

Worldwide Capital and Fixed Assets Guide

2021

Preface

Investment in capital assets continues to represent one of the largest items on a company's balance sheet. This guide helps you reference key tax factors needed to better understand the complex rules relating to tax relief on capital expenditure in 30 jurisdictions and territories.

The content is based on information current as of February 2021, unless otherwise indicated in the text of the chapter. The tax rules related to capital expenditures across the world are constantly being updated and refined. This guide is designed to provide an overview. To learn more or to discuss a particular situation, please contact one of the country representatives listed in the guide.

The *Worldwide Capital and Fixed Assets Guide* provides information on the regulations relating to fixed assets and depreciation in each jurisdiction, including sections on the types of tax depreciation, applicable depreciation rates, tax depreciation lives, qualifying and non-qualifying assets, availability of immediate deductions for repairs, depreciation and calculation methods, preferential and enhanced depreciation availability, accounting for disposals, how to submit a claim and relief for intangible assets.

For the reader's reference, the names and symbols of the foreign currencies that are mentioned in the guide are listed at the end of the publication.

This is the sixth publication of the *Worldwide Capital and Fixed Assets Guide*. For many years, the *Worldwide Corporate Tax Guide* has been published annually, along with two companion guides on broad-based taxes: the *Worldwide Personal Tax Guide* and the *Worldwide VAT, GST and Sales Tax Guide*. In recent years, those three have been joined by additional tax guides on more specific topics, including the *Worldwide Estate and Inheritance Tax Guide*, the *Worldwide Transfer Pricing Reference Guide*, the *Global Oil and Gas Tax Guide*, the *Worldwide R&D Incentives Reference Guide*.

Each of the guides represents many hours of tax research. They are available free online, along with timely Global Tax Alerts and other publications on ey.com or in the EY Global Tax Guides app for tablets.

You can also keep up with the latest updates at [ey.com/GlobalTaxGuides](https://www.ey.com/GlobalTaxGuides).

1. Entitlement to claim

Legal ownership is required for a claim to tax depreciation.

2. Allocation of tangible assets to tax depreciation lives and rates

Several tax opinions have expressed that if a movable asset is part of a building but does not constitute a sole unit with the building in terms of functionality, a different tax depreciation method applies (e.g., machinery and equipment).

The tax legislation only provides a 2% rate of tax depreciation per year for immovable property (except for land). Calculations must be performed quarterly.

For other assets, the tax legislation does not provide any lives or rates. In general terms, accounting criteria are followed to calculate tax depreciation. However, other criteria could be adopted if there are technical reasons that support such adoption.

In General Instruction (SDG ASJ-AFIP) 7/2012, the tax authorities expressed that given the lack of particular rules, to calculate the tax depreciation of movable assets, it should be understood that the probable useful life refers to a reasonable estimation. In this regard, the concepts of obsolescence and efficient useful life should be considered when making the calculation.

2.1 Assets that qualify for tax depreciation

Specific fact patterns may determine different depreciation rates. The useful lives and depreciation rates indicated below are a general indicator.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment	10 years (except for industrial plants, which may be regarded as buildings)	Straight-line method	10%	Other methods could be used, e.g., units of production depreciation method or units of time depreciation method, and other depreciation rates could be applied if supported by technical reasons.
Buildings	50 years	Straight-line method	2%	A higher rate could be applied if a lower useful life could be proved.
Furniture, fittings or fixtures	10 years	Straight-line method	10%	Other methods and rates could be used if supported by technical reasons.
Computer hardware	3 years	Straight-line method	33%	Other methods and rates could be used if supported by technical reasons.
Computer software	3 years	Straight-line method	33%	Other methods and rates could be used if supported by technical reasons.
Aircraft	5 years	Straight-line method	20%	Other methods and rates could be used if supported by technical reasons.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Transport other than motor cars	5 years	Straight-line method	20%	Other methods and rates could be used if supported by technical reasons.
Motor cars	5 years	Straight-line method	20%	Other methods and rates could be used if supported by technical reasons.
Car parks	50 years	Straight-line method	2%	A higher rate could be applied if a lower useful life could be proved.
Office equipment (including office furniture and fixtures)	10 years	Straight-line method	10%	Other methods and rates could be used if supported by technical reasons.
Agricultural machinery and equipment	8 years	Straight-line method	13%	A higher rate could be applied if a lower useful life could be proved.

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	In general, costs would be added to the value of land. The specific case should be reviewed.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Preliminary costs (startup costs) can be deducted in the year in which they were incurred or amortized over a maximum term of five years, at the taxpayer's option.

Land remediation – removing asbestos, Japanese knotweed

According to some interpretations, if the cost is considerable, it should be added to the cost of the land. Otherwise, it could be added to the cost of the assets to be depreciated located on such land.

Own labor capitalized

Not deductible

2.4 Availability of immediate deductions for repairs

There are no rules that allow any asset to be written off in its entirety in the year of acquisition.

Nevertheless, a particular analysis of each case should be performed. If there is a reasonable justification, for example, based upon a professional opinion that may support the entire depreciation of the asset, the possibility to apply these criteria could be considered.

Description	Detail
Repairs	Not considered an asset; in this regard, they are deducted in the fiscal year they are accrued.
Items of a revenue nature	N/A

The tax legislation provides for the concept of repairs and defines the concept of "improvements." In this regard, repairs that may involve the simple maintenance of the asset are considered as expenditures and, therefore, are deductible as expenses.

On the other hand, improvements are disbursements that do not qualify as ordinary repairs that involve the simple maintenance of the asset. They imply an increase in the value of the good by at least 20%. In addition, doctrine has expressed that, to qualify as improvement, this expense should increase the useful life of the asset.

Pursuant to income tax law, improvements are not deductible as expenses in the year of accrual. They would be capitalized and depreciated over the life of the asset.

Tax depreciation may differ from the accounting depreciation used in the financial statements.

3. Depreciation and calculation methods

Methods used	Straight-line is the preferred method, but the other methods can be used if supported by technical reasons.
Frequency	Daily, monthly or annual basis The tax legislation is only specific regarding the tax depreciation calculation for immovable property. For other assets, accounting criteria are followed or other criteria could be adopted if there are technical reasons that support it. Therefore, tax depreciation could be calculated daily, monthly or annually, depending on the case.

Year of acquisition	The Income Tax Law (ITL) provides, in the case of immovable property only, that tax depreciation must be calculated on a quarterly basis. As no provisions are stated to calculate the tax depreciation for other assets, accounting criteria or any other criteria according to each case could be adopted. The most important consideration would be to keep homogeneous criteria.
Year of disposal	A balancing charge or allowance may arise to make the accurate adjustments to the capital assets; the residual tax value of the corresponding asset should be deducted from the sale price.
Ability to use different methods for different assets	It is not necessary, but as mentioned, the uniformity of the criteria adopted is preferable. In this regard, different methods may be used for different classes of assets, but within the same group of assets, it is preferable to apply the same method. However, each case should be analyzed on its own merits.
Ability to switch methods	Yes. The methods applied could be changed from one year to another if technical reasons justified the change, but authorization from the tax authorities must be obtained.

4. Preferential and enhanced depreciation availability

Commonly, the introduction of benefits for investments in certain industries is linked with the approval of the Annual Budget Law.

Asset used in	Comment on specific application and benefits available
Production of biofuels, oil and gas exploration, production of electric energy, production of bioethanol, employment of renewable energy sources for the obtainment of electric energy	Law 25,924 states the corresponding quotas of tax depreciation. The use of this benefit is subject to the condition that the asset remains in the equity for three years from the start of its utilization. In addition, Law 27,191 provides accelerated depreciation benefits related to the purchase of new fixed assets or infrastructure services performed to develop projects based on the use of renewable energy sources.
Mining	Law 24,196 provides the corresponding quotas of tax depreciation for each asset. The tax authorities and other corresponding authorities should be informed of the method of tax depreciation adopted.
Forestry	Law 25,080 provides the corresponding quotas of tax depreciation for each asset. In addition, it states that the tax depreciation of each fiscal year should not surpass the income arising from the development of forestry activities.
Production of biotechnology	The accelerated tax depreciation may be performed from the moment the asset starts being utilized. The applicable depreciation rate should be analyzed in each specific case.

5. Accounting for disposals

To make the accurate adjustments to the capital asset, the residual tax value of the corresponding asset should be deducted from the sale price. Please note that if the Argentine assets were revaluated according to the revaluation option, the new tax value of the assets will be considered.

In case of disposal of an asset, it is considered the difference between the original cost of the asset and the accumulated tax depreciation.

There are no provisions in the tax legislation for the case that an asset is scrapped because it has no salable value. According to some interpretations, the residual tax value should be deducted in the fiscal year the asset is scrapped. It is furthermore advisable to possess supporting documents to prove the destruction of the assets, e.g., minutes drawn up by a notary public stating the destruction of the asset.

As per the tax treatment of the disposal pursuant to Argentine law, if gains arise from the disposal of a movable asset (by deducting the residual tax value from the sale price), the taxpayer would be subject in principle to pay the income tax. This should be analyzed in each specific case.

6. Making a claim

Deductions corresponding to tax asset depreciations should be claimed within the income tax return.

It is advisable to maintain supporting documents, such as a report with an expert's opinion that may back up the adopted tax depreciation criteria, to be shown to the tax authorities if necessary.

7. Intangible assets

Tax depreciation for purchases of intangible assets would only be available if they involve a right with a determined useful life.

Type of asset	Rates/lives
Trademarks	Will depend on the period of time for which the right of use was granted
Patents, copyright, design, know-how or similar item	Will depend on the period of time for which the right of use was granted
Goodwill	Not deductible
License or permit	Will depend on the period of time for which the right of use was granted

8. Adjustment for inflation

According to the provisions of the ITL, amended by Tax Reform Law 27,430 (hereinafter the Law), the depreciation of assets purchased, and investments performed after 1 January 2018 would be adjusted on the basis of the percentage variations of the General Consumer Price Index published by the National Institute of Statistics and Census, according to the criteria to be established by the Tax Authorities. Such adjustment is not applicable to the depreciation of assets acquired or investments performed before 1 January 2018.

In addition to the adjustment of the assets mentioned above, according to rules in force, an integral inflation adjustment calculation for tax purposes would be based on the Consumer Price Index (in Spanish, Índice de Precios al Consumidor nivel general, or IPC) and would only be triggered for tax years starting from 2018, 2019 and 2020 if the index exceeds 55%, 30% and 15%, respectively.

When referring to the integral inflation adjustment for tax purposes, for tax years 2019 and 2020, Law No. 27,541 requires the inflation adjustment factor to be allocated equally over six years. For tax years beginning on or after 1 January 2021, taxpayers may deduct 100% of the negative or positive inflation adjustment in the year in which the adjustment is calculated.

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Capital allowances

Does the tax treatment follow book/statutory accounting depreciation?

No

Range of rates used

0%-100%

Depreciation method used to calculate tax deduction

Straight-line/prime cost, double diminishing value (declining) method

1. General entitlement to claim

A taxpayer who “holds” the asset – typically the owner (legal owner or equitable) – may claim depreciation. A taxpayer who “holds” an asset may also be one of the following individuals or entities:

- ▶ A lessee who has the right to use a luxury car
- ▶ A lessor who has the right to recover an asset that is subject to a lease and is fixed to land
- ▶ A partnership asset, if held by the partnership and not the individual partners
- ▶ An entity that has the information can hold mining or prospecting information (mining information is geological, geophysical or technical information that relates to the presence, absence or extent of deposits of minerals in an area, or is likely to help in determining this); different subdivisions may apply.
- ▶ Where it is a joint ownership of the assets (but not a partnership), each taxpayer is considered to hold assets jointly, and consequently, each taxpayer’s share of the asset is treated as a separate depreciating asset.

Whether an asset (rather than its components) is a depreciating asset is a question of fact and degree, determined in light of all the circumstances. A “functionality test” is usually applied to identify a “unit of plant,” in that the function of the asset need only be separately identifiable, rather than be self-contained or isolated. This means that if assets have a number of separate working parts, they may be identifiable as individual assets and depreciated accordingly. A fixture on land, whether removable or not, and any improvements to the land or fixtures are treated as separate depreciating assets.

Assuming a taxpayer satisfies the general entitlement to claim a capital allowance deduction, current year deductions for the FY21 and FY22 income years in Australia must be determined by either:

- ▶ The availability of an immediate 100% deduction for the full capital expenditure in the year incurred. In practice, most taxpayers should be able to access these temporary provisions, but care is required to confirm their applicability. These are largely temporary provisions designed to provide economic stimulus (materially a reaction to the COVID-19 pandemic). These rules are outlined at Section 2 below.
Or
- ▶ An amortizing deduction over a period of years (usually the effective life of the asset) when the concessionary provisions in Section 2 do not apply. These traditional amortizing provisions (refer to Sections 3 to 9) will prevail in all other situations and beyond the application of the temporary concessionary provisions outlined in Section 2.

2. Temporary relief concessions

Largely as an economic stimulus, the Australian government introduced a number of temporary relief concessions in relation to full deductibility for depreciating assets. When the concessionary relief period expires it is intended that eligible depreciating assets will be depreciated under the usual rules (refer to Sections 3 to 9).

