non-treaty countries	27	22	22

- (a) Under Danish domestic law, no withholding tax is imposed on dividends paid to companies if both of the following requirements are satisfied:
- The shares are group shares or subsidiary shares (see Section B).
 - A tax treaty between Denmark and the country of residence of the recipient of the dividend provides that Denmark must eliminate or reduce the withholding tax on dividends, or the recipient is resident in an EU member state and falls within the definition of a company under Article 2 of the EU Parent-Subsidiary Directive (90/435/EEC) and the directive provides that Denmark must eliminate or reduce the withholding tax on dividends.
- (b) In general, all interest payments to foreign group companies are subject to a final withholding tax of 22%. Several exceptions exist (see Section B). As a result of these exceptions, in general, withholding tax is imposed only on interest payments made to group companies that would qualify as CFCs for Danish tax purposes or if the recipient is not considered to be the beneficial owner, according to the domestic interpretation. Effective from the 2006 income year, withholding tax on interest paid to individuals was abolished.
- (c) The rate is 15% (Croatia, 10%; Portugal and Singapore, 10%; Egypt, Indonesia, Trinidad and Tobago, and Turkey, 20%; India and Morocco, 25%; Kenya, 30%) if the recipient is not a company owning at least 25% of the capital (Cyprus, 10% of the capital; Japan and Trinidad and Tobago, 25% of the voting shares).
- (d) The withholding tax rate is 0% if all of the following conditions are satisfied:
- The recipient directly owns at least 25% of the share capital of the payer for a period of 12 consecutive months that includes the date of the distribution of the dividend.
 - The dividend is not taxed in Greenland.
 - The recipient does not deduct the portion of a dividend distributed by it that is attributable to the Danish subsidiary.
- If the above conditions are not met, the withholding tax rate is generally 27%. However, the rate is 15% for dividends on unlisted portfolio shares (shares held by a person owning less than 10% of the company's shares).
- (e) Under Danish domestic law, the rate is 0% for royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films, and for the use of, or the right to use, industrial, commercial or scientific equipment. Under a tax treaty, the general withholding tax rate for royalties of 22% can be reduced to 0%. Royalties paid to a company resident in another EU country are not subject to withholding tax if the provisions of the EU Interest/Royalty Directive are met and if the recipient is considered to be the beneficial owner according to the domestic interpretation.
- (f) The withholding tax rate is 0% if the recipient owns at least 50% of the share capital in the dividend distributing company and has invested more than EUR2 million in the dividend paying company. The withholding tax rate is 5% if the recipient owns at least 10% of the share capital in the dividend paying company and has invested more than EUR100,000 in the dividend paying company. The withholding tax rate is 10% in all other cases.
- (g) The rate is 22% (applicable to payments on or after 1 March 2015) for payments for the use of, or the right to use, trademarks.
- (h) Denmark honors the USSR treaty with respect to the former USSR republics. Armenia, Azerbaijan, Kazakhstan, Moldova, Tajikistan, Turkmenistan and Uzbekistan have declared that they do not consider themselves obligated by the USSR treaty. Kyrgyzstan has not yet declared whether it considers itself obligated by the USSR treaty. Denmark has entered into tax treaties with Estonia, Georgia, Latvia, Lithuania, the Russian Federation and Ukraine.
- (i) Denmark honors the Czechoslovakia treaty with respect to the Slovak Republic.
- (j) Denmark honors the Yugoslavia treaty with respect to Montenegro. Denmark has entered into tax treaties with Croatia, Macedonia, Serbia and Slovenia. The withholding rates under these treaties are listed in the table.
- (k) The rate is 5% if the recipient is a company that owns at least 70% of the capital of the payer or has invested at least USD12 million in the capital of the payer. The rate is 10% if the recipient is a company owning at least 25%, but less than 70%, of the capital of the payer. For other dividends, the rate is 15%.
- (l) The rate is 15% if the recipient is not a company owning at least 10% of the shares of the payer.
- (m) The treaty does not cover the Hong Kong SAR.
- (n) The withholding tax rate for dividends is 0% if the parent company (beneficial owner) owns at least 10% of the share capital of the payer of the dividends (under the Hungary treaty, the share capital must also be owned for a continuous period of at least one year and/or the parent company [beneficial owner] must be a pension fund). If this condition is not met, the dividend withholding tax rate is 15%.
- (o) Under a new tax treaty between Denmark and Austria, the dividend withholding tax rate is 0% if the recipient is a company owning at least 10% of the

payer. For other dividends, the rate is 15%. These rates will apply for income years beginning on or after 1 January 2011.

- (p) The double tax treaty between Denmark and France was terminated, effective from 1 January 2009. The countries will enter into a new treaty. However, at the time of writing, the countries had not yet entered into such treaty. Until a new tax treaty enters into force, Danish withholding taxes on dividends, interest and royalties are imposed according to Danish domestic law. Certain exemptions may apply (see Section B).
- (q) The double tax treaty between Denmark and Spain was terminated, effective from 1 January 2009. The countries will enter into a new treaty. However, at the time of writing, the countries had not yet entered into such treaty. Until a new tax treaty enters into force, Danish withholding taxes on dividends, interest and royalties are imposed according to Danish domestic law. Certain exemptions may apply (see Section B).
- (r) The withholding tax rate for dividends is 0% if the recipient owns at least 10% of the share capital in the payer of the dividends for a continuous period of at least 12 months. If this condition is not met, the dividend withholding tax rate is 10%.
- (s) The rate is 5% if the recipient of the dividends is a company owning at least 25% of the capital of the payer.

In addition to the double tax treaties listed in the table above, Denmark has entered into double tax treaties on savings, double tax treaties on international air and sea traffic, agreements on exchange of information in tax cases and agreements on promoting the economic relationship. The following are the jurisdictions with which Denmark has entered into such agreements:

- Double tax treaties on savings: Anguilla, Aruba, British Virgin Islands, Cayman Islands, Curaçao, Sint Maarten, Bonaire, Sint Eustatius and Saba (formerly part of the Netherlands Antilles), Guernsey, Isle of Man, Jersey, Montserrat, and Turks and Caicos Islands
- Double tax treaties on international air and sea traffic: Bermuda, British Virgin Islands, Cayman Islands, Guernsey, Hong Kong SAR, Isle of Man, Jersey, Jordan, Kuwait and Lebanon
- Agreements on exchange of information: Andorra, Anguilla, Antigua and Barbuda, Aruba, Bahamas, Barbados, Belize, Brunei Darussalam, Cayman Islands, Dominica, Gibraltar, Grenada, Guatemala, Guernsey, Ireland, Isle of Man, Jersey, Liechtenstein, Luxembourg, Macau SAR, Monaco, Montserrat, St. Kitts and Nevis, St. Vincent and the Grenadines, San Marino, Turks and Caicos Islands, Uruguay, and Curaçao, Sint Maarten, Bonaire, Sint Eustatius and Saba (formerly part of the Netherlands Antilles)
- Agreements on promoting the economic relationship: Aruba, and Curaçao, Sint Maarten, Bonaire, Sint Eustatius and Saba (formerly part of the Netherlands Antilles)

Agreements on exchange of information with respect to taxes have been proposed with Belgium, Botswana, Costa Rica, Greenland (appendix), Guatemala, Jamaica, Kuwait, Liberia, Marshall Islands, Niue, Panama, Qatar, Seychelles, Uruguay and Vanuatu.

A. At a glance

Corporate Income Tax Rate (%)	27
Capital Gains Tax Rate (%)	27
Branch Tax Rate (%)	27 (a)
Withholding Tax (%)	
Dividends	10 (b)
Interest	10 (c)
Royalties	27 (d)
Branch Remittance Tax	10
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) The Dominican Tax Regulations do not contemplate an exclusive or additional income tax for branches. Therefore, the standard corporate income tax rate applies to branches.
- (b) This is a final withholding tax applicable to payments to both residents and nonresidents.
- (c) This is a final withholding tax applicable to payments to resident individuals and to nonresident individuals, companies and unincorporated business entities.
- (d) This withholding tax applies to royalty payments made abroad to nonresident individuals or legal entities.

B. Taxes on corporate income and gains

Corporate income tax. Resident corporations are subject to tax on their Dominican-source income and on their foreign-source income derived from investments and financial gains, such as dividends and interest from bonds acquired abroad.

A company is resident in the Dominican Republic if it is incorporated in the Dominican Republic.

A foreign company is considered domiciled in the Dominican Republic if it has its principal business or its effective management located in the Dominican Republic. Nonresidents operating through a permanent establishment are subject to income tax as companies incorporated in the Dominican Republic.

Corporate income tax rates. The corporate income tax rate is 27%.

Full exemptions or certain income tax credits usually apply to companies established in designated Free-Trade Zones (FTZs) or benefiting from other special incentive laws, such as the Frontier Development Law (Law 28-01), the Tourism Development Law (Law 158-01, as amended by Law 195-13), the Renewable Energies Law (Law 57-07) or the Film Law (Law 108-10).

Asset tax. The annual asset tax is assessed at a rate of 1% on the assets registered in the taxpayer's accounting books.

The tax base is the net carrying value of the taxpayer's assets at the end of the fiscal year as shown in the balance sheet, not adjusted by inflation and after applying depreciation, amortization and reserves for bad debt expenses. Investments in shares of another company, real estate used for agricultural exploitation and advance tax payments are excluded from the tax base. Corporate income tax is creditable against the asset tax. The asset tax is calculated in the annual income tax return.

For financial institutions, electricity companies, stockbrokers, pension fund administrators, investment fund administrators and securitization companies, the tax base for the asset tax is the total value of fixed assets (net of depreciation) according to the balance sheet at the end of the tax period.

Entities that benefit from corporate income tax exemptions based on special laws or public contracts approved by Congress are exempt from the asset tax.

Capital gains. Gains derived from direct and indirect transfers of assets or rights located or economically exploited in the Dominican Republic are taxable and subject to the capital gains tax rate of 27%. Under the Dominican Republic Tax Code, capital gains may arise from the transfer of shares, land or other capital assets possessed by taxpayers, regardless of whether the gains are connected to the taxpayers' businesses. The following assets are not considered capital assets:

- Commercial inventories or assets possessed principally for sale to clients in the ordinary course of business
- Depreciable assets
- Accounts or promissory notes acquired in the ordinary course of business for services rendered or derived from the sale of inventory assets or assets sold in the ordinary course of business

The capital gain equals the difference between the transfer price of the assets and the cost of acquisition or production (adjusted for inflation).

Administration. In general, the tax year is the calendar year. However, companies may adopt a fiscal year ending on 31 March, 30 June or 30 September. The income tax return must be filed within 120 days after the end of the fiscal year.

All companies must make monthly income tax prepayments. For taxpayers that had an effective tax rate (ETR) in the preceding tax year that was lower or equal to 1.5%, each prepayment equals the amount resulting from applying the 1.5% rate to the gross income reported in the preceding fiscal year. Taxpayers with an ETR higher than 1.5% must make monthly prepayments corresponding to 1/12 of the income tax paid in the preceding fiscal year. The ETR is determined by dividing the income tax paid in the preceding fiscal year by the gross income of the same period.

Taxpayers can request a two-month income tax return filing extension.

Indemnity interest at a rate of 1.10% (1.73% until 30 April 2015) is charged on outstanding balances of taxes due. In addition, a penalty of a 10% surcharge applies for the first month, and a 4% surcharge applies for each month or fraction of a month thereafter.

Non-compliance by the taxpayer with tax obligations may be subject to a penalty of 5 to 30 minimum wages (DOP43,225 to DOP154,740 [approximately USD938 to USD3,358]). In addition, a penalty equal to 0.25% of the income declared in the preceding fiscal year may be applied.

Dividends. Dividends (and all other types of distributions of earnings) are subject to a final withholding tax of 10%. Under the Dominican Tax Code and its regulations, a dividend is defined as any distributions of profits or reserves made by any type of corporation or entity to a shareholder, partner or participant. The following are included in the concept of profit distributions:

- Accounts receivable or similar arrangements that a corporation or entity has with its shareholders, members or participants, if they were not generated by a commercial transaction and if no principal or interest payments have been made in a period of more than 90 calendar days.
- Share capital reductions, if capitalized reserves and/or retained earnings exist, until these reserves and earnings accounts are exhausted. This does not apply to capital returns derived from the liquidation of the entity, whereby the first amounts distributed are deemed to be capital returns rather than the distribution of retained earnings.

Foreign tax relief. Foreign income tax paid on income derived from investments and financial gains abroad may be claimed as a credit against the income tax payable in the Dominican Republic. However, such credit is limited to the portion of Dominican Republic tax allocable to the foreign-source income subject to tax abroad (that is, limited to a 27% rate).

C. Determination of trading income

General. Tax is imposed on taxable profits, which correspond to the accounting profits adjusted in accordance with the income tax law.

Expenses incurred to generate taxable income and preserve the source of such income are deductible on an accrual basis if properly documented. However, certain expenses are not deductible, including the following:

- Expenses not properly documented
- Unauthorized bad debt provisions
- Prior period tax adjustments
- Personal expenses
- Profits to be capitalized

In addition, the Dominican Tax Code contains interest deduction rules, which are described below.

Under Dominican Republic law, the deduction of interest depends on certain general and specific conditions.

The following are the general conditions for the deduction of interest:

- The interest should be related to the acquisition, maintenance and/or operation of taxable income-producing assets.
- Corporate entities should recognize interest expenses according to the accrual method of accounting.
- Expenses and costs, such as interest payments, must be supported by corresponding documentation (loan agreement and invoices).
- The loan and interest rates agreed between the parties must comply with the arm's-length principle.
- The 10% withholding tax applicable to the gross amount of such payments has been applied and paid to the Dominican Republic tax authorities.

In addition, if the payment exceeds DOP50,000 (approximately USD1,050), the payment must have been made through any of the means available in the financial industry (for example, wire transfers and checks).

Dominican Republic law provides the following specific limitations for the deduction of interest:

- A special anti-avoidance rule, which limits the interest deductible based on the effective tax rate of the interest recipient
- A thin-capitalization limitation, which limits the amount deductible to three times the ratio of the average of equity to the average of debt that generated such interest in a given year

Special industries. Rules applicable to special industries are outlined below.

Nonresident insurance companies. Nonresident insurance companies are taxed on a deemed income equal to 10% of their gross income (premiums) derived from insurance services rendered to resident or domiciled companies or individuals.

Transportation. Income derived from transportation services rendered from the Dominican Republic to other countries is deemed to equal 10% of the gross income derived from such services.

Others. Film distribution companies are taxed in the Dominican Republic based on a deemed income equal to 15% of their gross income derived from the distribution of foreign films. In addition, foreign communications companies are taxed on a deemed income equal to 15% of their gross income.

Inventories. In general, last-in, first-out (LIFO) is the approved method for valuing inventory. However, taxpayers may use other methods if previously approved by the tax authorities.

Provisions. In general, provisions are not deductible for income tax purposes. However, the Tax Code and Income Tax Regulations provide for limited exceptions to this rule, including a provision for uncollectable accounts receivable. This provision is allowable as a deductible expense if it is calculated based on 4% of the accounts receivable balance at the close of the fiscal year and if the amount is authorized by the Tax Administration.

Provisions for gratifications, bonuses and other similar compensation items are deductible for income tax purposes if the amounts in the provisions are paid by the filing date of the income tax return.

Tax depreciation and amortization allowances. Depreciation is calculated using a variation of the declining-balance method. Intangibles, such as patents, models, drawings and copyrights, may be amortized using the straight-line method if they have a definite useful life.

Salvage value is not taken into account in calculating depreciation. The following are the generally applicable depreciation rates provided by law.

Asset	Rate (%)
Buildings	5
Light vehicles and office equipment, including computers	25
Other assets	15

Relief for losses. Losses generated by companies in the ordinary course of a trade or business may be carried forward for a five-year period. In each fiscal year, 20% of the total loss can be used to offset taxable income. However, in the fourth and fifth years, only 80% and 70%, respectively, of the total taxable income may be offset by the 20% loss carry forward. Losses derived from reorganizations are not deductible for income tax purposes. Net operating losses may not be carried back.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax; standard rate	18
Social security contributions	
Health contributions; imposed on salary up to a maximum amount of 10 legal minimum wages (DOP86,450 or approximately USD1,876; the legal minimum wage for social security contributions is DOP8,654 or approximately USD187)	
Employer	7.09
Employee	3.04
Pension contributions; imposed on salary up to a maximum amount of 20 legal minimum wages (DOP172,900 or approximately USD3,752)	
Employer	7.10
Employee	2.87
Labor risk contributions; payable by employer on salary up to a maximum amount of 4 legal minimum wages (DOP34,580 or approximately USD756); rate varies according to the risk level of the company's activity	1.1 to 1.3
Workers' compensation insurance	Various

Nature of tax	Rate (%)
Telecom Tax; imposed on the consumption of telecom services by legal entities and individuals in the Dominican Republic; tax rate applied to gross payment	10
Tax on financial transactions; imposed on the value of checks and wire transfer transactions and on payments made to third parties (the tax applies even if the wire transfer is made to an account in the same bank)	0.0015

E. Foreign-exchange controls

The Central Bank of the Dominican Republic (Banco Central de la República Dominicana) has liberalized foreign-exchange controls. Only individuals and companies generating foreign currency from exports, services rendered and other specified activities are required to exchange foreign currency with the Central Bank through commercial banks. The Central Bank is not required to furnish foreign currency to satisfy demands for foreign payments. Individuals and companies may buy foreign currency from, or sell it to, commercial banks.

As of 10 November 2016, the exchange rate was USD1 = DOP46.08.

F. Treaty withholding tax rates

The following are the maximum withholding tax rates under the Dominican Republic's double tax treaties.

	Dividends	Interest	Royalties
	%	%	%
Canada	18*	18	18
Spain	10	10	10
Non-treaty countries	10	10	27

* Under the tax treaty with Canada, if the Dominican Republic enters into a treaty with another country in which the applicable income tax withholding rate for dividends is lower than the rate provided in the treaty with Canada that same tax treatment automatically applies to the treaty with Canada.

Because of the frequent changes to the tax law in Ecuador in recent years, readers should obtain updated information before engaging in transactions.

A. At a glance

Corporate Income Tax Rate (%)	22 (a)
Capital Gains Tax Rate (%)	0/22 (b)
Branch Tax Rate (%)	22 (a)
Withholding Tax (%) (c)	
Dividends	0/10/13 (d)
Interest	22 (e)
Royalties	22
Technical Assistance	22
Services	22
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	5 (f)

- (a) Companies that reinvest their profits in Ecuador and use them to acquire assets for productive activities in Ecuador are entitled to a reduction of 10 percentage points in the corporate income tax rate on the reinvested amount (that is, the reinvested profits are taxed at 12%) if the company increases its

capital stock and such increase is registered with the Commercial Register by 31 December of the fiscal year.

- (b) Capital gains tax on sales of tangible assets is not imposed in Ecuador. Gains derived from direct or indirect transfers of shares of Ecuadorian entities are considered to be income subject to corporate income tax.
- (c) These withholding taxes are imposed on remittances abroad to non-domiciled companies and nonresident individuals. The withholding tax rates may be reduced under tax treaties. For further details concerning withholding taxes, see Section B.
- (d) For details, see Section B.
- (e) A 22% withholding tax is imposed on payments of interest to non-domiciled companies and nonresident individuals unless the interest is paid on loans granted by financial institutions or multilateral institutions (Andean Corporation for Promotion, International Monetary Fund or World Bank). Thin-capitalization rules apply to the deductibility of interest paid to related parties (see Section E).
- (f) See Section C.

B. Taxes on corporate income and gains

Corporate income tax. Corporate income tax is levied on companies domiciled in Ecuador and on foreign companies. Companies domiciled in Ecuador include those incorporated in Ecuador and companies incorporated in foreign countries that have been approved as branches by the Superintendence of Companies after a legal proceeding. Companies incorporated in Ecuador are subject to tax on their worldwide income. Foreign companies are subject to tax on income derived from activities within Ecuador and from goods and assets located within Ecuador.

Rate of corporate tax. The standard rate of corporate income tax is 22%.

If an entity has shareholders domiciled in tax-haven jurisdictions, the corporate income tax rate is increased to 25%, and it is applied to the tax base in proportion to the tax-haven shareholders' ownership; if this ownership exceeds 50%, the 25% rate applies to the entire tax base.

Companies that reinvest their profits in Ecuador and use them to acquire assets for productive activities in Ecuador are entitled to a reduction of 10 percentage points in the corporate income tax rate on the reinvested amount (that is, the reinvested profits are taxed at 12%) if they retain the reinvested profits until 31 December of the tax year following the tax year in which the profits are earned.

Capital gains. Capital gains tax on sales of tangible assets is not imposed in Ecuador.

Gains derived from direct or indirect transfers of shares of Ecuadorian entities are considered to be income subject to corporate income tax. Indirect transfers of tax are taxable if both of the following conditions are met:

- At any time during the tax year in which the sale is performed, the real value of the shares of the Ecuadorian entity or permanent establishment represents directly or indirectly more than the 20% of the real value of the shares of the nonresident company. The tax administration will establish by resolution the procedure for calculating this percentage. However, as of the time of writing, this resolution had not yet been issued.
- In the same fiscal year or 12 months before the fiscal year, the sales of shares of the nonresident company by the same

seller directly or indirectly corresponds to an aggregate amount exceeding 300 basic fractions of income tax for individuals (USD3,387,000 for the 2017 fiscal year). This amount is increased to 1,000 basic fractions of income tax for individuals (USD11,290,000 for the 2017 fiscal year) if the transaction does not exceed the 10% of the total share capital.

Under the above rule, the Ecuadorian entity whose shares were negotiated or transferred is considered the substitute for the taxpayer and, consequently, is responsible for the income tax payment.

This tax does not apply in the case of mergers, spin-offs, corporate transformations or capital contributions.

Losses on sales between related parties are not deductible.

Administration. The fiscal year runs from 1 January to 31 December. No other closing dates are permitted, regardless of the date a business begins operations. Returns must be filed between 10 April and 28 April.

Companies must make an advance payment of income tax equal to the sum of 0.2% of the equity of the company, 0.2% of the total costs and expenses deducted in the calculation of income tax, 0.4% of the total assets of the company and 0.4% of the total income subject to income tax. The equity and total assets are determined as of the end of the preceding fiscal year. The other amount is the total for the preceding fiscal year.

The amount of the advance payment is calculated in the annual tax return. The advance payment is payable in two installments, which are due in July and September. To calculate the amount of the advance payment, the withholdings made with respect to the taxpayer in the preceding year are subtracted.

The advance payment is considered a minimum tax. As a result, if no tax is payable for a fiscal year or the tax payable is lower than the advance payment, the advance tax is considered a final tax payment that may not be refunded or offset against tax in future years.

The penalty for late filing is 3% of the income tax due for each month or fraction of a month of the delay, up to a maximum of 100% of the tax due. Interest at the maximum legal rate, which floats, is levied on all increases in tax assessments from the date the tax was originally due to the date of payment.

Withholding taxes. A 22% withholding tax is generally imposed on the following payments abroad:

- Interest, royalties and payments for technical assistance to non-domiciled companies and nonresident individuals
- Payments to nonresident individuals for services rendered
- Payments to non-domiciled companies for professional services rendered abroad or occasional services rendered in Ecuador

Income tax withholding at a rate of 22% applies to all reimbursements of expenses abroad.

Income tax withholding at a rate of 35% applies to cross-border payments made to recipients in tax havens, low-taxation jurisdictions or preferential tax regimes.

Penalties are imposed for failures to comply with the withholding requirements. Withholding agents who deliberately fail to provide taxpayers, totally or partially, with tax withholding receipts are subject to imprisonment and fines.

Dividends. In general, dividends distributed after the payment of income tax are not subject to income tax or withholding tax. However, if the effective beneficiary is an Ecuadorian individual, a withholding tax is imposed (between 1% and 13%). Also, a 10% withholding tax is imposed on dividends paid to recipients in tax havens, low-taxation jurisdictions or preferential tax regimes.

For anticipated dividend distributions (before the annual income tax determination), withholding tax at a rate equal to the corporate income tax rate is applied.

Foreign tax relief. Ecuador does not grant relief for foreign taxes paid to companies domiciled in Ecuador.

C. Determination of trading income

General. Taxable income is based on accounting profits after the corresponding tax reconciliation adjustments.

In computing taxable income, a company can deduct expenses incurred in producing income, including production and distribution costs, interest charges, royalty payments and depreciation. Also, employee profit-sharing distributions (15% of gross profit) can be deducted before computing taxes. Special provisions govern the computation of taxable profits from the export of petroleum, maritime transportation and video films.

Expenses incurred abroad are generally deductible if corresponding taxes are withheld and if the payment constitutes taxable income for the recipient. The following cross-border payments are deductible subject to specified limitations:

- Payments for imports, including interest and financing fees, as provided in import licenses
- Export fees of up to 2% of the export value
- Interest paid to related parties that are subject to the thin-capitalization rules (see Section E)
- Payments under financial leases
- Indirect costs allocation (up to 5% of the tax base)
- Royalties, technical services, management fees and consulting services paid to related parties (up to 20% of the sum of the tax base and these expenses)

Nondeductible expenses include the following:

- Interest paid on foreign loans, to the extent the interest rate exceeds the limit established by the Central Bank Board (the maximum rate is the Prime Rate), and interest on foreign loans not registered at the Ecuadorian Central Bank
- Losses on sales of assets between related parties
- Leasing payments with respect to leasebacks or trade with related parties

Inventories. Inventory is generally stated at cost (calculated using the average, last-in, first-out [LIFO], first-in, first-out [FIFO] or actual methods). Inventory write-offs must be documented through a sworn statement that the inventory was destroyed or donated.

Tax depreciation and amortization. Depreciation and amortization expenses are deductible for income tax purposes. The tax law provides the following maximum straight-line depreciation rates applicable for tax purposes.

Asset	Rate (%)
Commercial and industrial buildings, aircraft and ships	5
Office equipment	10
Motor vehicles and trucks	20
Plant and machinery	10
Computers	33

For tax purposes, as a general rule, expenditures to acquire property and other assets that produce revenue must be amortized over 5 years, using a straight-line depreciation rate of 20%. Intangibles must be amortized over either the term of the relevant contract or a 20-year period.

The tax authorities may approve other methods and annual rates for depreciation and amortization.

Organizational costs may be amortized over a 10-year period. Research and development expenses are generally written off over five years.

Depreciation of fixed assets in excess of their original cost is permitted if business assets are revalued as a result of inflation or increased replacement costs.

Relief for losses. Net operating losses may be carried forward and offset against profits in the following five years, provided that the amount offset does not exceed 25% of the year's profits. Loss carrybacks are not permitted.

Groups of companies. For tax purposes, no measures exist for filing consolidated returns and relieving losses within a group.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax; imposed on sales and commercial transactions, imports, rendering of services and intellectual property rights; principal products that are exempt are food products in their natural state, drugs and veterinary products	
Rate until May 2017	14
Rate beginning May 2017	12
Currency exportation tax (CET); imposed on all cross-border payments or money transactions abroad, with or without the intervention of financial institutions, and monies deposited abroad through bank transfers, CET also applies to any form of termination of obligations, such as clearance of accounts; checks or wire transfers; tax is withheld at source; foreign banks operating in Ecuador must pay the tax monthly; the tax	

Nature of tax	Rate (%)
<p>law provides that CET applies to payments made from foreign bank accounts of Ecuadorian entities if CET was not levied on the cash when it was initially transferred to the foreign bank account and to exports of goods and services if the cash does not enter Ecuador within six months after the goods arrive at their destination or the services begin to be rendered; CET paid on imports of raw materials, supplies and capital goods may be used as a tax credit for income tax purposes for the following five years if such goods are used in production processes and listed in a resolution issued by the Internal Revenue Service (IRS) of Ecuador</p>	5

E. Miscellaneous matters

Foreign-exchange controls. All transactions in Ecuador must be conducted in US dollars.

Debt-to-equity rules. A thin-capitalization rule applies in Ecuador. Any interest paid on loans from related parties in excess of a 3:1 debt-to-equity ratio is not deductible.

Free-trade zone. The signatories of the Andean Community or the former Andean Pact (Bolivia, Colombia, Ecuador and Peru) have entered into a free-trade agreement. However, Peru signed the agreement with some restrictions. Under the agreement, merchandise and goods manufactured in one of the signatory countries may enter the other signatory countries free of customs duties. All items imported from other countries are subject to a common external customs duty.

Transfer pricing. In general, transfer-pricing rules in Ecuador follow Organisation for Economic Co-operation and Development (OECD) rules, because they require fulfillment of the arm's-length standard. Nevertheless, the technical preferences of the IRS are quite specific and may imply significant differences when measuring compliance with the rules. Special rules apply to oil, bananas and metallic commodities.

In addition to traditional ownership-control criteria to determine relationships between parties, since 2008, the law considers companies related if they are domiciled in foreign jurisdictions listed as tax havens by the IRS (86 jurisdictions) or if they are paying anywhere else a corporate income tax deemed as "low" by the IRS (as of 2017, the threshold is 13.2%).

Transfer-pricing information must be documented by all companies having transactions with related parties, including domestic ones. Companies must file their documentation with the IRS if certain conditions are met, as described below.

Income taxpayers that have carried out transactions with related parties during a fiscal year in an amount exceeding USD3 million must submit the Transfer Pricing Annex to the IRS.

Income taxpayers that have carried out transactions with related parties during a fiscal year in an amount that exceeds USD15 million

must submit the Transfer Pricing Annex and the Transfer Pricing Comprehensive Report to the IRS.

Income taxpayers that do not meet the minimum amounts mentioned above must submit the Transfer Pricing Annex or the Transfer Pricing Comprehensive Report at the request of the IRS.

Transactions that are added up for purposes of the threshold include most balance-sheet movements.

Certain transactions (most of them are domestic if certain conditions are met) are not added up for purposes of the threshold and are not part of the compulsory Annex or Report, but their documentation may be requested at any time by the IRS.

The deadline to file the Transfer Pricing Annex and the Transfer Pricing Comprehensive Report is two months after the deadline for the filing of the corporate income tax return, which includes certain declarations on the total amounts of relevant related parties' transactions.

Taxpayers involved in transactions with related parties are exempt from the application of the transfer-pricing regime if they satisfy all of the following conditions:

- Their corporate income tax is higher than 3% of taxable income.
- They do not conduct business with residents in tax havens or lower-tax jurisdictions.
- They do not have contracts with government institutions for the exploration or exploitation of non-renewable resources.

Transactions covered by an Advanced Pricing Ruling (APR) of the IRS do not need to be reported. APRs may be requested at any time and for any transaction, but they are commonly used to eliminate deductibility restrictions that the Ecuadorian tax law imposes on related-party transactions regarding administrative and technical services, royalties, consultancy, technical assistance and similar items.

F. Treaty withholding tax rates

Under an agreement with Bolivia, Colombia and Peru (the Andean Pact), income earned in those countries is generally not taxed in Ecuador to avoid double taxation. The withholding tax rates under Ecuador's bilateral treaties are shown in the table below. Ecuadorian law has established a refund mechanism regarding the benefits from double tax treaties. Under this mechanism, the full applicable withholding will be made with respect to payments abroad, and a tax claim must then be presented to the IRS to recover the excess amount withheld.

	Dividends (a) %	Interest %	Royalties %
Belgium	15	10	10
Brazil	0	15	15 (c)
Canada	5/15	15	10/15
Chile	5/15	4/15	10/15
China	0/5	0/10	0/10
France	15	10/15	15
Germany	15	15	15

	Dividends (a)	Interest	Royalties
	%	%	%
Italy	15	0/10	5
Korea (South)	5/10	0/12	5/12
Mexico	5	10/15	10
Romania	15	10	10
Singapore	0/5	0/10	10
Spain	15	10/15	15
Switzerland	15	10	10
Uruguay	10/15	15	10/15
Non-treaty countries	0	22 (b)	22

- (a) Dividends are exempt from withholding tax under Ecuadorian domestic law if corporate income tax was paid on the profits out of which the dividends were distributed.
- (b) A 22% withholding tax is imposed on the payment of interest abroad unless the interest is paid on loans granted by financial institutions, specialized non-financial entities qualified by the control authorities in Ecuador or multilateral institutions.
- (c) Trademark royalties are taxed at a rate of 22%.

A. At a glance

Corporate Income Tax Rate (%)	22.5 (a)
Capital Gains Tax Rate (%)	
Sales of Securities	10/22.5 (a)(b)
Sales of Other Assets	22.5 (a)
Branch Tax Rate (%)	22.5 (a)
Withholding Tax (%)	
Dividends	10 (c)
Interest	20 (c)
Royalties from Patents, Know-how, etc.	20 (c)
Services	20 (c)
Branch Remittance Tax	5 (d)
Net Operating Losses (Years)	
Carryback	0 (e)
Carryforward	5

- (a) The standard corporate income tax rate is 22.5%. Exceptions to the 22.5% rate exist (see Section B).
- (b) For details regarding the 10% rate, see Section B.
- (c) This is the standard rate. The rate may be reduced to 5% under domestic law for dividends. It also may be reduced under a tax treaty. Exemptions may apply in certain circumstances. The tax is a final tax imposed on gross payments. Also, see Section B.
- (d) A branch remittance tax of 5% is payable within 60 days after the financial year-end.
- (e) Only losses incurred in long-term projects may be carried back to offset profits from the same project for an unlimited number of years.

B. Taxes on corporate income

Corporate income tax. Egyptian corporations are subject to corporate profits tax on their profits derived from Egypt, as well as on profits derived from abroad, unless the foreign activities are performed through a permanent establishment located abroad. Foreign companies performing activities through a permanent establishment in Egypt are subject to tax only on their profits derived from Egypt.

Rates of corporate income tax. The standard rate of corporate income tax is 22.5%.

Exceptions to the 22.5% rate exist. Oil prospecting and production companies are subject to tax on their profits at a rate of 40.55%. The Suez Canal Company, the Egyptian General Petroleum Company and the Central Bank of Egypt are subject to tax on their profits at a rate of 40%.

Capital gains

From the sale of securities. Capital gains derived from the sales of securities realized by nonresident juridical persons are subject to tax at a rate of 10% (suspended for listed securities for a two-year period beginning on 17 May 2015).

The following rates apply to capital gains derived from the sale of securities by resident juridical persons:

- A 10% rate applies to capital gains on securities registered at the Egyptian Stock Exchange that are sourced in Egypt (suspended for listed securities for two years, effective from 15 July 2015).
- The standard corporate tax rate of 22.5% applies to capital gains on securities not registered with the Egyptian Stock Exchange that are sourced in Egypt, capital gains on securities realized abroad and capital gains on shares.

From the sale of other assets. Tax on capital gains on other assets is calculated at the ordinary corporate profits tax rates in the same manner as ordinary business profits and is not calculated separately. Trading and capital losses derived from sales of other assets are deductible against taxable capital gains.

Administration. Companies must file their annual tax returns, together with all supporting schedules and the original financial statements, before 1 May of each year, or four months after the end of the financial year. The tax return must be signed by the taxpayer. Taxpayers can file a request for an extension of the due date for filing the tax return if the estimated amount of tax is paid at the time of the request. A request for an extension must be filed at least 15 days before the due date. An extension of up to 60 days may be granted. An amended tax return can be filed within 30 days after the original due date.

Any tax due must be paid when the tax return is filed.

A late penalty is imposed at a rate of 2% plus the credit and discount rate set by the Central Bank of Egypt in January of each year.

The law has set up appeals committees at two levels — the Internal Committee and the Appeal Committee. The Appeal Committee's decision is final and binding on the taxpayer and the tax department, unless a case is appealed to the court within 30 days of receiving the decision, which is usually in the form of an assessment.

Dividends. Dividends paid by corporations or partnerships, including companies established under the special economic zone system, to resident juridical persons, nonresident persons, or nonresident juridical persons that have a permanent establishment in Egypt are subject to tax on dividends.

Tax on dividends is imposed at a standard rate of 10% without any deductions or exemptions. However, this rate can be reduced to 5% if both of the following conditions are fulfilled:

- The recipient holds more than 25% of the distributing company's capital or voting rights.
- The recipient holds the shares or commits to hold the shares for a period of not less than two years.

Under the law, foreign branches' profits in Egypt are considered distributed profits within 60 days after the financial year-end. As a result, a branch must pay the dividend tax on its annual profits within 60 days after the financial year-end.

The tax law grants exemptions for investment funds, parent companies and holding companies under some conditions.

Dividends in the form of free stocks are not subject to tax on dividends.

Withholding tax. In general, payments for all services performed by nonresident companies for Egyptian companies in or outside Egypt are subject to withholding tax at a rate of 20%. However, this withholding tax does not apply to payments related to the following activities:

- Transportation
- Shipping

- Insurance
- Training
- Participation in conferences and exhibitions
- Registration in foreign stock markets
- Direct advertising campaigns
- Hotel accommodation
- Services related to religious activities

Foreign tax relief. Foreign tax paid by resident entities outside Egypt can be deducted if supporting documents are available.

Treaties entered into between Egypt and other countries provide a credit for taxes paid abroad on income subject to corporate income tax in Egypt.

C. Determination of taxable income

General. Corporate income tax is based on taxable profits computed in accordance with generally accepted accounting principles, modified for tax purposes by certain statutory provisions primarily concerning depreciation, provisions, inventory valuation, intercompany transactions and expenses. Interest on bonds listed on the Egyptian stock exchange is exempt from tax if certain conditions are satisfied.

Taxable profits are based on actual revenues and costs. Consequently, unrealized revenues and costs are not included in the tax base.

Start-up and formation expenses may be deducted in the first year.

The deductibility of a branch's share of head office overhead expenses is limited to 10% of the taxable net profit. Head-office expenses are fully deductible if they are directly incurred by the branch and are necessary for the performance of the branch's activity in Egypt. Such expenses must be supported by original documents and approved by the head office auditors.

Interest paid on loans and overdrafts with respect to a company's activities is deductible after offsetting interest income. Interest paid to individuals who are not subject to tax or exempt from tax is not deductible. Deductible interest is limited to the interest computed at a rate equal to twice the discount rate determined by the Central Bank of Egypt.

Inventories. Inventory is normally valued for tax purposes at the lower of cost or market value. Cost is defined as purchase price plus direct and indirect production costs. Inventory reserves are not permissible deductions for tax purposes. For accounting purposes, companies may elect to use any acceptable method of inventory valuation, such as first-in, first-out (FIFO) or average cost. The method should be applied consistently, and if the method is changed, the reasons for such change should be stated.

Provisions. Provisions are not deductible except for the following:

- Provision for up to 80% of loans made by banks, which is required by the Central Bank of Egypt
- Insurance companies' provision determined under Law No. 10 of 1981

Bad debts are deductible if the company provides a report from an external auditor certifying the following:

- The company is maintaining regular accounting records.
- The debt is related to the company's activity.
- The debt appears in the company's records.
- The company has taken the necessary action to collect the debt.

Depreciation and amortization allowances. Depreciation is deductible for tax purposes and may be calculated using either the straight-line or declining-balance method. The following are the depreciation rates.

Type of asset	Method of depreciation	Rate (%)
Buildings, ships and aircraft	Straight-line	5
Intangible assets	Straight-line	10
Computers	Declining-balance	50
Heavy machinery and equipment	Declining-balance	25
Small machinery and equipment	Declining-balance	25
Vehicles	Declining-balance	25
Furniture	Declining-balance	25
Other tangible assets	Declining-balance	25

The law allows a taxpayer to claim a deduction of 30% of the costs of new or used equipment and machines as accelerated depreciation if the assets are used for production purposes. This deduction applies only in the first tax period in which the equipment and machines are used.

Relief for losses. Tax losses may be carried forward for five years. Losses incurred in long-term projects may be carried back for an unlimited number of years to offset profits from the same project.

Losses incurred outside Egypt cannot be offset against taxable profits in Egypt.

If capital losses exceed capital gains realized from disposals of securities and shares in a tax year, the excess can be carried forward for three years.

Groups of companies. Associated or related companies in a group are taxed separately for corporate income tax purposes. Egyptian law does not contain a concept of group assessment under which group losses may be offset against profits within a group of companies.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax	Various
Customs duties	
General, ad valorem	Various
On value of machinery needed for investments by companies	5
Stamp duties on bills, promissory notes and letters of guarantee as well as most types of documents, contracts, checks and receipts (shares and bonds listed on the Egyptian Stock Exchange are exempt)	Various

Nature of tax	Rate (%)
Social insurance	
On monthly base salary, up to EGP1,120; paid by	
Employer	26
Employee	14
On amount of variable salary (any amount other than base salary) of EGP2,110 a month; paid by	
Employer	24
Employee	11
On contract labor force	18

E. Miscellaneous matters

Foreign-exchange controls. Egypt has a free-market exchange system. Exchange rates are determined by supply and demand, without interference from the central bank or the Ministry of the Economy.

Debt-to-equity rules. Under the new tax law, the maximum debt-to-equity ratio is 4:1. If the debt exceeds such ratio, the excess interest may not be claimed as a deductible expense.

Transfer pricing. The Egyptian tax law contains measures regarding transfer pricing, which are based on the arm's-length principle. Under these measures, the tax authorities may adjust the income of an enterprise if its taxable income in Egypt is reduced as a result of contractual provisions that differ from those that would be agreed to by unrelated parties. However, under the new tax law, it is possible to enter into arrangements in advance with the tax department regarding a transfer-pricing policy (Advance Pricing Arrangement). An Advance Pricing Arrangement ensures that transfer prices will not be challenged after the tax return is submitted and, accordingly, eliminates exposure to penalties and interest on the late payment of taxes resulting from adjustments of transfer prices.

The Egyptian Tax Department, in association with the Organisation for Economic Co-operation and Development, has issued transfer-pricing guidelines. The guidelines provide taxpayers with guidance on the application of the arm's-length principle to the pricing of their intra-group transactions, as well as outlining the documentation taxpayers must maintain to demonstrate their compliance with this principle.

F. Treaty withholding tax rates

The table below sets forth maximum withholding rates provided in Egypt's double tax treaties for dividends, interest and royalties.

To benefit from the tax rates provided by double tax treaties with respect to dividends, interest and royalties, within six months after the date of receipt of the payment, a nonresident entity or its legal representative must submit to the tax authorities an application to apply the tax rate stated in the treaty and request a refund of the difference between the domestic rate and the treaty rate. The application must be submitted on the form designed for this purpose together with required documents.

The following is the treaty withholding tax rate table.

	Dividends (a) (%)	Interest (%)	Royalties (%)
Albania	5/10	10	10
Algeria	5/10	5	10
Austria	5/10	15	0
Bahrain	0	According to domestic law in each country	According to domestic law in each country

Switzerland	0	15	12.5
Syria	5/10	15	20
Tunisia	5/10	10	15
Turkey	5/10	10	10
Ukraine	5/10	12	12
United Arab Emirates	0	10	10
United Kingdom	5/10	15	15
United States	5/10	15	15
Yemen	5/10	10	10
Yugoslavia (b)	5/10	15	15
Non-treaty countries	10	20	20

(a) The rates depend on various conditions.

(b) The treaty with Yugoslavia applies to the republics that formerly comprised Yugoslavia.

Egypt has signed double tax treaties with Armenia, Bangladesh, Kazakhstan, Mongolia, Oman, Senegal, Seychelles, the Slovak Republic, Sri Lanka, Tanzania, Thailand, Uganda and Vietnam, but these treaties have not yet been ratified. Tax treaty negotiations are under way with Congo (Democratic Republic of), Macedonia and Korea (North).

Paid to Domiciled Companies and Individuals	15
Paid to Non-domiciled Companies and Individuals	25
Loans	5 (b)
Equity or capital decreases	5 (j)
Other Payments Made to Nonresidents	20/25 (d)
Net Operating Losses (Years)	
Carryback	0
Carryforward	0 (k)

- (a) A special 5% tax is imposed on the income of large taxpayers. For further details regarding the corporate income tax and the special 5% tax, see Section B.
- (b) For details, see Section B.
- (c) The withholding tax applies to interest received by individuals and companies on bank deposits. Interest paid between domiciled companies is not subject to withholding tax.
- (d) Amounts paid or credited to non-domiciled legal entities or individuals who are resident, domiciled or incorporated in tax-haven jurisdictions (or paid through legal entities resident, domiciled or incorporated in such jurisdictions) are subject to a 25% withholding tax. Exceptions apply to the following types of payments:
- Payments for acquisitions or transfers of tangible assets
 - Payments to taxpayers in tax-haven jurisdictions located in Central America that have signed cooperation agreements with Salvadoran tax and customs authorities
 - Payments to taxpayers in tax-haven jurisdictions that have signed with El Salvador information exchange agreements or double tax treaties
 - Payments under circumstances in which reduced withholding tax rates apply

If an interest payment is made to a non-domiciled entity that is not registered with the Central Reserve Bank of El Salvador and not domiciled in a tax-haven jurisdiction, a 20% withholding tax applies. If an interest payment is made to a non-domiciled entity that is not registered with the Central Reserve Bank of El Salvador and domiciled in a tax-haven jurisdiction, a 25% withholding tax applies. Withholding tax at a reduced 10% rate applies if the recipient of the interest is a financial institution supervised in its country of origin and registered with the Central Reserve Bank of El Salvador. If the recipient does not file an annual income tax return, the withholding tax is presumed to be a payment in full of the income tax on the interest income.

- (e) The withholding tax is imposed on payments to foreign companies and individuals for services rendered or used in El Salvador, as well as on payments for the transfer of intangible assets. If the recipient does not file an annual income tax return, the withholding tax is presumed to be a final tax. Amounts paid or credited to non-domiciled legal entities or individuals who are resident, domiciled or incorporated in tax-haven jurisdictions (or paid through legal entities resident, domiciled or incorporated in such jurisdictions) are subject to a 25% withholding tax. Exceptions apply to the following types of payments:

- Payments for acquisitions or transfers of tangible assets
- Payments to taxpayers in tax-haven jurisdictions located in Central America that have signed cooperation agreements with Salvadoran tax and customs authorities
- Payments to taxpayers in tax-haven jurisdictions that have signed with El Salvador information exchange agreements or double tax treaties
- Payments under circumstances in which reduced withholding tax rates apply

The 20% rate applies to royalties from know-how and technical services paid to non-domiciled entities that are not domiciled in tax-haven jurisdictions.

- (f) The withholding tax is imposed on payments to non-domiciled persons or entities for transfers of intangible assets or for the use, or grant of use, of rights over tangible and intangible assets related to cinematographic movies, video tapes, phonographic discs, radio serials, television serials, serials and strips reproduced by any means, video and track records, and television programs transmitted by cable, satellite or other similar media. If the recipient does not file an annual income tax return, the withholding tax is presumed to be a final tax.
- (g) The withholding tax is imposed on payments to foreign companies and individuals for international transportation services. If the recipient does not file an annual income tax return, the withholding tax is presumed to be a final tax.
- (h) The withholding tax is imposed on payments to non-domiciled insurance and reinsurance companies and reinsurance brokers, authorized by the Superintendent of the Financial System. If the recipient does not file an annual income tax return, the withholding tax is presumed to be a final tax.
- (i) A withholding tax rate of 3% applies to income derived from capital invested in securities, or transactions in securities, shares and other investments in the Salvadoran securities market (primary or secondary).
- (j) A withholding tax rate of 5% applies to amounts paid or credited in capital or equity reductions, in the portion corresponding to capitalization or reinvestment of profits. For this purpose, the amounts paid or credited by the decrease of equity or capital corresponds to previously capitalized amounts.
- (k) Capital losses can be carried forward to offset capital gains for a period of five years, provided that the losses have been reported in previously filed tax returns.

B. Taxes on corporate income and gains

Corporate income tax. Resident corporations are subject to tax on Salvadoran-source income and on certain types of foreign investment income. Nonresident corporations are subject to tax on Salvadoran-source income only. As a result, resident and non-resident taxpayers are subject to income tax on income derived from the following:

- Movable and immovable property in El Salvador
- Activities carried out in El Salvador
- Services rendered by domiciled and non-domiciled entities that are used in El Salvador

Taxable foreign investment income derived by resident corporations includes income, capital gains, profits, or interest derived

from securities, financial instruments, and derivative contracts if any of the following conditions are met:

- The issuing entity is a national entity or domiciled in El Salvador.
- The capital is invested or employed in El Salvador.
- The risk assumed is placed or located in El Salvador.

Foreign investment income earned by a legal entity that is domiciled in El Salvador or that is considered a domiciled establishment or branch for Salvadoran tax purposes is taxable.

Income derived from interest, premiums and other earnings from deposits abroad paid by non-domiciled financial institutions to domiciled legal entities must always be declared to the Salvadoran tax authorities even if they have been subject to income tax or other similar taxes abroad. Taxes paid abroad can be credited according to the rules provided by Salvadoran law.

Corporate income tax rate. The standard rate of income tax is 30% for Salvadoran companies, foreign companies with a permanent establishment in El Salvador and non-domiciled companies. However, companies that have sales equal to or less than USD150,000 are subject to a 25% income tax rate.

Special tax for large taxpayers. On 29 October 2015, El Salvador's Congress approved a legislative decree that created a special tax for large taxpayers to support the government's public safety plan. The decree entered into force for five years as of 29 November 2015, and it prevails over any other contradictory law or statute. Taxpayers with annual net income of USD500,000 or more must report and pay a tax of 5% of net income. In practice, the tax should apply only to taxpayers classified as large taxpayers by the tax authorities.

Capital gains. Capital gains derived from the sale of movable and immovable property are subject to income tax at a rate of 10%. However, if the asset is sold within 12 months after acquisition, the capital gain is subject to tax at a rate of 25% or 30% of net income.

Companies may carry forward capital losses for a five-year period to offset future capital gains only.

The capital gain or loss on a transaction is computed by deducting from the sales price the following:

- Cost of the asset, which equals the purchase price less allowable depreciation claimed under the income tax law
- Improvements made to the asset
- All selling expenses necessary to complete the transaction

Administration. The statutory tax year runs from 1 January through 31 December. Companies must file annual income tax returns and pay any tax due within four months after the end of the tax year.

Companies with total assets of SVC10 million (approximately USD1,142,857) or more, or with gross income of SVC5 million (approximately USD571,428) or more, must file an annual tax certification of their tax obligations. This certificate is issued by an external certified public accountant (CPA) who is authorized by the CPA Surveillance Council.

Dividends. Domiciled entities in El Salvador that pay to, or register profits for, domiciled or non-domiciled entities or individuals

must withhold income tax at a 5% rate. This serves as a definite income tax payment. Payment or registration of profits can be made in various forms, including, among others, payments in cash or securities and in-kind payments, regardless of whether they are considered dividends, quotas, excess payments, legal reserves, profits or earnings.

The above obligation also applies to representatives of parent companies, affiliates, branches, agencies and other permanent establishments that pay or credit profits to domiciled entities or individuals abroad.

Notwithstanding the above, if payments are made to an entity or individual domiciled or resident in a tax-haven jurisdiction, a 25% withholding tax rate applies.

Withholding tax on loans. Legal entities or entities without legal capacity domiciled in El Salvador that remit cash or in-kind assets as loans or advance remittances or engage in other types of loan operations must withhold tax at a rate of 5% of such amounts if the amounts are remitted to any of the following:

- Partners, shareholders, associates, beneficiaries, and other related parties according to Section 25 of the Income Tax Law (for example, spouses and relatives in the fourth degree of consanguinity or second degree of kinship)
- Entities or individuals domiciled or resident in a tax-haven jurisdiction
- Parent companies or branches domiciled abroad

Certain exceptions apply, such as to loans with a market value interest rate or a one-year term and to supervised financial institutions.

Foreign tax relief. In general, relief is granted in El Salvador for foreign taxes paid with respect to certain types of investment income earned abroad. Also, see Section F.

C. Determination of trading income

General. Taxable income is computed in accordance with adopted Financial Information Standards in El Salvador (International Financial Reporting Standards), subject to adjustments required by the Salvadoran income tax law. The Salvadoran income tax law requires the use of the accrual method of accounting.

Taxable income includes all income derived from the following:

- Assets located in El Salvador
- Activities or transactions carried out in El Salvador
- Capital invested in El Salvador
- Services rendered in El Salvador and services rendered outside El Salvador that are used in El Salvador
- Certain types of investment income (see Section B)

In general, all costs and expenses necessary to produce and preserve taxable income are deductible for income tax purposes, provided all legal deductibility requirements are met.

Imputed income. The Salvadoran income tax law does not contain rates and formulas for calculating imputed income. However, the tax authorities may determine taxable income based on certain information, including the following:

- Investments made during the tax year
- Equity fluctuations
- Transactions and profits recorded in previous tax years
- Purchases and sales
- Value of imported goods
- Value of inventories
- Purchases not recorded
- Performance of similar businesses
- General expenses

Inventories. Salvadoran income tax regulations provide that inventories may be valued at acquisition cost. The cost may be calculated using certain methods, such as first-in, first-out (FIFO), last purchase cost and average cost, as well as special methods established for agricultural products and cattle. The income tax law provides that inventories can be valued by other methods if authorization from the tax authorities is obtained before the method is implemented.

Provisions. Provisions for contingent liabilities, such as severance payments and labor costs, are not deductible expenses. However, payments of such liabilities are deductible expenses. Amounts for doubtful accounts may be deducted if certain legal requirements are satisfied.

Tax depreciation and amortization

Depreciation. The acquisition cost of products with a useful life of 12 months or less may be fully deducted from taxable income in the year of acquisition. Property with a useful life of more than 12 months may be depreciated using the following straight-line rates.

Asset	Rate (%)
Buildings	5
Machinery	20
Vehicles	25
Other movable property	50

Only a portion of the acquisition cost of used machinery and movable property may be deducted for tax purposes. The deductible percentages, which are based on the asset's life, are shown in the following table.

Asset's useful life Years	Deductible percentage (%)
1 but less than 2	80
2 but less than 3	60
3 but less than 4	40
4 or more	20

The useful life of a used asset is determined when the asset is purchased. The depreciable portion of the acquisition cost is calculated according to the normal depreciation rules.

Tax amortization. The acquisition cost or development cost of software programs used to produce and preserve taxable income may be amortized at an annual rate of up to 25% of the cost of development or acquisition. The deductible percentages applicable to used machinery (see above) also apply to used software programs.

Relief for losses. Net operating losses may not be carried forward or back to offset taxable income.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax; transfers of fixed assets that have been used for four years or more are not subject to transfer taxes	13
Real property transfer tax; tax imposed on value of real property with respect to the amount that exceeds SVC250,000 (approximately USD28,571)	3
Customs duties	Various
Tax on certain financial transactions; imposed on payments of goods and services by check and debit card for which the transaction value exceeds USD1,000, payments through wire transfers for which the transaction value exceeds USD1,000, transfers in favor of third parties in any form or by any technological means, for which the transaction value exceeds USD1,000 loan or financing disbursements of any kind and transactions between entities of the financial system (banks) for their own purposes or in accordance with a customer's instructions; exemptions apply	0.25
Withholding tax on cash deposits, payments and withdrawals over USD5,000	0.25
Social contributions; paid by employer	
Prevention system (this system provides pensions and certain other benefits); on salaries up to SVC55,291.43 (USD6,319.02)	6.75
Social security; on salaries up to SVC8,750 (USD1,000)	
Maternity, sickness and professional risks	7.5
Professional training	1

E. Foreign-exchange controls

The currencies in El Salvador are the colon (SVC) and the US dollar. Since 2001, all transactions and operations in El Salvador can be carried out and denominated in colons or US dollars. The permanent exchange rate in El Salvador is SVC8.75 = USD1.

No restrictions are imposed on foreign-trade operations or foreign-currency transactions.

F. Tax treaties

El Salvador's only tax treaty in force is with Spain. The treaty is based on the Organisation for Economic Co-operation and Development model, with some minor differences.

In Spain, the treaty applies to income tax on individuals, income tax on corporations, income tax for nonresidents, net worth tax, and local income tax and net worth tax. In El Salvador, the treaty applies to income tax.

For dividends, interest and royalties paid by companies domiciled in one signatory country to residents of the other signatory country, the treaty provides for maximum tax rates in the source country of 12% for dividends and 10% for interest and royalties. If certain conditions are met, the tax rate for dividends may be reduced to 0%. The treaty also provides for a maximum rate of 10% in the source country for services, unless the individual or company that accounts for the income has a permanent establishment in the country in which the services are rendered.

A. At a glance

Corporate Income Tax Rate (%)	35 (a)
Capital Gains Tax Rate (%)	35 (b)
Branch Tax Rate (%)	35
Withholding Tax (%)	
Dividends	25 (c)
Interest	25 (c)
Royalties from Patents, Know-how, etc.	10
Payments for Oil and Gas Services	5/6.25/10 (d)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	3/5 (e)

- (a) The minimum corporate tax is 3% of turnover. See Section B for details.
 (b) In certain circumstances, the tax is deferred or reduced (see Section B).
 (c) This tax is imposed on payments to nonresidents. For residents, the rate is 35%.
 (d) This tax applies to payments for services performed by subcontractors of oil and gas companies. The 6.25% rate applies to residents. The 10% rate applies to nonresidents. The 5% rate applies to transportation, mobilization services (bringing a rig or vessel into Equatorial Guinea [EG]) and demobilization services (sending a rig or vessel out of EG) performed by nonresidents in EG.
 (e) In general, companies may carry forward net operating losses for three years. However, companies operating in the hydrocarbon sector may carry forward net operating losses for five years.

B. Taxes on corporate income and gains

Corporate income tax. Equatorial Guinea (EG) companies are taxed on the territorial principle. As a result, EG companies carrying on business outside EG are not subject to corporate income tax in EG on the related profits. EG companies are those registered in EG, regardless of the nationality of the shareholders or where the companies are managed and controlled. Foreign companies engaged in business in EG are subject to corporate income tax on EG-source profits.

Tax rate. The corporate income tax rate is 35%.

The minimum corporate tax is 3% of annual turnover for the preceding year. The amount of this tax cannot be less than XAF800,000 (for further details regarding this tax, see *Administration*).

Capital gains. Capital gains are taxed at the regular corporate income tax rate. However, the tax can be deferred if all of the proceeds are used to acquire new fixed assets in EG within three years or in the event of a merger. If the business is totally or partially transferred or discontinued, only one-half of the net capital gains is taxed if the event occurs less than five years after the start-up or purchase of the business, and only one-third of the gains is taxed if the event occurs five years or more after the business is begun or purchased.

Administration. The tax year is the calendar year. Tax returns must be filed by 30 April. The minimum corporate tax must be declared and paid by 31 March of each year. The minimum corporate tax may be set off against the regular income tax payable for the same tax year.

Late payments and late filings of tax returns are subject to penalties. For the minimum corporate tax, the penalty equals 50% of the amount of the tax. For corporate income tax, the following are the penalties:

- XAF200,000 per month of delay for the filing of the return. However, the total amount of the penalty cannot exceed 75% of the tax owed.
- 50% of the amount not declared if the return has a shortfall that exceeds 1/10 of the declared profit. The penalty is increased to 100% in case of bad faith.

Dividends. Dividends paid to nonresidents are subject to a 25% withholding tax.

Resident companies normally include dividends received in taxable income. However, a parent company may exclude up to 90% of the dividends received from a 25%-owned subsidiary.

Foreign tax relief. EG does not provide relief for foreign taxes paid.

C. Determination of trading income

General. Taxable income is based on financial statements prepared according to generally accepted accounting principles and the rules contained in the general accounting chart of the Organization for Harmonization of Business Law in Africa (Organisation pour l'Harmonisation en Afrique du Droit des Affaires, or OHADA).

Business expenses are generally deductible unless specifically excluded by law. The following expenses are deductible only if they are normal and substantiated:

- Head office overhead and remuneration for certain services (studies and technical, financial or administrative assistance) paid to nonresidents
- Royalties from patents, brands, models or designs paid to a non-Economic and Monetary Community of Central Africa (Communauté Économique et Monétaire de l'Afrique Centrale, or CEMAC) corporation participating in the management of, or owning shares in, the EG corporation

The following expenses are not deductible:

- Rent expense for movable equipment paid to a shareholder holding, directly or indirectly, more than 10% of the capital
- A portion of interest paid to a shareholder in excess of the central bank annual rate and, if the shareholder is in charge of management, on the portion of the loan exceeding one-half of the capital stock
- Commissions and brokerage fees exceeding 5% of purchased imports
- Certain specific charges, penalties, corporate income tax and individual income tax
- Most liberalities (payments that do not produce a compensatory benefit, such as excessive remuneration paid to a director), gifts and subsidies

Inventories. Inventories are normally valued at cost. Cost must be determined under a weighted average cost price method.

Provisions. In determining accounting profit, companies must establish certain provisions, such as a provision for a risk of loss for certain expenses. These provisions are normally deductible for tax purposes if they provide for clearly specified losses or expenses that are probably going to occur and if they appear in the financial statements and in a specific statement in the tax return.

Capital allowances. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at rates specified by the tax law. The following are the straight-line depreciation rates for major categories of assets.

Asset	Rate (%)
Buildings	5 to 20
Plant and machinery, and transportation equipment	5 to 100
Office equipment	10 to 15

Relief for losses. In general, companies may carry forward net operating losses for three years. However, companies operating in the hydrocarbon sector may carry forward net operating losses for five years. Losses attributable to depreciation may be carried forward indefinitely. Losses may not be carried back.

Groups of companies. EG law does not allow the filing of consolidated tax returns or provide any other form of tax relief for groups of companies. However, the OHADA Uniform Act on Accounting Law contains the principle of consolidated financial statements.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax; imposed on transactions performed in EG that are not subject to the oil and gas sector withholding tax (see Section A)	
General rate	15
Reduced rate	6
Specified products	0

Nature of tax	Rate (%)
Social security contributions; imposed on salaries; paid by	
Employer	21.5
Employee	4.5
Worker Protection Fund and Professional Training Fund; imposed on salaries; paid by	
Employer (on gross salary)	1
Employee (on net salary)	0.5

E. Foreign-exchange controls

The EG currency is the CFA franc BEAC (XAF).

Exchange-control regulations exist in EG for financial transfers in the franc zone which is the monetary zone including France and its former overseas colonies. In the franc zone, transactions from XAF1 million to XAF10 million require a preliminary declaration to the Ministry of Finance. Outside the franc zone, a preliminary authorization from the Ministry of Finance and Budget is required for any transaction exceeding XAF10 million.

F. Tax treaties

EG has entered into the tax treaty of the former Central African Economic and Customs Union (Union Douanière et Économique de l'Afrique Centrale, or UDEAC).

The tax law in Estonia has been frequently amended, and further changes are likely to be introduced. Because of these frequent changes, readers should obtain updated information before engaging in transactions.

A. At a glance

Corporate Tax Rate (%)	20 (a)
Capital Gains Tax Rate (%)	0/20 (b)
Branch Tax Rate (%)	20 (a)

Withholding Tax (%) (d)

Dividends	0 (c)
Interest	0/20 (d)
Royalties	0/10/20 (e)
Rental Payments	20 (f)
Services	0/10/20 (g)
Salaries and Wages	20

- (a) Resident companies and permanent establishments of nonresident companies are not subject to tax on their income. They are subject only to tax at a rate of 20% on the gross amount of distributed profits and certain payments made. The tax rate is applied to the net taxable amount divided by a specified percentage (for further details, see Section B).
- (b) Resident companies and permanent establishments of nonresident companies are not subject to tax on their capital gains received. They are subject only to tax at a rate of 20% on the gross amount of distributed profits. Nonresident companies without a permanent establishment in Estonia are subject to tax at a rate of 20% on their capital gains derived from Estonian sources. For further details, see Section B.
- (c) Withholding tax is not imposed on dividends. Dividends are subject to 20% corporate income tax at the level of the resident distributing companies only (for further details, see Section B).
- (d) Interest payments are generally exempt from withholding tax. Withholding tax at a rate of 20% is imposed on interest paid to resident individuals (including payments made by contractual investment funds on the account of the funds), except for interest received from European Economic Area (EEA) credit institutions from deposits. Interest paid to nonresidents as a result of ownership of contractual investment funds is subject to a 20% withholding tax if more than 50% of the assets owned (directly or indirectly) by the fund during a two-year period preceding the date of the interest payment is real estate located in Estonia and if the interest recipient has at least 10% ownership in the contractual investment fund at the moment of receiving the interest. Withholding tax is not imposed on interest paid from the profits of contractual investment funds if the profits have already been taxed.
- (e) Withholding tax at a rate of 10% is imposed on payments to nonresident individuals and companies. Royalties paid to companies resident in other EU countries or Switzerland are not subject to withholding tax if the provisions of the EU Interest-Royalty Directive are satisfied. A 20% withholding tax is imposed on payments to resident individuals.
- (f) Withholding tax at a rate of 20% is imposed on payments to resident individuals and nonresidents.
- (g) The 20% rate applies to payments to nonresidents from low-tax jurisdictions (a low-tax jurisdiction is a jurisdiction that does not impose a tax on profits or distributions or a jurisdiction in which such tax would be less than 1/2 of the Estonian tax payable by resident individuals on a similar amount of business income). The 10% rate applies to payments to other nonresidents for services rendered in Estonia. A 0% rate may apply under double tax treaties.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies and permanent establishments of nonresident companies are not subject to tax on their income. They are subject only to tax on the following payments made to resident legal entities, nonresident companies, resident individuals and nonresident individuals:

- Dividends
- Fringe benefits
- Gifts
- Donations
- Business entertainment expenses
- Distributions of profits
- Payments not related to the business of the payer

Resident companies are companies registered (effectively the same as incorporated) in Estonia. European public limited liability companies and European Cooperative Societies that have their

registered office in Estonia are deemed to be Estonian tax residents. Nonresident companies without a permanent establishment in Estonia are subject to tax on their business income derived from Estonia.

Tax rates. Resident companies are subject to tax on the payments described in *Corporate income tax* at a rate of 20% of the gross amount of the payments. To calculate the corporate income tax for 2017, the tax rate is applied to the net taxable amount divided by 0.8.

A 20% rate applies to income derived by nonresident companies without a permanent establishment in Estonia.

Capital gains. Capital gains derived by resident companies and permanent establishments of nonresident companies are exempt from tax until they are distributed.

Nonresident companies without a permanent establishment in Estonia are taxed at a rate of 20% on their capital gains derived from Estonian sources.

Capital gains derived from sales of shares and securities by nonresidents are exempt from tax. However, if the shares of a company, contractual investment fund or other pool of assets are sold by a nonresident with at least a 10% holding and if at the time of the sale or at any other time during the two preceding years, real estate and buildings directly or indirectly accounted for 50% or more of the assets of the company, capital gains derived from the sale of the shares are taxable.

If a resident company is deleted from the Estonian commercial register without liquidation and its economic activities are ended, the holding of a nonresident in the company is taxed as a capital gain, which is equal to the market value of the holding less the acquisition cost. The taxation is postponed if economic activities are continued through another resident company or a permanent establishment remains in Estonia.

Administration. The tax period is a calendar month. Tax returns must be filed and income tax must be paid by the 10th day of the following month.

Advance rulings. Taxable persons may apply for advance rulings from the tax authorities. Advance rulings may relate only to actual planned transactions, as opposed to theoretical questions. The advance ruling is binding on the tax authorities and recommended for the taxable person. The taxable person must inform the tax authorities of the execution of the transaction described in the advance ruling. A time limit for the binding nature of the ruling is set based on the taxpayer's evaluation of the time needed for the execution of the transaction.

The processing of the advance ruling may be suspended if a similar transaction is simultaneously being reviewed in challenge proceedings (administrative proceedings involving a dispute between the taxpayer and the tax authorities) or court proceedings and if the expected decision in such proceedings is crucial for the determination of the tax consequences. Advance rulings may not be issued with respect to the determination of transfer prices (determination of value of transactions between related parties).

For the advance ruling to be binding, the taxpayer must present detailed and accurate information before the beginning of the relevant transactions. If the tax laws are amended after the advance ruling has been issued but before the transaction is carried out, the advance ruling is no longer binding. The deadline for issuing an advance ruling is 60 calendar days beginning with the date of acceptance of the application. By a motivated decision (a decision that includes arguments supporting the decision) in writing, the deadline may be extended for an additional 30 calendar days. A state fee is payable for the processing of the advance-ruling application.

A summary of the ruling, except for information protected by the tax secrecy clause (the tax authorities are bound to maintain the confidentiality of information concerning a taxpayer that was acquired in the course of their activities; certain exceptions apply), is published on the tax authorities' web page. The taxable person may prohibit the disclosure of specific information.

Dividends. Withholding tax is not imposed on dividends paid. Payers of dividends must pay corporate income tax at a rate of 20% on the gross amount of dividends paid. This income tax is treated as a payment of income tax by the distributing company and not as tax withheld from the recipient of the dividends.

Dividends received are not included in taxable income (see *Foreign tax relief*).

The following payments are also taxable as dividends at the level of the company:

- Decrease of share capital (if the decrease exceeds paid-in equity capital)
- Redemption of shares and the payment of liquidation proceeds in an amount that exceeds the monetary and non-monetary payments made into the equity capital

Interest. Interest payments are generally exempt from withholding tax. Withholding tax at a rate of 20% is imposed on interest paid to resident individuals (including payments made by contractual investment funds on the account of the funds), except for interest received from European Economic Area (EEA) credit institutions from deposits. Interest paid to nonresidents as a result of ownership of contractual investment funds is subject to a 20% withholding tax if more than 50% of the assets owned (directly or indirectly) by the fund during a two-year period preceding the date of the interest payment is real estate located in Estonia and if the interest recipient has at least 10% ownership in the contractual investment fund at the moment of receiving the interest. Withholding tax is not imposed on interest paid from the profits of contractual investment funds if the profits have already been taxed.

Foreign tax relief. Dividends distributed by an Estonian company and a permanent establishment of a foreign company that had received dividends from a foreign company (except from a company located in a low-tax jurisdiction) are exempt from income tax if the following conditions are satisfied:

- The dividends are received from a taxable company resident in the EEA or Switzerland, or foreign tax has been paid on or withheld from the profits out of which the dividends were paid.

- The Estonian company receiving the dividends owns at least 10% of the shares or votes of the foreign company when the dividends were received.
- The transaction or a chain of transactions is actual (a transaction or a chain of transactions is not actual if its primary purpose or one of its primary purposes is to obtain a tax advantage), and the distributing subsidiary cannot deduct the distributed profits. The tax exemption applies to the extent that a transaction or a chain of transactions is carried out for business purposes, the economic content of which is necessary and appropriate for the business activities in question.

The following profits are also exempt from tax:

- Profits allocated to a permanent establishment of an Estonian company in an EEA country or Switzerland
- Profits allocated to a permanent establishment of an Estonian company in another foreign country if foreign tax has been paid on the profits

Profits received from a permanent establishment by an Estonian resident company remain exempt if a transaction or a chain of transactions is actual (a transaction or a chain of transactions is not actual if its primary purpose or one of its primary purposes is to obtain a tax advantage).

Any foreign tax paid or withheld can be credited by an Estonian company against income tax payable on dividend distribution.

C. Determination of trading income

Because resident companies and permanent establishments of nonresident companies registered with the Estonian authorities are not subject to tax on their income, they need not determine their trading income for tax purposes.

Profits of Estonian contractual investment funds from immovable property are taxed immediately when profits are earned.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on goods and services, excluding exports	9/14/20
Social security tax	32.5
Mandatory funded pension contributions	2/3
Land tax	0.1 to 2.5
Unemployment insurance contributions (2017 rates); paid by	
Employer	0.8
Employee	1.6

Other significant taxes include excise duty, stamp duties, heavy vehicles tax, charges on the use of Estonian natural resources and pollution charges.

E. Miscellaneous matters

Foreign-exchange controls. The official currency in Estonia is the euro (EUR).

Enterprises registered in Estonia may maintain bank accounts abroad without any restrictions.

Debt-to-equity rules. No debt-to-equity or thin-capitalization rules exist in Estonia.

Anti-avoidance legislation. Under the Taxation Act, if it is evident from the content of a transaction or act that the transaction or act is performed for the purposes of tax evasion, the actual economic substance of the transaction applies for tax purposes. If a fictitious transaction is entered into in order to conceal another transaction, the provisions of the concealed transaction apply for tax purposes. Also, see *Foreign tax relief* in Section B.

Transfer pricing. Under a transfer-pricing measure in the income tax law, pricing between resident and nonresident associated companies should be at arm's length. The tax authorities may adjust to an arm's-length amount the profit of a company engaging in transactions with nonresident associated persons. Persons are considered associated if they have a common economic interest or if one person has a prevalent influence over another person. The transfer-pricing measure also covers transactions between nonresident legal entities and their permanent establishments in Estonia. Transfer-pricing documentation is required for the following entities:

- Entities with more than 250 employees (together with related parties)
- Entities operating in certain industries
- Entities that had turnover, including the turnover of related parties, of at least EUR50 million in the preceding financial year
- Entities that had consolidated net assets of at least EUR43 million in the preceding financial year
- Parties to a transaction if one of the parties is a resident of a low-tax jurisdiction

F. Treaty withholding tax rates

The rates reflect the lower of the treaty rate and the rate under Estonian domestic law.

- (a) Dividends are not subject to withholding tax under Estonian domestic law.
- (b) Interest is not subject to withholding tax under Estonian domestic law except for interest paid in certain circumstances to nonresidents as a result of ownership in foreign contractual investment funds (see Section B).
- (c) Royalties paid to a company resident in another EU country or Switzerland are not subject to withholding tax if the provisions of the EU Interest-Royalty Directive are satisfied.
- (d) The lower rate applies to royalties paid for the use of industrial, commercial or scientific equipment.
- (e) The lower rate applies to royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films, but excluding software payments.
- (f) The 20% rate applies to rental payments to nonresidents. The 10% rate applies to royalties, including royalties paid for the use of industrial, commercial or scientific equipment.

Carryforward	5/10 (f)

- (a) The standard business income tax rate is 30%. Income from large-scale mining operations is taxed at a rate of 25%. A 35% rate applies to income from small-scale mining operations, with the same exclusions. Income from petroleum, natural gas and oil shale operations is taxed at the standard rate of 30%.

- (b) The 15% rate applies to gains derived from transfers of buildings located in municipal areas that are used for a business. The 30% rate applies to gains derived from transfers of shares of companies.
- (c) This is a final income tax that is withheld at source for both residents and nonresidents.
- (d) This rate applies if the supplier provides a tax identification number. Otherwise, the rate is 30%. For further details, see Section B.
- (e) Remittances by branches to their foreign headquarters are considered to be distributions of dividends and are accordingly subject to income tax at a rate of 10%.
- (f) Companies in the mining sector may carry forward losses 10 years. Also, see Section C.

B. Taxes on corporate income and gains

Business income tax. Resident companies are subject to business income tax on their worldwide income. Nonresident companies are subject to tax on their Ethiopian-source income only. A company is resident in Ethiopia if it satisfies any of the following conditions:

- It has its principal office in Ethiopia.
- Its place of effective management is located in Ethiopia.
- It is registered in the trade register of the Ministry of Trade and Industry or of the trade bureaus of the regional governments of Ethiopia. Registered companies include permanent establishments of nonresident companies in Ethiopia.

Tax rates. The standard business income tax rate is 30%. Income from large-scale mining operations is taxed at a rate of 25%. A 35% rate applies to income from small-scale mining operations, with the same exclusions. Income from petroleum, natural gas and oil shale operations is taxed at the standard rate of 30%.

Certain investment activities approved by the Ethiopian Investment Authority qualify for income tax exemptions and other incentives. For example, new export-oriented investments in manufacturing, agro-industrial activities or the production of agricultural products may qualify for income tax exemptions ranging from two to seven years, while two-year tax exemptions are available for investments in the expansion and upgrading of existing businesses engaged in such activities. The availability and length of tax exemptions depend on the distance of the place of investment from Addis Ababa, the capital city. The exemptions are designed to encourage investors to invest in remote areas that are less developed but endowed with resources. Enterprises that incur losses during the period of income tax exemption may carry forward their losses to years following the expiration of the tax-exemption period for a period equaling half the tax-exemption period. The normal loss carryforward period is three years (see Section C).

Tax on “windfall profit” obtained by a person as a result of change that occurred in local or international economic situations that was not caused by the person’s own efforts will be applied as soon as the Ministry of Finance and Economic Development prescribes the following:

- Businesses subject to the “windfall profit” tax
- The amount of income to be considered “windfall profit”
- The effective date for application of the tax

Shortly after parliament approved an amendment of the income tax proclamation providing for the introduction of a tax on “windfall profit” during its 18 November 2010 session, the Ministry of

Finance and Economic Development (MoFED) instructed commercial banks to pay 75% of the profit that the MoFED determined that the banks made because of the devaluation of the birr. The amendment to the proclamation stated that businesses in the finance sector and oil exploration and mining sector were likely to be subject to such tax.

Capital gains. Capital gains derived from transfers of buildings located in municipal areas that are used for a business, factory or office are subject to tax at a rate of 15%. Capital gains derived from transfers of shares of companies are subject to tax at a rate of 30%.

Subject to certain limitations, losses incurred on transfers of the properties described above may be used to offset gains. Unused capital losses may be carried forward indefinitely.

Subject to limitations, gains or losses are recognized on transfers of assets used in a business (other than buildings) and are subject to business income tax.

Administration. The Ethiopian Revenues and Customs Authority (ERCA) administers and collects certain taxes, including the business income tax and capital gains tax of companies. The Ministry of Mines and Energy collects mining taxes.

The tax year (year of assessment) is the Ethiopian budgetary year, which runs from 8 July to 7 July of the following calendar year. If a company's accounting year differs from the Ethiopian budgetary year, its base period for the tax year is the accounting year ending within the tax year.