Temporary relief concession measure	Turnover requirements	Asset acquisition period requirements	Eligible depreciating asset requirements	Application of concessions and other comments
Immediate write-off (100% deduction)	Businesses with an aggregated turnover of AUD10 million or more but less than AUD500 million. For these purposes, aggregated turnover includes the worldwide income of the entity as well as that of its connected entities and affiliates.	Depreciating assets first acquired between 12 March 2020 and 31 December 2020 and are in use or are installed ready for use, in an income year that ends on or after 12 March 2020 and on or before 30 June 2021.	Eligible depreciating assets costing less than AUD150,000 and used for a taxable purpose.	An immediate 100% deduction for eligible depreciating assets is available for a limited period. For assets that a business with an aggregated turnover of less than AUD500 million starts to hold, and first uses (or has installed ready for use) for a taxable purpose from 7:30 p.m. (AEDT) on 6 October 2020 to 30 June 2022 the immediate write-off threshold of less than AUD150,000 does not apply. Eligible taxpayers can deduct the business portion of the eligible asset's cost under the temporary full expensing measures (see below).

Temporary relief concession measure	Turnover requirements	Asset acquisition period requirements	Eligible depreciating asset requirements	Application of concessions and other comments
<p>Temporary full expensing (100% deduction)</p>	<p>Businesses with aggregated turnover of less than AUD5 billion. For these purposes, aggregated turnover includes the worldwide income of the entity as well as that of its connected entities and affiliates.</p> <p>An alternative <AUD5 billion test may also be satisfied if:</p> <ul style="list-style-type: none"> ▶ The entity is a corporate tax entity at any time in the income year (as a result, most trusts and partnerships are excluded). ▶ The entity's total ordinary and statutory income other than non-assessable non-exempt income is less than AUD5 billion for either the 2018-19 or the 2019-20 income year (note this does not include the worldwide income of connected entities and affiliates). ▶ The total cost of certain depreciating assets first held and used, or first installed ready for use, for a taxable purpose in the 2016-17, 2017-18 and 2018-19 income years (combined) exceeds AUD100 million. <p>For a tax consolidated group, the above tests are applied to the tax consolidated group.</p>	<p>The eligible new assets must be first held, and first used or installed ready for use for a taxable purpose, between 7:30 p.m. (AEDT) on 6 October 2020 (the "2020 Budget time"), and 30 June 2022.</p>	<p>To be eligible for temporary expensing, the depreciating asset must:</p> <ul style="list-style-type: none"> ▶ Be new or second-hand (only for businesses with an aggregated turnover of less than AUD50 million) ▶ Be first held on or after the 2020 Budget time ▶ First used or first installed ready for use for a taxable purpose before 30 June 2022 <p>Eligible assets do not include:</p> <ul style="list-style-type: none"> ▶ Assets allocated to low value or software development pools ▶ Certain primary production assets ▶ Buildings and other capital works (i.e., improvements) ▶ Assets not located in Australia or used principally in Australia for the principal purpose of carrying on a business <p>If the alternative test is adopted, intangible assets and assets used by associates are not eligible depreciating assets. Businesses with an aggregated turnover of AUD50 million or more cannot deduct the cost of an asset under the temporary full expensing provisions if a commitment to hold, construct or use the asset was entered or construction commenced before the 2020 Budget time.</p>	<p>There is no general limit on the cost of eligible assets to which the temporary full expensing provisions can be applied, but there may be specific cost limits on certain assets (for example luxury car vehicles).</p> <p>A deduction is claimed for the cost of asset in the income year in which the asset is first used or installed ready for use.</p> <p>Businesses can also immediately deduct the cost of improvements to eligible depreciating assets if those costs are incurred between the 2020 Budget time and 30 June 2022. This includes improvements on depreciating assets first held or installed and ready for use prior to the 2020 Budget time. For the cost improvements, the deduction is claimed in the income year the cost is incurred.</p> <p>Businesses can choose not to apply the temporary full expensing on an asset-by-asset basis.</p> <p>Small business entities using the simplified depreciation rules deduct the balance of their general small business pool for an income year ending between 6 October 2020 and 30 June 2022.</p>

Temporary relief concession measure	Turnover requirements	Asset acquisition period requirements	Eligible depreciating asset requirements	Application of concessions and other comments
				Temporary full expensing is not available for assets that are disposed of in the same income year as when the asset is first used. The cost of improvements also cannot be deducted under the temporary full expensing provisions if the disposal occurs in the same year the expenditure was incurred.
Backing business investment (accelerated depreciation)	Businesses with an aggregated turnover of less than AUD500 million.	<p>The accelerated depreciation rules apply to eligible assets with a cost of AUD150,000 or more in the:</p> <ul style="list-style-type: none"> ▶ 2019-20 income year, if the eligible asset was first held on or after 12 March 2020 and first used or installed ready for use for a taxable purpose in the 2019-20 income year ▶ 2020-21 income year, if the eligible asset was first held on or after 12 March 2020 and first used or installed ready for use for a taxable purpose in the 2020-21 income year 	<p>The depreciating asset must:</p> <ul style="list-style-type: none"> ▶ Be new and not previously held by another entity (other than as trading stock) ▶ Be first held on or after 12 March 2020 ▶ First used or first installed ready for use for a taxable purpose on or after 12 March 2020 and before 30 June 2021 ▶ Not be an asset to which an entity has applied either the immediate write-off or the temporary full expensing rules <p>Eligible assets do not include:</p> <ul style="list-style-type: none"> ▶ Second-hand assets ▶ Assets allocated to low-value pools or software development pools ▶ Certain primary production assets ▶ Buildings and other capital works (i.e., improvements) 	<p>Businesses with an aggregated turnover of less than AUD500 million may be able to deduct the cost of eligible new depreciating assets at an accelerated rate using the backing business investment (accelerated depreciation rules). For each new eligible asset, the deduction applies in the income year that the asset is first used or installed ready for use for a taxable purpose. Taxpayers can choose not to apply these rules on an asset-by-asset basis.</p> <p>Small business entities with a turnover of less than AUD10 million using the simplified depreciation rules, add assets with a cost of AUD150,000 that are eligible for the backing business investment to their pool, and deduct 57.5% (rather than 15%) of the cost of a new depreciating asset in the year the asset is added to the pool. In later years, the depreciating asset will be depreciated under the general small business pool rules.</p>

Temporary relief concession measure	Turnover requirements	Asset acquisition period requirements	Eligible depreciating asset requirements	Application of concessions and other comments
			<ul style="list-style-type: none"> Assets not located in Australia or used principally in Australia for the principal purpose of carrying on a business <p>There is no limit on the cost of an eligible asset (note passenger vehicles are subject to a luxury car limit).</p>	Business entities with a turnover of less than AUD500 million that do not use the simplified depreciation rules can deduct 50% of the cost of the eligible new depreciating asset in addition to the depreciation deduction that would otherwise apply but calculated as if the cost of the asset were reduced by 50%. In later years, the depreciating asset will be depreciated under the usual rules that apply.

3. Allocation of tangible assets to tax depreciation lives and rates

The decline in value of a depreciating asset is calculated based on the effective life of the asset. Taxpayers may calculate either their own estimate of the effective life (self-assessed) of a depreciating asset or rely on the Commissioner's published rates (see below). The choice must be made for the year in which the asset is first used. There are exceptions for which the taxpayer is obliged to work out depreciation using a prescribed statutory rate (e.g., buildings and structural improvements, certain intangible assets, capped-life assets).

Self-assessed effective life

The self-assessed effective life adopted must consider the total estimated period the asset can be used by any entity for the purposes of producing income, exploration or prospecting, mining site rehabilitation or environmental protection activities, or conducting R&D activities, depending on the asset's expected use.

Commissioner's determination of effective life

The Commissioner regularly publishes recommended effective lives for many depreciating assets that taxpayers may adopt, which can be found at ato.gov.au. The Commissioner's current effective lives are included in TR 2020/3 – income tax: effective life of depreciating assets (applicable from 1 July 2020) – and are generally updated annually. There is also a "statutory cap" to the effective lives of specific assets where the taxpayer has otherwise chosen the effective life determined by the Commissioner.

Changing effective life

A taxpayer may choose to recalculate the effective life of a depreciating asset if the nature of use of the asset changes and those changed circumstances make the current estimate inaccurate. A taxpayer can only make a new estimate of the effective life after the end of the income year in which the taxpayer first started to use the asset.

A taxpayer is required to recalculate the effective life of a depreciating asset if:

- ▶ The asset's cost increases by at least 10% in an income year.
- ▶ The taxpayer either has self-assessed the effective life or has used the Commissioner's determination of effective life and adopted the straight-line method.

3.1 Assets that qualify for tax depreciation

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment	There is a wide range.	Prime cost (PC)/straight-line or diminishing value (DV)		<p>The rate varies depending upon the industry and the particular asset type. Refer to the tax determination for particular assets.</p> <p>Foundations for plant and machinery (integral to operation, but not incorporated into plant and machinery itself) – 40 years.</p>
Buildings	25 years or 40 years	PC	2.5% or 4%	<p>Buildings and foundations</p> <p>Construction expenditure (and not the acquisition cost) on buildings is typically deductible under the capital works provisions (Division 43).</p> <p>The deduction is at the rate of 2.5% or 4% depending on the date the work begins and the use of the building.</p> <p>Components such as air conditioning systems, lifts and escalators would be considered plant and depreciable at faster rates.</p> <p>Relief under plant, machinery and equipment rules would be available where the plant and building become so integrated that the building is treated as part of the plant. For example, a building would form an integral part of the plant when it is absolutely essential to support the working plant.</p> <p>Where the whole building is plant, concrete foundations or footings in which the uprights of the structure are embedded may also qualify as plant. The cost of excavating foundations may be part of the depreciable cost but not general site preparation.</p> <p>If only part of a building is plant, the cost of the building is apportioned between plant and capital works (Division 43). Indirect construction costs having a link to both the plant and non-plant building components may be allocated in proportion to direct costs.</p>

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Improvement of nonresidential buildings	40 years	PC	2.5%	
Construction of buildings		PC		
Hotel	25 years		4%	
Industrial	25 years		4%	
Other building (e.g., office premises)	40 years		2.5%	
Furniture, fittings or fixtures	10-50 years	PC/DV		
Computer hardware	4 years	PC/DV		
Computers, generally laptops	2-4 years	PC/DV		
Computer software (includes acquired software)	5 years (4 years for assets first used between 13 May 2008 and July 2015)	PC	In-house: Year 1 = 0% Year 2 = 30% Year 3 = 30% Year 4 = 30% Year 5 = 10% Acquired: prime cost	Expenditures on developing in-house software may be pooled. A separate software development pool must be created for each income year in which expenditure on such software is incurred. In-house software expenditures are those spent on developing software or on a right to use computer software that you acquire, develop or have another entity develop for use in your business. Acquired software must use the prime cost method and be depreciated over five years on a daily basis.
Aircraft – general use	8 or 10 years	PC/DV		If the plane or helicopter is used predominantly for agricultural spraying or agricultural dusting, then capped effective life of 8 years is applied. Otherwise, capped effective life of 10 years may apply.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Transport:		PC/DV		Lives quoted are the current lives set out in the Commissioner's list.
Motor cars (load of less than one tonne and less than nine passengers)	8 years			*Capped effective lives may also apply, depending on the gross vehicle mass (GVM) of the asset.
Buses	15 years (*7.5 years, if carries more than 9 people)			Note: the depreciable cost of motor cars is capped at AUD59,136 per car for the income year of 2020-21. The limit is indexed annually.
Taxis	4 years			
Light commercial	12 years (*7.5 years, may also apply if GVM less than 3.5 tonnes and carries more than 1 tonne)			
Motorcycle	7 years			
Trucks	15 years (*7.5 years if GVM more than 3.5 tonnes, other than certain trucks used in mining operations)			
Car park assets	5-20 years (assets)	PC/DV		Car parks would typically be a structural improvement depreciated under Division 43 (2.5% PC).
Sealed car parks	40 years (buildings)	PC		
Office equipment		PC/DV		Lives quoted are the current lives set out in the Commissioner's list.
Chairs	10 years			
Desks	20 years			
Reception assets	10 years			
Screens	20 years			
Tables	10 years			
Workstations	20 years			
Printer/copier	5 years			
Whiteboards	10 years			

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Land improvements	Varies depending on the types of improvements made	PC/DV		A land improvement can be a separate depreciating asset, depreciable over its effective life. Some land improvements may merely form part of the non-depreciable cost of the land.
Agricultural machinery and equipment	3-40 years	PC/DV		Effective life largely depends on the asset type and the agricultural sector where it is used.
Property used in R&D	N/A	N/A		Effective lives as noted above apply.

3.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Land is specifically not depreciable. Any gain or loss is only recognized on disposal. Fixtures or land improvements may be depreciable.
Trading stock	This is specifically not depreciable for Australian tax purposes.
Goodwill	This is not depreciable for Australian tax purposes. Any gain or loss is recognized on disposal.
Telecommunications	Expenditures incurred on rights to use an international telecommunication system before 22 September 1999 and domestic telecommunication systems before 12 May 2004 do not qualify as being a depreciating asset. Therefore, any decline in value attributable to such expenditure was not deductible under the capital allowance provisions. In certain circumstances, a deduction may have been available for such expenditures under other provisions contained in the Tax Acts. This would be factually specific to the circumstances. Expenditures on rights to use international and domestic telecommunication systems incurred on and after these dates are intangible depreciating assets, and a depreciation deduction should be available for their decline in value.

3.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Amounts paid to buy or create an asset (labor and materials) or to bring the asset to its current location and conditions are capitalized to the cost of the asset. This can include the following costs: incidental, site preparation, professional fees, testing asset functionality prior to installation and repair of asset.