Advance income tax of 2% is withheld from payments for goods or services if the payments exceed certain thresholds. The tax is withheld from payments for goods if the amount payable in a single transaction or supply contract is more than ETB10,000. For payments for services, tax is withheld if the amount payable in a single transaction or contract is more than ETB500.

Companies must file annual tax returns, together with their annual accounts, within four months after the end of their accounting year. Companies must pay the tax shown in the tax return reduced by the amount of the advance payments withheld and any foreign tax credits. The tax office audits the company's return and annual accounts to determine the final assessment.

Companies that fail to pay tax by the due date must pay interest at a rate that is 25% above the highest commercial lending interest rate that prevailed during the preceding quarter, together with administrative penalties.

Dividends. A 10% final income tax that is withheld at source is imposed on dividends paid by share companies and withdrawals of profits from private limited companies. The tax applies to both residents and nonresidents. If shareholders decide to reinvest their dividends to expand the activities of the company, the dividends are exempt from tax, with the exception of certain sectors.

Remittances by branches to their foreign headquarters are considered to be distributions of dividends and are accordingly subject to income tax at a rate of 10%.

Income withholding taxes are imposed on interest, royalties and certain other types of income. For a listing of these taxes, see Section A.

Dividend tax on retained earnings. Business entities that are operating in Ethiopia are required to pay a dividend tax of 10% of their retained earnings. Companies must pay the dividend tax on annual basis within 12 months after the end of the tax year without regard to the distribution of the retained earnings to the shareholders. However, undistributed retained earnings may be exempted from the tax if the retained earnings are converted to capital within the 12 months after the end of the company's tax year.

Withholding tax on imports. Withholding tax is collected from business income taxpayers at a rate of 3% at the time of importation of goods for commercial use. The amount of this tax may be credited against the taxpayer's income tax liability for the year.

Foreign tax relief. Foreign tax paid may be used as a credit against tax payable with respect to the foreign-source income, limited to the amount of tax in Ethiopia that would otherwise be payable on such income.

C. Determination of trading income

General. Taxable income is the amount of income subject to tax after the deduction of all expenses and other deductible items allowed under the tax law.

Expenses are deductible to the extent they are incurred for the purpose of earning, securing, and maintaining business income, if it can be proved that the expenses are genuine.

Subject to restrictions, reinvestments by resident companies of their profit to increase the capital of another company may be deducted for tax purposes.

Foreign-exchange gains and losses. All net gains or losses arising from transactions in foreign exchange are considered to be taxable income or deductible losses in the year in which they arise.

Provisions. Specifically identifiable provisions for bad debts are allowed if the company has taken all reasonably necessary steps to recover the debts. General provisions and provisions for stock obsolescence are not allowed.

Financial institutions may deduct special (technical) reserves in accordance with the National Bank of Ethiopia directives. However, the taxable income of banks is increased by amounts withdrawn from such reserves.

Tax depreciation. Buildings and other structures are depreciated using the straight-line method at an annual rate of 5%. A straight-line depreciation rate of 10% applies to intangible assets.

The following assets are depreciated using a pooling system.

Assets	Rate (%)
Computers, information systems, software products and data storage equipment	25
Fixed assets of companies engaged in mining activities	25
Other business assets	20

Under the pooling system, the depreciation rate is applied to the depreciation base, which is the book value of the category as recorded in the opening balance sheet of the tax year, increased by certain costs incurred during the tax year, and decreased by certain amounts received during the tax year. The tax base is increased by the following costs: the cost of assets acquired or created; the cost of improvements that are capitalized; and the costs of renewal and reconstruction of assets. The tax base is decreased by the sales proceeds of assets disposed of and compensation received for the loss of assets.

A negative depreciation base is added to taxable income. If the depreciation base is ETB1,000 or less, the entire depreciation base is deductible.

No depreciation is allowed on the revaluation of business assets.

Maintenance and improvement expenses exceeding 20% of the depreciation base of a category of business assets increase the depreciation base of that category.

Fine arts, antiques, jewelry, trading stock and other business assets not subject to wear and tear and obsolescence may not be depreciated.

Relief for losses. If the determination of taxable business income results in a loss in a tax period, that loss may be set off against taxable income in the next five tax periods. Earlier losses are set off before later losses. A net operating loss may be carried forward and deducted only for two periods of five years.

Companies in the mining sector may carry forward losses 10 years.

If, during a tax period, the direct or indirect ownership of the share capital or the voting rights of a body change more than 25%, by value or by number, the right to a loss carryforward no longer applies to losses incurred by that body in that tax period and previous tax periods.

Group of companies. The Ethiopian tax law does not allow the filing of consolidated returns.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax (VAT); levied on all supplies of goods and services made in Ethiopia and on imports, except for exempt goods and services	
Standard rate	15%
Exports of goods and services	0%
Equalization turnover tax; imposed on persons not registered for VAT	
Goods sold locally	2%
Services rendered locally by contractors and grain mills, and on rentals of tractors and combine-harvesters	2%
Other services	10%

Nature of tax	Rate
Excise tax; levied on specified goods manufactured in Ethiopia and on imports; for locally produced goods, tax is imposed when production is completed and is based on production cost; for imports, tax is imposed on Cost, Insurance and Freight (CIF) value; rates vary among products; low rate applies to textile and garment products, and high rate applies to various items, including vehicles with engines exceeding 1,800 cc	10% to 100%
Rates	10% to 100%
Surtax on all imported items mentioned above	Additional 20% of CIF value
Revenue stamp duties; levied on transfers of certain property, including vehicles	2%

E. Tax treaties

Ethiopia has entered into double tax treaties with various countries, including the Czech Republic, France, Israel, Italy, Kuwait, the Netherlands, Romania, the Russian Federation, South Africa, Tunisia and Turkey. Ethiopia has signed double tax treaties that have not yet been ratified with Algeria, Iran and Oman. Ethiopia also recently entered into double tax treaties with India and the United Kingdom. However, Ethiopia has not implemented any of its double tax treaties.

Corporate Income Tax Rate (%)	20
Capital Gains Tax Rate (%)	10
Branch Tax Rate (%)	20
Withholding Tax (%)	
Dividend (a)	
Resident individuals	3
Nonresidents	9
Interest	10
Royalties from Patents, Know-how, etc.	15
Net Operating Losses (Years)	
Carryback	0
Carryforward	4 (b)

- (a) These rates are effective from 1 January 2016 for 2016 profits. For 2014 and 2015, profits are subject to the 1% transitional rule. This rule applies to dividends from after-tax profits for 2014 and 2015. This tax is payable by 31 March 2016 with respect to 2014 profits, while the tax office will provide an extension for the tax with respect to 2015 profits. Also, see Section B. Profits before 2014 are subject to the 2001 dividend regulations, which are based on imputation. Dividends paid to resident companies are exempt from tax.
- (b) See Section C.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are subject to income tax on worldwide assessable income. Nonresident companies carrying on business through a branch pay tax only on Fiji-source income. A resident company is a company incorporated in Fiji. A company not incorporated in Fiji is considered a resident company if it carries on business in Fiji and has either its central management or control in Fiji or its voting power controlled by shareholders who are residents of Fiji.

Tax rates. In general, resident companies and branches of non-resident companies are subject to tax at a rate of 20%. Companies

that are listed on the South Pacific Stock Exchange and have a resident shareholding of at least 40% are subject to tax at a rate of 10%. Foreign companies that establish their headquarters in Fiji or relocate their headquarters to Fiji are subject to tax at a rate of 17%.

Tax holidays are available to various enterprises and for various activities, including qualifying hotel projects, companies granted a tax-free regions license, qualifying information communications technology operators, approved activities in commercial agricultural farming and agro-processing, approved activities with respect to processing agricultural commodities into biofuels, approved activities in renewable energy projects and power cogeneration, medical services, residential housing development and audiovisual activities. Effective from 1 January 2017, certain licenses for hotel tax concessions are no longer granted.

Capital gains. The rate of the capital gains tax is 10%. Effective from 1 January 2016, the capital gains tax is administered through the Income Tax Act 2015. Previously, capital gains tax was administered through the Capital Gains Tax Decree 2011. Capital gains tax applies only to non-depreciable capital assets, while gains on depreciable capital assets are subject to income tax at a rate of 20%.

Administration. The Fiji tax year is the calendar year. However, for most companies, an alternative fiscal year is normally allowed. Tax for any fiscal year is payable in three installments according to the following schedule:

- 33.3% of the preceding year's tax liability by the end of the sixth month
- Another 33.3% of the preceding year's liability by the end of the ninth month
- Another 33.4% of the preceding year's liability on or before the balance date

Companies are required to file tax returns within three months after the fiscal year-end, but extensions of an additional two, four or six months are granted to tax agents, depending on the level of taxable income.

Dividends. Dividends received by a resident company from another resident company are not taxable. Effective from 1 August 2016, all dividends declared are chronologically assessed, and dividends paid out of profits arising before 1 January 2014 are subject to a 3% withholding tax for resident individuals and a 9% withholding tax for nonresidents including companies.

Branch profits. Effective from 1 January 2016, remittances of branch profits are treated as dividends and are subject to a 9% withholding tax. Remittances of profits pertaining to periods before 1 January 2014 are also subject to 9% withholding tax, effective from 1 August 2016.

Foreign tax relief. Income derived by Fiji residents from treaty countries is subject to Fiji income tax, but credit is given for taxes paid, up to the amount of Fiji tax applicable on the same income.

Income derived from non-treaty countries is exempt to the extent that it was subject to income tax in such countries.

C. Determination of trading income

General. Income is defined as the aggregate of all sources of income, including annual net profit from a trade, commercial, financial or other business.

Expenses are deductible to the extent incurred in producing taxable income. Expenditures of a personal or capital nature are generally not deductible. Deductions are allowable for certain expenditures incurred in the agricultural and mining industries. Experimentation and research and development expenses incurred in projects connected with the taxpayer's business are deductible.

Inventories. Fiji does not have any specific measures for stock valuation for the purposes of year-end income determination. Valuations are generally made at cost or market value on a first-in, first-out (FIFO) or actual basis. The tax authorities have discretion to make adjustments if inventories are sold or otherwise disposed of at below market value.

Provisions. Provisions are not deductible until payments are made or, in the case of doubtful trading debts, until the debts are considered totally irrecoverable and have been written off.

Tax depreciation. The following are some of the annual depreciation rates prescribed by law for 2016 and future years.

Asset	Rate	
	Straight line (%)	Diminishing value (%)
Commercial and industrial buildings	1.25 to 7	—
Office equipment	12.5	20
Heavy commercial motor vehicles	25	40
Passenger motor vehicles	20	30
Plant and machinery	12.5	20

Tax depreciation is subject to recapture on the sale of an asset, to the extent the sales proceeds exceed the tax value after depreciation. The amount recaptured may be set off against the cost of a replacement asset; otherwise, it is taxed as ordinary income in the year of sale. In addition, a capital gain on the sale of a capital asset is subject to capital gains tax.

Relief for losses. Losses may be carried forward for four years. Losses incurred as a result of claiming the standard allowance are available for carryforward for a period of eight years. The standard allowance is one of the hotel incentives. It allows a hotel owner a 25% deduction with respect to capital expenditure on construction, renovation or refurbishment of a hotel. Losses are not available for carryforward if the taxpayer's business in the year in which relief is claimed is substantially different from its business in the year in which the loss was incurred.

Groups of companies. No group relief measures exist.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax; imposed on virtually all goods and services and residential rent, if annual gross turnover exceeds FJD100,000; financial services (except insurance services) and gambling are exempt	9
Service turnover tax	10
Environmental levy; imposed on prescribed services subject to the service turnover tax	6
Fringe benefit tax	20
Social security contributions to the national provident fund, paid by	
Employer	10
Employee (maximum rate)	8

E. Miscellaneous matters

Foreign-exchange controls. Most remittances abroad require approval from the Reserve Bank of Fiji. Depending on the level of the country's foreign-exchange reserve, further restrictions may be imposed on the nature, timing and amount of remittances that can be made.

Debt-to-equity ratios. An entity may have offshore borrowings up to FJD5 million per year without the prior approval of the Reserve Bank of Fiji. Foreign-owned companies may borrow locally any amount if a total debt-to-equity ratio of 3:1 is maintained. The total debt consists of local and offshore borrowings. Equity includes paid-up capital, shareholders' non-interest-bearing loans, retained earnings and subordinated interest-bearing loans.

Anti-avoidance legislation. Contracts, agreements or arrangements entered into that have the effect of altering the incidence of any tax may be rendered void by the tax authorities. However, the act does not allow for restructuring.

F. Treaty withholding tax rates

	Dividends %	Interest %	Royalties %
Australia	20	10	15
India	5	10	10
Japan	15	10	15
Korea (South)	10/15 (a)	10	10
Malaysia	15	15	15
New Zealand	15	10	15
Papua New Guinea	17	10	15
Singapore	5/15 (b)	10	10
United Arab Emirates	0	0	10
United Kingdom	15	10	15
Non-treaty countries	9 (c)	10	15

(a) The 10% rate applies if the recipient of the dividends is a company holding at least 25% of the capital of the payer. The 15% rate applies to other dividends.

(b) The 5% rate applies if the recipient of the dividends is a company holding at least 10% of the company paying the dividends. The 15% applies to other dividends.

(c) See Section A.

Branch Tax Rate (%)	20
Withholding Tax (%) (b)	
Dividends	0/15/20 (c)
Interest	0/20 (d)
Royalties	20 (e)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	10 (f)

(a) See Section B.

(b) The withholding taxes apply only to payments to nonresidents. The rates may be reduced by tax treaties.

(c) No withholding tax is imposed on dividends paid to a parent company resident in another European Union (EU) country if the recipient of the dividends satisfies the following conditions:

- It holds directly at least 10% of the capital of the payer.
- The recipient of the dividend is a company qualifying under Article 2 of the EU Parent-Subsidiary Directive.

Companies resident in EU or European Economic Area (EEA) member states are generally eligible for the tax exemption for dividends under the same conditions as comparable Finnish companies if the Finnish withholding taxes cannot be credited in the company's state of residence and if sufficient exchange of information may take place between Finland and the state of residence of the recipient. Dividends paid to a company resident in an EU/EEA member state are subject to withholding tax at a rate of 15% if the shares constitute investment assets of the recipient company and the recipient owns less than 10% of the Finnish company.

(d) Interest paid to nonresidents is generally exempt from tax unless the loan may be deemed comparable to an equity investment. In general, interest paid to resident individuals is subject to a final withholding tax of 30% if it is paid on bonds, debentures and bank deposits.

(e) No withholding tax is imposed on royalties paid to nonresidents if all of the following conditions are satisfied:

- The beneficial owner of the royalties is a company resident in another EU country or a permanent establishment located in another EU country of a company resident in an EU country.
- The recipient is subject to income tax in its home country.
- The company paying the royalties, or the company whose permanent establishment is deemed to be the payer, is an associated company of the company receiving the royalties, or of the company whose permanent establishment is deemed to be the recipient.

A company is an associated company of another company if any of the following apply:

- The first company has a direct minimum holding of 25% in the capital of the second company.
- The second company has a direct minimum holding of 25% in the capital of the first company.
- A third company has a direct minimum holding of 25% in both the capital of the first company and the capital of the second company.

Royalties paid to resident individuals are normally subject to salary withholding.

(f) See Section C.

B. Taxes on corporate income and gains

Corporate income tax. Companies resident in Finland are taxed on their worldwide income. Nonresident companies are taxed only on their Finnish-source income. Resident companies are generally those incorporated in Finland.

Rate of corporate income tax. The corporate income tax rate is 20%.

Capital gains. Gains derived by companies from the disposal of business assets are treated as ordinary business income. Gains derived from the disposal of machinery and equipment are deducted from the remaining book value of similar assets, reducing the depreciable basis of the remaining assets. Gains derived from the disposal of buildings are calculated separately for each building by deducting the remaining acquisition cost from the sales price.

Gains derived by corporate entities, other than companies engaged in private equity investment activities, from the sale of shares are exempt from tax if all of the following conditions are satisfied:

- The shares are part of the seller's fixed assets.
- The seller has owned at least 10% of the shares in the company, including the shares sold, for an uninterrupted period of at least one year.
- The shares sold are shares in either a Finnish company, a company as defined in Article 2 of the EU Parent-Subsidiary Directive or a company resident in a country with which Finland has entered into a tax treaty that applies to dividends distributed by the company whose shares are sold.
- The shares are not shares in a real estate company.

Even if the above conditions are satisfied, a sale of shares under certain circumstances may result in the generation of taxable income. If the acquisition cost of the shares has at any time been depreciated on the grounds that the fair market value of the shares has declined or if a reserve has been deducted, this part of the consideration received (that is, the deducted depreciation or reserve) is taxable income. The same principle applies if the shares have at any time been the subject of a transaction between related companies and if this transaction resulted in a tax-deductible loss. Under these circumstances, the consideration received for the shares is taxable up to the amount of the earlier tax-deductible loss.

A loss incurred on the sale of shares is not tax-deductible if a gain on the sale of such shares would have been exempt from tax. If the above-mentioned requirements of tax exemption are not fulfilled, a loss from sale of shares that are part of seller's fixed assets is deductible from profit resulting from sale of such shares during the five years following the loss-making year.

The participation exemption rules concerning capital gains, which are described above, do not apply to shares owned by capital investors. For capital investors, capital gains derived from the sale of shares are taxable income and capital losses incurred on shares are tax-deductible.

Administration. Companies must file the corporate income tax return within four months after the end of their accounting period. Nonresident companies carrying out business activities in Finland without triggering a permanent establishment should also file an activity report, based on the tax authorities' guidance.

Corporate income tax is prepaid in 12 monthly installments during the accounting period. After the tax return is filed and processed by the tax authorities, a final settlement or refund is made. The tax assessment is completed within 10 months after the end of the accounting period. If the taxes assessed exceed the total of the prepaid installments, interest at a rate of 2% (for 2017) is

added to the final assessment. If the prepaid taxes exceed the final assessment, a refund with interest at a rate of 0.5% (for 2017) is paid. Supplementary tax prepayments may also be made before the assessment.

The tax authorities have the right to carry out tax audits within five years from the end of the assessment year. For assessments concluded in 2017 or later, the statute of limitations is generally reduced to three years. However, the statute is six years in certain specific situations (for example, transfer-pricing matters or intra-group financing or restructuring). Under extraordinary circumstances, these time limits may be extended by a year. A company's 2015 fiscal year is open for adjustment until the end of December 2021; however, its 2016 fiscal year should only be open for adjustment until the end of December 2020.

All major corporations can expect a tax audit, usually every fifth year to seventh year.

As a result of an audit, a penalty of up to 30% of the adjusted amount of taxable income may be imposed on a corporation. A penalty charge can be added even though the adjustment does not result in additional income taxes (a change in the taxable income amount is sufficient). Also, interest is charged on the additional tax (but not on the penalties) at a specified rate (7.5% for 2015 and 2016). Neither the penalty nor the interest is deductible when calculating taxable income.

Dividends. Under the current rules, a dividend distribution by a Finnish company cannot result in liability for the distributing company to pay additional income taxes on the basis of the distribution alone. This applies to dividends distributed to both Finnish residents and nonresidents.

A dividend received by a Finnish corporate entity from a company resident in Finland or from a "company," as defined in Article 2 of the EU Parent-Subsidiary Directive, is usually exempt from tax. The exemption also applies to dividends received from any other company resident in another EU/EEA country if the company paying the dividends is liable to pay income tax of at least 10%. If a Finnish corporate entity receives a dividend from a company resident in a non-EU/EEA country, the dividend is usually fully (100%) taxable.

The dividend is also fully taxable if the company paying the dividend can deduct the dividend in its tax calculation.

By exception, a dividend received by an unlisted Finnish corporate entity from a listed company is fully (100%) taxable, unless the listed company is resident in Finland or in an EU/EEA country and the recipient owns at least 10% of the shares in the distributing company.

Distribution of funds from invested unrestricted equity capital. The return of invested unrestricted equity to shareholders in listed companies is taxed as dividend income, effective from 1 January 2014. The return of the invested unrestricted equity from an unlisted company continues to be treated as a repayment of capital if the recipient can show that the recipient has made an investment to the company and that the invested capital is returned within

10 years from the time the investment was made. The new provisions apply to unlisted companies, effective from 1 January 2016, if the investment was made before 1 January 2014.

Foreign tax relief. If no tax treaty is in force, domestic law provides relief for foreign tax paid. The credit is granted if the recipient Finnish corporation pays corporate income tax on qualifying foreign-source income in the same year. If the Finnish company does not have any corporate income tax liability that year, no credit is granted. Foreign tax credits may be carried forward five years under certain conditions. Foreign tax credits may not be carried back.

Under tax treaties, foreign tax is most frequently relieved by exemption or a tax credit. With developing countries, tax sparing may also be granted.

C. Determination of trading income

General. Taxable income is very closely tied to the income in the statutory accounts. Most of the deductions must be booked in the statutory accounts to be valid for tax purposes. As stated in the tax law, the definitions of both income and expenses are general and broad and include all expenses that are incurred to maintain or create new taxable income.

In general, expenses are deductible if they are incurred for the purpose of acquiring or maintaining taxable income. For the 2014 financial year, entertainment expenses are fully nondeductible for corporate income tax purposes. However, effective from 1 January 2015, 50% of entertainment expenses is deductible for tax purposes. Expenses incurred to obtain tax-free income, as well as income taxes and penalties, are not deductible.

Inventories. Inventories are valued at the lowest of cost, replacement cost or market value on a first-in, first-out (FIFO) basis. Companies may allocate fixed manufacturing overhead to the cost of inventory for accounting and tax purposes if certain conditions are met. Obsolete inventories should be provided for or discarded.

Provisions. In general, the possibility of establishing provisions or reserves for tax purposes is relatively limited. Deductions of warranty reserves and provisions for doubtful debts are limited to the amount of actual expected costs. These provisions are available for certain types of taxpayers under certain conditions.

A corporation may create a replacement reserve if it derives a capital gain on the disposal of its business premises or if it receives insurance compensation for a fixed asset because of a fire or other accident. The replacement reserve must be used to buy new depreciable assets during the next two years. This time limit can be extended on application.

If created from the profit on the sale of a previous office, a replacement reserve can only be used to buy a building or shares that entitle the holder to the use of office space and to the maintenance of that space.

Inventory and operating reserves are no longer allowed.

Tax depreciation. The Business Tax Act provides detailed rules for the depreciation of different types of assets. The depreciable base is the acquisition cost, which includes related levies, taxes and installation costs. The depreciation expense for tax purposes is not permitted to exceed the cumulative depreciation expense reported in the annual financial statements in the current year or in previous years. Plant machinery, equipment and buildings are generally depreciated by using the declining-balance method.

Machinery and equipment are combined into a pool for depreciation purposes. Companies may vary the annual depreciation in this pool from 0% to 25%. All machinery and equipment with a life of more than three years are classified as depreciable assets. The depreciable basis is decreased by proceeds from sales of assets in the pool. If the sales price exceeds the depreciable basis, the excess is added to taxable income. If it can be proven that the remaining balance of all machinery and equipment is higher than the fair market value as a result of injury, damage or a similar circumstance, additional depreciation may be claimed for the balance of the machinery.

Equipment with a short life (up to three years), such as tools, is usually expensed. Equipment with an acquisition price of less than EUR850 may also be expensed, with a maximum deduction of EUR2,500 per year.

The maximum depreciation rates for buildings vary from 4% to 20%. The depreciation percentage depends on the use of the building. The depreciation rate for factories, warehouses, shops and similar buildings is 7%.

Intangible assets, such as patents and goodwill, are depreciated using the straight-line method over 10 years, unless the taxpayer demonstrates that the asset's useful life is less than 10 years.

The Finnish government has decided to temporarily double the depreciation rights relating to certain investments used in productive activities for the 2013 through 2016 tax years. This measure allows accelerated depreciation for buildings, machines and devices that are brought into use during the period of 2013 through 2016.

Relief for losses. Losses may be carried forward for 10 years. However, a direct or indirect change in the ownership of the company involving more than 50% of the shares results in the forfeiture of the right to set off losses against profits in future years. An indirect change occurs if more than 50% of the shares in the parent company owning at least 20% of the shares of the loss-making company are transferred and accordingly all of the shares owned by the parent company in the loss-making company are deemed to have changed ownership. An application may be made to the tax office for a special permit for reinstating the right to use the tax losses. The tax office has extensive discretion as to whether to grant the permit.

Losses may not be carried back.

Groups of companies. Corporations are taxed individually in Finland. No consolidated tax returns are applicable. A kind of group taxation is, however, introduced by allowing group contributions

for limited liability companies. Group contributions are tax-deductible for the payer and included in the income of the recipient. By transfers of these contributions, income can be effectively allocated among group companies in Finland. To qualify, both companies must be resident in Finland, and at least 90% ownership, direct or indirect, must exist from the beginning of the tax year. Both companies must carry out business activities and be taxed under the Business Tax Act. Also, they must have the same accounting period. The taxpayer cannot create a tax loss by making group contributions.

If the local tax authorities allow tax losses to be deducted regardless of a change in ownership, these losses may generally not be covered by group contributions. However, on application, the local tax authorities may allow such tax losses to be covered by group contributions only in special circumstances.

If a corporate entity or a group of corporate entities owns at least 10% of the share capital of another company, the losses of any receivables from the other company (other than sales receivables) are not tax-deductible. With the exception of the group contributions described above, the same rule applies to all other financial assistance granted to the other company without compensation that is intended to improve the other company's financial situation.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on the sale, rental, importation or repair of goods, and on services unless specifically exempt; exempt services include financial services and insurance services	24
Transfer tax on the purchase of real estate located in Finland; calculated as a percentage of the purchase price	4
Transfer tax on the purchase of shares relating to real estate; calculated as a percentage of the purchase price or other consideration	2
Transfer tax on the purchase of shares in Finnish companies; calculated as percentage of the purchase price or other consideration	1.6
Social security taxes, paid by the employer as a percentage of salaries	
Health insurance premium (2017 rate)	1.08
Employment pension premium; average rate (2017)	17.95
Group life, accident and unemployment insurance premium, on total salaries paid by the employer (average rates for 2017)	
Up to EUR2,059,500	0.8
Amount in excess of EUR2,059,50	3.3

E. Miscellaneous matters

Foreign-exchange controls. No restrictions are imposed on the repatriation of earnings, interest and royalties abroad. The commercial bank involved in the transfer must notify only the Bank of Finland for statistical purposes.

Transfer pricing. Related-party transactions are accepted if they are carried out at arm's length. Corporate income can be adjusted if the transactions are not as they would have been between independent parties.

Under Finnish transfer-pricing rules, group companies must prepare transfer-pricing documentation if specific circumstances exist. The aim of the documentation is to prove the arm's-length nature of the prices used in cross-border intercompany transactions. On request of the tax authorities, the transfer-pricing documentation for a specified fiscal year must be submitted within 60 days, but not earlier than 6 months after the end of the financial year. Additional clarifications concerning the documentation must be submitted within 90 days of a request by the tax authorities.

A tax penalty of up to EUR25,000 can be imposed for a failure to comply with the transfer-pricing documentation requirements, even if the pricing of the transactions was at arm's length. The adjustment of taxable income may also result in a separate tax penalty of up to 30% of the adjusted amount of income as well as penalty interest.

Debt-to-equity rules. Direct investments are generally made with a combination of equity and foreign or domestic loans. Finland does not have any specific thin-capitalization legislation. The law does not provide a specific debt-to-equity ratio, and a very limited amount of case law exists. Interest determined on an arm's-length basis is normally fully deductible. If interest is paid to non-tax treaty countries or if a tax treaty does not contain a specific non-discrimination clause concerning interest, the deductibility of the interest might be challenged on grounds related to thin capitalization. To ensure deductibility, an advance ruling procedure is available.

Restrictions on the tax deductibility of interest expenses entered into force on January 2013 and were applied for the first time with respect to taxation for the 2014 tax year. They do not apply to financial, insurance and pension institutions or to mutual real estate and housing companies. In addition, the restrictions do not apply if the taxpayer establishes that the ratio of its book equity to total assets in the financial statements is equal to or higher than the corresponding ratio in the consolidated financial statements of its ultimate parent company.

Under the new provisions, interest expenses are fully deductible against interest income. Any interest expenses exceeding interest income (that is, net interest expenses) may be fully deducted if the total amount of net interest expenses does not exceed EUR500,000 during the fiscal year.

If the EUR500,000 threshold is exceeded, net interest expenses may be deducted only to the extent that they do not exceed 25% of the taxable business profit (calculated under Section 3 of the Finnish Business Income Tax Act) after adding back the following:

- Interest expenses
- Tax depreciation
- Group contributions received (group contributions paid are subtracted)

The maximum amount of nondeductible net interest expenses corresponds to the amount of net interest expenses incurred between related parties.

The nondeductible amount of interest expenses may be deducted during subsequent years within the respective limitations for each tax year.

Controlled foreign companies. Under Finland's controlled foreign company (CFC) legislation, a Finnish shareholder is subject to tax on its respective share of the CFC's income if the taxpayer, alone or together with certain related parties, directly or indirectly owns at least 25% of the CFC's share capital or is entitled to at least 25% of the return on capital of the company.

A company is considered to be "controlled" if one or more Finnish tax residents directly or indirectly own at least 50% of the share capital or voting power of the company or if one or more Finnish tax residents is entitled to at least 50% of the return on capital of the company.

A foreign permanent establishment (PE) of a foreign corporation is categorized as a CFC under the same conditions as subsidiaries if the foreign PE is located in a different state than the foreign corporation and if the income of the foreign PE is not taxed in the residence state of the foreign corporation. A transitional period applied until 1 January 2015 to PEs that already existed before 31 December 2007.

To determine whether a company is a CFC, the steps described below must be followed.

It first must be determined whether the company is controlled by Finnish residents. If not, the CFC rules do not apply. Under the act, a company is controlled by Finnish residents if residents of Finland for tax purposes own more than 50% of the share capital or the voting shares of the company, or if certain other circumstances exist.

If the company is controlled by Finnish residents, the income of the company must be analyzed. The CFC rules do not apply to income derived from following activities if the activities are carried out in the state of residence of the company:

- Industrial production or similar production activity
- Shipping
- Sales or marketing activity regarding the first two categories of activities
- A company deriving its income as payments from group companies that are carrying on any of the activities mentioned above and that are resident in the same country as the company itself

If the company is not excluded from the CFC rules based on the nature of its income, it must be determined if the company is resident for tax purposes in a tax treaty country.

For a company not resident for tax purposes in a tax treaty country, it must be determined if the effective tax rate (the effective tax rate is computed by determining the tax on taxable income calculated according to Finnish tax rules) of the company is at least 3/5 of the Finnish corporate tax rate of 20% (that is, 12%). If it is

determined that the effective tax rate is below 12%, the CFC rules apply to the company.

For a company resident in a tax treaty country for tax purposes, if the effective tax rate is below 12%, the theoretical tax rate in the treaty country (corporate income tax rate according to the tax law of the country) must be determined. If the theoretical tax rate is at least 75% of the 20% corporate tax rate in Finland (that is, 15%), it must be determined whether the company has taken advantage of any special tax reliefs.

Special tax reliefs are reliefs that are not available to all companies in the company's country of residence. These reliefs include reliefs for foreign companies and reliefs for all companies based on location. If the company in a tax treaty country has not taken advantage of special tax reliefs and if the overall tax rate in its home country is at least 15%, the CFC rules do not apply. Such company is not subject to the CFC rules even if the effective tax rate for the company is less than 12%.

If the company has taken advantage of special tax reliefs, it must be determined whether the effective tax rate for the company is at least 12%. If yes, the CFC rules do not apply. However, the CFC rules do not apply to a company that has taken advantage of special tax reliefs if it is established in the following states:

- An EU or EEA member state, provided that the company is genuinely established in its state of residence and is carrying on genuine economic activities in this state (substance requirement).
- A tax treaty state with sufficient information exchange, excluding countries mentioned in the black list, provided that the company satisfies the substance requirement mentioned above. The black list is a tentative list of tax treaty countries that are considered to have substantially lower corporate income tax rates than Finland. The list includes Barbados, Bosnia and Herzegovina, Georgia, Kazakhstan, Macedonia, Malaysia, Moldova, Montenegro, Serbia, Singapore, Switzerland, Tajikistan, the United Arab Emirates, Uruguay and Uzbekistan.

Anti-avoidance legislation. Under a general anti-avoidance provision in the law, the tax authorities may look through certain transactions.

F. Treaty withholding tax rates

The rates in the table below reflect the current double tax treaty rates. As a result of domestic legislation, lower rates may apply. Certain other exceptions may also apply. Please consult your local tax specialist for more information.

- (a) The lower rate applies if the recipient is a corporation owning at least 20% of the payer.
- (b) The lower rate applies if the recipient is a corporation owning at least 25% of the payer.
- (c) The rate is 0% for royalties received for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films or tapes for television or radio broadcasting.
- (d) The lower rate applies if the recipient is a corporation owning at least 15% of the payer.
- (e) Copyright royalties for the production or reproduction of any literary, dramatic, musical or artistic work (other than motion picture films) are exempt from tax.
- (f) The lower rate applies if the recipient is a company owning at least 10% of the voting power of the payer.
- (g) The rate is 10% for royalties for copyrights of literary, artistic or scientific works, including films and tapes; otherwise, the rate is 15%.
- (h) The 5% rate applies if the recipient is a corporation owning at least 25% and more than EUR200,000 of the capital of the payer.
- (i) Interest on certain loans is exempt from withholding.
- (j) The rate is 0% for royalties received for the use of or the right to use any copyright of literary, artistic or scientific work, excluding cinematographic films or films and tapes for television or radio broadcasting.
- (k) The 10% rate applies if the recipient has owned at least 25% of the voting rights of the payer for at least six months before the end of the payer's fiscal year. The 15% rate applies to other dividends.
- (l) The lower rate applies to royalties paid for the use of computer software and for equipment leasing.
- (m) The rate is 15% for royalties paid by an enterprise registered with and engaged in preferred areas of activities, for royalties for cinematographic films or tapes for television or broadcasting, and for royalties for the use of, or the right to use, any copyright of literary, artistic or scientific work.
- (n) The 0% rate applies if the recipient is a corporation owning at least 5% of the payer.
- (o) The 20% rate applies if the recipient of the dividends is a corporation that owns at least 25% of the payer. The 15% rate applies to dividends paid by industrial enterprises to recipients described in the preceding sentence. Otherwise, the domestic rates of 20% or 30% apply.
- (p) The lower rate applies if the recipient is a financial institution.
- (q) A lower tax rate applies in certain cases. Please consult the tax treaty.
- (r) The 0% rate applies if the receiving company owns at least 80% of the voting power of the paying company for at least 12 months and qualifies under certain provisions of the limitation-on-benefits article of the treaty.
- (s) The 5% rate applies if, at the time the dividend is payable, the recipient of the dividends owns at least 30% of the share capital of the payer and has invested in the payer foreign capital in excess of USD100,000. The 12% rate applies to other dividends.

- (t) The 0% rate applies to royalties paid for copyrights of literary, artistic or scientific works. The 5% rate applies to royalties paid for the use of cinematographic films and tapes and films for television or radio broadcasting. The 15% rate applies to royalties paid for the use of, or the right to use, patents, trademarks, designs or models, plans, secret formulas or processes, or industrial, commercial or scientific equipment, or for information concerning industrial, commercial or scientific experience.
- (u) The 0% rate applies if the recipient of the dividends owns at least 10% of the voting rights of the payer. The 15% rate applies to other dividends.
- (v) Finland is honoring the Yugoslavia treaty with respect to Bosnia and Herzegovina, Croatia, Kosovo, Montenegro and Serbia.
- (w) Under Finnish domestic law, interest paid to nonresidents is generally exempt from tax.
- (x) The 5% rate applies to royalties paid for the use of industrial, commercial or scientific equipment. The 10% rate applies to other royalties.
- (y) The 0% rate applies if, at the time the dividend is payable, the recipient of the dividends owns at least 50% of the share capital of the payer and has invested in the payer foreign capital of EUR2 million or more. The 5% rate applies if the recipient of the dividends owns at least 10% of the share capital of the payer and has invested in the payer foreign capital in excess of EUR100,000. The 10% rate applies to other dividends.
- (z) The rate is 10% for royalties received for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films or tapes for television or radio broadcasting. For other royalties, the rate is 5%.
- (aa) No withholding tax is imposed on dividends paid to a parent company resident in another EU country if the recipient of the dividends satisfies the following conditions:
- It holds directly at least 10% of the capital of the payer.
 - The recipient of the dividend is a company in a form mentioned in the EU Parent-Subsidiary Directive.
- Companies resident in EU or EEA states are generally eligible for the tax exemption for dividends under the same conditions as comparable Finnish companies if the Finnish withholding taxes cannot be credited in the company's state of residence.
- (bb) The 5% rate applies if the recipient is a corporation owning at least 70% of the share capital of the payer. The 10% rate applies if the recipient is a corporation owning at least 25%, but less than 70%, of the share capital of the payer. The 15% rate applies to other dividends.
- (cc) No withholding tax is imposed on royalties paid to nonresidents if all of the following conditions are satisfied:
- The beneficial owner of the royalties is a company resident in another EU country or a permanent establishment located in another EU country of a company resident in an EU country.
 - The recipient is subject to income tax in its home country.
 - The company paying the royalties, or the company whose permanent establishment is deemed to be the payer, is an associated company of the company receiving the royalties, or of the company whose permanent establishment is deemed to be the recipient.
- A company is an associated company of another company if any of the following apply:
- The first company has a direct minimum holding of 25% in the capital of the second company.
 - The second company has a direct minimum holding of 25% in the capital of the first company.
 - A third company has a direct minimum holding of 25% in both the capital of the first company and the capital of the second company.
- (dd) The 0% rate applies to royalties for software programs, patents, models or drawings. The 5% rate applies to other industrial royalties. The 10% rate applies to royalties for literary, artistic or scientific works, including cinematographic films or tapes for television or radio broadcasting.
- (ee) The lower rate applies if the recipient is a corporation owning at least 10% of the payer.
- (ff) A lower rate applies in certain circumstances. Please consult the tax treaty.
- (gg) The 3% rate applies to royalties paid to a news agency. The 5% rate applies to artistic royalties. The 10% rate applies to industrial royalties. The 15% rate applies to other royalties.
- (hh) The 0% rate applies to royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films or tapes for television or radio broadcasting. The 1% rate applies to amounts paid under financial leases of equipment. The 5% rate applies to amounts paid under operating leases of equipment and computer software. The 10% rate applies to other royalties.

- (ii) The 12% rate applies if the recipient of the dividends is a corporation owning at least 25% of the payer. The 15% rate applies if the recipient of the dividends is a corporation owning less than 25% of the payer. The 20% rate applies to other dividends.
- (jj) The 0% rate applies in certain circumstances. Please consult the tax treaty.
- (kk) The 0% rate applies to royalties paid for the use of, or right to use, computer software, patents, designs, models or plans. The 5% rate applies to royalties paid for the use of, or the right to use, secret formulas or processes, or for information concerning industrial, commercial or scientific experience (know-how). The 10% rate applies to royalties for the use of, or right to use, trademarks and copyrights of literary, artistic or scientific works, including cinematographic films, and films or tapes for television or radio broadcasting.
- (ll) The 5% rate applies if the recipient is a corporation owning at least 10% of the payer's voting rights. The 0% rate applies if the Australian company has held at least 80% of the Finnish company's voting power for at least 12 months and meets certain other conditions.
- (mm) The lower rate applies to, among other interest payments, interest paid by public bodies.
- (nn) The lower rate applies to, among other interest payments, interest on current accounts and on advance payments between banks.
- (oo) The 5% rate applies to royalties paid for the use of, or the right to use, industrial, commercial or scientific equipment, or software. The 10% rate applies to royalties paid for the following:
- The use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films, and films or tapes for television or radio broadcasting
 - The use of, or the right to use, patents, trademarks, designs or models, plans, secret formulas or processes
 - Information concerning industrial, commercial or scientific experience
- (pp) Copyright royalties are exempt from withholding tax. The 1% rate applies to royalties paid for finance leases of equipment. The 5% rate applies to royalties paid for operating leases of equipment, or for the use of, or the right to use, cinematographic films, films and tapes for television or radio broadcasting, or computer software. The 10% rate applies to royalties paid for the use of, or the right to use, patents, trademarks, designs, plans, formulas or processes, or for information concerning industrial, commercial or scientific experience.
- (qq) A tax treaty is in force between Finland and Brazil. However, the tax-sparing articles of the treaty applied only for the first 10 years since the signing of the treaty. This period ended on 25 December 2007.
- (rr) The lower rate applies if the Italian company holds directly more than 50% of the capital in the Finnish company.
- (ss) The beneficial owner of royalties paid for the use of, or the right to use, industrial, commercial or scientific equipment may elect to be taxed, in the contracting state in which such royalties arise, as if the equipment were effectively connected with a permanent establishment in that state. In such case, the provisions of Article 7 (Business income) of the treaty apply to the income and deductions attributable to such equipment.
- (tt) The 0% rate applies if the interest is paid to the state or a local authority thereof, to the national bank, or to an institution of which the capital is wholly owned by the government.
- (uu) The lower rate applies to loans granted by banks.
- (vv) The 0% rate applies if the interest is paid to the state or national bank. The 5% rate applies to interest on loans to certain public entities promoting export. The 10% rate applies to loans granted by banks.
- (ww) The 15% rate applies if the recipient is a company owning at least 10% of the voting power of the payer. Otherwise, the domestic rates of 20% or 30% apply.
- (xx) The 5% rate applies to interest paid with respect to sales on credit. The 0% rate applies in certain circumstances. Please consult the tax treaty.
- (yy) A new tax treaty has been signed and ratified, but it is not yet in force.
- (zz) A new tax treaty was signed in 2016. The Finnish parliament has ratified the treaty, but the treaty has not yet entered into force.
- (aaa) A new tax treaty has been signed. The Finnish parliament has ratified the treaty, but the treaty has not yet entered into force.

A. At a glance

Corporate Income Tax Rate (%)	33 $\frac{1}{3}$ (a)
Capital Gains Tax Rate (%)	0/15/19/25/33 $\frac{1}{3}$ (a)(b)
Branch Tax Rate (%)	33 $\frac{1}{3}$
Withholding Tax (%)	
Dividends	30/75 (c)(d)(e)
Interest	0/75 (c)(f)(g)
Royalties from Patents, Know-how, etc.	33 $\frac{1}{3}$ /75 (c)(f)(g)
Branch Remittance Tax	30 (h)
Net Operating Losses (Years)	
Carryback	1 (i)
Carryforward	Unlimited (j)

- (a) For resident companies, surtaxes are imposed on the corporate income tax and capital gains tax. For further information, see Section B.
- (b) For details concerning these rates, see Section B.
- (c) These are the withholding tax rates under French domestic law. Tax treaties may reduce or eliminate the withholding taxes.
- (d) Under the European Union (EU) Parent-Subsidiary Directive and Article 119 ter of the French Tax Code, dividends distributed by a French subsidiary to an EU parent company are exempt from withholding tax, if, among other conditions, the recipient holds or commits to hold at least 5% of the subsidiary's shares for at least two years. For details, see Section B.
- (e) The withholding tax rate is 75% for distributed profits paid into uncooperative states.
- (f) No withholding tax is imposed on interest and royalties paid between associated companies of different EU member states if certain conditions are met. For details, see Section B.
- (g) The withholding tax rate is 75% for interest on qualifying borrowings and royalties paid into uncooperative states.
- (h) Branch remittance tax may be reduced or eliminated by double tax treaties. It is not imposed on French branches of companies that are resident in EU member states and are subject to tax in their home countries.
- (i) Losses carried back may not exceed EUR1 million.
- (j) The amount of losses used in a given year may not exceed EUR1 million plus 50% of the taxable profit exceeding this limit for such year.

B. Taxes on corporate income and gains

Corporate tax. The taxation of French companies is based on a territorial principle. As a result, French companies carrying on a trade or business outside France are generally not taxed in France on the related profits and cannot take into account the related losses. However, under the French controlled foreign company (CFC) rules contained in Article 209 B of the French Tax Code, income earned by a French enterprise through a foreign enterprise may be taxed in France if such income is subject to an effective tax rate that is 50% lower than the French effective tax rate on similar income (for further details, see Section E). French companies are companies registered in France, regardless of the nationality of the shareholders and companies that have their place of effective management in France. Foreign companies carrying on an activity in France are subject to French corporate tax on their French-source profits.

Profits derived in France by branches of nonresident companies are deemed to be distributed, normally resulting in the imposition of a branch withholding tax of 30% on after-tax income. This tax is not imposed on the profits of French branches of companies

that are resident in EU member states and that are subject to corporate income tax in their home countries. It may be reduced or eliminated by tax treaties. Although branch withholding tax normally applies to undistributed profits, such profits may be exempted from the tax if an application is filed with the tax authorities and if certain requirements are met.

Rates of corporate tax. The standard corporate tax rate is 33⅓%.

A social security surtax of 3.3% is assessed on the corporate income tax amount. This surtax is imposed on the portion of corporate tax due exceeding EUR763,000 before offsetting the tax credits granted under tax treaties (see *Foreign tax relief*). The 3.3% surtax does not apply to companies whose annual turnover is lower than EUR7,630,000 if at least 75% of the company is owned by individuals or by companies that themselves satisfy these conditions.

Members of consolidated groups must take into account the global turnover of the group to determine whether they reach the EUR7,630,000 threshold mentioned above.

In addition, for fiscal years ending on or after 31 December 2011, a temporary additional surtax was assessed on the corporate income tax amount due from companies with turnover exceeding EUR250 million. Initially set at 5%, the rate of the surtax was increased to 10.7% for fiscal years ending between 31 December 2013 and 30 December 2016. This surtax does not apply for fiscal years ending on or after 31 December 2016.

Taking into account the social security surtax, the marginal effective rate of French corporate income tax is 34.43% (33.33% + 1.1%).

A reduced corporate tax rate of 15% applies to the first EUR38,120 of the profits of small and medium-sized enterprises if certain conditions are met, including the following:

- The turnover of the company is less than EUR7,630,000 (EUR50 million for fiscal years beginning on or after 1 January 2019).
- At least 75% of the company is owned by individuals or by companies that themselves satisfy this condition and the above condition.

The standard corporate tax rate is planned to decrease progressively from 33⅓% to 28% for fiscal years beginning on or after 1 January 2020. For fiscal years beginning on or after 1 January 2017, the 28% rate applies only to Small and Medium enterprises, as defined under EU law, on the first EUR75,000 of taxable income. For fiscal years beginning on or after 1 January 2018, the 28% rate will apply to the first EUR500,000 of taxable income of all entities. For fiscal years beginning on or after 1 January 2019, the 28% rate will apply to the taxable income of all entities with revenues not exceeding EUR1 billion and on the first EUR500,000 of taxable income of entities with revenues exceeding this threshold (the EUR1 billion threshold will be considered with respect to the aggregate revenues of all French tax-consolidated entities, if applicable). For fiscal years beginning on or after 1 January 2020, the 28% rate will apply for all entities, regardless of their revenue and profits.

Capital gains. Capital gains derived from the sale of fixed assets by French companies are subject to corporate income tax at the standard rate.

Capital gains derived from the sale of qualifying participations that have been held for at least two years before their sale are exempt from tax. The following are qualifying participations:

- *Titres de participation* (specific class of shares for accounting purposes that enables the shareholder to have a controlling interest)
- Participations eligible for the dividend participation exemption regime if the shareholder holds at least 5% voting rights

However, for tax years ending on or after 31 December 2012, the corporate income tax applies to 12% of the gross capital gains realized on qualifying participations. As a result, the effective tax rate on such gains is 4% (based on a 33⅓% standard corporate tax rate).

Capital losses incurred with respect to such qualifying participations may no longer be offset against capital gains. Long-term capital losses existing as of the closing date of the tax year preceding the first tax year beginning on or after 1 January 2007 are forfeited.

A reduced 15% tax rate applies to the following:

- Capital gains derived from sales of shares in venture mutual funds (FCPRs) and venture capital investment companies (SCRs), if these shares have been held for a period of at least five years
- Income derived from the licensing of patents or patentable rights
- Capital gains realized on patents or patentable rights held for at least two years, unless the disposal takes place between related companies

Long-term capital losses relating to interests qualifying for the 15% category may only be offset against long-term capital gains corresponding to the same category.

The reduced rates also apply to various distributions made by venture mutual funds (FCPRs) and venture capital investment companies (SCRs).

Capital gains derived from sales of participating interests in companies that are predominantly real estate companies are subject to tax at the standard rate. For listed real estate companies, the rate is reduced to 19%.

Long-term capital gains derived from the first sale of participating interests in companies whose assets' value is mainly composed of television broadcasting rights are subject to tax at a rate of 25%.

Administration. In general, companies must file a tax return within three months following the end of their financial year.

Corporate income tax is prepaid in four installments. Companies that have their financial year ending on 31 December must pay the installments on 15 March, 15 June, 15 September and 15 December. The balance of corporate tax is due by 15 April of the following year. Other companies must pay the balance of corporate tax

due within four months following the end of their financial year. The rules governing the payment of corporate income tax also apply to the payment of the 3.3% surtax.

Companies must file their corporate income tax and VAT returns electronically. If a company does not comply with this requirement, a 0.2% penalty is imposed.

In general, late payment and late filing are subject to a 10% penalty. If additional tax is payable as a result of a reassessment of tax, interest is charged at 0.4% per month (4.8% per year). Many exceptions and specific rules apply to interest and penalties.

Dividends. Dividends paid by French companies no longer carry a tax credit (*avoir fiscal*). However, under the parent-subsidiary regime, dividends received by French companies or French branches of nonresident companies are exempt from corporate income tax, except for a 5% service charge computed on the gross dividend income (net dividend income and foreign tax credits) and added back to the recipient's taxable income. Effective from 1 January 2016, such service charge is reduced to 1% for recipients that are part of a tax-consolidated group with respect to dividends distributed by a French company that is part of the tax-consolidated group or by a European company that could have been part of the tax-consolidated group if resident in France.

The parent-subsidiary regime does not apply to the following:

- Profit distributions that are deductible from the distributing company's taxable income
- Dividends distributed within an arrangement or a series of arrangements, which, having been put into place for the main purpose, or one of the main purposes, of obtaining a tax advantage contrary to the object or purpose of the participation exemption regime, are not genuine having regard to all relevant facts and circumstances (that is, not put into place for valid commercial reasons that reflect economic reality)
- Dividends received from a subsidiary established in an uncooperative country (as defined in Article 238-0 A of the French Tax Code; see Section E), unless the parent company demonstrates that the subsidiary's activities are real and do not aim to locate revenues in an uncooperative country

The parent-subsidiary regime applies if the recipient holds at least 5% of the share capital of the distributing company for at least two years.

In general, a 30% withholding tax is imposed on dividends paid to nonresidents. The withholding tax rate is increased to 75% for distributed profits paid into uncooperative states (see Section E), unless it is demonstrated that these distributions do not aim to locate revenues in an uncooperative state.

This tax may be reduced or eliminated by tax treaties. In addition, under the EU Parent-Subsidiary Directive, dividends distributed by French subsidiaries to EU parent companies are exempt from withholding tax, if, among other conditions, the recipient holds 10% or more of the shares of the subsidiary for at least two years (the 10% threshold is lowered to 5% if the effective beneficiary cannot credit the French withholding tax in its country of residence).

Furthermore, the withholding tax no longer applies to profits derived from stock, interests or assimilated shares distributed to collective investment vehicles (CIVs) created under foreign law and located in an EU member state or in a state that has signed a treaty with France that includes an administrative assistance provision aimed at combating tax fraud. However, to benefit from the withholding tax exemption, foreign CIVs must meet the same definition as French CIVs, and the content and actual implementation of the administrative assistance provisions must effectively allow the French tax authorities to obtain from the foreign tax authorities the information needed to verify this condition. A 15% withholding tax applies to distributions of income exempt from corporate income tax that are made by French real estate investment trusts (so-called SIICs and SPPICAVs) to French or foreign CIVs.

A 3% tax applies to dividends paid or dividends deemed to be distributed by entities (including French branches of foreign companies that are deemed to distribute their yearly profits) to all French or foreign companies that are liable for corporate income tax in France, excluding CIVs. The following are exemptions to this tax:

- Distributions made within French tax-consolidated groups
- Distributions made by French branches of EU or EEA companies
- Distributions paid in stock and other distributions from specific entities

For distributions made on or after 1 January 2017, the exemption for distributions made within a French tax-consolidated group is extended to distributions made to a company if the following conditions are fulfilled:

- The recipient company is subject to the French corporate tax or to a foreign equivalent in an EU member state or in a country that has signed a treaty with France that includes an administrative assistance provision aimed at combating tax fraud.
- The 95% holding requirement for electing French tax group consolidation is met.

This tax is payable by the distributing entities and must be paid together with the first advance payment of corporate income tax following the distribution payment.

Withholding taxes on interest and royalties. Under French domestic law, withholding tax is no longer imposed on interest paid to nonresidents. However, a 75% domestic withholding tax is imposed on interest on qualifying borrowings paid into uncooperative states (see Section E), unless it is demonstrated that the corresponding operations do not aim to locate revenues in the uncooperative states.

A 33⅓% withholding tax is imposed on royalties and certain fees paid to nonresidents.

However, as a result of the implementation of EU Directive 2003/49/EC, withholding tax on interest and qualifying royalties paid between “associated companies” subject to corporate income tax of different EU member states was abolished. A company is an “associated company” of a second company if any of the following conditions is satisfied:

- The first company has maintained a direct minimum holding of 25% in the capital of the second company for at least two years at the time of the payment or commits itself to maintain such holding for a two-year period.
- The second company has maintained a direct minimum holding of 25% in the capital of the first company for at least two years or commits itself to maintain the holding for the two-year period.
- A third company has maintained a direct minimum holding of 25% in the capital of both the first and second companies for at least two years or commits itself to maintain such holding for a two-year period.

In these three situations, if the company chooses to undertake to keep the shares for at least two years, it must appoint a tax representative in France who would retrospectively pay the withholding tax if the shares are sold before the end of the two-year period.

Domestic withholding tax on royalties may be reduced or eliminated by tax treaties.

Foreign tax relief. In general, French domestic law does not allow a foreign tax credit; income subject to foreign tax and not exempt from French tax under the territoriality principle is taxable net of the foreign tax paid. However, most tax treaties provide for a tax credit that generally corresponds to withholding taxes on passive income.

C. Determination of trading income

General. The assessment is based on financial statements prepared according to French generally accepted accounting principles, subject to certain adjustments.

Deductibility of interest. In general, interest payments are fully deductible. However, certain restrictions are imposed.

Interest accrued by a French entity with respect to loans from its direct shareholders may be deducted from the borrower's taxable income only if the following two conditions are satisfied:

- The share capital of the borrower is fully paid-up.
- The interest rate does not exceed the average interest rate on loans with an initial duration of more than two years granted by banks to French companies.

The above restriction also applies to interest paid outside France by international treasury pools established in France.

Under thin-capitalization rules, related-party interest is tax-deductible only if it meets both an arm's-length test and a thin-capitalization test. These tests are applied on a stand-alone basis by each borrowing company. Effective from 1 January 2011, the thin-capitalization rules are extended to interest paid to third parties on the portion of the debt that is guaranteed by a related party, or by a party whose commitment is guaranteed by a related party of the French borrowing entity.

Under the arm's-length test, the interest rate is capped to the higher of the following two rates:

- The average annual interest rate on loans granted by financial institutions that carry a floating rate and have a minimum term of two years

- The interest rate at which the company could have borrowed from any unrelated financial institution, such as a bank, in similar circumstances (that is, the market rate)

The portion of interest that exceeds the higher of the above two thresholds is not tax-deductible and must be added back to the company's taxable income for the relevant financial year.

The thin-capitalization test may limit the deductibility of interest payments even if the amount of the interest expense complies with the arm's-length test described above. Under the thin-capitalization test, the interest paid in excess of the three following thresholds is not tax-deductible:

- The debt-to-equity ratio threshold, which is calculated in accordance with a formula. For the purposes of this formula, A is the amount of interest that meets the arm's-length test, B equals 150% of the net equity of the borrower at either the beginning or the end of the financial year, and C equals the total indebtedness of the French borrowing company resulting from borrowing from related companies. The following is the formula:

$$\frac{A \times B}{C}$$

- The earnings threshold, which equals 25% of the adjusted current income. The adjusted current income is the operating profit before the deduction of tax, related-party interest, depreciation and amortization, and certain specified lease rents.
- The interest income threshold, which equals the amount of interest received by the French company from related companies.

If the interest that is considered to be tax-deductible under the arm's-length test exceeds each of the three above thresholds, the portion of the interest that exceeds the highest of the above thresholds is not tax-deductible unless the excess amount is lower than EUR150,000.

The nondeductible portion of interest is added back to the taxable income of the borrowing entity. However, it can be carried forward for deduction in subsequent financial years. A 5% annual reduction of the interest balance that is carried forward applies beginning with the second subsequent financial year.

The thresholds that limit the deductibility of interest do not apply if the French borrowing company can demonstrate that the consolidated debt-to-equity ratio of its group is higher than the debt-to-equity ratio of the French borrowing company on a stand-alone basis (based on its statutory accounts). In determining the consolidated debt-to-equity ratio of the group, French and non-French affiliated companies and consolidated net equity and consolidated group indebtedness (excluding intercompany debt) must be taken into account.

In the context of a tax-consolidated group, excess interest that is not tax-deductible under the thin-capitalization test cannot be carried forward by the company that has incurred the excess interest (see *Groups of companies*).

The deduction of interest related to the acquisition of qualifying participations is limited for companies that have qualifying participations worth more than EUR1 million if the company does

not demonstrate that it effectively makes the decisions concerning these investments and that it has effective control or influence over the acquired company. The nondeductible portion is computed by applying the ratio of the acquisition price to the debts of the acquiring company. The limitation applies to fiscal years beginning on or after 1 January 2012, and to the eight years following the acquisition. Consequently, it may apply to existing loans. This limitation does not apply if the debt is not connected to the acquisition or if the group debt-to-equity ratio is higher than the ratio of the French borrowing company.

In addition, the 2013 Finance Bill introduced a general interest deduction cap based on the amount of the net financial expenses incurred during a fiscal year (that is, the financial expenses reduced by financial income). As of 1 January 2014, only 75% (previously 85% for the 2012 and 2013 fiscal years) of the net financial expenses incurred in the 2014 fiscal year and future years is deductible. For purposes of this rule, financial expenses (or income) are any amounts that are accrued in remuneration for monies put at the disposal of the company (or by the company to another party). For a tax-consolidated group, the interest cap applies to the net financial expenses of the tax group (excluding intercompany transactions). This provision applies to all entities subject to corporate income tax in France, including permanent establishments of foreign companies. However, it does not apply if the net financial expenses incurred by the company or by the tax group during a fiscal year are below EUR3 million.

The 2014 Finance Bill introduced a new anti-hybrid financing measure limiting the deductibility of interest accrued to related-party lenders. Under this measure, the tax deduction is disallowed if the French taxpayer cannot prove, at the request of the French tax authorities, that the related lender is liable to corporate income tax on such interest that is at least 25% of the corporate income tax that would have been due had the lender been established in France. Consequently, interest received by the related entity must be subject to tax at a rate of at least 8.33% (based on a 33 $\frac{1}{3}$ % standard corporate tax rate; potentially higher if the borrower is subject to additional and/or exceptional taxes with respect to corporate income tax). In case the lender is domiciled or established outside France, the French corporate income tax is determined as if the lender were established or domiciled in France. If the lender is a transparent entity, such as a partnership or an investment fund, the limitation of interest deduction only applies to the extent that such entity and its relevant members are affiliated, and the minimum corporate income tax rate of 25% is considered at the level of the entity's members or shareholders. These new rules apply to fiscal years ending on or after 25 September 2013.

Inventories. Inventory is normally valued at the lower of cost or market value. Cost must be determined under a weighted average cost price method. A first-in, first-out (FIFO) basis is also generally acceptable, but a last-in, first-out (LIFO) basis is not permitted.

Reserves. In determining accounting profit, companies must book certain reserves, such as reserves for a decrease in the value of assets, risk of loss or expenses. These reserves are normally deductible for tax purposes. In addition, the law provides for the deduction of special reserves.

Capital allowances. In general, assets are depreciated using the straight-line method. However, new qualifying industrial assets are generally depreciated using the declining-balance method.

Depreciable assets composed of various parts with different characteristics must be depreciated on a separate basis (these assets must be split into a principal component or structure on the one hand and into additional components on the other hand). The depreciable amount of each asset must be spread out over its likely useful life for the company, which corresponds to the time period during which the company may expect to derive a profit from it. The depreciation method applied to each asset (straight-line method or accelerated method) must also be consistent with the pace at which the company expects to derive a profit from the asset.

Periodic assessment of the residual value of each component must be conducted to establish a (non-tax deductible) provision for impairment if needed.

For tax purposes, the depreciation of assets that have not been split into components and the depreciation of the principal component or structure of assets that have been split into components can be spread out over the useful life commonly accepted in business practices. This rule does not apply to buildings acquired by real estate investment companies. The following are some of the acceptable straight-line rates.

Asset	Rate (%)
Commercial buildings	2 to 5
Industrial buildings	5
Office equipment	10 to 20
Motor vehicles	20 to 25
Plant and machinery	5 to 10*

* These are the general rates. Alternatively, new plant and machinery may be depreciated using the declining-balance method at rates generally ranging from 12.5% to 50%.

Certain specified assets may be depreciated using accelerated depreciation methods. Land and works of art are not depreciable. Intangible assets are depreciable if the company can anticipate that the profits derived from the assets will end at a fixed date. In general, goodwill is not depreciable.

Companies may elect to take an additional deduction from their taxable income, equal to 40% of the cost of acquiring or manufacturing eligible equipment or rent paid under a financial lease during the period of 15 April 2015 through 14 April 2017, if such amounts are allocated to their own activities (Article 39 decies of the French Tax Code).

Relief for tax losses. Losses incurred for financial years ending after 31 December 2003 may be carried forward indefinitely. However, for fiscal years closed on or after 31 December 2012, the amount of losses used in a given year may not exceed EUR1 million plus 50% of the taxable profit above that amount for such fiscal year.

In addition, enterprises subject to corporate tax may carry back losses against undistributed profits from the prior fiscal year. The

carryback results in a credit equal to the loss multiplied by the current corporate tax rate, but losses carried back may not exceed EUR1 million. The credit may be used to reduce corporate income tax payable during the following five years with the balance being refunded at the end of the fifth year. A significant change in the company's activity, particularly an addition or a termination of a business that infers a decrease of 50% or more of either the revenue or the average headcount and fixed assets, may jeopardize the loss carryover and carryback.

Groups of companies. Related companies subject to corporate tax may elect to form a tax-consolidated group. Under the tax-consolidation regime, the parent company files a consolidated return, thereby allowing the offset of losses of one group entity against the profits of related companies. The parent company then pays tax based on the net taxable income of companies included in the consolidated group, after certain adjustments for intra-group provisions are made, in particular, the following:

- Intra-group asset or share transfers, as well as any subsequent depreciation related to these transfers, are neutralized.
- Intra-group dividends not subject to the parent-subsidiary regime are neutralized.
- Intra-group provisions for bad and doubtful debts are neutralized.
- Waivers of debts and subsidies between members of the group are neutralized.
- Interest not deductible at the level of a member company in application of the thin-capitalization rules (see *Deductibility of interest*) becomes, with certain conditions and limitations, deductible at the level of the consolidated income.

If a company is acquired from a shareholder controlling the group and becomes a member of the tax-consolidated group, the amendment Charasse provides that an amount of the financing expenses of the group must be added back to the consolidated income within a nine-year period starting with the purchasing year. This amount is calculated as follows:

$$\text{Group financing expenses} \times \frac{\text{Acquisition price of the shares}}{\text{Average amount of the group's debt}}$$

The group includes the French subsidiaries in which the parent has a direct or indirect shareholding of at least 95% and for which the parent company has elected tax consolidation.

The Second Amended Finance Bill for 2014 implemented “horizontal tax consolidation” into French law, allowing a French company or permanent establishment to form a French tax consolidated group with other French companies or permanent establishments if all are owned at 95% or more by a foreign parent company or permanent establishment that is subject to a tax equivalent to French corporate income tax in another EU country or European Economic Area (EEA) country. The 95% ownership test can be met directly, or indirectly, through intermediate companies or permanent establishments that are all subject to tax in an EU/EEA country or through other French consolidated companies. This new regime applies to fiscal years closed on or after 31 December 2014.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax	2.1/5.5/10/20
Territorial Economic Contribution; replaced the Business Activity Tax (Taxe professionnelle); capped to a certain amount of the value added by the company; maximum rate	3
Social security contributions, on gross salary (approximate percentages); paid by Employer	35 to 45
Employee	18 to 23
General social security tax (<i>contribution sociale généralisée</i> , or CSG) on active income	7.5
General social security tax on patrimonial and financial income (for example, income from real estate and securities)	8.2
Social debt repayment tax (<i>contribution remboursement de la dette sociale</i> , or CRDS), on all income	0.5
Social levy on patrimonial and financial income (including 4.5% contribution and 0.3% surtax)	4.8
Special social security tax on patrimonial and financial income (<i>prélèvement de solidarité</i>)	2
Registration duty	
On sales of shares in stock companies (including <i>sociétés anonymes</i> , <i>sociétés par actions simplifiées</i> and <i>sociétés en commandites par actions</i>), shares of private limited liability companies (<i>sociétés à responsabilité limitée</i> , or SARLs) and interests in general partnerships (<i>sociétés en nom collectif</i> , or SNCs); for sales of shares in stock companies, the tax rate is reduced to 0.1%; intragroup transfers are exempt	3
On sales of goodwill	3 to 5
On sales of professional premises, housing, businesses and shares of companies whose assets primarily consist of real estate	5

E. Miscellaneous matters

Foreign-exchange controls. French exchange-control regulations have been eased. French direct investments into foreign countries are now almost completely unrestricted. In general, foreign direct investments in France, except in certain sensitive sectors, are only subject to an administrative declaration. For current operations, such as loans between residents and nonresidents and the opening of foreign bank accounts by French companies, the regulations have been almost totally eliminated.

Payments to residents of tax havens or to uncooperative states or territories. Under Article 238 A of the French Tax Code, interest, royalties and other remuneration paid to a recipient established in a tax haven or on a bank account located in a tax haven are deemed to be fictitious and not at arm's length. As a result, to deduct the amount paid, the French entity must prove that the operation is effective (that it effectively compensates executed

services) and is at arm's length. For purposes of the above rules, a privileged tax regime is a regime under which the effective tax paid is 50% lower than the tax that would be paid in France in similar situations.

If these payments are made to a recipient established in an uncooperative country or on a bank account located in an uncooperative country, the French entity must also prove that the operation's principal aim is not to locate the payment in that country. The list of the uncooperative countries is published at least once a year.

Transfer pricing. French entities controlled by, or controlling, entities established outside France are taxable in France on any profits transferred directly or indirectly to the entity located abroad through an increase or decrease in purchase or sale prices or by any other means.

In the context of a tax audit, the following companies must provide their transfer-pricing documentation on the tax inspector's request or within 30 days (Article L 13AA of the French Tax procedure Code):

- Companies with total net sales before taxes or total gross assets equal to or greater than EUR400 million
- Subsidiaries owned at more than 50% by such companies
- Parent companies that hold more than 50% of such companies
- Members of a French tax-consolidated group that includes at least one company that meets the above criteria

The transfer-pricing documentation includes the following:

- General information concerning the related enterprises (economic, legal and financial background of the group)
- Specific information pertaining to the audited company
- Information pertaining to agreements or tax rulings obtained by the audited company's related parties from foreign tax authorities (if known by the audited company in question)

If the company fails to provide the documentation in due time, a penalty of up to either 5% of the transfer-pricing reassessment or 0.5% of the volume of the transactions carried out with related enterprises is imposed, with a minimum of EUR10,000 per fiscal year under audit.

In addition, these companies were required to file "light" transfer-pricing documentation within six months after the filing deadline of the tax return (Article 223 quinquies B of the French Tax Code). However, for financial years ending on or after 31 December 2016, the threshold for filing this transfer-pricing statement was lowered from EUR400 million to EUR50 million. The transfer-pricing statement includes the following:

- General information about the group (main activities, intangible assets held by the group and used by the reporting entity, general description of the transfer-pricing policy applied by the group and companies related to the reporting entity)
- Specific information for intragroup transactions
- Disclosure of change in the activity of the entity or in the transfer-pricing method being applied

Although the penalty for a not filing this transfer-pricing statement is minimal (EUR150), taxpayers failing to file the report are likely to be scrutinized by the French tax authorities.

Country-by-Country Reporting. Implementing the Organisation for Economic Co-operation and Development (OECD) final report on Transfer Pricing Documentation and Country-by-Country Reporting (CbCR) — Action 13, and EU Directive 2011/16/EU regarding mandatory automatic exchange of information in the field of taxation, as amended in 2016, the 2016 Finance Bill introduced a CbCR obligation for certain companies that are members of a multinational group with a consolidated turnover of at least EUR750 million (Article 223 quinquies C of the French Tax Code). The report must be filed within 12 months after the closing date of the financial year. This obligation applies to fiscal years beginning on or after 1 January 2016. Non-compliant companies may be subject to a penalty of up to EUR100,000.

Controlled foreign companies. Under Section 209 B of the French Tax Code, if French companies subject to corporate income tax in France have a foreign branch or if they hold, directly or indirectly, an interest (shareholding, voting rights or share in the profits) of at least 50% in any type of structure benefiting from a privileged tax regime in its home country (the shareholding threshold is reduced to 5% if more than 50% of the foreign entity is held by French companies acting in concert or by entities controlled by the French company), the profits of this foreign entity or enterprise are subject to corporate income tax in France. If the foreign profits have been realized by a legal entity, they are taxed as a deemed distribution in the hands of the French company. If the profits have been realized by an enterprise (an establishment or a branch), these profits are taxed as profits of the French company if the tax treaty between France and the relevant foreign state allows the application of Section 209 B of the French Tax Code.

For the purpose of the above rules, a privileged tax regime is a regime under which the effective tax paid is 50% lower than the tax that would be paid in France in similar situations (such a foreign company is known as a controlled foreign company [CFC]). Tax paid by a CFC in its home country may be credited against French corporate income tax.

CFC rules do not apply to profits derived from entities established in an EU member state unless the French tax authorities establish that the use of the foreign entity is an artificial scheme that is driven solely by French tax avoidance purposes.

Similarly, the CFC rules do not apply if the profits of the foreign entity are derived from an activity effectively performed in the country of establishment. The concerned company must demonstrate that the establishment of the subsidiary in a tax-favorable jurisdiction has mainly a non-tax purpose and effect by proving that the subsidiary mainly carries out an actual industrial or commercial activity.

Debt-to-equity rules. For a discussion on the restrictions imposed on the deductibility of interest payments, including the thin-capitalization rules, see Section C.

Headquarters and logistics centers. The French tax authorities issue rulings that grant special tax treatment to headquarters companies and logistics centers companies. These companies are subject to corporate income tax at the normal rate on a tax base corresponding generally to 6% to 10% of annual operating expenses,

depending on the company's size, functions assumed and risks borne. In addition, certain employee allowances are exempt from income tax.

Reorganizations. On election by the companies involved, mergers, spin-offs, split-offs and dissolutions without liquidation may qualify for a special rollover regime.

Tax credit for research and development. To encourage investments in research and development (R&D), the tax credit for R&D expenditure equals 30% of qualifying expenses related to operations of R&D (qualifying expenses equal the sum of 75% of the depreciation of fixed assets used in the research activity and 50% of staff expenses related to research) up to EUR100 million, and 5% for such expenses above EUR100 million. The rate is increased to 40% for the first year and to 35% for the following year for companies that benefit from the tax credit for the first time or that did not benefit from the regime for the five years preceding their request for the credit.

A ruling issued in April 2008 confirmed the eligibility of recharged R&D expenses.

Special tax credit. A special tax credit called the Tax Credit for Competitiveness and Employment (Crédit d'impôt pour la compétitivité et l'emploi, or CICE) has been introduced for fiscal years closed on or after 31 December 2013. It is computed on the basis of salaries that are below 2.5 times the minimum wage. The rate is 7% for 2017 and future years (it was 6% since 2014 and 4% for 2013). Higher wages do not give rise to the CICE, even for the amount under the threshold.

Tax audits. Effective from 1 January 2014, all companies must maintain their accounting records in an electronic form when French tax authorities carry out a tax audit.

- (a) Dividends paid by French companies to parent companies located in other EU member states are exempt from withholding tax if the parent company makes a commitment to hold at least 10% of the distributing company for an uninterrupted period of at least two years. However, the Finland treaty provides that all dividends are exempt from withholding tax.
- (b) Withholding tax rates of 5%/15% (dividends), 0%/10% (interest) and 0%/10% (royalties) apply with respect to Quebec.
- (c) France has agreed with Turkmenistan to apply the France-USSR tax treaty. France applies the France-USSR tax treaty to Belarus, Kyrgyzstan and Moldova.
- (d) The tax treaty between France and China does not apply to the Hong Kong SAR.
- (e) As a result of the implementation of EU Directive 2003/49/EC, withholding tax on interest and royalties paid between associated companies of different EU states is abolished if certain conditions are met (see Section B).
- (f) France is honoring the France-Yugoslavia treaty with respect to Bosnia and Herzegovina, Montenegro and Serbia.
- (g) The French domestic law applies. As a result, the rate is 0% under normal circumstances. The rates listed for interest in the table are the treaty rates.
- (h) The general rates under the treaty are reduced in practice according to a “most-favored-nation” clause. The rates listed are those resulting from the application of the “most-favored-nation” clause.
- (i) The 75% rate applies only to payments made into uncooperative countries (see Section E).
- (j) The domestic rate applies.
- (k) The dash signifies the domestic rate.

A. At a glance

Corporate Income Tax Rate (%)	25/30/35 (a)(b)
Capital Gains Tax Rate (%)	25/30/35 (c)
Withholding Tax (%)	
Dividends	10/20 (d)
Interest	20 (e)
Royalties from Patents, Know-how, etc.	20 (f)
Payments for Services	20 (g)
Branch Remittance Tax	10/20 (h)
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) The minimum tax is 1% of turnover (unless exempt). See Section B for details.
 (b) Oil companies' subcontractors with a permanent establishment in Gabon are subject to tax on taxable turnover. The tax rate for these subcontractors is currently 8.75% (see Section D).
 (c) In certain circumstances, the tax is deferred (see Section B).
 (d) The rate is 10% if the parent-subsidiary regime applies. The 20% rate applies to payments made to resident and nonresident individuals and legal entities.
 (e) This 20% rate applies to interest paid to resident and nonresident individuals and nonresident legal entities, excluding interest on bonds.
 (f) This withholding tax applies to payments to nonresidents.
 (g) This withholding tax applies to payments made by resident companies to nonresidents for services, including professional services, rendered or used in Gabon.
 (h) This tax applies if the profits are remitted to the head office. The 10% rate applies to payments to head offices located in tax treaty countries. The rate of 20% applies to payments to head offices located in non-treaty countries.

B. Taxes on corporate income and gains

Corporate income tax. Gabonese companies are taxed on the territoriality principle. As a result, Gabonese companies carrying on a trade or business outside Gabon are not taxed in Gabon on the

related profits. Gabonese companies are those registered in Gabon, regardless of the nationality of the shareholders or where the companies are managed and controlled. Foreign companies with activities in Gabon are subject to Gabonese corporate tax on Gabonese-source profits.

Tax rates. The standard corporate income tax rate is 30%. However, oil and mining companies are subject to tax at a rate of 35%. A reduced corporate tax rate of 25% applies to a limited number of companies. The minimum corporate tax payable is 1% of annual turnover, but not less than XAF1 million. The base for the calculation of the minimum corporate tax is the global turnover realized during the tax year. An exemption from the minimum corporate tax applies to the following companies:

- Companies exempt from corporate income tax, as provided in the general tax code
- New businesses
- Newly incorporated companies or legal entities, for their first two years, regardless of their activities

Capital gains. Capital gains are taxed at the regular corporate rate. The tax, however, can be deferred if all of the proceeds are used to acquire new fixed assets in Gabon within three years.

Administration. The tax year is the calendar year. Tax returns must be filed by 30 April.

Companies must pay the corporate tax (or the minimum tax) in two installments, which are due on 30 November and 30 January. The first installment equals 25% of the preceding year's corporate tax. The second installment equals 33.33% of such tax. Companies must pay any balance of tax due by the due date for the tax return, which is 30 April.

Late payments are subject to a penalty of 10% for the first month and 3% for subsequent months.

Late filing of the corporate tax return is subject to a penalty of XAF50,000 per month (before summons to pay), increased to XAF200,000 per month (after summons to pay), with a maximum penalty of XAF5 million.

Dividends. Dividends paid to resident and nonresident individuals and legal entities are subject to a 20% withholding tax.

If the parent-subsidiary regime applies, dividends received by parent companies are subject to a 10% tax. The parent-subsidiary regime applies if the following conditions are satisfied:

- The shares owned by the parent company represent at least 25% of the capital of the subsidiary.
- Both the parent and subsidiary have their seat in a Central African Economic and Monetary Community (CEMAC) member country (Cameroon, Central African Republic, Chad, Congo, Equatorial Guinea and Gabon).
- The holding company retains the shares registered in its own name for at least two years from the date of issuance of the shares.