Land remediation, dismantling, restoration

When an entity uses an asset, it may incur a contractual, statutory or constructive obligation to dismantle and remove the item or restore the site to minimum standards at the end of an asset's life. These costs may only be deducted in the period when incurred, and not merely when the liability is provided for.

Own labor capitalized – work on developing software, for example, or carrying out work on property

Employee costs in relation to initial acquisition (including installation and construction) of an asset are generally capitalized. This includes costs incurred to repair an asset to its original functional working condition immediately following or soon after acquisition (i.e., "initial repairs"). All other ongoing costs associated with maintaining the asset in its original functional working condition may be expensed in the year incurred (see below).

3.4 Availability of immediate deductions

In certain circumstances (other than those outlined above in section 2 in relation to Temporary Relief Concessions) expenditure that is capital in nature may be immediately deductible (see table below for qualifying expenditures).

Description	Detail
Assets below a certain value	<p>An immediate 100% deduction applies for depreciating assets costing AUD300 or less, subject to satisfying all the following conditions:</p> <ul style="list-style-type: none"> ▶ The asset was not part of a set of assets where the total cost exceeded AUD300. ▶ The total cost of the asset and any identical item started to be held in that year did not exceed AUD300. <p>The asset was used for producing assessable income that is not income from carrying on a business.</p> <p>For example, minor assets used to derive salaries and wages may be immediately deductible.</p> <p>In practice, the Australian Tax Office (ATO) also accepts that assets acquired by a business with a cost less than AUD100, which have not been included in the asset register, to be revenue in nature and immediately deductible (as set out in PS LA 2003/8).</p>
Repairs	Repairs and maintenance to maintain the asset in a functional working condition (and they are not initial repairs).
Environmental protection activities (EPA)	An immediate deduction can be claimed for expenditures incurred for the sole or dominant purpose of carrying on EPA. These are activities undertaken to prevent, fight or remedy pollution or to treat, clean up, remove and store waste from earning activities.

Description	Detail
Land care operations	The deduction is available as long as the land is used for a primary production business or for carrying on a business for a taxable purpose from the use of rural land. The deduction may be claimed even when the taxpayer is the lessee of the land.
Exploring or prospecting	Capital expenditures for exploring or prospecting for minerals are immediately deductible. Note: the costs of mining rights and information acquired from a nongovernment third party are not immediately deductible but may be deducted over the shorter of 15 years or the life of the mine/permit.

An immediate deduction can usually be claimed for repairs to machinery, tools or premises used to produce assessable business income.

“Repairs” is not defined but adopts its ordinary meaning. Taxation Ruling TR 97/23 discusses the meaning of “repair” and considers that repairs remedy or make good of defects. A repair involves restoration of the efficiency of function of the asset without changing its character. A repair merely replaces a part of something or corrects something that is already there and has become worn out or dilapidated. The treatment of repairs could be different for accounting and tax purposes.

The work may go beyond “repairs” if it (a) changes the character of the property or (b) does more than restore its efficiency of function.

An expenditure is considered capital when it is for work that is a renewal or reconstruction of the entirety of the asset. Here, “entirety” means that the asset is identified separately as a principal item of capital equipment or that it is an integral part, but only a part, of the entire premises and is capable of providing a useful function without regard to any other part of the premises or that it is a separate and distinct item of plant in itself from the thing or structure that it serves.

3.5 Small and medium business concessions

Small-business concessions

Small businesses can access a range of concessions including payment and reporting options. From 1 July 2016, a small business tax concession is available to all businesses with turnover less than AUD10 million. This applies to sole traders, partnerships, companies or trusts.

Small-business concessions include simplified depreciation rules, as described below; accelerated depreciation for primary producers; deductions for professional expenses for startups; immediate deductions for prepaid expenses; lower company tax rate; simplified trading stock rules; and others.

An immediate write-off is available for depreciating assets costing less than AUD1,000 (low-cost assets) (this was reduced from AUD6,500, effective 1 January 2014) for small businesses. An immediate write-off is also available for assets acquired for less than:

- ▶ AUD20,000 and installed ready for use after 7:30 p.m. (AEST) on 12 May 2015 and up until the end of 28 January 2019
- ▶ AUD25,000 and installed ready for use from 29 January 2019, until before 7:30 p.m. (AEDT) 2 April 2019

- ▶ AUD30,000 and installed ready for use from 7:30 p.m. (AEDT) 2 April 2019 until 11 March 2020
- ▶ AUD150,000 and installed ready for use from 12 March 2020 to 30 June 2021 providing the asset was purchased by 31 December 2020
- ▶ For assets that a small business starts to hold, and first uses (or has installed ready for use) for a taxable purpose from 7:30 p.m. (AEDT) on 6 October 2020 to 30 June 2022, the immediate write-off threshold above does not apply. Small business taxpayers can deduct the business portion of the asset's cost under the temporary full expensing measures (discussed above at Section 2).

The threshold reverts to AUD1,000 from 1 July 2022.

Simple pooling facility is available for the business portion of most higher cost assets (those with a cost equal to or more than the relevant instant asset write-off threshold) and claim: (a) 15% deduction in the first year and (b) 30% deduction per year thereafter; and deduct the balance of the small business pool at the end of the income year if the balance at that time (before applying the depreciation deductions) is less than the instant asset write-off threshold. Buildings are specifically excluded from the pooling arrangements unless they would qualify for deduction under Division 40.

Medium-business concessions for income years ending between 2 April 2019 and 11 March 2020

An immediate 100% deduction for depreciating assets costing less than AUD30,000 used by a medium-size business for a taxable purpose is available for a limited period. The deduction is only available for depreciating assets first acquired between 7:30 p.m. (AEDT) on 2 April 2019, and 11 March 2020 and has started to use, or has installed ready for use, in an income year that ends on or after 2 April 2019, and on or before 11 March 2020 (i.e., generally the 2018-19 and 2019-20 income years).

A medium-size business is an entity that is not a small business entity but would qualify as a small business entity if the threshold of the aggregated turnover test were AUD50 million instead of AUD10 million. A medium-size business is not able to access the simplified depreciation regime available to small business.

4. Depreciation and calculation methods

Methods used	Straight-line/prime cost, double diminishing value (declining) method
Frequency	Annually An annual calculation is required based on the days held and used. For example, diminishing value is calculated as opening written-down value (WDV) x (days held/365) x (2/effective life).
Year of acquisition	Where a depreciating asset is held and used for only part of the income year, the decline in value is calculated based on the number of days the asset is held and used or installed ready for use – i.e., cost x (days held/365).

Year of disposal	Assets continue to depreciate until disposal. When the asset is disposed of, any gain (or loss) on disposal is treated as assessable (or deductible).
Ability to use different methods for different assets	The choice of method is exercised on an asset-by-asset basis, and a different method can be used for identical assets.
Ability to switch methods	The choice of method for a particular asset applies for that income year and all later years in which the taxpayer claims a deduction in decline in value of that asset.

Taxpayers may use either of two methods to calculate the decline in value of a depreciating asset: **prime cost (straight-line)** or the **diminishing value (double diminishing)** method. The choice must be made before submitting the income tax return for the income year to which the choice relates. The choice is deemed to have been made from the taxpayer's capital allowances disclosures within the income tax return.

The choice is exercised on an asset-by-asset basis. The choice of straight-line or double diminishing cannot be changed once the choice is made (i.e., after submitting the income tax return for a particular year).

For a limited number of assets, however, no choice of method is available, and the taxpayer must use the prime cost method. This includes intangible depreciating assets, such as in-house software, intellectual property (IP), spectrum licenses and data-casting transmitter licenses.

5. Other preferential and enhanced depreciation availability

Tax depreciation method	Comment on specific application and benefits available
Primary producers	<p>A primary production business includes, <i>inter alia</i>, (a) cultivating plants, fungi seeds, etc.; (b) maintaining animals for sale; (c) manufacturing dairy produce from raw material produced; (d) catching fish, mollusks, etc.; (e) culturing pearls; (f) planting or tending trees; (g) felling trees; and (h) transporting trees.</p> <p>Primary producers may be entitled to concessional depreciation deductions:</p> <ul style="list-style-type: none"> ▶ Annual deductions over 10 years for the cost of telephone lines ▶ Accelerated write-off for new horticultural plants and grapevines ▶ Three-year write-off for expenditure on water facilities ▶ Outright deduction for land-care operations ▶ Special deduction for timber depletion and other timber industry concessions <p>Primary producers are entitled to immediately deduct the cost of fencing (except for stockyard, pen and portable fence) and water facilities such as dams, tanks, bores, irrigation channels, pumps, water towers and windmills incurred from 7:30 p.m. (AEST) on 12 May 2015.</p>
Exploration or prospecting expenditure	<p>Capital expenditure on exploration or prospecting for minerals (including petroleum) or quarry materials obtainable by "mining or quarrying operations" is deductible in the year in which it is incurred. Examples include transport, materials, labor and administrative costs incurred in carrying out exploration or prospecting activities.</p> <p>The cost of depreciating assets that are first used for exploration purposes is also immediately deductible (excluding the costs of mining rights and information acquired from a nongovernment third party).</p>

Tax depreciation method	Comment on specific application and benefits available
Project pools	<p>Certain mining project expenditures and transport expenditures or other capital project expenditures may be deductible over the estimated life of the project (called "project amounts"). The deduction is not limited to expenditures relating to mining projects and can include certain costs of infrastructure projects.</p> <p>Project amounts only include a capital expenditure that is not otherwise deductible and does not form part of the cost of a depreciating asset held by the taxpayer. That is, this covers those capital amounts that may not otherwise be deductible.</p> <p>Project amounts that are not mining capital expenditures and transport capital expenditures may also be deductible. Cost must be directly connected with a project and must be one of the following types of expenditures:</p> <ul style="list-style-type: none"> ▶ An amount to create or upgrade community facilities associated with the project ▶ An amount for site preparation costs for a depreciating asset ▶ An amount for feasibility studies for the project ▶ An amount for environmental assessments for the project ▶ An amount incurred to obtain information associated with the project ▶ An amount incurred to obtain a right to intellectual property ▶ An amount incurred for ornamental trees or shrubs <p>These amounts are deductible on a double diminishing value basis over the life of the project.</p>
Site rehabilitation expenditure	<p>An immediate deduction is available for current and capital expenditures on the rehabilitation of sites that have been used for "mining, quarrying or petroleum operations" (including exploration activities).</p> <p>"Rehabilitation" involves the restoration of the site to a reasonable approximation of its "pre-mining condition."</p> <p>An immediate write-off of capital expenditures incurred on "environmental protection activities" is also available for a broader range of expenditures (e.g., a preventive expenditure) than under the mine site rehabilitation measures.</p>
Environmental protection	<p>An expenditure, whether capital or revenue, that is incurred for the sole or dominant purpose of carrying on an environmental protection activity is deductible in the income year in which it was incurred. This immediate deduction is not available if environmental protection is only a residual or subsidiary purpose.</p>
Carbon sink forests	<p>An immediate deduction is available for capital expenditures on establishing trees in carbon sink forests in the 2007-08 income year and in later income years up to and including the 2011-12 income year.</p> <p>From 1 July 2012, a deduction may be claimed for a period of 14 years and 105 days at a write-off rate of 7%. The deduction is only available if the following conditions are met:</p> <p>The primary and principal purpose for establishing the trees is carbon sequestration by the trees.</p> <p>The expenditure is not incurred under a managed investment scheme (MIS).</p> <p>The trees meet certain forest characteristics and adhere to certain environmental resource management guidelines.</p>

6. Deductions for assets used in R&D

Research and development tax incentive for income years between 1 July 2011 and 30 June 2021

To encourage companies to conduct R&D activities in Australia, an entity is entitled to a tax offset, referred to as the “R&D tax incentive” for eligible R&D expenditures from 1 July 2011. The entity must satisfy both the R&D tax and depreciating assets provisions to obtain concessional deductions for assets which are used for conducting R&D activities.

For eligible activities, an entity may claim one of the following two types of R&D tax offsets:

1. If the R&D entity’s aggregated turnover for the income year is less than AUD20 million, the entity will be entitled to the refundable tax offset (currently at 43.5%, resulting in a net uplift of up to 16% from the standard deductions).
2. If the R&D entity’s aggregated turnover for the income year is equal to or exceeds AUD20 million, the R&D entity will be entitled to a non-refundable tax offset (currently at 38.5%, resulting in a net uplift of up to 8.5% from the standard deductions). This may be used to reduce the current year tax liability or carried forward and utilized in a future income year.

The offset for notional R&D deductions is capped at AUD100 million.

To the extent the R&D tax offset is claimed in relation to depreciating assets used in R&D activities, a taxpayer may not be able to claim tax depreciation on these same assets.

Research and development tax incentive for income years on or after 1 July 2021

In response to the COVID-19 pandemic, the government has announced amendments to the R&D tax incentive that will apply from the first income year commencing on or after 1 July 2021.