Foreign tax relief. In general, foreign tax credits are not allowed; income subject to foreign tax that is not exempt from Gabonese

tax under the territoriality principle is taxable net of the foreign tax. However, Gabon's tax treaties with Belgium, Canada and France provide a tax credit that corresponds to the amount of the withholding tax.

C. Determination of trading income

General. Taxable income is based on financial statements prepared according to generally accepted accounting principles and the rules contained in the general accounting chart of the Organization for the Harmonization of Business Law in Africa.

Business expenses are generally deductible unless specifically excluded by law. To be deductible, an expense must satisfy the following general conditions:

- It must be made in the direct interest of the company or linked to the normal management of the company.
- It must be real and justified.
- It must result in the diminution of the net assets of the company.
- It must be registered in the company books as an expense of the related fiscal year.
- It must not be expressly excluded from deductible expenses by law.
- It must not be considered as an abnormal transaction.

The following expenses are deductible, subject to the conditions mentioned above:

- Head office overhead and remuneration for certain services (studies and technical, financial or administrative assistance) paid to nonresidents. The deduction is limited to 10% of chargeable income before taking into account such expenses.
- Royalties from patents, brands, models or designs paid to a non-CEMAC corporation participating in the management of, or owning shares in, the Gabonese corporation.

The following expenses are not deductible:

- Rent expense for movable equipment paid to a shareholder holding, directly or indirectly, more than 10% of the capital
- A portion of interest paid to a shareholder in excess of the central bank annual rate plus two points and, if the shareholder is in charge of management, on the portion of the loan exceeding one-half of the capital stock
- Commissions and brokerage fees exceeding 5% of purchased imports
- Certain specific charges, penalties and corporate tax
- Most liberalities (payments that do not produce a compensatory benefit, such as excessive remuneration paid to a director), gifts and subsidies

Inventories. Inventories are normally valued at cost or market value. Cost must be determined on a weighted-average cost price method. A first-in, first-out (FIFO) basis is also generally acceptable.

Provisions. In determining accounting profit, companies must establish certain provisions, such as a provision for a risk of loss or for certain expenses. These provisions are normally deductible for tax purposes if they provide for clearly specified losses or expenses that are probably going to occur and if they appear in the financial statements and in a specific statement in the tax return.

Capital allowances. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at rates specified by the tax law. The following are some of the applicable straight-line rates.

Asset	Rate (%)
Constructions	5 to 20
Plant and machinery and transport equipment	5 to 33.3
Office equipment	To 33.3

An accelerated depreciation method may be used for certain fixed assets, subject to the approval of the tax authorities.

Relief for tax losses. Losses may be carried forward five years; losses attributable to depreciation may be carried forward indefinitely. Losses may not be carried back.

Groups of companies. Gabonese law does not allow the filing of consolidated tax returns. Tax rules applicable to groups of companies are discussed below.

Corporate income tax. Costs incurred within a group are deductible for tax purposes. These costs include assistance fees, interest on partner current accounts and rentals of goods within the group.

Capital gains derived from intragroup operations are taxable at a reduced rate of 20% instead of a rate of 30%, unless they are subject to other favorable exemption regimes.

Tax on investment income. Tax on Gabonese-source investment income (for example, dividends) paid to companies of the same group are subject to the Tax on Income from Movable Capital (Impôt sur le Revenu des Capitaux Mobiliers, or IRCM) at a rate of 5%. This income is normally taxable at a rate of 20% (or 10% if the company is located in the CEMAC area).

A 10% rate applies if the income is paid by the head company to a partner who is an individual or legal entity.

Subject to conditions, a tax credit in Gabon may be granted even for tax paid to countries that have not entered into a tax treaty with Gabon.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Business activity tax (<i>license</i>); calculated based on the nature of the business, the value of equipment and the number of employees	Various
Special tax on subcontractors of petroleum companies; a global tax including a contractual payment amount, income tax and payroll tax; on taxable turnover	8.75
Registration duties, on transfers of real property or businesses	4 to 8

Nature of tax	Rate (%)
Social security contributions, on an employee's gross salary limited to XAF1,500,000 a month	
Employer	16
Employee	2.5
Medical health contributions, on an employee's gross salary limited to XAF1,500,000 a month	
Employer	4.1
Employee	1
Value-added tax (VAT); imposed on corporations realizing annual turnover in excess of XAF60 million from general business activities and on corporations realizing annual turnover in excess of XAF500 million from forestry development activities	
Standard rate	18
Reduced rate, on certain items such as sugar	10
Reduced rate on sales of cement and the rendering of services related to cement	5
Exports and international transport	0
Withholding tax on local service providers that are not subject to VAT; tax based on the total amount of the invoice	9.5

E. Miscellaneous matters

Foreign exchange controls. The CEMAC Act, dated 29 April 2000, provides exchange-control regulations, which apply to financial transfers outside the franc zone, which is a monetary zone including France and its former overseas colonies.

Specific tax incentive regime on mergers and similar operations. A specific tax incentive regime for mergers and similar operations is available. To benefit from this regime, all of the following conditions must be satisfied:

- The transferee (beneficiary company in the transfer) must have its registered office in Gabon.
- An agreement must be obtained from the Minister of Finance, after approval of the Director General of Taxes if foreign companies are involved in the operation.
- The operation must be justified by economic reasons instead of fiscal reasons.
- The new shares must be held for a period of five years after the transfer.

F. Treaty withholding tax rates

Gabon has signed a multilateral tax treaty with the CEMAC members, which were formerly members of the Central African Economic and Customs Union (UDEAC). Gabon has also entered into the African and Mauritian Common Organization (OCAM) multilateral tax treaty, as well as tax treaties with Belgium, Canada and France. The withholding rates under these multilateral treaties and the treaties with Belgium, Canada and France are listed in the following table.

	Dividends	Interest	Royalties
	%	%	%
Belgium	15	15	10
Benin	15	15	– (a)
Cameroon	15	15	– (a)
Canada	15	10	10 (a)
Central African Republic	15	15	– (a)
Chad	15	15	– (a)
Congo (b)	15	15	– (a)
Côte d'Ivoire	15	15	– (a)
Equatorial Guinea	15	15	– (a)
France	15	10	10
Senegal	15	15	– (a)
Togo	15	15	– (a)
Non-treaty countries	20	20 (c)	20

- (a) Withholding tax is not imposed, but the income is subject to tax in the state of the recipient.
- (b) Congo and Gabon have signed both the CEMAC (UDEAC) and OCAM treaties. The withholding rates are the same under each treaty.
- (c) See footnote (e) to Section A.

Because of the rapidly changing economic and political situation in Georgia, changes are expected to be made to the Tax Code of Georgia. As a result, readers should obtain updated information before engaging in transactions.

A. At a glance

Corporate Income Tax Rate (%)	15 (a)
Capital Gains Tax Rate (%)	15 (b)
Withholding Tax (%)	
Dividends	5
Interest	5
Royalties	5 (c)
Management Fees	10 (c)
Income from International Transport or International Communications	10 (c)
Income from Oil and Gas Operations	4 (c)
Interest, Royalties and Payments of Other Georgia-Source Income to Companies Registered in Low-Tax Jurisdictions	15
Payments of Other Georgia-Source Income	10 (c)
Branch Remittance Tax	0

- (a) Resident companies and permanent establishments of nonresident companies are not subject to tax on their income. They are subject only to tax at a rate of 15% on distributed profits and certain payments made. The tax rate is applied to the taxable object divided by a specified percentage (for further details, see Section B).
- (b) Resident companies and permanent establishments of nonresident companies are not subject to tax on their capital gains received. They are subject only to tax at a rate of 15% on distributed profits. Nonresident companies without a permanent establishment in Georgia are subject to tax at a rate of 15% on their capital gains derived from Georgian sources. For further details, see Section B.
- (c) These withholding taxes apply to payments to foreign companies.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies and permanent establishments of nonresident companies are not subject to tax on their income. They are subject only to tax on the following taxable objects:

- Distributed profits
- Expenses incurred and other payments not related to economic activity

- Gratuitous supplies of goods or services and transfers of funds
- Representative expenses exceeding statutory limits prescribed by the Tax Code of Georgia (TCG)

Distributed profits. Distributed profit consists of cash or non-cash dividends distributed by a legal entity to its partners or shareholders.

Activities that are not considered distributions of profits include, among others, the following:

- Distributions of dividends among Georgian legal entities
- Distributions of dividends received from foreign enterprises (other than companies registered in low-tax jurisdictions)

Repatriations of profits attributable to permanent establishments of nonresident entities are treated as distributions of profits. Profit attributable to a permanent establishment is a profit that the permanent establishment would have made if it were a distinct and separate enterprise engaged in the same or similar activities under the same or similar conditions.

Distributions of profits include the following:

- Transactions conducted with related resident entities that are not subject to tax on distributions of profit (that is, they are taxed under the old regime) if the contractual price of such transactions differs from the market price
- International controlled transactions that are not at arm's length
- Transactions conducted with persons that are tax-exempt under the TCG if the contractual price of such transactions differs from the market price

Incurred expenses and other payments not related to economic activity. The TCG contains a list of expenses or payments that are subject to corporate income tax. Such expenses include, among others, expenses that are not documentarily proven or that do not have the purpose of deriving profit, income or compensation. In addition, certain payments to persons registered in low-tax jurisdictions are taxable.

Gratuitous supplies of goods/services and transfers of funds. Supplies that are not aimed at gaining profit, income or compensation are considered to be gratuitous. In addition, a shortage of inventory or fixed assets is considered a gratuitous supply and is subject to corporate income tax.

Gratuitous supplies of goods or services are exempt from tax under the following circumstances:

- The supply was taxed at the source of payment.
- The supply represents a donation to a charitable organization and does not exceed 10% of the net profit for the preceding calendar year.
- The recipient of the goods or services is a state authority, municipal body or legal entity of public law.

Representative expenses. Representative expenses exceeding 1% of the higher of revenues or expenses for the preceding calendar year are taxable.

Commercial banks, credit unions, insurance companies, microfinance organizations and pawnshops will be taxed in accordance with new system described above, effective from 1 January 2019.

Until then, the tax base of these entities is determined as the difference between the gross taxable income and the amount of deductions stipulated under the TCG.

Foreign legal entities without a permanent establishment in Georgia are subject to withholding tax on their Georgian-source income at a rate of 4%, 5%, 10% or 15% (see Section A).

Tax rate. The regular corporate income tax rate is 15%. To calculate corporate income tax, the tax rate is applied to the taxable objects described above divided by 0.85.

Special types of enterprises. The Georgian tax law provides for beneficial tax treatment for enterprises operating in Georgia with the following statuses:

- International Financial Company
- Special Trade Company
- Free Industrial Zone Company
- Virtual Zone Person
- Tourist Enterprise
- Agricultural Cooperative

The Georgian Tax Authorities (GTA) grant the above statuses according to the rules defined by the Minister of Finance of Georgia. The statuses are described below.

International Financial Company. A financial institution may obtain the status of International Financial Company for the purpose of tax benefits if its Georgian-source income derived from financial operations or financial services does not exceed 10% of its worldwide income. Income received from financial operations and financial services between International Financial Companies is not considered to be income received from Georgian sources. An International Financial Company must be established outside a Free Industrial Zone. International Financial Companies are exempt from corporate income tax on income derived from financial operations, financial services and the sale of securities issued by nonresident persons.

Special Trade Company. An entity conducting its activities in an authorized warehouse may be granted Special Trade Company status for corporate income tax exemption purposes. A Special Trade Company may supply and re-export foreign goods, as well as purchase foreign goods from an entity without such status for further supply or re-export. A Special Trade Company may also derive income (including Georgian-source income) from other allowable activities if such income does not exceed the sum of GEL1 million and 5% of the customs value of foreign goods brought into Georgia. In addition, a Special Trade Company may derive income exempted from corporate income tax and from the sale of fixed assets used in economic activities for more than two years. A Special Trade Company is prohibited from importing or purchasing Georgian goods for further supply, rendering of services in Georgia and operating an authorized warehouse. The status of Special Trade Company is canceled for a calendar year if an authorized representative of such company submits an application to the GTA at least five business days before the beginning of the relevant calendar year. A Special Trade Company is

exempt from corporate income tax on income received from allowable activities except for income received from the sale of fixed assets.

Free Industrial Zone Company. Free Industrial Zone Company status for tax purposes may be granted to a company operating in a Free Industrial Zone. Free Industrial Zone Companies primarily engage in the manufacturing and export of goods outside Georgia from a Free Industrial Zone. The status of Free Industrial Zone Company is subject to cancellation if the company engages in activities prohibited by the law. Free Industrial Zone Companies are exempt from corporate income tax on income from activities allowed within a Free Industrial Zone.

Virtual Zone Person. Virtual Zone Person status for tax purposes may be granted to a company engaged in information technology activities. Virtual Zone Persons are exempt from corporate income tax on distributions of profits derived from the supply of self-produced information technology outside Georgia.

Tourist Enterprise. Tourist Enterprise status for tax purposes may be granted to a company that builds a hotel for the purpose of the sale and leaseback of the assets, or part of the assets, of the hotel and uses the building in hotel operations. Distribution of profit derived from the rendering of hotel services and the incurrence of expenses in the course of such activity by tourist enterprises are exempt from corporate income tax until 1 January 2026.

Agricultural Cooperative. Agricultural Cooperative status for tax purposes may be granted to a company in accordance with the Law of Georgia on “Agricultural Cooperative.” Agricultural Cooperatives are exempt from corporate income tax on income derived from the supply of agricultural products produced in Georgia before their processing (that is, a change of commodity code occurs) until 1 January 2017.

Capital gains. No separate capital gains tax is imposed in Georgia. Capital gains derived by resident companies and permanent establishments of nonresident companies are exempt from tax until they are distributed.

Administration. The reporting period for the entities subject to corporate income tax on distribution of profit is a calendar month. Such entities must submit a corporate income tax return and pay the respective tax by the 15th of the month following the reporting month.

The reporting period for commercial banks, credit unions, insurance companies, microfinance organizations and pawnshops is a calendar year. These entities must make advance payments of corporate income tax. Each payment is equal to 25% of the corporate income tax liability for the preceding year. The due dates for the payments are 15 May, 15 July, 15 September and 15 December. Advance payments of tax are applied against the corporate income tax liability for the current tax year.

If the total advance payments exceed the tax due for the tax year, the excess is applied against any outstanding liabilities for other taxes. If no outstanding tax liabilities exist, taxpayers may apply overpayments against future tax liabilities or ask for a refund.

The entities mentioned above must file the annual corporate income tax return and make the balancing payment of corporate income tax by 1 April of the year following the reporting year.

Interest is charged on late tax payments at a rate of 0.05% of the tax due for each day of delay. If the tax return is not filed by the due date, a penalty is imposed. This penalty equals 5% of the amount of tax payable stated in the tax return for each complete or incomplete month of delay. However, the total amount of the penalty may not be less than GEL50 or more than 30% of the amount of tax liability. A penalty for an understatement of tax liability or overstatement of a tax credit that results from a change of the taxable point by the GTA is imposed at a rate of 10% of the relevant amount. The percentage is 50% in all other cases. No penalty is imposed if a taxpayer voluntarily files an adjusted tax return.

Dividends. A dividend withholding tax is imposed on dividends paid by Georgian enterprises to individuals, not-for-profit companies and foreign legal entities. However, dividends paid to Georgian legal entities are not subject to withholding tax. The current dividend withholding tax rate is 5%.

The following types of dividends are not subject to withholding tax:

- Dividends paid by International Financial Companies
- Dividends paid by Free Industrial Zone Companies in Free Industrial Zones
- Dividends paid on free-floating securities (debt or equity securities listed on the stock exchange with a free-float rate in excess of 25% as of 31 December of the current and preceding reporting year, according to information provided by the issuer of the securities to the stock exchange)
- Dividends paid by Agricultural Cooperatives to their members until 1 January 2017

Interest. An interest withholding tax is imposed on interest payments made by a permanent establishment of a nonresident or a resident or on their behalf. However, interest paid to resident banks is not subject to withholding tax. The current interest withholding tax rate is 5%.

The following types of interest payments are not subject to withholding tax:

- Interest paid by financial institutions licensed according to the Georgian law. However, interest is included in gross income if the recipient is also a licensed financial institution.
- Interest paid by Free Industrial Zone Companies in Free Industrial Zones.
- Interest paid on free-floating securities.
- Interest paid on debt securities issued by Georgian entities listed on recognized foreign stock exchanges.
- Interest paid on debt securities issued by International Financial Institutions (a list of International Financial Institutions is contained in a resolution of the government of Georgia).

Foreign tax relief. Foreign income tax paid on income generated from foreign sources may be credited against Georgian tax imposed on the same income, limited to the amount of such Georgian tax (that is, up to the amount of corporate income tax that would have been payable on such income in Georgia).

C. Determination of taxable income

General. Until 1 January 2019, the tax base of commercial banks, credit unions, insurance companies, microfinance organizations and pawnshops equals the difference between the gross taxable income and the amount of deductions stipulated under the TCG. Consequently, the rules provided below in this section apply only to these entities. These entities will be taxed in accordance with the new system (that is, on distribution of profit), effective from 1 January 2019.

Taxable income of entities mentioned above is computed on the basis of International Financial Reporting Standards, modified by certain tax adjustments. It includes the following:

- Trading income
- Capital gains
- Income from financial activities
- Gratuitously received assets
- Works and services
- Other items of income

Income received in foreign currency is converted into Georgian lari (GEL) at the daily exchange rate determined by the National Bank of Georgia (NBG) for the date of receipt of the income.

Commercial banks, credit unions, insurance companies, microfinance organizations and pawnshops may deduct from gross income all documented expenses contributing to the generation of such income. However, certain expenses are nondeductible or partially deductible for tax purposes.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT); imposed on goods and services supplied in Georgia and on imported goods; reverse-charge VAT is imposed on works and services carried out in Georgia by nonresident entities	18
Property tax; on the average annual net book value of fixed assets	1
Property tax for leasing companies on leased assets	0.6

Georgia also imposes several other minor taxes.

E. Miscellaneous matters

Foreign-exchange controls. The Georgian currency is the lari (GEL). The lari is a non-convertible currency outside Georgia. Enterprises may buy or sell foreign currencies through authorized banks or foreign-exchange offices in Georgia.

Georgia does not impose restrictive currency-control regulations. Enterprises may open bank accounts abroad without any restriction if they declare such accounts (other than deposit accounts) with the GTA within five working days after opening such accounts. In general, all transactions performed in Georgia must be conducted in lari. Transactions with nonresident entities can be conducted in other currencies.

Transfer pricing. Under the transfer-pricing (TP) rules set by the TCG, the arm’s-length principle applies to transactions carried out by taxpayers with related parties. The TP rules generally apply to cross-border transactions between related parties. These rules may also apply to transactions between a Georgian resident entity and an unrelated foreign entity that is a resident of a low-tax jurisdiction or offshore country and transactions between a Georgian company and its permanent establishment.

The generally accepted transfer-pricing methods include the following:

- Comparable uncontrolled price method
- Resale price method
- Cost-plus method
- Net profit margin method
- Profit split method

The Minister of Finance of Georgia is authorized to provide detailed descriptions of TP methods, their application rules and other procedural rules.

In 2013, the Minister of Finance of Georgia enforced the Instruction “On Pricing International Controlled Transactions,” which is in accordance with the TCG provisions. The Instruction covers the following items:

- Scope of transactions subject to Georgian transfer-pricing rules
- Acceptable transfer-pricing methods
- Comparability criteria
- Information sources
- Arm’s-length range
- Procedure for advance pricing agreements
- Transfer-pricing documentation requirements
- Other procedural issues

It also outlines required actions for companies doing business in Georgia.

Thin capitalization. The thin-capitalization rules are abolished, effective from 1 January 2017.

F. Treaty withholding tax rates

Georgia has entered into tax treaties with 52 countries. The table below lists the withholding tax rates under these treaties. In general, if the withholding tax rate provided in a treaty exceeds the rate provided by the TCG, the latter rate applies.

	Dividends %	Interest %	Royalties %
Armenia	5/10 (a)	10	5
Austria	0/5/10 (b)	0	0
Azerbaijan	10	10	10
Bahrain	0	0	0

- (a) The 5% rate applies if the actual recipient of the dividends is a company (other than a partnership) that holds directly at least a 25% share in the capital of the payer of the dividends. The 10% rate applies in all other cases.
- (b) The 0% rate applies if the beneficial owner of the dividends is a company that holds directly or indirectly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than EUR2 million (or the equivalent amount in Georgian lari). The 5% rate applies if the beneficial owner is a company that holds directly or indirectly at least 10% of the capital of the payer of the dividends and that has invested in the payer more than EUR100,000 (or the equivalent amount in Georgian lari). The 10% rate applies in all other cases.
- (c) The 5% rate applies if the beneficial owner of the dividends is a company that holds at least 25% of the capital of the payer of the dividends. The 15% rate applies in all other cases.

- (d) The 0% rate applies if the recipient is the beneficial owner of interest on a commercial debt-claim, including a debt-claim represented by commercial paper, resulting from deferred payments for goods, merchandise or services supplied by an enterprise or if the recipient is the beneficial owner of interest on a loan that is represented by a bearer instrument and that is granted by a banking enterprise. The 10% rate applies in all other cases.
- (e) The 5% rate applies if the beneficial owner of the royalties is a company. The 10% rate applies in all other cases.
- (f) The 5% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 25% of the capital of the payer of the dividends. The 10% rate applies in all other cases.
- (g) The 0% rate applies if the recipient is the beneficial owner of interest on credit sales of industrial, commercial or scientific equipment. The 8% rate applies in all other cases.
- (h) The 0% rate applies if the recipient is the beneficial owner of royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works, except for computer software and including cinematographic films, and films or tapes for television or radio broadcasting. The 5% rate applies if the recipient is the beneficial owner of royalties paid for the use of, or the right to use, industrial, commercial or scientific equipment. The 10% rate applies if the recipient is the beneficial owner of royalties paid for the use of, or the right to use, patents, trademarks, designs or models, planes, secret formulas or processes, computer software or information concerning industrial, commercial or scientific experience.
- (i) The 0% rate applies if the actual recipient of the dividends is a company that holds directly or indirectly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than EUR2 million (or the equivalent amount in Danish krone or Georgian lari). The 5% rate applies if the actual recipient is a company that holds directly or indirectly at least 10% of the capital of the payer of the dividends and that has invested in the payer more than EUR100,000 (or the equivalent amount in Danish krone or Georgian lari). The 10% rate applies in all other cases.
- (j) The 0% rate applies if the actual recipient of the dividends is a company (other than a partnership) that holds directly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than EUR2 million (or the equivalent amount in Georgian lari). The 5% rate applies if the actual recipient is a company (other than a partnership) that holds directly at least 10% of the capital of the payer of the dividends and that has invested in the payer more than EUR100,000 (or the equivalent amount in Georgian lari). The 10% rate applies in all other cases.
- (k) The 0% rate applies if the actual recipient of the dividends is a company that holds directly or indirectly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than EUR3 million (or the equivalent amount in Georgian lari). The 5% rate applies if the actual recipient is a company that holds directly or indirectly at least 10% of the capital of the payer of the dividends and that has invested in the payer more than EUR100,000 (or the equivalent amount in Georgian lari). The 10% rate applies in all other cases.
- (l) The 0% rate applies if the actual recipient of the dividends is a company (other than a partnership) that holds directly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than EUR3 million (or the equivalent amount in any currency). The 5% rate applies if the actual recipient is a company (other than a partnership) that holds directly at least 10% of the capital of the payer of the dividends and that has invested in the payer more than EUR100,000 (or the equivalent amount in any currency). The 10% rate applies in all other cases.
- (m) The 0% rate applies if the beneficial owner of the dividends is a company that holds directly or indirectly at least 50% of the voting rights in the payer of the dividends and that has invested in the payer at least EUR3 million (or the equivalent amount in Georgian lari). The 5% rate applies if the beneficial owner is a company that holds directly or indirectly at least 10% of the voting rights in the payer of the dividends and that has invested in the payer more than EUR100,000 (or the equivalent amount in Georgian lari). The 10% rate applies in all other cases.
- (n) The 5% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the payer of the dividends. The 10% rate applies in all other cases.
- (o) The 5% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 25% of the capital of the payer of the dividends and that has invested in the payer at least EUR75,000. The 15% rate applies in all other cases.

- (p) The 0% rate applies if the actual recipient of the dividends is a company that holds directly or indirectly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than EUR2 million (or the equivalent amount in Georgian lari). The 5% rate applies if the actual recipient is a company that holds directly or indirectly at least 10% of the capital of the payer of the dividends and that has invested in the payer more than EUR100,000 (or the equivalent amount in Georgian lari). The 10% rate applies in all other cases.
- (q) The 0% rate applies if the beneficial owner of the dividends is a company that holds directly or indirectly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than USD2 million (or the equivalent amount in euros or Georgian lari). The 5% rate applies if the recipient is a company that holds at least 10% of the capital of the payer of the dividends. The 15% rate applies in all other cases.
- (r) The 0% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends. The 10% rate applies in all other cases.
- (s) The 15% rate applies if the dividends are paid out of income derived directly or indirectly from immovable property within the meaning of Article 6 by an investment vehicle that distributes most of this income annually and if the income from such immovable property is exempt from tax. The 0% rate applies in all other cases.
- (t) The 5% rate applies if the actual recipient of the dividends is a company (other than a partnership) that holds directly at least 25% of the capital of the payer of the dividends. The 15% rate applies in all other cases.
- (u) The 0% rate applies if the beneficial owner of the dividends is a company (other than a partnership that is not liable to tax) that has held directly at least 25% of the capital of the company paying the dividends for an uninterrupted period of at least 12 months before the decision to distribute the dividends. The 5% rate applies in all other cases.
- (v) The 5% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends. The 10% rate applies in all other cases.
- (w) The 0% rate applies if the beneficial owner of the dividends is either of the following:
- A company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends
 - A pension fund or other similar institution providing pension schemes in which individuals may participate to secure retirement benefits if such pension fund or other similar institution is established and recognized for tax purposes in accordance with the laws of the other state. The 5% rate applies in all other cases.
- (x) The 0% rate applies if the beneficial owner of the dividends is a company that has invested in the payer more than USD3 million (or the equivalent amount in Georgian lari). The 5% rate applies in all other cases.
- (y) The 0% rate applies to pension funds and recipients of interest on corporate bonds traded on a stock exchange in the other state and issued by a company that is a resident of that state. The 5% rate applies in all other cases.
- (z) The 0% rate applies to recipients of interest on loans or credits granted by banks. The 5% rate applies in all other cases.
- (aa) The 0% rate applies if the beneficial owner of the dividends is a company (or partnership) that holds at least 10% of the capital of the company paying the dividends. The 10% rate applies in all other cases.
- (bb) The 0% rate applies to royalties paid as consideration for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films and films or tapes for radio or television broadcasting. The 10% rate applies to royalties paid as consideration for the use of, or the right to use, patents, trademarks, designs or models, plans, secret formulas or processes, for the use of, or the right to use, industrial, commercial or scientific equipment, or for information concerning industrial, commercial or scientific experience.
- (cc) The 5% rate applies if the beneficial owner is a company (other than a partnership) that holds directly at least 25% of the capital of the company paying the dividends. The 10% rate applies in all other cases.

A. At a glance

Corporate Income Tax Rate (%)	15 (a)
Trade Tax Rate (Average Rate) (%)	14
Capital Gains Tax Rate (%)	15 (a)
Branch Tax Rate (%)	15 (a)
Withholding Tax (%)	
Dividends	25 (a)(b)(c)(d)
Interest	0 (e)(f)
Royalties from Patents, Know-how, etc.	15 (a)(b)(f)(g)(h)
Remuneration to Members of a Supervisory Board	30 (h)
Payments for Construction Work	15 (a)(b)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	1 (i)
Carryforward	Unlimited (j)

- (a) A 5.5% solidarity surcharge is imposed (see Section B).
- (b) On application, these rates may be reduced by tax treaties.
- (c) This withholding tax applies to dividends paid to residents and nonresidents. Under the 2009 Annual Tax Act, for dividends paid to nonresident corporate entities, this rate may be reduced to 15% if the nonresident dividend recipient qualifies as an eligible recipient under the German anti-treaty shopping rules.
- (d) These rates may be reduced under the European Union (EU) Parent-Subsidiary Directive. Under the EU Parent-Subsidiary Directive, on application, a withholding tax rate of 0% applies to dividends distributed by a German subsidiary to an EU parent company if the recipient has owned 10% or more of the share capital of the subsidiary for a continuous period of 12 months at the time the dividend distribution takes place and if the German anti-treaty shopping rules do not apply.

- (e) A 25% interest withholding tax is imposed on the following types of interest:
- Interest paid by financial institutions. The rate is 15% if the loan is not recorded in a public debt register.
 - Interest from over-the-counter business. Over-the-counter business refers to bank transactions carried out over the bank counter, without the securities being on deposit at the bank.
 - Interest from certain types of profit-participating and convertible debt instruments.

The interest withholding tax is not imposed on intercompany loans. Non-residents may apply for a refund of the withholding tax if a treaty exemption applies. If a nonresident is required to file an income tax return in Germany, the withholding tax is credited against the assessed corporate income tax or refunded.

- (f) These rates may be reduced by tax treaties or under the EU Interest-Royalty Directive. Under the EU Interest-Royalty Directive, on application, German withholding tax is not imposed on interest and royalties paid by a German resident company to an associated company located in another EU member state. To qualify as associated companies, a minimum 25% shareholding or a common parent is required, among other requirements.
- (g) The withholding tax rate on royalties from patents, know-how and similar items is 15% for payments to nonresident corporations if such items are registered in Germany or used in a German permanent establishment.
- (h) This withholding tax applies to payments to nonresidents only.
- (i) The loss carryback, which is optional, is available for corporate income tax purposes, but not for trade income tax purposes. The maximum carryback is EUR1 million.
- (j) The carryforward applies for both corporate income tax and trade tax purposes. Effective for tax years ending after 31 December 2003, the maximum loss carryforward that may be used for corporate and trade tax purposes is restricted to EUR1 million for each tax year plus 60% of annual taxable income exceeding EUR1 million (so-called minimum taxation). The carryforward is subject to the change-of-ownership rule (see Section C).

B. Taxes on corporate income and gains

Corporate income tax. Corporations, such as stock corporations (Aktiengesellschaft, or AG) and limited liability companies (Gesellschaft mit beschränkter Haftung, or GmbH), that have their corporate seat or place of management in Germany (resident corporations) are subject to corporate income tax (Körperschaftsteuer) on worldwide income, unless otherwise provided in tax treaties.

A nonresident corporation, whose corporate seat and place of management are located outside Germany, is subject to corporate income tax only on income derived from German sources. Income from German sources includes, among other items, business income from operations in the country through a branch, office or other permanent establishment, including a permanent representative, and income derived from the leasing and disposal of real estate located in Germany.

Rates of corporate income tax. Corporate income tax is imposed at a rate of 15% on taxable income, regardless of whether the income is distributed or retained.

A 5.5% solidarity surcharge is imposed on corporate income tax, resulting in an effective tax rate of 15.825%. Prepayments of corporate income tax and withholding tax payments are also subject to this surcharge.

Companies that continue to have a corporate income tax credit balance resulting from retained earnings taxed in the years for which the imputation tax credit system applied (generally, 2000 and earlier years) receive a refund of this remaining balance in 10 equal amounts during the period of 2008 through 2017.

Companies that continue to have untaxed equity (known as “EK 02”) made up of various amounts of tax-free income generated in the years for which the imputation tax credit system applied (generally, 2000 and earlier years) must pay tax on this untaxed equity at a rate of 3%. Companies must pay this amount of additional tax in 10 equal installments from 2008 to 2017 or as a one-time payment on a discounted basis.

Trade tax. Municipalities impose a trade tax on income. However, for purposes of this tax, taxable income is subject to certain adjustments. The major adjustments include a 25% add-back of interest expenses with respect to debt, a 6.25% add-back of license payments, a 5% add-back of lease payments for movable assets and a 12.5% add-back of lease payments for immovable assets. The effective average trade tax rate amounts to approximately 14%. Taking into account the various municipality multipliers, the combined average tax rate for corporations (including corporate income tax, solidarity surcharge and trade tax) ranges from approximately 23% to 33%.

If a company operates in several municipalities, the tax base is allocated according to the payroll paid at each site. Certain enterprises, such as specified banks and real estate companies, receive privileged treatment under the trade tax law.

Withholding tax on construction work. Taxpayers and entities that are corporate bodies under public law (for example, cities and municipalities) must withhold a tax of 15% from payments made for construction work provided in Germany. The tax must be withheld even if the work provider does not have a tax presence in the form of a permanent establishment or permanent representative in Germany unless the work provider obtains a “certificate of non-taxation” from the competent tax office. Construction work providers may obtain a refund of the withholding tax if they can prove that no German tax liability against which the withholding tax could be applied exists.

Capital gains and losses. Capital gains of corporations, except those derived from sales of shares, are treated as ordinary income. However, rollover relief is granted if gains derived from disposals of real estate are reinvested in real estate within the following four years and if certain other conditions are met.

Capital gains derived by corporations from sales of shares in corporations are generally exempt from corporate income tax and trade tax. Five percent of the capital gain is deemed to be a non-deductible expense. As a result, the exemption is effectively limited to 95% of the capital gain. This may also apply to nonresident corporate sellers if they have owned at least 1% of the capital stock of a German company at any time during the five years preceding the sale and if the nonresident seller cannot claim treaty protection. The 95% tax exemption for capital gains received by a corporate shareholder is not granted to banks, financial services institutions and financial enterprises (including holding companies) that purchase shares with the intention of realizing short-term profits for their own account (a proposed change to the law would effectively deny the tax exemption only to banks, financial institutions and entities controlled by such enterprises).

However, to the extent that write-downs of the shares have previously been deducted for tax purposes, capital gains from sales of shares are not exempt.

Capital gains derived from the disposal of tainted shares are, in principle, 95% exempt from tax. Tainted shares may result from corporate reorganizations (for example, contributions of qualifying businesses or partnership interests into corporations in return for shares or share swaps) that are carried out at tax book values or below fair market values. The subsequent disposal of the tainted shares results in a (full or partial) retroactive taxation of the original reorganization that gave rise to the share taint. In general, after a seven-year holding period, the shares lose their taint.

In general, capital losses are deductible. However, capital losses are not deductible if a gain resulting from the underlying transaction would have been exempt from tax. Consequently, capital losses from sales of shares or write-downs on shares are not deductible. In addition, capital losses and write-downs on loans to related parties may not be deductible under certain circumstances.

Administration. The tax year is the calendar year. If a company adopts an accounting period that deviates from the calendar year, tax is assessed for the taxable income in the accounting period ending within the calendar year. The adoption of a tax year other than the calendar year requires the consent of the tax office.

Annual tax returns must be filed by 31 May of the year following the tax year. However, an extension to 31 December of the year following the tax year is usually granted if a licensed tax consultant prepares the return.

Payments made with respect to the estimated corporate income tax liability, usually determined at one-quarter of the liability for the previous year, are due on 10 March, 10 June, 10 September and 10 December. Prepayments of trade tax are due on 15 February, 15 May, 15 August and 15 November. Final payments are due one month after the tax assessment notice issued by the tax authorities is received by the taxpayer.

Late tax payments and tax refunds are generally subject to interest of 0.5% per month. Interest begins to accrue 15 months after the end of the calendar year for which the tax is assessed. The interest is not deductible for corporate income and trade tax purposes if the tax itself is not deductible. Late payment penalties are also charged at 1% a month if the unpaid balance is not settled within one month from the date of the assessment notice issued by the tax office. A penalty of up to 10% of the tax liability, but not more than EUR25,000, can be assessed if the tax return is not filed by the due date, including extensions granted.

Dividends. Dividends received by German corporations and branches of nonresident corporations from their German and foreign corporate subsidiaries are exempt from tax. However, effective from 1 March 2013, a minimum shareholding requirement of 10% applies for this participation exemption for corporate income tax purposes. In addition to this domestic rule, an applicable tax treaty may provide for an exemption for foreign dividends. Beginning from the 2014 tax year, the tax exemption for dividends is granted only if the dividend payment is not tax-deductible as a business expense at the level of the distributing entity (linking rule).

Five percent of the tax-exempt dividend income is treated as a nondeductible expense, while the expenses actually incurred are deductible. Consequently, only 95% of the dividends received by

a corporation is effectively exempt from tax. The 95% tax exemption for dividends received by a corporate shareholder is not granted for portfolio dividends (less than 10% shareholding) or to banks, financial services institutions and financial enterprises (including holding companies) that purchase shares with the intention of realizing short-term profits for their own account (a proposed change to the law would effectively deny the tax exemption only to banks, financial institutions and entities controlled by such enterprises).

The participation exemption applies for trade tax purposes if the dividends are received from corporations in which the parent holds at least 15% as of 1 January of the calendar year in which the dividend distribution takes place. For dividends from EU corporations, the required minimum shareholding is 10%. For dividends from third-country corporations, the shares (minimum shareholding of 15%) must be held continuously since 1 January of the calendar year in which the dividend distribution takes place and the subsidiary's gross income must be realized exclusively or almost exclusively from active business. A tax exemption on the basis of a double tax treaty may apply for trade tax purposes.

Foreign tax relief. Under German domestic tax law, income from foreign sources, except for foreign dividends received by a qualifying corporate shareholder (see *Dividends*), is usually taxable, with a credit for the foreign income taxes paid, up to the amount of German tax payable on the foreign-source income, subject to per-country limitations. Excess foreign tax credit cannot be carried back or carried forward. Instead of a foreign tax credit, a deduction may be claimed for foreign income tax. This may be beneficial in loss years and in certain other instances. In general, German tax treaties provide for an exemption from German taxation of income from foreign real estate and foreign permanent establishments.

C. Determination of trading income

General. Taxable income of corporations is based on the annual financial statements prepared under German generally accepted accounting principles (GAAP), subject to numerous adjustments for tax purposes. After the annual financial statements have been filed with the tax authorities, they may be changed only to the extent necessary to comply with GAAP and the tax laws.

Acquired goodwill must be capitalized for tax purposes and may be amortized over 15 years. Intangibles acquired individually must also be capitalized for tax purposes and may be amortized over their useful lives (normally between 5 and 10 years). A company's own research and development and start-up and formation expenses may not be capitalized for tax purposes. They must be currently expensed.

Inventories. Inventory is basically valued at acquisition cost or production cost, unless a lower value (that is, the lower of reproduction or repurchase cost and market value) is indicated. Under certain conditions, the last-in, first-out (LIFO) method can be used to value inventory assets if the assets are of a similar type.

Provisions. In general, provisions established under German GAAP are accepted for tax purposes. However, in past years, the

scope of tax-deductible provisions has been severely limited by certain rules, including, among others, the following:

- Liabilities or accruals of obligations whose fulfillment is contingent on future revenue or profit may be recorded only when the condition occurs.
- Provisions for foreseeable losses from open contracts may not be recorded.
- Future benefits arising in connection with the fulfillment of an obligation must be offset against costs resulting from the obligation.
- Non-monetary obligations may be accrued using the direct cost and the necessary indirect cost.
- Provisions for obligations resulting from the operation of a business must be built up in equal increments over the period of operation.
- Provisions for pension obligations must be calculated on an actuarial basis using an interest rate of 6% and built up over the period of employment.

If built-in losses contained in the above provisions or liabilities materialize on their transfer at fair market value, the resulting losses may generally only be deducted for tax purposes over a period of 15 years.

Non-interest-bearing debt must be discounted at an annual rate of 5.5% if the remaining term exceeds 12 months.

Depreciation. For movable fixed assets purchased or produced after 31 December 2007, tax depreciation must be calculated using the straight-line method (as an exception, the declining-balance method could have been applied for movable assets purchased or manufactured between 1 January 2009 and 31 December 2010). Movable assets with acquisition costs that do not exceed EUR410 can be fully depreciated in the year of acquisition, regardless of their useful lives. Useful lives of movable assets are published by the Federal Ministry of Finance, based primarily on tax audit experience; deviation from published useful life is possible, but requires justification by the taxpayer. Tax depreciation rates for buildings are provided by law. The Federal Ministry of Finance has published tax depreciation rates for movable fixed assets generally usable in trade and industry. Schedules for assets specific to certain industries are also available. The following are some of the straight-line rates under the general list.

Asset	Rate (%)
Office equipment	6 to 20
Motor vehicles	10 to 16.6
Plant and machinery	6 to 12.5
Airplanes	5
Personal computers or notebooks and related equipment	33.3
Nonresidential buildings (offices, retail and factories)	
Constructed before 1 January 1925	2.5
Constructed after 31 December 1924 and application for the construction permit filed before 1 April 1985	2
Application for the construction permit filed after 31 March 1985	3*

* The rate is 4% if the application for the construction permit was filed or the purchase agreement was dated before 1 January 2001.

Mark-to-market rule. Under a mark-to-market rule, a tax deduction for the write-down of an asset because of a permanent impairment in value is allowed only if the value is permanently lower (for fixed assets) or is lower than the acquisition costs (not just temporarily). This rule is particularly relevant for assets that are not subject to ordinary depreciation, such as land or shares (however, write-downs of shares are not tax effective; see Section B). For assets that have been written down to their going-concern value, the write down must be reversed as soon as and to the extent that the asset has increased in value.

Disallowed items. After income for tax purposes has been determined, certain adjustments need to be made to calculate taxable income. Major adjustments include the following nondeductible expenses:

- Income taxes (corporate income tax, solidarity surcharge and trade tax) and any interest expense paid with respect to these taxes
- Interest expenses (see *General interest expense limitation*)
- Penalties
- Fifty percent of supervisory board fees
- Thirty percent of business meal expenses
- Gifts to non-employees exceeding EUR35 per person per year and input value-added tax (VAT) regarding such expenses
- Expenses incurred in direct connection with tax-exempt income items (see the discussion of dividends in Section B)

In addition, as a result of the exemption for capital gains derived from sales of shares (see Section B), losses from sales of shares, write-downs of shares or, under certain circumstances, write-downs on loans to related parties are no longer deductible for tax purposes and must be added back to the tax base.

General interest expense limitation. The interest expense limitation rule applies to all loans (that is, group and third-party loans, regardless of recourse) and to businesses resident in Germany, companies residing abroad but maintaining a permanent establishment in Germany, and partnerships with a German branch.

Under the interest expense limitation rule, the deduction of interest expense exceeding interest income (net interest expense) is limited to 30% of taxable earnings before (net) interest, tax, depreciation and amortization (EBITDA). Tax-exempt income and partnership income should not be considered in the calculation of the taxable EBITDA.

The limitation rule does not apply if one of the following exemption rules applies:

- Exemption threshold. The annual net interest expense is less than EUR3 million.
- Group clause. The company is not a member of a consolidated group (a group of companies that can be consolidated under International Financial Reporting Standards [IFRS]). The group clause does not apply if both of the following circumstances exist:
 - A shareholder who, directly or indirectly, holds more than 25% in the corporation or a related party of such shareholder grants a loan to the company.
 - The interest exceeds 10% of the company's net interest expense.

- **Escape clause.** The equity ratio of the German subgroup is at least as high as the equity ratio of the worldwide group (within a 2% margin). A “group” is defined as a group of entities that could be consolidated under IFRS, regardless of whether a consolidation has been actually carried out. The equity ratio is calculated on the basis of the IFRS/US GAAP/EU local country GAAP consolidated balance sheet of the ultimate parent. The same accounting standard is applied to a German group but subject to several complex technical adjustments, such as a deduction for unconsolidated subsidiaries. The access to the escape clause is limited in the case of certain loans from non-consolidated shareholders (related party debt exception).

Unused EBITDA can be carried forward over a five-year period. However, the carryforward does not apply if one of the above-mentioned exemptions from the interest expense limitation rule applies or if a positive net interest balance exists. The EBITDA carryforward is forfeited in the course of reorganizations but not under the loss-trafficking rules (see *Tax losses*).

Nondeductible interest expense can be carried forward indefinitely but is subject to the loss-trafficking rules (see *Tax losses*). A deduction is possible in the following years in accordance with the interest expense limitation rules. The nondeductibility is final in the case of a transfer, merger, termination or liquidation of the business or in the case of a permanent excess of limitation amounts (that is, net interest expense is permanently higher than 30% of the taxable EBITDA and the exemption clauses are not fulfilled; as a result, the deduction of all of the interest expense is permanently not achievable).

The interest expense limitation rules may be incompatible with German constitutional law according to the German Federal Tax Court, which has recently referred the case to the German Constitutional Court.

Constructive distributions of income. Adjustments to taxable income as a result of a violation of arm’s-length principles are deemed to be constructive distributions of income (see the discussion of transfer pricing in Section E).

Tax losses. Tax losses may be carried forward without time limitation. Under the restrictions of the so-called minimum taxation, only 60% of annual taxable profits in excess of EUR1 million can be offset by loss carryforwards. As a result, 40% of the portion of profit exceeding EUR1 million is subject to tax.

This tax loss carryforward rule applies for both corporate income tax purposes and trade tax purposes. For corporate income tax (not trade tax) purposes, an optional loss carryback is permitted for one year up to the maximum amount of EUR1 million.

Under the German loss-trafficking rule, tax loss carryforwards are forfeited proportionally if, within a five-year period, more than 25% of the shares of a loss-making entity are directly or indirectly transferred to a single new shareholder or a group of shareholders. If, within a five-year period, more than 50% of the shares are transferred, the entire loss carryforward is forfeited. To prevent abuse of the rule, the rule includes a measure under which investors with common interests and acting together are deemed to be one acquirer for the purposes of the rule.

The following exceptions apply to the loss-trafficking rule:

- **Group restructuring exception.** A transfer of shares is not considered to be harmful if it occurs within a “100% controlled group.” A group is considered to be a “100% controlled group” if, after a direct or indirect transfer, the same person owns directly or indirectly 100% of the transferor and transferee, or if the acquirer is holding all of the shares in the seller of the shares or the seller is holding all of the shares in the acquirer of the shares. This recently expanded group restructuring exception applies to all transfers of shares taking place in assessment periods beginning after 31 December 2009.
- **Built-in gain exception.** For harmful share transfers, a loss carry-forward is not forfeited up to the amount of the loss company’s built-in gains to the extent that these built-in gains are taxable in Germany. Consequently, built-in gains allocable to subsidiaries are not taken into account; see the discussion of capital gains and losses in Section B.

Under a proposed law change, the carryforward of losses would also be allowed in certain limited shareholder change situations if business continuation requirements are met. This would be aimed in particular at start-up or restructuring situations.

Loss carryforwards are also forfeited in the course of a merger, change of legal form and liquidation of the loss-making company.

Groups of companies. German tax law provides a tax consolidation for a German group of companies (*Organschaft*), which allows losses of group companies to be offset against profits of other group companies. Only German resident companies in which the parent company has held directly or indirectly the majority of the voting rights since the beginning of the fiscal year of the subsidiary may be included (this requirement is known as financial integration). A tax consolidation may cover corporate income tax, trade tax and VAT. To make the *Organschaft* effective for corporate income tax and trade tax purposes, the parent company and the German subsidiaries must enter into a profit-and-loss absorption agreement (*Gewinnabführungsvertrag*) for a minimum period of five years. Partnerships do not qualify as subsidiaries in a corporate income tax or trade tax *Organschaft*.

An *Organschaft* subsidiary must have its place of management in Germany and its legal seat in Germany or an EU/European Economic Area member state.

A domestic or foreign corporation, individual or partnership may become the head of an *Organschaft* if, in addition to the above requirements, the following requirements are met:

- The company has an active trade or business (generally assumed for corporations).
- The investments in the subsidiaries are assets of a German branch.
- The branch profits (including the income of the subsidiaries) are subject to German taxation for both domestic direct tax and tax treaty purposes.

The *Organschaft* for VAT requires the following:

- Financial integration (see above).
- Economic integration of the lower-tier entities. Economic integration exists if the business activities of the members of the group complement each other.

- Integration in organizational matters. Organizational integration exists if the group parent is able to impose its will on the group members and does so in the day-to-day business.

In contrast to the other Organschaft forms, Organschaft for VAT can begin and end during the course of the fiscal year.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Real property tax, on assessed standard value of real property; rate varies by municipality	0.65 to 2.83
Real estate transfer tax (RETT), on sales and transfers of real property, including buildings, and on certain transactions that are deemed to be equivalent to transfers of real property, such as the assignment of at least 95% of the shares of a German or foreign company that holds the title to domestic real property (however, a group exception may apply); levied on the purchase price of the real property or, in certain situations (such as when at least 95% of the shares of a real estate-owning company are transferred), on the assessed standard value of the real property	
Rate for real estate located in Bavaria and Saxony	3.5
Rate for real estate located in Hamburg	4.5
Rate for real estate located in Baden-Württemberg, Bremen, Lower Saxony Mecklenburg-West Pomerania, Rhineland-Palatinate and Saxony-Anhalt	5
Rate for real estate located in Berlin and Hesse	6
Rate for real estate located in Brandenburg, North Rhine-Westphalia, Saarland and Schleswig-Holstein and Thuringia	6.5
Value-added tax (VAT or Umsatzsteuer); on application, foreign enterprises may receive refunds of German VAT paid if they are neither established nor registered for VAT purposes in Germany; this application must be filed by non-EU enterprises by 30 June and by EU enterprises by 30 September, in the year following the year in which the invoice was received by the claimant)	
Standard rate	19
Reduced rate	7

E. Miscellaneous matters

Foreign losses. In principle, losses incurred by foreign permanent establishments are not deductible if a German tax treaty provides that a permanent establishment's income is taxable only in the country where it is located. However, these losses may be taken into account if they are incurred in non-treaty countries or if a tax treaty provides for the credit method, subject to the condition that the foreign branch is engaged in a specified active trade.

The German tax authorities refuse to grant the deduction of EU branch losses, and such cases will need to be litigated.

Foreign-exchange controls. No controls are imposed on the transfer of money in and out of Germany. However, specific reporting requirements for certain transactions must be met.

Debt-to-equity rules. The interest expense limitation rule (see Section C) replaced the former thin-capitalization rules. Consequently, no statutory debt-to-equity ratio currently applies.

Anti-avoidance legislation. Several tax laws contain anti-avoidance legislation. The Corporate Income Tax Act deals with constructive dividends by corporations, both in Germany and abroad. The Foreign Transactions Tax Act deals with all kinds of related or affiliated taxpayers, such as individuals, partnerships and corporations, and is restricted to cross-border transactions. It contains extensive provisions on controlled foreign company (CFC) and passive foreign investment company income. The General Tax Code contains a general anti-abuse rule stating that a tax liability cannot be effectively avoided by an abuse of legal forms and methods if obtaining a tax advantage is the only reason for such an arrangement.

The Income Tax Act provides anti-abuse rules that are aimed at preventing the unjustified reduction of German withholding taxes under a tax treaty, under the EU Parent-Subsidiary Directive or under the EU Interest-Royalty Directive (treaty or directive shopping). Effective from 1 January 2012, the German anti-treaty-shopping rule was changed to conform to EU law. However, the increased substance requirement must still be fulfilled (see Section F).

Germany's newer tax treaties include "switch-over" clauses as well as "subject-to-tax" clauses. Domestic treaty-overriding rules, which are aimed at preventing double non-taxation, also exist.

Transfer pricing. German tax law contains a set of rules that allow the adjustment of transfer prices. These rules include general measures on constructive dividend payments and constructive contributions and a specific adjustment provision in the CFC legislation. All of the measures mentioned in the preceding sentence are based on the arm's-length principle. Germany has implemented the Authorized Organisation for Economic Co-operation and Development (OECD) Approach (AOA). As a result, permanent establishments and partnerships are treated as separate entities, similar to corporations.

The Foreign Transactions Tax Act now specifically provides that the preferential bases for determining the transfer price are the traditional transaction methods (comparable uncontrolled price method, resale-minus method and cost-plus method) if comparable transactions can be determined. In addition, the code contains express language with respect to the determination of the arm's-length character of a transfer price if no comparables can be found. Effective from 1 January 2008, a special set of rules directed at securing the German tax revenue have been incorporated into the code. These rules deal with the determination of transfer prices in the event of a transfer of business functions abroad.

Specific documentation rules apply for transfer-pricing purposes. On request of a tax auditor, the taxpayer is required to submit the

transfer-pricing documentation within 60 days (in the case of extraordinary business transactions, within 30 days). Non-compliance with these rules may result in a penalty (if imposed) of at least EUR100 per day of delay up to a maximum of EUR1 million. If no documentation is provided or if the documentation is unusable or insufficient, a surcharge of 5% to 10% of the income adjustment is applied with a minimum surcharge of EUR5,000.

Draft legislation that intends to implement the OECD's Base Erosion and Profit Shifting (BEPS) Action Plan 13 recommendation into local legislation has been published. Under the draft legislation, a Country-by-Country Reporting (CbCR) requirement will be applied to German taxpayers for fiscal years beginning after 31 December 2015, if they belong to a group with consolidated revenues of at least EUR750 million in the preceding fiscal year. The providing of a master file in addition to a local file on request will be required for fiscal years beginning after 31 December 2016 if the German taxpayer's revenue was at least EUR100 million in the preceding fiscal year.

Real estate investment trusts. Effective from 1 January 2007, Germany introduced the real estate investment trust (REIT), which is a tax-exempt entity. In general, an REIT is a listed German stock corporation (AG) that satisfies certain conditions, including, but not limited to, the following:

- It has a free float (volume of shares traded on the stock exchange) at the time of listing of at least 25%.
- Its real estate assets account for at least 75% of its gross assets.
- Rental income from real estate accounts for at least 75% of its total income.
- Ninety percent of its income is distributed to its shareholders.

Mutual assistance. Germany exchanges tax-relevant information with various countries based on tax treaties, other bilateral agreements (for example, the Intergovernmental Agreement between Germany and the United States with respect to the US Foreign Account Tax Compliance Act [FATCA]), EU Directives (such as the EU Mutual Assistance Directive) and multilateral agreements (such as the OECD's Multilateral Competent Authority Agreement for the Common Reporting Standard [CRS]). Recently enacted legislation focuses in particular on the automatic exchange of information.

Automatic exchange of financial account information. Under the FATCA Intergovernmental Agreement of 31 May 2013 and the FATCA Implementation Decree of 23 July 2014, German financial institutions must report certain financial account information regarding US reportable accounts on an annual basis to the German Federal Central Tax Office (Bundeszentralamt für Steuern), which automatically exchanges this information with the US Internal Revenue Service. In addition, effective from 1 January 2016, Germany implemented the CRS. German financial institutions are required to identify reportable accounts, which are the accounts held by the following:

- An individual or certain entities resident in a CRS zone country
- "Passive nonfinancial entities" (as defined) with one or more controlling persons resident in a CRS zone country

These accounts must then be reported annually by 31 July for the preceding reporting period to the German Federal Central Tax

Office (with first reporting in 2017 for 2016), which passes this information on to the competent tax authorities where the reportable person is tax resident.

Under both exchange-of-information regimes, the term “financial institution” is defined rather broadly and does not only include banks, financial services companies, investment funds and insurance companies, but also certain holding companies, treasury centers, captive finance companies, other investment entities, pension entities and certain other entities.

Automatic exchange of advance cross-border rulings and advance pricing agreements. The German implementation of changes to the EU Mutual Assistance Directive provides for the automatic exchange of advance cross-border rulings and advance pricing arrangements (APAs) between EU member states. The information exchange occurs within three months after the end of the calendar half-year in which the advance cross-border rulings were granted. In line with the EU directive, the information exchange obligation affects rulings and arrangements that are issued, amended or renewed as of 1 January 2017. However, under certain conditions, rulings and arrangements that have been issued or amended since 1 January 2012 are also subject to exchange.

F. Treaty withholding tax rates

The rates listed below reflect the lower of the treaty rate, the rate under domestic tax law or the rate under the EU Parent-Subsidiary Directive, which has been incorporated into the German Income Tax Act (Section 43b ITA).

Under the amended German anti-treaty shopping rules, effective from 1 January 2012, tax relief is denied if and to the extent that the foreign company does not earn its gross income from its own economic activities and if at least one of the following two conditions is met:

- For income not resulting from the foreign company’s own economic activity, no economic or other relevant reason exists to interpose the foreign company.
- The foreign company does not participate in the general marketplace with appropriately equipped business premises.

In addition, a foreign company not earning its gross income from its own economic activities has the burden of proof that the above-mentioned conditions are not met and, as a result, the withholding tax relief should be granted; that is, the foreign company has the burden of proof with respect to the existence of economic or other relevant reasons for its interposition and the burden of proof with respect to its business substance. If a foreign company earns its gross income from genuine economic activities, no business purpose test or substance test as mentioned above is required for the application of the tax relief under a treaty or an EU directive. If a foreign company earns income from both genuine economic activities and non-genuine economic activities and if, with respect to the non-genuine business activities, the business purpose and substance tests are met, the foreign company can obtain tax relief under EU law and/or the applicable tax treaty, regardless of the fulfillment of any percentage threshold for the income from genuine economic activities. If either of the conditions is not met, then the relief is denied for the income from non-genuine economic activities.

- (1) These rates also apply to silent partnership income. Under German tax law, income from a silent partnership is regarded as a dividend if the silent partnership is characterized as a typical silent partnership. Profits from an atypical silent partnership are considered business profits. Income from participation rights (Genussrechte) is treated as a dividend if the holder participates in profits and liquidation results. Otherwise, the income from participation rights is considered to be interest for treaty purposes.
- (2) German interest withholding tax is imposed only on interest paid by financial institutions, on interest from over-the-counter business and on interest payments on convertible and profit-sharing bonds and participating loans (for details, see footnote (g) to Section A). In addition, interest on loans secured by fixed property located in Germany is subject to a limited German tax liability; tax on such interest is not imposed by withholding tax but by the issuance of an assessment notice on the filing of a tax return. If not otherwise noted, the treaty withholding tax rate also reduces the German statutory tax rate for interest on loans secured by fixed property located in Germany.
 - (a) The rate applies if the income is subject to tax in the other state.
 - (b) The rate is 2% (0% under the Latvia and Lithuania treaties) for interest on loans granted by banks or for interest on loans granted in connection with sales on credit of industrial, commercial or scientific equipment or sales of merchandise or services between enterprises.
 - (c) Silent partnership income is taxed at the domestic rate of 25% (reduced on application for refund to 15% if the recipient is a corporation and if the German anti-treaty shopping rules do not apply).

- (d) Interest on participating loans and profit-sharing bonds is taxed at 25% (reduced on application for refund to 15% if the recipient is a corporation and if the German anti-treaty shopping rules do not apply).
- (e) Under the Bolivia and Kazakhstan treaties, interest is exempt from withholding tax if it is paid to a contracting state. Under the other treaties, interest paid to the contracting states or subdivisions or paid to certain banks may be exempt from withholding tax.
- (f) A 10% rate (0% under the Belarus treaty) may apply to certain types of interest, such as interest paid on bank loans, or interest paid in connection with the sale of industrial, commercial or scientific equipment or with financing activities in the public sector. Regarding the treaties with China and the Philippines, the interest may be taxed only in the contracting state in which the recipient is a resident if the recipient is the beneficial owner of the interest and if the interest is paid in connection with the sale of commercial or scientific equipment on credit; or (only relevant for the Philippines) in connection with the sale of goods by an enterprise to another enterprise on credit.
- (g) Interest on convertible bonds and profit-sharing bonds is taxed at 15%.
- (h) Interest paid to an enterprise is exempt from withholding tax if either of the following applies:
- The recipient is a company owning more than 25% of the paying company.
 - The interest is derived from bonds other than commercial bills of exchange.
- (i) Interest on securities issued by a contracting state or subdivision thereof or paid to certain state banks or to a contracting state or subdivision thereof is exempt from withholding tax.
- (j) Interest on loans secured by immovable property located in Germany may be subject to the 15% (25% until 2007) corporate income tax rate.
- (k) Interest payments to banks or on loans granted by banks may be subject to a 10% withholding tax rate.
- (l) A 0% rate applies to royalties for the use of, or right to use, scientific rights, patents, marks, samples, models, plans, formulas or procedures, as well as to royalties for the disclosure of industrial, commercial or scientific know-how.
- (m) Interest payments to a company that is genuinely carrying on a banking enterprise or is controlled by one or more companies genuinely carrying on such an enterprise are exempt from tax.
- (n) Royalties for motion picture films are treated as business profits.
- (o) Interest is exempt from withholding tax in Germany if the recipient is the government, the Central Bank of Azerbaijan or the national petroleum funds. Interest is exempt from withholding tax in Azerbaijan if it is paid on a loan guaranteed by the German government or if the recipient is the government, the German Central Bank, the Reconstruction Loan Corporation or the German Investment and Development Company (DEG).
- (p) Trademark royalties are taxed at a rate of 25%.
- (q) Copyright royalties for literary, dramatic, musical or artistic works (except motion picture films or television videotapes for Canada) are exempt from withholding tax.
- (r) For royalties with respect to the use of technical, commercial or scientific equipment, the rate is reduced to 0% under the Canada treaty, to 6% under the China treaty, to 5% under the Estonia, Latvia and Lithuania treaties, to 2% under the Korea treaty and to 3% under the Uzbekistan treaty.
- (s) Agreement has been reached on a new tax treaty, but the content has not yet been published.
- (t) A 0% rate applies to royalties for the use of, or the right to use, copyrights, including those for films and television. For Tunisia, the rate is 10% and does not apply to film and television copyrights. For Finland and Tunisia, copyrights specifically include those for literary, scientific and artistic works. For Trinidad and Tobago, they specifically exclude film and television copyrights. Under the Belarus treaty, the rate is 5% for royalties paid for the use of, or the right to use, copyrights of literary and artistic works, including films, television and broadcasts.
- (u) This treaty does not apply to the Hong Kong and Macau Special Administrative Regions (SARs).
- (v) A 20% rate applies to payments made for trademarks or for copyrights, excluding motion picture films or tapes for television or broadcasting.
- (w) Royalties for copyrights of literary or artistic works, motion picture films, or television or broadcasting are taxed at 20%.
- (x) Royalties for copyrights of literary, artistic or scientific works are taxed at 5%.
- (y) The treaty withholding tax rate increases to 15% (Albania, China [10%/15%; see footnote (rr)], Estonia, Mongolia, Switzerland, Syria, Ukraine and United Arab Emirates, 10%; Georgia and Israel, 5%/10%; United States, 5%/15%; Philippines and Vietnam, 10%/15%; Iran, Thailand, Trinidad and Tobago and

Zimbabwe, 20%) if the recipient is not a corporation owning at least 25% (Algeria, Austria, Bulgaria, Canada, Croatia, Cyprus, Denmark, France, Ghana, Hungary, Ireland, Israel, Japan, Kuwait, Macedonia, Malaysia, Malta, Mauritius, Mexico, Mongolia, Namibia, Poland, Romania, Russian Federation, Singapore, Spain, Syria, Tajikistan, United Arab Emirates, United Kingdom and Uruguay, 10%; Georgia, 10%/50%; United States, 10%/80%; Venezuela, 15%; Belarus, Costa Rica, Pakistan, Switzerland and Ukraine, 20%; Philippines and Vietnam, 70%/25%) of the distributing corporation or if the participation does not have a specific value (Azerbaijan EUR150,000; Belarus EUR81,806.70; Georgia EUR3 million/EUR100,000; Russian Federation EUR80,000). Under the treaty with the United Arab Emirates, a tax rate of 15% applies to real estate investment corporations that are not or only partially subject to tax.

- (z) A 0% rate may apply under the EU-Switzerland treaty.
- (aa) The United States treaty provides for a 0% rate if the participation is at least 80% for a period of 12 months and if the conditions of the Limitation of Benefit test under Article 28 are fulfilled.
- (bb) The rate is reduced to 0% for interest paid on a loan guaranteed by Hermes-Deckung (this relates to security given by the German government for loans in connection with deliveries by German suppliers to foreign customers, particularly customers in developing countries).
- (cc) The rate is reduced to 10% for royalties for the use of commercial or scientific equipment.
- (dd) The 7.5% rate applies to dividends paid to companies owning at least 25% of the voting shares of the payer. A 15% rate applies if a recipient company owns less than 25% of the voting shares and if it is subject to tax on such dividend income. Otherwise, the full domestic German rate applies.
- (ee) The withholding tax rate applicable to fees for technical services is 7.5%.
- (ff) Germany has agreed with the Czech Republic and the Slovak Republic to apply the treaty with the former Czechoslovakia.
- (gg) Germany honors the USSR treaty with respect to all former Soviet republics except for Belarus, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, the Russian Federation and Ukraine. This has been acknowledged by Armenia, Moldova and Turkmenistan. Germany has entered into tax treaties with Azerbaijan, Belarus, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, the Russian Federation, Tajikistan, Ukraine and Uzbekistan. Withholding tax rates under these treaties are listed in the above table. Germany is engaged in tax treaty negotiations with Armenia and Turkmenistan.
- (hh) The treaty with the former Yugoslavia applies to Bosnia and Herzegovina, Kosovo, Montenegro and Serbia. Germany has entered into tax treaties with Croatia, Macedonia and Slovenia. The tax rates under these treaties are listed in the table above.
- (ii) Dividends distributed by a German subsidiary to an EU parent company are exempt from withholding tax if the recipient owns 10% or more of the subsidiary. This exemption also applies if the participation is 10% or more and if the EU country where the parent company is located provides the exemption reciprocally. If the EU directive does not apply, the following rules apply:
- The withholding tax rate increases to 5% (Finland 10%) if the recipient owns at least 10% (Czechoslovakia, Estonia, Finland, Italy, Latvia, Lithuania and Slovenia, 25%) of the distributing company.
 - For Belgium, Czechoslovakia, Italy, Portugal and Sweden, the withholding tax rate increases to 15% (Ireland, 10%; Greece, 25%) for all shareholdings (under the Sweden treaty, only for shareholdings of less than 10%). Under the Netherlands and United Kingdom treaties, a rate of 10% applies for dividend payments to pension schemes.
- (jj) The rate is 5% for interest on loans granted by banks.
- (kk) The rate is reduced to 5% as long as German domestic law does not impose withholding tax on interest payments to nonresidents.
- (ll) The rate is 0% for interest in connection with sales of merchandise.
- (mm) The rate is reduced to 7.5% for royalties in connection with the use of technical equipment.
- (nn) Under the Tajikistan treaty, the 5% rate applies to the following:
- Royalties for the use of, or the right to use, copyrights of literary or artistic works, including motion picture films, or for the use of, or the right to use, names, pictures or similar personal rights
 - Royalties for the recording of artistic or athletic shows for television or radio broadcasting
 - Royalties for the use of, or the right to use, scientific rights, patents, trademarks, samples, models, plans, formulas or procedures for commercial and industrial or scientific know-how

Under the Azerbaijan treaty, a 10% rate applies to the royalties described in the first two bullets above, while a 5% rate applies to the royalties described in the third bullet.

- (oo) Under the 2009 Annual Tax Act, the rate may be reduced to 15% if the non-resident dividend recipient qualifies under the German anti-treaty shopping rules.
- (pp) A 5.5% solidarity surcharge applies.
- (qq) The 0% rate applies to corporations if, at the time the dividend distribution takes place, the recipient has held a direct and continuous shareholding of at least 10% (Japan, 25%) of the voting rights for the last 12 months (Japan, 18 months). The withholding tax rate is increased to 5% if the corporation does not fulfill the requirement of 10% of the voting rights for the last 12 months (Japan, 6 months) before the dividend distribution. Regarding Liechtenstein, on application, the 5% tax can be refunded if the requirement of 10% of the voting rights for a continuous 12 months is fulfilled after the dividend distribution has taken place. A 15% withholding tax rate applies in all other cases, especially, regarding Liechtenstein, to certain investment funds.
- (rr) A 15% rate applies to dividends that are paid out of income or gains derived from immovable property within the meaning of Article 6 by an investment vehicle.

Germany has initialed and/or signed new tax treaties with Armenia, Australia, Belgium, Croatia, Ecuador, Egypt, Finland, Greece, Iceland, Macedonia, Oman, Poland, Singapore, South Africa, Sri Lanka, Trinidad and Tobago, Tunisia and Turkmenistan. At the time of writing, the domestic legal procedures for the entry into force of those treaties had not yet been concluded.

Germany is negotiating or renegotiating tax treaties with Argentina, Bangladesh, Bolivia, Canada, Colombia, Cuba, Denmark, Ethiopia, Ghana, the Hong Kong SAR, India, Indonesia, Jordan, Korea (South), Kuwait, Kyrgyzstan, Liberia, Morocco, Namibia, Portugal, Qatar, Rwanda, Serbia, Sweden, Switzerland, Tajikistan, Tanzania, Thailand, Ukraine and Vietnam.

Net Operating Losses (Years)

Carryback	Unlimited (d)
Carryforward	3/5 (e)

- (a) Applicable to payments to residents and nonresidents.
- (b) This is a final tax for both residents and nonresidents without a permanent establishment in Ghana.
- (c) This is a final tax for nonresidents without a permanent establishment in Ghana only.
- (d) Losses incurred on completion of long-term contracts may be carried back to prior tax years.
- (e) Enterprises that operate in government priority sectors (petroleum operations, minerals and mining operations, energy and power, manufacturing, farming, agro-processing, tourism, and information and communication technology businesses) are allowed to carry forward their losses for a period of five years. All other enterprises are allowed to carry forward their losses for a period of three years. In addition, losses incurred by venture capital financing companies on the disposal of shares invested in venture capital subsidiary companies under the Venture Capital Trust Fund Act, 2004 (Act 680) and losses incurred by qualifying venture capital financing companies on shares in any venture may be carried forward for five years after the disposal of the shares.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are subject to tax on their business or investment income for the year, regardless of whether the source of the income still exists. A company is resident in Ghana if it is incorporated under the laws of Ghana or if its management and control are exercised in Ghana at any time during the year. Permanent establishments of nonresident companies in Ghana are also subject to tax on their worldwide income.

Rates of corporate income tax. The standard corporate income tax rate is 25%. However, various other tax rates apply to income derived from specified business activities.

Income derived from non-traditional exports is taxed at a rate of 8%. Income derived by banks from loans granted to farming enterprises is subject to tax at a rate of 20%. The rate of tax applicable to income derived by financial institutions from loans to leasing companies is 20%.

Rural or community banks are subject to tax at a rate of 1% for a period of 10 years beginning with their first year of operations.

The corporate income tax rate applicable to companies principally engaged in the hotel industry is 22%.

For petroleum extracting companies, the tax rate is 35%. The rate is consistent with the rate provided in the publicly disclosed petroleum agreements that have been signed with the government of Ghana. After a company has recovered all outlays from an oil field plus a specified rate of return after deduction of tax, royalties and an inflation adjustment, the government may negotiate for an additional share of the crude oil profits.

Mining companies are subject to corporate income tax at a rate of 35%. A holder of a mining lease, restricted mining lease or small-scale mining license must pay a royalty with respect to minerals obtained from its mining operations in Ghana. The royalty must be paid at the prescribed rate and in the prescribed manner.

Tax incentives. Ghana offers tax exemptions and tax reductions to companies engaged in specified industrial activities.

Income derived by companies from the business of constructing affordable low-cost residential premises for lease or sale is subject to tax at a rate of 1% for a period of five tax years (years of assessment). The tax-incentive period begins with the tax year in which the company begins its operations. If the company's accounting year differs from the calendar year, the beginning of the tax-incentive period is the tax year in which the accounting period of the first year of operations begins.

Rural banks are subject to tax at a rate of 1% for their first 10 years of operation.

The income of a venture capital financing company is subject to tax at a rate of 1% for five years if the company satisfies the eligibility requirements for funding under the Venture Capital Trust Fund Act. The tax-incentive period begins with the tax year in which the company satisfies the eligibility requirements.

Cocoa farmers are exempt from tax on income derived from cocoa. Cattle ranchers are subject to tax at a rate of 1% for the first 10 tax years. Income derived from tree crops, such as coffee, oil palm, shea nut, rubber and coconut, is subject to tax at a rate of 1% for 10 years following the first harvest. For a company's first five years of operations, income derived from livestock (other than cattle), fishing and cash crops, such as maize, rice, pineapple, cassava and yam, is subject to tax at a rate of 1%.

Income of a company from an agro-processing business conducted wholly in Ghana is subject to tax at a rate of 1% for a period of five tax years. The period begins with the tax year in which the company begins commercial production. If the company's accounting year differs from the calendar year, the beginning of the period is the tax year in which the accounting period of the first year of production begins.

Income of a company that commercially produces cocoa byproducts wholly in Ghana from substandard cocoa beans, cocoa husks and other cocoa waste as the principal raw materials is subject to tax at a rate of 1% for a period of five tax years. The tax-incentive period begins with the tax year in which the company begins commercial production. If the company's accounting year differs from the calendar year, the beginning of the period is the tax year in which the accounting period of the first year of production begins.

The income of a company whose principal activity is the processing of waste, including recycling of plastic and polythene material for agricultural or commercial purposes, is subject to tax at a rate of 1% for a period of seven tax years. This period begins with the tax year in which the company begins its operations. If the company's accounting year differs from the calendar year, the beginning of the tax-exemption period is the tax year in which the accounting period of the first year of operations begins.

Nonresident companies engaged in air and sea transportation are exempt from tax if the Commissioner-General of the Ghana Revenue Authority (GRA) is satisfied that the same types of companies resident in Ghana are granted an equivalent exemption by the nonresident company's country of residence.

Manufacturing enterprises, other than those operating in free zones or engaged in the export of non-traditional goods, located

in regional capitals other than Accra are entitled to a 25% income tax rebate, while manufacturing enterprises located outside regional capitals other than Tema are entitled to a 50% income tax rebate.

Capital gains. A company that derives a gain from the realization of a capital asset is required to include the gain in its business income unless the asset is held or used for investment purposes. In such case, the gain is included in determining the company's investment income.

To calculate a gain from the realization of a capital asset, the cost basis of the asset is deducted from the proceeds received on the disposal of the asset. The cost basis of a chargeable asset is the sum of the following:

- Cost of the asset including incidental costs
- Expenditure incurred to alter or improve the asset
- Expenditure relating or incidental to the disposal of the asset

Administration. The Ghana Revenue Authority (GRA) is responsible for the administration and collection of all taxes.

The tax year is the calendar year. If a company's accounting year differs from the calendar year, its basis period for a tax year is the accounting year ending within the tax year.

Companies must file their tax returns within four months after the end of their accounting year.

Assessed tax must be paid on the date specified in the notice of assessment from the Commissioner-General of the GRA. In general, companies whose accounting year differs from the tax year must make quarterly payments at the end of the third, sixth, ninth and twelfth months of their accounting year.

Companies that fail to pay income tax by the due date are liable to pay interest at 125% of the statutory rate on the amount of tax that remains unpaid, in addition to the tax payable. The interest is compounded monthly.

To make tax collection more efficient, taxpayers are segmented into the following three categories:

- Large taxpayers
- Medium taxpayers
- Small taxpayers

The 2016 Budget Statement and Economic Policy of the Government of Ghana proposes a review of the current thresholds for the classification of taxpayers.

Dividends. An 8% withholding tax is imposed on dividends paid to resident shareholders, unless exempt, and nonresident shareholders. This is a final tax.

Foreign tax relief. Foreign tax paid on foreign income is allowed as a credit against tax payable with respect to the foreign income received in Ghana. The amount of tax chargeable with respect to the income is reduced by the amount of the credit.

C. Determination of trading income

General. Chargeable income is based on the income reported in entities' financial statements, subject to certain adjustments.

To be deductible, expenses must be wholly, exclusively and necessarily incurred in the production of income by the company during the financial year. Expenses that may be deducted include the following:

- Interest (subject to thin-capitalization rules; see Section E)
- Rent
- Repair of plant, premises, machinery and fixtures (see *Repairs*)
- Bad debts (see *Provisions*)
- Research and development expenditure
- Financial costs (see *Financial costs*)

Repairs. Expenditure on repairs and improvements to a depreciable asset are deductible expenses, regardless of whether they are of a capital nature. However, the amount deductible is limited to 5% of the written-down value of the pool to which the depreciable asset belongs. The excess expenditure is added to the written-down value of such pool.

Financial costs. Financial costs other than interest incurred by an entity are deducted in calculating the income of the entity from an investment or business. However, the deduction is limited to the sum of the following:

- Financial gains to be included in calculating the income of the entity from the business or investment
- Fifty percent of the chargeable income of the entity for the year from the business or investment, calculated without including financial gains derived by the entity or deducting financial costs incurred by the entity

Any outstanding financial costs can be carried forward to up to five tax years.

The timing of the inclusions and exclusions of financial gains and costs is determined in accordance with generally accepted accounting principles (GAAP).

Inventories. In determining the chargeable income of a person from a business, the cost of inventory used in generating the income is deducted. The deductible amount is determined by adding to the value of the opening stock the expenses incurred by the person that is included in the cost of trading stock and deducting the value of the closing stock from the amount.

Provisions. Bad debts incurred in business are deductible if the company proves to the satisfaction of the Commissioner-General of the GRA that the debts have become bad, and that it has taken all reasonable steps to ensure payment, but to no avail. Under the Tax Act, provisions for bad and doubtful debts are not allowed for tax purposes.

All amounts recovered with respect to bad debts that were deducted must be included in income for the accounting year of the recovery.

Research and development expenditure. Expenses with respect to research and development are deductible if the expenses are wholly, exclusively and necessarily incurred in generating the income of the business, regardless of whether the expense is of a capital nature.

Capital allowances (tax depreciation). Capital allowances are granted on depreciable assets. Depreciable assets are classified into five main classes. Assets in Classes 1, 2, and 3 are placed in separate pools, and capital allowances granted with respect to the pool. Capital allowances for Classes 4 and 5 assets are granted on individual assets of the same class. To claim capital allowances, a company must satisfy the following conditions:

- It used the asset in the production of the income.
- It incurred cost in purchasing the asset.

Capital allowances granted for a particular tax year are deemed to be deductions in arriving at the chargeable income or loss of the company.

The following table presents the various classes of assets and details for calculating their capital allowances (capital allowances granted with respect to assets used in mining and petroleum operations are not included in the table).

Class	Assets	Rate %	Formula for calculating capital allowances
1	Computers and data handling equipment, together with peripheral devices	40	$(A \times B \times C) \div 365$ (a)
2	Automobiles; buses and minibuses; goods vehicles; construction and earth-moving equipment, heavy general purpose or specialized trucks; trailers and trailer-mounted containers; plant and machinery used in manufacturing; and costs of a capital nature with respect to long-term crop planting costs	30	$(A \times B \times C) \div 365$ (a)
3	Railroad cars, locomotives and equipment; vessels, barges, tugs, and similar water transportation equipment; aircraft; specialized public utility plant, equipment, and machinery; office furniture, fixtures and equipment; and any depreciable asset not included in another class	20	$(A \times B \times C) \div 365$ (a)
4	Buildings, structures and similar works of a permanent nature	10	$(A \times B \times C) \div 365$ (b)(c)
5	Intangible assets	– (d)	$[(A \div D) \times C] \div 365$ (c)(e)

- (a) A is the written-down value of the pool at the end of a basis period, B is the depreciation rate applicable to the pool, and C is the number of days in the period.
- (b) A is the cost base of the asset, B is the depreciation rate, and C is the number of days in the basis period.
- (c) The total amount of capital allowances granted for a Class 4 or 5 asset may not exceed the cost basis of the asset.
- (d) The rate is determined by formula.
- (e) A is the cost base of the asset, C is the number of days in the basis period, and D is the useful life of the asset in whole years calculated at the time the asset is acquired.

Mining and petroleum. A different method applies for granting capital allowances for mining and petroleum companies or contractors. For mining and petroleum operations, assets are pooled on a year-by-year basis, and assets acquired each year represent a separate pool. Capital allowances are calculated on straight-line basis at a rate of 20% on each separate pool.

Relief for losses. Enterprises engaged in government priority sectors are permitted to carry forward losses for a period of five years. However, enterprises operating in any other sector of the economy are allowed to carry forward losses for a period of three years.

Losses incurred on completion of long-term contracts may be carried back to prior tax years.

Groups of companies. Each company within a group must file a separate tax return. Offsetting of losses against profits among members of the group is not allowed.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT); imposed on all supplies of goods and services made in, or goods imported into, Ghana, except for exempt items; services imported for the person's own consumption are subject to a reverse VAT charge	15
National Health Insurance Levy (NHIL); imposed on all supplies of goods and services made in or imported into Ghana, except for supplies that are specifically exempt; services imported for the person's own consumption are subject to a reverse a NHIL charge	2.5

E. Miscellaneous matters

Foreign-exchange controls. The currency in Ghana is the Ghana cedi (GHS).

The Foreign Exchange Act, 2006 (Act 723) governs foreign-exchange controls in Ghana. However, the Bank of Ghana exercises much discretion in administering the act.

Anti-avoidance legislation. A company must obtain a tax-clearance certificate to engage in certain transactions, including the purchase of goods in commercial quantities from producers, distributors,

manufacturers or importers. The Commissioner-General of the GRA has the power to disregard or re-characterize fictitious arrangements and schemes entered into or carried out for the purposes of avoiding tax. The income tax law contains the following three specific anti-avoidance measures:

- Income splitting (see Section C)
- Transfer pricing (see *Transfer pricing*)
- Thin capitalization (exempt-debt to exempt-equity ratio; see *Debt-to-equity ratio*)

Transfer pricing. Ghana introduced transfer pricing regulations in September 2012. The regulations follow the Organisation for Economic Co-operation and Development (OECD) Transfer Pricing Guidelines. The regulations allow the use of the transfer-pricing methods outlined in the OECD guidelines and the use of an alternative method if the methods stated are not appropriate for determining the arm's-length price for the transaction. On the filing of a return, the Commissioner-General can use an alternative transfer-pricing method if the Commissioner-General takes the view that the method used does not result in the arm's-length price for a transaction.

The regulations also require entities that enter into related-party transactions to prepare contemporaneous documentation to support their returns. Entities must also submit transfer-pricing returns as part of their annual income tax returns within four months after the end of the accounting year.

Debt-to-equity ratio. If an "exempt-controlled resident entity," other than a financial institution, has an "exempt debt" to "exempt equity" ratio in excess of 3:1, no deduction is allowed for interest paid or a foreign-exchange loss incurred on the portion of the debt that exceeds the 3:1 ratio. Broadly, an "exempt-controlled resident entity" is a resident entity of which at least 50% of its underlying ownership or control is held by an "exempt person," which is a nonresident person or a resident person meeting certain criteria. The law also provides detailed definitions of "exempt debt" and "exempt equity."

F. Treaty withholding tax rates

The following are the maximum withholding rates under Ghana's double tax treaties for dividends, interest, royalties, and management and technology transfer fees.

	Dividends	Interest	Royalties and management and technology transfer fees
	%	%	%
Belgium	5	10	15
France	8	10	15
Denmark	5	8	8
Germany	8	10	15
Italy	5	10	10
Netherlands	8	10	15
South Africa	8	10	15
United Kingdom	8	10	15
Non-treaty countries	8	8	15/20*

* The 15% rate applies to royalties. The 20% rate applies to management and technical service fees.

A. At a glance

Corporate Income Tax Rate (%)	10 (a)
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	10 (a)
Withholding Tax (%)	
Dividends	0
Interest	0
Royalties	0
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	Unlimited (b)

- (a) A tax rate of 20% applies to utility, energy and fuel supply companies and companies abusing a dominant market position.
- (b) In general, the carryforward is unlimited. However, if both a change in ownership and a major change in the nature or conduct of a trade carried on by the company occurs within a three-year period, losses incurred before the change in ownership cannot be offset against losses incurred subsequent to the change in ownership.

B. Taxes on corporate income and gains

Corporate income tax. Companies are taxed on profits “accrued in or derived from” Gibraltar. “Accrued in or derived from” is defined by reference to the location of the activities that generate the profits. If a company’s income results from an underlying activity that requires a license and regulation under any law of Gibraltar, the income is deemed to accrue in and derive from Gibraltar, except for income from activities carried on outside Gibraltar by a branch or permanent establishment.

The above rule applies regardless of whether a company is registered in Gibraltar or whether it is ordinarily resident in Gibraltar. A company is ordinarily resident in Gibraltar if central management and control is exercised there.

Rates of corporation tax. All companies are chargeable on taxable profits at a rate of 10%, except for utility, energy and fuel supply companies and companies deemed to be abusing a dominant market position, which are subject to tax at a rate of 20%.

Capital gains. Capital gains are not taxed in Gibraltar. Capital losses are not deductible.

Administration. For financial periods ending on or after 1 January 2016, all companies that are registered in Gibraltar or that have income assessable to tax in Gibraltar are required to file a return. For prior financial periods, only companies with income assessable to tax in Gibraltar were required to file a return. Returns, accounts and computations must be filed within nine months after the end of the month in which the financial period ends.

For financial periods ending on or after 1 January 2016, all companies incorporated in Gibraltar that declare a dividend in a financial period are required to file a dividend return within nine months after the end of the month in which that financial period ends. Before 2016, only companies incorporated in Gibraltar that declared a dividend in favor of a person ordinarily resident in Gibraltar or in favor of another company incorporated in Gibraltar were required to file a dividend return.

Companies must make payments on account of their corporation tax by 28 February and 30 September each year. Each payment is made toward the tax liability for the financial period in which the payment on account is due. The amount of payment on account due is based on the tax payable for the last relevant financial period. An application can be made for a reduced or zero payment if basing the payment on a prior year would result in an excessive payment. The final payment with respect to a financial period is due within nine months after the end of the month in which that financial period ends.

Companies not complying with filing and payment deadlines are subject to penalties and surcharges.

A self-assessment system requires companies to assess correctly their tax liabilities or face significant penalties.

Companies may request advance tax rulings.

Dividends. Dividends paid by Gibraltar companies are not subject to withholding tax. Tax credits are attached to dividends paid by companies incorporated in Gibraltar. This tax credit equals the tax paid by the company on the profits out of which the dividend is paid. Restrictions may apply to how such tax credits may be utilized.

Dividend income is not taxable in the following circumstances:

- The dividend is received by a company from another company.
- The dividend is received by a person who is not ordinarily resident in Gibraltar.
- The dividend is received from a company that has its shares listed on a recognized stock exchange.
- The dividend represents the distribution of profits or gains on which no tax has been charged in accordance with the provisions of the Income Tax Act 2010 (the act contains rules governing the allocation of dividends to specific profits or gains).

The above exceptions may be subject to the anti-avoidance provisions introduced into the EU Parent-Subsidiary Directive, which apply from 31 December 2015.

Interest. Withholding tax is not imposed on the payment of interest. Interest income is not taxable, except for the following:

- Interest on loans or advances by one company to another company if the interest from an individual company is GIP100,000 or more per year. Under an anti-avoidance measure, interest received or receivable from different companies is considered to be from the same company for the purposes of the GIP100,000 threshold if those companies are “connected persons.” For this purpose, interest is deemed to be accrued and derived in Gibraltar if the company in receipt of the interest is a Gibraltar-registered company.
- Interest income of a company that lends to, or takes deposits from, the general public or engages in similar activities.

Royalties. Royalty income received or receivable by a company is taxable. Such income is deemed to be accrued and derived in Gibraltar if the company receiving the royalties is a Gibraltar-registered company.

Foreign tax relief. Unilateral tax relief is granted with respect to tax paid or payable in another jurisdiction on income from that jurisdiction. This is restricted to the tax that would otherwise have been payable in Gibraltar on that income.

C. Determination of trading income

General. Taxable profits are determined based on financial statements prepared in accordance with Gibraltar generally accepted accounting practice (GAAP), or UK GAAP or International Financial Reporting Standards, subject to certain adjustments and provisions.

In general, expenses must be incurred wholly and exclusively for the purposes of the trade, business, profession or vocation. However, specific reliefs and prohibitions exist for certain expenses.

Certain expenses are either not deductible or are subject to restrictions, including the following:

- Interest paid or payable to a person not resident in Gibraltar is not deductible to the extent that the interest is charged at a rate greater than a reasonable commercial rate.
- Depreciation and amortization of assets are not deductible (instead capital allowances are given; see *Tax depreciation [capital allowances]*).
- Contributions to a provident, pension or other fund for the benefit of employees are not deductible if the fund has not been approved by the Commissioner of Income Tax.
- The cost of entertaining existing and potential clients and persons introducing business, are deductible, but detailed rules restrict deductibility.
- For a branch or a company with a branch, the deduction for certain head office expenses or certain expenses incurred by a branch for the common purpose of the company is restricted to 5% of gross income of the branch.
- “General” expenses are apportioned between chargeable and non-chargeable income on a pro rata basis. The part of such expenses attributable to non-chargeable income is not deductible.

Tax depreciation (capital allowances). The first GIP30,000 of plant and machinery (including, among other items, fixtures,

fittings, equipment and commercial motor vehicles) acquired in a financial period is fully deductible in that period. In addition, the first GIP50,000 of qualifying capital expenditure on information technology investment in a financial period is also fully deductible.

All such assets are pooled for tax purposes. The pool is increased with respect to any additions in excess of initial allowances given, and reduced by the proceeds of any disposals in the period. The allowance for the year is then calculated at 15% of the value of the pool. The pool value is then reduced by that allowance and the remaining balance carried forward to the next period. For companies taxed at 20% (see *Rates of corporate tax*), the annual allowance is given at 20% instead of 15%.

Groups of companies. Gibraltar law does not provide for tax consolidation. It does not have any provision for group relief (that is, the use of tax losses of one group company by another group company).

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Stamp duty	
On the issuance or increase of authorized share capital, or on the issuance of loan capital; fixed amount per transaction	GIP10
On the purchase of real estate in Gibraltar	
First- and second-time buyers	
First GIP260,000 of purchase price	0%
Balance above GIP260,000 to GIP350,000	5.5%
Balance above GIP350,000	3.5%
Other buyers	
Purchase price not exceeding GIP200,000	0%
Purchase price between GIP200,001 and GIP350,000	2% on first GIP250,000, and 5.5% on balance
Purchase price of over GIP350,000	3% on first GIP350,000, and 3.5% on balance
Social insurance contributions, on employees' wages and salaries; payable on weekly wages by Employer	
Employer	20% (subject to minimum of GIP15 per employee per week and maximum of GIP32.97 per employee per week)
Employee (under 60)	10% (subject to minimum of GIP5 per week and maximum of GIP25.16 per week)

E. Miscellaneous matters

Foreign-exchange controls. Restrictions are not imposed on foreign exchange or on inward or outward investments. The transfer of profits and dividends, loan principal and interest, royalties and fees is unlimited, subject to company law.

Anti-avoidance legislation. Gibraltar tax law contains several anti-avoidance provisions.

The Commissioner of Income Tax may disregard part or all of arrangements that are deemed to be artificial and/or fictitious and whose purpose is to reduce or eliminate tax payable.

Any “notifiable arrangement” or “notifiable proposal” must be disclosed to the Commissioner of Income Tax. Detailed procedures exist for seeking clearance in advance of proposals. A timetable is provided for the Commissioner to request further information, to notify the applicant that anti-avoidance provisions will or will not apply, or to notify the applicant that the Commissioner requires a further 21 days to make a decision.

In certain circumstances, the deduction for expenses incurred in favor of a connected party or parties may be restricted to the lower of 5% of turnover or 75% of profit before taking into account the expenses in question.

Debt-to-equity ratios. Thin-capitalization rules apply to interest paid by a company in the following circumstances:

- The interest is paid to a connected party that is not a company.
- The loan is secured by assets belonging to a connected party that is not a company.

In the above circumstances, if the loan is not considered to be on arm’s-length terms and if the loan capital to equity ratio is greater than 5:1, interest paid by the company may be treated as a dividend instead of a deductible expense.

Interest paid to a connected party in excess of the amount that would have been charged on an arm’s-length basis may be deemed to be a dividend instead of a deductible expense.

Interest may be disallowed as a deductible expense if both of the following circumstances exist:

- The loan is secured by a cash deposit made with the lender (or party connected to the lender) or secured by certain investments.
- The income from the cash deposit or investment is not assessable to tax.

F. Tax treaties

Gibraltar has no tax treaties in force. Gibraltar has implemented the European Union (EU) Parent Subsidiary Directive and the EU Directive on Interest and Royalties. Notwithstanding the legislation arising from these EU directives, Gibraltar does not impose withholding tax on dividends, interest or royalties.

At the time of writing, changes to the tax law were expected. Because of these expected changes, readers should obtain updated information before engaging in transactions.

A. At a glance

Corporate Income Tax Rate (%)	29
Capital Gains Tax Rate (%)	29 (a)
Branch Tax Rate (%)	29
Withholding Tax (%)	
Dividends	15 (b)
Interest	
Bank Interest	15 (c)(d)
Interest on Treasury Bills and Corporate Bonds	15 (c)(d)
Repos and Reverse Repos	15 (c)(d)
Other Interest	
Paid to Greek Legal Entities	15
Paid to Foreign Legal Entities	15 (d)(e)
Royalties from Patents, Know-how and similar payments	20 (d)(e)
Technical Service Fees, Management Service Fees, Consulting Service Fees and Fees for Similar Services	20 (f)
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) For details regarding the taxation of capital gains derived by legal persons or legal entities, see Section B.
- (b) The 15% withholding tax rate applies to dividends and interim dividends distributed by a Greek corporation (*anonymos eteria*, or AE; (in certain countries, a corporation is referred to as a *société anonyme*, or SA) and profits distributed by a Greek limited liability company (*eteria periorismenis eftinis*, or EPE). This 15% withholding tax is subject to rates applicable under double tax treaties or under the European Union (EU) Parent-Subsidiary Directive (amended by Directive 2011/96/EC).
- (c) This 15% withholding tax is subject to rates applicable under double tax treaties or under the EU Interest-Royalties Directive.
- (d) This is a final tax if the beneficiary is a legal person (for example, a company) or legal entity that satisfies both of the following conditions:
- It does not have its tax residency in Greece.
 - It does not maintain a permanent establishment for corporate income tax purposes in Greece.
- (e) This 20% withholding tax is subject to rates applicable under double tax treaties or under the EU Interest-Royalties Directive. No tax is withheld on payments of royalties made to legal persons or legal entities that have their tax residence in Greece or that have a Greek permanent establishment in Greece.
- (f) If the 20% withholding tax does not exhaust the final Greek corporate income tax liability of the beneficiary, it is credited against the beneficiary's final Greek corporate income tax liability.

B. Taxes on corporate income and gains

Corporate income tax. Greek companies are taxed on their worldwide income. Foreign business enterprises are taxed only on income derived from a permanent establishment in Greece or on profits generated in Greece. An AE, SA or EPE is Greek if its corporate seat or place of effective management is located in Greece.

A legal person or entity is considered to be a Greek tax resident in the following cases:

- It is incorporated or established under Greek law.
- It has its registered office in Greece.
- Its place of effective management is in Greece at any time during the tax year.

The “place of effective management” concept should be reviewed on an ad hoc basis in the context of the factual background of each case. For this purpose, indicative criteria are listed, such as the following:

- The place where the day-to-day management of the company takes place
- The place where strategic business decisions are made
- The place where the annual general meeting of shareholders or partners or the board of directors takes place
- The place where the accounting books of the company are held
- The residence of the members of the board of directors

In addition, the Greek tax administration may examine additional factors, such as the residence of the majority of the shareholders or partners.

Rate of corporate income tax. The standard corporate income tax rate is 29%.

Capital gains. Capital gains earned by legal entities are treated as business income and are subject to corporate income tax at the standard rate of 29% if they derive from the following:

- Disposals of fixed assets
- Transfers of businesses as going concerns
- Disposals of real estate property that do not constitute a business activity per se
- Transfers of securities (such as listed shares, unlisted shares, interests in partnerships, treasury bills, Greek state bonds and derivatives)

Sales of listed shares are also subject to a 0.2% transaction duty.

Administration. The fiscal year coincides with the calendar year. Legal persons or entities keeping double-entry books may set their tax year to end on 30 June or on any other date coinciding with the tax year-end of their foreign shareholder. An option for a tax year exceeding 12 months is not available. Greek SAs or AEs, Greek EPEs and branches of foreign companies must file an annual corporate income tax return by the end of the sixth month following the end of their fiscal year.

In general, on filing their annual corporate income tax return, legal entities must make an advance payment against the next year's income tax liability. Such advance payment equals the amount calculated by applying a rate of 100% to the income tax

due for the year for which the return is filed. The final payment of tax is calculated by subtracting the advance payment made in the preceding year and other prepayments of tax (including taxes withheld at source) and foreign taxes paid on foreign-source income from the amount of tax due. The foreign tax credit cannot exceed the amount of Greek tax otherwise payable on the foreign-source income.

A description of the penalties is provided below; if more than one penalty applies to the same tax offense, only the provision providing for the largest penalty applies.

A failure to file a corporate income tax return or to file in time a corporate income tax return results in the imposition of an administrative penalty ranging from EUR100 (if no tax is due) to EUR500 (if tax is due).

A failure to pay corporate income tax as a result of filing an inaccurate corporate income tax return results in the imposition of the following penalties:

- If the filing of an inaccurate corporate income tax return results in a difference of corporate income tax of 5% to 20%, the penalty equals 10% of the amount of the difference between the tax assessed on the basis of the tax return and the corrective tax assessment.
- If the filing of inaccurate corporate income tax return results in a difference of corporate income tax exceeding 20% but not exceeding 50%, the penalty equals 25% of the amount of the difference.
- If the filing of inaccurate corporate income tax return results in a difference of corporate income tax exceeding 50%, the penalty equals 50% of the amount of the difference.

A failure to file a corporate income tax return when corporate income tax would be due results in the imposition of a penalty equal to 50% of the amount of corporate income tax avoided.

In addition to the above, interest in arrears for the late payment of corporate tax is assessed; the current rate is 0.73% per month.

A failure to file a withholding tax return, the filing of an inaccurate withholding tax return or the failure to pay withholding taxes on time results in the imposition of a penalty equal to 50% of the amount of the unpaid tax.

At the time of writing, it was expected that new legislation would revise the above penalty rates.

Dividends. A 15% withholding tax is imposed on dividends and interim dividends distributed to Greek or foreign beneficiaries by Greek SAs and profits distributed by Greek EPEs, unless an applicable double tax treaty provides otherwise (see Section F) or unless tax relief is available under the EU Parent-Subsidiary Directive (90/435/EEC), as amended by Directive 2011/96/EC). For details regarding the rules in this directive, please see below. This tax represents the final tax liability of the recipient with respect to the dividends received if the recipient is a legal entity that does not have tax residency in Greece and does not maintain a permanent establishment in Greece.

A Greek subsidiary is not required to withhold the 15% withholding tax from dividends and interim dividends distributed to their EU parent companies if all of the following conditions are satisfied:

- The EU parent company holds a minimum 10% participation in the Greek subsidiary.
- The EU parent company holds the above participation in the Greek subsidiary for at least two consecutive years.
- The recipient EU parent company satisfies all of the following additional conditions:
 - It has one of the legal types listed in Annex I of EU Directive 2011/96/EC.
 - It is tax resident in one of the EU member states (and is not considered tax resident in any non-EU country).
 - It is subject to one of the taxes listed in Annex I of Section B of EU Directive 2011/96/EC, with no option for a tax exemption.

Effective from 1 January 2014, if a Greek tax resident legal person distributes dividends to its parent company and if the parent company has not completed the two-year holding period for a 10% participation but meets the rest of the exemption requirements (see above), the distribution can be exempt from withholding tax, provided that the local Greek tax resident legal person deposits a bank guarantee in an amount based on a specific calculation. This amount is almost equal to the amount of the dividend withholding tax due.

Foreign tax credit. Foreign-source income is usually taxable with a credit for foreign income taxes paid, up to the amount of Greek tax corresponding to the foreign-source income. The credit cannot exceed the amount of Greek tax payable on the same amount.

C. Determination of trading income

General. Taxable income for all legal entities consists of annual gross income, less allowable deductions. In principle, expenses may be deducted only from gross income for the fiscal year in which they are incurred.

In general, effective from 1 January 2014, all ordinary business expenses and specific items mentioned in the tax law may be deducted for tax purposes (with the exception of certain expenses that the law explicitly indicates are not deductible for tax purposes) only if the following conditions are satisfied:

- They are made in the interest of the business or in the ordinary course of its business transactions.
- They reflect an actual transaction that has a value not considered lower or higher than the actual value, based on indirect audit methods (cross-checks).
- They are recorded in the accounting books for the period in which they are incurred and are supported by proper documentation.

Special reference is made to the deductibility of expenses made for scientific and technological research.

The new Income Tax Code also includes a list of nondeductible expenses.

Inventories. Effective from 1 January 2014, inventory and semi-finished products must be evaluated according to current accounting principles. The tax law does not determine any official method for stock valuation. However, beginning with the tax year in which a valuation method is first used by a company for valuation of its inventory and semifinished products, the company must use the method for a minimum of four years.

Provisions. Bad debt provisions and write-offs are deductible for corporate income tax purposes at a rate defined on a case-by-case basis, based the amount of the uncollected debt and the time period during which the debt remains uncollected.

For uncollected debts that do not exceed EUR1,000 and that are overdue for a period of more than 12 months, the taxpayer may establish a provision equal to 100% of the debt.

For uncollected debts that exceed EUR1,000 and that are overdue, the taxpayer may establish a provision equal to the following:

- 50% of the debt if it is overdue from 12 to 18 months
- 75% of the debt if it is overdue from 18 to 24 months
- 100% of the debt if this is overdue for more than 24 months

Restrictions are imposed on the formation of bad debt provisions for a shareholder or partner holding at least a 10% participation in a business and for business' subsidiaries with a minimum 10% participation. Special rules are also provided for the deduction of bad debt provisions by banks, leasing and factoring companies.

Depreciation. Depreciation is performed by applying a specific depreciation rate to the acquisition or construction cost for a business asset. The depreciation of each fixed asset begins the month following the month in which the asset is first used or put into service by the taxpayer. The following table provides the annual depreciation rates, effective from 1 January 2014.

Categories of assets	Depreciation rate (%)
Buildings, installations, facilities industrial installations, non-building facilities, warehouses and special loading and unloading vehicles	4
Plots of land used for mining purposes and quarries, except those used for ancillary mining activities	5
Public means of transportation (including airplanes, trains and ships)	5
Machinery and equipment (except for personal computers [PCs] and software)	10
Means of transportation of individuals	16
Means of transportation of goods	12
Intangible assets and royalties and expenses of multiannual depreciation	10
PCs and software	20
Other fixed assets	10

An option exists for one-off depreciation of fixed assets valued up to EUR1,500 in the year in which the assets are acquired and

placed in service. Newly established companies are eligible to claim depreciation for all of their fixed assets at a 0% rate for their first three years.

Relief for losses. Tax losses may be carried forward to offset business profits in the following five consecutive tax years from the tax year in which they are incurred. The right to carry forward tax losses ceases to apply if changes in ownership or voting rights exceed 33% in value or number, unless it is proven that the transfer was not made for the purpose of tax avoidance or tax evasion. Offsetting of losses incurred abroad against business profits derived domestically is not allowed, with the exception of income arising in other EU or European Economic Area (EEA) member states that is not exempted based on an applicable double tax treaty. Losses may not be carried back.

Groups of companies. Each company forming part of a group must file a separate return. The law does not provide for consolidated tax returns or other group relief.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT)	
Standard rate	24
Reduced rate	13
	(special reduced rate of 6%)
Stamp duty on private loan agreements	2.4/3.6
Capital duty	1.1
Annual real estate tax; imposed on the value of real estate owned by legal entities; the rate depends on the zone of the real estate, its surface, year built, whether the property faces a national road and other factors	Various
Special property tax; imposed on the "objective" value of real estate property; the tax does not apply if the company has listed shares or if it discloses its corporate structure and the ultimate individual shareholders or partners are revealed	15
Real estate transfer tax; imposed on taxable value	3

E. Miscellaneous matters

Foreign-exchange controls. As of July 2015, important restrictions have been introduced with respect to the transfer of money out of Greece. As a general rule, the transfer of funds to a foreign credit institution may be subject to certain preapprovals from the side of the Greek credit institution or from the competent Administrative Credit Committee of Greece; otherwise, it is prohibited (although some exemptions exist). Readers should obtain updated information before engaging in any transaction because the relevant rules are subject to amendment on a regular basis.

Transfer pricing. The Greek tax law includes a transfer-pricing clause (Articles 21 and 22 of the Code of Fiscal Procedure) that

is aligned with international standards. In addition, the transfer-pricing legislation requires that an enterprise maintain documentation files.

Effective from 1 January 2014, a new definition of “associated/affiliate enterprises” is introduced. The new law defines the term “associated person,” which extends to legal entities, individuals and any other body of persons. The term encompasses two persons if any of the following circumstances exists:

- One of them holds directly or indirectly shares, parts or quotas in the other of at least 33%, estimated on the basis of total value or number, or equivalent profit participation rights or voting rights.
- Another third person participates directly or indirectly in the other two in any of the aforementioned ways.
- Between them, direct or indirect management dependence or control exists or the possibility exists for one person to exercise decisive influence over the other or for a third person to do so in both of them.

Effective from 1 January 2014, the concept of advance pricing arrangements (APAs) is introduced in Greek transfer-pricing legislation.

Debt-to-equity rules. No deduction is allowed for interest expenses (with the exception of interest on banking loans and corporate bond loans) incurred on loans granted by third parties to the extent that the interest rate exceeds the interest that would be payable if the applicable interest rate were equal to the interest rate for loans connected with revolving accounts to non-credit or non-financial enterprises, as published by the Bank of Greece.

Under the rules applicable for fiscal years beginning on or after 1 January 2017, interest expense in excess of interest income (net interest expense) that exceeds 30% of Earnings Before Interest, Tax, Depreciation, and Amortization (EBITDA) plus nondeductible expenses is not deductible for tax purposes. However, notwithstanding the above rule, interest expense in excess of interest income is fully deductible as a business expense if the cumulative amount of interest expenses recorded in the accounting books does not exceed EUR3 million per year.

The amount of interest expense that is not deductible for corporate income tax purposes in accordance with the above debt-to-equity rules may be carried forward as a deductible expense with no restriction (indefinitely).

The above debt-to-equity rules do not apply to credit institutions.

Controlled foreign corporations. Controlled foreign corporation (CFC) rules are introduced in Greece, effective from 1 January 2014. These rules are designed to deal with tax avoidance of Greek companies through the shifting of revenues to subsidiaries in low-tax jurisdictions. Basically, these rules provide for the inclusion in the taxable income of the Greek companies of undistributed passive income (for example, interest, dividends and royalties) of foreign subsidiaries under the conditions stipulated in the law.

Mergers and acquisitions. Company law regulates mergers and acquisitions in Greece. However, significant tax exemptions and relief for company restructurings may be available.

Transfers of operations. The tax law regulates the tax treatment of a group business restructuring that results in a transfer of operations (exit taxation). In the case of a local or cross-border intra-group restructuring qualifying as a transfer of functions, assets, risks and business opportunities (profit potential), the transfer of these items are considered a “transfer package” for the purposes of the law. If, within the context of such restructuring, a transfer of an intangible asset takes place (among other transfers), such transfer must be made for consideration according to the arm’s-length principle, taking into account the total value of the underlying assets and the transfer package (relevant functions and risks transferred). If the taxpayer can prove that no significant intangible assets have been transferred and that arm’s-length consideration has been paid with respect to the specific transfer that took place, the transfer-package provisions do not apply.

General anti-avoidance rule. Fiscal Procedure Code Law 4174/2013 introduced a general anti-avoidance rule. Under this rule, the tax administration may disregard any artificial arrangement or series of arrangements that aim at the evasion of taxation and lead to a tax advantage. An arrangement is considered artificial if it lacks commercial substance and aims for the evasion of taxation or a tax benefit. To determine if an arrangement is artificial, various characteristics are examined. For purposes of this measure, the goal of an arrangement is to avoid taxation if, regardless of the subjective intention of the taxpayer, it is contrary to the object, spirit and purpose of the tax provisions that would apply in other cases. To determine the tax advantage, the amount of tax due after taking into consideration such arrangements is compared to the tax that would be payable by the taxpayer under the same conditions in the absence of such an arrangement.

Law 89/1967 regime. Enterprises licensed to operate under the Law 89/1967 regime may enter into a favorable APA with the tax authorities. A license may be granted to enterprises under this regime if certain conditions are met. The principal condition is that the company must be exclusively engaged in the provision of specific services to foreign associated companies, the foreign head office or foreign branches. The Ministry of Economy and Finance grants the license after reviewing and approving the applicant’s transfer-pricing study (based on the cost-plus method).

F. Treaty withholding tax rates

Under most double tax treaties, the rates in the table below apply to the extent that the amount of interest or royalties is at arm’s length. The domestic withholding tax rates apply to any excess amounts. In addition, certain recent double tax treaties include an anti-abuse clause.

Greece has implemented EU Directive 2003/49/EC. Under this directive, withholding tax on interest and royalties paid between associated companies of different EU member states was abolished, effective from 1 July 2013.

The following table provides treaty withholding tax rates for dividends, interest and royalties.

	Dividends	Interest	Royalties
	%	%	%
Albania	5	5	5
Armenia	10	10	5
Austria	0/5/15 (m)(n)	0/8 (o)	0/7 (o)
Azerbaijan	8	8	8
Belgium	0/5/15 (m)(n)	0/10 (l)(o)	0/5 (o)
Bosnia and Herzegovina	5/15 (m)	10	10

- (a) The rate is 5% for royalties paid for the use of industrial, commercial or scientific equipment (7% under the Romania and South Africa treaties).
- (b) The 0% rate applies if the recipient does not control directly or indirectly more than 50% of the voting power in the payer. However, the 0% rate does not apply to interest paid to US recipients to the extent that the interest is paid at an annual rate exceeding 9%.
- (c) For details, see Section A.
- (d) The 0% rate does not apply to cinematographic film royalties paid to US residents.
- (e) The rate is 5% for film royalties.
- (f) The rate is 8% if the recipient is a bank or similar entity.
- (g) The rate is 0% for copyright royalties for literary, artistic or scientific works, including films.
- (h) The rate is 5% for royalties for literary, artistic or scientific works, including films.
- (i) Greece honors the Czechoslovakia treaty with respect to the Czech and Slovak Republics.
- (j) Under the South Africa treaty, the rate is 0% for interest paid to the South Africa Reserve Bank. Under the Italy treaty, the rate is 0% for interest payments made by the Greek government, interest payments made to the Italian government and interest payments relating to government loans.
- (k) The 10% rate applies to copyright royalties for literary, artistic or scientific works.
- (l) The rate is 5% if the recipient is a bank. Under the China, Mexico and Turkey treaties, the rate is 0% if the recipient is a government bank.
- (m) The 5% rate applies if the recipient of the dividends is a company that owns more than 25% of the payer corporation.
- (n) The 0% rate applies if the conditions of the EU Parent-Subsidiary Directive are met (for Switzerland, the 0% rate applies if the conditions of the European Community (EC)-Switzerland agreement providing for measures equivalent to those in Directive 2003/48/EC are met).
- (o) The 0% rate applies if the terms of the EU Interest-Royalties Directive are met; for Switzerland, the 0% rate applies if the conditions of the EU-Switzerland agreement providing for measures equivalent to those in Directive 2003/48/EC are met.
- (p) The 0% rate for dividends and interest payments applies if the recipient is the government of Kuwait or a state division or subdivision, the Central Bank of Kuwait or other government organizations or government funds.
- (q) The 0% rate on interest payments applies if the recipient is the government of Qatar.
- (r) The 0% withholding tax rate for dividends and interest payments applies if the recipient is the government of the United Arab Emirates (UAE) or its political subdivisions, the Central Bank of the UAE or certain UAE investment authorities.

- (a) The withholding tax rates may be reduced under tax treaties (see Section E).
(b) Imposed on payments to nonresidents.
(c) Interest on certain portfolio debt obligations issued after 18 July 1984 and bank deposit interest not effectively connected to a trade or business in Guam are exempt from withholding.
(d) The branch profits tax is imposed on the earnings of a foreign corporation attributable to its branch, reduced by earnings reinvested in the branch and increased by withdrawals of previously reinvested earnings.

B. Taxes on corporate income and gains

The system of corporate income taxation in force in Guam, a territory of the United States, is a mirror image of the US income tax system. The applicable law is the US Internal Revenue Code, with “Guam” substituted for all references to the “United States.” Therefore, for a description of the income taxation of corporations resident or doing business in Guam, refer to the sections on the United States and substitute “Guam” for each reference to the “United States.”

Income taxes are paid to the government of Guam, which administers its tax system.

Under an agreement between the United States and Guam, Guam had the authority to separate its system of taxation from the US Internal Revenue Code, effective 1 January 1991. Because a comprehensive Guam Tax Code has not yet been developed, this date has been extended, and the mirror system of taxation continues to apply to Guam until a new code goes into effect. A Guam Tax Code Commission has been formed and has begun work on the new law.

The government of Guam, through the Guam Economic Development Authority, is authorized by law to allow tax rebates to qualified investors. Qualifying Certificates (QCs) for tax incentives are granted based on the investment commitment as well as on the potential for creating new employment and expanding the base of the island's industry. These incentives are aimed primarily at manufacturers, insurance companies, trusts, commercial fishing companies, corporate headquarters, specialized medical facilities, high-technology companies, agricultural enterprises and tourism-development companies. In general, the tax rebates can amount to up to 75% of income tax paid for up to 20 years. Certain insurance companies may qualify for a 100% income tax rebate.

C. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Gross receipts tax, on sales of tangible personal property and services, excluding wholesale activities	4%
Use tax, on goods imported into and consumed in Guam (businesses are subject to either gross receipts tax or use tax, not both)	4%
Hotel occupancy tax	11%
Real property tax, on appraised value of Land	0.0875%
Improvements	0.35%
Liquid fuel taxes, imposed per gallon	
Aviation	4 cents
Diesel	14 cents
Other	15 cents
Alcoholic beverage excise tax	
Malted fermented beverages	7 cents per 12 fluid ounces
Distilled beverages	USD18 per gallon
Vinous beverages	USD4.95 per gallon
Tobacco excise tax	
Cigarettes	USD5 per 100 cigarettes
Cigars	20 to 25 cents per cigar
Other tobacco products	USD3.50 per pound
Documents tax, on conveyances and on mortgages of real property	0.1%
Social security contributions (US system), imposed on	

Nature of tax	Rate
Wages up to USD127,200 (for 2017); paid by	
Employer	7.65%
Employee	7.65%
Wages in excess of USD127,200 but not in excess of USD200,000 (for 2017); paid by	
Employer	1.45%
Employee	1.45%
Wages in excess of USD200,000 (for 2017); paid by	
Employer	1.45%
Employee	2.35%
Miscellaneous license fees	Various

D. Miscellaneous matters

Foreign-exchange controls. Guam does not impose foreign-exchange controls.

Debt-to-equity rules. The US thin-capitalization rules apply in Guam.

Transfer pricing. The US transfer-pricing rules apply in Guam.

E. Tax treaties

The Guam Foreign Investment Equity Act was signed into law on 24 August 2002 and amends the Organic Act of Guam with respect to the application of the Guam territorial income tax laws. The Guam Foreign Investment Equity Act provides that the tax rate under Sections 871, 881, 884, 1441, 1442, 1443, 1445 and 1446 of the US Internal Revenue Code of 1986, on any item of income from sources in Guam is the same as the rate that would apply with respect to such item were Guam treated as part of the United States for purposes of the treaty obligations of the United States. However, this provision does not apply to determine the tax rate on any item of income received from a Guam payer, if for any tax year, the tax on the Guam payer was rebated under Guam law (see Section B for a discussion of the QC rebates).

- (a) For details regarding the Regime on Profits from Business Activities and the Optional Simplified Regime on Revenue from Business Activities, see Section B.
- (b) Subsidiaries and branches are subject to the same tax treatment (that is, as independent taxpayers separate from their parents and headquarters).
- (c) See Section B for further information.
- (d) The withholding taxes, other than the dividend withholding tax, apply to nonresidents without a permanent establishment in Guatemala. For information regarding dividends, see *Dividends* in Section B.
- (e) For details regarding the withholding tax on interest, see Section B.

B. Taxes on corporate income and gains

Corporate income tax. The Income Tax Law (ITL) provides that income derived from activities rendered or services used in Guatemala is considered Guatemalan-source income and must be classified and taxed under one of the following categories:

- Income from business activities
- Income from employment
- Income from capital

Corporate income tax rates. Income from business activities is income derived from ordinary or occasional trade or business. Companies that generate income from business activities may choose to be taxed under one of the following tax regimes:

- Regime on Profits from Business Activities, which applies on a net income basis (authorized expenses are deductible)
- Optional Simplified Regime on Revenue from Business Activities, which applies on a gross receipts basis (no deductions are allowed)

Under the Regime on Profits from Business Activities, companies may deduct expenses incurred to generate taxable income or to preserve the source of such income, except in specific circumstances in which the law imposes limits on deductibility. The taxable income is subject to tax at a rate of 25%. In addition, a 1% Solidarity Tax applies (see Section D).

Alternatively, companies may elect to be taxed under the Optional Simplified Regime on Revenue from Business Activities. Under this regime, companies are subject to income tax on their “taxable income,” which is understood to be the difference between gross income and exempt income. The first GTQ30,000 (approximately USD3,995) of taxable income is subject to tax at a rate of 5%, and the exceeding amount is subject to tax at a rate of 7%. No deductions are allowed. Taxpayers that choose to operate through this scheme are subject to final withholding tax.

Companies operating under the Drawback Regime, the Free Trade Zone Regime or the Santo Tomas de Castilla Free-Trade and Industrial Zone (La Zona Libre de Industria y Comercio de Santo Tomás de Castilla, or ZOLIC) Regime benefit from a 100% income tax exemption for income earned from export activities. However, on 31 March 2016, the Emerging Law for the Preservation of Employment (Decree No. 19-2016) entered into force. The purpose of the law is to limit access to benefits for taxpayers under the Drawback Regime and the Free Trade Zone Regime.

Income from capital and capital gains. Income from capital (other from dividends; see *Dividends*) and capital gains generated in Guatemala are taxed at a rate of 10%, regardless of the regime elected by the taxpayer. The following types of income are classified as income from capital and are subject to tax in Guatemala:

- Royalties
- Income from leasing and subleasing (if not part of the taxpayer’s ordinary trade or business)
- Interest and other types of returns derived from investments that are received by residents or nonresidents with permanent establishment in Guatemala

Under the ITL, the following gains are subject to capital gains tax in Guatemala:

- Gains derived from the transfer of shares issued by resident entities
- Gains derived from the transfer of shares issued by foreign entities that own immovable or movable property located in Guatemala
- Gains derived from the transfer of movable or immovable assets, lottery tickets, raffle tickets or similar items or from the incorporation of assets located in Guatemala into the taxpayer's property

Administration. The statutory tax year runs from 1 January through 31 December.

Companies operating under the Regime on Profits from Business Activities must file an annual income tax return and make any payment due within three months after the end of the tax year. Companies operating under the Optional Simplified Regime on Revenue from Business Activities must file an annual information tax return within three months after the end of the tax year. Interest and penalty charges are imposed for late payments of taxes.

Under the Regime on Profits from Business Activities, companies must make quarterly advance income tax payments, which are credited against the final income tax liability. In addition, taxpayers that are qualified as Special Taxpayers must file the annual income tax return together with financial statements audited by a certified public accountant or an independent audit firm.

Companies operating under the Optional Simplified Regime on Revenue from Business Activities settle their tax through final withholding payments made by the payer. They must file a monthly tax return in which they separately determine the total amounts of gross income, exempt income, income subject to withholding tax and income subject to direct payment (companies may be required to make direct payments of tax if they are transacting with persons not required by law to make withholdings or if they have been previously authorized by the tax authorities). The tax return must be filed within the first 10 business days of the month following the month in which the tax was generated.

Dividends. Dividends are taxed under the category of "Income from Capital." A 5% withholding tax is imposed on all dividend distributions made, regardless of the beneficiary's country of residence.

Interest. In general, a 10% final withholding tax is imposed on interest paid to nonresidents. However, withholding tax is not imposed on the following types of interest payments:

- Interest payments made by local banks to banks and financial institutions domiciled abroad (that is, entities licensed and regulated in their country of origin)
- Interest payments made by local taxpayers to multilateral institutions abroad
- Interest payments made by local taxpayers to banks and financial institutions domiciled abroad that are authorized to operate in the country by the Guatemalan Law on Banks and Financial Groups

Foreign tax relief. Guatemala does not grant relief for foreign taxes paid.

C. Determination of trading income

General. Under the Regime on Profits from Business Activities, expenses incurred to generate taxable income, including local taxes, other than income tax and value-added tax (VAT), are deductible. The tax authorities are empowered to deny deductions if they determine that any of the following circumstances exist:

- The expenses are not considered necessary to produce taxable income.
- The expenses correspond to a different fiscal year.
- The expenses are not supported by the appropriate documentation.

The expenses must be registered in the taxpayer's accounting records.

Documents issued abroad that support the deduction of expenses may be subject to a 3% stamp tax.

The deductibility of expenses is also conditioned on the reporting and payment of withholding taxes and on the satisfaction of specific documentation requirements, which apply in certain circumstances. This documentation includes, among others, the following items:

- Valid invoices authorized for local operations
- Invoices or receipts issued abroad
- Notary Public deeds
- Payrolls reported to the social security authorities
- Customs returns for the importation of goods including the tax receipts

In general, payments on transactions valued over GTQ30,000 (approximately USD3,995) must be made through a banking or financial institution, and the corresponding balance statement is required as part of the supporting documentation needed to consider the payment deductible. Operations not made through the banking system must be documented through a Notary Public deed.

For these purposes, the law provides that a single transaction may be considered to include the following:

- All payments made to a single source or provider during a calendar month
- An operation of GTQ30,000 (approximately USD3,995) or above that involves partial or split payments to the same provider or person

In both of the above cases, taxpayers should use the payment or documentation methods listed above. Otherwise, the expense may not be deductible for income tax purposes and may not be considered a tax credit for VAT purposes. This requirement is known in Spanish as "Bancarización."

The deduction for royalties, payments for financial or technical advice and professional service fees for services rendered from abroad to local taxpayers is limited to 5% of the taxpayer's gross income.

Interest is deductible for income tax purposes if all of the following conditions are satisfied:

- The loan proceeds that give rise to such interest must be used to generate taxable income.
- Payments must be documented and correspond to the same fiscal year.
- The taxpayer must comply with the obligation to withhold the corresponding tax, if applicable.
- The deductible amount may not exceed the value calculated by multiplying the interest rate set by the Guatemalan Monetary Board by a total of three times the “average net asset” amount reported by the taxpayer in the annual tax return. “Average net asset” is defined as the sum of the total net worth of the previous year and the total net worth of the current year (values declared in the annual income tax returns), divided by two.
- Loans issued abroad must be obtained from banks or financial institutions that are registered and monitored by the state entity in charge of bank supervision in the country of origin. They must also be authorized for financial intermediation in the country in which the loan is granted.
- The interest rate on foreign-currency loans may not exceed the maximum simple annual rate set by the Monetary Board, minus the value of the quetzal exchange rate variation in relation to the currency in which the loan is expressed, during the period corresponding to the annual income tax return.

Inventories. Inventories are valued at cost. The acquisition cost may be computed using various valuation methods provided in the income tax law. No deviation from these methods is allowed unless previously authorized by the tax authorities.

Cattle may be priced at cost or sales price.

No provisions for deterioration or obsolescence are allowed. The destruction of inventory is considered a deductible expense if it is certified by an inspector from the tax authorities or by a Notary Public.

Provisions. Provisions for bad debts of up to 3% of credit-sales balances are deductible (excluding bad debts guaranteed by pledge or mortgage). Reserves for severance compensation of up to 8.33% of payroll costs are also deductible.

Tax depreciation. Straight-line depreciation is allowed, subject to the following annual maximum rates.

Asset	Rate (%)
Buildings and leasehold improvements	5
Plantations	15
Furniture, fixtures, ships and railroads	20
Machinery and equipment, vehicles and containers	20
Computer equipment	33.33
Tools, porcelain, glassware and certain animals	25
Other items that are not specified	10

Goodwill can be amortized over a minimum period of 10 years. Other intangible assets may be amortized over a minimum period of five years.

Oil and other natural resources are subject to depletion in accordance with the level of production and the remaining reserves.

Relief for losses. Under the Regime on Profits from Business Activities and the Optional Simplified Regime on Revenue from Business Activities, net operating losses cannot offset taxable income in prior or future years.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax	12%
Levies on petroleum distribution; rate varies by type of fuel	USD0.17 to USD0.63 per gallon
Land tax; imposed annually on value of land; maximum rate, applicable to value in excess of GTQ70,000 (approximately USD9,320)	0.9%
Revaluation tax; imposed on the increase in value resulting from a revaluation of immovable property and other fixed assets by an authorized third-party adjuster	10%
Import duties	0% to 20%
Social security tax; imposed on wages; paid by Employer	12.67%
Employee	4.83%
Solidarity Tax (ISO); imposed on legal entities subject to the Regime on Profits from Business Activities; tax rate applied to the higher of 1/4 of net assets or 1/4 of gross income; newly organized entities are not subject to ISO during their first four quarters of operations; entities that have a gross margin of lower than 4% of its gross income or incur losses for two consecutive years are not subject to the tax	1%

E. Miscellaneous matters

Foreign-exchange controls. The currency in Guatemala is the quetzal (GTQ). As of 10 November 2016, the average exchange rate was GTQ7.50211 = USD1. Guatemala does not impose foreign-exchange controls. The exchange system is regulated through the banks.

Debt-to-equity rules. Guatemala does not impose any debt-to-equity requirements.

Anti-avoidance legislation. The tax law contains general measures to prevent tax fraud and similar conduct.

Transfer pricing. Effective from 1 January 2013, official transfer-pricing rules apply to transactions with related parties resident abroad. However, Decree 19-2013 of the Guatemalan Congress suspended the application of the transfer-pricing rules as of 23 December 2013. These rules re-entered into force as of 1 January 2015.

F. Tax treaties

Guatemala signed a double tax treaty with Mexico in March 2015, which is not yet in effect. The treaty will enter into effect after both countries complete their respective legislative approval processes.

Carryforward	Unlimited

- (a) This is the standard corporate income tax rate. For details regarding other rates, see Section B.
- (b) Dividend withholding tax is not imposed on dividends paid to foreign shareholders. See Section B. Guernsey resident individual shareholders may be subject to withholding tax on dividends received.
- (c) A carryback for up to two years is available for terminal losses if trade is permanently discontinued.

B. Taxes on corporate income and gains

Corporate income tax. A Guernsey resident company is subject to income tax on its worldwide income. A company not resident in Guernsey is subject to Guernsey income tax on its Guernsey-source income (other than disregarded company income, such as bank interest), unless a double tax treaty applies. A company is resident in Guernsey if its shareholder control is in Guernsey or if it is incorporated in Guernsey. Control for Guernsey tax purposes is determined by reference to ownership rather than central management and control.

Rates of corporate income tax. The standard rate of corporate income tax is 0%. A 10% rate applies to profits derived from banking business, insurance management, insurance intermediaries, domestic insurance business, regulated fiduciary business and fund administration business. Profits from Guernsey property and from regulated utility business are taxable at 20%. Effective from 1 January 2016, retail business carried on in Guernsey that has a taxable profit of more than GBP500,000 in a year and the importation and/or supply of hydrocarbon oil or gas are also subject to tax at a rate of 20%.

Exempt companies. The exempt company regime is only available for collective-investment schemes. An exempt company is treated as nonresident for tax purposes and is taxable in Guernsey only on Guernsey-source income, excluding bank interest. Collective-investment schemes (typically unit trusts, investment trusts or bodies involving other forms of public participation) form a substantial sector of the finance industry in Guernsey. Peripheral companies associated with such schemes may also qualify for exemption.

Exempt companies pay a fixed annual fee of GBP1,200, regardless of their income.

Protected cell companies. Protected cell companies (PCCs) consist of several cells and core capital. Each cell is liable only to its own creditors. A creditor of a particular cell has recourse to the assets of that cell and the core capital only. PCCs may be used for captive insurance companies, collective investment schemes or other approved enterprises.

Incorporated cell companies. Incorporated cell companies (ICCs) are similar to PCCs in terms of their cellular nature. However, each cell is regarded as an incorporated entity in its own right and, consequently, is subject to tax as a separate entity.

Capital gains. Capital gains are not taxable in Guernsey.

Administration. The Guernsey tax year corresponds to the calendar year. Tax payments on account are normally due in two equal installments on 30 June and 31 December of the tax year, with a balancing payment or repayment due after filing and assessment.

An annual tax return is generally required for all Guernsey resident companies and some foreign companies with Guernsey-source income. The annual tax return must be filed electronically by 30 November of the following year. Automatic late filing penalties may be imposed.

If taxable distributions or loans to Guernsey resident individuals are made during the year, a final Distribution Reporter tax return is required to be filed by 15 January following the tax year. Taxes on such events must be withheld at source and paid quarterly by the 15th of the month following the relevant quarter.

Companies must file annual validation forms with the Guernsey Registry, and pay the relevant filing fee. Fees are based on the type and activity of the company and range from GBP100 to GBP1,000.

Dividends. No tax is withheld from dividends paid to foreign shareholders of Guernsey companies.

If dividends are paid to Guernsey resident individual shareholders, the company may be required to withhold tax of up to 20%

of the distribution. The amount of tax withheld may be reduced if the company has already suffered tax on the profits distributed. Companies maintain tax pools to track undistributed income (income that has not suffered tax at 20% or more) and tax already suffered. Distributions are required to be matched against undistributed income first.

Companies may also be required to withhold tax at a rate of 20% if a loan is advanced to a Guernsey resident beneficial member, but some exemptions apply.

Foreign tax relief. Guernsey grants specific double taxation relief for income from its treaty countries and grants unilateral relief for income from non-treaty countries up to an effective maximum rate of 15%.

C. Determination of trading income

General. The assessment is based on accounting profits, subject to certain adjustments. To be deductible, expenses must be incurred wholly and exclusively for the purposes of the trade.

Nonresident companies are exempt from tax on disregarded company income, including Guernsey-source bank interest.

Tax depreciation. Depreciation is not an allowable deduction, but annual allowances are available on the cost of plant and machinery. Annual allowances are generally calculated at a rate of 20% on a reducing-balance or straight-line basis (subject to specific variations).

Groups of companies. Under Guernsey law, a trading loss incurred by a member of a 90%-owned group of companies may be offset against profits earned in the same tax year by another member of the group. All members of the group must be incorporated and resident in Guernsey or have a fixed place of business in Guernsey. Restrictions apply if members of the group are taxed at different rates.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Social security contributions; payable on the salaries and wages of employees resident in Guernsey; paid by (2017 rates)	
Employer (maximum contribution of GBP762.76 per month)	6.6
Employee (maximum contribution of GBP762.76 per month)	6
Tax on real property; based on the unit value of the property located in Guernsey; rates vary according to the type of property	Various
Document duty on sales of Guernsey property; based on the value of the transaction; the rates and method of calculation are changed, effective from 1 January 2017	2 to 4
(Legislation extending the duty to include the sale of shares in corporate vehicles holding Guernsey real property is expected to be introduced.)	

E. Miscellaneous matters

Anti-avoidance legislation. Guernsey's tax law includes a general anti-avoidance rule. The Director of Income Tax has broad powers to adjust a taxpayer's tax liability and assess income tax that, in the Director's opinion, has been deliberately avoided by a transaction entered into by the taxpayer.

Exchange controls. Guernsey does not impose any foreign-exchange controls.

Debt-to-equity ratios. Guernsey does not prescribe any debt-to-equity ratios, but the general anti-avoidance rule can be applied in some situations.

Types of companies. The Guernsey company law allows the incorporation of companies limited by shares, guarantee or shares and guarantee. A company limited by shares and guarantee may have both shareholders and guarantee members. See Section B for information on PCCs and ICCs.

Migration of companies. Guernsey law allows an overseas company to migrate into Guernsey and be registered as a Guernsey company. In addition, a Guernsey company may be removed from the Companies Register with the intention of becoming incorporated in another jurisdiction. In both cases, the law of the other jurisdiction must provide for the migration, the company must be solvent and certain other conditions must be met.

Country-by-Country Reporting. Guernsey has committed to adopt the minimum standards required by the Base Erosion and Profit Shifting (BEPS) Action 13 of the Organisation for Economic Co-operation and Development (OECD). As a result, certain reporting obligations are required from 2017 with respect to Country-by-Country Reporting (CbCR). At the time of writing, enabling legislation had not yet been enacted, but the CbCR regulations will be based on the OECD model legislation.

F. Tax treaties

Guernsey has entered into comprehensive tax treaties with the following jurisdictions.

Cyprus	Luxembourg	Qatar
Hong Kong SAR	Malta	Seychelles
Isle of Man	Mauritius	Singapore
Jersey	Monaco	United Kingdom
Liechtenstein		

Guernsey has completed negotiations for comprehensive double tax treaties with Bahrain and Bermuda and is engaged in tax treaty negotiations with Gibraltar, Panama and the United Arab Emirates. In addition, discussions are ongoing regarding the possibility of double tax treaties with Estonia and Thailand. Negotiations on a revised double tax treaty with the United Kingdom began in 2016.

It also has partial (limited) treaties with the following jurisdictions.

Australia	Greenland	New Zealand
Denmark	Iceland	Norway
Faroe Islands	Ireland	Poland
Finland	Japan	Sweden

In addition, Guernsey has signed tax information exchange agreements with 60 jurisdictions.

 (b) The tax may be deferred if proceeds are reinvested (see Section B).
 (c) This tax applies to payments to nonresidents.
 (d) This tax applies to payments by residents to nonresidents for services, including professional services, performed in Guinea.

- (e) This tax applies only to rent paid to individuals.
- (f) This tax applies to banks only.
- (g) This tax applies to insurance companies only.
- (h) This tax applies to lottery tickets sold by gambling companies.
- (i) See Section B.

B. Taxes on corporate income and gains

Corporate income tax. Guinean companies are taxed on the territoriality principle. As a result, Guinean companies carrying on a trade or business outside Guinea are not taxed in Guinea on the related profits. Foreign companies with activities in Guinea are subject to Guinean corporate tax on Guinean-source profits only.

Tax rates. The regular corporate income tax rate is 35%. Since the issuance of the amended Mining Code in April 2013, the rate for the mining sector is 30% (applicable to mining companies only; not applicable to subcontractors). The annual minimum tax payable is 3% of annual turnover. However, under the 2012 Financial Law, it cannot be less than GNF15 million or more than GNF60 million.

Profits realized in Guinea by branches of foreign companies are deemed to be distributed and therefore are subject to a branch withholding tax of 10% on after-tax income.

Corporations may apply for various categories of priority status and corresponding tax exemptions. The priority status varies, depending on the nature of the project and the level of investment.

Capital gains. Capital gains are taxed at the regular corporate rate. The tax, however, may be deferred if the proceeds are used to acquire new fixed assets in Guinea in the following three financial years.

Capital gains on transfers of shares are taxed at a rate of 10%.

Administration. The fiscal year is from 1 January to 31 December. Tax returns must be filed by 30 April of the year following the fiscal year.

Companies must pay the relevant annual minimum tax before 15 January of the year following the fiscal year. Two advance payments of corporate tax, each equal to 33 $\frac{1}{3}$ % of the corporate tax for the previous year, are due on 15 June and 15 September of the fiscal year. Any balance due must be paid by 30 April of the following year.

Dividends. Dividends are subject to a 10% withholding tax, which may be credited by the recipient against corporate income tax.

Foreign tax relief. Foreign tax credits are not allowed. Income subject to foreign tax that is not exempt from Guinean tax under the territoriality principle is taxable net of the foreign tax.

C. Determination of trading income

General. Taxable income is based on financial statements prepared according to generally accepted accounting principles and the rules contained in the Organization for the Harmonization of Business Law in Africa (Organisation pour l'Harmonisation en Afrique du Droit des Affaires, or OHADA) Uniform Act on Accounting Law (SYSCOHADA).

Business expenses are generally deductible unless specifically excluded by law. The following expenses are not deductible:

- Head office overhead in excess of 10% of turnover derived by a Guinean branch
- Interest paid on loans from shareholders to the extent the rate exceeds the current rate of the Central Bank and all of the interest on shareholder loans if the capital of the company is not fully paid
- Corporate income tax and withholding tax on real estate
- Certain specific charges

Inventories. Inventory is normally valued at the lower of cost or market value.

Provisions. In determining accounting profit, companies must establish certain provisions, such as a provision for a risk of loss or for certain expenses. These provisions are normally deductible for tax purposes if they provide for clearly specified losses or expenses that are probably going to occur and if they appear in the financial statements and in a specific statement in the tax return.

Capital allowances. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at maximum rates specified by the tax law.

Relief for tax losses. Losses may be carried forward for three years. Losses may not be carried back.

Groups of companies. Fiscal integration of Guinean companies equivalent to a consolidated filing position is not available.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on sales of goods and services and on imports	
Standard rate	20
Business activity tax (<i>patente</i>), calculated based on the nature of the business activity and the rental value of the place of business	Various
Registration duties, on transfers of real property or businesses	2 to 15
Payroll taxes; paid by employers on salaries	6
Training tax; paid by employers on salaries	1.5/3
Social security contributions, on an employee's annual gross salary, up to GNF1,500,000	
Employer	18
Employee	5

E. Foreign-exchange controls

Exchange-control regulations exist in Guinea for foreign financial transactions.

F. Tax treaties

Guinea has entered into double tax treaties with France and the United Arab Emirates.

(a) The 27.5% rate applies to non-commercial companies. Commercial companies are taxed at a rate of 40% of income, or 2% of turnover, whichever is lower. Telephone companies are taxed at a rate of 45%. See Section B.

(b) See Section B.

(c) These withholding taxes apply to payments to nonresidents only.

(d) These withholding taxes apply to payments to companies and individuals.

(e) This tax applies to deemed remittances of profits to the overseas head office.

(f) See Section C.

B. Taxes on corporate income and gains

Corporate income tax. Companies resident in Guyana are subject to tax on their worldwide income from all sources. Relief with

respect to taxation suffered on foreign-source income in an overseas jurisdiction may be available under a double tax treaty. Non-resident companies engaged in business in Guyana are subject to tax on income directly or indirectly accruing in or derived from Guyana.

Rates of tax. For the 2017 year of income, the basic rate of corporation tax for non-commercial companies is 27.5%. However, other tax rates apply to income derived from specified business activities, as described below.

Income derived by a commercial company is taxed at 40%. A commercial company is a company that derives at least 75% of its gross income from trading in goods not manufactured by the company. It includes a commission agency, a telecommunication company and an entity engaged in banking and insurance business (except long-term insurance business). Telephone companies are taxed at a rate of 45%.

An advance corporation tax at a rate of 10% must be deducted by the payer from gross fees paid to a nonresident company with respect to goods and services provided if the nonresident company is engaged in a trade or business in Guyana. The advance corporation tax is creditable against the nonresident company's ultimate corporation tax liability.

Payments in excess of GYD500,000 to resident independent contractors who are individuals are subject to withholding tax at a rate of 2% on each payment if the payments are for the supply of services, goods, equipment, materials or personnel in the furtherance of services.

Commercial companies, other than insurance companies, and commercial activities of a company carrying on both commercial and non-commercial activities are subject to a minimum tax at a rate of 2% of turnover if the corporation tax calculated as payable for the preceding year was less than 2% of the turnover of the commercial company. If, in any year, the corporation tax payable is calculated to be higher than 2% of turnover, the tax payable is limited to the corporation tax assessed. Consequently, the tax payable by a commercial company or with respect to the commercial activities of a company undertaking both commercial and non-commercial activities is the lower of 2% of turnover or corporation tax at a rate of 40%.

Capital gains. Capital gains tax is payable at a rate of 20% on the net chargeable gain of a person accruing or arising in Guyana or elsewhere, regardless of whether it is received in Guyana, on the change of ownership of property, subject to certain exceptions. In general, if capital allowances were taken with respect to an asset being disposed, the capital gain is the amount by which the value of the consideration received exceeds the cost of or acquisition value of the asset, less any capital allowances taken with respect to the property. In certain sectors, a disposal may give rise to a balancing adjustment, which may be subject to corporation tax and may affect the amount of applicable capital gains tax.

Capital losses may be carried forward for 24 years.

If an exemption from property tax is granted, a concomitant exemption is granted for capital gains tax.

Short-term capital gains from the disposal of assets within 12 months of their acquisition and from the disposal of assets 25 years after their acquisition are exempt from capital gains tax. However, short-term capital gains are subject to corporation tax.

Administration. The tax year is the calendar year. Tax is calculated on the profits for the accounting period that ends during the tax year. For each quarter, a company is required to pay a corporation tax or minimum tax installment, whichever is lesser. The quarterly payments must be made by 15 March, 15 June, 15 September and 15 December in each tax year. Quarterly payments of corporation tax are determined based on the taxable income for the preceding accounting period. Minimum tax installments are based on the actual gross sales or receipts of the company for the relevant quarter. The minimum tax calculation excludes income or receipts that are exempt for corporation tax purposes, such as dividends received from Guyana resident companies.

Annual tax returns must be filed by 30 April in the year following the tax year, and any balance of tax due is payable at that time.

Failure to file a tax return attracts a penalty of 10% of the amount of tax assessed, while failure to file a nil tax return or a tax return that discloses a loss attracts a penalty of GYD50,000. If the balance of tax due is not paid by the 30 April deadline, a penalty is payable equal to 2% of the unpaid tax for each month, or part thereof, that tax remains outstanding. Interest is also payable at a rate of 18% per year.

Dividends. Dividends received from nonresident companies are subject to tax. Dividends received by resident companies from other resident companies are exempt from tax.

Dividends paid to nonresident companies and individuals are generally subject to a withholding tax of 20%.

Double tax relief. Bilateral agreements have been entered into between the government of Guyana and the governments of certain other countries to provide relief from double taxation (see Section F). Relief from double taxation is achieved by one of the following two methods:

- Exemption or a reduced rate on certain classes of income in one of the two countries concerned.
- Credit if the income is fully or partially taxed in the two countries. The tax in the country in which the income arises is allowed as a credit against the tax on the same income in the country where the recipient is resident. The credit is the lower of the Guyana tax or the foreign tax on the same income.

C. Determination of taxable income

General. The assessment is based on financial statements prepared according to international accounting standards, subject to certain adjustments.

To be deductible, expenses must be incurred wholly and exclusively in the production of income. Deductions for head-office

expenses paid by a Guyana branch to a nonresident head office or to a nonresident associate or subsidiary company, or by a Guyana resident company to a nonresident parent or associate company, may not exceed 1% of the sales or gross income of the payer.

Inventories. Inventory may be valued at cost or market value, whichever is lower. A method of stock valuation, once properly adopted, is binding until permission to change is obtained from the Guyana Revenue Authority.

Bad debts. Trading debts that have become bad and that are proven to be so to the satisfaction of the Guyana Revenue Authority may be deducted in determining taxable income. In addition, doubtful debts are deductible to the extent that they have become bad during the year. If these debts are subsequently collected, they are considered to be income subject to tax in the year of recovery.

Tax depreciation (capital allowances). Depreciation is calculated on the depreciated value of fixed assets at the beginning of each accounting year.

Capital expenditure incurred on plant, machinery or equipment or any building housing machinery owned by the taxpayer or incurred with respect to machinery and equipment that the taxpayer has the full burden of wear and tear qualify for capital allowances under the declining-balance method or straight-line method. However, if the latter method is used, a maximum of 90% of the cost of the asset may be depreciated.

The following are the applicable rates for assets acquired on or after 1 January 1992.

Asset	Rate (%)
Aircraft	33.3
Boats	10
Buildings (housing machinery)	5 (on cost)
Furniture and fittings	10
Motor vehicles	20
Office equipment	
Electronic	50
Other	15
Plant and machinery	20

Separate capital allowances are available with respect to the petroleum and mining sectors. Capital allowances may be claimed on petroleum capital expenditure in the petroleum sector at a rate of 20% per year on a straight-line basis. In addition, in the diamond and gold mining sector, capital allowances may be claimed on exploration and development expenditure at a rate of 20% per year on a straight-line basis. Other sectors are also granted specific initial and annual allowances.

Relief for tax losses. Losses carried forward can be written off to the extent of half the taxable income for the tax year. The unrelieved balance can be carried forward indefinitely. No loss carry-back is allowed.

In the petroleum sector, corporation tax losses may be written off to the full extent of the taxable income for the tax year. Similarly,

the restriction on the ability to set off the full extent of losses against taxable income does not apply to commercial companies liable to pay minimum tax.

Groups of companies. No provisions for group relief exist.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT); applies to most products supplied and services rendered in Guyana; imports of goods are also subject to VAT; certain imports of services are also subject to VAT under the VAT reverse-charge mechanism; companies and other businesses are required to register for VAT if their turnover exceeds a stipulated threshold as specified in the Value-Added Tax Act (currently GYD15,000,000 [approximately USD75,000] a year)	
Standard rate	14
Certain items, including specified exports	0
Property tax; payable on the net property of a person in excess of GYD500,000; the tax is payable on the amount by which the aggregate value of all movable and immovable property of a person exceeds the aggregate value of all debts owed	
On the first GYD10 million of net property	Nil
For every dollar of the next GYD15 million of net property	0.5
For every dollar of the remainder of net property	0.75

E. Miscellaneous matters

Foreign-exchange controls. The Guyana currency is the Guyana dollar (GYD).

Guyana has a floating exchange-rate regime. Profits may be repatriated without the approval of the Central Bank of Guyana. However, certain restrictions are imposed with respect to the settlement of local transactions in foreign currency and the borrowing of funds in a foreign currency. Permission is also required to establish a foreign-currency account.

Debt-to-equity rules. In general, no thin-capitalization rules are imposed in Guyana. However, if a local company pays or accrues interest on securities issued to a nonresident company and if the local company is a subsidiary of the nonresident company or a fellow subsidiary with respect to the nonresident company, the interest is treated as a distribution and may not be claimed as a deduction against the income of the local company.

F. Treaty withholding tax rates

The following table lists the withholding tax rates under Guyana's tax treaties. If the treaty rates are higher than the rates prescribed in the domestic law, the lower domestic rates apply.

	Dividends	Interest	Royalties
	%	%	%
Canada	15	25	10
Caribbean Community and Common Market (a)			
Antigua and Barbuda	0	15	15
Barbados	0	15	15
Belize	0	15	15
Dominica	0	15	15
Grenada	0	15	15
Jamaica	0	15	15
St. Kitts and Nevis	0	15	15
St. Lucia	0	15	15
St. Vincent and the Grenadines	0	15	15
Trinidad and Tobago	0	15	15
United Kingdom	10/15 (b)	15	10
Non-treaty countries	20	20	20

- (a) The listed countries have ratified the Caribbean Community and Common Market (CARICOM) double tax treaty.
- (b) The lower rate applies if the recipient and beneficial owner of the dividends is a company that owns 10% or more of the voting power of the distributing company.

Reinsurance	10
Videos and Films	25 (c)
Other	10
Branch Remittance Tax	10
Net Operating Losses (Years)	
Carryback	0
Carryforward	3 (d)

- (a) An alternate minimum income tax and asset tax are also imposed (see Section B). A Social Contribution Tax is imposed at a rate of 5% on companies with net income exceeding HNL1 million (approximately USD43,346). Domiciled entities that have reported operating losses in two consecutive or alternate tax periods that are still open for examination are also subject to advance

income tax payments (AIT) that are computed at a rate of 1% of gross income equal to or greater than HNL100 million (approximately USD4,334,633). The AIT may be credited against the annual corporate income tax, asset tax or the Social Contribution Tax.

- (b) Withholding taxes are imposed on payments to nonresident companies and individuals.
- (c) This withholding tax applies to payments for films and video tapes for movies, television, video clubs and cable television.
- (d) Only companies engaged in agriculture, manufacturing, mining and tourism may carry forward net operating losses.

B. Taxes on corporate income and gains

Corporate income tax. Honduran resident companies are taxed on their worldwide income. Resident companies are those incorporated in Honduras. Nonresident companies are subject to income tax only on income derived from Honduran sources.

Corporate income tax rates. Companies are subject to corporate income tax at a rate of 25% on their net income.

A Social Contribution Tax of 5% applies to companies with net income exceeding HNL1 million (approximately USD43,346).

A 1% income tax installment applies to taxpayers that meet the following conditions:

- During open tax periods, they have reported operating losses in two consecutive or alternate tax periods.
- In the prior tax period, they derived gross income equal to or greater than HNL100 million (approximately USD4,334,633).

The installment equals 1% of the gross income reported.

The income tax installment is a tax credit that may be applied against income tax, asset tax or the Social Contribution Tax on the filing of the year-end tax return.

The following taxpayers are not subject to the income tax installment:

- Individuals or entities in the preoperative phase, up to a maximum of five years.
- Companies and individuals that incur losses resulting from an act of God or force majeure. This loss needs to be certified by an audit firm registered with the respective accounting association, notwithstanding a subsequent examination by the tax authorities.
- Companies and individuals authorized by the tax authorities to carry forward losses in accordance to Section 20 of the Honduran Income Tax Law (HN ITL).
- Companies and individuals that calculated and paid tax in the prior tax period and are subject to income tax installments in accordance to Section 34 of the HN ITL.
- Companies and individuals that prove through a tax audit report, carried out by an audit firm registered with the respective accounting association, that the tax loss is real, subject to verification from the tax authorities.
- Companies and individuals established under Section 7 of the HN ITL and tax-exempt by law or Special Legislative Decrees.

Companies operating under the following special regimes are exempt from income tax, sales tax, customs duties and certain municipal taxes:

- Free Trade Zone
- Industrial Processing Zone (Zona Industrial de Procesamiento, or ZIP)
- Temporary Import Regime (Régimen de Importación Temporal, or RIT)
- Agroindustrial Export Zone (Zona Agro-Industrial de Exportación, or ZAIDE)
- Free Tourist Zone (Zona Libre Turística, or ZOLT)

Alternative minimum income tax. An alternative minimum income tax applies to resident individuals or corporations with annual gross income in a fiscal year equal to or greater than HNL10 million (approximately USD433,463). The alternative minimum income tax is calculated by applying a rate of 1.5% to gross income. Legal entities must apply the ordinary rate of 25% to net income and apply the alternative minimum tax rate of 1.5% to gross income. The income tax payable is the higher amount resulting from these two calculations.

The minimum income tax rate is reduced to 0.75% of gross income for individuals or legal entities producing or selling the following products or services:

- Cement production and distribution
- Public utility services provided by state-owned companies
- Products and medicines for human use (at the importation and production levels)
- Bakery-related products

Asset tax. An asset tax is assessed based on net assets (as defined in the law) reported in the company's balance sheet. The asset tax rate is 1%. Income tax may be credited against asset tax. If the income tax equals or exceeds the asset tax for the tax year, no asset tax is due. If the income tax is less than the asset tax, the difference is payable as asset tax. In such circumstances, the asset tax represents a minimum tax for the year.

Financial transaction tax. A financial transaction tax applies to local and foreign currency operations carried on in either national or foreign currency within the institutions of the national banking system, including the following:

- National Bank for Agricultural Development (Banco Nacional de Desarrollo Agrícola, or BANADESA)
- Financial entities
- Representation offices that are supervised by the National Commission on Banking and Insurance (Comisión Nacional de Bancos y Seguros, or CNBS)

The financial transaction tax applies to the following transactions:

- Debits (withdrawals) from at-sight deposits and checking accounts, carried out by the institutions referred to in the preceding paragraph (the financial institutions).
- Debits (withdrawals) of deposits from saving accounts, carried out by the financial institutions.
- Loan operations granted by the financial institutions that need to be absorbed by the lender. The contribution under the financial transaction tax applies only to disbursements and not to payments received by the financial institution. The CNBS must

ensure that this special contribution is not transferred to the borrower.

- Issuance of cashier's checks, certified checks, traveler's checks and other similar existing financial instruments by financial institutions, or financial instruments to be created in the future, if they are issued without using the accounts mentioned in the first two bullets above.
- Payments or transfers in favor of third parties of money recovered or collected in the name of such parties that are carried out by the financial institutions without using the accounts mentioned in the first two bullets above.
- Transfers or money remittances abroad or locally, carried out through the financial institutions, without using the accounts mentioned in the first two bullets above.
- Credit card annual membership renewals, for the principal cardholder only.

The following are the amounts of the contributions required under the financial transaction tax for the first, second, fourth, fifth and sixth categories of transactions listed above:

- First, second, fifth and sixth categories listed above: HNL2 (approximately USD0.08) per thousand or fraction of a thousand
- Fourth category: HNL1.50 (approximately USD0.06) per thousand or fraction of a thousand

The contributions for the transactions in the seventh (last) category above are provided in the following table.

Credit line		Contribution HNL
Exceeding HNL	Not exceeding HNL	
40,000	50,000	500
50,000	100,000	600
100,000	200,000	700
200,000	500,000	800
500,000	1,000,000	900
1,000,000	—	1,000

The law does not establish the contribution for the third category.

Capital gains. Capital gains are subject to tax at a rate of 10%.

A gain generated from any type of transfer of assets or rights by a person whose ordinary trade does not involve commercializing such assets or rights is considered a capital gain.

However, if the asset being transferred is part of the ordinary course of business of the transferor (for example, the transferor ordinarily or habitually engages in the trade or business of selling shares), the gains are categorized as ordinary income subject to corporate income tax at a rate of 25%.

Capital losses are deductible only if derived from the sale of depreciable assets or from the sale of non-depreciable assets sold in the ordinary course of a trade or business.

The capital gain must be reported and the corresponding tax paid for each transaction within 10 working days following the date on which the payment is received by the seller. An annual return must also be filed by 30 April of each year.

For the transfer of immovable property or rights and securities carried out with a nonresident, the buyer must withhold 4% of the transfer value. The capital gains tax is deemed to constitute a credit to such tax for the seller. The tax withheld must be reported in a filing and paid by the buyer within 10 calendar days following the date of the transaction.

Administration. The regular statutory tax year runs from 1 January through 31 December. However, taxpayers may elect a different tax year by giving notice to the tax authorities. Companies with a regular statutory tax year must file an annual income tax return and pay any corresponding tax due within 120 days after the end of the tax year. For companies with a different tax year, the filing and payment deadline is 90 days after the end of their tax year. Mandatory advance tax payments are payable each quarter based on the income tax liability for the preceding tax year.

Dividends. A 10% withholding tax is imposed on dividends.

Foreign tax relief. Honduras does not grant any relief for foreign taxes paid.

C. Determination of taxable income

General. Net taxable income is computed in accordance with generally accepted accounting and commercial principles, subject to certain adjustments required by the Honduran income tax law.

Inventories. Inventories are valued using the first-in, first-out (FIFO), last-in, first-out (LIFO) or weighted-average cost methods.