For eligible activities, an entity may claim one of the following two types of R&D tax offsets:

1. If the R&D entity’s aggregated turnover for the income year is less than AUD20 million, the entity will be entitled to the refundable tax offset (currently at 43.5%, resulting in a net uplift of up to 18.5% from the standard deductions).
2. If the R&D entity’s aggregated turnover for the income year is equal to or exceeds AUD20 million but is less than AUD50 million, the R&D entity will be entitled to a nonrefundable tax offset based on incremental intensity of R&D expenditure as a proportion of total expenditure for the year. This may be used to reduce the current year tax liability or carried forward and utilized in a future income year. The rate of the tax offset will be:
 - For R&D intensity between 0% and 2%, a 33.5% offset (resulting in a net uplift of up to 8.5% from the standard deductions)
 - For R&D intensity above 2%, a 41.5% offset (resulting in a net uplift of up to 16.5% from the standard deductions)
3. If the R&D entity’s aggregated turnover for the income year is equal to or exceeds AUD50 million, the R&D entity will be entitled to a nonrefundable tax offset based on incremental intensity of R&D expenditure as a proportion of total expenditure for the year. This may be used to reduce the current year tax liability or carried forward and utilized in a future income year. The rate of the tax offset will be:
 - For R&D intensity between 0% and 2%, a 38.5% offset (resulting in a net uplift of up to 8.5% from the standard deductions)
 - For R&D intensity above 2%, a 46.5% offset (resulting in a net uplift of up to 16.5% from the standard deductions).

The offset for notional R&D deductions will be capped at AUD150 million per annum.

To the extent the R&D tax offset is claimed in relation to depreciating assets used in R&D activities, a taxpayer may not be able to claim tax depreciation on these same assets.

7. Accounting for disposals

When a depreciable asset is disposed of, a “balancing adjustment event” occurs. The difference between the asset’s tax written-down value on the date of disposal (i.e., cost less accumulated depreciation) and any proceeds received on disposal is recognized as assessable income or a deductible expense (as a revenue deduction). No additional tax deduction is claimed after the disposal. The proceeds received may be deemed to be equal to the market value of the asset at that time.

If an asset is scrapped, then provided a taxpayer stops using it, or having it installed ready for use, and the taxpayer expects to never use it again, this may give rise to a balancing adjustment event.

8. Making a claim

A claim for depreciation is made in the income tax return. The tax system is a self-assessment, where minimal disclosures are required in the income tax return for capital allowances. For the 30 June 2020 income year, these include tax depreciation disclosures, adjustable values of depreciating assets, information on disposal of depreciating assets and termination value of depreciating assets.

Record-keeping requirements

A taxpayer must keep the following information for a depreciating asset:

- ▶ The first¹ and second element of cost²
- ▶ The opening adjustable value for the income year
- ▶ Any adjustments made to cost or adjustable value
- ▶ The date the taxpayer started to hold the asset
- ▶ The rate or effective life used to work out the decline in value and any reduction for use of the asset for nontaxable purposes
- ▶ The adjustable value at the end of the income year
- ▶ Any recoupment of cost included in assessable income
- ▶ If a balancing adjustment event occurs, e.g., a disposal or scrapping, the date of the balancing adjustment event, termination value (i.e., proceeds), adjustable value at that time, the balancing adjustment amount, any reduction of the balancing adjustment amount and details of any rollover or balancing adjustment relief

¹ The first element of cost is generally the amount paid to hold the asset. Market value substitution rules or other “deeming rules” may also apply.

² The second element of cost is amounts incurred after starting to hold the asset to bringing the asset to its present condition and location (e.g., capital improvements) and expenditures incurred that are reasonably attributable to the asset when a taxpayer stops holding this asset or will never use it again.

The following must also be kept:

- ▶ Details of how the effective life of a depreciating asset was worked out if the Commissioner's effective life was not adopted
- ▶ If the taxpayer has recalculated the effective life of an asset, the income year of the recalculation, the recalculated effective life, the reason for the recalculation and details of how the recalculated life was worked out
- ▶ Original documents such as suppliers' invoices and receipts for expenditure on the depreciating asset

These documents are not required to be submitted to the ATO but must be retained for five years.

9. Intangible assets

Intellectual property (IP)

Depreciating assets include items of IP, such as a patent, a registered design or a copyright (or as licensee of any of these items). Trademarks are not depreciating assets.

The decline in value of such items is calculated over the statutory effective life using the prime cost method (refer to below).

Computer software

In-house software is computer software, or a right to use computer software, that is acquired or developed mainly for use in performing the functions for which it was developed. The expenditure on in-house software will be deducted in the following ways:

- ▶ The decline in value of acquired in-house software is determined using an effective life of five years (apply to expenditures incurred on or after 1 July 2015) and the prime cost method.
- ▶ An expenditure incurred in developing in-house software may be allocated to a software development pool (see below).
- ▶ If the above expenditure is not pooled, it can be capitalized into the cost of a resulting unit of in-house software, and its decline in value is determined using an effective life of five years and the prime cost method.

Software development pool

A taxpayer may choose to allocate to a software development pool expenditure incurred on developing in-house software if its intended use is strictly for a taxable purpose. Once an expenditure is allocated to a pool, all such expenditures in that year or a later year must be allocated to a software development pool. A deduction for an expenditure in a software development pool is not claimed in the income year in which it is incurred. Rather, a deduction is allowed at a 30% rate in each of the following three years and 10% in the final year (year five) (for expenditures incurred from 1 July 2015).

Other intangible assets

Type of asset	Rates/lives
Standard patent	20 years
Innovation patent	8 years
Petty patent	6 years
Registered design	15 years
Copyright (other than film copyright)	Shorter of 25 years from the acquisition of copyright or the period until copyright ends
License (not relating to copyright or in-house software)	License term
License relating to copyright (except film copyright)	Shorter of 25 years from when taxpayer became licensee, and the period until license ends

Type of asset	Rates/lives
In-house software	5 years (from 1 July 2015)
Spectrum license	License term
Data-casting transmitter license	15 years
Telecommunications site access right	Term of the right

A film copyright (acquired on or after 1 July 2004) is specifically excluded from general treatment for ordinary copyright, and deductions for its decline in value are available on the basis of effective life, using either prime cost or diminishing value.

The effective life of an indefeasible right to use a telecommunications cable system is the effective life of the cable over which the right is granted. The taxpayer may self-assess such effective life, or the Commissioner can determine this.

An intangible asset (other than a copyright, a license related to a copyright and in-house software) acquired from a former holder of the asset is depreciable over the remaining number of years that are yet to elapse at the start of the year when the asset was acquired.

Effective life of intangible depreciating assets: mining, quarrying or prospecting rights

Type of asset	Rates/lives
A mining, quarrying or prospecting right relating to mining operations (except for obtaining petroleum or quarry materials)	The life of the mine or proposed mine or, if there is more than one, the life of the mine that has the longest life
A mining, quarrying or prospecting right relating to mining operations to obtain petroleum	The life of the petroleum field or proposed petroleum field, or, if there is more than one, the life of the petroleum field that has the longest life
A mining, quarrying or prospecting right relating to mining operations to obtain quarry materials	The life of the quarry or proposed quarry or, if there is more than one, the life of the quarry that has the longest estimated life

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation

Does the tax treatment follow book/statutory accounting depreciation?

No

Range of rates used

4%-100%

Depreciation method used to calculate tax deduction

Straight-line method

1. Entitlement to claim

The taxpayer that owns and uses fixed assets is entitled to claim depreciation costs (proof of ownership, possession or effective use of the assets may be required).

2. Allocation of tangible assets to tax depreciation lives and rates

Segregation of assets is mandatory to control the depreciation individually, as different assets may have different rates, and taxpayers need to demonstrate that no asset has been over-depreciated (i.e., exceeding its purchase value).

The Brazilian Internal Revenue Service (IRS) is the authority responsible for publishing the useful life and the depreciation rates accepted for tax purposes. For accounting purposes, there is no consolidated table of assets and correspondent useful life; thus, it varies by industry, and proof, through an expert's report, is required to support the case to use different depreciation rates from the ones set forth in the tax regulation.

2.1 Assets that qualify for tax depreciation

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment (general)	10 years	Annual	10%	The rate of depreciation may vary according to details and the Brazilian IRS ruling. The depreciation rate varies by industry. 3, 4, 5 or 10 years; 10%, 20%, 25% or 33%.
Automobiles	5 years	Annual	20%	The rate of depreciation may vary according to details and the Brazilian IRS ruling. The depreciation rate varies by industry. 4 or 5 years; 20% or 25%.
Buildings	25 years	Annual	4%	
Furniture, fittings or fixtures (general)	10 years	Annual	10%	The rate of depreciation may vary according to details and the Brazilian IRS ruling. The depreciation rate varies by industry. 5, 10 or 25 years; 4%, 10% or 20%.
Computer hardware	5 years	Annual	20%	
Computer software	5 years	Annual	20%	
Aircraft	10 years	Annual	10%	
Transportation other than automobiles or aircraft				The rate of depreciation may vary according to details of the asset and the Brazilian IRS rules. Depreciation will only be permitted if the asset is related to production or commercialization of goods and services. The depreciation rate varies by industry. 4, 5, 10 or 20 years; 5%, 10%, 20% or 25%.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Car parks				Parking buildings may apply for depreciation according to general building depreciation rules.
Office equipment (including office furniture and fixtures)	10 years	Annual	10%	
Qualified improvements in leasehold properties	1 year or more/less than 1 year	May vary	May vary	Improvements that enhance the useful life of the property in more than one year may be depreciated with the remaining value of the asset. Improvements that do not enhance the useful life in more than one year must be recognized as an expenditure in the period. Improvements in leasehold properties may be amortized if related to the manufacturing or commercialization of goods and services. The amortization rate varies as per the remaining years of the right or according to the period in which they will be enjoyed, if related to an intangible asset.
Machinery and equipment used for agricultural purposes	1 year	Annual	100%	Assets may be depreciated at 100% annual rate (accelerated depreciation).
Property used in R&D	No specific rate for R&D	No specific rate for R&D; it follows the regular asset depreciation.	No specific rate for R&D; it follows the regular asset depreciation.	Assets must be depreciated separately and might be subject to accelerated depreciation as a tax incentive in the first fiscal year.

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Long-term investment
Buildings rented or used for purposes other than manufacturing or commercialization of goods and services	Not an operational asset
Assets with value that usually increases over time (e.g., art/antiques)	Not an operational asset
Assets to which exhaustion quote applies	Exhaustion has the same tax and accounting impacts as depreciation. Exhaustion quotes are specific to the mining and forest assets' useful life, as these resources are exhausted, not depreciated. Although it is a different terminology, the principle is the same.

2.3 Noteworthy items

Pre-operational costs

Pre-operational costs and expenses must integrate into fixed-asset or intangible costs. If not related to fixed assets or intangibles, they must be written off as an expense. Intangibles might be subject to amortization.

Pre-operational expenditures, such as training programs, administrative and sales, cannot integrate into the value of intangibles; thus, they must be written off as expenses.

Leased assets

According to IRS Ordinance 1.700/2017, the deduction of depreciation, amortization, exhaustion and financial expenses generated for leased assets is prohibited for corporate income tax purposes.

However, any consideration paid or credited under the leasing contract may be deducted on the computation of corporate income tax.

Land remediation – removing asbestos

Depending on the specifics of the situation, the corresponding costs can be integrated to the fixed asset or written off as an expense.

Labor costs applied to software design

If the company is a service provider and develops specific software to improve the performance of its services, the corresponding labor costs can be integrated to the intangible value. Intangibles might be subject to amortization.

Other relevant matters

Repairs or improvements that do not enhance the useful life of an asset in more than one year must be written off as expenses in the same fiscal year.

Tax depreciation can differ from the accounting depreciation of the financial statements while not imposing restrictions. However, taxpayers might opt to use accounting over tax depreciation, if it is more tax beneficial.

2.4 Availability of immediate deductions for repairs

For tax purposes, it is possible to depreciate the following assets in the same year of acquisition:

- ▶ Fixed assets used in agricultural activity
- ▶ New machinery, equipment, apparatus and instruments used solely in activities of technological research and development (R&D incentive)

3. Depreciation and calculation methods

Methods used	The method referred to in tax legislation is the straight-line method. Nevertheless, there are different tax rates (not methods) related to specific regulations or based on expert reports (e.g., accelerated depreciation of machinery and industrial equipment used in two or three shifts).
Frequency	The depreciation rate is set on an annual basis. However, tax depreciation is calculated on a monthly basis.
Year of acquisition	The depreciation rate is calculated upon the acquisition date. However, if the asset is assembled and installed after the beginning of the tax year, the depreciation rate is apportioned to the remaining months of the tax year.
Year of disposal	N/A
Ability to use different methods for different assets	Both tax and accounting methods apply to different types of assets. For tax purposes, there must be an expert's report to support the case to use different depreciation rates from the ones set forth in the tax regulation. There are different methods only for accounting purposes.
Ability to switch methods	There are no different methods for tax purposes. Different rates may apply if there is an expert's report to validate the use of machinery and industrial equipment in two or three shifts (accelerated depreciation).

4. Preferential and enhanced depreciation availability

Two kinds of accelerated depreciation are set forth by tax law:

- Related to machinery and industrial equipment used in two or three daily production shifts
- Accelerated depreciation for very specific machinery, equipment and vehicles set forth by tax law

Specific legislation has created certain tax benefits related to accelerated depreciation for very specific years, regions and types of equipment.

Tax depreciation method	Comment on specific application and benefits available
Straight-line and accelerated depreciation	Agricultural machinery
Straight-line and accelerated depreciation	R&D – new machinery, equipment, apparatus and instruments, used solely for activities of technological research and development (R&D incentive)
Straight-line and accelerated depreciation	Fixed assets acquired or constructed by companies (e.g., public concessions)
Straight-line and accelerated depreciation	Vehicles for the transportation of goods, wagons and locomotives

5. Accounting for disposals

The residual value (i.e., the difference between the original cost of the asset and its depreciation) of an asset that is disposed must be considered to determine the capital gain. If the asset's sale price is higher than the residual amount, the capital gain is subject to corporate income tax. However, if it results in a capital loss, it is treated as a deductible expense for corporate income tax purposes.

Supporting documentation is necessary to prove the disposal of the asset (e.g., minutes drawn up by a notary public office).

6. Making a claim

Tax deductions corresponding to asset depreciation should be claimed when filing the income tax return.

Companies are required to keep supporting documentation to prove that the tax depreciation calculation is being done properly and separately by asset.

7. Intangible assets

Intangible assets are subject to amortization. There is specific legislation for every kind of intangible asset, such as goodwill, trademarks and licenses. The amortization rates of trademarks and licenses are related to the contracts/rights duration.

Goodwill is no longer subject to accounting amortization.

Type of asset	Rates/lives
Trademarks	Contingent on the contract/right duration
Patents, copyrights, design, know-how or similar items	Contingent on the contract/right duration
Goodwill	In-house goodwill is not deductible for tax purposes.
Licenses or permits	Contingent on the contract/right duration
Other (please provide details)	N/A

The deductible cost of amortization is related to the contract period. Additionally, in-house trademarks, patents and copyrights are not deductible.

8. Depreciation rates tax vs. accounting purposes – adjustments in taxable income

If the company adopts an accounting depreciation rate different from those accepted by the Brazilian IRS, and the measured value is less than that measured by tax depreciation rates, the difference of value may be adjusted in the taxable income, up to the limit of the value of the asset (according to IRS Ordinance 1.700/2017, article 124).

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Capital cost allowance (CCA)

Does the tax treatment follow book/statutory accounting depreciation?

No

Range of rates used

4%-100%

Depreciation method used to calculate tax deduction

Declining-balance, straight-line

Note: the 21 November 2018 Federal Economic Update implements wide-ranging changes to tax depreciation rules in Canada for most classes of assets acquired on or after this date and through the end of 2027.

1. Entitlement to claim

Corporate and personal taxpayers, as well as partnerships that generate business or property income, are entitled to claim the CCA.

2. Allocation of tangible assets to tax depreciation lives and rates

Details and descriptions of various CCA classes, including applicable declining-balance depreciation rate or straight-line depreciation life, and the properties that qualify for them are listed in Schedule II of the Income Tax Regulations (Canada). Assets that are purchased solely in support of equipment may be considered part of that equipment and classified as such (e.g., heating, ventilation and air conditioning (HVAC); plumbing; electrical). This is not required but typically results in more advantageous depreciation rates for the particular supporting assets/costs. In manufacturing and processing (M&P) situations, costs specifically related to the M&P activities and processes may be classified separately from the building.

Budget 2019-20 – tax depreciation/CCA measures

On 19 March 2019, Canada's Department of Finance introduced the 2019-20 federal budget with three key CCA measures that were previously announced in the 2018 Fall Economic Statement. These measures are now enacted and are known as the Accelerated Investment Incentive (All) rules:

(1) *Full expensing for manufacturing and processing machinery and equipment*

The 2019-20 federal budget proposes to allow for full expensing of M&P machinery and equipment by providing an enhanced first-year allowance for M&P machinery and equipment acquired after 20 November 2018 that becomes available for use before 2028. The enhanced first-year allowance will provide taxpayers with an immediate write-off of the full cost of M&P machinery and equipment if the property becomes available for use before 2024 (the half-year rule, discussed below, will not apply). The enhanced first-year allowance will be phased out as follows:

- ▶ For property that becomes available for use in 2024 and 2025, the enhanced first-year allowance is reduced to 75% of the cost of the M&P machinery and equipment.
- ▶ For property that becomes available for use in 2026 and 2027, the enhanced first-year allowance is reduced to 55% of the cost of the M&P machinery and equipment.

The enhanced first-year allowance is eliminated for property that becomes available for use after 2027. M&P machinery and equipment that becomes available for use after 2027 will be included in Class 43 and subject to a 30% CCA rate (subject to the half-year rule discussed below).

(2) *Full expensing for clean energy equipment*

The 2019-20 federal budget proposes to allow for full expensing of clean energy equipment included in Class 43.1 or 43.2 on a temporary basis. As with the proposed rules for M&P machinery and equipment, these proposed rules provide an enhanced first-year allowance for clean energy equipment acquired after 20 November 2018 that becomes available for use before 2028. The enhanced first-year allowance will provide taxpayers with an immediate write-off of the full cost of clean energy equipment if that property becomes available for use before 2024 (the half-year rule, discussed below, will not apply). The enhanced first-year allowance will then be phased out in the same manner described above for M&P machinery and equipment.

Clean energy equipment that becomes available for use after 2027 will be included in Class 43.1 and subject to a 30% CCA rate.

(3) *Accelerated investment incentive (applies to most other properties including buildings)*

For essentially any property subject to the existing tax depreciation/CCA rules, excluding property subject to the full expensing measures discussed above, the 2019-20 federal budget introduces an accelerated investment incentive to write off a larger share of the costs of newly acquired assets in the year the asset becomes available for use.

In general, the accelerated investment incentive has two elements:

- ▶ A 50% increase of the net capital cost addition to a class with respect to property acquired after 20 November 2018 that becomes available for use before 2024
- ▶ The suspension of the existing CCA half-year rule (discussed below) with respect to property acquired after 20 November 2018 that becomes available for use before 2028

Property that is eligible for this additional first-year allowance will be eligible for CCA of 150% of the standard CCA rate or deduction in the year that the property becomes available for use if acquired after 20 November 2018 and available for use before 2024. Properties acquired after 2023 and before 2028 will be eligible for 100% of the standard CCA rate or deduction in the year that the property becomes available for use.

This first-year enhanced allowance is not available where:

- ▶ The property was previously owned or acquired (before 21 November 2018) by the taxpayer or a person or partnership with which the taxpayer did not deal at arm's length.
- ▶ The property was transferred to the taxpayer on a tax-deferred rollover basis.

Overall, the All rules significantly accelerate tax depreciation in the first year of asset ownership; at the same time, other eligibility requirements for the asset class remain the same. If a property eligible for the accelerated investment incentive is available for use in a short taxation year (see Section 3 for further details), the additional CCA claim will be calculated in accordance with the short taxation year rules and no further incentive is available for this property in future taxation years.

2.1 Assets that qualify for tax depreciation

Asset type	Useful life for tax	Type of tax depreciation method	First-year tax depreciation rate under All rules	Applicable tax depreciation rate – regular rate before All rules	Comments
Plant, machinery and equipment (PME)	N/A	Declining-balance (DB)	30% DB – Class 8 (general equipment) 100% – Class 53 (M&P equipment)	Various – see comments	There are many CCA classes for PME, the most common of which are Class 8 (general equipment – 20% DB CCA rate) and Class 53 (M&P equipment – 50% DB CCA rate).
Automobiles	N/A	DB	45%	30%	Luxury passenger vehicles (those that cost more than CAD30,000, excluding pickup trucks, vans and similar vehicles that are used more than 90% for business) are limited to a maximum CAD30,000 addition to CCA Class 10.1 and must be placed in a separate class for each asset. Passenger vehicles costing less than CAD30,000 or pickup trucks, vans and similar vehicles used more than 90% for business are recorded in one class and depreciated at a rate of 30%. Zero-emissions vehicles acquired after 1 March 2020 and available for use before 2024 are eligible for a 100% depreciation rate.
Buildings	N/A	DB	6%/9%/15%	4%/6%/10%	Buildings initially qualify for 4% DB CCA rate. Buildings with more than 90% non-residential usage (by square footage) are depreciated at a 6% DB CCA rate; buildings with more than 90% M&P usage (by square footage) are depreciated at a 10% DB CCA rate. Corrugated metal buildings with no footings or base support below ground level are depreciated at a 10% DB CCA rate.

Asset type	Useful life for tax	Type of tax depreciation method	First-year tax depreciation rate under All rules	Applicable tax depreciation rate – regular rate before All rules	Comments
Furniture, fittings	N/A	DB	30%	20%	
Computer hardware	N/A	DB	82.5%	55%	Includes general-purpose electronic data processing equipment, systems software, and ancillary data processing equipment
Computer software	N/A	DB	100%	55%/100% (half-year rule)	System software is classified with the related computer hardware as noted above. Application software is depreciated at a 100% DB CCA rate, but half-year rule is applicable (see below).
Aircraft	N/A	DB	37.5%	25%	Includes furniture and fittings attached to aircraft
Transport other than automobiles	N/A	DB	45% – general automotive equipment 60% – tractors for hauling freight	Various	Most automotive equipment is depreciated at a 30% DB CCA rate. Tractors designed for hauling freight with a GVWR >11,788kg are depreciated at a 40% DB CCA rate.
Car parking lots	N/A	DB	12%	8%	Surface-constructed parking lots are depreciated at an 8% DB CCA rate.
Office equipment (including office furniture and fixtures)	N/A	DB	30%	20%	

Asset type	Useful life for tax	Type of tax depreciation method	First-year tax depreciation rate under All rules	Applicable tax depreciation rate – regular rate before All rules	Comments
Land improvements	N/A	DB or immediate deduction	Various DB rates or expense	Various DB rates or expense	Landscaping is immediately deductible in the year incurred. Other land improvements incurred because of the installation of another asset (parking lot drainage, drainage for building, utility service trenching, etc.) would follow the classification of the asset that required the land improvement to be incurred.
Qualified leasehold improvement property	Initial lease term plus first renewal period/option	Straight-line (SL) depreciation method with half-year rule in the first year	150% of standard straight-line depreciation	Initial lease term plus one renewal period	This applies to leasehold improvement costs incurred by a tenant.
Agricultural machinery and equipment	N/A	DB	30%/45%	20%/30%	Automotive agricultural equipment has a 30% CCA rate. Most other equipment will be considered general equipment and have a 20% CCA rate.
Property used in R&D	N/A	DB	Various	Various	No special rules apply for R&D equipment. Equipment type will dictate depreciation rate. If R&D activity supports M&P, the R&D property could be considered M&P property. Other equipment would follow classifications set out above.

2.2 Assets that do not qualify for tax depreciation

Type of asset	Explanation
Land	Land does not qualify for CCA deduction as it is not depreciable property. See also land improvements above.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

These fees are generally considered to be included in the capital cost of an asset put into use. If they relate to more than one asset, they would be allocated among the properties.

Land remediation – removing asbestos, Japanese knotweed

No specific treatment for these items is given in legislation. See general principles set out in the repair discussion below. If a taxpayer has owned land for a period of time and discovers it has become contaminated, and the taxpayer remediates the land (restoring it to its original “clean” state), the related remediation costs would be deductible. If the taxpayer acquires land that was already contaminated (known or unknown to the taxpayer) and remediates the land, the related costs would be added to the cost of the property/land.

Own labor capitalized – work on developing software, for example, or carrying out work on property

When a taxpayer manufactures or produces a property for his or her own use, the capital cost of the property includes material, labor and overhead costs reasonably attributable to the property. The capital cost excludes any profit that might have been earned if the property had been sold.

2.4 Availability of immediate deductions

Description	Detail
Chinaware, cutlery or other tableware	100% DB CCA rate (not subject to half-year rule)
Kitchenware utensils costing less than CAD500	100% DB CCA rate (not subject to half-year rule)
Medical or dental instruments costing less than CAD500	100% DB CCA rate (not subject to half-year rule)
Linens	100% DB CCA rate (not subject to half-year rule)
Tools costing less than CAD500	100% DB CCA rate (not subject to half-year rule)
Uniforms	100% DB CCA rate (not subject to half-year rule)
Apparel or costumes used for the purpose of earning income	100% DB CCA rate (not subject to half-year rule)
M&P machinery and equipment acquired after 20 November 2018 and available for use before 2024	100% CCA rate in the year of acquisition (not subject to half-year rule)
Clean energy equipment in Class 43.1 or 43.2 acquired after 20 November 2018 and available for use before 2024	100% CCA rate in the year of acquisition (not subject to half-year rule)

Description	Detail
Application software acquired before 2028	100% CCA rate in the year of acquisition (not subject to half-year rule)
Repairs and maintenance expenditures	Repairs and maintenance expenditures that restore an asset to its original condition and do not create an enduring benefit to the taxpayer – replacing a component part of a larger asset, etc. – can be immediately deductible for tax purposes.

No legislation details what a repair is, however this has been addressed through much case law. Administrative positions also have been published by the Canada Revenue Agency (CRA). The courts have held that the determination of capital vs. expense is based on ordinary commercial principles and must be evaluated on a case-by-case basis. CRA's administrative guidelines with respect to the determination of what constitutes a capital or current (repair) expenditure are indicated in the following key factors/criteria:

- ▶ Enduring benefit – does the expenditure bring into existence an asset or advantage?
- ▶ Maintenance or betterment – does it result in more than the restoration of an asset to its original condition?
- ▶ Integral part or separate asset – is the expenditure a repair or an acquisition of a separate asset?

The CRA guidelines/administrative position have been developed from the extensive body of case law that addresses whether an expenditure is on account of capital or an immediately deductible repair.