Provisions. Provisions for contingent liabilities, such as severance pay, are not deductible for tax purposes. However, payments of such liabilities are deductible expenses.

Tax depreciation. Depreciation may be computed using the straight-line method. Companies may obtain authorization from the tax authorities to use other depreciation methods. However, after a company selects a depreciation method, the method must be applied consistently thereafter. The following are the applicable straight-line method rates for some common assets.

Asset	Rate (%)
Buildings	2.5 to 10
Plant and machinery	10
Vehicles	10 to 33
Furniture and office equipment	10
Tools	25

Relief for losses. Companies engaged in agriculture, manufacturing, mining and tourism may carry forward net operating losses for three years. However, certain restrictions apply. Net operating losses may not be carried back.

Groups of companies. Honduran law does not allow the filing of consolidated income tax returns or provide any other tax relief to consolidated groups of companies.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Sales tax	15
Customs duties	1 to 20
Payroll taxes; paid by employers; average rate	8.5
Municipal taxes	
Property tax; imposed on companies owning real estate	Various
Industry trade and service municipal tax; imposed monthly on income derived from the operations of companies; rates vary according to the annual production volume, income or sales	
Up to HNL500,000	0.030
From HNL500,000 to HNL10,000,000	0.040
From HNL10,000,000 to HNL20,000,000	0.030
From HNL20,000,000 to HNL30,000,000	0.020
Over HNL30,000,000	0.015

E. Foreign-exchange controls

The Honduran currency is the lempira (HNL). As of 10 November 2016, the exchange rate for the lempira was HNL23.07 = USD1.

No restrictions are imposed on foreign-trade operations or foreign currency transactions.

F. Tax treaties

Honduras has not entered into any income tax treaties with other countries.

Interest	0
Royalties from Patents, Know-how, etc.	
Paid to Corporations	4.95/16.5*
Paid to Individuals	4.5/15*
Branch Remittance Tax	0

Net Operating Losses (Years)

Carryback	0
Carryforward	Unlimited

* This is a final tax applicable to persons not carrying on business in Hong Kong. The general withholding tax rate is 4.95% for payments to corporations. For payments to individuals (including unincorporated businesses), the general withholding tax rate is 4.5%. However, if a recipient of payments is an associate of the payer and if the intellectual property rights were previously owned by a Hong Kong taxpayer, a withholding tax rate of 16.5% applies to payments to corporations and, for payments to individuals (including unincorporated businesses), a 15% rate applies.

B. Taxes on corporate income and gains

Profits tax. Companies carrying on a trade, profession or business in Hong Kong are subject to profits tax on profits arising in or derived from Hong Kong. However, certain royalties received from a Hong Kong payer by a foreign entity that does not otherwise carry on a trade, profession or business in Hong Kong are liable to a withholding tax in Hong Kong (see Section A).

The basis of taxation in Hong Kong is territorial. The determination of the source of profits or income can be extremely complicated and often involves uncertainty. It requires case-by-case consideration. To obtain certainty concerning this and other tax issues, taxpayers may apply to the Inland Revenue for advance rulings on the tax implications of a transaction, subject to payment of certain fees and compliance with other procedures.

Rates of profits tax. The corporate rate of profits tax is 16.5%.

Tax incentives. As tax incentives, the following items are either exempt or taxed at a concessionary tax rate:

- Interest income and trading profits derived by corporations from qualifying debt instruments with a maturity period of less than seven years are taxed at a rate of 8.25% (that is, 50% of the normal profits tax rate), while interest income and trading profits derived from instruments with a maturity period of seven years or longer are exempt from tax.
- Income derived from the business of reinsurance of offshore risks by professional reinsurers that have made an irrevocable election is taxed at a rate of 8.25%.
- Income derived from the business of insurance of offshore risks by authorized captive insurers that have made an irrevocable election is taxed at a rate of 8.25%.
- Profits derived by authorized and certain bona fide widely held mutual funds, collective-investment schemes and unit trusts are exempt from tax.
- Profits derived from qualifying corporate treasury activities by qualifying corporate treasury centers that have made an irrevocable election are taxed at a rate of 8.25%.

Tax exemption for nonresident funds. Nonresident persons, including corporations, partnerships and trustees of trust estates, are exempt from tax in Hong Kong if their activities in Hong Kong are restricted to certain specified transactions and to transactions incidental to such transactions. An entity is regarded as a nonresident if its place of central management and control is located outside Hong Kong. Specified transactions are broadly defined to cover most types of transactions typically carried out by investment funds, such as transactions involving securities (for unlisted

securities, the exemption is subject to certain specified conditions), future and currency contracts, commodities and the making of deposits other than by money-lending businesses.

Anti-avoidance measures provide that under certain circumstances, a resident investor in an exempt nonresident fund is deemed to derive a portion of the exempt income of the fund and is subject to tax in Hong Kong on such income, regardless of whether the fund makes an actual distribution.

Capital gains. Capital gains are not taxed, and capital losses are not deductible for profits tax purposes.

Administration. A fiscal year runs from 1 April to 31 March. If an accounting period does not coincide with a fiscal year, the profit for the accounting period is deemed to be the profit for the fiscal year in which the period ends. Special rules govern commencements and cessations of businesses and deal with accounting periods of shorter or longer duration than 12 months.

Companies generally make two payments of profits tax during a fiscal year. The first payment consists of 75% of the provisional tax for the current year plus 100% of the final payment for the preceding year. The second payment equals 25% of the provisional tax for the current year. The timing of payments is determined by assessment notices rather than by set dates, generally during November to April of the fiscal year.

Dividends. Hong Kong does not impose withholding tax on dividends paid to domestic or foreign shareholders. In addition, dividends received from foreign companies are not taxable in Hong Kong.

Foreign tax relief. In certain circumstances, a deduction is allowed for foreign taxes paid. A foreign tax credit is available under the full comprehensive double tax treaties entered into between Hong Kong and other jurisdictions. However, the amount of the credit may not exceed the amount of tax payable under the Hong Kong tax laws with respect to the relevant item of income. For details concerning Hong Kong's double tax treaties, see Section E.

C. Determination of assessable profits

General. The assessment is based on accounts prepared on generally accepted accounting principles, subject to certain statutory tax adjustments.

In general, interest income earned on deposits with financial institutions is exempt from profits tax. However, this exemption does not apply if the recipient of the interest is a financial institution or if the deposits are used as security for borrowings and the interest expense with respect to the borrowings is claimed as a tax deduction.

Expenses must be incurred in the production of chargeable profits. Certain specified expenses are not allowed, including domestic and private expenses, capital expenditures, the cost of improvements, sums recoverable under insurance and tax payments. The deductibility of interest is subject to restrictions (see Section D).

Inventories. Stock is normally valued at the lower of cost and net realizable value. Cost must be determined using the first-in, first-out (FIFO) method or an average cost, standard cost or adjusted

selling price basis. The last-in, first-out (LIFO) method is not acceptable. However, this may not apply to shares and securities held for trading purposes.

Capital allowances

Industrial buildings. An initial allowance of 20% is granted on new industrial buildings in the year in which the expenditure is incurred, and annual depreciation allowances are 4% of qualifying capital expenditure beginning in the year the building is first put into use. No initial allowance is granted on the purchase of used buildings, but annual depreciation allowances may be available. Subject to certain exceptions, buildings used for the purposes of a qualifying trade are industrial buildings.

Commercial buildings. An annual allowance (4% of qualifying capital expenditure each year) is available on commercial buildings. Buildings that do not qualify as industrial buildings are commercial buildings. Refurbishment costs for premises, other than those used as domestic dwellings, may be deducted in equal amounts over a five-year period.

Prescribed plant and machinery. Subject to satisfying certain conditions, companies may immediately write off 100% of expenditure on manufacturing plant and machinery and on computer software and hardware.

Environmental protection facilities. Subject to satisfying certain conditions, capital expenditure incurred on eligible environmental protection machinery and environmentally friendly vehicles qualifies for a 100% write-off in the year in which the expenditure is incurred. Expenditure incurred on the construction of an eligible environmental protection installation forming part of a building or structure is deductible in equal amounts over a period of five years.

Other plant and machinery, and office equipment. An initial allowance of 60% is granted for non-manufacturing plant and machinery, and office equipment in the year of purchase. An annual allowance of 10%, 20% or 30% under the declining-balance method is available on the balance of the expenditure beginning in the year the asset is first used in the business. Consequently, the total allowances (initial and annual) in the first year can be 64%, 68% or 72%.

Motor vehicles. An initial allowance of 60% is granted for motor vehicles in the year of purchase. An annual allowance of 30% under the pooling system (declining-balance method) is allowed on the balance of the expenditure beginning in the year the asset is first used in the business.

Intellectual property rights. Subject to certain anti-avoidance provisions, capital expenditure incurred on the purchase of patents, industrial know-how, registered trademarks, copyrights and registered designs qualifies for tax amortization over a time period ranging from one to five years.

Recapture. Depreciation allowances are generally subject to recapture if the proceeds from the sale of a depreciable asset exceed its tax-depreciated value. The recapture rule also applies to prescribed plant and machinery (manufacturing plant and machinery and computer hardware and software) and environmental protection

machinery and installations that were previously written off in full. Consequently, in the year of disposal, the sales proceeds from prescribed assets generally are included in chargeable profits, up to the original costs of the assets. Allowances for commercial and industrial buildings may be recaptured, up to their original costs. Assets depreciable under the pooling system (declining-balance method) are allocated to one of three pools according to their depreciation rates, which are 10%, 20% or 30%. Proceeds from the sale of an asset in a pool (up to the cost of the asset) are deducted from the pool balance. If a negative balance results within the pool, a balancing charge is added to taxable profits.

Relief for business losses. Losses incurred in a year can be carried forward indefinitely and set off against the profits of the company in subsequent years. No carryback is possible. Certain rules prevent trafficking in loss companies. In addition, specific rules govern the offset of normal business losses against concessionary trading receipts (that is, those taxed at concessionary rates instead of the full normal rates) and vice versa.

Groups of companies. Consolidated filing is not permitted. Hong Kong does not provide group relief for tax losses.

D. Miscellaneous matters

Mergers and reorganizations. When considering an acquisition in Hong Kong, a company must first decide whether to acquire the shares or the assets of the target company. Unlike some other jurisdictions, the Hong Kong tax code does not allow a step-up in tax basis of the underlying assets if shares are acquired. The target company retains the same tax basis for its assets, regardless of the price paid for the shares.

Effective from 3 March 2014, the new Companies Ordinance (Cap 622) introduced measures to facilitate an amalgamation of two or more wholly owned companies within a group without the need to seek approval from the court. Currently, the Hong Kong tax code does not contain specific provisions relating to a court-free amalgamation. The Hong Kong Inland Revenue Department (IRD) is considering the enactment of specific legislation to address the issues relating to court-free amalgamations. Pending the enactment of such legislation, the IRD has announced that if it is satisfied that a court-free amalgamation that does not involve a sale of assets is not carried out for the purpose of obtaining tax benefits, the amalgamated company (that is, the surviving entity) will generally be treated as if it is the continuation of, and the same person as, the amalgamating company (that is, the company that ceased to exist as a separate legal entity upon amalgamation). Under such an approach, except for trading stocks, no tax charges will arise in the amalgamating company, and the amalgamated company will be entitled to deductions for any unrelieved tax costs inherent in the items being taken over. In addition, subject to satisfying certain conditions, tax losses brought forward from the amalgamating company can be used to offset profits of the amalgamated company.

Anti-avoidance legislation. Transactions that are artificial, fictitious or predominantly tax-driven may be disregarded under general anti-avoidance tax measures. In addition, specific measures deny the carryforward of tax losses if the dominant reason for a

change in shareholding of a corporation is the intention to use the tax losses. Other specific anti-avoidance measures include those designed to counteract certain leverage and cross-border leasing, non-arm's-length transactions between a Hong Kong resident company and its foreign affiliates and the use of personal service companies to disguise employer-employee relationships.

Foreign-exchange controls. Hong Kong does not impose foreign-exchange controls.

Islamic bonds. A special legislative framework provides comparable tax treatment in terms of stamp duty, profits tax and property tax for some common types of Islamic bonds (sukuk), vis-à-vis conventional bonds. However, no special tax incentives are conferred on Islamic bonds.

Interest expense. In an attempt to combat avoidance, restrictions are placed on the deductibility of interest expense. In general, subject to certain specific anti-avoidance rules, interest on monies borrowed is deductible for tax purposes if it is incurred in the production of chargeable profits in Hong Kong and if one of the following additional conditions is satisfied:

- The recipient is taxable in Hong Kong on the interest.
- The interest is paid to a recognized financial institution in Hong Kong or overseas.
- The interest is paid with respect to debt instruments that are listed or marketed in Hong Kong or in a recognized overseas market.
- The interest is paid with respect to money that is borrowed from an unrelated person and that is wholly used to finance capital expenditures on plant and machinery qualifying for capital allowances or the purchase of trading stock.
- The interest is paid by a corporation in the ordinary course of its intra-group financing business to its overseas associated corporations, and such overseas corporations are subject to tax overseas with respect to the interest received at a rate of not less than the applicable reference rate (that is, 16.5% or 8.25% as the case may be).

In addition, subject to certain provisions, distributions made with respect to regulatory capital securities (covering both Additional Tier 1 instruments and Tier 2 instruments; these instruments are securities issued by financial institutions to fulfill the capital adequacy requirements under the relevant banking regulations) issued by financial institutions in compliance with the relevant banking capital adequacy requirements are treated as interest expenses and are tax deductible.

Reversion of sovereignty to China. Since 1 July 1997, Hong Kong has been a Special Administrative Region (SAR) of China under Article 31 of the constitution of China. However, as an SAR, Hong Kong has a tax system that is based on common law and distinct from the system used in Mainland China.

In addition, on its own, Hong Kong, using the name "Hong Kong, China," may maintain and develop relations, and may conclude and implement agreements, with foreign states and regions and relevant international organizations in such fields as economics, trade, finance, shipping, communications, tourism, culture and sports.

E. Tax treaties

Both the Hong Kong and Mainland China tax authorities take the view that Mainland China's tax treaties with other countries do not cover Hong Kong.

For the avoidance of double taxation on shipping income, Hong Kong has entered into agreements with Denmark, Germany, Norway, Singapore, Sri Lanka and the United States. These agreements generally provide for tax exemption in one territory for profits and capital gains derived by an enterprise of the other territory in the first-mentioned territory with respect to the operation of ships in international traffic. However, under the agreement between Hong Kong and Sri Lanka, 50% of the profits derived from the operation of ships in international traffic may be taxed in the source jurisdiction. Apart from these agreements, reciprocal exemption provisions with the tax authorities of Chile, Korea (South) and New Zealand have also been confirmed.

Hong Kong has signed double tax agreements relating to airline profits with several jurisdictions, including Bangladesh, Croatia, Denmark, Estonia, Ethiopia, Fiji, Finland, Germany, Iceland, Israel, Jordan, Kenya, Laos, the Macau SAR, Maldives, Mauritius, Norway, Seychelles, Singapore, Sri Lanka and Sweden. Under these agreements, international transport income of Hong Kong airlines is exempt from tax in these signatory countries. However, international transport income of Hong Kong airlines that is exempt from tax overseas under these agreements or under relevant full comprehensive double tax treaties is taxed in Hong Kong.

Hong Kong has also entered into full comprehensive double tax treaties modeled on the conventional tax treaty adopted by the Organisation for Economic Co-operation and Development (OECD), with the jurisdictions listed in the table below. The table shows the withholding tax rates for dividends, interest and royalties paid from Hong Kong to residents of the treaty jurisdictions. The rates shown in the table are the lower of the treaty rates and the applicable rates under Hong Kong domestic law.

- (a) The withholding rates in Hong Kong applicable to individuals (including unincorporated businesses) and corporations are 4.5% and 4.95%, respectively. These rates are lower than those specified in the relevant tax treaties, and consequently, the Hong Kong domestic rates apply.
- (b) The tax treaty is still pending ratification. The reduced rates for royalties will not apply until the ratification procedures are completed.
- (c) The 0% rate applies if the beneficial owner of the royalties is a company (other than a partnership). In all other cases, the 3% rate applies.

The same rate applies to the taxable income of permanent establishments of nonresident companies. In general, the various permanent establishments of a nonresident company are taxed as a single entity. However, the taxable income of permanent establishments that are registered as distinct branches with the Court of Registration must be calculated separately, and losses incurred by one branch may not offset the profits of another. Such registrations are an option for foreign taxpayers in some cases and mandatory in other cases, depending on the country of incorporation of the foreign entity, its planned activities and other circumstances.

Alternative minimum tax. The alternative minimum tax (AMT) is calculated by applying the general rate of 9% to the AMT tax base. In general, the AMT tax base is 2% of total revenues, excluding any revenue attributable to foreign permanent establishments. The AMT tax base must be increased by an amount equal to 50% of additional loans contracted by the company from its shareholders or members during the tax year.

If a company's AMT is higher than the corporate income tax otherwise calculated or the pretax profit, the taxpayer may choose to pay either of the following:

- AMT.
- Corporate income tax otherwise payable. In this case, the company must fill out a one-page form that provides information regarding certain types of expenses and, in principle, is more likely to be selected for a tax audit.

Tax incentives

Reduced rate on certain types of income. Companies may reduce their corporate tax base by 50% of royalty income, which includes, in certain cases, income from the disposal of intangible property. In effect, only half of the royalty income is taxable. In light of the recent developments regarding the OECD's Base Erosion and Profit Shifting (BEPS) Project, the definition of royalties eligible for these incentives was narrowed, and the conditions for applying these allowances were tightened as of 1 July 2016.

The total reduction mentioned above may not exceed 50% of the pretax profit of the company. The deduction may be claimed on the tax return. Unlike the development tax allowance (see *Development tax allowance*), no special reporting or preapproval obligations are imposed.

Research and development double deduction. In addition to being recognized expenses for corporate income tax purposes, the direct costs of basic research, applied research and research and development (R&D) incurred within the scope of a company's activities reduces the corporate income tax base. As a result, a double deduction is allowed for these expenses for corporate income tax purposes. It is not required that the research itself take place in Hungary, and the double deduction may include R&D purchased from related or unrelated foreign enterprises and, in some cases, from Hungarian enterprises.

R&D triple deduction. Certain R&D activities conducted in cooperation with the Hungarian Academy of Arts and Sciences and its research institutions, public research centers or private research centers directly or indirectly owned by the state can result in a

deduction of three times the R&D cost. However, this deduction is capped at HUF50 million (approximately USD172,000).

Development tax allowance. Companies may benefit from a development tax allowance (tax credit), conforming with European Community (EC) law, for up to 12 tax years if they satisfy all of the following conditions:

- They make an investment of at least HUF3 billion (approximately USD10,350,000) or an investment of HUF1 billion (approximately USD3,450,000) in an underdeveloped region.
- They meet either of the following conditions:
 - The average number of employees increases by at least 50 (or 25 in underdeveloped regions).
 - Compared to the tax year preceding the commencement of the investment, the increase in the annual wage cost is at least 300 times (150 times in underdeveloped regions) the minimum wage (for 2017, the minimum monthly wage is HUF127,650 [approximately USD440]).
- The investment comprises one of the following:
 - The acquisition of a new asset
 - The enlargement of existing assets
 - The fundamental modification of the final product or the previous production method as a result of the investment

Taxpayers may claim a development tax allowance with respect to investments of at least HUF100 million (approximately USD345,000) in free entrepreneurial zones.

Small and medium-sized enterprises may become eligible for development tax allowances with respect to investments implemented in any region.

A development tax allowance can also be claimed for investments of at least HUF100 million (approximately USD345,000) in the fields of food product hygiene, environmental protection, basic or applied research or film production, if certain other requirements are met. Investments of any amount in any field that result in a certain level of job creation may also qualify for a tax allowance.

In general, companies must submit a notification regarding the allowance to the Ministry of National Economy before the start date of the investment and self-assess the tax allowance. However, companies must obtain permission from the Ministry of National Economy if their investment-related costs and expenses exceed EUR100 million (approximately USD110 million). Taxpayers must report the completion date of their investments within 90 days after the date on which the investment becomes operational.

The tax allowance may reduce the company's corporate income tax liability by up to 80%, resulting in an effective tax rate of 1.8% (instead of 9%) to 1.8% (instead of 9%). Depending on the location of the project, the allowance may cover between 20% and 50% of the eligible investment costs. In general, the allowance may be used within a 12-year period after the investment is put into operation, but it must be used by the 16th year after the declaration for the allowance was filed. In general, the 12-year period begins in the year following the year in which the investment is put into operation. However, the investor may request that the

12-year period begin in the year in which the investment is put into operation.

Tax allowance for investments made for energy-efficiency purposes. If taxpayers make investments to reduce their final energy consumption, they can utilize a tax allowance up to 30% of the eligible extra costs (up to a maximum of the present HUF value of EUR15 million) directly relating to or attributable to the assets responsible for the energy saving. The tax allowance can be applied in the tax year following the year in which the investment was put into operation, and in the following five tax years. To be able to apply the tax allowance, the taxpayer must hold a certificate issued by the relevant authority proving that the investment qualifies as an investment for energy-efficiency purposes. Qualifying assets must be operated for at least five years. The tax allowance for investments serving energy-efficiency purposes and the development tax credit cannot both be applied to the same investment.

Tax allowance for investments in registered start-up companies. Taxpayers that invest in start-up companies may decrease their pretax profit by three times the acquisition value of the participation (including the increase in the acquisition value as a result of a capital increase after acquisition) in the tax year the participation is obtained and in the following three years, in equal amounts. The pretax profit can be decreased by a maximum of HUF20 million in each tax year. If, as a result of a capital increase in the start-up, the acquisition value increases in the period in which the allowance can be applied, the tax base can be decreased with respect to the increase, provided that the participation acquired in the start-up company previously entitled the taxpayer to apply a tax-base allowance. However, this does not extend the length of the initial application period.

Tax-base allowances to promote labor mobility. Under the tax-base allowances to promote labor mobility, the pretax profit can be decreased by the following:

- The amount of mobility housing support provided in the current tax year
- The amount recorded as the acquisition value or the increment of the acquisition value of workers' hostels in the tax year in which the investment or renovation is finished
- The amount recorded as the rental fees for properties used as workers' hostels, or incurred with respect to the maintenance and operation of workers' hostels in the current tax year

Film tax credit. Tax relief is provided to Hungarian companies sponsoring film production carried out in Hungary. The contributions are effectively refunded by the state because the sponsors can deduct the contributions from the corporate income tax payable, but the amount deducted may not exceed 20% of eligible expenses of the film production. In addition, these contributions, up to the above limit, are also deductible for corporate income tax purposes. The tax relief may be carried forward for a period of three years. It is available only if the sponsor does not receive any rights with respect to the sponsored film.

To qualify for tax incentives, films are subject to a comprehensive cultural test, which grants points for various aspects of the

production, including the members of the crew, the actors and the theme of the film being European. In general, only films receiving more than a certain number of points qualify.

To use the film tax credit, the taxpayer must pay 6.75% supplementary support to the beneficiary in the tax year in which the basic support is provided. The supplementary support is not deductible for corporate income tax purposes.

Sports tax credit. Tax relief is provided to Hungarian companies supporting sports organizations in the following popular team sports:

- Football (that is, soccer)
- Handball
- Basketball
- Water polo
- Ice hockey

Under the sports tax credit scheme, national sports associations, professional sports organizations, amateur sports organizations, nonprofit foundations and civil sports organizations may be supported. Donations granted to these sports organizations are fully creditable against the corporate tax liability of the donor, capped at 70% of the donor's total corporate tax liability, if the taxpayer does not have government liabilities in arrears. Unused tax credits may be carried forward for a period of six years. In addition, amounts donated are also deductible for corporate income tax purposes. Supplementary sport development aid must be paid by the donors within the framework of sponsorship or aid contracts equal to at least 6.75% of the amount indicated in the support certificate. This expense is not deductible for corporate income tax purposes. The supplementary development aid must be transferred to the respective national sport associations or the respective sports organizations or foundations.

Culture tax credit. Tax relief is provided to Hungarian corporate taxpayers supporting cultural organizations (for example, theaters). The support can be for an amount of up to 80% of the organization's revenues from ticket sales, capped at HUF1.5 billion (approximately USD5,170,000). The mechanism of the tax relief is the same as for the sports tax credit (see *Sports tax credit*).

New film, culture and sports tax credit. Effective from 2015, film productions, sports organizations and cultural organizations may be supported by Hungarian corporate taxpayers in a new manner, as an alternative to the "old" model that will also remain in existence. Under the new rules, the taxpayer may designate a portion of its tax liability as support for a selected, qualifying organization. On receiving the tax payment from the taxpayer, the tax authority remits the designated amount to the beneficiary. Taxpayers can designate up to 50% of their monthly or quarterly tax advance payments and up to 80% of their "top-up payments" or year-end tax payments. The total amount of the support is capped at the same amounts as under the "old" rules. As a benefit, the tax authority credits 7.5% of the amounts designated from advance tax payments and "top-up payments" and 2.5% of the amounts designated from the year-end tax payment to the taxpayer's tax account.

Capital gains. With the exception of capital gains on “reported shares,” “reported intangibles” and certain other intellectual property (see below), capital gains derived by Hungarian companies are included in taxable income and taxed at the standard corporate income tax rate.

Capital gains derived by nonresident companies from disposals of Hungarian shares (except for shares in Hungarian real estate companies, see below) are not subject to tax, unless the shares are held through a permanent establishment of the seller in Hungary.

Reported shares. If a taxpayer has held at least 10% of the registered shares of an entity for at least one year and reported the acquisition of the shares within 75 days after the date of the acquisition to the Hungarian tax authorities, the shares are “reported shares.” If a shareholding has already been reported to the tax authorities, further reporting is necessary only if the proportion of the shareholding increases.

Capital gains (including foreign-exchange gains) derived from the sale of the reported shares or from the contribution of the reported shares in kind to the capital of another company are exempt from corporate income tax. Capital losses (including foreign-exchange losses) incurred on such investments are not deductible for tax purposes.

Reported intangibles. Similar to the rules of reported shares, the acquisition and creation of royalty-generating intangible assets (intellectual property and pecuniary rights) by Hungarian taxpayers can be reported to the Hungarian tax authorities within 60 days after the date of acquisition or creation. If the reported intangible asset is sold or disposed of after a holding period of at least one year, the gain on the sale is non-taxable. However, any losses related to such reported intangible asset (that is, impairment) are not deductible for corporate income tax purposes.

If an unreported intangible asset is sold, the gain on the sale is exempt from tax if this gain is used to purchase further royalty-generating intangibles within four years. A taxpayer may not enjoy the benefits arising from the reporting of a repurchased intangible if this asset was previously sold as an unreported intangible that benefited from this capital gains tax exemption.

Hungarian real estate holding companies. Gains derived by a nonresident from the alienation of shares in a Hungarian real estate holding company are taxed at a rate of 9%, unless a tax treaty exempts such gains from taxation. A Hungarian company is deemed to be a Hungarian real estate holding company if either of the following circumstances exists:

- More than 75% of its book value is derived from real property located in Hungary.
- More than 75% of the total book value of the group, comprised of the company and its related companies that are engaged in business in Hungary (whether as resident entities or through permanent establishments), is derived from real property located in Hungary.

The capital gains are not taxable if the Hungarian company is listed on a recognized stock exchange.

Administration. In general, the calendar year is the tax year. However, companies may choose a different tax year if such year best fits their business cycle or is required to meet the management information needs of the parent company. Companies selecting a tax year other than the calendar year must notify the tax authorities within 15 days after making the decision on the selection.

Companies must file their corporate income tax returns by the last day of the fifth month following the end of the tax year. If their annual tax liability is greater than the total advance tax payments paid during the year, they are required to pay the balance on filing the return.

Extensions to file tax returns may not be obtained in advance of the due date. However, a company may obtain an extension after the due date if it files, with the completed late return, a letter requesting an extension to the date the return is filed. At their discretion, the tax authorities may accept the late return as being filed on time if the letter explains the reasons for the delay and establishes that the tax return is being filed within 15 days after the reason for the delay expires, and if the company pays any balance of tax due shown on the return.

If an extension for filing is granted, no late filing or payment penalties are imposed, and no interest is charged on the late payment. If an extension for filing is not granted, a penalty of up to HUF500,000 (approximately USD1,720) can be imposed. In addition, interest is charged on the late payment of tax at a rate equal to twice the National Bank of Hungary prime interest rate (on 9 January 2017, the prime interest rate was 0.9%). Interest is charged beginning on the date the payment is due, and it may be charged for up to three years.

In their corporate income tax returns, taxpayers also declare the tax advances that they will pay for the 12-month period beginning in the second month after the filing deadline. The total of these advances equals the amount of tax payable for the year covered in the corporate income tax return. For calendar-year taxpayers, which have a filing deadline of 31 May, advances are payable over a 12-month period beginning in July of the year following the year covered in the corporate income tax return and ending in June of the subsequent year. For companies with a corporate income tax liability exceeding HUF5 million (approximately USD17,200) in the preceding year, advance payments are divided into 12 equal monthly installments. Other companies make quarterly advance payments. As a result of the decrease of the corporate income tax rate in 2017, the amount of advance tax payable in 2017 and 2018 must be calculated based on special transitional rules. In addition to paying the monthly or quarterly advances, by the 20th day of the last month of their tax year, companies must make a “top-up payment” if their net sales revenues exceeded HUF100 million (approximately USD345,000) in the preceding tax year. The amount of the payment is the difference between the installments paid during the tax year and the anticipated tax liability for the tax year.

Dividends

Dividends paid by Hungarian companies. Withholding tax is not imposed on dividends paid to foreign companies.

Withholding tax at a rate of 15% is imposed on dividends paid directly to resident and nonresident individuals. Tax treaties may override Hungarian domestic law with respect to the withholding tax on dividends.

Dividends received by Hungarian companies. In general, dividends received by Hungarian companies are exempt from corporate income tax. The only exception applies to dividends paid by controlled foreign corporations (CFCs; see Section E).

Interest, royalties and service fees

Interest, royalties and service fees paid by Hungarian companies. Withholding tax is not imposed on interest, royalties and service fees or any other payments made to local or foreign companies.

Hungary imposes a withholding tax at a rate of 15% on interest paid directly to individuals (this rule does not apply to interest paid to individuals resident in certain countries if the payment falls under a reporting obligation under the European Union [EU] Savings Directive).

Interest and royalties received by Hungarian companies. A tax incentive may apply to royalties received by Hungarian companies (see *Tax incentives*). Interest received by a Hungarian company is taxable according to the general rules.

Foreign tax credit. Foreign taxes paid on foreign-source income may be credited against Hungarian tax. Foreign dividend withholding tax may be credited for Hungarian tax purposes if the dividend or the undistributed profit is subject to tax in Hungary.

C. Determination of trading income

General. Taxable income is based on financial statements prepared in accordance with Hungarian accounting standards. These standards are set forth in the law on accounting, which is largely modeled on EU directives.

Effective from 1 January 2017, the following companies can elect to use International Financial Reporting Standards (IFRS) for purposes of preparing their stand-alone Hungarian financial statements:

- Entities subject to compulsory statutory audit
- Companies whose direct or indirect parent prepares a consolidated report under IFRS
- Insurance companies
- Banks and other entities subject to similar prudential rules
- Entities providing financial services under the supervision of the Hungarian National Bank
- Hungarian branches of non-Hungarian entities

Effective from 1 January 2017, the use of IFRS is mandatory in the following circumstances:

- The entity's stock is listed on any of the stock exchanges in the European Economic Area (EEA), excluding banks and other entities subject to similar prudential rules and insurance companies).
- It is mandatory under Regulation 1606/2002 of the European Parliament and of the EU Council.

The application of IFRS is mandatory for banks and other entities subject to similar prudential rules (regardless of whether their stock is listed on any of the stock exchanges in the EEA) and insurance companies with securities listed on any of the stock exchanges in the EEA from the tax year beginning in 2018.

Taxable income is determined by adjusting the pretax profit shown in the annual financial statements by items described in the Act on Corporate Income Tax. If IFRS are applied, the starting point for the determination of the corporate income tax base is the IFRS result, but different adjustments apply. The purpose of making adjustments to the IFRS result is to arrive at a tax base that is largely similar to the tax base of companies reporting under Hungarian accounting standards.

Some items are not subject to tax as income, such as dividends received (but see the controlled foreign corporation rules in Section E).

Some items, such as transfers without consideration, are not deductible for tax purposes.

Tax depreciation. In general, depreciation is deductible in accordance with the Annexes to the Act on Corporate Income Tax. Lower rates may be used if they are at least equal to the amount of the depreciation used for accounting purposes. The annexes specify, among others, the following straight-line tax depreciation rates.

Asset	Rate (%)
Buildings used in hotel or catering businesses	3
Commercial and industrial buildings	2 to 6
Leased buildings	5
Motor vehicles	20
Plant and machinery	
General rate	14.5
Automation equipment, equipment for environmental protection, medical equipment and other specified items	33
Computers	50
Intellectual property and film production equipment	50

Relief for losses. Pre-2015 losses can be applied in any tax year until 2025. Losses incurred in 2015 and subsequent years may be carried forward for five years only. The losses can be applied against only 50% of the tax base for a particular year. Certain special rules apply to losses incurred before 2009.

Change-of-control restrictions have been introduced with respect to the availability of previously incurred tax losses after corporate transformations, mergers and acquisitions.

Groups of companies. The Hungarian tax law does not allow the filing of consolidated tax returns by groups of companies.

D. Other significant taxes

The following table summarizes other significant taxes and provides the 2017 rates for these taxes.

Nature of tax	Rate (%)
Value-added (sales) tax, on goods, services and imports	
Standard rate	27
Preferential rates	5/18
Bank tax; imposed on various entities in the financial market; the tax base and tax rate varies by financial activity	Various
Levy on energy suppliers (“Robin Hood tax”)	31
Social security contributions, on gross salaries; in general, expatriates do not participate; paid by	
Employer	22
Employee (the contribution represents the sum of the 8.5% health-care contribution and the 10% pension fund contribution)	18.5
Excise duty, on various goods, including gasoline, alcohol, tobacco, beer, wine and champagne	Various
Local business tax; imposed on turnover or gross margin (A decision of the European Court of Justice held that this tax was compatible with EU law.)	2

E. Miscellaneous matters

Foreign-exchange controls. The Hungarian currency is the forint (HUF). Hungary does not impose any foreign-exchange controls; the forint is freely convertible.

Companies doing business in Hungary must open a bank account at a Hungarian bank to make payments to and from the Hungarian authorities. They may also open accounts elsewhere to engage in other transactions.

Payments in Hungarian or foreign currency may be freely made to parties outside Hungary.

Transfer pricing. For contracts between related companies, the tax base of the companies must be adjusted by the difference between the market price and the contract price if the application of the market price would have resulted in higher income for the companies.

Taxpayers may also reduce the tax base in certain circumstances if, as a result of not applying market prices, their income is higher than it would have been if market prices had been applied. This does not apply if the transaction involves companies deemed to be controlled foreign corporations (CFCs; see *Controlled foreign corporations*).

The market price must be determined by one of the following methods:

- Comparable uncontrolled price method
- Resale price method
- Cost-plus method
- Transactional net margin method
- Profit split method
- Any other appropriate method

These methods reflect the July 2010 update of the Organisation for Economic Co-operation and Development (OECD) guidelines. A decree issued by the Ministry of National Economy describes the requirements for the documentation of related-party transactions. Transfer-pricing documentation must be prepared for all related-party agreements that are in effect, regardless of the date on which the agreement was concluded.

The transfer-pricing rules also apply to in-kind capital contributions (including on foundation) and the withdrawal of assets in kind (in the case of capital reduction and possibly in the case of winding-up) by the majority shareholder. The transfer-pricing rules also apply to in-kind dividend payments. Advance pricing agreements (APAs) are available.

Hungary has ratified and is applying the Arbitration Convention.

Controlled foreign corporations. As of 18 January 2017, the definition of controlled foreign companies (CFCs) in the Act on Corporate Income Tax and Dividend Tax is changed in accordance with the EU Council Directive that sets out the rules against tax-avoidance practices closely relating to the operation of the internal market. A CFC is defined as a nonresident company (branch) that meets one of the following conditions:

- At least 50% of the registered capital or the voting rights in the nonresident company is directly or indirectly owned by a Hungarian resident private individual or company, provided that the foreign company has to pay less than half of the amount of corporate income tax that would be payable if the tax and the tax base were calculated on the basis of the Hungarian tax rules. The 50% threshold must be evaluated on a consolidated basis. Consequently, the ratio of participation and voting rights held by all Hungarian and non-Hungarian related parties must be considered on an aggregate basis.
- A Hungarian resident individual or company has the right to receive at least 50% of the after-tax profit of the foreign company, provided that the foreign company has to pay less than half of the amount of corporate income tax that would be payable if the tax and the tax base were calculated on the basis of the Hungarian tax rules. The 50% threshold must be evaluated on a consolidated basis. Consequently, the rights to receive part of the after-tax profit held by all Hungarian and non-Hungarian related parties should be considered on an aggregate basis.
- A foreign branch of a Hungarian resident company is a CFC if the foreign branch has to pay less than half of the amount of corporate income tax that would be payable if the tax and tax base of the branch were calculated on the basis of the Hungarian tax rules.

A nonresident company (branch) is not a CFC if it has sufficient personnel, assets and locations through which it performs genuine business activity. If at least 50% of the total revenue of the nonresident company (branch) is generated from manufacturing, processing, agricultural, commercial, investing or service-providing activities through its own employees and assets, the nonresident company (branch) is considered to be performing a genuine business activity by law. Eligible investing activity covers the permanent investments made in the following:

- Memberships
- The purchase, holding and sale of debt securities
- Investing activity of funds, companies and other entities that are subject to regulations concerning securities and investment services in the country of their residence or that are controlled by the financial supervisory authority of the country of residence or have the license of such supervisory authority

If the nonresident company (branch) has related parties in the country of its establishment, the 50% revenue threshold must be evaluated on a consolidated basis; that is, the revenues of these related parties should also be considered.

Also, the foreign company does not qualify as a CFC if an entity that has been listed on a recognized stock exchange for at least five years or a related party holds at least 25% of the shares of the foreign company on every day of the tax year.

If a Hungarian company holds at least 25% of the shares of a CFC, the company must increase its tax base by an amount equal to its proportionate share in the undistributed after-tax profit of the CFC. However, the corporate income tax paid abroad can be credited against the Hungarian corporate income tax liability. As a result, the overall non-Hungarian and Hungarian tax burden is capped at the 9% Hungarian corporate income tax rate. This adjustment to the tax base does not apply if an individual deemed to be a Hungarian tax resident holds shares in the Hungarian company.

Dividends received from CFCs do not qualify for the participation exemption regime and, accordingly, are treated as taxable income to the Hungarian shareholders (except for dividends that were already taxed as undistributed after-tax profits in previous years). Nevertheless, the corporate income tax paid abroad can be credited against the Hungarian corporate income tax liability. As result, the overall non-Hungarian and Hungarian tax burden is capped at the 9% Hungarian corporate income tax rate. Capital losses on investments in CFCs are not deductible for tax purposes.

Debt-to-equity rules. A Hungarian company's taxable income is increased by the interest payable on the amount of net debt in excess of three times the amount of the company's average net equity during the tax year.

Liabilities can be calculated on a net basis; that is, only the proportion of liabilities that exceeds the amount of certain receivables needs to be taken into consideration in the thin-capitalization calculation.

The thin-capitalization rules are extended to non-interest-bearing liabilities if a transfer-pricing adjustment has been applied to them. Consequently, when calculating thin capitalization, both interest accounted for in the books and deemed interest imputed as a result of transfer-pricing adjustments must be taken into account.

Foreign investment. No restrictions are imposed on the percentage of ownership that foreigners may acquire in Hungarian companies. Some restrictions exist with respect to the ownership of farmland.

F. Treaty withholding tax rates

Hungary does not impose withholding taxes on payments to foreign entities. However, it does impose withholding tax on the payment of dividends and interest to foreign individuals (for details, see Section B).

Hungary has tax treaties in effect with the following jurisdictions.

Albania	Indonesia	Portugal
Armenia	Iran	Qatar
Australia	Ireland	Romania
Austria	Israel	Russian Federation
Azerbaijan	Italy	San Marino
Bahrain	Japan	Saudi Arabia
Belarus	Kazakhstan	Serbia (b)
Belgium	Korea (South)	Singapore
Bosnia and Herzegovina (a)	Kosovo	Slovak Republic
Brazil	Kuwait	Slovenia
Bulgaria	Latvia	South Africa
Canada	Liechtenstein	Spain
China	Lithuania	Sweden
Croatia	Luxembourg	Switzerland
Cyprus	Macedonia	Taiwan
Czech Republic	Malaysia	Thailand
Denmark	Malta	Tunisia
Egypt	Mexico	Turkey
Estonia	Moldova	Turkmenistan
Finland	Mongolia	Ukraine
France	Montenegro (b)	United Arab Emirates
Georgia	Morocco	United Kingdom
Germany	Netherlands	United States (c)
Greece	Norway	Uruguay
Hong Kong SAR	Pakistan	Uzbekistan
Iceland	Philippines	Vietnam
India	Poland	

- (a) The 1985 treaty between Hungary and the former Socialist Federal Republic of Yugoslavia is applied with respect to Bosnia and Herzegovina.
- (b) The 2001 treaty between Hungary and the former Federal Republic of Yugoslavia is applied with respect to Serbia. In practice, Hungary and Montenegro also apply this treaty, but no formal announcement has been made to confirm this practice.
- (c) This treaty was renegotiated in 2010, but the new treaty is not yet in force.

Hungary is negotiating double tax treaties with Algeria, Chile, Cuba, Iraq, Jordan, Kyrgyzstan, Lebanon, Oman, Panama and Sri Lanka.

A. At a glance

Corporate Income Tax Rate (%)	20 (a)
Capital Gains Tax Rate (%)	20 (b)
Branch Tax Rate (%)	20 (a)
Withholding Tax (%)	
Dividends	
Residents	20 (c)
Nonresidents	18 (d)
Interest	
Residents	20
Nonresidents	10 (e)
Royalties from Patents, Know-how, etc.	20 (f)
Payments under Leases and Rent	20 (f)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	10

- (a) A 36% rate applies to partnerships.
- (b) Capital gains are taxed as ordinary income. Capital gains may be offset by extraordinary depreciation (for details, see Section B).
- (c) Dividends received by domestic companies are considered ordinary income. However, dividends received from domestic companies are fully deductible. Dividends received from foreign companies are also fully deductible if the foreign companies are taxed in a similar manner to Icelandic companies.
- (d) An 18% withholding tax is imposed on dividends paid to nonresident entities. A 20% withholding tax is imposed on dividends paid to nonresident individuals. Nonresidents can obtain a refund of the withholding tax or apply for an exemption from the withholding tax based on an applicable double tax treaty. If no double tax treaty applies, nonresidents must suffer the withholding. However, residents of European Union (EU), European Economic Area (EEA) or European Free Trade Association (EFTA) states or the Faroe Islands are eligible for a full deduction for dividends received from domestic companies in the same manner as domestic entities. Companies may claim this deduction by filing a tax return. They are accordingly reimbursed for withheld taxes in the general assessment in the following year.

- (e) A 10% withholding tax is imposed on interest paid to nonresident entities and nonresident individuals unless, on application, the Director of Internal Revenue grants an exemption from withholding tax based on an applicable double tax treaty. Alternatively, the withholding tax may either be refunded or not withheld. Interest on bonds issued in the name of financial undertakings or energy companies is not subject to withholding tax. The bonds must be registered at a central securities depository established in an Organisation for Economic Co-operation and Development (OECD), EEA or EFTA state or the Faroe Islands. Interest paid by Seðlabanki Íslands (the Icelandic central bank) in its own name or on behalf of the Icelandic treasury is also not subject to withholding tax.
- (f) Royalties, payments under leases and rent payments that are paid to nonresident companies, partnerships and individuals are subject to withholding tax at a rate of 20%. A 20% rate applies to resident companies. A 36% rate applies to resident partnerships. These payments are not subject to withholding when paid to residents.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are taxed on their worldwide income. Resident corporations are those incorporated, registered, domiciled or effectively managed in Iceland. Nonresident companies are taxed only on their income earned in Iceland.

Rate of corporate tax. The rate of corporate income tax is 20%. The rate for taxable partnerships is 36%.

Capital gains. Capital gains result from profits derived from sales of assets. These gains are included in ordinary income and taxed at the normal income tax rates.

Capital gains may be offset by extraordinary depreciation on other fixed assets or on fixed assets acquired within two years of the sale. If the fixed assets are not acquired within two years of the sale, the gain is included in income, and a 10% penalty is imposed.

Profits from stock sales. Profits derived by domestic companies from stock sales are considered ordinary income. However, profits derived from stock sales in domestic companies are fully deductible. Dividends received from foreign companies are also fully deductible if the foreign companies are taxed in a similar manner to Icelandic companies with a tax ratio that is not lower than the general tax ratio in any member state of the OECD, any member state of the EEA, a founding state of the EFTA or the Faroe Islands.

Administration. The tax year is generally the calendar year.

Due dates for filing income tax returns vary, depending on the type of entity. The filing date for limited companies and partnerships, which is 31 May, is usually extended. Monthly advance tax payments are due on the first day of each month except for January and October. Each advance payment equals 8.5% of the previous year's tax. The tax due is determined when the annual assessment is issued. Companies generally must pay the unpaid balance in two equal monthly payments in November and December.

Advance rulings. Both resident and nonresident companies may request advance rulings on most corporate income tax consequences of future transactions. Rulings are issued only on matters of substantial importance.

Dividends. Dividends earned by domestic companies are considered ordinary income. Dividends are subject to withholding tax except for dividends paid to companies of the same tax-consolidated group. However, dividends received from domestic companies are fully deductible in the annual assessment process, and any tax withheld at source is refunded. Dividends received from foreign companies are also fully deductible if the foreign companies are taxed in a similar manner to Icelandic companies with a tax ratio that is not lower than the general tax ratio in any member state of the OECD, any member state of the EEA, a founding state of the EFTA or the Faroe Islands.

Withholding tax is imposed on dividends paid to nonresidents. The rate is 18% for companies and 20% for individuals. Tax treaties may reduce or eliminate the dividend withholding tax. Nonresidents from EU, EEA or EFTA states or the Faroe Islands are eligible for a full deduction from dividends received from domestic companies in the same manner as domestic entities. Companies may claim this deduction by filing a tax return. They are accordingly reimbursed for withheld taxes in the general assessment in the following year.

No withholding tax is imposed on distributions by taxable partnerships.

Foreign tax relief. Relief for double taxation may be obtained unilaterally under Icelandic domestic law or under a tax treaty. Unilateral relief may be granted through a tax credit against Icelandic income tax at the discretion of the Director of Internal Revenue.

C. Determination of trading income

General. The computation of taxable income is based on net income in the financial statements prepared according to generally accepted accounting principles. For tax purposes, several adjustments are made, primarily concerning depreciation and write-offs of inventory.

In general, expenses incurred to generate and maintain business income are deductible.

Inventories. Inventories are valued at the lower of cost or market value. Cost must be determined using the first-in, first-out (FIFO) method. Five percent of the value of inventory at the end of the year is deductible.

Tax depreciation. Depreciation must be calculated using either the declining-balance method or the straight-line method. The straight-line method applies to buildings, expendable natural resources and the right of ownership of valuable intellectual properties, including copyright, publishing rights, patent rights and brand rights. The declining-balance method applies to ships, aircraft, vehicles and machinery. Fixed assets cannot be depreciated below 10% of cost. The following are some of the applicable depreciation rates.

Assets	Rate (%)
Buildings	
Office and retail	1 to 3
Industrial plants	3 to 6
Drilling holes and transmission lines	7.5 to 10

Assets	Rate (%)
Ships, aircraft, cars carrying fewer than nine persons (except taxis)	10 to 20
Automobiles and other transport vehicles	20 to 35
Industrial machinery and equipment	10 to 30
Office equipment	20 to 35
Machinery and equipment for building and construction	20 to 35
Other movable property	20 to 35

The amortization period for goodwill ranges from 5 to 10 years. The amortization period for copyrights, patents, trademarks, designs, models, know-how or similar rights ranges from five to seven years.

Relief for losses. Losses may be carried forward for 10 years. Losses may not be carried back.

Groups of companies. Resident companies may use group consolidation if one company owns at least 90% of the shares in another company or if at least 90% of the shares in a company are owned by companies that are members of the same tax-consolidated group.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on most goods sold in Iceland and most services rendered in Iceland	
Higher rate	24
Lower rate for hotels, books and publications, food products, heating of houses and road tolls	11
Social security contributions, paid by the employer on gross payroll	
1 January 2017 through 30 June 2017	7.35
1 July 2017 through 31 December 2017	6.85
Commodity tax; on certain goods, including vehicles and fuel	Various

E. Foreign-exchange controls

Comprehensive temporary capital controls were introduced in November 2008. The ability to shift between the Icelandic krona and foreign currency is restricted. Bonds and similar instruments denominated in Icelandic krona may not be converted to foreign currency on maturity. The restrictions apply both to residents and nonresidents. Transactions that facilitate imports and exports of goods and services and payments of dividends and interest are allowed.

Nonresidents may directly invest in most industries in Iceland, but they must notify Seðlabanki Íslands (the central bank) of such investments. The fishing industry is the principal industry in which investments by nonresidents are limited. Nonresidents may not own a majority in such companies.

F. Treaty withholding tax rates

A Qualifying companies.

B Individuals and other companies.

(a) Unless indicated otherwise, the rate applies to corporate shareholders with ownership of at least 10%.

(b) The lower rate applies to copyrights (except for films and similar items), computer software, patents and know-how. The higher rate applies to other royalties.

(c) The rate applies to corporate shareholders with ownership of at least 25%.

(d) These are the rates under the Nordic Convention.

(e) The lower rate applies to equipment leasing.

(f) A 10% withholding tax is imposed on interest paid to nonresident entities unless, on application, the Director of Internal Revenue grants an exemption from withholding tax. A 10% withholding tax is imposed on interest paid to nonresident individuals. Alternatively, the withholding tax may be refunded.

- (g) Royalties paid to nonresidents are subject to withholding tax at a rate of 20%. The net royalties (gross royalties less expenses) are normally included in ordinary income and taxed at the general corporate income tax rate unless a tax treaty provides a reduced rate.
- (h) The lower rate applies to royalties paid for the use of, or the right to use, computer software or patents or for information concerning industrial, commercial or scientific experiences if they are paid to a resident of the other contracting state that is the beneficial owner of the royalties.
- (i) The 5% rate applies to royalties paid for the following:
 - Information concerning industrial, commercial or scientific experience provided in connection with a rental or franchise agreement
 - A trademark associated with an agreement referred to in the first bullet
 - Copyright of a motion picture film or work on film or videotape or other means of reproduction for use in connection with television
- (j) The rate applies if the Russian company owns directly at least 25% of the capital in the Icelandic company and if the foreign capital invested exceeds USD100,000.

Tax information and exchange agreements are in force with Andorra, Anguilla, Antigua and Barbuda, Aruba, Bahamas, Bahrain, Belize, Bermuda, Botswana, the British Virgin Islands, Brunei Darussalam, the Cayman Islands, Cook Islands, the Dominican Republic, Gibraltar, Grenada, Guernsey, the Isle of Man, Jersey, Liberia, Liechtenstein, Monaco, Niue and the Netherlands Antilles (applicable to the successor jurisdictions of the Netherlands Antilles), Macau, Marshall Islands, Mauritius, Panama, St. Lucia, Samoa, San Marino, Seychelles, Turks and Caicos Islands, and Uruguay.

-----------------	---

A. At a glance

Domestic Company Income Tax Rate (%)	30 (a)(b)
Capital Gains Tax Rate (%)	20 (a)(c)
Branch Tax Rate (%)	40 (a)(d)
Withholding Tax (%)	
Dividends	0
Interest	
Paid to Domestic Companies	10 (e)(f)
Paid to Foreign Companies	20 (a)(e)(f)(g)(h)
Royalties from Patents, Know-how, etc.	10 (a)(e)(f)(i)
Technical Services Fees	10 (a)(e)(h)(i)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	8 (j)

- (a) The rates are subject to an additional levy consisting of a surcharge and a cess. They are increased by the following surcharges on such taxes:
- Domestic companies with net income exceeding INR100 million: 12%
 - Foreign companies with net income exceeding INR100 million: 5%
 - Domestic companies with net income exceeding INR10 million: 7%
 - Foreign companies with net income exceeding INR10 million: 2%
- No surcharge is payable if the net income does not exceed INR10 million. The tax payable (inclusive of the surcharge, as applicable) is further increased by a cess levied at 3% of the tax payable. The withholding tax rates are increased by a surcharge for payments exceeding INR10 million made to foreign companies and a cess (see above).
- (b) A reduced tax rate of 29% applies to companies that had gross turnover not exceeding INR50 million in the 2014-15 fiscal year. In addition, domestic companies set up and registered after 1 March 2016 and engaged in the manufacturing or production of articles or things and research with respect to such articles or things can opt for a concessional tax rate of 25%, subject to the fulfilment of specified conditions.
- (c) See Section B.
- (d) For exceptions to this basic rate, see Section B.
- (e) A Permanent Account Number (PAN) is a unique identity number assigned to a taxpayer in India on registration with the India tax authorities. If an income recipient fails to furnish its PAN, tax must be withheld at the higher of the rate specified in the relevant provision of the Income Tax Act and 20%.
- (f) Interest paid by business trusts is subject to a withholding tax at a rate of 10% for payments to residents and 5% for payments to nonresidents (including foreign companies) plus applicable surcharge and cess (See Section E).
- (g) This rate applies to interest on monies borrowed, or debts incurred, in foreign currency. Withholding tax at a rate of 5% (plus a surcharge of 2% or 5%, as applicable, and a 3% cess) is imposed on interest payments to nonresidents (including foreign companies) with respect to the following:
- Infrastructure debt funds
 - Borrowings made by an Indian company in foreign currency by way of loans between 1 July 2012 and 1 July 2017, infrastructure bonds issued between 1 July 2012 and 1 October 2014 or long-term bonds issued between 1 October 2014 and 1 July 2017, subject to prescribed conditions (for long-term bonds, the lower withholding rate would not be affected if the recipient does not furnish a PAN; see footnote [d] above)
 - Rupee-denominated bonds of an Indian company or a government security issued to a foreign institutional investor or a qualified foreign investor, with respect to interest payable between 1 June 2013 and 1 July 2017
 - Interest received from units of business trusts in India
- Other interest is taxed at a rate of 40% (plus the surcharge of 2% or 5%, as applicable, and the 3% cess).
- (h) If a recipient of income is located in a Notified Jurisdictional Area (NJA), tax must be withheld at the higher of the rate specified in the relevant provision of the Income Tax Act and 30% (for further details, see Section E).
- (i) The 10% rate (plus the 2% or 5% surcharge, as applicable, and the 3% cess) applies to royalties and technical services fees paid to foreign companies by Indian enterprises. However, if the royalties or technical services fees paid under the agreement are effectively connected to a permanent establishment or fixed place of the nonresident recipient in India, the payments are taxed on

a net income basis at a rate of 40% (plus the 2% or 5% surcharge, as applicable, and the 3% cess).

- (j) Unabsorbed depreciation may be carried forward indefinitely to offset taxable profits in subsequent years.

B. Taxes on corporate income and gains

Corporate income tax. A domestic company is defined for tax purposes as a company incorporated in India. The definition also includes a company incorporated outside India (foreign company) if the company has made certain arrangements for declaration and payment of a dividend in India. The tax rates in India are specified with reference to a domestic company. As a result, it is possible for a foreign company to be taxed at rates applicable to a domestic company if it has made the necessary arrangements for the declaration and payment of a dividend in India.

A company resident in India is subject to tax on its worldwide income, unless the income is specifically exempt. A company not resident in India is subject to Indian tax on Indian-source income and on income received in India. Depending on the circumstances, certain income may be deemed to be Indian-source income. Companies incorporated in India are resident in India for tax purposes, as are companies incorporated outside India, if their place of effective management in that year is in India. As a result, if the place of effective management of a foreign company is in India, it is subject to tax in India on its worldwide income. If such a foreign company also qualifies as a domestic company (see above), the tax rates applicable to a domestic company apply.

Rates of corporate tax. Domestic companies are subject to tax at a basic rate of 30% (29% for domestic companies that had gross turnover not exceeding INR50 million in the 2014-15 fiscal year). New companies set up and registered on or after 1 March 2016 that are engaged in the manufacturing or production of articles or things and research with respect to such articles or things can opt for a concessional tax rate of 25%, subject to the fulfilment of specified conditions. In addition, a 7% or 12% surcharge (for details regarding the surcharge, see footnote [a] in Section A) and a 3% cess are imposed on the income tax of such companies. Long-term capital gains are taxed at special rates (see *Capital gains*).

For foreign companies, the net income is taxed at 40% plus the 2% or 5% surcharge, as applicable, and the 3% cess. A rate of 10% plus the 2% or 5% surcharge and the 3% cess applies to royalties and technical services fees paid to foreign companies if the royalty or technical services fees agreement is approved by the central government or if it is in accordance with the Industrial Policy. A rate of 20% (plus the 2% or 5% surcharge and the 3% cess) applies to gross interest from foreign-currency loans or from units of a mutual fund. A lower rate of 5% (plus the 5%/2% surcharge and the 3% cess) applies to gross interest from foreign-currency borrowings raised by Indian companies or business trusts by way of loans between 1 July 2012 and 1 July 2017, long-term infrastructure bonds issued between 1 July 2012 and 1 October 2014 or long-term bonds issued between 1 October 2014 and 1 July 2017, subject to prescribed conditions. A lower rate of 5% (plus the 5%/2% surcharge and the 3% cess) also applies to interest payable between 1 June 2013 and 1 July 2017 on rupee-denominated bonds issued by Indian companies and government

securities, subject to prescribed conditions. A lower rate of 5% (plus the 5%/2% surcharge and the 3% cess) applies to interest received from units of business trusts in India (see Section E).

If a nonresident with a permanent establishment or fixed place of business in India enters into a royalty or technical services fees agreement and if the royalties or fees paid under the agreement are effectively connected to such permanent establishment or fixed place, the payments are taxed on a net income basis at a rate of 40% plus the 2% or 5% surcharge and the 3% cess.

Tax incentives. Subject to prescribed conditions, the following tax exemptions and deductions are available to companies with respect to business carried on in India:

- A 10-year tax holiday equal to 100% of the taxable profits is available to undertakings or enterprises engaged in the following:
 - Developing or operating and maintaining or developing, operating and maintaining infrastructure facilities (roads, toll roads, bridges, rail systems, highway projects including housing or other activities that are integral parts of the highway projects, water supply projects, water treatment systems, irrigation projects, sanitation and sewerage systems, solid waste management systems, ports, airports, inland waterways, inland ports or navigational channels in the sea), if development or operation and maintenance of the infrastructure facility begins before 1 April 2017
 - Generation or generation and distribution of power if the company begins to generate power at any time during the period of 1 April 1993 through 31 March 2017
 - Starting transmission or distribution by laying a network of new transmission or distribution lines at any time during the period of 1 April 1999 through 31 March 2017
 - Undertaking substantial renovation and modernization (at least 50% increase in book value of plant and machinery) of an existing network of transmission or distribution lines during the period of 1 April 2004 through 31 March 2017

The company may choose any 10 consecutive years within the first 15 years (10 out of 20 years in certain circumstances) for the period of the tax holiday. Such tax holiday is not available to an undertaking or enterprise that is transferred in an amalgamation or demerger.

- A 10-year tax holiday equal to 100% of profits and gains derived by an undertaking or enterprise that begins the development of a Special Economic Zone (SEZ) notified (through an official publication by the government of India) before 1 April 2017, subject to certain conditions.
- A 10-year tax holiday equal to 100% of taxable profits for the first 5 years and 30% of taxable profits for the next 5 years from the business of processing, preserving and packaging of fruits or vegetables or from the integrated business of handling, storing and transporting food grains. A similar tax holiday is available with respect to profits from the business of processing, preserving and packaging of meat and meat products, poultry or marine or dairy products.
- One hundred percent of the profits derived from the business of developing and building a housing project if approval from the competent authority is obtained during the period of 1 June 2016 through 31 March 2019, subject to fulfilment of other

conditions. The size of the plot and residential unit must be within specified limits to qualify for the tax holiday.

- A three-year tax holiday with respect to profits derived from a business that involves innovation, development, deployment or commercialization of new products, processes or services driven by technology or intellectual property, for domestic companies incorporated between 1 April 2016 to 31 March 2019, subject to other conditions.
- A 15-year tax holiday with respect to profits derived from export activities by units that begin to manufacture or produce articles or things or provide services in SEZs. For the first 5 years of the tax holiday, a tax deduction equal to 100% of the profits derived from the export of articles, things or services provided is available. For the following 5 years, a tax deduction equal to 50% of the profits is available. For the next 5 years, the availability of the deduction is contingent on the allocation of the profits to a specified reserve and the use of such amounts in the prescribed manner. The deduction is capped at 50% of the profits allocated to the reserve.
- A 10-year tax deduction equal to 100% of profits derived from an undertaking that begins the manufacturing or production of specified goods or carries on specified business in northeastern states before 1 April 2017. This deduction is also available if an undertaking manufacturing the specified goods undertakes a substantial expansion that involves an increase in investment in plant and machinery by at least 25% of the book value of plant and machinery (computed before depreciation).
- A 5-year tax holiday equal to 100% of the profits from the business of collecting and processing or treating of biodegradable waste for either of the following purposes:
 - Generating power or producing biofertilizers, biopesticides or other biological agents
 - Producing biogas or making pellets or briquettes for fuel or organic manure
- Accelerated deduction of capital expenditure (other than expenditure on the acquisition of land, goodwill or financial instruments) incurred, wholly and exclusively for certain specified businesses in the year of the incurrence of such expense. Expense incurred before the commencement of business is allowed as a deduction on the commencement of the specified business. The following are the specified businesses:
 - Setting up and operating a cold chain facility or setting up and operating a warehousing facility for storage of agricultural produce
 - Laying and operating a cross-country natural gas or crude or petroleum oil pipeline network for distribution including storage facilities that are an integral part of such network
 - Building and operating in India a new hotel with a two-star or above category, as classified by the central government
 - Building and operating in India a new hospital with at least 100 beds for patients
 - Developing and building a housing project under a scheme for slum redevelopment or rehabilitation framed by the government
 - Developing and building a housing project under a scheme for affordable housing framed by the central or state government in accordance with the prescribed guidelines

- Producing fertilizers in a new plant or newly installed capacity in an existing plant
- Setting up and operating an inland container depot or a container freight station notified or approved under the Customs Act
- Setting up and operating a warehousing facility for storage of sugar
- Beekeeping and production of honey and beeswax
- Laying and operating a slurry pipeline for the transportation of iron ore
- Setting up and operating a semiconductor wafer fabrication manufacturing unit notified by the Central Board of Direct Taxes (CBDT; the administrative authority for direct taxes) in accordance with prescribed guidelines

The deduction mentioned above is increased to 1.5 times the amount of capital expenditure (other than expenditure on the acquisition of land, goodwill or financial instruments) incurred by the following businesses:

- Setting up and operating a cold chain facility
 - Setting up and operating a warehousing facility for the storage of agricultural produce
 - Building and operating a hospital with a least 100 beds for patients
 - Developing and building a housing project under a scheme for slum redevelopment or rehabilitation framed by the government
 - Production of fertilizer in India
- Weighted deduction at a rate of 150% on expenditure on agriculture extension projects and on specified sums expended on skill development projects.

Minimum alternative tax. The minimum alternative tax (MAT) applies to a company if the tax payable by the company on its total income, as computed under the Income Tax Act, is less than 18.5% of its book profit. It is levied at a rate of 18.5% of book profit, plus applicable surcharge and cess (the surcharge, as applicable, is imposed at a rate of 7% or 12% for domestic companies and 2% or 5% for foreign companies, and the cess is imposed at a rate of 3%). The concessional rate of 9% applies in place of the 18.5% rate in the case of a unit located in the International Financial Service Center that derives its income solely in convertible foreign exchange. MAT is levied on companies only and does not apply to firms or other persons, which are separately subject to an alternative minimum tax of 18.5% (plus applicable surcharge and cess). MAT does not apply to a foreign company in the following cases:

- In the case of a foreign company that is resident of a country with which India has entered into a treaty, if such foreign company does not have a permanent establishment in India under the terms of the relevant treaty
- In the case of a foreign company that is resident of a country with which India has not entered into a treaty, if such foreign company does not have a place of business in India under the corporate tax laws of India

In computing book profit for MAT purposes, certain positive and negative adjustments must be made to the net profit shown in the books of account.

The net profit as per the profit-and-loss account is increased by the following key items:

- Amount of income tax (including dividend distribution tax, any interest charged under the Income Tax Act, surcharge and cess) paid or payable and the provision for such tax
- Amount carried to any reserves
- Amount allocated to provisions for liabilities other than ascertained liabilities
- Amount allocated to provision for losses of subsidiary companies
- Amount of dividend paid or proposed
- Amount of expenditure related to exempt income
- Amount of depreciation
- Amount of deferred tax and the provision for such tax, if debited to the profit-and-loss account
- Amounts set aside as a provision for diminution in the value of any asset
- Amount in revaluation reserve relating to a revalued asset on retirement of the asset
- Expenditure related to a share of the income of an association of persons that is not taxable
- Expenditure of a foreign company related to capital gains on specified securities, interest, royalties or fees for technical services, in certain specified circumstances
- Notional loss on the transfer of shares of a special-purpose vehicle to a business trust in exchange for units allotted by the trust, notional loss resulting from any change in the carrying amounts of such units or loss on the transfer of such units
- Expenditure related to royalty income with respect to patents covered by the Patent Box Regime (see Section E)
- Gain on the transfer of shares of a special-purpose vehicle to a business trust in exchange for units

The net profit is decreased by the following key items:

- Amount withdrawn from any reserves or provisions if such amount is credited in the profit-and-loss account
- Amount of losses carried forward (excluding depreciation) or unabsorbed depreciation, whichever is less, according to the books of account
- Profits of “sick” industrial companies, which are companies that have accumulated losses equal to or exceeding their net worth at the end of a financial year and are declared to be sick by the Board for Industrial and Financial Reconstruction
- Income that is exempt from tax
- Amount of depreciation debited to the profit-and-loss account excluding depreciation on account of revaluation of assets
- Amount of deferred tax, if any such amount is credited to the profit-and-loss account
- Amount withdrawn from revaluation reserve and credited to the profit-and-loss account, to the extent that it does not exceed depreciation of the revalued assets
- Share in the income of an association of persons that is not taxable
- Capital gains on certain specified securities, interest, royalties or fees for technical services of a foreign company in specified circumstances

- Notional gain on the transfer of shares of a special-purpose vehicle to a business trust in exchange for units allotted by the trust, notional gain resulting from any change in the carrying amount of such units or gain on the transfer of such units
- Royalty income with respect to patents covered by Patent Box Regime (see Section E)
- Loss on the transfer of shares of a special-purpose vehicle to a business trust in exchange for units

MAT paid by companies can be carried forward and set off against income tax payable in subsequent years under the normal provisions of the Income Tax Act for a period of 10 years. The maximum amount that can be set off against regular income tax is equal to the difference between the tax payable on the total income as computed under the Income Tax Act and the tax that would have been payable under the MAT provisions for that year.

MAT does not apply to income from life insurance businesses.

A report in a prescribed form that certifies the amount of book profits must be obtained from a chartered accountant.

Capital gains

General. The Income Tax Act prescribes special tax rates for the taxation of capital gains. Gains derived from “transfers” of “capital assets” are subject to tax as capital gains and are deemed to be income in the year of the transfer.

“Transfer” and “capital asset” are broadly defined in the Income Tax Act. In addition, shares or interests in foreign entities are deemed to be capital assets located in India if they derive, directly or indirectly, their value substantially from assets located in India. Gains derived from the transfer of such deemed capital assets are deemed to be income in the year of transfer.

The tax rate at which capital gains are taxable in India depends on whether the capital asset transferred is a short-term capital asset or a long-term capital asset. A short-term capital asset is defined as a capital asset that is held for less than 36 months immediately before the date of its transfer. However, if the capital asset is a security (other than a unit) listed on a recognized stock exchange in India, a unit of an equity-oriented mutual fund or a specified zero-coupon bond, a 12-month period replaces the 36-month period. In addition, in the case of shares of a company (other than shares listed on recognized stock exchange in India), a 24-month period replaces the 36-month period. A capital asset that is not a short-term capital asset is a long-term capital asset.

Capital gains on specified transactions on which Securities Transaction Tax has been paid. Long-term capital gains derived from the transfer of equity shares, units of an equity-oriented fund or units of a business trust on a recognized stock exchange in India are exempt from tax if Securities Transaction Tax (STT) has been paid on the transaction. For further details regarding STT, see Section D.

Short-term capital gains derived from the transfer of equity shares in a company, units of an equity-oriented fund or units of a business trust on a recognized stock exchange in India are taxable at a

reduced rate of 15% plus the surcharge, as applicable, and the cess, if STT has been paid on the transaction.

The tax regime described above applies to all types of taxpayers, including Foreign Institutional Investors (FIIs).

Sales of unlisted equity shares that are included in an initial public offer are also subject to STT and are eligible for the aforementioned reduced rates with respect to long-term or short-term capital gains.

Capital gains on transactions on which STT has not been paid. For sales of shares and units of mutual funds that have not been subject to STT and for capital gains derived from the transfer of a capital asset that is not a specified security, the following are the capital gains tax rates (excluding the applicable surcharge and cess).

Type of taxpayer	Short-term capital gains rate (%) (a)	Long-term capital gains rate (%) (a)
Domestic companies	30	20 (b)
FIIs	30	10
Nonresidents other than FIIs	40	20 (b)(c)

- The above rates are subject to a surcharge and cess. The surcharge is levied at a rate of 7% for domestic companies and at a rate of 2% for foreign companies if the net income of the company exceeds INR10 million. The surcharge rate is increased to 12% for domestic companies and 5% for foreign companies if net income exceeds INR100 million. The rate of the cess is 3%.
- A concessional rate of 10% (plus surcharge and cess) applies in certain cases, such as the transfer of listed securities, listed units of mutual funds or zero-coupon bonds, subject to certain conditions.
- Gains derived from the transfer of unlisted securities are taxable at a rate of 10%, without the benefit of protection from foreign currency fluctuation and indexation for inflation on the computation of such gains (see discussion below).

Computational provisions. For assets that were acquired on or before 1 April 1981, the market value on that date may be substituted for actual cost in calculating gains. The acquisition cost is indexed for inflation. However, no inflation adjustment is allowed for bonds and debentures. For the purpose of calculating capital gains, the acquisition cost of bonus shares is deemed to be zero. Nonresident companies compute capital gains on shares and debentures in the currency used to purchase such assets, and consequently they are protected from taxation on fluctuations in the value of the Indian rupee. As a result, the benefit of indexation is not available to nonresident companies with respect to the computation of capital gains on shares. If the consideration is not ascertainable or determinable for a transfer, the fair market value of the asset transferred is deemed to be the full value of consideration.

Slump sales, demergers and amalgamations. Special rules apply to “slump sales,” “demergers” and “amalgamations” (for a description of amalgamations, see Section C).

A “slump sale” is the transfer of an undertaking for a lump-sum consideration without assigning values to the individual assets and liabilities. The profits derived from such sales are taxed as long-term capital gains if the transferred undertaking has been held for more than 36 months.

Capital gains on a slump sale equal the difference between lump-sum consideration and the net worth of the undertaking. For purposes of computing capital gains, the net worth of the undertaking equals the difference between the value of the total assets (the sum of the tax-depreciated value of assets that are depreciable for income tax purposes and the book value of other assets) of the undertaking or division and the book value of liabilities of such undertaking or division.

With respect to companies, a “demerger” is the transfer of an undertaking by one company (demerged company) to another company (resulting company) pursuant to a scheme of arrangement under Sections 391 to 394 of the Companies Act, 1956, provided that certain conditions are satisfied. Subject to certain conditions, the transfer of capital assets in a demerger is not considered to be a transfer subject to capital gains tax if the resulting company is an Indian company.

In a demerger, the shareholders of the demerged company are issued shares in the resulting company in proportion to their existing shareholdings in the demerged company based on a predetermined share-issue ratio. This issuance of shares by the resulting company to the shareholders of the demerged company is exempt from capital gains tax.

In the case of a demerger of a foreign company, the provisions of Sections 391 to 394 of the Companies Act, 1956 do not apply. In such case, a transfer of shares in an Indian company, or shares in a foreign company that derives its value substantially from assets located in India, by the demerged foreign company to the resulting foreign company is exempt from capital gains tax if the following conditions are satisfied:

- Shareholders holding at least 75% in value of the shares in the demerged foreign company continue to remain shareholders of the resulting foreign company.
- Such transfer does not attract capital gains tax in the country of incorporation of the demerged foreign company.

Like demergers, if certain conditions are satisfied, transfers of capital assets in amalgamations are not considered to be transfers subject to capital gains tax, provided the amalgamated company is an Indian company.

In an amalgamation, shareholders of the amalgamating company are usually issued shares in the amalgamated company in exchange for their existing shareholding in the amalgamating company based on a predetermined share-exchange ratio. Such exchange of shares is exempt from capital gains tax if the following conditions are satisfied:

- The transfer is made in consideration of the allotment of shares in the amalgamated company (unless the shareholder itself is the amalgamated company).
- The amalgamated company is an Indian company.

A transfer of shares in an Indian company or shares in a foreign company that derives its value substantially from assets located in India, in an amalgamation of two foreign companies, is exempt from capital gains tax if the following conditions are satisfied:

- At least 25% of the shareholders of the amalgamating foreign company continue to remain shareholders of the amalgamated foreign company.
- Such transfer does not attract capital gains tax in the country of incorporation of the amalgamating foreign companies.

Depreciable assets. To compute capital gains on sales of assets on which depreciation has been allowed, the sales proceeds of the assets are deducted from the declining-balance value of the classes of assets (including additions during the year) of which the assets form a part. If the sales proceeds exceed the declining-balance value, the excess is treated as short-term capital gain. Otherwise, no capital gain results from sales of such assets even if the sales proceeds for a particular asset are greater than the cost of the asset.

Non-depreciable assets. For non-depreciable assets, such as land, gains are computed in accordance with the rules described below.

If the asset is held for 36 months or more, the capital gain is considered a long-term capital gain, which equals the net sale consideration less the indexed cost of acquisition. The gain on an asset held for less than 36 months is considered a short-term capital gain, which equals the sale consideration less the acquisition cost. For listed shares, listed securities, equity-oriented units of mutual funds and zero-coupon bonds, a 12-month period replaces the 36-month period. Further, in the case of shares of a company (other than shares listed on recognized stock exchange in India), a 24-month period replaces the 36-month period.

The transfer of a capital asset by a parent company to its wholly owned Indian subsidiary or the transfer of a capital asset by a wholly owned subsidiary to its Indian parent company is exempt from capital gains tax, subject to the fulfillment of certain conditions.

Administration. The Indian fiscal year runs from 1 April to 31 March. All companies must file tax returns by 30 September or 30 November (for companies undertaking international transactions; see the discussion of transfer pricing in Section E). Tax is payable in advance on 15 June, 15 September, 15 December and 15 March. Any balance of tax due must be paid on or before the date of filing the return. The carryforward of losses for a fiscal year is not allowed if a return is filed late.

A nonresident with a liaison office in India is required to submit a statement in the prescribed form within 60 days after the end of the fiscal year.

Income computation and disclosure standards. The government of India has notified 10 income computation and disclosure standards (ICDS), which are effective for the 2016-17 fiscal year and future years. The ICDS provides a set of rules for computing taxable income under the headings, “profits and gains of business or profession” and “income from other sources” of the Income Tax Act. This applies to all taxpayers following the mercantile system of accounting.

ICDS do not affect the maintenance of books of accounts. Consequently, they do not affect the MAT computation.

Withholding taxes. Payments to resident companies are subject to the following withholding taxes:

Type of payment	Rate (%) (a)
Dividends	0
Interest	10 (b)
Commissions from sales of lottery tickets	5
Other specified commissions	5
Payments to contractors	2
Rent	2/10 (c)
Income from lotteries and horse races	30
Professional and technical service fees	10
Royalties	10
Payments of compensation to residents for the compulsory acquisition of certain immovable property	10
Payment of consideration for transfer of immovable property	1

(a) If an income recipient fails to furnish its PAN, tax must be withheld at the higher of the rate specified in the relevant provision of the Income Tax Act and 20%.

(b) See footnote (f) in Section A.

(c) The withholding tax rate for rental payments is 10%. For equipment rental, the rate is 2%.

Payments to nonresident companies are subject to the following withholding taxes.

Type of payment	Rate (%) (a)(b)(c)
Dividends	0
Interest on foreign-currency loans	20 (d)
Royalties and technical services fees	10 (e)
Rent	40
Income from lotteries and horse races	30
Long-term capital gains other than exempt gains	20
Other income	40

(a) The 2% or 5% surcharge (applicable to payments made to foreign companies exceeding INR10 million or INR100 million, respectively) and the 3% cess are imposed on the above withholding taxes.

(b) If the income recipient fails to furnish a PAN to the payer, tax must be withheld at the higher of the following rates:

- Rate specified in the relevant provision of the Income Tax Act
- Tax treaty rate
- 20%

(c) If the recipient of income is located in an NJA, tax must be withheld at the higher of the rate specified in the relevant provision of the Income Tax Act and 30% (see Section E).