There are different guidelines/criteria for repairs and maintenance for tax purposes (based on case law principles) and accounting purposes (based on accounting standards). Any differences are reconciled in the calculation of taxable income for a period. Case law also indicates that when evaluating an expenditure as capital or current in nature for tax purposes, the accounting treatment can be looked to as an interpretive aid and no more.

If a business adopts a capitalization threshold, such as an asset below CAD1,000, it will be expensed for accounting purposes. CRA would typically accept this practice for tax purposes provided it is aligned with the accounting treatment.

3. Depreciation and calculation methods

Methods used	Declining-balance, straight-line
Frequency	CCA is calculated for each taxation year when the annual tax/partnership return is filed. For short taxation years, the depreciation/CCA claim is prorated on the number of days in the taxation year out of 365. For assets eligible for the All rules discussed in Section 2, the proration of this claim will also apply based on the number of days in the tax year out of 365, and no further incentive allowance will be available in the following tax year in respect of that property. Assets that are classified in the same CCA class are typically grouped together in one pool (other than specific classes, such as some automotive equipment, rental properties costing more than CAD50,000, 6%/10% buildings where the taxpayer files an election, etc.), and CCA is claimed on the entire pool of assets.
Year of acquisition	In the year of acquisition, most properties are subject to a half-rate rule, i.e., 50% of the class regular CCA rate. Accelerated Investment Incentive properties, as noted above, generally have a first-year CCA rate of 150% of the regular/normal CCA rate, up to a maximum of 100%. CCA is only calculated on the assets remaining in the CCA class/pool at year-end, so in the year of disposal, no CCA is calculated on an asset that is disposed of.

Ability to use different methods for different assets	Yes. The method is laid out by tax legislation (regulations).
Ability to switch methods	Yes, misclassified property can be reclassified, although when moving misclassified property in a taxation year subsequent to the year of acquisition there is no ability to claim any All benefit that would have been available if the property was initially classified correctly. Also, there are rules that allow classes to be combined when a certain property was acquired under one class, more additions were made under a new legislated class and assets are sold from both classes.

4. Preferential and enhanced depreciation availability

Type of asset	Comment on specific application and benefits available
M&P machinery and equipment	Depreciated on a three-year, straight-line basis (25%/50%/25%) for assets purchased before 2016. Assets purchased after 2015 and before 2026 will be depreciated on a 50% declining-balance basis. M&P machinery and equipment subject to the All rules discussed above that are acquired after 20 November 2018 and before 2024 are eligible for a 100% deduction in the year the property is available for use.
Energy-efficient assets, such as solar, wind, large-scale hydro, geothermal projects, etc.	Available to be depreciated at a 50% declining-balance rate if purchased after 22 February 2005 and before 2025. Under the All rules, such clean energy equipment acquired after 20 November 2018 and available for use before 2024 is eligible for a 100% deduction in the year the property is available for use.
Computer hardware	Computer hardware (electronic data processing equipment) and peripheral equipment (ancillary data processing equipment) is depreciated at a 55% DB CCA rate. Under the All rules, such property will be eligible for an 82.5% deduction in the year the property is available for use.
Computer software	System software is depreciated at a 55% DB CCA rate. Application software is depreciated at a 100% DB CCA rate, but half-year rule is applicable. Under the All rules, system software will be eligible for an 82.5% deduction in the year the property is available for use and application software will be eligible for a 100% deduction in the year the property is available for use.

Investments in qualified M&P equipment in certain areas of the country are eligible for either a provincial or federal investment tax credit (typically 4%-20% of the cost of the asset or more). Various other investment tax credits are available provincially across the country (e.g., green-energy equipment in Manitoba; digital media tax credit in Nova Scotia and Ontario). As well, Quebec has introduced additional or "super" tax depreciation/CCA beginning in 2017 – here additional tax depreciation/CCA is available for certain property acquired in Quebec and is in addition to regular tax depreciation/CCA (effectively 22% to 37.5% additional tax depreciation depending on the date the property is acquired).

5. Accounting for disposals

As discussed above, most property/asset CCA classes are made up of pools of similar assets. When an asset is disposed of, the pool value is reduced by the lesser of the original cost of the asset or the proceeds of disposition. CCA is then calculated on the resulting net/adjusted pool balance after this reduction.

If the last asset in a pool/class is disposed of, there is an income inclusion if the resulting pool balance is negative (called "recapture") or an additional deduction if the resulting pool balance is positive (called a "terminal loss") after deducting the lesser of the original cost or proceeds from the pool value.

No adjustments/deductions are available if a company scraps an asset for no value.

6. Making a claim

Depreciation/CCA claims are made by filling out Schedule 008 of the Corporation Income Tax or Partnership Return. This schedule calculates the current year CCA claim by factoring in opening pool balances, additions, disposals and adjustments. This amount is then deducted in calculating net income for tax purposes/taxable income elsewhere in the return.

Supporting documentation must be retained by the taxpayer for all tax returns filed (whether electronically or on paper) for a period of seven years after the end of the tax year, although there is no supporting documentation required to be sent along with the tax return when it is filed.

7. Intangible assets

- ▶ Unless specifically permitted to be deducted in Part I of the Income Tax Act (Canada), all amounts on account of capital are non-deductible. Specific CCA classifications/deductions for some limited-life intangible assets are detailed in the table below.
- ▶ There is also a deduction available for eligible capital expenditures (ECEs), which are expenditures made with respect to a business, made on account of capital, for the purpose of gaining or producing income not otherwise deductible under a specific provision of the Income Tax Act (Canada) and not included in the cost of tangible, corporeal, intangible or incorporeal property of the taxpayer. Examples of ECEs include goodwill, customer lists, trademarks, farm quotas, franchises, concessions and licenses of indeterminate duration. Prior to 2017, ECEs were deducted by adding 75% of the capital cost of the ECE to a pool that was depreciated at a 7% declining-balance depreciation rate. Since 1 January 2017, 100% of these expenditures are added to CCA Class 14.1 and deducted at a 5% declining-balance depreciation rate with transitional rules applying for the transfer of the pre-2017 ECE pool to Class 14.1. Under the All rules, for ECEs acquired after 20 November 2018 and before 2024, the first year of CCA will be calculated using a 7.5% DB CCA rate (an additional 50%); for such property acquired after 2023 and before 2028, an additional 25% CCA deduction is available in the first year.

Type of asset	Rates/lives (Note: These rates do not reflect the All rules, which provide 150% of the CCA rate in the first year as discussed above)
Trademarks	CCA Class 14.1 – as noted above, 5% DB CCA rate.
Patents, copyrights, design, know-how or similar items	Patents are depreciated over the useful life of the asset (SL depreciation) – Class 14 (limited life). Patents may also be Class 44 property – 25% DB CCA rate.
Goodwill	CCA Class 14.1 – as noted above, 5% DB CCA rate.
Licenses or permits	Licenses are depreciated over the useful life of the asset (SL depreciation) – Class 14 (limited life).

This chapter relates to the mainland China tax jurisdiction.

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation

Does the tax treatment follow book/statutory accounting depreciation?

No

Range of rates used

5.00%-33.33%

Does the tax treatment follow book/statutory accounting depreciation?

Straight-line method

1. Entitlement to claim

Legal owners or lessees of a finance lease

2. Allocation of tangible assets to tax depreciation lives and rates

Accounting Standards for Business Enterprises No. 4 – fixed assets

The component parts of a fixed asset have different useful lives or provide economic benefits for the enterprise in different forms, and different depreciation rates or depreciation methods apply. As such, they are recognized as fixed assets on an individual component part basis.

The cost of a purchased fixed asset includes the purchase price, relevant taxes, freight, loading and unloading fees, professional service fees and other disbursements that bring the fixed asset to the expected conditions for use and that may be attributed to the fixed asset.

If a payment is made for purchasing several fixed assets that are not priced separately, the price of each fixed asset shall be determined by allocating the payment according to the proportion of fair value of each fixed asset to the total cost of all assets acquired.

If a payment for a fixed asset is delayed beyond the normal credit conditions, and it is of financing nature in effect, the cost of the fixed asset shall be determined based on the current value of the purchase price. The difference between the actual payment and the current value of the purchase price shall be recorded in the current profits and losses within the credit period, unless it shall be capitalized under Accounting Standards No. 17 – *Borrowing Costs*.

Unless otherwise prescribed in the regulations of the competent finance and taxation departments under the State Council, the minimum terms of calculating the depreciation of the fixed assets are as follows.

2.1 Assets that qualify for tax depreciation

Generally speaking, if the amount of accounting depreciation is less than the tax depreciation, the tax depreciation is limited to the amount of accounting depreciation calculated by asset.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Houses and buildings	20 years			
Airplanes, locomotives, ships, machines and other production facilities	10 years			
Apparatus, tools and furniture in connection with the production operation	5 years			
Transportation facilities other than airplanes, locomotives and ships	4 years			
Electronic equipment	3 years			
Land and buildings	20 years	Straight-line method	5%	Land is usually considered an intangible asset in form of land use right in China.
Plant, machinery and equipment	10 years	Straight-line method	10%	
Motor cars	4 years	Straight-line method	25%	
Buildings	20 years	Straight-line method	5%	
Furniture, fittings or fixtures	5 years	Straight-line method	20%	
Computer hardware	3 years	Straight-line method	33.33%	

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Computer software	10 years	Straight-line method	10%	
Aircraft	10 years	Straight-line method	10%	
Transport other than motor cars	4 or 10 years	Straight-line method	25% or 10%	Depending on the type of transportation facility
Car parks	20 years	Straight-line method	5%	Assuming it is a building
Office equipment (including office furniture and fixtures)	3 or 5 years	Straight-line method	33.33% or 20%	Depending on whether such office equipment could be considered as electronic equipment
Land improvements				Depending on accounting treatment; if treated as land cost, such improvement shall be amortized based on the remaining land-use term.
Qualified leaseholder improvement property	Based on remaining lease term	Straight-line method	Depends	The improvement shall have the effect of changing building structure or prolonging useful life.
Agricultural machinery and equipment	5 years	Straight-line method		
Property used in R&D		Straight-line method		May be qualified for super deduction (see below)

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Fixed assets, other than houses and buildings, that have not yet been used	
Fixed assets leased from other parties by means of operating lease	
Fixed assets leased to other parties by means of finance lease	
Fixed assets that have been depreciated in full but are still in use	
Fixed assets that are unrelated to business operating	

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Follow accounting treatment

Land remediation – removing asbestos, Japanese knotweed

Follow accounting treatment

Own labor capitalized – e.g., work on developing software or carrying out work on property

Follow accounting treatment

Accounting Standards for Business Enterprises No. 4 – Fixed Assets

According to Article 8, the cost of a purchased fixed asset includes the purchase price, relevant taxes, freight, loading and unloading fees, professional service fees and other disbursements that bring the fixed asset to the expected conditions for use and that may be attributed to the fixed asset.

If several fixed assets are purchased for a combined price, the price of each fixed asset will be determined by allocating the payment according to the proportion of fair value of each fixed asset to the total cost of all assets acquired.

If the payment for a fixed asset is delayed beyond the normal credit conditions (e.g., through a finance arrangement), the cost of the fixed asset will be determined by the basis of the current value of the purchase price. The difference between the actual payment and the current value of the purchase price will be recorded in the current profits and losses within the credit period, unless it is capitalized under Accounting Standards No. 17 – *Borrowing Costs*.

2.4 Availability of immediate deductions for repairs

According to Article 13, in the computation of taxable income, the following expenses incurred by an enterprise as long-term deferred expenses and computed in accordance with relevant provisions may be deducted:

- ▶ Reconstruction expenses for fixed assets that have been depreciated in full
- ▶ Reconstruction expenses for fixed assets leased from other parties
- ▶ Expenses for material repair of fixed assets are not necessary

According to Article 68, the expenditures arising from reconstructing the fixed assets mean the expenditures that the enterprise has paid for changing the structure of a house or building and extending the lifetime of a house or building.

Expenditures relating to owned assets will be amortized in stages as per the estimated lifetime of the fixed assets. Expenditures relating to leased assets will be amortized by stages as per the remaining lease term stipulated in the lease contract. If the reconstruction of fixed assets extends their lifetime, besides being subject to the provisions of Item 1 and Item 2 of Article 13 of Enterprise Income Tax Law, their term of depreciation shall be extended.

According to Article 69, expenditures arising from overhauling fixed assets, as indicated in Item 3 of Article 13 of the Enterprise Income Tax Law, mean expenditures that meet the following conditions:

- ▶ A repair expenditure reaching 50% or more of the taxation basis of acquiring the fixed assets
- ▶ An extension of over two years of the lifetime of the overhauled fixed assets

The expenditure prescribed in Item 3 of Article 13 of the Enterprise Income Tax Law will be amortized by stages as per the remaining lifetime of the fixed assets.

The deductions will be consistent with the accounting treatments adopted in financial information, e.g., tax deduction cannot be taken for items that have been capitalized on book.

3. Depreciation and calculation methods

Methods used	Straight-line method, unit-of-production method, double-declining-balance method and sum-of-the-years'-digits method could be eligible for qualified accelerated depreciation (see below).
Frequency	Monthly
Year of acquisition	The depreciation of fixed assets can be calculated from the month after the fixed assets are put into use.
Year of disposal	The calculation of the depreciation stops the month following when the fixed assets ceases to be used.
Ability to use different methods for different assets	Subject to qualified accelerated depreciation (see below)
Ability to switch methods	No

Law of China on Enterprise Income Tax

According to Article 32, where the fixed assets of enterprises require accelerated depreciation due to technology advancement, the years of depreciation may be shortened or the accelerated depreciation method may be adopted.

Circular of the State Administration of Taxation on Issues Concerning the Treatment of Income Tax on Accelerated Depreciation of Enterprise Fixed Assets (Guoshuifa [2009] No. 81)

According to Article 1, in accordance with the relevant provisions of Article 32 of the Enterprise Income Tax Law and Article 98 of the Implementing Regulations, if the major or key fixed assets of an enterprise possessed and used for production and operation by the enterprise need to be depreciated in an accelerated rate due to the following reasons, it may curtail the term of depreciation or adopt a method for accelerated depreciation:

- ▶ Where the products are replaced and upgraded due to technological progress
Or
- ▶ Where the fixed assets are in a state of vibration and are being exposed to a high degree of erosion

Notice regarding the improvement of corporate income tax (CIT) policies on accelerated depreciation of fixed assets (Caishui [2014] No. 75)

- ▶ Accelerated depreciation treatments are applicable to six industries. Enterprises engaging in the following six industries may adopt a shortened depreciation life or accelerated depreciation methods for CIT purposes for fixed assets acquired on or after 1 January 2014:
 - ▶ Manufacturing of biopharmaceuticals
 - ▶ Manufacturing of special equipment
 - ▶ Manufacturing of transportation equipment for railway, shipping, aviation, aerospace and other conveying units
 - ▶ Manufacturing of computers, telecommunication and other electronic equipment
 - ▶ Manufacturing of instruments and meters
 - ▶ Information transmission, software and information technology services

Small and micro-sized enterprises engaging in the above six industries can claim a deduction for CIT purposes all at once for devices and equipment with unit value not exceeding RMB1 million that are acquired on or after 1 January 2014 and used for research and development (R&D), as well as production and business operations. These enterprises would no longer be required to depreciate the aforesaid fixed assets over their useful lives. For those fixed assets with unit value exceeding RMB1 million, the above enterprises may adopt a shortened depreciation life or accelerated depreciation methods for CIT purposes.

- ▶ Accelerated depreciation treatments applicable to fixed assets with unit value not exceeding RMB5,000
Enterprises under various industries can claim a deduction for CIT purposes all at once for their fixed assets with unit value not exceeding RMB5,000. Enterprises would no longer be required to depreciate these fixed assets over their useful lives.
- ▶ Where the fixed assets are in a state of vibration and are being exposed to a high degree of erosion

For the above enterprises that can adopt a shortened depreciation life applicable to the six specific industries and R&D projects, the applicable minimum depreciation period shall not be shorter than 60% of the depreciation period stipulated in Article 60 of the Implementation Regulations on the CIT Law (CITLIR) as mentioned above. Enterprises that can adopt accelerated depreciation methods can adopt the double-declining-balance method and sum-of-years'-digits method.

Notice regarding the further improvement of CIT policies on accelerated depreciation of fixed assets (Caishui [2015] No. 106)

Enterprises engaging in four key industries – textile, machinery, automobile and light – may adopt a shortened depreciation life or accelerated depreciation method for CIT purposes for fixed assets acquired on or after 1 January 2015.

Small and micro-sized enterprises engaging in the above four industries can claim a 100% up-front deduction with respect to depreciation for CIT purposes for devices and equipment with a unit value not exceeding RMB1 million that were acquired on or after 1 January 2015 and used for R&D, as well as production and business operations. These enterprises would no longer be required to depreciate the aforesaid fixed assets over their useful lives.

For fixed assets with a unit value exceeding RMB1 million, the above enterprises may choose to adopt a shortened depreciation life or apply an accelerated depreciation method for CIT purposes.

For eligible enterprises that choose to adopt a shortened depreciation life applicable to the four key industries mentioned above, the minimum depreciation period shall not be shorter than 60% of the depreciation period stipulated in CITLIR. Enterprises that choose to adopt accelerated depreciation methods can use either the double-declining-balance method or the sum-of-years'-digits method.

Notice regarding CIT policies on deductions for equipment and devices (Caishui [2018] No. 54)

It is further prescribed in Circular 54 that, from 1 January 2018 to 31 December 2020, an enterprise may claim a CIT deduction all at once for any newly acquired device or equipment (except for real estate or constructions) if the unit value of the device or equipment does not exceed RMB5 million.

Where an enterprise acquires any newly acquired device or equipment with unit value exceeding RMB5 million, the taxpayers should still refer to Circular 75 and Caishui [2015] No. 106 (Circular 106, i.e., Notice regarding the further improvement of CIT policies on accelerated depreciation of fixed assets).

Announcement regarding the further improvement of CIT policies on accelerated depreciation of fixed assets (SAT [2019] No. 66)

From 1 January 2019, the preferential policy for accelerated depreciation of fixed assets as provided in Circular 75 and Caishui [2015] No. 106 shall be expanded to the whole manufacturing industry.

Where any manufacturing enterprise has not been entitled to the preferential policy for accelerated depreciation of fixed assets prior to the issuance of this Announcement, it may be entitled to such preferential policy when declaring the monthly (quarterly) prepayment of enterprise income tax or making the final settlement of enterprise income tax for 2019 after the Announcement is released.

Circular on preferential corporate income tax policies for the Hainan Free Trade Port (Caishui [2020] No. 31)

From 1 January 2020 to 31 December 2024, an enterprise established in the Hainan Free Trade Port may claim a CIT deduction all at once for newly acquired (including self-constructed and self-developed) fixed assets if the unit value does not exceed RMB5 million.

If the unit value of newly acquired (including self-constructed and self-developed) fixed assets or intangible assets exceeds RMB5 million, the depreciation or amortization period can be shortened or an accelerated depreciation or amortization method can be adopted.

The term "fixed assets" as used in this article refers to fixed assets other than houses and buildings.

4. Preferential and enhanced depreciation availability

Investment in R&D equipment may be rewarded by an enhanced depreciation at 175% of the original cost.

If an enterprise is engaged in qualified R&D activities, it may qualify for a super-deduction (enhanced depreciation by increasing the calculation base) for devices and facilities used specifically for R&D activities.

R&D activities refer to activities with clearly defined purposes continuously and systematically carried out to obtain new science/technology knowledge, including:

- ▶ Applying new science/technology knowledge in an innovative manner
- Or
- ▶ Improving current technologies, products/services or techniques substantially

The following industries are not eligible for the super deduction:

- ▶ Tobacco
- ▶ Accommodation and catering
- ▶ Wholesale and retail
- ▶ Real estate
- ▶ Leasing and commercial service
- ▶ Entertainment
- ▶ Other industries as specified by the Ministry of Finance (MOF) or State Administration of Taxation (SAT)

The following seven types of activities are excluded from applicable scope of the super deduction policy:

- ▶ Routine upgrades of products/services
- ▶ Simple application of R&D results, such as direct application of public techniques, materials, devices, products, services, knowledge, etc.
- ▶ Technical support to customers after the commoditization
- ▶ Repeated or simple changes made to existing products, services, technologies, materials or processes
- ▶ Research on market, efficiency or management
- ▶ Regular quality control, test and analysis, repairs and maintenance
- ▶ Research on social sciences, arts or humanities

5. Accounting for disposals

Asset losses incurred by an enterprise due to normal abandonment and disposal of fixed assets reaching or exceeding the service life could be claimed as a deduction. Companies only need to fill out related forms for asset losses as part of the annual income tax returns and keep the supporting documents for further possible tax inspection. A gain on disposal of an asset will be subject to CIT as part of taxable income.

6. Making a claim

Tax depreciation is incorporated into the tax return. No special procedures are required for a deduction.

Form A105080 of annual CIT filing return shows the calculation for tax and accounting depreciations. For accelerated depreciation, Appendix 1 of quarterly CIT filing return shall be submitted. No other documentation is required by the tax authority. However, supporting documents such as invoices should be kept by management for further examination.

7. Intangible assets

Implementing regulations of the law of China on enterprise income tax

Amortized expenses calculated as per the straight-line method for intangible assets may be deducted. The term of amortization for the intangible assets shall be no less than 10 years.

For the intangible assets used as investment or transferred intangible assets, if the term of validity is prescribed by the relevant laws or the agreement/contract, the amortization may be calculated in stages based on the term of validity.

For purchased software, the term could be shortened to two years subject to specific application.

Type of asset	Rates/lives
Trademarks	10 years or actual term of validity
Patents, copyright, design, know-how or similar item	10 years or actual term of validity
Goodwill	Cannot be amortized
License or permit	10 years or actual term of validity
Other	Depends on the details

According to Article 65, the intangible assets indicated in Article 12 of the Enterprise Income Tax Law mean the nonmaterial and non-currency long-term assets that the enterprise has possessed for producing the commodities; providing labor service; leasing; or managing, including the patent right, the trademark privileges, the copyright, the land-use right, the non-patent technology and the credit.

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation

Does the tax treatment follow book/statutory accounting depreciation?

No

Range of rates used

0%-100%

Depreciation method used to calculate tax deduction

Declining-balance, straight-line (acquisition cost)

1. Entitlement to claim

The legal owners are generally entitled to claim.

2. Allocation of tangible assets to tax depreciation lives and rates

Generally, companies are not required to break down assets. Taxpayers are required to specify buildings and leasehold improvements per asset and acquisition year. In addition, if a building is constructed or purchased, the company can distinguish between parts of the building and segregate these into the depreciation classes defined in the Tax Depreciation Act. The treatment of buildings and associated assets (such as installations or operating equipment) depends on the use of the building.

Depreciation classes for fully depreciable buildings in use for commercial purposes:

Type of building	Yearly deduction percentage
Buildings	4% (straight-line)
Associated buildings	4% (straight-line)
Installations	4% (straight-line)
Operating equipment	25% (declining-balance)
Installations serving the specific business activity of the user qualify as operating equipment	25% (declining-balance)
Fees paid for connection to public and privately held facilities, e.g., water	20% (straight-line)

Depreciation classes for non-depreciable buildings in use for commercial purposes:

Type of building	Yearly deduction percentage
A building cannot be depreciated if it is used for: <ul style="list-style-type: none"> ▸ Offices ▸ Residential (hotels are depreciable) ▸ Health care ▸ A business in the financial sector, such as banking, insurance, stockbroking, etc. 	0%
Installations	4% (straight-line)
Installations with a useful life of < 25 years	1/economic life + 3%
Operating equipment	25% (declining-balance)
Installations serving the specific business activity of the user qualify as operating equipment	25% (declining-balance)
Fees paid for connection to public and privately held facilities, e.g., water	20% (straight-line)

Depreciation classes for mixed-use buildings that are partly depreciable and in use for commercial purposes:

Type of building	Yearly deduction percentage
Buildings <ul style="list-style-type: none"> ▸ Minimum usage for 25% depreciable purpose or at least 300 square meters 	4% (straight-line) Depreciation according to proportionate usage of total square meters Additions and disposals for depreciable square meters and not depreciable square meters are handled as separate balances.
Installations	4% (straight-line)

Type of building	Yearly deduction percentage
Installations with a useful life of < 25 years within non-depreciable element of building	1/economic life + 3% Depreciation according to proportionate usage of total square meters
Operating equipment	25% (declining-balance)
Installations serving the specific business activity of the user qualify as operating equipment	25% (declining-balance)
Fees paid for connection to public and privately held facilities, e.g., water	20% (straight-line) Depreciation according to proportionate usage for commercial purposes

2.1 Assets that qualify for tax depreciation

Asset type	Applicable tax depreciation rate	Comments
Infrastructure equipment	7% (declining-balance)	Transport, telecommunication, oil and gas, rail, etc.
Certain other fixed assets (Visse faste anlæg)	15% (declining-balance)	Ships with a gross tonnage of more than 20 tons, airships, trains, etc.
Other operating equipment	25% (declining-balance)	
Leasing assets (for lessor)	Year 1: 0% Year 2: 50% (straight-line) Year 3: 25% (declining-balance)	

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Land does not qualify because the value is not decreasing.

2.3 Noteworthy items

None

2.4 Availability of immediate deductions

Description	Detail
Assets with life of less than three years	Equipment with a general life-span of less than three years, typically mobile phones, etc.
Assets below a certain value	Below standardized amount, currently DKK14,400
Repairs	Repairs to conserve the original condition
Software	

3. Depreciation and calculation methods

Methods used	Declining-balance, straight-line/prime cost
Frequency	Annually
Year of acquisition	Timing of the acquisition is not relevant for the level of depreciation.
Year of disposal	No depreciation is available if not held at year-end.
Ability to use different methods for different assets	Yes
Ability to switch methods	No

4. Preferential and enhanced depreciation availability

There is additional tax depreciation available for assets relating to research and development.

5. Accounting for disposals

Gains or losses are assessed on the tax base and are taxable or fully deductible respectively.

6. Making a claim

Depreciation is claimed on an annual basis to the tax authority through the income tax return.

7. Intangible assets

Acquired intangible assets, including goodwill on activities, can be depreciated over seven years.

Acquired patents and know-how can be elected to be depreciated over seven years or immediately deducted in the year of acquisition.

Self-generated intangible assets, excluding development costs and goodwill generated from mergers, cannot be depreciated.

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

N/A

Does the tax treatment follow book/statutory accounting depreciation?