(d) See footnotes (f) and (g) in Section A.

(e) See footnote (i) in Section A.

Dividends. Dividends paid by domestic companies are exempt from tax in the hands of the recipients. However, domestic companies must pay a dividend distribution tax (DDT) at a rate of 20.36% (basic rate of 15% on the gross amount of dividend payable plus the 12% surcharge and the 3% cess) on dividends declared, distributed or paid by them. A company that is a unit located in International Financial Service Center is not liable to pay DDT for any dividends declared after 1 April 2017. The DDT paid is a nondeductible expense.

The amount of dividends (on which DDT is leviable) that are paid by a domestic company can be reduced by the amount of dividends received from its subsidiary on which the subsidiary has paid DDT, subject to the satisfaction of prescribed conditions.

Gross dividends received by a domestic company from a specified foreign company (in which it has shareholding 26% or more) are taxable at a concessional rate of 15% (plus applicable surcharge and cess).

Dividends received by an Indian company from a foreign company in which the Indian company has a shareholding of more than 50% can be set off against subsequent dividends paid by the Indian company to its shareholders on which DDT is payable, subject to conditions.

Buyback tax. The buyback of unlisted shares by an Indian company is subject to buyback tax at a rate of 20% plus surcharge of 12% and cess of 3%, resulting in effective tax rate of 23.07%. The tax is computed on the difference between the price at which shares are bought back and the consideration received by the company for issuance of shares. The amounts received are exempt in the hands of the shareholders.

Foreign tax relief. Foreign tax relief for the avoidance of double taxation is governed by tax treaties with several countries. If no such agreements exist, resident companies may claim a foreign tax credit for the foreign tax paid under domestic law provisions. The amount of the credit is the lower of the Indian tax payable on the income that is taxed twice and the foreign tax paid. Treaty benefits and relief are available only if a nonresident taxpayer obtains a tax-residency certificate indicating that it is resident in a country outside India. This certificate must be issued by the government of that country. In addition to obtaining the certificate, taxpayers must maintain certain prescribed documents and information.

C. Determination of trading income

General. Business-related expenses are deductible; capital expenditures (other than on scientific research in certain cases) and personal expenses may not be deducted. Certain expenses on which taxes are required to be withheld are not allowable as deductions to the extent of 30% of such expenses until the required taxes have been withheld and paid to the government. The deductibility of head-office expenses for nonresident companies is limited.

Income derived from operations with respect to mineral oil, and certain other income derived by nonresidents are taxed on a deemed-profit basis. Under an optional tonnage tax scheme, shipping profits derived by Indian shipping companies are taxed on a deemed basis.

Inventories. In determining trading income, inventories may, at the taxpayer's option, be valued either at cost or the lower of cost or replacement value. The last-in, first-out (LIFO) method is not accepted.

Provisions. Provisions for taxes (other than income tax, dividend distribution tax and wealth tax, which are not deductible expenses) and duties, bonuses, leave salary and interest on loans from financial institutions and scheduled banks are not deductible on an accrual basis unless payments are made before the due date of filing of the income tax return. If such payments are not made before the due date of filing of the income tax return, a deduction

is allowed only in the year of actual payment. General provisions for doubtful trading debts are not deductible until the bad debt is written off in the accounts, but some relief is available for banks and financial institutions with respect to nonperforming assets. Interest payable on loans, borrowings or advances that is converted into loans, borrowings or advances may not be claimed as a deduction for tax purposes.

Depreciation allowances. Depreciation is calculated using the declining-balance method and is allowed on classes of assets. Depreciation rates vary according to the class of assets. The following are the general rates.

Asset	Rate (%)
Plant and machinery	15*
Motor buses, motor lorries and motor taxis used in a rental business	30
Motor cars other than those used in the business of running them on hire	15
Buildings	10
Furniture and fittings	10

* Subject to the fulfillment of prescribed conditions, accelerated depreciation equal to 20% of the actual cost is allowed in the first year with respect to plant and machinery (other than ships or aircraft) acquired or installed after 31 March 2005. Accelerated depreciation is allowed at the rate of 35% to an undertaking or manufacturing enterprise set up in notified areas (in the states of Andhra Pradesh, Bihar, Telangana or West Bengal) on or after 1 April 2015 but before 1 April 2020. Additions to plant and machinery that are used for less than 180 days in the year in which they are acquired and placed in service qualify for accelerated depreciation in that year at one-half of the above rates. The balance of accelerated depreciation is allowed in the subsequent year.

Depreciation is also allowed on intangibles, such as know-how, patents, copyrights, trademarks, licenses, franchises or other similar commercial rights. These items are depreciated using the declining-balance method at a rate of 25%.

Special rates apply to certain assets, such as 60% for computers and computer software, 80% for energy-saving devices and 100% for air or water pollution-control equipment. Additions to assets that are used for less than 180 days in the year in which they are acquired and placed in service qualify for depreciation in that year at one-half of the normal rates. On the sale or scrapping of an asset within a class of assets, the declining-balance value of the class of assets is reduced by the sales proceeds (for details concerning the capital gains taxation of such a sale, see Section B).

Companies engaged in power generation or in power generation and distribution may elect to use the straight-line method of depreciation at specified rates.

Investment allowances. An additional deduction of 15% of the cost of new plant and machinery (other than ships, aircraft, computers, computer software and vehicles) is allowed to companies engaged in the business of manufacturing or production of articles or things that acquire and install new plant and machinery between 1 April 2014 and 31 March 2017 if their aggregate expenditure on such new plant and machinery exceeds INR250 million.

In addition to the above, a further additional deduction of 15% is available to an undertaking set up between 1 April 2015 and

31 March 2020 that is engaged in the business of manufacturing or production of articles or things in notified backward areas in the states of Andhra Pradesh, Bihar, Telangana or West Bengal and that acquires and installs new plant and machinery (other than ships, aircraft, computers, computer software and vehicles) between 1 April 2015 and 31 March 2020.

Relief for losses. Business losses, excluding losses resulting from unabsorbed depreciation of business assets (see below), may be carried forward to be set off against taxable income derived from business in the following eight years, provided the income tax return for the year of loss is filed on time. For closely held corporations, a 51% continuity of ownership test must also be satisfied.

Unabsorbed depreciation may be carried forward indefinitely to be set off against taxable income of subsequent years.

Losses under the heading “Capital Gains” (that is, resulting from transfers of capital assets) may not be set off against other income, but may be carried forward for eight years to be set off against capital gains. Long-term capital losses may be set off against long-term capital gains only.

Amalgamations and demergers. Special rules apply to “amalgamations” and “demergers” (for a description of a “demerger,” see Section B). With respect to companies, an “amalgamation” is the merger of one or more companies with another company or the merger of two or more companies to form one company (the company or companies that merge are referred to as the “amalgamating company or companies” and the company with which they merge, or which is formed as a result of the merger, is known as the “amalgamated company”) that meet certain specified conditions.

An amalgamated company may claim the benefit of the carryforward of business losses and unabsorbed depreciation of the amalgamating companies if the following conditions are satisfied:

- Shareholders holding at least 75% of the shares of the amalgamating company become shareholders of the amalgamated company.
- The amalgamating company owns an industrial undertaking, a ship or a hotel.
- The amalgamating company has been engaged in business for at least three years and incurred the accumulated business loss or unabsorbed depreciation during such period.
- As of the date of amalgamation, the amalgamating company has continuously held at least 75% of the book value of the fixed assets that it held two years before the date of the amalgamation.
- At least 75% of the book value of fixed assets acquired from the amalgamating company is held continuously by the amalgamated company for a period of five years.
- The amalgamated company continues the business of the amalgamating company for at least five years from the date of amalgamation.
- An amalgamated company that acquires an industrial undertaking of the amalgamating company through an amalgamation must achieve a level of production that is at least 50% of the “installed capacity” of the undertaking before the end of four years from the date of amalgamation and continue to maintain this minimum level of production until the end of the fifth year

from the date of amalgamation. For this purpose, “installed capacity” is the capacity of production existing on the date of amalgamation.

- Additional specified conditions apply to ensure that the amalgamation is for genuine business purposes.

In the event of non-compliance with any of the above conditions, any business losses carried forward and unabsorbed depreciation that has been set off by the amalgamated company against its taxable income is treated as income for the year in which the failure to fulfill any of the above conditions occurs.

Groups of companies. The income tax law does not provide for the consolidation of income or common assessment of groups of companies. Each company, including a wholly owned subsidiary, is assessed separately.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Equalisation Levy; deducted from payments made to nonresidents that do not have a permanent establishment in India for the rendering of specified services to residents of India; specified services include online advertisements, provision for digital advertising space, or any other facilities or services for the purpose of online advertisements	6
Securities Transaction Tax (STT); payable on transactions in equity shares, derivatives, units of an equity-oriented mutual funds and units of business trusts on a recognized stock exchange; the tax is imposed on the value of the transaction and varies according to the type of transaction	
Delivery-based transactions in equity shares or in units of equity-oriented funds	
Buyer	
Shares	0.1
Units	Nil
Seller	
Shares	0.1
Units	0.001
Sale of units of equity-oriented funds to mutual funds; tax paid by seller	0.001
Non-delivery-based transactions in equity shares or in units of an equity-oriented fund; tax paid by seller	0.025
Sale of derivatives	
Sale of option (seller); rate applied to option premium	0.05
Sale of option when option is exercised (buyer); rate applied to settlement price	0.125
Sale of futures (seller)	0.01
Sale of unlisted equity shares under offer for sale to public	0.2

Nature of tax	Rate (%)
Sale of units of a business trust (delivery-based)	
Tax paid by buyer	0.1
Tax paid by seller	0.1
Sale of units of a business trust (non-delivery-based); tax paid by seller	0.025
Commodities transaction tax; tax paid by seller on taxable value on sales of commodities derivatives	0.01
Central value-added tax (CENVAT), on goods manufactured in India; levied by the central government	Various
Customs duty, on goods imported into India; levied by the central government	Various
Sales tax; generally imposed on sales of goods; levied either by the central government (central sales tax) on interstate sales or the state government (state sales tax; generally referred to as "value-added tax") on intrastate sales	Various
Luxury tax; levied by certain states on notified items (items officially prescribed by the relevant authority)	Various
Works contract tax; on goods for which title is transferred during execution of work contracts (for example, contracts for the construction, fabrication or installation of plant and machinery)	Various
Lease tax on contracts involving transfer of rights to use goods	Various
Octroi/entry tax; levied by certain municipalities and states on the entry of goods into municipal jurisdiction or state for use, consumption or sale	Various
Research and development cess; imposed on payments made for the import of technology	5
Stamp duties; levied by each state on specified documents and transactions, including property transfers	Various
Social security contributions; paid by the employer for medical insurance plans for certain categories of employees and for minimum retirement benefit plans	Various
Service tax, on provision of services including imports of services into India; imposed on all services except those specified in "negative list," and certain exempt services (including 0.5% Swachh Bharat Cess and 0.5% Krishi Kalyan Cess)	15

E. Miscellaneous matters

Foreign-exchange controls. All cross-border transactions with non-residents are subject to foreign-exchange controls contained in the Foreign Exchange Management Act. The rupee is fully convertible for trade and current account purposes. Except for certain specified restrictions, foreign currency may be freely purchased

for trade and current account purposes. In general, such purchases must be made at the market rate. Capital account transactions are not permitted unless they are specifically allowed and the prescribed conditions are satisfied. Cross-border transactions that are specifically allowed include the following:

- All remittances abroad that require prior approval arrangements, such as joint venture and technical collaboration agreements.
- The remittance of interest, dividends, service fees and royalties.
- Repatriation of capital is also freely permitted for investment approved on a repatriable basis. However, for sales of Indian assets, the terms of sale require the approval of the exchange-control authorities, and certain other conditions must be satisfied.

Transfer pricing. The Income Tax Act includes detailed transfer-pricing regulations. Although the guidelines are broadly in line with the principles set out by the Organisation for Economic Co-operation and Development (OECD), key differences exist.

Under these regulations, income and expenses, including interest payments, with respect to international transactions between two or more associated enterprises (including permanent establishments) must be determined using arm's-length prices. The transfer-pricing regulations also apply to, among other transactions, cost-sharing arrangements, certain capital-financing transactions, business restructurings or reorganizations and dealings in intangibles.

The transfer-pricing regulations contain definitions of various terms, including "associated enterprise," "arm's-length price," "enterprise," "international transaction" and "permanent establishment." It specifies methods for determining the arm's-length price. The following are the specified methods:

- Comparable uncontrolled price method
- Resale price method
- Cost-plus method
- Profit split method
- Transactional net margin method
- Any other method that takes into account the price that has been charged or paid or would have been charged or paid, in the same or a similar uncontrolled transaction, with or between non-associated enterprises, under similar circumstances, considering all the relevant facts

The CBDT has issued regulations for applying these methods to determine arm's-length prices. In addition, the CBDT has issued safe-harbor rules indicating the circumstances in which tax officers accept transfer prices declared by taxpayers. The safe harbor rules for determining transfer prices apply for five years beginning with the 2012-13 fiscal year.

The transfer-pricing regulations require each person entering into an international transaction to maintain prescribed documents and information regarding a transaction. Each person entering into an international transaction must arrange for an accountant to prepare a report and furnish it to the Tax Officer by the due date for filing the corporate tax return, which is 30 November in such circumstances.

A tax officer may make an adjustment with respect to an international transaction, if the officer determines that certain conditions exist, including any of the following:

- The price is not at arm's length.
- The prescribed documents and information have not been maintained.
- The information or data on the basis of which the price was determined is not reliable.
- Information or documents requested by the Tax Officer have not been furnished.

Stringent penalties (up to 2% of the transaction value) are imposed for non-compliance with the procedural requirements and for understatement of profits.

Measures allowing Advance Pricing Agreements (APAs) are effective from July 2012. Under these measures, the tax administration may enter into an APA with any person undertaking an international transaction. APAs are binding on the taxpayer and the tax authorities (provided no change in law and facts) and are valid for a maximum period of five consecutive years. The APA scheme provides for a "rollback" mechanism, which is subject to prescribed conditions and procedures. Under the "rollback" mechanism, an APA covering a future period may also be applied to international transactions entered into by a taxpayer during the periods (not exceeding four years) preceding the first year for which the APA is applicable.

Transfer-pricing measures have been applied to certain domestic transactions between related parties and transactions involving tax-holiday units.

Country-by-Country Reporting, Master File and Local File. The Income Tax Act provides a specific regime with respect to Country-by-Country Reporting (CbCR), the Master File and the Local File in line with OECD's final report on Base Erosion Profit Shifting (BEPS) Action Plan 13. The reporting provisions apply for the 2016-17 fiscal year if consolidated revenue of an international group in the prior year (that is, the 2015-16 fiscal year) exceeds the prescribed limit. The parent entity of the international group must file the CbCR if such parent entity is a resident of India. In other cases, every constituent entity of such group that is a resident of India must file the CbCR.

Debt-to-equity rules. India does not currently impose mandatory capitalization rules. However, banks and financial corporations must comply with capital adequacy norms. In addition, foreign-exchange regulations prescribe that the debt-to-equity ratio should not exceed 4:1 in the case of borrowings beyond a certain limit from certain nonresident lenders.

General Anti-avoidance Rules. The Income Tax Act includes General Anti-avoidance Rules (GAAR), which will be effective from 1 April 2017. The GAAR are broad rules that are designed to deal with aggressive tax planning. Wide discretion is provided to the tax authorities to invalidate an arrangement, including the disregarding of the application of tax treaties, if an arrangement is treated as an "impermissible avoidance arrangement."

Notified Jurisdictional Area. The Income Tax Act contains a “tool box” to deal with transactions with entities located in noncooperative countries or jurisdictions that do not exchange information with India. The government of India is empowered to notify such jurisdiction as a Notified Jurisdiction Area (NJA). The government discourages transactions by taxpayers in India with persons located in an NJA by providing onerous tax consequences with respect to such transactions. The consequences include applicability of transfer-pricing regulations, additional disclosure and compliance requirements, disallowance of deductions in some circumstances and higher withholding tax rates on transactions with a person located in an NJA. Previously Cyprus was notified as an NJA, effective from 1 November 2013. Such notification was withdrawn with retrospective effect, under an amendment to the India-Cyprus double tax treaty. No other jurisdiction is notified as an NJA.

Business trusts. The Income Tax Act contains a specific taxation regime for the taxability of income from business trusts (real estate investment trusts and infrastructure investment trusts). This is a new category of investment vehicles for acquiring control or interests in Indian special-purpose vehicles for investments in the real estate or infrastructure sector. Units of business trusts can be listed on recognized stock exchange and can be subscribed by residents and nonresident investors (including foreign companies). Business trusts can also avail themselves of external commercial borrowings from nonresident investors (including foreign companies). Business trusts are granted pass-through status for purposes of taxation. Distributions of dividend income from business trusts are exempt in the hands of investors. For further details, see footnote (f) in Section A and *Rates of corporate tax* and *Capital gains* in Section B.

Patent Box Regime. The Income Tax Act contains the Patent Box regime, which is a specific taxation regime for the taxability of royalty income earned by a patentee resident in India with respect to a patent developed and registered in India. Such royalty income is taxable at the rate of 10% on the gross amount without any allowance or deduction for any expenditure. For these purposes, royalty income includes consideration for any of the following:

- Transfer of all or any rights with respect to a patent
- Imparting of any information concerning the working of, or the use of, a patent
- The use of any patent
- Rendering of any services in connection with any of these activities

F. Treaty withholding tax rates

Under the Income Tax Act, Indian companies are required to pay DDT (see Section B) at an effective tax rate of nearly 20.36% (base rate of 15% on gross amount plus a surcharge of 12% and an education cess of 3%) on dividends declared, distributed or paid by it. Such dividends are exempt from tax in the hands of the recipients. Accordingly, the relevant treaty rates for dividends are not captured in the table below.

Tax rates specified under the Income Tax Act are increased by a surcharge and cess. See footnote (a) and (c) below for tax rates under the Income Tax Act on outbound payments of interest and

royalties, respectively. In general, if the relevant treaty specifies the same or lower rate for withholding, these treaty rates, which are more beneficial for the nonresident recipient, may be applied. In addition, these tax rates need not be increased by the surcharge and cess. To claim treaty benefits, the nonresident recipient must obtain a Tax Residency Certificate indicating that it is a resident of that country or specified territory. This certificate is issued by the government of such country or territory. The nonresident recipient is also required to provide certain information and documents to substantiate its eligibility to claim treaty benefits.

The following table presents the treaty rates on outbound payments of interest and royalties to jurisdictions that have entered into tax treaties with India.

	Dividends	Interest (a)(b)	Approved royalties (c)(d)
	%	%	%
Albania	0	10	10

Vietnam	0	10	10
Zambia	0	10	10
Non-treaty countries	0	20 (a)	10 (c)

- (a) A 20% rate applies if the relevant tax treaty provides for unlimited taxation rights for the source country on interest income. Under the Income Tax Act, the 20% rate applies with respect to interest on monies borrowed or debts incurred in foreign currency by an Indian concern or the government. If the recipient is a foreign company, this rate is increased by a surcharge of 2% (when the aggregate income exceeds INR10 million) or 5% (when the aggregate income exceeds INR100 million) and is further increased by an education cess of 3% (on income tax and surcharge). A special reduced rate of 5% applies under certain specified circumstances (see footnote [f] in Section A). In other cases, depending on whether the recipient is a corporate entity, a tax rate of 30% or 40% applies. These tax rates are increased the applicable surcharge and cess.
- (b) A reduced rate of 0% to 10% generally applies under a tax treaty if interest payments are made to local authorities, political subdivisions, the government, banks, financial institutions or similar organizations. A reduced rate may also apply if the lender holds a certain threshold of capital in the borrower. The text of the relevant tax treaty needs to be examined.
- (c) Under the Income Tax Act, a 10% rate applies if the relevant tax treaty provides for unlimited rights for the source country to tax royalties (the rate is increased by the surcharge and cess) and if the payment is made by the government of India or an Indian concern. In other cases, as mentioned in footnote (a) above, a tax rate of 30% or 40% applies. These rates are increased by the applicable surcharge and cess.
- (d) The rate provided under the relevant tax treaty applies to royalties not effectively connected with a permanent establishment in India. Also, in some of India's tax treaties, such as with Australia, Canada, Spain, the United Kingdom and the United States, a separate rate of 10% is specified for equipment royalties. Similarly, under India's tax treaty with Bulgaria, a 15% rate applies to copyright royalties other than cinematographic films or films and tapes used for radio or television broadcasting. In addition, many of India's tax treaties also provide for withholding tax rates for technical services fees. In most cases, the rates applicable to royalties also apply to the technical services fees. The text of the relevant tax treaty needs to be examined to determine the relevant scope and rate.
- (e) A more restrictive scope of the definition of royalties or interest and/or a reduced rate may be available under the most-favored-nation clause in the relevant tax treaty.
- (f) A reduced rate of 10% applies in the event of notifications issued by the government of India that give effect to the most-favored-nation clauses in these tax treaties.
- (g) A revised tax treaty with Thailand was signed on 29 June 2015 and is effective in India from 1 April 2016.
- (h) This treaty applies to the Slovak Republic.
- (i) A revised tax treaty was signed with Cyprus on 18 November 2016 and will be effective in India from 1 April 2017. Under the revised treaty, the withholding tax rate for both interest and royalties will be 10%. After it takes effect, it will replace the existing 1994 tax treaty.
- (j) An increased rate of 25% applies to trademark royalties.
- (k) A protocol amending the tax treaty with Mauritius was signed on 10 May 2016 and will be effective in India from 1 April 2017. The protocol provides for a withholding tax rate of 7.5% on interest and 15% on royalties.
- (l) A revised tax treaty with Korea (South) was signed on 18 May 2015 and is effective from 1 April 2017 in India. Under the revised treaty, the withholding tax rate for both interest and royalties will be 10%. After it takes effect, it will replace the existing 1985 tax treaty.
- (m) A revised tax treaty with Indonesia was signed on 27 July 2012 and is effective from 1 April 2017 in India. Under the revised treaty, the withholding tax rate for both interest and royalties will be 10%. After it takes effect, it will replace the existing 1987 tax treaty.
- (n) A revised tax treaty with Kenya was signed on 11 July 2016. The government of India has not yet issued the notification for making the treaty effective. After the revised treaty is effective, it will provide for a withholding tax rate of 10% for both interest and royalties.

A. At a glance

Corporate Income Tax Rate (%)	25 (a)
Capital Gains Tax Rate (%)	– (b)
Withholding Tax (%)	
Dividends	10/15/20 (c)
Interest	15/20 (c)
Royalties from Patents, Know-how, etc.	15/20 (c)
Rent	
Land or Buildings	10 (d)
Other Payments for the Use of Assets	2 (e)
Fees for Services	
Payments to Residents	
Technical, Management and Consultant Services	2 (e)
Construction Contracting Services	2/3/4 (f)
Construction Planning and Supervision	4/6 (f)
Other Services	2 (e)
Payments to Nonresidents	20 (g)
Branch Profits Tax	20 (h)
Net Operating Losses (Years)	
Carryback	0
Carryforward	5 to 10 (i)

- (a) This rate also applies to Indonesian permanent establishments of foreign companies. See Section B.
- (b) See Section B for details concerning the taxation of capital gains.
- (c) A final withholding tax at a rate of 20% is imposed on payments to nonresidents. Tax treaties may reduce the tax rate. Certain dividends paid to residents are exempt from tax if prescribed conditions are satisfied. If the exemption does not apply, a 15% withholding tax applies on dividends paid to tax resident companies and a 10% final withholding tax applies to dividends paid to tax resident individuals. A 15% withholding tax is imposed on interest paid by non-financial institutions to residents. Interest paid by banks on bank deposits to residents is subject to a final withholding tax of 20%.
- (d) This is a final withholding tax imposed on gross rent from land or buildings.
- (e) This tax is considered a prepayment of income tax. It is imposed on the gross amount paid to residents. An increase of 100% of the normal withholding tax rate is imposed on taxpayers subject to this withholding tax that do not possess a Tax Identification Number.

- (f) This tax is considered a final tax. The applicable tax rate depends on the type of service provided and the “qualification” of the construction companies. The “qualification” is issued by the authorities with respect to the business scale of a construction company (that is, small, medium or large).
- (g) This is a final tax imposed on the gross amount paid to nonresidents. The withholding tax rate on certain types of income may be reduced under double tax treaties.
- (h) This is a final tax imposed on the net after-tax profits of a permanent establishment. The rate may be reduced under double tax treaties. The tax applies regardless of whether the income is remitted. An exemption may apply if the profits are reinvested in Indonesia.
- (i) Losses incurred by taxpayers engaged in certain businesses or incurred in certain areas may be carried forward for up to 10 years (see Section B).

B. Taxes on corporate income and gains

Corporate income tax. Companies incorporated or domiciled in Indonesia are subject to income tax on worldwide income. Foreign tax may be claimed as a tax credit subject to a limitation rule (see *Foreign tax relief*). Branches of foreign companies are taxed only on those profits derived from activities carried on in Indonesia. However, income accruing from Indonesia to a foreign company having a permanent establishment in Indonesia is taxed as income of the permanent establishment if the business generating the income is of a similar nature to the business of the permanent establishment. This is known as the “force of attraction” principle.

Rates of corporate tax. Corporate tax is imposed at a flat rate of 25%. This rate applies to Indonesian companies and foreign companies operating in Indonesia through a permanent establishment. The tax rate is reduced by five percentage points for listed companies that have at least 40% of their paid up capital traded on the stock exchange. Small and medium-scale domestic companies (that is, companies having gross turnover of up to IDR50 billion) are entitled to a 50% reduction of the tax rate. The reduced rate applies to taxable income corresponding to gross turnover of up to IDR4.8 billion.

Branch profit tax. The net after-tax profits of a permanent establishment are subject to branch profit tax at a rate of 20%. This rate may be reduced under a double tax treaty. Branch profit tax applies regardless of whether the income is remitted to the head office. An exemption may apply if the profits are reinvested in Indonesia.

Tax incentives

Tax Allowance Incentive. Tax incentives under the Tax Allowance Incentive are granted to certain qualifying resident companies investing in certain types of businesses or regions. The Tax Allowance Incentive consists of the following:

- Accelerated depreciation and amortization.
- Extended period of 10 years for the carryforward of a tax loss (normally 5 years), subject to certain conditions.
- Reduced tax rate of 10% (or lower rate under a double tax treaty) for dividends paid to nonresidents.
- Investment allowance in the form of reduction of net income by 30% of the amount invested in land and buildings, and plant and equipment. This allowance is claimed at a rate of 5% each year over a six-year period.

To qualify for the above tax incentives, the investment must be a new investment or an investment for the purpose of expanding a current business. Under a government regulation, 71 categories of business sectors and 74 other categories of industries in certain areas may qualify for the tax incentives. The designated areas and provinces are generally outside Java. They are primarily the north-eastern provinces and provinces located in Sulawesi.

Certain restrictions apply to the use and transfer of fixed assets that benefit from the incentives. These restrictions apply for the first six years of commercial production or for the prescribed useful life of the assets for tax purposes. The incentives are revoked with a penalty if these rules are violated. Implementation of the government regulation is evaluated within two years from the date on which the approval is granted. A monitoring team is established for this purpose.

Tax Holiday Incentive. Certain taxpayers engaged in a “pioneer industry” may seek a tax incentive commonly known as the Tax Holiday Incentive, which was introduced in 2011 and renewed in August 2015. The Tax Holiday Incentive offers a corporate income tax reduction from 10% up to maximum of 100% (effectively a tax exemption) for a period of 5 years to 20 years from the beginning of commercial production. An extended period of the tax incentive for up to 20 years may be granted by the Minister of Finance on consideration of the interest in maintaining competitiveness of the national industry and the strategic value of certain industries.

To qualify for the Tax Holiday Incentive, taxpayers must fulfill all of the following criteria:

- They must be a new taxpayer.
- They must be engaged in a “pioneer industry.”
- They must have new investment plans approved by the relevant authority in the minimum amount of IDR1 trillion (approximately USD75 million).
- They must satisfy the thin-capitalization ratio required by the Minister of Finance for income tax purposes.
- They must submit a statement confirming the ability to deposit at least 10% of the total investment plan in the Indonesian banking system without any withdrawal until realization of their investment.
- They must be in the form of an Indonesian legal entity established after 15 August 2011.

Currently, the following sectors qualify as “pioneer industries”:

- Upstream-metal industry
- Oil-refining industry
- Oil and gas-based organic chemical producing industry
- Machinery industry that produces industrial machines
- Agricultural, forestry and fishery products-based processing industry
- Telecommunication, information and communication industries
- Marine transportation industry
- Economic infrastructures other than those using the scheme of Partnership between the Government and Business Entities (Kerjasama Pemerintah dengan Badan Usaha, or KPBU)

Taxpayers that have received tax incentives for investments in certain types of businesses or regions are not eligible for the Tax Holiday Incentive and vice versa.

A recommendation from the head of the Coordinating Board for Capital Investment is required for obtaining the Tax Holiday Incentive. The recommendation should be submitted before 15 August 2018.

Special tax rates. Special tax rates granted to certain companies are described below.

Petroleum. Tax rates applicable to petroleum companies are those applicable when the petroleum companies' contracts were signed and approved. In addition, foreign petroleum companies are subject to branch profit tax of 20% on their taxable income, except as otherwise provided in an applicable tax treaty.

Mining. Income tax applicable to general mining companies may depend on generation of the concessions granted (that is, when the concession is granted). Holders of earlier concessions are taxed at the rates ranging from 30% to 45% (the tax rates are the rates prevailing at the time the concession was granted). Holders of the more recent concessions are taxed in accordance with the prevailing tax laws (current rate is 25%). Although withholding tax on dividends paid overseas is generally imposed at a rate of 20%, some earlier concessions provide a reduced rate of 10%. These rates may be subject to reduction under certain tax treaties.

Construction companies. Construction companies are subject to corporate income tax with tax rates ranging from 2% to 6% of the contract value. The income tax applies to complete or partial construction activities. The applicable tax rate depends on the business qualification of the respective company and/or the type of services performed. The tax is considered a final tax. Consequently, no corporate income tax is due on the income at the end of a fiscal year. Foreign construction companies operating in Indonesia through a branch or a permanent establishment are subject to further branch profit tax of 20% on the taxable income (accounting profit adjusted for tax) after deduction of the final tax. The rate is subject to applicable tax treaties. Exemption from branch profit tax may apply in the circumstances described above (see *Branch profit tax*).

Foreign drilling companies. Foreign drilling companies are subject to corporate income tax at an effective rate of 3.75% of their gross drilling income, as well as to branch profit tax of 20% on their after-tax taxable income. The branch profit tax may be reduced under certain tax treaties. Branch profit tax may be avoided in the circumstances described above (see *Branch profit tax*).

Nonresident international shipping companies and airlines. Nonresident international shipping companies and airlines are subject to tax at a rate of 2.64% of gross turnover (inclusive of branch profit tax). As a result of the reduction of the corporate tax rate in 2010, the effective tax rate may change. However, this has not yet been confirmed through the issuance of a tax regulation.

Small and medium-sized entities. Individual and corporate taxpayers (except permanent establishments) with annual gross turnover of less than IDR4.8 billion are subject to income tax at a rate of 1% of monthly gross turnover. This income tax is final.

The following taxpayers are excluded from this final tax:

- Individual taxpayers performing trading and/or service activities who use assembled infrastructure and a public facility that is not intended for commercial use
- Corporate taxpayers that have not yet started commercial operations
- Corporate taxpayers that have gross revenue over IDR4.8 billion from commercial operations in a year.

For purposes of the above measure, business income does not include income from independent professional services, such as, among others, services provided by lawyers, accountants, medical doctors and notaries.

Taxpayers qualifying for a different final tax regime, such as construction services companies, are not eligible for this 1% final tax.

Capital gains. A 0.1% final withholding tax is imposed on proceeds of sales of publicly listed shares through the Indonesian stock exchange. An additional tax at a rate of 0.5% of the share value is levied on sales of founder shares associated with a public offering. Founder shareholders must pay the 0.5% tax within one month after the shares are listed. Founder shareholders that do not pay the tax by the due date are subject to income tax on the gains at the ordinary income tax rate.

Capital gains derived by residents are included in taxable income and are subject to tax at the normal income tax rate. Capital gains derived by nonresidents are subject to tax at a rate of 20%. The law provides that the 20% tax is imposed on an amount of deemed income. The Minister of Finance established the deemed income for sales of unlisted shares. The deemed income equals 25% of the gross sale proceeds, resulting in an effective tax rate of 5% of the gross sale proceeds. This rule applies to residents of non-treaty countries and to residents of treaty countries if the applicable treaty allows Indonesia to tax the income.

In addition to sales or transfers of shares, Indonesian tax applies a 20% tax rate to an estimated net income of 25% on sales or transfers of certain assets owned by non-Indonesian tax residents that do not have a permanent establishment in Indonesia. The assets are luxury jewelry, diamonds, gold, gemstones, luxury watches, antiques, paintings, cars, motorcycles, yachts and/or light aircraft. This results in an effective tax rate of 5%. The purchaser must withhold the tax. A tax exemption applies to transactions with a value of less than IDR10 million. The provisions of tax treaties override the above regulation.

The sale or transfer by nonresidents of shares in conduit companies or special purpose companies established or resident in tax-haven jurisdictions that have a special relationship with an Indonesian entity or an Indonesian permanent establishment of a foreign entity is deemed to be a sale or transfer of shares of the Indonesian entity or the permanent establishment. The relevant regulation provides that the Indonesian income tax applicable to the transaction is 5% of the gross sale proceeds. The 5% rate is derived from the application of the 20% cross-border withholding tax under Article 26 of the Income Tax Law to a profit that is deemed to be 25% of the gross sale proceeds. A provision in an applicable tax treaty overrides the above rule if the seller of the

shares is a tax resident in a country that has entered into a tax treaty with Indonesia.

Sellers or transferors of the right to use land or buildings are subject to tax at a rate of 2.5% of the higher of the transaction value and the government official value for the purpose of land and building tax. Purchasers or transferees must pay a transfer duty of 5%, which may be reduced to 2.5% for transfers in business mergers approved by the Director General of Taxation.

Administration. The annual corporate income tax return must be filed by the end of the fourth month following the end of the fiscal year. The deadline can be extended for two months. The balance of annual tax due must be settled before filing the annual tax return.

Corporate income tax must be paid in advance through monthly installments, which are due on the 15th day of the month following the relevant month. The tax installment equals 1/12 of tax payable for the preceding year (after exclusion of non-regular income) or tax payable based on the latest tax assessment received. Banks and securities companies calculate their monthly tax installments based on quarterly and semiannual financial reports, respectively.

Tax amnesty. In 2016, the Indonesian government introduced a tax amnesty program, which provides a waiver of tax due, tax administration sanctions and tax criminal sanctions relating to income tax, value-added tax and luxury taxes, if previously undisclosed assets are disclosed and a redemption payment or levy is made. All taxpayers (individual, corporate and taxpayers with certain turnover) are eligible to participate in the tax amnesty program, except for the following:

- Taxpayers undergoing an investigation, if the investigation document has been declared complete
- Taxpayers in a court process
- Taxpayers undergoing criminal sanctions in relation to a tax offense

The redemption payment or levy is based on the net value of the assets and varies depending on the location of the assets and when the taxpayer participates in the tax amnesty, as indicated in the following table.

Milestones of reporting	1 July to 30 Sept. 2016 %	1 Oct. 2016 to 31 Dec. 2016 %	1 Jan. 2017 to 31 March 2017 %
Repatriation of offshore assets and disclosure of assets located in Indonesia	2	3	5
Declaration of assets located outside Indonesia that are not repatriated to Indonesia	4	6	10

Milestones of reporting	1 July to 30 Sept. 2016 %	1 Oct. 2016 to 31 Dec. 2016 %	1 Jan. 2017 to 31 March 2017 %
Taxpayers with turnover of less than IDR4.8 billion with a value of assets declared Up to IDR10 billion	0.5	0.5	0.5
More than IDR10 billion	2	2	2

Dividends. In general, dividends are taxable.

Dividends paid domestically to Indonesian resident corporate taxpayers are subject to withholding tax at a rate of 15%. This tax is an advance payment of the dividend recipient's tax liability. Tax exemption may apply if the dividends are paid from retained earnings and if the recipient's share ownership in the payer of the dividends represents 25% or more of the paid-in capital. Dividends exempted from tax are not subject to the 15% withholding tax. Dividends received by Indonesian resident individuals are subject to a final tax of 10%.

Dividends remitted to overseas shareholders are subject to a final 20% withholding tax, unless an applicable tax treaty provides a lower rate.

Foreign tax relief. A credit is allowed for tax paid or due overseas on income accruing to an Indonesian company, provided it does not exceed the allowable foreign tax credit. The allowable foreign tax credit is computed on a country-by-country basis.

C. Determination of trading income

General. Income is broadly defined. It includes, but is not limited to, the following:

- Business profits
- Gains from sales or transfers of assets
- Interest, dividends, royalties and rental and other income with respect to the use of property
- Income resulting from reorganizations, regardless of the name or form
- Gains from sales or transfers of all or part of a mining concession, funding participation or capital contribution of a mining company
- Receipt of refund of tax that has been claimed as a tax deduction
- Income earned by *syariah*-based businesses (*syariah* refers to businesses conducted in accordance with Islamic law)
- Interest compensation
- Surplus of Bank Indonesia

Certain income is not taxable or is subject to a final tax regime. Interest earned by resident taxpayers on time deposits, certificates of deposit and savings accounts is subject to a 20% withholding tax, representing a final tax on such income. A final 20% (or lower rate provided in a tax treaty) withholding tax is imposed on interest earned by nonresidents.

Taxpayers are generally able to deduct from gross income all expenses to the extent that they are directly or indirectly incurred in earning taxable income. Nondeductible expenses include the following:

- Income tax and penalties
- Expenses incurred for the private needs of shareholders, associates or members
- Gifts
- Donations (except for donations for national disasters, grants in the framework of research and development activities in Indonesia, grants for the development of social infrastructure, grants in the form of education facilities [for example, books, computers, chairs, tables and other educational resources] and grants for the development of sport)
- Benefits-in-kind, which include a subsidy, aid, gift or award given to an employee or a related party
- Reserves and provisions for certain industries

Business losses incurred overseas are not deductible.

Foreign-exchange gains and losses are treated as taxable income and deductible expenses in accordance with the generally accepted accounting procedures in Indonesia that are consistently adopted.

Inventories. For tax purposes, inventories must be valued at cost using either the first-in, first-out (FIFO) or average-cost method. The last-in, first-out (LIFO) method is not allowed.

Provisions. Provisions are generally not deductible for tax purposes.

Certain taxpayers that may claim bad debt provisions as deductible expenses include banks and certain nonbank financial institutions, such as other corporate entities providing loan facilities, insurance companies, leasing companies that lease assets under finance leases, consumer financing companies, and factoring companies. The following companies may also claim tax deductions for reserves or provisions:

- Social insurance providers: reserves of social funds
- Forestry companies: reserves for reforestation
- Mining companies: reserves for reclamation of mining sites
- Industrial waste treatment companies: reserves for closure and maintenance of waste treatment plants

Taxpayers may claim tax deductions for bad debts if all of the following conditions are satisfied:

- The costs have been claimed as corporate losses in commercial financial reports.
- A list of the names of the debtors and totals of the bad debts is submitted to the Director General of Taxation.
- A legal suit for collection of the debt is filed with the public court or government institutions handling state receivables. Alternatively, taxpayers may publicize the bad debt in a general or specialized publication or obtain acknowledgment of the write-off of the bad debt from the relevant debtor.

The write-off of receivables from a related party is not deductible for tax purposes.

Depreciation and amortization allowances. Depreciation is calculated on the useful life of an asset by applying the straight-line

method or declining-balance method. In general, depreciation is deducted beginning with the month the expenditure is incurred. However, for assets under construction, depreciation begins with the month in which the construction of the assets is completed. Buildings are depreciated using the straight-line method. The following table provides the useful lives and depreciation rates for depreciable assets.

Class of asset (%)	Useful life Years	Depreciation method	
		Straight-line (%)	Declining-balance
Buildings			
Permanent	20	5	–
Non-permanent	10	10	–
Other assets			
Class 1	4	25	50
Class 2	8	12.5	25
Class 3	16	6.25	12.5
Class 4	20	5	10

Intangible assets with more than one year of benefit, including leases of tangible property, are amortized according to their useful lives using the same percentages applicable to fixed assets. Special depreciation and amortization rules apply to assets used in certain businesses or in certain areas (see Section B).

Revaluation of assets for tax purposes. Subject to approval of the Directorate General of Taxation, increments resulting from revaluation of tangible fixed assets is subject to final income tax at the following rates:

- 3% for applications submitted from 15 October 2015 through 31 December 2015
- 4% for applications submitted from 1 January 2016 through 30 June 2016
- 6% for applications submitted from 1 July 2016 through 31 December 2016
- 10% for applications submitted in the 2017 fiscal year

The final tax is applied to any excess in value of the tangible fixed assets' revaluation or revaluation forecast over the tangible fixed assets' tax written-down value. This tax must be settled before the application is submitted. The value of tangible fixed assets being revalued should be the fair market value of the tangible fixed assets as determined by a licensed appraisal company. The Directorate General of Taxation may re-determine the fair market value of the relevant tangible fixed assets.

Revaluation of fixed assets can be conducted on all of the tangible fixed assets owned by the company or certain selected tangible fixed assets if the assets are physically located in Indonesia and are used to earn, collect and maintain taxable income. The tangible fixed assets revaluation can only be performed every five years, and any breach of this period results in the imposition of additional tax. A tangible fixed asset that has been revalued is depreciated based on a new revalued cost base and is treated as having the same useful life as a new asset.

Revalued tangible fixed assets in Classes 1 and 2 (see *Depreciation and amortization allowances*) that are transferred before the end

of their useful lives, as well as revalued tangible fixed assets in Classes 3 and 4, and land and buildings that are transferred within 10 years of their revaluation approval, are subject to additional tax.

Relief for losses. Tax losses may not be carried back. They may generally be carried forward for five years. Tax losses incurred by certain businesses or incurred in certain areas may be carried forward for up to 10 years (see Section B).

Groups of companies. The losses of one company may not be used to reduce the profits of an affiliate.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT), on delivery of taxable goods, on imports of goods and on services (including services furnished by foreign taxpayers outside Indonesia if the services have a benefit in Indonesia), unless specifically exempt	
Standard rate	10
Export of goods or certain services	0
Sales tax on luxury goods, imposed in addition to the VAT on the delivery of luxury goods manufactured in or imported into Indonesia; rate depends on the nature of the goods	10 to 200
Transfer duty on land and buildings	5

E. Miscellaneous matters

Foreign-exchange controls. No exchange controls affect the repayment of loans and the remittance of dividends, interest and royalties. Remittance of funds of USD10,000 or more must be notified by the remitting bank to Bank Indonesia. Foreign loans must be reported to Bank Indonesia to enhance the monitoring of the country's foreign exchange reserves.

Debt-to-equity rules. Under the tax law, the Minister of Finance may determine an acceptable debt-to-equity ratio. In September 2015, the Minister prescribed a maximum debt-to-equity ratio of 4:1, effective from the 2016 tax year. This rule applies only to Indonesian resident companies, which are companies that are established or incorporated in Indonesia or domiciled in Indonesia and that have their equity made up of shares. It does not apply to permanent establishments. Certain taxpayers are exempted from the rule.

Under the Minister of Finance Regulation regarding the debt-to-equity ratio, if a taxpayer breaches the ratio limit, the Directorate General of Taxation is entitled to adjust the taxpayer's borrowing costs based on the debt-to-equity ratio limit. For a taxpayer that has a nil or negative equity, all costs related to the borrowing are treated as nondeductible for corporate tax purposes. Foreign loans must be reported to the Directorate General of Taxation. Non-reporting of foreign loans result in the forfeiting of the deductibility of the interest.

Interest rates on related-party loans must be at arm's length.

Transfer pricing. The law provides that the following methods may be used to determine arm's-length pricing:

- Comparable uncontrolled price method
- Resale-price method
- Cost-plus method
- Profit-split method
- Transactional net margin method

The Indonesian tax authority requires that related-party transactions or dealings with affiliated companies be carried out in a "commercially justifiable way" and on an arm's-length basis. Taxpayers must maintain documentation establishing that related-party transactions are conducted at arm's length. The transfer-pricing study must be maintained for 10 years from the relevant tax year.

The Indonesian tax authority uses advance pricing agreements (APAs) to regulate transactions between related parties and to mitigate future transfer-pricing disputes with the Director General of Taxation. Broadly, an APA represents an advance agreement between a company and the Director General of Taxation regarding the determination of the acceptable pricing for a transaction between related parties. An APA provides the sales price for manufactured goods, the amount of royalties and other information. An APA may be entered into with the Director General of Taxation (unilateral) or between the Director General of Taxation and the foreign tax authority (bilateral).

F. Treaty withholding tax rates

Indonesia has introduced tough anti-treaty abuse rules. The Indonesian tax authority may ignore the provisions of a tax treaty if these rules are not satisfied.

The Indonesian tax authority may seek agreement with a tax treaty country for exchange of information, mutual agreement procedure and assistance with tax collection.

The following table shows withholding tax rates under Indonesia's double tax treaties.

	Dividends (%)		Interest (b)	Royalties
	A	B	%	%

Non-treaty countries	20	20	20	20

-
- A Rate applicable to portfolio investments.
B Rate applicable to substantial holdings.
- (a) Technical services are subject to the following reduced rates of withholding tax:
- Germany, 7.5%
 - Luxembourg, 10%
 - Pakistan, 15%
 - Papua New Guinea, 10%
 - Switzerland, 5%
 - Venezuela, 10%
 - Zimbabwe, 10%
- (b) If two rates are other than 0%, the higher rate applies to interest paid to companies in certain specified industries or to interest on certain bonds. The 0% rate applies if the beneficial owner of the interest is the government, except under the Singapore treaty, which provides that the 0% rate applies to interest on government bonds.
- (c) The rates vary according to the rights or information licensed.
- (d) The tax treaty allows each of the signatory countries to apply the domestic tax anti-avoidance rules.
- (e) On 30 July 2015, Indonesia and the Netherlands signed a new protocol to their tax treaty. This protocol provides reduced rates of 5% and 15% for dividends and 5% and 10% for interest (no tax exemption for interest paid to the Netherlands). The new protocol is subject to ratification of both countries before it becomes effective.

In addition to the above treaties, Indonesia has entered into agreements for the reciprocal exemption of taxes and duties on air transport with Bangladesh, Croatia, Laos, Morocco, Saudi Arabia and South Africa.

- (a) The 15% rate is the general corporate income tax rate. The 35% rate applies to oil and gas production and extraction activities and related industries, including service contracts. The Kurdistan Region of Iraq has not yet adopted the 35% rate.
- (b) This withholding tax is imposed on payments to nonresidents.
- (c) See Section C.

B. Taxes on corporate income and gains

Corporate income tax. In general, corporate income tax is imposed on profits arising in Iraq from commercial activities (or activities of a commercial nature), vocations and professions, including profits arising from contracts and undertakings. In assessing the taxability of nonresidents in Iraq, the General Commission for Taxes (GCT), which is the Iraqi tax authority, generally relies on certain factors that distinguish between “doing business in Iraq” and “doing business with Iraq.” If any one of the following factors is satisfied, a company is deemed to be “doing business in Iraq” and accordingly taxable in Iraq:

- The place of signing the contract by the party performing work under the contract (vendor or service provider) is in Iraq.
- The place of performance of work is in Iraq.
- The place of delivery of goods or services is in Iraq.
- The place of payment for the work is in Iraq.

The Iraqi Ministry of Finance’s Instructions No. (1) of 2014 amended the above four factors. Under the new instructions, the taxability of the following items is addressed separately:

- Supply contracts
- Supplementary or complementary services performed in relation to a supply contract
- Professional services

Income arising from a supply contract is taxable in Iraq if any one of the following factors applies:

- The vendor or service provider has a branch or an office in Iraq, and the contract is signed by the branch or office representative, any of the branch or office’s employees or any other person who is resident in Iraq and authorized to sign the contract.
- The vendor or service provider has a branch or an office in Iraq, and the contract is performed or executed by the branch or office representative, any of the branch or office’s employees or any other person who is resident in Iraq and is authorized to perform or execute the contract.
- The contract’s legal formalities and requirements are completed in Iraq in the name of the vendor or service provider (for example, customs clearance, payment of customs duties, opening of letter of credit or any related procedures, regardless of whether the vendor or service provider has a branch, office or agent in Iraq).
- Payments under the contract to the vendor or service provider are received fully or partially in Iraq, regardless of the currency used to make the payments.
- The vendor or service provider receives payment in barter.

Tax is imposed on income arising from supplementary or complementary services performed in Iraq with respect to a supply contract (such as erection, supervision, maintenance or engineering services), regardless of whether the services are included in the supply contract or in an independent contract. In addition, the taxability of the service component is determined separately from the taxability of the supply contract.

Tax is imposed on professional services performed in Iraq by a legal or natural person, regardless of whether the services are

included in the supply contract or in an independent contract and regardless of the place of payment. The taxability of the service component is determined separately from the taxability of the supply contract.

Tax rates. The general corporate income tax rate applicable to all companies (except oil and gas production and extraction activities and related industries, including service contracts) is a unified flat rate of 15% of taxable income. Activities relating to oil and gas production and extraction activities and related industries, including service contracts, are subject to income tax at a rate of 35% of taxable income. The Kurdistan Region of Iraq has not yet adopted the 35% rate.

Withholding tax. Companies doing business in Iraq are required to withhold taxes from payments made to their subcontractors and remit the withheld taxes to the GCT on a monthly basis. The withholding rates vary, depending on the nature of activities carried out under each contract. The Kurdistan Region of Iraq does not currently observe this withholding and remittance process.

Capital gains. Capital gains derived from the sale of fixed assets are taxable at the normal corporate income tax rate of 15% (35% for oil and gas production and extraction activities and related industries, including service contracts, except in the Kurdistan Region of Iraq where the 35% tax rate has not yet been adopted). Capital gains derived from the sale of shares and bonds not in the course of a trading activity are exempt from tax; otherwise, they are taxed at the normal corporate income tax rates.

Administration. In Iraq, tax returns for all corporate entities must be filed in Arabic within five months after the end of the fiscal year, together with audited financial statements prepared under the Iraqi Unified Accounting System. The Kurdistan Regional Government's tax authority does not require a tax return to be filed; it only requires that audited financial statements be filed. The tax filing in the Kurdistan Region of Iraq must be made within six months after the end of the fiscal year.

A delay fine equal to 10% of the tax due is imposed, up to a maximum of IQD500,000 (up to IQD75,000 in the Kurdistan region of Iraq), on a taxpayer that does not submit or refuses to submit an income tax filing within five months after the end of the fiscal year (within six months in the Kurdistan Region of Iraq). Foreign branches that fail to submit financial statements by the due date for the income tax filing in Iraq are subject to an additional penalty of IQD10,000.

After an income tax filing is made, the tax authority undertakes an audit of the filing and may request additional information. It eventually issues a tax assessment in an estimation memorandum. Payment of the total amount of tax is due after the GCT and the taxpayer sign the estimation memorandum indicating their agreement with the tax assessment.

If the tax due is not paid within 21 days after the date of assessment notification, a late payment penalty equal to 5% of the amount of tax due is imposed. This amount is doubled if the tax is not paid within 21 days after the lapse of the first period. The

Kurdistan Regional Government's tax authority imposes different penalties and administers them differently.

Dividends. In general, dividends paid from previously taxed income are not taxable to the recipient.

Interest. Interest paid to nonresidents is subject to a withholding tax rate of 15%.

Foreign tax relief. A foreign tax credit is available to Iraqi companies on income taxes paid abroad. In general, the foreign tax credit is limited to the amount of an Iraqi company's income tax on the foreign income. Excess foreign tax credits may be carried forward for five years.

C. Determination of trading income

General. In general, all income generated in Iraq is taxable in Iraq (see *Corporate income tax* in Section B), except for income exempt under a valid tax law or resolution, the industrial investment law, or the investment promotion law in the Kurdistan Region of Iraq.

Business expenses incurred to generate income are allowable, with limitations on certain items, such as entertainment and donations. However, provisions and reserves are not deductible for tax purposes.

Tax depreciation. The Iraqi Depreciation Committee sets the maximum depreciation rates for various types of fixed assets. These rates are set out in several tables for various industries. In general, the following are the acceptable depreciation methods:

- Straight line
- Declining balance
- Other methods (with the approval of the GCT)

If the rates used for accounting purposes are greater than the prescribed tax depreciation rates, the excess is disallowed for tax purposes.

Relief for losses. A tax loss from one source of income may offset profits from other sources of income in the same tax year. Unused tax losses may be carried forward and deducted from the taxable income of the taxpayer during the following five consecutive years, subject to the following conditions:

- Losses may not offset more than half of the taxable income of each of the five years.
- The loss may offset only income from the same source from which the loss arose.

To claim losses, a taxpayer must obtain appropriate documentation including financial statements that support the loss and sufficient documentation to support the expenses that created such loss.

Groups of companies. Iraqi law does not contain any provisions for filing consolidated returns or for relieving losses within a group of companies.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Stamp duties; imposed on the total contract value	
Iraq	0.2
Kurdistan Region of Iraq	0.1
(The stamp duty rates provided are the most commonly applied rates in Iraq and the Kurdistan Region of Iraq. In practice, the application of the stamp duty may vary.)	
Property tax; imposed on the annual rent	
From buildings	9
From land	2
Social security contributions; imposed on salaries and benefits of local and expatriate employees; a portion of employee allowances up to an amount equal to 30% of the base salary is not subject to social security contributions	
Employer (general)	12
Employer (oil and gas sector, except in the Kurdistan Region of Iraq)	25
Employee	5

E. Miscellaneous matters

Foreign-exchange controls. The currency in Iraq is the Iraqi dinar (IQD). Iraq does not impose any foreign-exchange controls. However, according to the Central Bank of Iraq's instructions and regulations, transfers of funds must be in accordance with the Anti-Terrorism Law and the Anti-Money Laundering Law.

Debt-to-equity rules. Iraq does not have any debt-to-equity rules. The only restrictions on debt-to-equity ratios are those stated in the articles and memoranda of association. However, the GCT may disallow claims of interest expense if it deems the expense to be excessive or unreasonable.

F. Tax treaties

Iraq has entered into a bilateral double tax treaty with Egypt and a multilateral double tax treaty with the states of the Arab Economic Union Council.

- (a) This rate applies to trading income and to certain dividends received from nonresident companies. A 25% rate applies to certain income and to certain activities. For details concerning the tax rates, see Section B.
- (b) A 40% rate applies to disposals of certain life insurance policies.
- (c) This withholding tax is imposed on dividends distributed subject to exceptions (see Section B).
- (d) Applicable to both residents and nonresidents.
- (e) Interest paid by a company in the course of a trade or business to a company resident in another European Union (EU) member state or in a country with which Ireland has entered into a double tax treaty is exempt from withholding tax, subject to conditions. See footnote (p) in Section F for details regarding an extension of this exemption. Bank deposit interest is subject to a 39% deposit interest retention tax (DIRT). DIRT exemptions apply to bank interest paid to nonresidents and, subject to certain conditions, bank interest paid to Irish resident companies and pension funds.
- (f) Ireland implemented the EU Interest and Royalties Directive, effective from 1 January 2004.
- (g) Under Irish domestic law, withholding tax on royalties applies only to certain patent royalties and to other payments regarded as "annual payments" under Irish law. The Irish Revenue has confirmed that withholding tax need not be deducted from royalties paid to nonresidents with respect to foreign patents (subject to conditions).

B. Taxes on corporate income and gains

Corporation tax. A company resident in Ireland is subject to corporation tax on its worldwide profits (income plus capital gains). All Irish-incorporated companies are regarded as Irish resident, subject to an override in a double tax treaty. This rule applies from 1 January 2015 for companies incorporated on or after 1 January 2015. For companies incorporated before 1 January 2015, the new rule applies from the earlier of 1 January 2021 or from a date on or after 1 January 2015 on which both of the following conditions are satisfied:

- A change in ownership of the company occurs.
- Within one year before or five years after the change in ownership, a major change in the nature or conduct of the business of the company occurs.

For companies within this transitional period and for companies that are incorporated in other jurisdictions, the general rule for determining company residence is the common law, which provides that a company resides where its real business is carried on, that is, where the central management and control of the company is exercised.

Subject to neither of the changes referred to above occurring, a company incorporated in Ireland before 1 January 2015 is treated as resident for tax purposes in Ireland unless either of the following apply:

- The company or a related company (50% common ownership of ordinary share capital) carries on a trade in Ireland and either of the following conditions is satisfied:
 - The company is controlled by persons (companies or individuals) resident in a European Union (EU) member country or in a country with which Ireland has entered into a tax treaty (treaty country), provided these persons are not controlled by persons that are not resident in such countries.
 - The principal class of shares in the company or a related company is substantially and regularly traded on one or more recognized stock exchanges in an EU or treaty country.
- The company is regarded under a tax treaty as being resident in a treaty country and not resident in Ireland.

Notwithstanding the transitional rules, Finance (No. 2) Act 2013 provides that an Irish incorporated company is regarded as Irish resident if all of the following circumstances exist:

- The company is centrally managed and controlled in a territory with which a tax treaty is in force.
- It would have been tax resident in that relevant territory under its laws had it been incorporated there.
- The company would not otherwise be regarded by virtue of the law of any territory as resident in that territory.

A company not resident in Ireland is subject to corporation tax if it carries on a trade in Ireland through a branch or agency. The liability applies to trading profits of the branch or agency, other income from property or rights used by the branch or agency, and chargeable gains on the disposal of Irish assets used or held for the purposes of the branch or agency.

A company resident in a country with which Ireland has entered into a tax treaty is subject to tax only on profits generated by a

permanent establishment as described in the relevant treaty. This normally requires a fixed place of business or dependent agent in Ireland. Companies that are resident in non-treaty countries and do not trade in Ireland through a branch or agency are subject to income tax on income arising in Ireland and to capital gains tax (CGT) on the disposal of certain specified Irish assets (see *Chargeable capital gains*).

Rates of corporation tax. The standard rate of corporation tax on trading income is 12.5%.

On election, the 12.5% rate also applies to dividends received from the following companies:

- A company resident in an EU member state, a treaty country or a country that has ratified the Organisation for Economic Co-operation and Development (OECD) Convention on Mutual Assistance in Tax Matters
- A company that is 75%-owned by a publicly quoted company

The election applies only to dividends sourced from trading income unless the dividends are portfolio dividends (less than 5% interest). In this instance, the dividends are deemed to be from a “trading” source. Foreign dividends from portfolio investments that form part of the trading income of a company are exempt from corporation tax.

A 25% rate applies to the following:

- Certain non-trading income, such as Irish rental and investment income
- Foreign income unless the income is part of an Irish trade
- Income from “working minerals” (broadly defined), petroleum activities and dealing or developing land other than construction operations (for the taxation of construction operations, see *Land transactions*)

Start-up companies. A three-year exemption from tax on certain trading profits and capital gains (subject to conditions) applies to companies with a total corporation tax liability (as defined) of less than EUR40,000 per year. This exemption applies to new companies that begin trading on or before 31 December 2018. A cap referring to employer social insurance costs applies.

Land transactions. Different tax rates apply to land transactions. Profits or gains derived from dealing in residential or nonresidential development land are subject to the higher rate of corporation tax (25%). Most construction operations are subject to corporation tax at the standard rate of 12.5%.

Shipping companies. Shipping companies that undertake qualifying shipping activities, including carriage of cargo and passengers, marine-related activities, leasing of qualifying ships and related activities, may elect to be subject to a special tonnage tax regime instead of the normal corporation tax regime.

Under the tonnage tax regime, profits are calculated on the basis of a specified profit per day according to the tonnage of the relevant ship. The following are the amounts of the daily profit attributed to each qualifying ship:

- For each 100 tons up to 1,000 tons: EUR1.00
- For each 100 tons between 1,000 and 10,000 tons: EUR0.75
- For each 100 tons between 10,000 and 25,000 tons: EUR0.50
- For each 100 tons above 25,000 tons: EUR0.25

The profits attributed to each qualifying ship for the accounting period will be determined by multiplying the daily profit as determined above by the number of days in the accounting period, or, if the ship was operated by the company as a qualifying ship for only part of the period, by the number of days in that part of the accounting period.

The standard corporation tax rate for trading income (12.5%) applies to the amount of profits determined under the rules described above.

Oil and gas exploration. Petroleum production tax (PPT) applies to oil and gas exploration authorizations granted on or after 18 June 2014. PPT replaces profit resources rent tax (PRRT). This new regime applies a tax-deductible PPT to the net profits of each field, using a sliding scale of rates from 10% to 40%, based on the profitability of the field. This is in addition to the existing 25% corporation tax rate. A minimum PPT equal to 5% of field gross revenue less transportation expenditure applies.

PRRT continues to apply to authorizations granted in the period 1 January 2007 through 17 June 2014. The PRRT is imposed in addition to the 25% corporation tax rate, and it operates on a graduated basis that is linked to the profitability of the oil or gas field. The tax rate varies according to the profit ratio (rate of cumulative profits less 25% corporation tax divided by accumulated capital investment). The following are the tax rates.

Profit ratio	Tax rate (%)
Less than 1.5	0
Between 1.5 and 3	5
Between 3 and 4.5	10
Exceeding 4.5	15

Close companies. Investment and rental income of a “close company” is subject to an additional 20% surcharge if it is not distributed within 18 months after the end of the relevant accounting period. A closely held professional services company is subject to a 15% surcharge on 50% of its undistributed trading income. Broadly, a “close company” is a company that is under the control of five or fewer persons or under the control of its directors (as defined).

Life insurance companies. For life insurance business written before 1 January 2001, policyholders are subject to income tax at the standard rate (20%) on the investment income and gains less management expenses attributable to the policyholders. Life insurance companies withhold the income tax. Resident individuals do not pay any further tax. Companies are subject to Irish CGT arising on the disposal of a life insurance policy and receive a credit for income tax at the standard rate deemed to have been deducted by the life insurance company. For life insurance business written after 1 January 2001 and all other business of life companies, a tax-free buildup of investment return over the term of the policy (gross roll-up) is allowed. However, for Irish residents, an exit tax is imposed on gains resulting from certain “chargeable events” (as defined). The exit tax is withheld at a rate of 41% on the difference between proceeds on redemption, maturity or assignment, and the premiums or subscription amounts paid. A 60% exit tax applies to personal portfolio life insurance

policies (PPLPs). This rate applies to domestic and foreign PPLPs that were not cashed in before 26 September 2001.

Deemed disposal rules apply to gross roll up life policies held by Irish residents. A deemed chargeable event occurs at the end of every eight-year period (relevant period) beginning with the inception of the life policy. Exit tax is imposed on the gain arising on this deemed chargeable event. These rules do not apply to policies held by nonresidents.

Shareholder profits of domestic life insurance companies are taxed at the standard rate of corporation tax (now 12.5%) regardless of whether they relate to business written before or after 1 January 2001.

Companies investing in Irish policies are generally subject to an exit tax, as described above. However, corporate holders of certain foreign policies are subject to self-assessment tax at a rate of 25% on profits from the investment in the policies. These foreign policies are policies issued by an insurance company or a branch of such a company carrying on business in a member state of the EU (other than Ireland), in a state in the European Economic Area (EEA) or in a country in the OECD with which Ireland has entered into a tax treaty. Payments with respect to such policies accruing to Irish residents that are not companies are subject to income tax at a rate of 41%. The 41% rate depends on the filing of a self-assessment return with the Irish authorities. The deemed disposal measures (see above) also apply to foreign life policies. Payments with respect to foreign policies, other than those mentioned above, are subject to tax at a rate of 40%. If a company investing in a life insurance policy is a close company, additional surcharges may apply.

Investment undertakings (gross roll-up funds and net funds). For investment undertakings (gross roll-up funds), distributions and other payments made are subject to an exit tax at a rate of 41%. This exit tax applies to the cancellation, redemption or assignment of shares and is imposed on the difference between the amount payable to the shareholder and the amount invested by the shareholder. A pro rata calculation applies for partial disposal, redemption, cancellation, repurchase or assignment of shares unless the company has elected to apply a first-in, first-out basis of identification for such disposals. Investments in IFSC funds are now covered by the investment undertakings rules described above. Nonresidents are generally exempt from the exit tax in investment undertakings described above if they provide the relevant declarations (however, see *Irish Real Estate Funds*). Certain Irish residents are also exempt from the exit tax if the relevant declarations are provided.

A 60% exit tax applies to personal portfolio investment undertakings (PPIUs). A 60% rate also applies to foreign PPIUs that are equivalent to Irish investment undertakings.

Unit holders are deemed to dispose of units acquired by them every eight years from the date of acquisition. To the extent that a gain arises on this deemed disposal, exit tax must normally be deducted and paid by the investment undertaking to the Irish tax authorities. On the disposal of the relevant unit, a credit is available for the tax paid on the deemed disposal. Similarly, a refund is

payable to the unit holder if the actual exit tax liability is less than the exit tax paid on the deemed disposals. This refund is generally paid by the investment undertaking which can set off the refund against future exit tax. The deemed disposal rules apply to units acquired on or after 1 January 2001.

Offshore funds that are equivalent to Irish investment undertakings are also subject to tax on a self-assessment basis similar to the rules applicable to foreign life policies (see *Life insurance companies*). Deemed disposal rules also apply to Irish residents after every eight years.

Offshore funds domiciled in another EU member state, EEA state or a member state of the OECD with which Ireland has entered into a double tax agreement, are no longer subject to the offshore fund rules, effective from 2 April 2007. They are subject to either marginal rate of income tax on distributions or CGT at 33%. Certain transitional rules apply. Other offshore funds are still subject to either marginal rate income tax or CGT at 40%, depending on certain circumstances.

Investments in undertakings for collective investment (net funds) that are companies are subject to corporation tax at a rate of 30%.

Ireland has repealed the EU Savings Directive and incorporated the revised EU Council Directive on Administrative Cooperation (DAC 2) into Irish law. Ireland has already implemented the OECD Common Reporting Standard (CRS).

Irish Real Estate Funds. Effective from 1 January 2017, a new 20% withholding tax applies to payments from Irish Real Estate Funds (IREFs) to certain investors that are entitled to an exemption from the normal exit charge described above, typically non-resident investors. It applies to many forms of returns to investors of profits from certain real estate business activities, including dealing in or developing Irish land or an Irish property rental business. The withholding tax applies from 1 January 2017, regardless of when the profits arose. Although a general exemption is provided for distributions of profits on disposals of property held for five years, this may not apply to many investor structures (guidance is expected).

An IREF is an investment undertaking (or a subfund of such undertaking) in which at least 25% of the value of the assets at the end of the previous accounting period is derived from the following:

- Land or minerals in Ireland
- Certain offshore exploration rights
- Shares in a real estate investment trust
- Unquoted shares deriving their value directly or indirectly from the above
- Certain mortgages
- Another IREF

In addition, from 1 January 2017, acquirers of units in IREFs must apply a 20% withholding tax (regardless of the seller's status), unless the consideration does not exceed EUR500,000.

Knowledge Development Box. The 2015 Finance Act introduced the Knowledge Development Box (KDB). This regime complies

with the OECD's modified nexus approach. The KDB provides that an effective tax rate of 6.25% applies to qualifying profits. The relief is granted through a tax deduction and applies for accounting periods beginning on or after 1 January 2016 and before 1 January 2021. For KDB purposes, qualifying assets are innovations protected by qualifying patents (including patents pending) and certain copyrighted software. Expenditure on marketing-related intellectual property such as trademarks and brands does not qualify. KDB claims must be made within 24 months after the end of the accounting period.

Chargeable capital gains. Chargeable capital gains are subject to corporation tax at a rate of 33% (except for development land gains which are subject to CGT at that rate). In computing a gain, relief is given for the effects of inflation by applying an index factor. However, indexation relief applies only for the period of ownership of an asset up to 31 December 2002.

In calculating the liability for CGT on the disposal of development land or unquoted shares deriving their value from such land, certain restrictions apply. The adjustment for inflation is applied only to that portion of the purchase price reflecting the current use value of the land at the date of purchase. The balance of the purchase price, without an adjustment for inflation, is still allowed as a deduction. Gains on development land may be reduced only by losses on development land. However, losses on development land may be set off against gains on disposals of other assets.

A nonresident company is subject to CGT or corporation tax on its chargeable capital gains from the following assets located in Ireland:

- Land and buildings
- Minerals and mineral rights
- Exploration or exploitation rights in the continental shelf
- Unquoted shares deriving the majority of their value from such assets
- Assets used in a business carried on in Ireland through a branch or agency

Exit charge. A company that ceases to be tax resident in Ireland is deemed to have disposed of all of its assets at that time and to have immediately reacquired the assets at market value. The company is subject to corporation tax on any gains resulting from such deemed disposal. The tax is calculated in accordance with the normal CGT rules.

The exit charge does not apply if 90% of the exiting company's share capital is held by foreign companies resident in a jurisdiction with which Ireland has concluded a double tax treaty, or persons who are directly or indirectly controlled by such foreign companies.

An exemption applies to a company that ceases to be tax resident in Ireland but continues to carry on a trade in Ireland through a branch or an agency. In such circumstances, the assets used for the purposes of the branch or agency are not subject to the exit charge.

A company may postpone the charge in certain circumstances. In addition, an unpaid exit charge may be recovered from other group companies or controlling directors.

Substantial shareholding relief. An exemption from corporation tax applies to the disposal by an Irish company of a shareholding in another company (the investee company) if the following conditions are satisfied:

- At the time of disposal, the investee company is resident for tax purposes in Ireland, in another EU member state or in a country with which Ireland has entered into a tax treaty.
- The Irish company has held (directly or indirectly), for a period of at least 12 months, a minimum holding of 5% of the shares in the investee company.
- The investee company is wholly or principally a trading company or, taken together, the holding company, its 5% group and the investee company are wholly or principally a trading group.

If the above conditions are satisfied, the relief applies automatically (no claim or election mechanism exists).

Administration. The corporation tax liability is determined by self-assessment. As a result, a company must estimate its own liability. Preliminary tax is payable in two installments if the company is not a “small company” (see below). The initial installment is due on the 21st day of the 6th month of the accounting period (assuming the accounting period ends after the 21st day of a month). This installment must equal the lower of 50% of the tax liability for the preceding year or 45% of the tax liability for the current year. The final installment of preliminary tax is due 31 days before the end of the accounting period and must bring the aggregate preliminary tax payments up to 90% of the tax liability for the year. If this date falls on or after the 21st day of a month, the 21st of that month becomes the due date.

“Small companies” alternatively may pay preliminary tax equal to 100% of their tax liability for the preceding year. A company qualifies as a “small company” if its corporation tax liability for the preceding year did not exceed EUR200,000.

A company that pays more than 45% of its corporation tax liability for a period as an initial installment of preliminary tax or more than 90% of its corporation tax liability for a period by the due date for its final installment of preliminary tax can elect jointly with another group company that has not met the 45% or 90% tests to treat the excess as having been paid by that latter company for interest calculation purposes only. Certain conditions apply.

Any balance of corporation tax due is payable by the due date for the filing of the corporation tax return (Form CT1). This is normally nine months after a company’s accounting year-end.

When the nine-month period ends on or after the 21st day of a month, the 21st of that month becomes the due date for filing the Form CT1 and the payment of any balance of corporation tax.

A start-up company with a corporation tax liability of less than EUR200,000 is relieved from having to make any corporation tax payment until its tax return filing date.

Corporation tax returns and payments must normally be filed electronically via Revenue Online Service. Electronic filers may avail of a two-day extension of return filing and payment deadlines.

Accounts are required to be filed in iXBRL format, subject to limited iXBRL exemption criteria.

If a company does not comply with the above filing obligation (including the requirement to submit accounts in iXBRL format), it is subject to one of the following surcharges:

- 5% of the tax, up to a maximum penalty of EUR12,695, if the filing is not more than two months late
- 10% of the tax, up to a maximum penalty of EUR63,485, in all other cases

In addition, the company suffers the reduction of certain tax reliefs, which consist of the set off of certain losses against current-year profits and the surrender of losses among a group of companies. The following are the applicable reductions:

- A 25% reduction, up to a maximum of EUR31,740, if the filing is not more than two months late
- A 50% reduction, up to a maximum of EUR158,715, in all other cases

The above surcharges and restrictions also apply if a company fails to comply with its local property tax (see Section D) obligations with respect to residential properties that it owns.

A limited number of cases are selected for later in-depth Revenue examination, and the assessment can be increased if the return is inaccurate.

A company must file a CGT return reporting disposals of development land and related unquoted shares and pay CGT on such disposals. CGT may be due twice a year, depending on the date of realization of the chargeable gains. CGT on such chargeable gains arising in the period of 1 January to 30 November must be paid by 15 December of that same year. CGT on such gains arising in December of each year is due on or before 31 January of the following year.

Dividends

Dividend withholding tax. Dividend withholding tax (DWT) is imposed on distributions made by Irish companies at a rate of 20%.

The law provides for many exemptions from DWT. Dividends paid to the following recipients are not subject to DWT:

- Companies resident in Ireland
- Approved pension schemes
- Qualifying employee share ownership trusts
- Collective-investment undertakings
- Charities
- Certain sports bodies promoting athletic or amateur games
- Trustees of Approved Minimum Retirement Funds (funds held by qualifying fund managers on behalf of the individuals entitled to the assets)

Additional exemptions are provided for nonresidents. Distributions are exempt from DWT if they are made to the following:

- Nonresident companies, which are under the direct or indirect control of persons (companies or individuals) who are resident in an EU member country or in a country with which Ireland has entered into a tax treaty (treaty country), provided that these persons are not under the control of persons not resident in such countries

- Nonresident companies, or 75% parent companies of nonresident companies, the principal class of shares of which is substantially and regularly traded on a recognized stock exchange in an EU member country or a treaty country
- Companies not controlled by Irish residents that are resident in an EU member country or a treaty country
- Non-corporate persons who are resident in an EU member country or a treaty country and are neither resident nor ordinarily resident in Ireland
- Certain qualifying intermediaries and authorized withholding agents

The above “treaty country” references are extended to any country with which Ireland has signed a double tax treaty (see footnote [p] in Section F).

Detailed certification procedures apply to some of the exemptions from DWT described above.

DWT does not apply to dividends covered by the EU Parent-Subsidiary Directive. Anti-avoidance provisions prevent the use of EU holding companies to avoid DWT. If a majority of an EU parent company’s voting rights are controlled directly or indirectly by persons not resident in an EU or tax treaty country, DWT applies unless it can be established that the parent company exists for bona fide commercial reasons and does not form part of a tax avoidance scheme. DWT may also be recovered under a double tax treaty. The 2014 Finance Act introduced a wider general anti-avoidance rule, which denies the benefit of the directive if “arrangements” exist that “are not put in place for valid commercial reasons which reflect economic reality.”

Distributions paid out of certain types of exempt income, such as exempt woodland income, are not subject to DWT.

Companies must file a return within 14 days after the end of the calendar month of the distribution. The return is required regardless of whether DWT applies to the distributions. Any DWT due must be paid over to the Collector General when the return is filed.

Other: A company resident in Ireland can exclude from its taxable income distributions received from Irish resident companies (franked investment income).

Irish resident shareholders, other than companies, are subject to income tax on distributions received. DWT may be claimed as a credit against the recipient’s income tax liability. Recipients not subject to income tax may obtain a refund of DWT.

Foreign tax relief. Under tax treaty provisions, direct foreign tax on income and gains of an Irish resident company may be credited against the Irish tax levied on the same profits. However, foreign tax relief cannot exceed the Irish corporation tax attributable to the same profits.

For purposes of calculating the credit under tax treaties, income derived from each source is generally treated as a separate stream. Consequently, foreign tax may generally be credited only against the Irish corporation tax on the income that suffered the foreign tax. However, a unilateral credit for otherwise unrelieved foreign tax on interest income may be offset against the corporation tax

payable on the “relevant interest.” “Relevant interest” is defined as interest income from group companies, which are greater than 25% related and are resident in treaty countries. The unilateral credit relief effectively introduces a pooling mechanism for the calculation of the relief available.

If no treaty exists, a deduction for foreign tax paid is allowed against such income and gains. A unilateral credit relief is available for foreign tax deducted from royalties received by trading companies. For royalties received after 1 January 2012, a limited corporate tax deduction is available for foreign tax suffered that would not otherwise qualify for double tax relief or unilateral credit relief.

An Irish tax credit is available for taxes equivalent to corporation tax and CGT paid by a branch if Ireland has not entered into a tax treaty with the country where the branch is located or if Ireland’s tax treaty with such country does not provide for relief (that is, unilateral relief for branch profits tax).

An Irish company that has branches in more than one country can pool its excess foreign tax credits between the different branches. This is beneficial if one branch suffers the foreign equivalent of corporation tax at a tax rate higher than 12.5% and another branch pays tax at a rate lower than 12.5%. Unused credits can be carried forward to offset corporation tax in future accounting periods.

Unilateral credit relief for foreign tax paid by a company on interest income that is included in the trading income of a company for Irish corporation tax purposes may also be available. The relief is available only if the company cannot claim relief under a double tax treaty for the foreign tax and if the tax has not been repaid to the company. The unilateral relief is equal to the lesser of the Irish corporation tax attributable to the relevant interest or the foreign tax attributable to the relevant interest.

Unilateral credit relief may be available for Irish resident companies, or Irish branches of companies resident in EEA countries (excluding Liechtenstein), that receive dividends from foreign subsidiaries. Companies are permitted to “mix” the credits for foreign tax on different dividends from 5% subsidiaries for purposes of calculating the overall tax credit in Ireland. Any unused excess can be carried forward indefinitely and offset in subsequent periods. The subsidiaries can be located in any country. However, credits arising on dividends taxed at 12.5% are ring-fenced to prevent these tax credits from reducing the tax on the dividends taxed at the 25% rate.

An additional foreign tax credit (AFC) is available with respect to certain dividends received from companies resident in EEA countries (excluding Liechtenstein) if the existing credit for actual foreign tax suffered on the relevant dividend is less than the amount that would be computed by reference to the nominal rate of tax in the country from which the dividend is paid. The total foreign tax credit, including the AFC, cannot exceed the Irish corporation tax attributable to the income. Certain dividends are excluded.

Ireland has implemented the EU Parent-Subsidiary Directive (as amended). These provisions, which overlap to a significant extent

with the unilateral credit relief measures described above, have been extended to Switzerland.

A company that incurs a tax liability on a capital gain in one of nine specified countries may claim a credit for foreign tax against Irish CGT on the same gain. This unilateral credit is targeted at those countries with which Ireland has entered into double tax agreements before the introduction of CGT.

C. Determination of trading income

General. The calculation of trading income is based on the company's accounts prepared in accordance with generally accepted accounting practice (GAAP), subject to adjustments required or authorized by law. For tax purposes, accounts can be prepared under Irish GAAP (applies to accounting periods commencing before 1 January 2015), International Financial Reporting Standards (IFRS) or Financial Reporting Standards (FRS) 101 or 102 (FRS applies for any accounting periods commencing on or after 1 January 2015). Detailed rules address any transition from Irish GAAP to IFRS and FRS 101 or 102.

If derived from Irish sources, income derived from commercial woodlands is exempt from tax.

Expenses must be incurred wholly and exclusively for the purposes of the trade and be of a revenue (as distinct from capital) nature. However, entertainment expenses are totally disallowed, unless they are incurred for employees only. The deductibility of motor leasing expenses is restricted by reference to the carbon dioxide emissions of the motor cars.

Revenue expenditure incurred in the three years before the beginning of trading is generally deductible.

A tax deduction was available for expenditure incurred on acquiring know-how, which includes industrial information and techniques likely to assist in the manufacture or processing of goods or materials, for the purpose of a trade. The deduction was available for expenditure incurred before 7 May 2011. See *Tax depreciation (capital allowances)* for relief available on expenditure on intangible assets incurred on or after this date.

Depreciation of assets is not deductible. Instead, the tax code provides for a system of capital allowances (see *Tax depreciation [capital allowances]*).

Share-based payments. Consideration consisting directly or indirectly of shares in the company or a connected company that is given for goods or services or that is given to an employee or director of a company is generally not deductible except for the following:

- Expenditure incurred by the company on acquiring the shares (or rights to receive the shares)
- Payments made to a connected company for the issuance or the transfer of shares (or rights to receive the shares)

In effect, a tax deduction is denied for IFRS 2 or Financial Reporting Standard (FRS) 20 accounting costs unless these costs reflect actual payments. In addition, the timing of the tax deduction for such payments is dependent on the employees' income tax positions.

Interest payments. Interest on loans used for trading purposes is normally deductible on an accrual basis in accordance with its accounting treatment unless specifically prohibited.

Certain types of interest paid in an accounting period may be classified as a distribution and, consequently, are not treated as an allowable deduction. However, interest may not be reclassified if it is paid by an Irish resident company to an EU resident company or to a resident of a treaty country (on election). Such interest is allowed as a trading deduction and is not treated as a distribution, subject to certain conditions and exceptions. To facilitate cash pooling and group treasury operations, in the context of a lending trade, a tax deduction may be allowed for interest payments to a connected company in a non-treaty jurisdiction, to the extent that the recipient jurisdiction levies tax on such interest.

Before 2003, a borrower could accrue interest on a loan and claim a tax deduction, while the lender might not be subject to tax until the interest was actually paid. However, since 2003, a tax deduction for interest accrued on a liability between connected persons (including companies and individuals) may be deferred until such time as the interest is actually paid if all of the following circumstances exist:

- The interest is payable directly or indirectly to a connected person.
- Apart from the new measure, the interest would be allowable in computing the trading income of a trade carried on by the payer.
- The interest is not trading income in the hands of the recipient, as determined under Irish principles.

Detailed rules provide for the apportionment of interest between allowable and non-allowable elements.

The above restriction does not apply to interest payable by an Irish company to a connected nonresident corporate lender if the lender is not under the control, directly or indirectly, of Irish residents.

Banks may deduct interest payments made to nonresident group companies in calculating trading income (that is, the payments are not reclassified as distributions).

Charges on income, such as certain interest expenses and patent royalties, are not deductible in the computation of taxable trading income, but may be deducted when paid as a charge. A tax deduction may be claimed for interest as a charge (as a deduction from total profits, which consists of income and capital gains) if the funds borrowed are used for the following non-trading purposes:

- Acquisition of shares in a rental or trading company, or a company whose business principally consists of holding shares in trading or rental companies
- Lending to the companies mentioned in the first bullet, provided the funds are used wholly and exclusively for the purpose of the trade or business of the borrower or of a connected company

Deductions of interest as a charge have always been subject to certain conditions and anti-avoidance measures. These conditions and measures have added complexities to the implementation and maintenance of structures designed to qualify for this interest relief. In particular, interest relief is restricted if the borrower

receives or is deemed to have received, a “recovery of capital” (as defined).

Interest on loans made on or after 2 February 2006 is not allowed as a tax deduction if the loan to the Irish company is from a connected party and if the loan is used, directly or indirectly, to acquire shares from a connected company. The 2011 Finance Act introduced measures that restrict the deductibility of interest as a trading expense and interest as a charge to the extent that an acquisition of assets from a connected company is funded by monies borrowed from another connected company.

Certain additional anti-avoidance rules may apply in connected party situations.

Foreign-exchange gains and losses. Realized and unrealized foreign-exchange gains and losses relating to monies held or payable by a company for the purpose of its business, or to hedging contracts with respect to such items, are included in the taxable income of a company to the extent the gains and losses have been properly recorded in the company’s accounts. If a company acquires a shareholding in a 25% subsidiary in a foreign currency and that acquisition is funded by a liability (borrowings, share capital or a capital contribution) in the same foreign currency, the company can elect to match the foreign currency gain or loss on the asset (the shares in the 25% subsidiary) with the foreign currency gain or loss on the liability. As a result, the company is taxable only on the real economic gain or loss on the asset and not on currency movements against which it is economically hedged. A company must make the matching election within three weeks of the making of the investment.

An additional foreign-exchange matching measure permits trading companies to elect to match exchange-rate movements on trading assets denominated in foreign currency against movements on redeemable share capital denominated in foreign currency. The election for this treatment must be made within three weeks of acquiring the relevant trading asset.

Inventories. Stock is normally valued at the lower of cost or net realizable value. Cost must be determined on a first-in, first-out (FIFO) basis or some approximation of FIFO; the last-in, first-out (LIFO) basis is not acceptable.

Provisions. General provisions and reserves are not allowable deductions. Some specific provisions and reserves, including reserves for specific bad debts, may be allowed. In general, provisions created in accordance with Financial Reporting Standard 12 are deductible for tax purposes.

Tax depreciation (capital allowances)

Plant and machinery. Capital expenditure on plant and machinery and motor vehicles in use at the end of an accounting period is written off at an annual straight-line rate of 12.5%.

The maximum qualifying expenditure for capital allowances on motor vehicles is EUR24,000. Capital allowances and leasing expense deductions for new motor cars are granted by reference to carbon dioxide emissions. As a result, some vehicles do not qualify for capital allowances or leasing expense tax deductions.

An immediate 100% write-off is allowed for capital expenditure on oil and gas exploration, development and abandonment, incurred under a license issued by the Minister for Energy. An immediate 100% write-off is also allowed for certain energy-efficient equipment.

On the disposal of plant and machinery, a balancing charge or allowance applies, depending on the amount received on disposal compared with the written-down value of the asset. Balancing charges are not imposed with respect to plant and machinery if the proceeds from the disposal are less than EUR2,000.

Computer software. If a company carrying on a trade incurs capital expenditure on the acquisition of software or a right to use software in that trade, the right and related software is regarded as plant or machinery and qualifies for capital allowances over eight years. Some computer software may qualify for tax depreciation under the intangible assets regime (see *Intangible assets*).

Patent rights. A company incurring capital expenditure on the purchase of patent rights for use in a trade may be entitled to writing-down allowances. Relief is given over 17 years or the life of the patent rights, whichever is the shorter. Ongoing patent royalties are typically deductible when paid (see information regarding charges in *Interest payments*). The allowances are available for expenditure incurred before 7 May 2011. See *Intangible assets* for relief available on expenditure incurred on or after this date.

Immovable property. The basic annual rate is 4% for industrial buildings. Capital expenditure incurred on hotels on or after 4 December 2002 is written off over 25 years (previously 7 years). Transitional measures applied to certain approved projects if the expenditure was incurred on or before 31 December 2006, and reduced rates applied in certain circumstances if the expenditure was incurred in the period 1 January 2007 through 31 July 2008.

Urban renewal schemes. Property-based tax incentives in urban renewal areas may be available for expenditure incurred before 31 July 2008. The reliefs include accelerated capital allowances for commercial and industrial buildings.

Telecommunication infrastructure. Capital allowances are available for capital expenditure incurred on the purchase of rights to use advanced telecommunication infrastructure. These intangible rights typically extend from 10 to 25 years. They are usually purchased with an upfront lump-sum payment. The expenditure incurred by a company on such rights may be written off over the life of the agreement relating to the use of the rights, with a minimum period of seven years.

Other. Capital allowances are also available on expenditure incurred for scientific research, dredging, mining development, ships, agricultural buildings, airport buildings, runways, and petroleum exploration, development and production.

Intangible assets. Capital allowances are available on a broad range of specified intangible assets acquired on or after 8 May 2009. Capital allowances are available for expenditure incurred on many types of intangible assets including, but not limited to, customer lists, brands, trademarks, patents, copyrights, designs,

know-how, some computer software, pharmaceutical authorizations and related rights, licenses and attributable goodwill.

Relief is generally granted in line with book depreciation and is claimed on the annual tax return.

However, the company can elect for a 15-year write-off period, which is useful if intangible assets are not depreciated for book purposes. This election is made on an asset-by-asset basis.

The aggregate amount of allowances and related interest expense that may be claimed for any accounting period is capped at 100% of the trading income of the relevant trade for that period (excluding such allowances and interest). Excess allowances can be carried forward indefinitely against income of the same trade.

Allowances granted are clawed back if the asset is sold within a five-year period.

Patent rights and know-how. For acquisitions before 6 May 2011, allowances for acquired patent rights were granted over the shorter of 17 years or the duration of acquired rights. Certain know-how was deductible in full in the year of acquisition. After that date, relief must be claimed under the new intangible asset regime (see *Intangible assets*).

Research and development expenditures. A corporation tax credit of 25% is available for qualifying research and development (R&D) expenditure incurred by companies for R&D activities carried on in EEA countries. This credit is granted in addition to any existing deduction or capital allowances for R&D expenditure. As a result of this credit, companies may enjoy an effective benefit of up to 37.5% of R&D expenditure.

R&D credits that cannot be used in an accounting period can be carried forward indefinitely to future accounting periods. Excess R&D credits can be carried back against corporation tax paid in the immediately preceding accounting period. Any remaining excess credits may be refunded over a three-year period. This enhancement of the R&D credit regime represents a significant cash-flow opportunity for loss-making companies. However, a 12-month time limit for R&D claims applies. All R&D claims must be made within 12 months after the end of the accounting period in which the R&D expenditure giving rise to the claim is incurred.

A reward scheme allows companies to use all or part of the R&D credit to reward key employees.

Film credit. Amendments to the provisions relating to relief for investment in qualifying films (Section 481 relief) were introduced in 2015. The principle of relief for investors in films is replaced with a tax credit system for producer companies. The film corporation tax credit of 32% applies against the corporation tax liability of the producer company. Any excess is available for payment to the producer company. Detailed certification rules and conditions apply.

Relief for losses. Trading losses and charges incurred by a company in an accounting period in a trading activity that is not subject to the 25% corporation tax rate (effectively most trades) can be

offset only against profits of that accounting period or the preceding accounting period to the extent that the profits consist of trading income subject to the 12.5% rate. Any unused trading losses may be carried forward to offset future trading income derived from the same trade.

Relief may be available through a reduction of corporation tax on a value basis. For example, in 2017, when the standard corporation tax rate on trading income is 12.5%, 12.5% of the trading loss may be offset against the corporation tax liability of a company with respect to profits from all sources. The full amount of the trading loss that is so utilized is regarded as being used up for purposes of calculating losses that may be carried forward. In effect, a company needs trading losses equal to twice the amount of its passive income to eliminate its tax liability on such income.

Terminal loss relief may be available if a company incurs a loss in its last 12 months of trading. This relief allows such losses to be carried back against income of the same trade in the preceding three years.

Groups of companies. Certain tax reliefs are available to a group of companies that meet the following requirements:

- The group companies have a minimum share relationship of 75%.
- The parent company is entitled to 75% of distributable profits.
- The parent company is entitled to 75% of assets available for distribution on a winding up.

Such companies may transfer surplus losses and excess charges on income. Surplus losses of companies owned by a consortium may also be transferred.

Group and consortium relief are available if all of the companies in the group or consortium are resident in an EEA member country (except Liechtenstein). Loss relief was historically restricted to losses incurred in a business carried on by a company subject to Irish corporation tax. However, group relief is now available for certain “trapped” trading losses incurred by non-Irish 75% subsidiaries resident in an EEA country (except Liechtenstein). Losses that can be used elsewhere are ineligible for surrender.

Losses can be transferred between two Irish resident companies if both companies are part of a 75% group involving companies that are tax resident in an EU or tax treaty country, or quoted on a recognized stock exchange. In determining whether a company is a 75% subsidiary of another company for the purpose of group relief (losses), the parent is no longer regarded as owning any shares that it owns directly or indirectly in a company that is not resident for tax purposes in a relevant territory. This effectively means that losses may not be surrendered if a company resident in a state that has not entered into a double tax treaty with Ireland is between a claimant and a surrendering company in the group structure.

The National Asset Management Agency Act 2009 provides for a limited form of loss surrender between certain financial institutions in the same group with respect to excess losses carried forward from earlier periods for which the surrendering financial institution cannot obtain relief.

In a 75% group, assets may be transferred without generating a chargeable gain. An asset retains its tax value while it is held within the group. The tax value is generally based on original cost; for assets acquired before 6 April 1974, the tax value is computed with reference to the market value on that date. If an asset is transferred to a company that leaves the group within 10 years after the transaction, that company is deemed to have disposed of and immediately reacquired the asset at its market value at the time of its acquisition, effectively crystallizing the deferred gain.

A nonresident company that is resident in an EEA country (except Liechtenstein) may be taken into account in determining whether a group exists for chargeable gains purposes. An Irish branch of a company resident in an EEA country (except Liechtenstein) that is a member of a group may transfer assets to another member of a group on a tax-neutral basis. Any gain arising on the transfer is not taxable until the asset is sold outside the group. To qualify for such relief, the following conditions must be satisfied:

- Each of the companies in the group must be resident in Ireland or in an EEA country (except Liechtenstein).
- Any companies not resident in Ireland must be carrying on a trade in Ireland through a branch.
- The transferred asset must be a chargeable asset for corporation tax purposes in Ireland.

Dividends paid between Irish resident companies are not subject to DWT (see Section B) if the appropriate declarations are made. However, a 51% subsidiary resident in Ireland may pay dividends free of DWT without the parent company making a formal declaration to the subsidiary that it is an Irish resident company. Withholding tax is not imposed on interest and royalty payments between members of a 51% group.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on any supply of goods or services, other than an exempt supply made in or deemed to be made in Ireland, and on imports from other than EU member states at the point of entry	
Standard rate	23
Other rates	0/4.8/5.2/9/13.5
Stamp duty, on certain documents (maximum rate)	2
Local property tax (residential property); assessed on the midpoint value of valuation bands	
Market value less than EUR1 million	0.18
Market value greater than EUR1 million	
First EUR1 million	0.18
Balance	0.25
Pay-related social insurance (PRSI) (for the period ending 31 December 2017), on employees' salaries; paid by	

Nature of tax	Rate (%)
Employers	
For employees earning a weekly salary of more than EUR376; on each employee's salary without limit	10.75
For employees earning a weekly salary of EUR376 or less	8.5
Employees	
PRSI; on annual salary	4
Universal Social Charge (USC)	
Annual salary of up to EUR12,012 (exempt if income is less than EUR13,000)	0.5
Annual salary of EUR12,013 to EUR18,772	2.5
Annual salary of EUR18,773 to EUR70,044	5
Annual salary in excess of EUR70,044	8
(A 2.5% rate applies to individuals over 70 years old or who hold a full medical card and whose aggregate income for the year is less than EUR60,000.)	

E. Miscellaneous matters

Foreign-exchange controls. Foreign-exchange controls are not imposed, except in very limited circumstances at the discretion of the Minister for Finance. For example, the minister may impose foreign-exchange controls to comply with EU law or a United Nations resolution.

Debt-to-equity ratios. No thin-capitalization rules exist, but interest payments to 75%-nonresident affiliated companies may be treated as distributions of profit and consequently are not deductible (for details regarding this rule, see Section C).

Controlled foreign companies. No controlled foreign company (CFC) rules exist in Ireland.

Anti-avoidance rule. A general anti-avoidance rule (GAAR) empowers the Revenue Commissioners to reclassify a "tax avoidance" transaction in order to remove a tax advantage resulting from such transaction. An additional surcharge equal to 30% (20% for transactions begun on or before 23 October 2014) of the underpayment can be imposed if the Revenue Commissioners deny a tax advantage and if the taxpayer had not made a "protective notification" of the "tax avoidance" transaction to the Revenue within 90 days after the beginning of the transaction.

Transfer pricing. Transfer-pricing legislation in Ireland is effective from 1 January 2011. The rules apply to any arrangement between associated enterprises if the transaction meets the definition of an Irish trading transaction for one or both of the parties. For the purposes of determining an arm's-length price, the OECD Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations are adopted. Sufficient records must be maintained to support an arm's-length price. OECD-style documentation is sufficient.

Grandfathering provisions apply to transactions for which the terms were agreed on before 1 July 2010. Exemptions from the rules are available for small and medium-sized enterprises, which are companies with fewer than 250 employees and turnover of less than EUR50 million or assets of less than EUR43 million.

Country-by-Country Reporting. The 2015 Finance Act introduced Country-by-Country Reporting compliant with the OECD's recommendations. For accounting periods beginning on or after 1 January 2016, Irish-headquartered companies must file a Country-by-Country Report with the Irish Revenue within 12 months after the end of their accounting period. Groups with annual consolidated group revenue in the immediately preceding accounting period of less than EUR750 million are exempt from this reporting requirement.

Construction operations. Special withholding tax rules apply to payments made by principal contractors to subcontractors with respect to relevant contracts in the construction, forestry and meat-processing industries. Under these rules, principal contractors must withhold tax from certain payments. Under this electronic system (within which all relevant contracts must be registered), withholding rates of 0%, 20% and 35% apply. If subcontractors are not registered with the Revenue or if serious compliance issues that need to be addressed exist, the rate is 35%. All other subcontractors should qualify for the 20% rate.

F. Treaty withholding tax rates

The rates reflect the lower of the treaty rate and the rate under domestic tax law.

countries	0/20 (o)(p)	20 (b)(p)	0/20 (c)

(a) Withholding tax at a rate of 20% applies to dividends distributed on or after 6 April 2001. The table assumes that the recipient of the dividends is not a company controlled by Irish residents (that is, the domestic measure providing that DWT is not imposed on payments to residents of treaty countries

applies). If domestic law allows the imposition of DWT, a refund of the DWT may be obtained under the terms of an applicable tax treaty.

- (b) Interest is generally exempt from withholding tax if it is paid by a company or investment undertaking in the ordinary course of its business to a company resident in an EU member country or a country with which Ireland has entered into a tax treaty. However, this exemption may be unavailable if the recipient is resident in a country that does not generally impose a tax on interest received from foreign sources.
- (c) Under Irish domestic law, withholding tax on royalties applies only to patent royalties and to other payments regarded as “annual payments” under Irish law. The Irish Revenue has confirmed that withholding tax need not be deducted from royalties paid to nonresidents with respect to foreign patents (subject to conditions). Effective from 4 February 2010, withholding tax does not apply to patent royalties paid by a company in the course of a trade or business to a company resident in a treaty country that imposes a generally applicable tax on royalties received from foreign sources (subject to conditions).
- (d) The normal withholding tax rate for royalties is 10%. However, the following royalties are exempt unless the recipient has a permanent establishment in Ireland and the income is derived there:
 - Copyright royalties and similar payments with respect to the production or reproduction of literary, dramatic, musical or artistic works (but not including royalties paid for motion picture films or for works on film or videotape or other means of reproduction for use in connection with television broadcasting)
 - Royalties for the use of, or the right to use, computer software or patents or for information concerning industrial, commercial or scientific experience (but not including any such royalties in connection with rental or franchise agreements)
- (e) The 0% rate also applies in certain circumstances, such as if the interest is paid by, or received from, a central bank or local authority.
- (f) The 5% rate applies to royalties paid for the use of industrial, commercial or scientific equipment. The higher rate applies to other royalties.
- (g) The 0% rate also applies in certain circumstances, such as if the interest is paid by or received from a central bank or local authority. The 5% rate applies if the beneficial owner of the interest is a bank. The 10% rate applies to other interest.
- (h) A 0% rate also applies to royalties for the use of copyrights of literary, artistic or scientific works, including motion pictures, film recordings on tape, other media used for radio or television broadcasting or other means of reproduction or transmission.
- (i) The 0% rate also applies to interest paid to banks or financial institutions, interest paid on loans with a term of more than two years and interest paid in certain other circumstances.
- (j) The withholding tax rate for royalties is 10%, but only 60% of royalties for the use of, or the right to use, industrial, commercial or scientific equipment is taxable.
- (k) The 5% rate applies to royalties paid for the use of patents, designs or models, plans, secret formulas or processes or for information concerning industrial or scientific experience. The 10% rate applies to royalties paid for the use of trademarks or information concerning commercial experience. The 15% rate applies to other royalties.
- (l) The normal withholding tax rate for interest is 10%, but a 0% rate applies in certain circumstances.
- (m) Ireland has implemented Council Directive 2003/49/EC of 3 June 2003 on a common system of taxation applicable to interest and royalty payments made between 25%-associated companies of different EU member states. The 2005 Finance Act extended these benefits to Switzerland. If the directive applies, the withholding tax rate is reduced to 0%.
- (n) The 10% rate applies to interest paid with respect to a loan or other debt claim for a period exceeding two years or interest paid to a financial institution.
- (o) Irish domestic law may provide for an exemption from DWT under certain circumstances (see Section B).
- (p) Certain withholding tax exemptions that are available to treaty countries under Irish domestic law (see footnotes [a] and [b]) may be extended to residents of any countries with which Ireland signs a double tax treaty (beginning on the date of signing of such agreement), subject to conditions.
- (q) The 5% rate applies to royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works. The 10% rate applies to royalties paid for the use of, or the right to use, patents, trademarks, designs or models, plans, secret formulas or processes, computer software, industrial, commercial or scientific equipment or information concerning industrial, commercial or scientific experience.

- (r) This treaty is effective from 1 January 2017.
- (s) The 10% rate applies if the interest is beneficially owned by a financial institution or if it is beneficially owned by a resident of the other contracting state and is paid with respect to indebtedness arising from a sale on credit by a resident of that other state of equipment, merchandise or services, unless the sale is between persons not dealing with each other at arm's length. The 15% rate applies to interest in other cases.
- (t) The 5% rate applies to the right to use copyrights of literary, artistic or scientific works. The 10% rate applies to the use of, or the right to use, industrial, commercial or scientific equipment, or patents. The 15% rate applies to the use of, or the right to use, trademarks, designs or models, plans, secret formulas or processes and to information concerning industrial, commercial or scientific experience.
- (u) The 10% rate applies if the interest is beneficially owned by a resident of other contracting state. The 5% rate applies to interest paid in connection with the sale on credit of industrial, commercial or scientific equipment, or on loans granted by banks.
- (v) The 5% rate applies with respect to copyrights of scientific works, patents, trademarks, secret formulas or processes or information concerning industrial, commercial or scientific experience.
- (w) The 10% rate applies if the interest is beneficially owned by a resident of the other contacting state.
- (x) The 8% rate applies to royalties with respect to copyrights of scientific works, patents, trademarks, designs or models plans, secret formulas or processes, or information concerning industrial commercial or scientific experience.
- (y) For purposes of giving relief under a double tax agreement, IREF distributions (see *Irish Real Estate Funds* in Section B) are regarded as income from immovable property if the investor in an investment undertaking is beneficially entitled directly or indirectly to at least 10% of the IREFs units. Otherwise, the payment is regarded as a dividend for treaty purposes. The table assumes that the distribution is not from an IREF.

Ireland has entered into limited double tax agreements with Guernsey, the Isle of Man and Jersey, which do not provide for reductions in withholding taxes.

Negotiations for a protocol to the existing double tax treaty with Mexico have concluded.

Ireland is negotiating double tax treaties with Azerbaijan, Ghana, Kazakhstan, Oman and Turkmenistan.

Carryback	1 (c)
Carryforward	Unlimited (c)

- (a) The standard 0% rate of corporate income tax applies to all profits derived by companies except for the following:
- Certain banking business in the Isle of Man and certain retail business in the Isle of Man, which are subject to tax at a rate of 10%
 - Profits arising from land and property in the Isle of Man, which are subject to tax at a rate of 20%
- (b) Information is exchanged automatically in all cases.
- (c) Loss relief is available in certain circumstances (see Section C).

B. Taxes on corporate income and gains

Corporate income tax. Companies resident in the Isle of Man are subject to income tax on their worldwide income, but relief from double taxation may be available. A nonresident company with a branch carrying on a trade in the Isle of Man is subject to tax on the income of the branch. A company is resident in the Isle of Man if it is incorporated in the Isle of Man or if the central management and control of the company is exercised there.

Rates of corporation tax. The standard rate of corporate income tax is 0%. This rate applies to all profits derived by trading and investment companies, except for the following:

- Certain banking business in the Isle of Man and certain retail business in the Isle of Man, which are subject to tax at a rate of 10%

- Profits arising from land and property in the Isle of Man, which are subject to tax at a rate of 20%

Trading companies may also elect to be taxed at the 10% rate.

Special types of companies. Special types of companies in the Isle of Man are described briefly below.

Funds industry. The Isle of Man has a full suite of fund options, with the Specialist Funds being a popular vehicle for alternative investment. Management fees, including administration services' fees, to Specialist Funds, are exempt for value-added tax (VAT) purposes if the services are provided from the IOM. Specialist Funds can include close-ended investment trust companies. The exemption can also cover UK-listed investment entities, including investment trust companies, venture capital trusts, and certain overseas funds.

The Isle of Man also offers exempt schemes that are not subject to regulation. Exempt schemes may have up to 49 members (provided the scheme is not available to the public; that is, it is a private engagement). Virtually all types of assets can be held in these schemes.

Overseas funds may be administered in the Isle of Man without being subject to Isle of Man regulations if they are incorporated in a jurisdiction with an appropriate regulatory framework.

Limited liability companies. The Limited Liability Companies Act 1996 allows for the formation of limited liability companies (LLCs). The liability of the members of an LLC is limited to the members' contributions to capital.

For Manx tax purposes, an LLC is treated like a partnership. Consequently, an LLC's profits are allocated among its members for tax purposes.

New Manx Vehicles. The New Manx Vehicle (NMV) is a corporate vehicle that is subject to simplified filing requirements and that is designed to be flexible and inexpensive to administer. It is taxed in the same manner as normal Isle of Man companies.

Manx foundations. Under the Foundations Act 2011, foundations can be created in the Isle of Man. Manx foundations are regarded as corporate taxpayers for purposes of Manx corporate income tax and are taxed in the same manner as normal Isle of Man companies. Manx foundations are of particular interest to persons who are from civil law jurisdictions.

Capital gains. The Isle of Man does not impose a tax on capital gains.

Administration. Tax returns must be filed within 12 months and 1 day after the accounting year-end, and any tax payable is due at the same time. In certain circumstances, companies wholly subject to the 0% rate file shortened tax returns.

Filing penalties apply for the late submission of company returns. The first penalty is GBP250. A further penalty of GBP500 is imposed if the return is not filed within 18 months and 1 day after the end of the accounting period. If the return remains outstanding

24 months after the end of the accounting period, the company and its officers may be subject to criminal proceedings.

Withholding taxes. In general, no withholding tax is imposed on dividends, interest and royalties paid by Isle of Man resident companies. The Assessor of Income Tax may require a person who makes a payment or credit of taxable income to a person resident outside the Isle of Man to deduct income tax from such payment or credit at a rate specified by the Assessor. For example, a 20% withholding tax is imposed on Isle of Man rent paid by Isle of Man resident companies to nonresident companies and individuals.

Foreign tax relief. Foreign tax on income of a resident company may be credited against Manx income tax on the same profits. Foreign tax relief cannot exceed the income tax assessed by the Isle of Man on those profits.

C. Determination of trading income

General. The tax assessment is based on financial accounts prepared using generally accepted accounting principles, subject to certain adjustments and provisions.

Expenses must be incurred wholly and exclusively for the purpose of the trade and in acquiring income. Dividends are not deductible in calculating taxable profit.

Inventories. Inventory is normally valued at the lower of cost or net realizable value. Cost must be determined on a first-in, first-out (FIFO) basis; the last-in, first-out (LIFO) basis is not acceptable.

Capital allowances (tax depreciation)

Plant and machinery. A first-year allowance of up to 100% may be claimed. Annual writing-down allowances of 25% may also be claimed.

Motor vehicles. Expenditures on motor vehicles qualify for an annual allowance of 25% of the declining balance. The maximum annual allowance is GBP3,000.

Industrial buildings, agricultural buildings and tourist premises. A 100% initial allowance may be claimed on capital investment to acquire, extend or alter a qualifying industrial building, agricultural building or tourist facility. This allowance is granted on expenditures in excess of any government grants received.

Disposals. On the ultimate disposal of assets on which capital allowances have been claimed, an adjustment is made by add-back or further allowance to reflect the net cost to the company of the asset.

Relief for trading losses. Trading losses may be used to offset other income of the year in which the loss was incurred or income of the preceding year if the same trade was carried on, or losses may be carried forward, without time limit, to offset future income from the same trade. Special rules apply to the carryback of losses on commencement or cessation of the trade.

Companies may also surrender losses to 75%-group companies. A recipient company can use surrendered losses only against profits earned in the same year of assessment.

Under the loss relief rules described above, relief is allowable only against profits chargeable at the same rate of tax. Losses arising from activities subject to tax at the rate of 0% may not be relieved against profits taxed at 10%.

D. Other significant taxes

The Isle of Man and the United Kingdom are considered one area for VAT, customs and excise purposes. VAT, customs and excise rates are levied in the Isle of Man at the same rates as in the United Kingdom. The Customs and Excise Division in the Isle of Man operates independently from the United Kingdom, but under similar legislation.

Under Protocol 3 of the UK's Treaty of Accession to the European Union (EU), the Isle of Man enjoys the benefits of being within Europe for financial services, customs and VAT purposes, but outside the United Kingdom and the EU with respect to direct taxation and legal and regulatory matters. This makes it possible to operate businesses from the Isle of Man that are subject to a corporate income tax rate of 0%, but are VAT-registered. It allows UK inward investors to arrange for VAT registration in the Isle of Man without the risk of a taxable presence in the United Kingdom. The Isle of Man has its own Electronic Processing Unit (EPU), whereby international traders or their agents can electronically declare imports or exports into or out of the Isle of Man or the United Kingdom. This results in a system-generated customs clearance. On payment of duties and taxes due, goods can then enter into free circulation and be traded with any other EU member state. Businesses can land their goods in the Isle of Man or the United Kingdom and make customs declarations through the Isle of Man for both jurisdictions. Systems and procedures in both the Isle of Man and the United Kingdom are the same and rules, procedures and decisions from the Isle of Man apply throughout the EU.

The Isle of Man has the same system for National Insurance contributions as the United Kingdom, but the contributions are calculated at lower rates.

E. Miscellaneous matters

Anti-avoidance provisions. The Assessor of Income Tax has the authority to make an assessment or an additional assessment in situations in which the Assessor considers Manx tax to have been avoided. Appeals are made to the Income Tax Commissioners. No assessment is made if the person involved provides evidence to the Assessor that the purpose of avoiding or reducing income tax liability was not the primary purpose or one of the primary purposes for which the transaction was carried out.

Foreign-exchange controls. The Isle of Man does not impose any foreign-exchange controls.

Transfer pricing. Isle of Man law does not include transfer-pricing rules. However, domestic anti-avoidance provisions need to be considered.

Debt-to-equity rules. The Isle of Man does not impose debt-to-equity requirements.

F. Tax treaties

The Isle of Man has entered into double tax treaties with Bahrain, Estonia, Guernsey, Jersey, Luxembourg, Malta, Qatar, Seychelles, Singapore, and the United Kingdom. It has also signed a double tax treaty with Belgium, but this treaty is not yet in force.

In addition, the Isle of Man has entered into agreements with the following countries to eliminate the double taxation of profits with respect to enterprises operating ships or aircraft in international traffic.

Denmark	Germany	Norway
Faroe Islands	Greenland	Poland
Finland	Iceland	Sweden
France	Netherlands	United States

The Isle of Man has signed tax information exchange agreements (TIEAs) with the following countries.

Argentina	Germany	Poland
Australia	Greenland	Portugal
Botswana	Iceland	Romania
British Virgin Islands	India	Slovenia
Canada	Indonesia	Spain*
Cayman Islands	Ireland	Swaziland*
China	Italy	Sweden
Czech Republic	Japan	Switzerland
Denmark	Lesotho	Turkey*
Faroe Islands	Mexico	Turks and Caicos Islands*
Finland	Netherlands	United Kingdom
France	New Zealand	United States
	Norway	

* TIEAs with these countries are awaiting ratification.

Royalties from Patents, Know-how, etc.	24 (a)(c)(e)
Branch Remittance Tax	0

Net Operating Losses (Years)

Carryback	0
Carryforward	Unlimited

- This is the regular company tax rate for profits and real capital gains. Reduced rates of company tax are available in accordance with the Capital Investment Encouragement Law (for details, see Section B).
- See Section B for details.
- The withholding tax may be reduced by applicable tax treaties.
- The 0% rate generally applies to distributions to Israeli parent companies. In addition, reduced withholding tax rates of 15% and 20% may apply under the Capital Investment Encouragement Law.
- In principle, the withholding taxes on interest and royalties are not final taxes.
- Interest paid to nonresidents on Israeli corporate bonds registered for trading on the Tel-Aviv Stock Exchange is exempt. In general, interest paid to nonresidents on Israeli governmental bonds is exempt. However, interest on short-term bonds (issued for 13 months or less) is taxable.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are subject to Israeli tax on their worldwide income. Nonresident companies are subject to Israeli tax on income accrued or derived in Israel, unless otherwise provided for in an applicable tax treaty.

A company is considered resident in Israel for Israeli tax purposes if either of the following applies:

- It is incorporated in Israel.
- Its business is controlled and managed in Israel.

Rates of corporate tax. Effective from 1 January 2017, the regular rate of company tax is 24%. The following are the combined Israel taxes on profits, taking into account the 30% withholding tax on dividends paid to shareholders holding 10% or more of the company (material shareholders) and the 25% withholding tax imposed on shareholders holding less than 10% of the company:

- Material shareholders: 46.8% for 2017. Shareholders who are individuals may be subject to an additional tax at a rate of 3% on their taxable income in excess of ILS640,000 (linked to the Consumer Price Index each year).
- Other shareholders: 43% for 2017. For individual shareholders, an additional tax of 3% may apply (see above).

The dividend withholding tax rates mentioned above may be reduced based on applicable tax treaties.

Tax levy on oil and gas. Under the Windfall Profits Tax Law, a levy is imposed on oil and gas profits from an oil or gas project in the relevant tax year. The levy is designed to capitalize on the economic dividend arising from each individual reservoir. The levy is imposed only after the investments in exploration, development and construction are fully returned plus a yield that reflects, among other items, the developer's risks and required financial expenses. The levy is progressive and has a relatively lower rate when first collected, and increases as the project's profit margins grow.

Tax reductions and exemptions. The major tax reductions and exemptions offered by Israel are described below.

Capital Investment Encouragement Law. The Capital Investment Encouragement Law has the following objectives:

- Achieving of enhanced growth targets in the business sector

- Improving the competitiveness of Israeli industries in international markets
- Creating employment and development opportunities in outlying areas

Precedence is granted to innovation and development areas.

The country is divided into national priority areas, which benefit from several reduced tax rates and benefits based on the location of the enterprise.

A reduced uniform corporate tax rate for exporting industrial enterprises (generally over 25% of turnover from export activity) applies. The reduced tax rate does not depend on a program and applies to the industrial enterprise's industrial income.

The reduced tax rates for industrial enterprises that meet the criteria of the law are 7.5% for Development Area A and 16% for the rest of the country. In addition, accelerated depreciation applies. The accelerated depreciation reaches 400% of the standard depreciation rate on buildings (not exceeding 20% per year and exclusive of land) and 200% of the standard depreciation rate on equipment.

A reduced tax on dividends of 15% or 20% is imposed without distinction between foreign and local investors. These tax rates may be reduced under applicable tax treaties. On the distribution of a dividend to an Israeli company, no withholding tax is imposed.

A unique tax benefit is granted to certain large industrial enterprises. This entitles such companies to a reduced tax rate of 5% in Development Area A and 8% in the rest of the country.

In addition to the above tax benefits, fixed asset grants of 20% to 32% of the investment cost of fixed assets may be granted to enterprises in Development Area A.

Grants may also be made under the Employment Grant Program. These grants are made to create incentives for employment in the outlying areas of Israel. The grants are up to 40% of the cost of salaries for a period of two and one-half to four years, depending on the location, number of employees and the employees' salaries.

New innovation box. Israel approved a new innovation box regime for intellectual property (IP)-based companies, effective from 1 January 2017. This regime is included in the Capital Investment Encouragement Law.

The Israeli government tailored the new regime to the Organisation for Economic Co-operation and Development (OECD) Base Erosion and Profit Shifting (BEPS) framework, encouraging multinationals to consolidate IP ownership and profits in Israel, together with existing Israeli research and development (R&D) functions.

Tax benefits created to achieve this goal include a reduced corporate income tax rate of 6% on IP-based income and on capital gains from future sales of IP. The 6% rate applies to qualifying Israeli companies that are part of a group with global consolidated revenue of over ILS10 billion (USD2,500,000,000).

Other qualifying companies with global consolidated revenue below ILS10 billion are subject to a 12% tax rate. However, if the Israeli company is located in a development area, the tax rate is further reduced to 7.5%.

In addition, withholding tax on dividends is subject to a reduced rate of 4% for all qualifying companies (unless further reduced by a treaty).

Entering into the regime is not conditioned on making additional investments in Israel. A company can qualify if it invests at least 7% of the last three years' revenue in R&D or incurs ILS75 million in R&D expenses per year and if it meets one of the following conditions:

- It has at least 20% R&D employees (or more than 200 R&D employees).
- A venture capital investment of ILS8 million was previously made in the company.
- It had average annual growth over three years of 25% in sales or employees.

Companies not meeting the above conditions may still be considered qualified companies at the discretion of the Israeli Innovation Authority in the Economy Ministry.

Companies wishing to exit from the regime in the future will not be subject to the clawback of tax benefits.

The Finance Committee also approved a stability clause to encourage multinationals to invest in Israel. Accordingly, companies will be able to confirm the applicability of tax incentives for a 10-year period under a ruling process.

In line with the new OECD Nexus Approach, the Finance Minister promulgated regulations to ensure that companies are benefiting from the regime to the extent qualifying R&D expenses are incurred.

Research and development incentives. R&D programs are available to Israeli companies. The Office of the Chief Scientist at the Ministry of Economy primarily provides these incentives. The company can obtain an R&D grant equal to about 30% to 60% of its R&D expenses, depending on the grant program, the company's technology innovation and its business model. Binational agreements for joint R&D projects are also available. These agreements provide for grants equaling 30% to 60% of the R&D expenses incurred during the commercial phase.

Some of Israel's tax treaties include tax-sparing clauses under which regular Israeli taxes, rather than reduced Israeli taxes, may be credited against tax imposed on dividends received from an Israeli company in the investor's country of residence. As a result, the Israeli tax benefits may be partially or fully preserved for an investor in an Israeli company enjoying the benefits of the Capital Investment Encouragement Law.

Eilat free trade zone. A value-added tax (VAT) exemption and employment benefits are granted to enterprises in the Eilat free trade zone.

Other incentives. Approved residential rental properties qualify for reduced company tax rates on rental income (and on gains

derived from sales of certain buildings that have a residential element; a building has a residential element if at least 50% of the floor space is rented for residential purposes for a prescribed number of years, according to detailed rules). The reduced rates generally range from 11% (plus 15% withholding tax on dividends) for companies to 20% for individuals.

Preferential tax treatment may also be allowed with respect to the following:

- Real Estate Investment Trust (REIT) companies
- Agriculture
- Oil
- Movies
- International trading
- R&D financing
- Hotels and tourist ventures

Foreign resident investors may qualify for exemption from capital gains tax in certain circumstances (see *Capital gains and losses*).

Capital gains and losses

Residents. Resident companies are taxable on worldwide capital gains. Capital gains are divided into real and inflationary components. The following are descriptions of the taxation of these components:

- Effective from 1 January 2017, the tax rate on real capital gains is the standard corporate tax rate of 24%.
- The inflationary component of capital gains is exempt from tax to the extent that it accrued on or after 1 January 1994, and is generally taxable at a rate of 10% to the extent that it accrued before that date.

Gains derived from sales of Israeli real estate or from sales of interests in real estate associations (entities whose primary assets relate to Israeli real estate) are subject to Land Appreciation Tax at rates similar to those applicable to other capital gains.

Capital losses may be used to offset capital gains derived in the same or future tax years without time limit. In each year, capital losses are first offset against real gains and then offset against taxable inflationary amounts in accordance with the following ratio: ILS3.5 of inflationary amounts per ILS1 of capital losses. Capital losses from assets located abroad must be offset against capital gains on other assets abroad, then against capital gains from assets in Israel.

Capital losses incurred on securities can also be offset against dividend and interest income in the same year, subject to certain conditions.

Nonresidents. Unless a tax treaty provides otherwise, in principle, nonresident companies and individuals are subject to Israeli tax on their capital gains relating to any of the following:

- An asset located in Israel.
- An asset located abroad that is primarily a direct or indirect right to an asset, inventory or real estate in Israel or to a real estate association (an entity whose primary assets relate to Israeli real estate). Tax is imposed on the portion of the consideration that relates to such property in Israel.

- Shares or rights to shares (for example, warrants and options) in an Israeli resident entity.
- A right to a nonresident entity that primarily represents a direct or indirect right to property in Israel. Tax is imposed on the portion of the consideration that relates to such property in Israel.

Foreign residents not engaged in business in Israel may qualify for exemption from capital gains tax on disposals of the following investments:

- Securities traded on the Tel-Aviv stock exchange (with certain exceptions)
- Securities of Israeli companies traded on a recognized foreign stock exchange

The above exemption does not apply to the following:

- Gains attributable to a permanent establishment (generally a fixed place of business) of the investor in Israel
- Shares of Real Estate Investment Trust (REIT) companies
- Capital gains derived from the sale of Israeli governmental short-term bonds (issued for 13 months or less)

Foreign residents may also qualify for an exemption from capital gains tax on disposals of all types of Israeli securities not listed to trade that were purchased on or after 1 January 2009 if the seller (the company or individual who sold the Israeli securities to the foreign resident) was not a related party.

The above exemption does not apply to the following:

- Gains attributable to a permanent establishment (generally a fixed place of business) of the investor in Israel
- Shares of a company whose assets are principally Israeli real estate
- Shares of a company that has the value of its assets derived principally from the usufruct of immovable property and right to payments as consideration for the working of, or the right to work, mineral deposits, sources and other natural resources (for example, companies that hold licenses to exploit gas and minerals in Israel's territory, which includes Israel's economic water)

In other cases, unless a tax treaty provides otherwise, foreign resident companies pay capital gains tax in accordance with the rules and rates applicable to Israeli resident companies, as described above. However, nonresidents investing with foreign currency may elect to apply the relevant exchange rate rather than the inflation rate to compute the inflationary amount.

Administration. The Israeli tax year is normally the calendar year. However, subsidiaries of foreign publicly traded companies may sometimes be allowed to use a different fiscal year.

Companies are generally required to file audited annual tax returns and financial statements within five months after the end of their fiscal year, but extensions may be obtained.

Companies must normally file monthly or bimonthly reports and make payments with respect to the following taxes:

- Company tax advances, which are typically computed as a percentage of a company's sales revenues
- Supplementary company tax advances with respect to certain nondeductible expenses

- Tax and social security contributions withheld from salaries and remittances to certain suppliers
- VAT

Nonresidents are required to appoint an Israeli tax representative and VAT representative if any part of their activities is conducted in Israel. The VAT representative is deemed to be the tax representative if no other tax representative is appointed. The tax representative is empowered to pay tax out of the foreign resident's assets.

Dividends. A 30% withholding tax is generally imposed on dividends paid to individual shareholders holding 10% or more of the shares in an Israeli company (material shareholders). A 25% withholding tax is imposed on dividends paid to individual shareholders holding less than 10% of the shares in an Israeli company and on regular dividends paid by a publicly traded company (regardless of whether the recipient is a material shareholder). However, resident companies are exempt from company tax on dividends paid out of regular income that was accrued or derived from sources within Israel. Companies are generally subject to tax at a rate of 25% on foreign dividend income that is paid from a foreign source or from income accrued or derived abroad (foreign-source income that is passed up a chain of companies).

A reduced withholding tax of 15% or 20% is imposed on dividends paid out of the income of a company entitled to the benefits of the Capital Investment Encouragement Law. The rate may be further reduced under an applicable tax treaty. However, if such dividend is paid to an Israeli company, it is generally exempt from withholding tax (with certain exceptions).

Under a published temporary order, subject to certain terms, distributions of dividends until 30 September 2017 to material shareholders that are derived from profits generated up to 31 December 2016 are subject to tax at a rate of 25% (without additional tax).

Interest. Israeli resident companies are taxable on worldwide interest, original discount and linkage differentials income. The tax rate for these types of income is the standard corporate tax rate of 24%. Interest, original discount and linkage differentials income are treated as derived from Israeli sources if the payer is located in Israel. In principle, the same taxation rules apply to non-Israeli resident companies on Israeli-source interest, original discount and linkage differentials income, unless a tax treaty provides otherwise.

Nevertheless, an exemption from Israeli tax is available to foreign investors that receive interest income on bonds issued by Israeli companies traded on the Israeli stock exchange.

In addition, interest paid to nonresidents on Israeli governmental bonds that are issued for 13 months or more is exempt.

Israeli holding companies and participation exemption. To qualify for the participation exemption, an Israeli holding company must satisfy various conditions, including the following:

- It must be incorporated in Israel.
- Its business is controlled and managed in Israel only.
- It may not be a public company or a financial institution.
- It must not have been formed in a tax-deferred reorganization.

- For 300 days or more in the year, beginning in the year after incorporation, the holding company must have an investment of at least ILS50 million in the equity of, or as loans to, the investee companies, and at least 75% of the holding company's assets must consist of such equity investments and loans.

In addition, the foreign investee company must satisfy the following conditions:

- It must be resident in a country that entered into a tax treaty with Israel, or it must be resident in a foreign country that had a tax rate for business activity of at least 15% on the date of the holding company's investment (however, it is not required that the investee company pay the 15% tax [for example, it obtains a tax holiday]).
- At least 75% of its income in the relevant tax year is accrued or derived from a business or one-time venture abroad.
- The Israeli holding company must hold an "entitling shareholding" in the investee company for at least 12 consecutive months. An "entitling shareholding" is a shareholding that confers at least 10% of the investee's profits. The entitling shareholding must span a period of at least 12 months that includes the date on which the income is received.

An Israeli holding company is exempt from tax on the following types of income:

- Capital gains derived from the sale of an entitling shareholding in an investee company
- Dividends distributed during the 12-month minimum shareholding period with respect to an entitling shareholding in an investee company
- Interest, dividends and capital gains derived from securities traded on the Tel-Aviv Stock Exchange
- Interest and indexation amounts received from Israeli financial institutions

In addition, dividends paid by Israeli holding companies to foreign resident shareholders are subject to a reduced rate of dividend withholding tax of 5%.

Foreign tax relief. A credit for foreign taxes is available for federal and state taxes but not municipal taxes. Any excess foreign tax credit may be offset against Israeli tax on non-Israeli-source income from the same type in the following five tax years.

With respect to foreign dividend income, an Israeli company may receive a direct and an underlying tax credit for foreign taxes. The foreign dividend income is grossed up for tax purposes by the amount of the creditable taxes. The following are the alternative forms of the credit:

- Direct foreign tax credit only: a 25% tax is imposed on foreign dividend income, and any dividend withholding tax incurred is creditable in Israel.
- Direct and underlying foreign tax credit: a 25% tax is imposed on foreign dividend income, and a credit is granted for dividend withholding tax and underlying corporate tax paid abroad by 25%-or-greater affiliates and their direct 50%-or-greater subsidiaries. If an underlying foreign tax credit is claimed, any excess foreign tax credit may not be used to offset company tax in future years.

Foreign residents that receive little or no relief for Israeli taxes in their home countries may be granted a reduced Israeli tax rate by the Minister of Finance.

C. Determination of trading income

General. Taxable income is based on financial statements that are prepared in accordance with generally accepted accounting principles and are derived from acceptable accounting records. In principle, expenses are deductible if they are wholly and exclusively incurred in the production of taxable income. Various items may require adjustment for tax purposes, including depreciation, R&D expenses, and vehicle and travel expenses.

Inventories. In general, inventory may be valued at the lower of cost or market value. Cost may be determined using one of the following methods:

- Actual
- Average
- First-in, first-out (FIFO)

The last-in, first-out (LIFO) method is not allowed.

Provisions. Bad debts are deductible in the year they become irrecoverable. Special rules apply to employee-related provisions, such as severance pay, vacation pay, recreation pay and sick pay.

Depreciation. Depreciation at prescribed rates, based on the type of asset and the number of shifts the asset is used, may be claimed with respect to fixed assets used in the production of taxable income.

Accelerated depreciation may be claimed in certain instances. For example, under the Inflationary Adjustments Regulations (Accelerated Depreciation), for assets first used in Israel between 1 June 1989 and 31 December 2013, industrial enterprises may depreciate equipment using the straight-line method at annual rates ranging from 20% to 40%. Alternatively, they may depreciate equipment using the declining-balance method at rates ranging from 30% to 50%.

The following are some of the standard straight-line rates that apply primarily to non-industrial companies.

Asset	Rate (%)
Mechanical equipment	7 to 10
Electronic equipment	15
Personal computers and peripheral equipment	33
Buildings (depending on quality)	1.5 to 4
Goodwill	10 (a)
Patent rights and technology	12.5 (b)
Solar energy-producing plant	25

(a) Subject to the fulfillment of certain conditions.

(b) For industrial companies, subject to the fulfillment of certain conditions.

Groups of companies. Subject to certain conditions, consolidated returns are permissible for an Israeli holding company and its Israeli industrial subsidiaries if the subsidiaries are all engaged in the same line of production. For this purpose, a holding company is a company that has invested at least 80% of its fixed assets in

the industrial subsidiaries and controls at least 50% (or two-thirds in certain cases) of various rights in those subsidiaries. For a diversified operation, a holding company may file a consolidated return with the subsidiaries that share the common line of production in which the largest amount has been invested.

Group returns may also be filed by an Israeli industrial company and Israeli industrial subsidiary companies if the subsidiaries are at least two-thirds controlled (in terms of voting power and appointment of directors) by the industrial company and if the industrial company and the subsidiaries are in the same line of production.

Detailed rules concerning the deferral of capital gains tax apply to certain types of reorganizations, including corporate mergers, divisions and shares-for-assets exchanges. In many cases, an advance ruling is necessary.

Relief for losses. In general, business losses may be offset against income from any source in the same year. Unrelieved business losses may be carried forward for an unlimited number of years to offset business income, capital gains derived from business activities or business-related gains subject to the Land Appreciation Tax (see Section B). According to case law, the offset of losses may be disallowed after a change of ownership and activity of a company, except in certain bona fide circumstances.

Special rules govern the offset of foreign losses incurred by Israeli residents. Passive foreign losses may be offset against current or future foreign passive income (for example, income from dividends, interest, rent or royalties). Passive foreign rental losses arising from depreciation may also be offset against capital gains from the sale of the relevant foreign real property.

Active foreign losses (relating to a business or profession) may be offset against the following:

- Active foreign income and business-related capital gains in the current year.
- Passive foreign income in the current year.
- Active Israeli income in the current year if the taxpayer so elects and if the foreign business is controlled and managed in Israel. However, in the preceding two years and in the following five years, foreign-source income is taxable up to the amount of the foreign loss.
- Active foreign income and business-related capital gains in future years.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT), standard rate	17
Wage and profit tax, imposed on financial institutions instead of VAT; this tax is imposed in addition to company tax	17
National insurance contributions on monthly employment income (subject to an upper income limit that fluctuates periodically)	

Nature of tax	Rate (%)
Employer payments; rates depend on residency of employee	Various
Employee payments; rates depend on residency of employee	Various
Payroll levy on salaries of foreign employees; levy does not apply if monthly salary exceeds twice the average monthly salary	10 to 20
Acquisition tax, imposed on purchasers of real estate rights; maximum rate	0 to 10
Annual municipal taxes on property	Various

E. Miscellaneous matters

Foreign-exchange controls. The Israeli currency is the new Israel shekel (ILS).

No exchange-control restrictions exist.

Debt-to-equity rules. No thin-capitalization rules are imposed in Israel. However, approved enterprises and approved properties (see Section B) must be at least 30% equity-financed if they received their approval before 1 April 2005.

Transfer pricing. Transactions between related parties should be at arm's length. Detailed transfer-pricing regulations apply. An Israeli taxpayer must report on each international transaction undertaken with a related party and indicate the arm's-length amount for such transaction. Advance rulings may be requested regarding transfer pricing.

Measures to counteract tax planning involving foreign companies. Certain measures are designed to counteract tax planning involving foreign companies.

Foreign professional companies. Israeli residents are taxed on deemed dividends received from foreign professional companies (FPCs) at the standard corporate tax rate; a foreign corporate tax credit is available. In addition, on the actual distribution of dividends by FPCs, Israeli residents are subject to dividend tax. A company is considered to be an FPC if a company meets all of the following conditions:

- It has five or fewer ultimate individual shareholders.
- It is owned 75% or more by Israeli residents.
- Most of its 10%-or-more shareholders conduct a special profession for the company.
- Most of its income or profits are derived from a special profession.

The special professions include engineering, management, technical advice, financial advice, agency, law, medicine and many others.

Controlled foreign corporations. Israeli residents are taxed on deemed dividends received from a controlled foreign corporation (CFC) if they hold 10% or more of the CFC. An amendment to the CFC regime is effective from 1 January 2014. A foreign company (or any other body of persons) is considered to be a CFC if all of the following conditions exist:

- The foreign company primarily derives passive income or profits that are taxed at a rate of 15% or less abroad.

- The foreign company's shares are not publicly traded, or less than 30% of its shares or other rights have been issued to the public or listed for trade.
- One of the following requirements is satisfied:
 - Israeli residents own either directly or indirectly more than 50% of the foreign company.
 - An Israeli resident owns over 40% of the foreign company, and together with a relative, owns more than 50% of the company.
 - An Israeli resident has veto rights with respect to material management decisions, including decisions regarding the distribution of dividends or liquidation.

The shareholdings of the CFC are calculated as the higher of the following:

- The shareholdings at the tax year-end
- The shareholdings any day in the tax year plus any day in the following tax year

The deemed dividend is the taxpayer's share of passive undistributed income on the last day of the tax year. Under the 2014 amendment, the possibility of claiming a deemed foreign tax credit is abolished.

Reportable transactions. Certain types of transactions with foreign companies must be reported to the tax authorities.

Withholding taxes on overseas remittances. Israeli banks must withhold tax, generally at a rate of 25%, from most overseas remittances unless the remittances relate to imported goods. An exemption or a reduced withholding rate may be obtained from the Israeli tax authorities in certain circumstances, such as when a treaty applies or when the payments are for services that are rendered entirely abroad. A 30% withholding tax rate applies to dividends paid to recipients holding 10% or more of the payer entity.

Free-trade agreements. Israel has entered into free-trade agreements with Bulgaria, Canada, the European Free Trade Association, the European Union, Mexico, Romania, Turkey and the United States.

F. Treaty withholding tax rates

The following table provides Israeli withholding tax rates for payments of dividends, interest and royalties to residents of various jurisdictions. Exemptions or conditions may apply, depending on the terms of the particular treaty.

	Dividends	Interest	Royalties (a)
	%	%	%
Austria	25	15	10
Belarus	10	5/10 (c)	5/10 (aa)
Belgium	15	15	10
Brazil	10/15 (l)	15 (c)	10/15 (jj)
Bulgaria	10/12.5 (b)	5/10 (c)	12.5 (d)
Canada	15	15	15
China	10	7/10 (e)	7/10 (f)
Croatia	5/10/15 (h)	0/5/10 (c)(ll)	5
Czech Republic	5/15 (g)	10	5
Denmark	0/10 (oo)	0/5 (q)(mm)	0

	Dividends	Interest	Royalties (a)
	%	%	%
Estonia	0/5 (oo)	5 (c)	0
Ethiopia	5/10/15 (h)	0/5/10 (c)(ll)	5
Finland	5/10/15 (h)	10 (i)	10
France	5/10/15 (h)	5/10 (i)(j)	10
Georgia	0/5 (oo)	0/5 (q)(mm)	0
Germany	5/10 (vv)	5	0
Greece	25 (k)	10	10
Hungary	5/15 (g)	0	0
India	10	10	10
Ireland	10	5/10 (j)	10
Italy	10/15 (l)	10	10
Jamaica	15/22.5 (m)	15	10
Japan	5/15 (n)	10	10
Korea (South)	5/10/15 (h)	7.5/10 (c)	2/5 (o)
Latvia	5/10/15 (h)	5/10 (c)	5
Lithuania	5/10/15 (h)	0/10 (q)(ll)	5/10 (u)
Luxembourg	5/10/15 (h)	5/10 (c)	5
Macedonia (pp)	5/15 (ww)	10 (xx)	5 (yy)
Malta	0/15 (uu)	0/5 (q)(ss)	0
Mexico	5/10 (p)	10 (q)	10
Moldova	5/10 (kk)	0/5 (q)(mm)	5
Netherlands	5/10/15 (h)	10/15 (r)	5
Norway	25	25	10
Panama	5/15/20 (qq)	0/15 (rr)	15
Philippines	10/15 (s)	10	10/15 (t)
Poland	5/10 (g)	5	5/10 (u)
Portugal	5/10/15 (h)	10 (q)	10
Romania	15	5/10 (v)	10
Russian Federation	10	10 (q)	10
Singapore	5/10 (g)	7 (c)	5 (x)
Slovak Republic	5/10 (g)	2/5/10 (y)	5
Slovenia	5/10/15 (h)	0/5 (q)(mm)	5
South Africa	25	25	0
Spain	10	5 (z)	5/7 (aa)
Sweden	0 (w)	25	0
Switzerland	5/10/15 (h)	5/10 (c)	5
Taiwan	10	7/10 (c)	10
Thailand	10/15 (bb)	10/15 (cc)	5/15 (dd)
Turkey	10	10 (ee)	10
Ukraine	5/10/15 (h)	5/10 (c)	10
United Kingdom	15	15	0
United States	12.5/15/25 (ff)	10/17.5 (gg)	10/15 (hh)
Uzbekistan	10	10	5/10 (ii)
Vietnam	10	10 (q)	5/7.5/15 (u)
Non-treaty countries (nn)	25/30	25 (tt)	25 (tt)

(a) Different rates may apply to cultural royalties.

(b) The 10% rate applies to dividends that are paid out of profits taxed at a reduced company tax rate. For other dividends, the withholding tax rate may not exceed one-half the non-treaty withholding tax rate; because the non-treaty withholding tax rate for dividends is currently 25%, the treaty withholding tax rate is 12.5%.

(c) Interest on certain government loans is exempt. The rate of 5% (Belarus, Bulgaria, Croatia, Ethiopia, Latvia, Luxembourg, Switzerland and Ukraine), 7% (Taiwan) or 7.5% (Korea) applies to interest on loans from banks or financial institutions. The 10% rate (Brazil, 15%; Estonia, 5%; and Singapore, 7%) applies to other interest payments.

- (d) The withholding tax rate may not exceed one-half the non-treaty withholding tax rate; because the non-treaty withholding tax rate is currently 26.5%, the treaty withholding tax rate is 13.25%.
- (e) The 7% rate applies to interest paid to banks or financial institutions.
- (f) Under a protocol to the treaty, the 7% rate is the effective withholding rate for amounts paid for the use of industrial, commercial or scientific equipment.
- (g) The 5% rate applies if the recipient holds directly at least 10% of the capital of the payer (Hungary, Singapore and Slovak Republic) or at least 15% of the capital of the payer (Poland), or if the recipient is a company that holds at least 15% of the capital of the payer (Czech Republic).
- (h) The 5% rate applies if the dividends are paid out of profits that were subject to the regular company tax rate (currently, 26.5%) and if they are paid to a corporation holding at least 10% (Ethiopia, Finland, France, Korea, Latvia, Lithuania, Luxembourg, Slovenia and Switzerland) or 25% (Croatia, Netherlands, Portugal and Ukraine) of the payer's capital. The 10% rate applies to dividends paid to such a corporation (under the Ukraine treaty, a corporation holding at least 10%) out of profits that were taxed at a reduced rate of company tax. The 15% rate applies to other dividends.
- (i) Alternatively, an interest recipient may elect to pay regular tax (currently, the company tax rate is 26.5%) on the lending profit margin.
- (j) The 5% rate applies to interest on a bank loan as well as to interest in connection with sales on credit of merchandise between enterprises or sales of industrial, commercial or scientific equipment.
- (k) Dividends are subject to tax at the rate provided under domestic law, which is currently 25% in Israel.
- (l) The 10% rate applies if the recipient holds at least 25% of the capital of the payer.
- (m) The 15% rate applies if the recipient is a company that holds directly at least 10% of the voting power of the payer.
- (n) The 5% rate applies to corporate recipients that beneficially own at least 25% of the voting shares of the payer during the six months before the end of the accounting period for which the distribution is made.
- (o) The 2% rate applies to royalties for use of industrial, commercial or scientific equipment.
- (p) The 5% rate applies if the recipient holds at least 10% of the payer and if the payer is not an Israeli resident company that paid the dividends out of profits that were taxed at a reduced tax rate. The 10% rate applies to other dividends.
- (q) Interest on certain government loans is exempt.
- (r) The 10% rate applies to a Dutch bank or financial institution.
- (s) The 10% rate applies if the recipient holds at least 10% of the capital of the payer.
- (t) The 15% rate applies unless a lesser rate may be imposed by the Philippines on royalties derived by a resident of a third country in similar circumstances. The Philippines-Germany treaty specifies a 10% withholding tax rate on industrial and commercial royalties. Consequently, a 10% rate might apply to these royalties under the Israel-Philippines treaty.
- (u) The 5% rate applies to royalties for the use of industrial, commercial or scientific equipment. The 7.5% rate (Vietnam) applies to technical fees.
- (v) The 5% rate applies to interest on bank loans as well as to interest in connection with sales on credit of merchandise between enterprises or sales of industrial, commercial or scientific equipment. Interest on certain government loans is exempt.
- (w) Under a disputed interpretation of the treaty, a 15% rate may apply to dividends paid out of the profits of an approved enterprise or property.
- (x) The tax rate on the royalties in the recipient's country is limited to 20%.
- (y) The 2% rate applies to interest paid on certain government loans. The 5% rate applies to interest received by financial institutions that grant loans in the course of its usual business activities. The 10% rate applies to other interest payments.
- (z) This rate applies to interest in connection with sales on credit of merchandise between enterprises and sales of industrial, commercial or scientific equipment, and to interest on loans granted by financial institutions.
- (aa) The 5% rate applies to royalties paid for the use of industrial, commercial or scientific equipment (and road transport vehicles under the Belarus treaty), or for copyrights of literary, dramatic, musical or artistic works. The rate for other royalties is 10% (Belarus) or 7% (Spain).
- (bb) The 10% rate applies if the recipient is an Israeli resident or if the recipient is a Thai resident holding at least 15% of the capital of the payer.
- (cc) The 10% rate applies to interest paid to banks or financial institutions, including insurance companies.
- (dd) The 5% rate applies to royalties paid for the use of literary, artistic or scientific works, excluding radio or television broadcasting works.

- (ee) Interest on certain government loans is exempt. The 10% rate applies to all other interest payments.
- (ff) The 12.5% rate applies to dividends paid by a company that does not have an approved enterprise or approved property in Israel to US corporations that own at least 10% of the voting shares of the payer, subject to certain conditions. The 15% rate applies to dividends paid out of the profits of an approved enterprise or property. The 25% rate applies to other dividends.
- (gg) The 10% rate applies to interest on a loan from a bank, savings institution, insurance company or similar company. The 17.5% rate applies to other interest. Alternatively, an interest recipient may elect to pay regular tax (the company tax rate is currently 26.5%) on the lending profit margin.
- (hh) The 10% rate applies to copyright and film royalties. The 15% rate applies to industrial and other royalties.
- (ii) The 5% rate applies to royalties paid for the use of literary, artistic or scientific works, excluding cinematographic films. The 10% rate applies to other royalties.
- (jj) The 15% rate applies to royalties for the use of, or the right to use, trademarks. The 10% rate applies to other royalties.
- (kk) The 5% rate applies if the dividends are paid to a corporation holding at least 25% of the payer's capital. The 10% rate applies to other dividends.
- (ll) The 0% rate applies to interest with respect to sales on credit of merchandise or industrial, commercial or scientific equipment. Under the Lithuania treaty, such credit must not exceed six months and related parties are excluded.
- (mm) The 0% rate applies to interest with respect to a loan, debt-claim or credit guaranteed or insured by an institution for insurance or financing of international trade transactions that is wholly owned by the other contracting state (Denmark, Georgia and Moldova) or acts on behalf of the other contracting state (Slovenia), and with respect to interest paid on traded corporate bonds (Denmark and Georgia). The 5% rate applies to other interest.
- (nn) See Sections A and B. A 25% withholding tax rate applies to dividends and other payments to recipients who hold under 10% of the payer entity.
- (oo) The 0% rate applies if the recipient is a company that holds directly at least 10% of the capital of the payer for a consecutive period of at least 12 months.
- (pp) This treaty has been signed, but it has not yet been ratified.
- (qq) The 5% rate applies to dividends paid to pension schemes. The 20% rate applies to distributions from a real estate investment company if the beneficial owner holds less than 10% of the capital of the company. The 15% rate applies to other dividends.
- (rr) The 0% rate applies to interest on certain government loans, interest paid to pension schemes and interest on certain corporate bonds traded on a stock exchange. The 15% rate applies to other interest.
- (ss) The 0% rate applies to interest derived from corporate bonds listed for trading.
- (tt) This is the regular company tax rate for profits and real capital gains effective from 1 January 2016.
- (uu) The 0% rate applies if the beneficial owner of the dividends is a company (other than a partnership or a real estate investment company) that holds directly at least 10% of the capital of the company paying the dividends. The 15% rate applies to dividends in all other cases. Distributions made by a real estate investment company that is a resident of Israel to a resident of Malta may be taxed in Malta. Such distributions may also be taxed in Israel according to the laws of Israel. However, if the beneficial owner of these distributions is a resident of Malta holding directly less than 10% of the capital of the distributing company, the tax charged in Israel may not exceed a rate of 15% of the gross distribution.
- (vv) The 5% rate applies if the recipient holds at least 10% of the payer's capital. The 10% rate applies to other dividends.
- (ww) The 5% rate applies if the beneficial owner of the dividends is a company (other than a partnership or a real estate investment company) that holds directly at least 25% of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (xx) The maximum tax rate is 10% if the beneficial owner of the interest is a resident of the other contracting state. However, interest arising in a contracting state is exempt from tax in that state if one of the following circumstances exists:
- The interest is paid to the government of the other contracting state, a local authority or the central bank thereof.
 - The interest is paid by the government of that contracting state, a local authority or the central bank thereof.
- (yy) The maximum tax rate is 5% if the beneficial owner of the royalties is a resident of the other contracting state.

A. At a glance

Corporate Income Tax Rate (%)	24 (a)
Capital Gains Tax Rate (%)	1.2/24 (b)
Branch Tax Rate (%)	24 (a)
Withholding Tax (%)	
Dividends	0/1.2/26 (c)(d)
Interest	0/12.5/26 (e)(f)
Royalties from Patents, Know-how, etc.	0/22.5/30 (f)(g)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	Unlimited (h)

- (a) The 2016 Budget Law provides that, except for banks and other financial entities, the corporate income tax (*imposta sul reddito delle società*, or IRES) rate is reduced to 24%, effective from the 2017 fiscal year (fiscal years beginning after 31 December 2016). A 6.5% surcharge (increasing the total tax rate to 34%) was imposed on oil, gas and energy companies with revenues exceeding EUR3 million and taxable income exceeding EUR300,000 with reference to the preceding year (for 2011 to 2013, the surcharge was 10.5%). During 2015, the Italian Constitutional Court declared such surcharge unconstitutional and consequently repealed the surcharge without retroactive effect. A local tax on productive activities (*imposta regionale sulle attività produttive*, or IRAP) is imposed on the net value of production. For further details regarding IRAP, see Section B.
- (b) For details concerning capital gains taxation, see Section B.
- (c) Withholding tax is not imposed on dividends paid to resident companies. The 26% rate applies to dividends paid to resident individuals with non-substantial participations (for information on substantial and non-substantial participations, see the discussion of capital gains taxation in Section B). The 26% rate applies to dividends paid to nonresidents. Nonresidents may be able to obtain a refund of the withholding tax equal to the amount of foreign tax paid on the dividends. However, the maximum refund is 11/26 of the withholding tax paid. Tax treaties may provide for a lower tax rate. However, the maximum refund is 11/26 of the withholding tax paid. Tax treaties may provide for a lower tax rate. Effective from 1 January 2008, a 1.375% rate applied under certain circumstances (see Section B). This rate is increased to 1.2% as of 2017. If either the treaty or the 1.2% rate applies, the 11/26 tax refund cannot be claimed.
- (d) Under the European Union (EU) Parent-Subsidiary Directive, dividends distributed by an Italian subsidiary to an EU parent company are exempt from withholding tax, if among other conditions, the recipient holds 10% or more of the shares of the subsidiary for at least one year. See Section B. Similar treatment may apply to dividend payments to Swiss parents under the EU-Switzerland treaty (Article 15).
- (e) The 0% rate applies under certain circumstances to interest derived by nonresidents on the white list (see Section B) from treasury bonds, bonds issued by banks and “listed” companies, “listed” bonds issued by “non-listed” companies (often referred to as “mini-bonds”), nonbank current accounts and certain cash pooling arrangements and in other specific cases. The term “listed” refers to a listing on the Italian exchange or on an official exchange or a multilateral system for exchange of an EU or European Economic Area (EEA) country. The 26% rate applies to interest derived by residents and nonresidents from corporate bonds and similar instruments and from loans, in general. The 26% rate also applies as a final tax to interest paid to residents on bank accounts and deposit certificates. The rate applicable to interest paid on treasury bonds issued by the Italian government and by white-list countries is reduced to 12.5%. For resident individuals carrying on business activities in Italy and resident companies, interest withholding taxes are advance payments of tax. In all other cases, the withholding taxes are final taxes. Tax treaties may also provide for lower rates. For further details, see Section B.
- (f) No withholding tax is imposed on interest and royalties paid between associated companies of different EU member states if certain conditions are met.

For details, see Section B. Similar treatment may apply to interest payments to Swiss companies under the EU-Switzerland treaty (Article 15).

- (g) The withholding tax rate of 30% applies to royalties paid to nonresidents. However, in certain circumstances, the tax applies on 75% of the gross amount, resulting in an effective tax rate of 22.5%. These rates may be reduced under tax treaties.
- (h) Loss carryforwards are allowed for corporate income tax purposes only. Losses incurred in the first three tax years of an activity may be carried forward indefinitely. Losses incurred in the following years can also be carried forward indefinitely but can only be used against a maximum amount of 80% of taxable income. Anti-abuse rules may limit loss carryforwards.

B. Taxes on corporate income and capital gains

Corporate income tax. Resident companies are subject to corporate income tax (*imposta sul reddito delle società*, or IRES) on their worldwide income (however, effective from the 2016 fiscal year, an elective branch exemption regime is available; see Section E). A resident company is a company that has any of the following located in Italy for the majority of the tax year:

- Its registered office
- Its administrative office (similar to a “place of effective management” concept)
- Its principal activity

Unless they are able to prove the contrary, foreign entities controlling an Italian company are deemed to be resident for tax purposes in Italy (so-called “Esterovestizione”) if either of the following conditions is satisfied:

- The foreign entity is directly or indirectly controlled by Italian resident entities or individuals.
- The majority of members of the board of directors managing the foreign entity are resident in Italy.

Nonresident companies are subject to IRES on their Italian-source income only.

Rate of corporate tax. The 2016 Budget Law reduced the corporate tax rate by from 27.5% to 24%, effective from the 2017 fiscal year. It also provided for a 3.5% surcharge on banks and financial entities for which the aggregate corporate tax rate therefore remains unchanged (that is, 27.5%).

The 2017 Budget Law introduced specific provisions for fund management companies. Such companies are excluded from the application of the 3.5% corporate income tax surcharge, which is otherwise generally applied to financial entities. However, a 96% limit on the deduction of interest expenses is imposed on such companies (as opposed to the previous 100% deduction rule).

Local tax. Resident and nonresident companies are subject to a regional tax on productive activities (*imposta regionale sulle attività produttive*, or IRAP) on their Italian-source income. For manufacturing companies, IRAP is imposed at a standard rate of 3.9% on the “net value of production” (see below). However, different rates apply to the following:

- Corporations and entities granted concession rights other than those running highways and tunnels: 4.2%
- Banks and other financial entities: 4.65%
- Insurance companies: 5.9%
- Public administration entities performing business activities: 8.5%

In addition, each of the 20 Italian regions may increase or decrease the rate of IRAP by a maximum of 0.9176 percentage point, and companies generating income in more than one region are required to allocate their tax base for IRAP purposes among the various regions in the IRAP tax return.

The IRAP tax base is the “net value of production,” which is calculated by subtracting the cost of production from the value of production (that is, in general, revenue less operating costs). However, certain deductions are not allowed for IRAP purposes, such as the following:

- Certain extraordinary costs (but certain extraordinary income is not taxable). In this regard, the IRAP calculation must take into account the new profit-and-loss scheme contained in provisions introduced by Legislative Decree No. 139/2015, as well as the corresponding tax provisions expressly applicable to IRAP, which were introduced by Law Decree No. 244/2016.
- Bad debt losses.
- Labor costs (excluding certain compulsory social contributions and a fixed amount of the wages, in application of the so-called Cuneo Fiscale). However, under the 2015 Budget Law, labor costs incurred for employees hired on a permanent basis are fully deductible for IRAP purposes, beginning with the fiscal year including 31 December 2015.
- Interest expenses (but interest income is not taxable). However, banks, insurance companies and financial holding companies can deduct 96% of interest expenses and are taxed on 100% of interest income.

In addition, special rules for the calculation of the tax base for IRAP purposes apply to banking institutions, insurance companies, public entities and non-commercial entities.

Capital gains

Resident companies and nonresident companies with a permanent establishment in Italy. In general, capital gains derived by resident companies or nonresident companies with a permanent establishment (PE) in Italy are subject to IRES and IRAP (gains derived from sales of participations and extraordinary capital gains derived from transfers of going concerns are excluded from the tax base for IRAP purposes). Capital gains on investments that have been recorded in the last three financial statements as fixed assets may be electively taxed over a maximum period of five years.

Italian corporate taxpayers (that is, companies and branches) may benefit from a 95% participation exemption regime (that is, only 5% is taxable) for capital gains derived from disposals of Italian or foreign shareholdings that satisfy all of the following conditions:

- The shareholding has been classified as of the first financial statements closed during the holding period as a long-term financial investment.
- The Italian parent company holds the shareholding for an uninterrupted period of at least 12 months before the disposal.
- The subsidiary actually carries on a business activity (real estate companies are assumed not to be carrying on a business activity; therefore, they can satisfy this requirement only under certain limited circumstances).

- The subsidiary is not resident in a tax haven (a jurisdiction on the blacklist; for additional information regarding gains from blacklist participations, see *Dividends*).

The last two conditions described above must be satisfied uninterruptedly through the three financial years before the year of the disposal.

If the conditions described above are not satisfied, capital gains on the sale of shares are fully included in the calculation of the tax base for IRES purposes.

In general, capital losses on shares are deductible. However, an exception is made for capital losses on participations that would benefit from the 95% participation exemption. These losses are 100% nondeductible. However, losses from sales of participations not qualifying for the participation exemption are nondeductible up to the amount equal to the exempt portion of the dividends received on such participations during the 36 months preceding the sale.

Nonresident companies without a PE in Italy. Most tax treaties prevent Italy from levying taxation on nonresidents deriving capital gains from the sale of Italian participations.

If no treaty protection is available, capital gains derived from sales of a substantial participation in Italian companies and partnerships are subject to tax in Italy, but 50.28% of such gains is exempt. As a result, 49.72% of the gain is taxable at the corporate income tax rate of 24% (27.5% up to 2016), and the effective tax rate is 11.9% (13.67% up to 2016). As a result of the reduction of the IRES and withholding tax rate to 24% and 1.2%, respectively, the 2016 Budget Law prescribed that the 50.28% and 49.72% rates mentioned above would be adjusted by a Ministry Decree, but this decree has not yet been issued.

A “substantial participation” in a company listed on a stock exchange requires more than 2% of the voting rights at ordinary shareholders’ meetings or 5% of the company’s capital. For an unlisted company, these percentages are increased to 20% and 25%, respectively.

Capital gains on “non-substantial participations” are subject to a substitute tax of 26%. However, certain exemptions to the 26% rate may apply under domestic law, such as for the following:

- A nonresident (including a person from a tax haven) selling listed shares
- Nonresident shareholders resident in white-list jurisdictions under specified circumstances

Administration. Income tax returns must be filed by the end of the ninth month following the end of the company’s fiscal year. Companies must make advance payments of their corporate and local tax liability based on a forecast method or a specified percentage of the tax paid for the preceding year. For the fiscal years including 31 December 2015 or 31 December 2016, the advance payment for corporate income tax (and local tax) purposes for all companies is 100% of the corporate income tax (and local tax) due for the preceding fiscal year.

Under Law Decree No. 193/2016, effective from 1 January 2017, the balance of the personal income tax must be paid by 30 June of the following year.

IRES due must be paid in accordance with the following schedule:

- The first advance payment due for the current fiscal year must be paid by the same date as the balance due for the preceding fiscal year (last day of the sixth month following the end of the preceding fiscal year).
- The second advance payment must be paid by the last day of the 11th month following the end of the preceding fiscal year.
- The balance payment must be paid by the last day of the sixth month following the end of the fiscal year.

Statute of limitations. The 2016 Budget Law introduces a change to the statute of limitations rules. Under the new measures, a company may be subject to a tax assessment up to the end of the fifth year following the year of filing of the relevant tax return (the previous term was the fourth year following the year of the filing of the tax return). In addition, the statute of limitations is now extended to seven years for a failure to file any tax return (the previous term as five years). The 2016 Budget Law repealed the doubling of the statute of limitations in the case of criminal tax investigations. The new rules apply to tax assessments issued with reference to the 2016 fiscal year and subsequent years.

Law Decree No. 193/2016 introduced new provisions with respect to the correction of tax returns. To correct mistakes or omissions, including those related to increased or reduced taxable income, tax debts or tax credits, taxpayers may now submit a supplementary return to the Revenue Agency before the statute of limitations period expires (that is, before 31 December of the fifth year following the year in which the relevant tax return is filed). Any arising tax credits can then be offset against other amounts due, subject to certain conditions.

Tax rulings. Several tax ruling procedures are available in Italy.

Taxpayers may request in advance ordinary tax rulings to clarify the application of tax measures to transactions if objective uncertainty exists regarding the tax law. The request for an ordinary tax ruling must include the identification data for the taxpayer, a description of the transaction and a list of applicable measures, circulars and court decisions as well as the documentation related to the transaction.

Legislative Decree No. 156/2015 reorganized the tax-ruling procedures. In particular, effective from the 2016 fiscal year, the following are the main categories of rulings:

- Ordinary ruling (*interpello ordinario*), concerning the application of statutory provisions with objectively unclear interpretations
- Probative ruling (*interpello probatorio*), concerning the valuation and the fulfilment of the requirements necessary to qualify for specific tax regimes
- Anti-abuse ruling (*interpello antiabuso*), concerning the application of the abuse of law legislation to actual cases
- Exempting ruling (*interpello disapplicativo*), concerning the relief from application of specific anti-avoidance rules (for example, limitations to deductions or tax credits)

An international ruling scheme specifically deals with transfer pricing (advance pricing agreements [APAs] may be concluded for transfer-pricing issues), cross-border payments (interest, dividends and royalties), PE issues (including the determination of the existence of a PE) and the “patent box regime” (see below). The international ruling is binding for the fiscal year in which the ruling is entered into and for the following four fiscal years, unless material changes in legal or economic circumstances arise. A rollback effect is available in certain circumstances and subject to certain limits (for other information regarding the international ruling scheme, see *Advance Tax Agreements for Companies with International Operations*).

Advance Tax Agreements for Companies with International Operations. Legislative Decree No. 147/2015 (the Internationalization Decree) revised and expanded the scope of a specific type of tax agreement (formerly called the International Ruling) available for companies with international operations.

International Rulings were already available for taxpayers to reach agreements with the tax authorities on the following:

- Transfer-pricing issues (through the conclusion of APAs)
- Cross-border flow matters
- Attribution of profits to domestic and foreign PEs
- Existence of PEs

Under the revised rules, the International Ruling is renamed the Advance Tax Agreement for Enterprises with International Activities and its scope is extended to the following:

- Agreements on asset bases in the case of inbound and outbound migrations
- For companies that participate in the Cooperative Compliance Program (CCP, see *Cooperative Compliance Program* in Section E), agreements on the fair market value of costs incurred with respect to blacklist entities (blacklist costs) for deduction purposes (nonetheless, the blacklist cost deduction limitation rule has been fully repealed, effective from the 2017 fiscal year, and blacklist costs are now fully deductible)

In principle, the Advance Tax Agreement is valid for five years, which consists of the year in which it is signed and the following four years, to the extent that the underlying factual and legal circumstances remain unchanged.

During the period of the validity of the agreement, the tax authorities may exercise their power of scrutiny only with respect to matters that are not covered in the Advance Tax Agreement.

In addition, the new provision explicitly regulates rollback effects.

Advance tax ruling for new investments. A new type of ruling is introduced for investments of at least EUR30 million that have a significant and durable impact on employment with respect to the particular business activity.

The ruling provides the taxpayer an advance confirmation of the tax treatment of the entire investment plan (including the various envisaged transactions to achieve the plan) as well as, if needed, assurance on whether a going concern is formed. In addition, the ruling may also confirm the absence of any abusive behaviors,

the existence of prerequisites to exclude the application of anti-avoidance provisions or recognition of access to specific tax regimes.

The authorities must respond within 120 days with the possibility to extend the term by an additional 90 days if additional information is requested. If no response is provided by the end of these time periods, it is deemed that the administration implicitly agrees with the interpretation provided by the taxpayer. The position expressed in the ruling is binding on the tax authorities and remains valid as long as the factual and legal circumstances addressed in the ruling remain unchanged.

Taxpayers conforming to the ruling response may also take advantage of the CCP, regardless of their turnover threshold.

Dividends. Dividends distributed to Italian entities and branches subject to corporate income tax are 95% excluded from corporate taxation regardless of the source (domestic or foreign) of such dividends and are taxable on a cash basis.

The Internationalization Decree modified the taxation of blacklist dividends. Under the old rules, dividends derived by Italian companies from blacklist subsidiaries were subject to the following regime:

- Full taxation (versus ordinary 95% dividend exemption) was applied in the case of direct or indirect participations in blacklist companies unless an exemption applied.
- Exemption treatment could be obtained through an advance ruling based on the fact that the foreign income had been subject to an adequate level of tax abroad.
- Exemption treatment was also applied to dividends derived from blacklist companies to the extent that the relevant foreign income had been already taxed at the level of the Italian shareholder under flow-through taxation principles set forth by controlled foreign company (CFC) rules (for information regarding the CFC rules, see Section E).
- If an exemption from the CFC rules had been previously achieved through a positive advance ruling specifically based on the fact that the foreign entity has proper business substance (first exemption), the dividend income was still subject to full taxation and no credit was recognized for any taxes paid by the blacklist company.

The Internationalization Decree introduces the following ameliorative rules:

- Full taxation applies only to blacklist dividends derived directly from participations in blacklist subsidiaries or indirectly through controlled foreign white-list subsidiaries with blacklist participations.
- An exemption may now be obtained even without an advance ruling if, during an audit process, the taxpayer can document that the foreign income has already been subject to an adequate level of tax abroad.
- If an exemption from the CFC rules had previously been enjoyed under the first exemption mentioned above and if the dividend is actually paid, the Italian shareholder is subject to full taxation but is allowed an underlying tax credit for any taxes paid abroad by the blacklist subsidiary. Rules similar to those

provided for blacklist dividends apply to capital gains derived from the disposal of blacklist participations.

The new provisions apply to dividends and capital gains derived in or after 2015.

A 26% withholding tax is imposed on dividends paid by Italian companies to nonresident companies without a PE in Italy (double tax treaties may provide for lower rates). Nonresidents may obtain a refund of dividend withholding tax equal to the amount of foreign tax paid on the dividends, but the maximum refund is 11/26 of the withholding tax paid. Dividends paid by Italian entities (out of profits accrued in the fiscal year following the one in progress on 31 December 2007 and in subsequent fiscal years) to entities established in an EU member state or in an EEA country included in the white list are subject to a reduced withholding tax rate of 2%. If the 2% rate applies, the 11/26 tax refund cannot be claimed.

Companies from EU member states that receive dividends from Italian companies may be exempted from the dividend withholding tax or obtain a refund of the tax paid if they hold at least 10% of the shares of the payer for at least one year. A similar provision is available for Swiss recipients under certain circumstances on the basis of Article 15 of the EU-Switzerland tax treaty of 2004.

For nonresident companies with a PE in Italy, dividends may be attributed to the Italian PE for tax purposes. In this case, the dividend is taxed at the level of the PE, and no withholding tax applies.

Withholding taxes on interest and royalties. Under Italian domestic law, a 26% withholding tax is imposed on loan interest paid to nonresidents. Lower rates may apply under double tax treaties.

A 30% withholding tax applies to royalties and certain fees paid to nonresidents. In certain circumstances, the tax applies to 75% of the gross amount, resulting in an effective tax rate of 22.5%. Lower rates may apply under double tax treaties.

As a result of the implementation of EU Directive 2003/49/EC, interest payments and qualifying royalties paid between “associated companies” of different EU member states are exempt from withholding tax. A company is an “associated company” of a second company if any of the following circumstances exist:

- The first company has a direct minimum holding of 25% of the voting rights of the second company.
- The second company has a direct minimum holding of 25% of the voting rights of the first company.
- An EU company has a direct minimum holding of 25% of the voting rights of both the first company and the second company.

Under the EU directive, the shareholding must be held for an uninterrupted period of at least one year. If the one-year requirement is not satisfied as of the date of payment of the interest or royalties, the withholding agent must withhold taxes on interest or royalties. However, if the requirement is subsequently satisfied, the recipient of the payment may request a refund from the tax authorities.

To qualify for the withholding tax exemption, the following additional conditions must be satisfied:

- The recipient must be a company from another EU member state that is established as one of the legal forms listed in Annex A of the law.
- The company must be subject to corporate tax without being exempt or subject to a tax that is identical or similar.
- The recipient must be the beneficial owner of the payment.

An interest and royalty regime similar to the above-mentioned EU Directive 2003/49/EC applies under certain circumstances to recipients residing in Switzerland on the basis of Article 15 of the EC-Switzerland tax treaty of 2004.

Domestic withholding taxes on interest and royalties may be reduced or eliminated under tax treaties.

An exemption also applies to interest derived by nonresidents on the white list under certain circumstances (see footnote [e] in Section A).

Tax on financial transactions. A domestic tax on financial transactions (so-called “Tobin Tax,” which is also known as the “Italian Financial Transaction Tax”) is imposed on certain financial transactions regardless of where the transactions are executed and the nationalities of the parties. The tax is imposed on the following types of transfers:

- Transfers of shares and participating financial instruments issued by Italian resident entities (including the conversions of bonds into shares but excluding the conversion of bonds into newly issued shares in the case of the exercise of options of existing shareholders)
- Transfers of other instruments representing the above shares and participating financial instruments
- Derivatives transactions that have as a main underlying asset the above shares or participating financial instruments
- Transactions in “derivative financial instruments” in shares and participating financial instruments or in such instruments whose value depends mostly on the value of one or more of the above financial instruments
- Transactions in any other securities that allow the purchase or sale of the above shares and participating financial instruments or transactions that allow for cash regulations based on the shares

The tax on financial transactions also applies to high-frequency trading transactions executed on Italian financial markets if conditions listed in the Ministerial Decree issued on 21 February 2013 are met. Specific exemptions and exclusions are also provided by this decree (for example, the tax does not apply to new issues of shares or on intercompany transactions).

The tax is levied at the following rates, which depend on the type of transaction and relevant market:

- Transactions in shares and participating financial instruments are subject to a 0.1% tax if executed on a regulated market or a multilateral trading facility established in an EU member state or in an EEA member state allowing an adequate exchange of information with Italy. The rate is 0.2% in all other cases.

- Transactions in derivatives and other financial instruments relating to shares and participating financial instruments are subject to a fixed tax ranging from EUR0.01875 to EUR200, depending on the type of instrument and the value of the agreements. If derivative contracts are executed on a regulated market or multilateral trade facility, the tax is reduced to 20% of these fixed amounts.
- High-frequency trading transactions are subject to a 0.02% tax on the counter-value of orders automatically generated (including revocations or changes to original orders). The tax is applied in addition to the tax on financial transactions due on transfers of shares and participating financial instruments as well as on transactions in the relevant derivative instruments.

The tax on financial transactions on share transactions is due from the transferee only, while the tax applicable to transactions in derivatives is due from each party to the transaction.

The tax payment must be made in accordance with the following rules:

- By the 16th day of the month following the month in which the transfer of the ownership occurred (if effected through the Centralized Management Company [Società di Gestione Accentrata], by the 16th day of the second month following the transaction date) for the following:
 - Shares and participating financial instruments issued by Italian resident entities
 - Instruments representing such shares and participating financial instruments
- By the 16th day of the month following the month in which the contract is concluded (if effected through the Centralized Management Company, by the 16th day of the second month following the transactions date) for the following:
 - Derivatives that have as a main underlying asset the above shares or participating financial instruments
 - “Derivative financial instruments” in shares and participating financial instruments
 - Instruments whose value depends mostly on the value of one or more of the above financial instruments
 - Other securities that allow the purchase and sale of the above shares and participating financial instruments or that allow for cash regulations (settlements) based on such financial instruments
- By the 16th day of the month following the month in which the annulment or amending order is sent for the high-frequency trading transactions executed on Italian financial markets

Exit tax. The transfer of tax residence abroad qualifies as a taxable event in Italy. As a result, any unrealized capital gains must be computed on the basis of the fair market value principle and taxed immediately. The transfer of tax residence is not considered a taxable event only to the extent that the assets related to the Italian business are attributed to an Italian PE of the migrating company.

Under recently adopted rules, as an alternative to an immediate levy, Italian companies shifting their tax residence to other EU or EEA white-list countries may elect either to defer exit taxation to the moment of actual realization or to pay the tax due in six annual installments.

If taxation is deferred to the moment of actual realization, periodical information filings by the migrated company with the Italian tax authorities are required so that the tax authorities are in a position to monitor the events related to the migrated assets. The installment election exempts a taxpayer from any filing obligations. Both the deferral and the installment elections trigger interest payments and require the submission of proportioned guarantees if a serious and significant danger for the collection of taxes (specific guarantee exclusions are provided for by the law) exists. The following must also be considered:

- The moment of actual realization of the gains related to the migrated assets must be identified in accordance with ordinary Italian tax principles. Specific rules are applicable to identify the moment of actual realization of the following:
 - Assets and rights that can be subject to the amortization process (including intangible assets and goodwill)
 - Shares and financial instruments

In any case, the gains related to the migrated assets are deemed realized after 10 years from the end of the fiscal year in which the transfer of the tax residence occurs.

- Mergers and other reorganizations do not interrupt the tax deferral if the migrated company remains a resident of a country described above and if the migrated assets are not transferred to a resident of a country other than a country described above.

The Internationalization Decree clarifies that the above regime also applies to the transfer to any EU member state or any qualifying EEA country of specific assets of an Italian PE to the extent that those assets constitute a going concern.

Inbound migration. The Internationalization Decree provides that tax migration of companies from a white-list jurisdiction to Italy entails the tax step-up of the company's assets and liabilities at fair market value.

For entities migrating to Italy from a blacklist jurisdiction, the tax basis of the assets is considered equal to the lower of the acquisition cost, the book value or the fair market value, while the tax basis of the liabilities is equal to the higher of these items. Alternatively, such companies may elect for a tax ruling in which they reach agreement with the Italian tax authorities on the relevant tax values (see *Administration*).

Patent box regime. The 2015 Budget Law introduced a favorable tax regime for income generated through the use of qualified intangible assets, such as industrial patents, models and designs capable of being legally protected, trademarks, know-how and other intellectual properties.

Taxpayers performing activities related to such intangibles are eligible, under a specific election, for a reduction of the IRES and IRAP tax base equal to 30% (2015), 40% (2016) and 50% (2017 and subsequent years) of the income derived from the use of the qualifying assets. The exemption applies to income earned both from the licensing of the intellectual property to a related or unrelated party and from the direct exploitation of the asset. An advance ruling may be required if certain circumstances exist, as a prerequisite to access the regime.

Capital gains derived from the disposal of the qualifying assets can be exempted if at least the 90% of the cash received from the disposal is used to maintain or develop other qualifying intangible assets before the end of the second fiscal year following the year in which the disposal took place.

The beneficial regime is valid for five fiscal years after the year of the election.

Foreign tax relief. A foreign tax credit may be claimed for foreign-source income. The amount of the foreign tax credit cannot exceed that part of the corporate income tax, computed at the standard rate, that is attributable to the foreign-source income. Accordingly, the foreign tax credit may be claimed up to the amount that results from prorating the total tax due by the proportion of foreign-source income over total income.

If income is received from more than one foreign country, the above limitation on the foreign tax credit is applied for each country (per-country limitation). Excess foreign tax credits may be carried forward or back for eight years.

For corporate groups that elect the worldwide tax consolidation (see Section C), an Italian parent company may consolidate profits and losses of its foreign subsidiaries joining the tax group and compute a single group tax liability. Such group tax liability may be offset by a direct foreign tax credit granted to the resident parent company with respect to taxes paid abroad by foreign subsidiaries that are members of the tax group.

The Internationalization Decree provides important clarifications concerning foreign taxes eligible for a tax credit.

C. Determination of business income

General. To determine taxable income, profits disclosed in the financial statements are adjusted for exempt profits, nondeductible expenses, special deductions and losses carried forward. Exempt profits include interest on government bonds issued on or before 30 September 1986 and income subject to Italian withholding tax at source as a final tax.

The following general principles govern the deduction of expenses:

- Expenses are deductible if and to the extent to which they relate to activities or assets that produce revenue or other receipts that are included in income.
- Expenses are deductible in the fiscal year to which they relate (accrual basis rule). Exceptions are provided for specific items, such as compensation due to directors, which is deductible in the fiscal year in which it is paid.

The 2016 Budget Law provides that companies are no longer subject to limitations in deducting expenses incurred in transactions with enterprises and consultants resident in blacklist countries.

Inventories. Inventory is normally valued at the lower of cost or market value for both fiscal and accounting purposes. For determination of “cost,” companies may select one of the various methods of inventory valuation specifically provided in the law, such as first-in, first-out (FIFO); last-in, first-out (LIFO); or average cost.

Banks and other financial entities can deduct only 96% of interest expenses for both IRES and IRAP purposes.

Depreciation and amortization allowances. Depreciation at rates not exceeding those prescribed by the Ministry of Finance is calculated on the purchase price or cost of manufacturing. Incidental costs, such as customs duties and transport and installation expenses, are included in the depreciable base. Depreciation is computed on the straight-line method. Rates for plant and machinery vary between 3% and 15%.

In general, buildings may be depreciated using a 3% annual rate. Land may not be depreciated. If a building has not been purchased separately from the underlying land, for tax purposes, the gross value must be divided between the non-depreciable land component and the depreciable building component. The land component may not be less than 20% of the gross value (increased to 30% for industrial buildings). As a result, the effective depreciation rate for buildings is 2.4% (2.1% for industrial buildings).

Purchased goodwill may be amortized over a period of 18 years. Know-how, copyrights and patents may be amortized in accordance with financial statements, but over at least two fiscal years. The amortization period for trademarks is 18 years.

Research expenses and advertising expenses may be either entirely deducted in the year incurred or written off in equal installments in that year and in the four subsequent years, at the company's option.

Amortization allowances of other rights may be claimed with reference to the utilization period provided by the agreement.

The 2016 Budget Law introduced 40% extra depreciation (resulting in a total of 140% tax depreciation) for new tangible assets whose depreciation rate for tax purposes exceeds 6.5%. To qualify for the measure, the assets must be purchased or rented under a financial leasing contract during the period of 15 October 2015 through 31 December 2016. Real estate assets, pipelines, rolling stock and airplanes are excluded from the measure.

The 2017 Budget Law slightly changed the above rules. In addition, to qualify for this measure, the assets must be acquired by 30 June 2018. However, for assets acquired between 1 January 2018 and 30 June 2018, purchase orders need to be accepted by the seller by 31 December 2017 and at least 20% of the price of the assets needs to be paid by the same date.

The 2017 Budget Law for 2017 introduces a 150% extra-amortization (that is, up to a total of 250% tax amortization) for some listed "smart equipment," which is allowed to benefit from specific digital and technological transformation processes under the model promoted by the Italian government plan for industrial growth, named the Industry 4.0 Plan.

An additional 40% extra amortization is also introduced for certain intangible assets, such as software, information technology systems and platforms related to the Industry 4.0 Plan. A self-declaration or a third-party sworn appraisal (for assets with a value higher than EUR500,000) is required.

Provisions. The Italian tax law provides a limited number of provisions.

Bad and doubtful debts. A general provision of 0.5% of total trade receivables at the year-end may be made each year until the total doubtful debt provision reaches 5%. Bad debts actually incurred are deductible to the extent they are not covered by the accumulated reserve. In this regard, losses on bad debts are deductible for corporate income tax purposes only if they derive from “certain and precise” elements and if the debtor has been subject to a bankruptcy procedure or insolvency procedure. The Internationalization Decree provides that, effective from the 2015 fiscal year, the deduction for bad debt losses is allowed with respect to foreign bankruptcy and insolvency procedures, to the extent that they are equivalent to the Italian procedures and that the relevant foreign country allows a satisfactory exchange of information. “Certain and precise elements” are deemed to exist if one of the following conditions is met:

- The bad debt is not more than EUR2,500 (or EUR5,000 in the case of companies having a turnover not less than EUR100 million) and has been unpaid for at least six months.
- The right to collect the credit has expired. Under Article 2946 of the Italian Civil Law, the ordinary right to collect a credit expires after 10 years.
- The credit has been deleted from the financial statements in application of the relevant accounting rules.

For banks and financial entities, Law Decree No. 83/2015 repealed the rules concerning the tax deductibility of bad debt write-downs and bad debt losses arising from the transfer of receivables.

Redundancy and retirement payments. Provisions for redundancy and retirement payments are deductible in amounts stated by civil law and relevant collective agreements.

Limitations on interest deductions. For companies other than banks and other financial entities, the deductibility of net interest expenses is determined in accordance with an Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) test. Under this test, net interest expenses (that is, interest expenses exceeding interest income) are deductible only up to 30% of EBITDA and the excess can be carried forward indefinitely and used in the fiscal years in which 30% of EBITDA is higher than the net interest expense for the year. In addition, spare EBITDA capacity, which arises if the net interest expenses are less than 30% of EBITDA, is available for carryforward. For tax consolidations, excess interest expenses of a group company may be offset with spare EBITDA capacity of another group company.

The 2016 Budget Law provides changes in the deductibility of interest expenses for banks and other financial entities.

Specific rules apply to a domestic tax group if an excess of net interest expenses at the level of one entity may be deducted by the group and if other members have a corresponding amount of spare EBITDA.

The Internationalization Decree introduced further changes on interest expense deductions, including, but not limited to, the following:

- Dividends received (that is, actually paid) from foreign controlled subsidiaries are included in the EBITDA of Italian companies for the purposes of computing the 30% EBITDA cap for the net interest expense deduction (but the EBITDA capacity of foreign subsidiaries can longer be taken into account).
- The use of the EBITDA of foreign intragroup entities is longer allowed for interest expense deduction purposes.
- Limitations on the deduction of interest expenses arising from bonds issued by certain non-qualified companies are repealed.

The above rules are effective from the 2016 fiscal year.

Foreign-exchange losses. Gains and losses resulting from the mark-to-market of foreign currency-denominated debts, credits and securities are not relevant. An exception is provided for those hedged against exchange risk if the hedging is correspondingly marked-to-market at the exchange rate at the end of the fiscal year.

Relief for losses. For corporate income tax purposes only, losses may be carried forward with no time limit and deducted from income of the following periods for a total amount equal to 80% of taxable income (or a lower value if the tax-loss amount does not reach 80% of the amount of taxable income for the fiscal year).

Losses incurred in the first three years of an activity may also be carried forward for an unlimited number of tax periods, and the limit of 80% of taxable income does not apply. The three-year time limit is computed from the company's date of incorporation. In addition, to qualify for an unlimited loss carryforward, such losses must derive from a new activity; that is, companies within the same group may not have previously carried out the activity.

Restrictions on tax losses carried forward apply if ownership of the company is transferred and if the company changes its activity.

The company resulting from or surviving after a merger may carry forward unrelieved losses of the merged companies to offset its own profits. In general, tax losses carried forward may not exceed the lower of the net equity at the close of the last fiscal year or the net equity shown on the statement of net worth prepared for the merger of each company involved in the merger. This limitation is applied on a company-by-company basis. Contributions to capital made in the 24 months preceding the date of the net worth statement are disregarded. Special rules further limit the amount of the losses that can be carried forward. Additional measures combat abuses resulting from the use of losses with respect to mergers, demergers and the transparency regime (see *Consortium relief*).

Intragroup transfer of tax losses. Under new provisions introduced by the 2017 Budget Law, it is now possible for Italian resident companies, not being part of a tax group, but connected by at least 20% voting rights and profit share, to transfer tax losses accrued in the first three fiscal years to each other, provided that certain conditions are met.

The transfer must be related to the whole amount of the tax losses for the first three fiscal years of activity. The acquiring company

must remunerate the seller for the losses transferred by using the same corporate tax rate of the fiscal year when the tax losses accrued. The remuneration is not subject to tax for the seller.

Limitation on tax attributes carryforward in the case of change of ownership and extraordinary transactions. The 2017 Budget Law extends certain limitations already provided for the carrying forward of tax losses to spare nondeductible interest expenses and excess notional interest deduction (NID; see *Notional interest deduction*). In particular, such tax attributes may no longer be carried forward if the majority of the shares giving voting rights in the ordinary shareholders' meeting are transferred (that is, change of control) and if a change of the main business activity carried out by the Italian resident company takes place, unless a vitality test is met. The vitality test is an anti-avoidance rule aimed at barring the transfer of net operating losses and other attributes (also through an intercompany reorganization) to profitable companies that could offset all or a large part of the companies' taxable income with the inherited losses, NID and other attributes.

The 2017 Budget Law also extends to the excess NID, the limitation already provided for the carrying forward of tax losses and spare nondeductible interest expenses in the case of domestic and cross-border merger and demerger transactions.

Notional interest deduction. The Italian notional interest deduction (NID) or allowance for corporate equity (commonly referred to by the Italian acronym "ACE") grants Italian enterprises (including Italian branches of foreign businesses) a deduction from taxable income corresponding to an assumed "notional return" on qualifying equity increases contributed after the 2010 fiscal year. In particular, Italian resident companies are permitted to deduct from their net taxable income (that is, after applying any tax loss carryforward) an amount corresponding to a notional return on the increase in equity as compared to the equity as of the end of the 2010 fiscal year (New Equity). For Italian PEs of nonresident companies, the benefit is computed on the increase in the relevant endowment fund (for a PE, the endowment fund is equivalent to the share capital). The NID deduction may offset the net tax base but it cannot generate a tax loss. Any excess NID can be carried forward or converted into tax credits for IRAP purposes.

The New Equity is the result of an algebraic sum of positive and negative equity adjustments occurring after 2010. The following are positive adjustments:

- Contributions in cash
- Non-distribution of profits (the reserves that are not available are not qualified for equity increases)
- The waiver of credits by shareholders and the offset of credits by shareholders (credits are receivables that the shareholders have in favor of the company)

The following are negative adjustments:

- Assignments to shareholders.
- For adopters of International Financial Reporting Standards (IFRS), an equity reduction subsequent to a buy-back of own shares is considered up to the limit of any profits set aside as an available reserve.

Statutory losses do not qualify as negative equity adjustments for NID purposes because they do not represent a voluntary act of assignment to the shareholders. However, the value of the New Equity on which the NID deduction must be computed cannot be higher than the net equity of the entity at the end of each fiscal year (which is affected by the statutory losses).

For 2014, 2015 and 2016, the rate of the notional return was fixed at 4%, 4.5% and 4.75%, respectively. The 2017 Budget Law sets the NID rate at 2.3% for the 2017 fiscal year and at 2.7% for the 2018 fiscal year and future years.

A new negative adjustment for determining the New Equity qualifying for NID has been also introduced by the law. In particular, the increase of securities and financial instruments, other than participations, compared to the amount held as of 31 December 2010, reduces the qualifying equity.

The positive effect of an equity increase in a given year will permanently qualify as New Equity in subsequent years (in principle, securing a permanent NID deduction). This also applies to any reduction resulting from a negative adjustment.

Specific rules apply to a domestic tax group if an excess of NID at the level of one entity may be surrendered to the group and used to offset the income generated by other members.

A Law Decree providing for national budget measures, including urgent provisions on tax matters, was published in the *Official Gazette* on 24 April 2017 and is immediately in force, but it must be converted into law by the Italian parliament within 60 days. The Law Decree provides that from the 2017 fiscal year onward, the computation of the NID must be based on the equity increases that occurred starting from the fifth preceding year rather than from 1 January 2010, as had been provided. Therefore, for the computation of the 2017 NID deduction, the taxpayers should consider the retained earnings and cash injections of the 2013-2017 period. As a result of the amendments, the NID benefits now expire after five years from the equity increase, as opposed to the previous version of the regime under which the NID benefits were granted permanently, unless an equity decrease occurred in the meantime. The new provision needs to be considered for the computation of advance corporate income tax payments due for the 2017 fiscal year.

Anti-avoidance rule. Certain events are deemed to generate an undue duplication of the benefit with respect to the same contribution of cash and consequently trigger a corresponding decrease of the equity basis on which the benefit is calculated. In principle, the events identified by the anti-avoidance provision include the following:

- Cash contributions to related companies
- Financings with respect to related companies
- Acquisitions of controlling participations in related companies
- Acquisitions of businesses from related parties

In addition, cash contributions from nonresident blacklisted entities do not qualify for the benefit.

Non-operating companies. Italian resident companies and PEs of nonresident companies are deemed to be “non-operating companies” if the total of their average non-extraordinary revenues (proceeds from the ordinary activities of a company as shown on its financial statements) and increases in inventory are less than the sum of the average of the following during the preceding three years:

- 2% of the book value of the company’s financial assets
- 6% of the book value of the company’s real estate assets
- 15% of the book value of the company’s other long-term assets

The following companies are also deemed to be non-operating companies:

- Companies that incurred tax losses for five consecutive fiscal years
- Companies that incurred tax losses for four consecutive fiscal years and in the fifth fiscal year generated income in an amount lower than the minimum resulting from the application of the percentages described in the next paragraph

If the company qualifies as a non-operating company, its taxable income cannot be lower than the sum of the following items (minimum income):

- 1.5% of the book value of the company’s financial assets for the year
- 4.75% of the book value of the company’s real estate assets for the year
- 12% of the book value of the company’s other assets for the year

Non-operating companies may not generate tax losses. Previous tax losses (that is, those incurred when the company was operating) cannot be offset against the minimum income. In the (unlikely) event that the taxable income exceeds the minimum, only 80% of the amount exceeding the minimum can be offset.

The income of non-operating companies is subject to corporate income tax at a rate of 34.5% (rather than the ordinary 24% rate). IRAP (see Section B) also applies.

Non-operating companies that are in a value-added tax (VAT) credit position may no longer take the following actions:

- They may not claim such VAT for a refund.
- They may not use the VAT to offset other tax payments due.
- They may not surrender the VAT to other group companies.
- They may not carry forward the VAT.

Companies can be exempted from the above-mentioned regime, for both income tax and VAT purposes, if they prove to the tax authorities that they were not able to reach the minimum income requirements because of extraordinary circumstances (an advance ruling must be obtained for such a determination). Certain companies are specifically excluded from the non-operating companies’ regime (for example, listed groups, companies with 50 or more shareholders, companies with an amount of business income greater than the total assets value and companies that become insolvent or enter into an insolvency procedure).

Groups of companies. Groups of companies may benefit from tax consolidation and consortium relief. These regimes allow the off-setting of profit and losses of members of a group of companies.

Domestic tax consolidation. Italian tax consolidation rules provide two separate consolidation systems, depending on the residence of the companies involved. A domestic consolidation regime is available for Italian resident companies only. A worldwide consolidation regime, with slightly different conditions, is available for multinationals.

To qualify for consolidation, more than 50% of the voting rights of each subsidiary must be owned, directly or indirectly, by the common Italian parent company.

For a domestic consolidation, the election is binding for three fiscal years. However, if the holding company loses control over a subsidiary, such subsidiary must be immediately excluded from the consolidation. The tax consolidation includes 100% of the subsidiaries' profits and losses, even if the subsidiary has other shareholders. The domestic consolidation may be limited to certain entities, leaving one or more otherwise eligible entities outside the group filing election. Tax losses realized before the election for tax consolidation can be used only by the company that incurred such losses. Tax consolidation also allows net interest expenses (exceeding 30% of a company's EBITDA) to be offset with spare EBITDA capacity of another group company.

Dividends paid within a domestic consolidation are subject to the ordinary 1.2% tax at the level of the recipient.

Horizontal consolidation. To comply with Case C-40/13 of the Court of Justice of the EU, the Internationalization Decree introduces the possibility of electing a domestic tax consolidation between two or more Italian sister companies with a common parent residing in any EU or EEA country that provides adequate exchange of information with Italy. These new measures are effective from the 2015 fiscal year.

Under the new measures, a nonresident parent company can designate an Italian resident subsidiary to elect for a tax-consolidation regime together with each resident company controlled by the same foreign entity.

In addition, the horizontal consolidation may also include Italian PEs of EU and qualifying EEA companies to the extent that the nonresident company with a PE in Italy is controlled by the same parent company.

Consortium relief. Italian corporations can elect consortium relief if each shareholder holds more than 10% but less than 50% of the voting rights in the contemplated Italian transparent company. Under this election, the subsidiaries are treated as look-through entities for Italian tax purposes and their profits and losses flow through to the parent company in proportion to the stake owned. These profits or losses can offset the shareholders' losses or profits in the fiscal year in which the transparent company's fiscal year ends. Tax losses realized by the shareholders before the exercise of the election for the consortium relief cannot be used to offset profits of transparent companies.

Dividends distributed by an eligible transparent company are not taken into account for tax purposes in the hands of the recipient

shareholders. As a result, Italian corporate shareholders of a transparent company are not subject to corporate income tax on 5% of the dividends received (in all other circumstances this would mean an effective tax rate of 1.2%).

The election does not change the tax treatment of dividends distributed out of reserves containing profits accrued before the exercise of the election.

The consortium relief election is binding for three fiscal years and requires the consent of all the shareholders.

The consortium relief election may be beneficial for joint ventures that are not eligible for tax consolidation because the control test is not met. In addition, the election is also available for non-resident companies that are not subject to Italian withholding tax on dividend payments (that is, EU corporate shareholders qualifying under the EU Parent-Subsidiary Directive). If both EU corporate shareholders qualifying under the EU Parent-Subsidiary Directive and Italian corporate shareholders hold an Italian subsidiary, the EU corporate shareholders would want to elect consortium relief to allow the Italian corporate shareholders to benefit from tax transparency.

Group value-added tax. For groups of companies linked by more than a 50% direct shareholding, net value-added tax (VAT; see Section D) refundable to one group company with respect to its own transactions may be offset against VAT payable by another, and only the balance is required to be paid by, or refunded to, the group.

European VAT Group. The 2017 Budget Law introduces, effective from 1 January 2018, the option for the European VAT Group (as provided by Article 11 of the EU Directive 2006/112/CE) in the Italian VAT law.

Companies included in the European VAT Group are treated as a single VAT taxable person, which means the following:

- Transactions carried out between the entities of the group are not subject to VAT.
- Transactions carried out between an entity of the group and a third party are treated as performed by the group as a single entity.
- Entities incorporated in Italy should be entitled to elect the group if, while legally independent, they are closely bound one to another by the following financial, economic and organizational links:
 - Financial link: a minimum corporate participation link must exist between the entities electing for the group (more than 50% of the voting rights).
 - Economic link: the entities must perform the same kind of activity or complementary, ancillary and auxiliary activities.
 - Organizational link: a link between the decision-making bodies of the entities must exist.

If the election is made, all entities fulfilling the requirements must adhere to the group.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax, on goods, services and imports	
Standard rate	22%
Other rates	4%/10%
Municipal tax (Imposta Unica Comunale, or IUC); includes real property tax (Imposta Municipale Unica, or IMU), tax on municipal services (Tassa per Servizi Indivisibili, or TASI) and tax on garbage disposal (Tassa per Rifiuti, or TARI)	
IMU; imposed on Italian property's re-evaluated cadastral value; rates may be modified by municipal authorities; not applicable to principal home; payable by the owner of the real property; ordinary rate	0.76%
TASI; imposed on both the real estate owner and real estate user; rates may be modified by municipal authorities; ordinary rate	0.1%
TARI; imposed on the user	Various
Social security contributions (2015 rates); includes mandatory social contribution, Pension Fund contribution and Health Assistance Fund contribution; rates depend on the employer's sector of economic activity	
Industrial sector	
Mandatory social contributions; payable by employers with more than 50 employees; includes pension (IVS) and other minor contributions; payable on gross remuneration	
Employers (overall rates)	
Workers	41.57%
Office staff	39.35%
Executives	36.45%
Employees' charge	
Executives	9.19%
Workers and office staff	9.49%
(For employees who have no social security record before 1 January 1996, the above pension contributions payable by employers and employees are calculated on gross remuneration capped at EUR100,324.)	
Additional contribution payable to the Pension Fund for Industrial Executives (PREVINDAI); based on gross remuneration capped at EUR150,000	
Employers	4%
Employees	4%
Additional contribution payable for industrial executives to the Health Assistance Fund (FASI)	
Employers	quarterly EUR468 + 318/ annual EUR1,872 + 1,272
Employees	quarterly EUR240/ annual EUR960
Tertiary and commerce sector (trade, services and activities complementary and auxiliary to industrial production and the agricultural sector)	

Nature of tax	Rate
Mandatory social contributions; includes pension and other minor contributions; payable on gross remuneration by employers with more than 200 employees	
Employers (overall rates)	
Workers	39.37%
Office staff	39.37%
Executives	36.03%
Employees' charge	
Executives	9.19%
Workers and office staff	9.49%
(For employees who have no social security record before 1 January 1996, the above pension contributions payable by employers and employees are calculated on gross remuneration capped at EUR100,324.)	
Additional pension and health assistance contributions; payable by employees	
Pension fund (FON. TE.); payable on remuneration base for the severance payment fund (TFR)	
Employers	1.55%
Employees	0.55%
Health fund	
Employers	EUR120 per year
Employees	EUR24 per year
Mandatory insurance premium for injuries or professional diseases; payable by employers; the rate depends on the professional risk related to the employment activity performed by the individual (income cap of approximately EUR30,076.80 applies to executives)	Various

E. Miscellaneous matters

Foreign-exchange controls. The underlying principle of the foreign-exchange control system is that transactions with nonresidents are permitted unless expressly prohibited. However, payments by residents to foreign intermediaries must be channeled through authorized banks or professional intermediaries. In addition, transfers of money and securities exceeding EUR10,000 must be declared to the Italian Exchange Office. Inbound and outbound investments are virtually unrestricted.

Transfer pricing. Italy imposes transfer-pricing rules on transactions between related resident and nonresident companies. Under these rules, intragroup transactions must be carried out at arm's length. In principle, Italian transfer-pricing rules do not apply to domestic transactions. However, under case law, grossly inadequate prices in these transactions can be adjusted on abuse-of-law grounds (for example, transactions between a taxpaying company and another company with net operating losses on the verge of expiring).

No penalty applies as a result of transfer-pricing adjustments if Italian companies complied with Italian transfer-pricing documentation requirements, allowing verification of the consistency of the transfer prices set by the multinational enterprises with the

arm's-length principle. Such documentation consists of the documents called the following:

- Masterfile
- Country Specific Documentation

The Masterfile collects information regarding the multinational group and it must be organized in the following chapters.

Chapter	Information in chapter
1	A general description of the multinational group
2	Multinational group structure (organizational and operational)
3	Business strategies pursued by the multinational group
4	Transaction flows
5	Intragroup transactions
6	Functions performed, assets used and risks assumed
7	Intangible assets
8	Transfer-pricing policy of the multinational group
9	Relationships with the tax administrations of the EU member states regarding Advance Pricing Arrangements (APAs) and transfer-pricing rulings

The submission of more than one Masterfile is allowed if the multinational group carries out several industrial and commercial activities that are different from each other and regulated by specific transfer-pricing policies.

The Country Specific Documentation contains information regarding the enterprise and it must be organized in the following chapters and annexes.

Chapter	Information in chapter or annex
1	General description of the enterprise
2	Business sectors
3	Enterprise's organization chart
4	General business strategies pursued by the enterprise and potential changes compared to the previous tax years
5	Controlled transactions
6	Intragroup transactions
Annex 1	Flowchart describing the transaction flows, including those falling outside the scope of the ordinary management activities
Annex 2	Copies of written contracts on the basis of which the transactions referred to in Chapters 5 and 6 are regulated

The Internationalization Decree further clarifies that the transfer-pricing rules described above do not apply to transactions between resident entities.

Country-by-Country Reporting. The 2016 Budget Law introduced a new Country-by-Country Reporting (CbCR) obligation for multinational entities. Entities subject to this obligation must submit

an annual report indicating the amounts of revenues, gross profits, taxes paid and accrued, and other indicators of effective economic activities.

Italian parent companies of certain groups and certain Italian resident companies controlled by a foreign company are subject to the CbCR obligation.

Italian parent companies are subject to the CbCR obligation if their groups meet the following conditions:

- They are required to submit group consolidated financial statements. These are groups that exceed two of the following two of the following thresholds for two consecutive years:
 - Total assets of EUR20 million
 - Turnover of EUR40 million
 - 250 employees
- They had consolidated annual turnover in the preceding fiscal year of at least EUR750 million.
- They are not controlled by other entities.

Italian resident companies controlled by a foreign company are subject to the CbCR obligation if they are required to submit group consolidated financial statements in a country where the CbCR does not apply or in a country that does not allow exchange of information regarding the CbCR.

In the case of a failure to submit a report or an incomplete submission of a report, penalties apply from EUR10,000 to EUR50,000.

Final implementing measures have been announced and should be issued soon.

Cooperative Compliance Program. An elective Cooperative Compliance Program (CCP) is introduced for selected taxpayers that have adopted an adequate internal audit model to manage and control their tax risks with the purpose of promoting communication and cooperation between taxpayers and tax authorities.

Taxpayers that adhere to the CCP can benefit from certain advantages such as the following:

- Agreements on tax positions before the filing of the return
- Quicker rulings (45 days)
- No need for guarantees for tax refunds
- Reduction of applicable penalties to half of the minimum in the case of assessments concerning tax risks timely communicated by the taxpayer

Taxpayers that file a request to adhere to the CCP should receive an answer within 120 days.

In the case of a positive answer, admission to the regime is effective as of the fiscal year in which the request is filed and continues until the taxpayer files an end notice.

The tax authorities may exclude taxpayers from the CCP if during any of the years following the taxpayers' admission, the taxpayers no longer meet the CCP's requirements.

Taxpayers should adopt a collaborative attitude with Italian tax authorities by timely disclosing transactions that may be deemed to be aggressive tax planning, by promptly responding to any request and by promoting a corporate culture adhering to principles of fairness and respect of tax laws.

Controlled foreign companies. The Internationalization Decree introduced important changes to the controlled foreign company (CFC) regulations. Under the old rules, the income of a CFC was attributed to the Italian parent under a flow-through taxation principle if the subsidiary was located in a blacklist country, unless an advance ruling was obtained under one of the following exceptions:

- The foreign entity carried out as a main activity an actual industrial or commercial activity in the market of the state or territory in which it was located (first exemption).
- The participation in the foreign entity did not have the purpose to allocate income to countries or territories with a privileged tax regime (that is, the income is subject to an adequate level of tax in white-list jurisdictions).

The CFC legislation also applied to non-blacklist subsidiaries if both of the following circumstances existed:

- The effective tax rate applicable to the income of the foreign white-list entity was lower than 50% of the applicable Italian corporate tax rate.
- More than 50% of the foreign entity's gross revenues had a "passive income" nature.

In this scenario, CFC rules did not apply if the taxpayer proved through a tax ruling that the foreign company was not an artificial arrangement to obtain undue tax savings.

The Internationalization Decree introduced some changes to the above rules. The ruling procedure to avoid the applicability of the CFC legislation is no longer mandatory, but it remains as an optional procedure. The conditions required for the exemption from the regime can now be proved during the tax audit process. Accordingly, tax assessments concerning the CFC regime cannot be issued if the taxpayer has not been given the opportunity to provide evidence of one of the mentioned exemptions within 90 days from the clarification request.

In the absence of a positive ruling (and provided that the flow-through taxation has not been applied), the Italian parent needs to disclose in its tax return the ownership of the shares triggering the application of the CFC rule. Specific penalties of up to EUR50,000 apply for a failure to make such disclosure.

In addition, the Internationalization Decree provides that the CFC rules apply only to controlled companies, as opposed to the old legislation, which also applied to non-controlled subsidiaries under qualifying participations.

The new rules are effective from the 2015 fiscal year.

The 2016 Budget Law repealed the existing relevant blacklist for the application of the CFC regime and introduced new criteria to identify blacklist entities.

Effective from the 2016 fiscal year, foreign subsidiaries are considered blacklist entities for CFC purposes if they have a nominal corporate income tax rate lower than the 50% of the Italian rate or if special regimes allow a level of taxation below 50% of the

Italian rate. The CFC rules do not apply to EU and EEA resident entities that provide an adequate exchange of information with Italy.

Anti-avoidance legislation. Legislative Decree No. 128/2015 repealed the preexisting anti-avoidance provision (Art. 37-bis of Presidential Decree No. 600/1973) and introduced a written rule on “abuse of law,” which replaces the unwritten principle developed by the Italian jurisprudence in recent years.

The newly introduced rule applies to all direct and indirect taxes with the exclusion of custom duties.

The rule defines “abuse of law” as “one or more transactions lacking any economic substance which, despite being formally compliant with the tax rules, achieve essentially undue tax advantages.”

Transactions are deemed to lack economic substance if they imply facts, actions and agreements, even related to each other, that are unable to generate significant business consequences other than tax advantages. As indicators of lack of economic substance, the anti-avoidance rule refers to cases in which inconsistency exists between the qualification of the individual transactions and their legal basis as a whole and cases in which the choice to use certain legal instruments is not consistent with the ordinary market practice.

Tax advantages are deemed to be undue if they consist of benefits that, even if not immediate, are achieved in conflict with the purpose of the relevant tax provisions and the principles of the tax system.

Notwithstanding the above, the anti-avoidance rule establishes that no abuse of law exists if a transaction is justified by non-negligible business purposes (other than of a tax nature) including those aimed at improving the organizational and managerial structure of the business.

Taxpayers can submit ruling requests to the Italian authorities to verify whether any envisaged or realized transactions are considered abusive. The application must be filed before the deadline for the relevant tax return submission or before the satisfaction of other tax obligations associated with the transactions.

It is now specifically provided that challenges based on the new anti-avoidance rule (that is, other than those based on tax evasion or the implication of specific tax crimes) do not trigger criminal law consequences.

Debt-to-equity rules. For information regarding restrictions on the deductibility of interest, see Section C.

Mergers and acquisitions. Mergers of two or more companies, demergers and asset contributions in exchange for shares are, in principle, tax-neutral transactions. However, companies undertaking mergers, demergers and asset contributions in exchange for shares may step up the tax basis of the assets for IRES and IRAP purposes by paying a step-up tax at rates ranging from 12% to 16%. Different types of step-up elections are available.

Foreign PEs of Italian entities and Italian PEs of foreign entities.

The Internationalization Decree introduces changes to the law regarding foreign PEs of Italian entities and Italian PEs of foreign entities, which are described below.

Foreign PEs of Italian entities. The Internationalization Decree introduced an election to exempt income generated through foreign PEs. For branches located in a blacklist country, CFC rules apply unless one of the available CFC exemptions is met. The election is irrevocable and involves automatically all of a company's PEs (that is, "all in or all out"). The relevant election must be made at the time of creation of the first PE.

The exemption regime is effective from the 2016 fiscal year.

With respect to existing PEs, the election must be made by the end of the second fiscal year following the fiscal year of the effective date of the new provisions (2016 fiscal year), and it should not give rise per se to taxable gains or losses. Recapture rules apply with respect to any tax losses derived through the PEs in the years before the election.

After the election is made, the Italian company must separately disclose the income of the foreign PEs in the tax return.

Under the Tax Decree, effective from the 2017 tax year, the conversion to euros of the balance of the accounts of foreign PEs no longer needs to be done according to the exchange rate on the last day of the fiscal year. It now must be done according to the applicable exchange rate on the basis of the correct accounting principles. The difference between the balance of the current fiscal year and the balance of the previous fiscal year is not included in taxable income.

Italian PEs of foreign entities. The Internationalization Decree revises the method of attribution of income to Italian PEs in line with the "Authorized Organisation for Economic Co-operation and Development (OECD) Approach." The PE income is determined according to the ordinary rules for resident companies and on the basis of a specific statutory account prepared according to the Italian accounting principles applying to resident enterprises with similar features.

Accordingly, the Internationalization Decree also repeals certain provisions providing for PE "force of attraction." In addition, dealings between Italian PEs and foreign headquarters are explicitly subject to Italian transfer-pricing rules. In this respect, a PE is treated as separate and independent from its headquarters, and profits attributed to the PE are those that the branch would have earned at arm's length as if it were a "distinct and separate" entity performing the same or similar functions under the same or similar conditions, determined by applying the arm's-length principle. A branch "free capital" (*fondo di dotazione*) is also attributed to the PE on the basis of OECD principles.

The Internationalization Decree also specifies that tax authorities cannot apply penalties to assessments issued before the issuance of such regulations. The new rules are effective from the 2016 fiscal year.

(1) Dividends paid by Italian companies to EU parent companies are exempt from withholding tax if the recipient company holds a participation of at least 10% in the distributing company for an uninterrupted period of at least one year. Otherwise, a 1.2% dividend withholding tax rate applies under domestic law to dividends paid to EU and EEA subject-to-tax companies.

(a) The lower rate applies to corporate shareholders satisfying the following qualifying tests:

- Armenia: at least 10% of the capital (equal to at least USD100,000 or the equivalent value in other currency) for 12 months

- Bangladesh, Canada, Estonia, India, Kazakhstan and Lithuania: at least 10% of the capital
 - Denmark, Qatar and Saudi Arabia: at least 25% of the capital for 12 months before the date the dividend is distributed
 - Finland: more than 50% of the capital
 - France: more than 10% of the capital for 12 months
 - Belarus, Georgia, Germany, Indonesia, Israel, Korea, Macedonia, Mauritius, Moldova, Morocco, Pakistan, Slovenia, Syria, Trinidad and Tobago, United Arab Emirates and Zambia: at least 25% of the capital
 - Ghana: at least 10% of the capital
 - Iceland: beneficial owner is a company (other than a partnership) owning at least 10% of the capital for at least 12 months
 - Japan: at least 25% of the shares with voting rights for six months
 - Kuwait: at least 25% of the capital
 - Latvia: beneficial owner is a company (other than a partnership) owning at least 10% of the capital
 - South Africa: at least 25% of the capital for 12 months ending on the date the dividend is declared
 - Sweden: at least 51% of the capital
 - Thailand: at least 25% of the shares with voting rights
 - Ukraine: at least 20% of the capital
 - United Kingdom: at least 10% of the shares with voting rights for 12 months
- (b) The 0% rate applies to interest paid to or by a government.
- (c) The 5% rate applies to corporations that beneficially own more than 50% of the voting rights of the shares for the 12-month period ending on the date of declaration of the dividend. The 10% rate applies to the gross amount of the dividends if the beneficial owner is a company that is not entitled to the application of the 5% rate and that has held at least 10% of the voting shares of the company paying the dividends for the 12-month period preceding the date of declaration of the dividends. The 15% rate applies in all other cases.
- (d) Interest paid to a “government” or central bank is exempt. The term “government” refers to the central government and any other local authority entirely owned by the state that receives interest on behalf of the central authority.
- (e) Interest paid by a contracting state is exempt. Under the Philippines treaty, the loan must involve the issuance of bonds or financial instruments similar to bonds.
- (f) The 5% rate applies to dividends paid to corporations that beneficially own at least 70% of the capital of the payer. The 10% rate applies to dividends paid to corporations that beneficially own at least 25% but less than 70% of the capital of the payer. The 15% rate applies to other dividends.
- (g) The 5% rate applies if the recipient of the dividend is a corporation that beneficially owns more than 10% of the capital of the payer and if the value of the participation of the recipient is at least USD100,000 or an equivalent amount in another currency. The 10% rate applies to other dividends.
- (h) The lower rate is for the use of or right to use literary, artistic and scientific copyrights. Under the Canada treaty, the lower rate applies only to literary and artistic copyrights.
- (i) The higher rate applies if the recipient has an investment exceeding 50% of the capital of the payer.
- (j) The 10% rate applies only if the payer is engaged in an industrial activity and the interest is paid to a financial institution (including an insurance company). The exemption also applies to bonds issued by a contracting state.
- (k) The 25% rate applies to trademark royalties only.
- (l) The lower rate applies to royalties for literature, plays, and musical or artistic works. Under the Germany treaty, royalties for films and recordings for television qualify for the lower rate. Under the Canada treaty, such royalties do not qualify for the lower rate. Under the Mexico treaty, royalties for films and recordings for television and radio do not qualify for the lower rate.
- (m) The lower rate applies to royalties paid for literary, artistic or scientific works and for films and recordings for radio or television.
- (n) The lower rate applies to patents, trademarks, trade names or other intellectual property.
- (o) The lower rate applies to royalties from the use of copyrights on literary, artistic or scientific works (excluding cinema and television films).
- (p) The lower rate applies to royalties paid for the use of, or the right to use, copyrights for literary, artistic or scientific works, including cinematographic films and recordings for radio and television broadcasts.
- (q) The lower rate applies to royalties paid for literary and artistic works, including films and recordings for radio and television.

- (r) In the case of royalties for the use of trademarks, films and industrial, commercial or scientific equipment, the withholding tax rate is 16%; for the use of copyrights for artistic, literary and scientific works, the rate is 5%. In all other cases, the rate is 12%.
- (s) The 0% rate applies to royalties for copyrights of literary, artistic or scientific works (excluding royalties for computer software, motion pictures, films, tapes or other means of reproduction used for radio or television broadcasting). The 5% rate applies to royalties for the use of, or the right to use, computer software or industrial, commercial, or scientific equipment. In all other cases, the 8% rate is imposed on the gross amount of the royalties.
- (t) The 18% rate applies if the dividends are paid by a company that is resident in Côte d'Ivoire and that is exempt from tax on its income or not subject to that tax at the normal rate. The 15% rate applies in all other cases.
- (u) In general, the USSR treaty is honored by the Commonwealth of Independent States (CIS), except for Kazakhstan, but CIS members have different positions on the treaty. Italy and Kazakhstan have entered into a tax treaty (see rates in table). Tajikistan and Turkmenistan continue to apply the USSR treaty.
- (v) The treaty with the former Yugoslavia applies to Bosnia and Herzegovina, Montenegro and Serbia. Italy has entered into new tax treaties with Croatia, Macedonia and Slovenia.
- (w) An exemption applies to the following:
- Interest on loans that are not in the form of bearer securities if the interest is paid to the following: the other contracting state; its political or administrative subdivisions; or its local authorities
 - Interest paid to credit institutions of the other contracting state if the interest is paid on loans that are not in the form of bearer securities and if the loans are permitted under an agreement between the governments of the contracting states
- (x) The 10% rate applies to royalties and commissions paid for the use of or right to use the following: industrial, commercial or scientific equipment; or information concerning industrial, business or scientific know-how. The 15% rate applies to other royalties.
- (y) The 10% rate applies to interest paid by banks and other financial entities (that is, insurance companies). The 15% rate applies to other interest.
- (z) Interest paid on loans made in accordance with an agreement between the governments of the contracting states is exempt. Under the Mexico treaty, the loan must have a term of at least three years.
- (aa) Interest withholding tax is not imposed if any of the following circumstances exist:
- The interest is beneficially owned by a resident of the other contracting state that is a qualified governmental entity and that holds, directly or indirectly, less than 25% of the capital of the person paying the interest.
 - The interest is paid with respect to debt obligations guaranteed or insured by a qualified governmental entity of that contracting state or the other contracting state and is beneficially owned by a resident of the other contracting state.
 - The interest is paid or accrued with respect to a sale on credit of goods, merchandise, or services provided by one enterprise to another enterprise.
 - The interest is paid or accrued in connection with the sale on credit of industrial, commercial, or scientific equipment.
- (bb) The lower rate applies to royalties for literature, musical and artistic works.
- (cc) The 26% rate is the rate under Italian domestic law for dividends paid to nonresidents.
- (dd) These are the rates under Italian domestic law. Under the treaty, the rate is 0% if the interest is paid to a Mauritian public body or bank resident in Mauritius.
- (ee) Exemption is provided for interest paid in connection with the following:
- Credit sales of industrial, commercial or scientific equipment
 - Credit sales of goods delivered from one enterprise to another enterprise
- (ff) A 15% rate, which is contained in the dividend article, applies to payments on profit-sharing loans and to silent partners. The 10% rate applies in other circumstances.
- (gg) A refund may be available for the underlying tax credit with respect to business profits attached to the dividends.
- (hh) If a resident of a contracting state receives payments for the use of, or the right to use, industrial, commercial or scientific equipment from sources in the other contracting state, the resident may elect to be taxed in the contracting state in which the royalties arise as if the property or right for which the royalties are paid is effectively connected with a PE or fixed base in that contracting state. If such election is made, no withholding tax is imposed on the payments.

- (ii) The treaty exempts the following types of interest:
- Interest on bank credits and loans
 - Interest on current accounts and deposits with banks or other credit institutions
- The 26% rate is the withholding tax rate under Italian domestic law.
- (jj) The lower rate applies to fees paid for technical assistance services. The higher rate applies to royalties paid for the use of the intangibles.
- (kk) The 5% rate applies to royalties paid for the use of industrial, commercial or scientific equipment.
- (ll) The treaty provides the following exemptions:
- Interest paid by the government or its local authorities
 - Interest paid to the government of the other contracting state or its local authorities or other entities and organizations (including credit institutions) wholly owned by the other contracting state or its local authorities
 - Interest paid to other entities and organizations (including credit institutions) if the interest is paid on loans permitted under an agreement between the governments of the contracting states
- (mm) The treaty provides the following exemptions:
- Interest paid by the state of source, its political or administrative subdivisions or its local authorities
 - Interest paid on loans granted, guaranteed or secured by the government of the other contracting state, by its central bank or by other entities and organizations (including credit institutions) wholly owned by the other contracting state or under its control
- (nn) The lower rate applies to royalties paid for the use of, or the right to use, copyrights for literary, artistic or scientific works, excluding cinematographic films and other audio and visual recordings.
- (oo) The treaty provides the following exemptions:
- Interest paid by the government or a local authority thereof
 - Interest paid to the government, a local authority thereof or an agency or instrumentality (including a financial institution) wholly owned by the other contracting state or a local authority thereof
 - Interest paid to any other agency or instrumentality (including a financial institution) with respect to loans made under agreement entered into between the governments of the contracting states
- (pp) The 5% rate applies to companies (other than partnerships) that hold directly at least 15% of the capital of the payer of the dividends. The 10% rate applies to other dividends.
- (qq) The treaty provides the following exemptions:
- Interest paid to a contracting state, a local authority thereof, or a corporation having a public status, including the central bank of that state
 - Interest paid by a contracting state or local authority thereof, or any corporation having a public status
 - Interest paid to a resident of a contracting state with respect to debt obligations guaranteed or insured by that contracting state or by another person acting on behalf of the contracting state
 - Interest paid with respect to sales on credit of industrial, commercial or scientific equipment or of goods or services between enterprises
 - Interest paid on bank loans
- (rr) Effective from 1 July 2005 a 0% rate may apply under the agreement between Switzerland and the EU. The rates shown in the table are the withholding tax rates under the Italy-Switzerland double tax treaty. Subject to fulfillment of the respective requirements, the taxpayers may apply either the Switzerland-EU agreement or the Italy-Switzerland double tax treaty.
- (ss) See Section A.
- (tt) The exemption applies to interest paid to a resident of the other contracting state with respect to debt claims indirectly financed by the government of that other contracting state, a local authority, the central bank thereof or a financial institution wholly owned by the government of the other contracting state.
- (uu) The lower rate applies to interest related to loans that are guaranteed by the government or a local authority. Under the Korea treaty, the guarantee must be evidenced by an agreement contained in an exchange of letters between the competent authorities of the contracting states.
- (vv) The 15% rate applies to dividends paid by a company established in Italy to a Cyprus resident beneficiary. Dividends paid by a company established in Cyprus to an Italian resident beneficiary are exempt from withholding tax in Cyprus.
- (ww) The 10% rate applies to dividends paid by an Italian company to a Malaysian resident. Dividends paid by a Malaysian company to an effective beneficiary resident in Italy are exempt from tax in Malaysia if the beneficiary is subject to tax on the dividends in Italy.

- (xx) The 5% rate applies to royalties for the use of, or the right to use, computer software or industrial, commercial, or scientific equipment. In all other cases, the rate for royalties is 10%.
- (yy) The treaty provides an exemption from withholding tax for the following types of interest payments:
- Interest paid by the state of source, its political or administrative subdivisions or its local authorities
 - Interest paid on loans granted, guaranteed or secured by the government of the other contracting state, by its central bank or by other entities and organizations (including credit institutions) wholly owned by the other contracting state or under its control
 - Interest paid or accrued in connection with the sale on credit of industrial, commercial, or scientific equipment
- (zz) The 15% rate applies if the royalties are paid by an enterprise registered with the Philippine Board of Investments and engaged in preferred areas of activities and to royalties with respect to cinematographic films or tapes for television or broadcasting. The 25% rate applies in all other cases.
- (aaa) The 5% rate applies if the recipient company has owned at least 10% of the capital in the Italian company for at least 12 months.
- (bbb) The 5% rate applies to royalties paid for the following:
- The use of, or the right to use, patents, trademarks, designs or models, plans, and secret formulas or processes
 - The use of, or the right to use, industrial, commercial or scientific equipment that does not constitute immovable property, as defined in Article 6 of the treaty
 - Information concerning experience of an industrial, commercial or scientific nature
- (ccc) The treaty contains a specific anti-abuse provision. If the main purpose or one of the main purposes of the transaction is to benefit from the lower treaty rates, the lower rates may be denied.
- (ddd) On 10 August 2015, the income tax treaty between Italy and the Hong Kong Special Administrative Region (SAR) entered into force. The treaty is in effect with respect to Italian tax for years of assessment beginning on or after 1 January 2016. Under the treaty, the Hong Kong SAR has been removed from the Italian blacklists (for both cost deductions and for CFC purposes).
- (eee) On 23 February 2015, Italy and Switzerland signed a protocol to their double tax treaty as well as a road map for the continued dialogue in tax and financial matters.
- (fff) The 8% rate applies if the beneficial owner (different from a partnership or similar body) holds a minimum shareholding of 10% in the entity paying the dividends.

- (a) Unregulated companies are taxed at a rate of 25%, and regulated companies (excluding life insurance companies) are taxed at a rate of 33.3%. An unregulated company is a company that is not a regulated company. A regulated company is a company that is regulated by any of the following:
- Financial Services Commission
 - Office of Utilities Regulation
 - Bank of Jamaica
 - The minister with responsibility for finance
- Building societies are taxed at a rate of 30%.
- (b) The dividend withholding tax is a tax imposed on payments to nonresidents (the rate may be reduced by double tax treaties). Tax is required to be deducted from dividend payments made by a Jamaican resident to a Jamaican resident shareholder at a rate of 15%, unless the Jamaican shareholder is a company that holds more than 25% of the voting rights of the distributing company. In such cases, the dividends may be paid without deduction of tax.
- (c) This rate applies to interest paid to nonresident companies. Special rules apply to interest paid by prescribed persons (as defined). The withholding tax rates may be reduced under tax treaties. The recipients of the payments include the payments in taxable income reported on their annual income tax returns, and they may credit the tax against their annual income tax.
- (d) This is a final tax imposed on payments to both residents and nonresidents. The withholding tax rate may be reduced under tax treaties.
- (e) This withholding tax applies to all insurance premiums paid by residents to nonresidents. However, the withholding tax does not apply if a Jamaican resident insurance company pays the premium to an entity that meets all of the following conditions:
- It is not a connected company.
 - It is in the business of writing contracts of reinsurance in the international market.
 - It is not acting on behalf of a captive insurance company.
- (f) See Section C regarding a restriction on the loss carryforward.

B. Taxes on corporate income and gains

Corporate income tax. Companies are resident in Jamaica if the control and management of their affairs are exercised in Jamaica. Nonresident companies operating a branch on the island are taxed on profits derived from their Jamaican operations.

Tax rates. The standard rates of the tax on profits are 33.3% for regulated entities (excluding life insurance companies) and 25% for unregulated entities. Building societies are taxed at a rate of 30%. Effective from the 2015 tax year, life insurance companies are taxed at a rate of 25%.

Under the Betting, Gaming and Lotteries Act, the following are the amounts of the lottery tax payable:

- 25% of the gross weekly revenue derived from sales of lottery tickets with respect to a declared lottery
- 20% of the gross weekly revenue derived from promotion of a daily numbers game or instant lottery

Remittances overseas by branches of foreign companies are subject to branch remittance tax at a rate of 33.3%. This rate may be different if a double tax treaty is in place.

The Special Economic Zones Act (SEZ Act) replaced the Free Zones Act (which provided certain tax benefits to companies that operated under that legislation; the act was repealed in 2015). However, under grandfathering provisions, companies that operated under the Free Zones Act are given a four-year period to transition to the new SEZ regime. Under the SEZ Act, chargeable income from a trade, vocation or profession of approved developers or occupants is subject to income tax at a rate of 12.5%. The income tax rate for approved developers or occupants may be reduced by a Promotional Tax Credit, which may be claimed for expenditure on research, development and trading.

Developers and occupants are exempt from income tax on profits derived from the rental of property in the SEZ, subject to certain restrictions. Dividend income is subject to income tax at a rate of 0%. Withholding tax of 0% applies to dividends paid out of profits from a profession or vocation in the SEZ.

Under the Urban Renewal Act, which was introduced to promote the improvement of depressed areas, approved entities may obtain various types of tax relief for development carried out in areas designated by the Jamaican government as special development areas. The tax relief relates to income tax, stamp duty and transfer tax.

Minimum business tax. All entities other than registered charitable organizations are subject to a minimum business tax of JMD60,000 (approximately USD469), for each tax year. The tax is payable in two equal instalments of JMD30,000 (approximately USD235) on or before 15 June and 15 September of each year.

Withholding tax on specified services. Recipients of specified services (as defined in the legislation) are required to withhold a 3% tax from payments made to suppliers of these services. The tax must be withheld if either of the following circumstances exist:

- The gross payment relates to a single transaction with an invoice value of JMD50,000 (approximately USD391) or more

(before application of the General Consumption Tax [GCT; see Section D])

- A series of gross payments of less than JMD50,000 (before GCT) is made to the same service provider in a 30-day period, and these payments total JMD100,000 (approximately USD782) or more.

The service provider from whom the tax is withheld may claim, in the tax year of the withholding, a tax credit for the amount withheld against any quarterly income tax obligation or the tax due in the annual income tax return. Any excess credit for that tax year may be claimed as a refund or carried forward to be used in a future tax year.

Capital gains. No tax is imposed on capital gains. However, a transfer tax of 5% is imposed on transfers of certain Jamaican property, including land and securities (see Section D). Stamp duty may also apply.

Capital allowances are subject to recapture on the disposal of assets (see Section C).

Administration. The tax year is the calendar year. The Commissioner General may allow companies with an accounting year-end other than 31 December to pay tax based on income earned in that accounting year.

Income tax returns must be filed and payments made by 15 March of the year following the tax year to which the income tax return relates. Quarterly advance payments of tax must be made.

Interest of 20% per year is levied on late income (corporation) tax payments, and a penalty of 50% per year may also be imposed.

Dividends. In general, dividends paid to nonresidents are subject to a final withholding tax, and the tax withheld must be paid to the tax authorities in Jamaica. In general, withholding tax at a rate of 15% is imposed on dividends paid by Jamaican resident companies to Jamaican resident shareholders. However, if the company receiving the dividend holds more than 25% of the voting rights, the rate of income tax payable on such dividend is nil. Preference dividends that are deductible for income tax purposes are fully taxable in the hands of the shareholder, regardless of whether the shareholder is resident or nonresident. Dividends paid out of capital are not subject to income tax, but they are generally subject to a transfer tax of 5%.

Foreign tax relief. For income derived from treaty countries, the tax rate is the treaty rate applicable to the direct corporate investor. The regular Jamaican corporate tax rate of 25% or 33.3% is applied to income derived from non-treaty countries.

C. Determination of trading income

General. Taxable income is based on accounting income with appropriate adjustments. To be deductible, expenses must be incurred wholly and exclusively in earning income.

Nondeductible expenses include capital expenditures, incorporation expenses and interest accrued but not paid. Contributions or donations made to charities approved under the Charities Act by

the Department of Cooperatives and Friendly Societies are deductible, up to a maximum of 5% of taxable income.

Inventories. The first-in, first-out (FIFO) and weighted average methods of inventory valuation are allowed.

Provisions. To be deductible, bad debts must be specific. General provisions are not allowed.

Tax depreciation (capital allowances). The capital allowances are described below.

Initial allowance. An initial allowance of 25% of the cost of an asset is granted for certain types of assets, including office equipment, computers, and plant and machinery, as defined in the Income Tax Act. However, some office equipment and plant and machinery are not entitled to the initial allowance. Initial allowances are granted in the year of purchase and are deducted from the depreciable value of the asset.

Investment allowance. A 20% investment allowance is granted instead of the initial allowance for buildings and plant and machinery used in the electricity and steam industries. Plant and machinery purchased in Jamaica must be new to qualify for the investment allowance. However, both new and used plant and machinery purchased overseas qualify for the allowance. The initial allowance is substituted for the investment allowance if the asset is disposed of within three years after its purchase. The investment allowance does not reduce the depreciable value of an asset.

Annual allowance. Plant and machinery qualify for an annual allowance of 12.5%, calculated using the straight-line method. A 20% annual allowance, calculated using the straight-line method, is granted to motor vehicles. However, the maximum depreciable cost for vehicles that are not trade vehicles is an amount in Jamaican dollars that is equivalent to USD35,000. Office equipment qualifies for an annual allowance of 20%, calculated using the straight-line method. Nonresidential and industrial buildings generally qualify for annual allowances, calculated using the straight-line method, at rates that range from 4% to 12.5%, depending on the type of structure.

Disposal of depreciable assets. Initial and annual allowances are generally subject to recapture on the sale of an asset, to the extent the sales proceeds exceed the tax value after depreciation. The amount recaptured may not exceed the total of the initial and annual allowances granted. Any amounts recaptured are subject to tax at the regular corporate tax rate. If the proceeds are less than the tax-depreciated value, an additional allowance is granted.

Relief for losses. Losses may be carried forward indefinitely. However, each year, a loss carryforward may offset only 50% of the aggregate amount of income of the taxpayer from all sources after allowing the appropriate tax deductions and tax exemptions. However, the limitation does not apply in the following circumstances:

- For the first five years of trade
- If the taxpayer's gross revenue from all sources for the relevant tax year is less than JMD3 million

A carryback of losses is not permitted.

Groups of companies. The law does not contain any group loss relief or consolidated return provisions.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Customs Administrative Fee; rates vary depending on the product	Various
Environmental levy; imposed on the Cost, Insurance and Freight (CIF) value of all imported goods with a few exceptions	0.5%
General Consumption Tax, on the value added to goods and services; certain items are exempt	
Standard rate	16.5%
Telephone services, cards and instruments	25%
Tourism sector	
Hotels previously operating under the Hotel Incentives Act (HIA), but which now operate under the Fiscal Incentives Act	10%
Hotels remaining under the HIA	16.5%
Electricity for residential premises	16.5%
Electricity for commercial and industrial premises	16.5%
Certain commercial imports	16.5%
	(advance rate of 5%)
Exports, government supplies and services of diplomats and international agents	0%
Assets tax; on taxable value of assets	
General	JMD5,000 to JMD200,000
Life insurance companies	1%
Regulated entities other than life insurance companies	0.25%
Property tax; on gross asset	
First JMD100,000 of asset	JMD1,000
Asset in excess of JMD100,000 up to JMD1 million; rate on excess	1.5%
Asset that exceeds JMD1 million; rate on excess	2%
Transfer tax, on transfers of certain Jamaican property, including land and securities	5%
Transfer tax on death for estates	1.5%
Stamp duty	Various
Social security contributions	
National insurance scheme (NIS); imposed on annual earnings (income for self-employed individuals) up to JMD1,500,000; paid by	
Employer	2.5%
Employee	2.5%
Self-employed individual	5%
National Housing Trust (NHT); paid by	
Employer, on payroll	3%
Employee, on salary	2%
Self-employed individual, on income	3%

Nature of tax	Rate
Human Employment and Resource Training program (HEART), on total payroll if it exceeds JMD173,328 a year; paid by employer	3%
Education tax, on taxable salary; paid by Employer, on payroll	3.5%
Employee, on salary	2.25%
Self-employed individual, on net earnings	2.25%

E. Miscellaneous matters

Foreign-exchange controls. Jamaica does not impose foreign-exchange controls.

Debt-to-equity rules. No debt-to-equity restrictions are imposed.

Foreign-controlled companies. Subsidiaries of nonresident corporations are subject to income tax on their profits at a rate of 25% for unregulated companies or 33.33% for regulated companies. Withholding tax at a rate of 33.3% is generally imposed on dividends remitted, unless a treaty provides a different rate.

Anti-avoidance legislation. Several anti-avoidance measures are in force. These measures generally apply to transactions between related parties that were not made at arm's length.

Employment tax credit. A person other than a regulated company may be eligible to claim a nonrefundable tax credit (referred to as an employment tax credit [ETC]), up to a maximum amount of 30% of the income tax payable for each year. The amount eligible for the ETC is the total of education tax, NHT, NIS and HEART payments made by an eligible person that are declared and paid on a timely basis during the year. The ETC that may be claimed is therefore the lower of the total statutory payments during the year and 30% of the tax payable. The application of this ETC is subject to certain additional criteria. It may not be claimed against income tax chargeable on non-trading income, such as interest and dividend income.

F. Treaty withholding tax rates

The rates reflect the lower of the treaty rate and the rate under domestic tax law.

	Dividends %	Interest %	Royalties %	Management fees %
Antigua and Barbuda (h)	0	15	15	15
Barbados (h)	0	15	15	15
Belize (h)	0	15	15	15
Canada	15/22.5 (a)	15	10	12.5
China	5	7.5	10	0
Denmark	10/15 (b)	12.5	10	10

United Kingdom	15/22.5 (a)	12.5	10	12.5
United States	10/15 (e)	12.5	10	0 (g)
Non-treaty countries	33.3	33.3	33.3	33.3

- (a) Higher rate applies if payment is made to a company owning 10% or more of the voting stock of the payer.
- (b) Lower rate applies if payment is made to a company owning 25% or more of the capital or voting stock of the payer.
- (c) Lower rate applies if payment is made to a company owning 25% or more of the shares of the payer.
- (d) Lower rate applies to interest received by a bank recognized as a banking institution under the laws of the state from which the payment is made.
- (e) Lower rate applies if payment is made to a company owning 10% or more of the voting stock of the payer.
- (f) Lower rate applies if payment is made to a company owning 25% or more of the voting stock of the payer.
- (g) Management fees are not subject to withholding tax, but they are included in business profits. Consequently, net management fees are subject to tax in Jamaica only if the recipient has a permanent establishment there.
- (h) These are the rates under the Caribbean Community and Common Market (CARICOM) tax treaty, which the listed country has ratified.