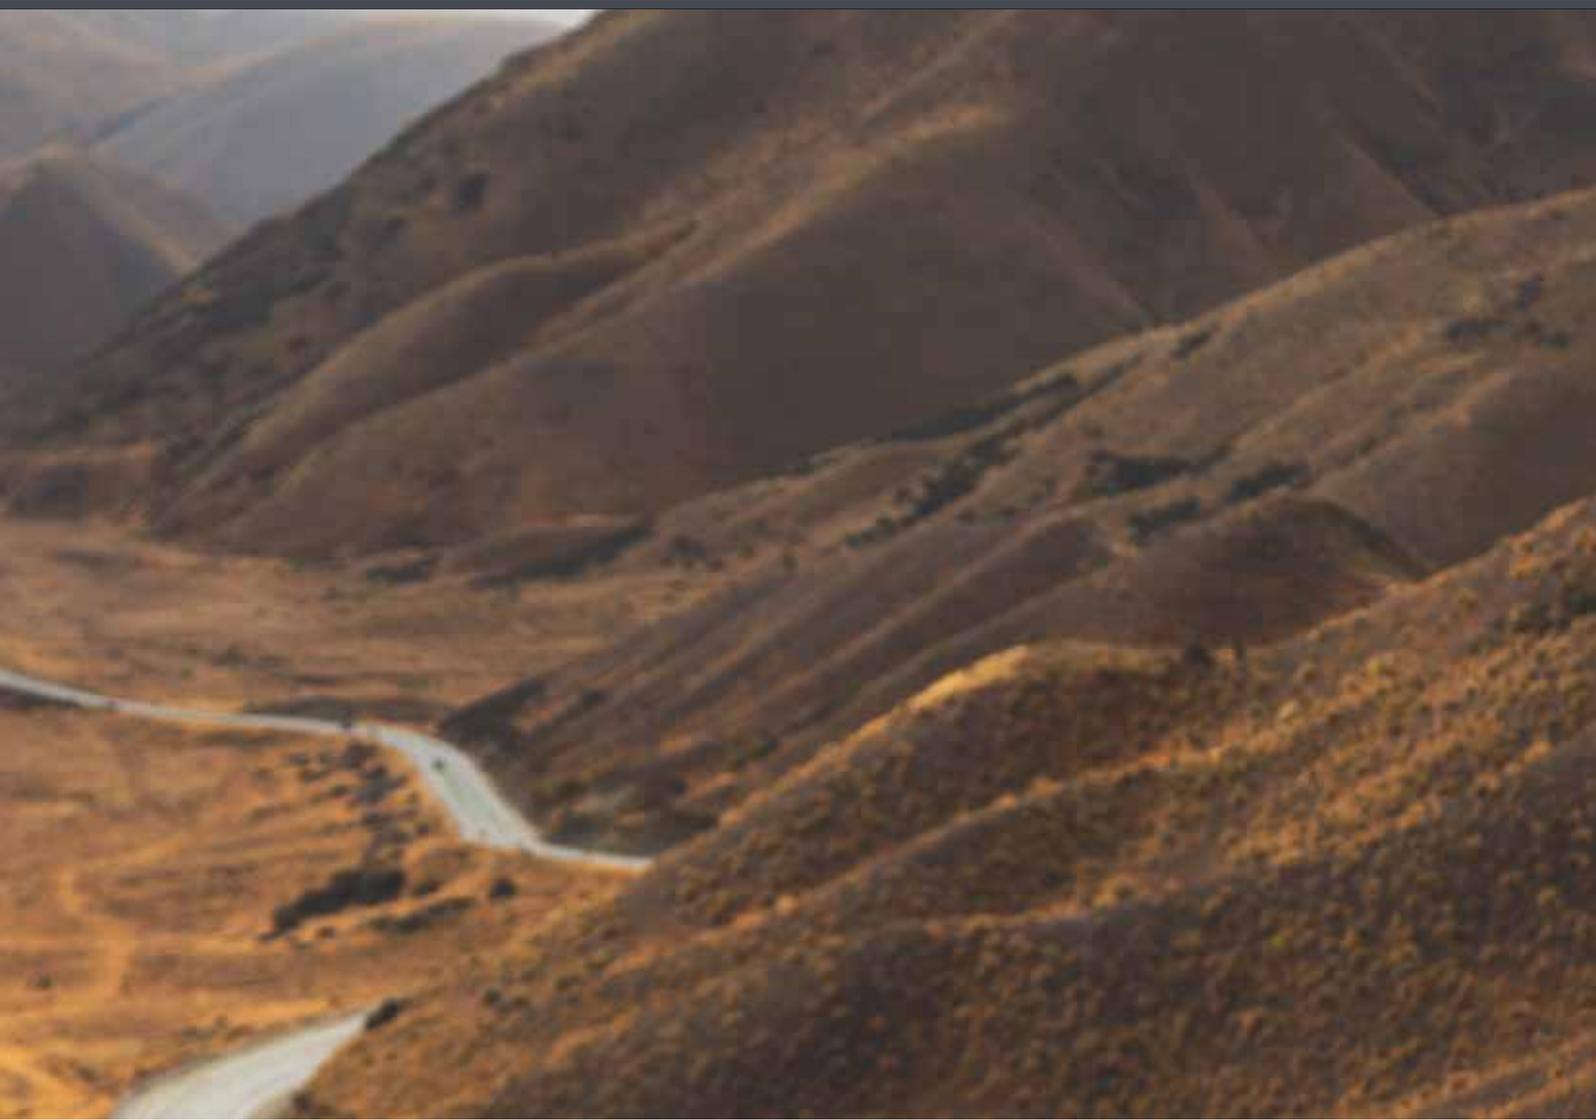

Not directly, but it is not possible to make larger depreciations in taxation than for accounting. However, some repairs can be deducted for tax purposes as annual costs, although costs would be activated in accounting.

Range of rates used:

0%-100%

Depreciation method used to calculate tax deduction:

Straight-line method, declining-balance method and depletion allowance method for extractable soil resource areas

1. Entitlement to claim

All companies and other entities subject to the Business Tax Act are entitled but not required to claim depreciation from their taxable business income for the financial year. Entities can apply changes afterward to their depreciation deductions if the depreciation method has been incorrect by submitting appeal to the Tax Administration. An appeal must be filed with the Tax Administration within five years from the beginning of the calendar year following the assessment. As of tax year 2018, the period to appeal is three years from the beginning of the calendar year following the assessment.

2. Allocation of tangible assets to tax depreciation lives and rates

2.1 Assets that qualify for tax depreciation

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment	N/A	Declining-balance	Maximum 25% (Maximum 50%: accelerated depreciations for tax years 2020-23)	Can be deducted immediately if useful life of the asset is maximum three years or acquisition cost is maximum €1,200 (total maximum €3,600 per tax year) For accelerated depreciations see 2.2
Buildings	N/A	Declining-balance	Maximum 7%: stores, warehouses, factories, agricultural buildings, power stations and other similar buildings Maximum 4%: residential buildings, offices and other similar buildings Maximum 20%: fuel and acid containers and other similar metal constructed storages or other structures Maximum 20% if building is used only for research activities aiming to promote business activities	
Furniture, fittings or fixtures	N/A	Declining-balance	Maximum 25%	Can be deducted immediately if useful life of the asset is maximum three years or acquisition cost is maximum €1,200 (total maximum €3,600 per tax year); included in plant, machinery and equipment when depreciated

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Computer hardware	N/A	Declining-balance	Maximum 25%	Can be deducted immediately if useful life of the asset is maximum three years or acquisition cost is maximum €1,200 (in total maximum €3,600 per tax year). Computer hardware is included in plant, machinery and equipment when depreciated.
Computer software	Maximum 10 years	Straight-line		Can be deducted immediately if useful life of the asset is maximum three years
Aircraft	N/A	Declining-balance	Maximum 25%	Included in plant, machinery and equipment
Transport other than motor cars	N/A	Declining-balance	Maximum 25%	Included in plant, machinery and equipment
Motor cars	N/A	Declining-balance	Maximum 25%	Included in plant, machinery and equipment
Car parks	N/A	Declining-balance		Included in buildings Applicable tax depreciation rate is assessed based on case-specific factors.
Office equipment (including office furniture and fixtures)	N/A	Declining-balance	Maximum 25%	Included in plant, machinery and equipment
Agricultural machinery and equipment	N/A	Declining-balance	Maximum 25%	Included in plant, machinery and equipment

2.2 Depreciation level increased for machine and device investment during 2020-23

An act regarding increased depreciations for machines, devices and other comparable movable fixed assets took effect on 1 January 2020 and was applied for the first time during fiscal year 2020. A taxpayer having business or agricultural activity can make a depreciation of 50% instead of 25% from the acquisition cost of the machine or device within the scope of the Act. According to the Business Income Tax Act (EVL, elinkeinoverolaki) 30 § the maximum tax depreciation of machines, devices or other comparable movable fixed assets is 25% of the residue tax basis. According to the Agricultural Income Tax Act (MVL, maatilatalouden tuloverolaki) 8 § the maximum tax depreciation of machines, equipment and devices is 25% of the residue tax basis. Under the new legislation, the taxpayer can make double depreciations compared with the regular depreciations from the acquisition cost of the applicable machines, equipment and devices. The act took effect 1 January 2020 and it will be applied during the fiscal years 2020-23. The Act is applied to all taxpayers regardless of the company form.

According to the new act the increased depreciation can be made from a machine or a device used in business activity as described in the EVL or in agricultural activity as described in the MVL. According to the Act, to make the increased depreciation the machine or device must be new. Thus, increased depreciation cannot be made from the acquisition cost of a used machine or device. Sometimes, the acquisition of a new machine or device may be connected to the repairing or renewing of a machine or device purchased before the Act has taken effect. In case of substantial investment that constitutes part of a machine or device taken into use earlier, the increased depreciations can be made from the acquisition cost of the new investment.

The right to make the increased depreciation only applies to machines and devices that have been put into use during the time the Act is applied. Thus, the increased depreciation is possible, if a machine or device has been put in use on 1 January 2020 at the earliest or during fiscal year 2023 at the latest. For the implementation of taxation, the taxpayer must be able to prove credibly when the asset has been taken into use. Ordering a machine or device, or its delivery before 1 January 2020, does not rule out the increased depreciation if the actual use in business or agriculture begins on 1 January 2020 or later. Merely installation or test run is not considered as putting the asset into use.

The maximum amount of the depreciation is 50% of the undepreciated acquisition cost of the machine or device purchased. A prerequisite for deducting the increased depreciation in taxation is that the corresponding amount of depreciation is also deducted as cost in bookkeeping.

2.3 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Is classified as non-wearing fixed asset
Securities	Are classified as non-wearing fixed assets

2.4 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Expenses that will accumulate income for three or more years are activated and depreciated using the straight-line method for a maximum of 10 years.

Land remediation – removing asbestos, Japanese knotweed

Upgrading, alteration, extension, reforming and other similar costs are included in asset's residual value. Expenses from smaller repairs are deducted immediately.

Own labor capitalized

If own labor is used in upgrading, alteration, extension or reforming, costs are included in residual value.

2.5 Availability of immediate deductions for repairs

Description	Detail
Repairs	If not upgrading, alteration, extension or reforming, repair costs are deducted immediately. Also, fairly big repair costs can be deducted in taxation immediately if requested by taxpayer even though they were activated in accounting.
Items of a revenue nature	If not upgrading, alteration, extension or reforming, repair costs are deducted immediately.

3. Depreciation and calculation methods

Methods used	Straight-line method, declining-balance method and depletion allowance method for soil resource areas
Frequency	Once per tax year. Tax year equals calendar year. If taxpayer's accounting period differs from tax year, the tax year is the accounting period or periods that have ended during that calendar year.
Year of acquisition	Asset starts to depreciate when it is put in use.
Year of disposal	When asset is put out of use
Ability to use different methods for different assets	The asset class determines the applicable depreciation method in taxation.
Ability to switch methods	The asset class determines the applicable depreciation method in taxation.

4. Preferential and enhanced depreciation availability

Asset used in	Comment on specific application and benefits available
Production of biofuels, oil and gas exploration, production of electric energy, production of bioethanol, employment of renewable energy sources for the obtainment of electric energy	No benefits
Mining	No benefits – depletion allowance method for depreciation of extractable soil resource areas
Forestry	Private investors and jointly owned forests both get preferential treatment. Corporations do not get preferential treatment.
Production of biotechnology	No benefits
Environmental investments	If considered as qualifying investments, they can be depreciated in four years.

5. Accounting for disposals

When an asset is disposed, its value is reduced to zero in the company's accounting. If disposing includes higher write-downs than maximum depreciation in taxation, the taxpayer must prove that the asset would not have had any resale or operating value to be able to deduct the write-down in taxation. (Movable assets form a pool for tax purposes.) If the asset were part of machinery and fixtures, the whole amount of this asset class's (movable assets) value should be zero to justify a write-down to zero in taxation.

6. Making a claim

Taxpayers can apply alterations afterward to their taxation by submitting an appeal to Tax Administration. An appeal must be filed within five years from the beginning of the calendar year following the assessment. As of tax year 2018, the period to appeal is three years from the beginning of the calendar year following the assessment.

7. Intangible assets

Type of asset	Rates/lives
Trademarks	Straight-line method in its useful life; in maximum 10 years
Patents, copyright, design, know-how or similar item	Straight-line method in its useful life; in maximum 10 years
Goodwill	Straight-line method in its useful life; in maximum 10 years
License or permit	Straight-line method in its useful life; in maximum 10 years

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation or depreciation for tax purposes

Does the tax treatment follow book/statutory accounting depreciation?

Yes

Range of rates used

4%-50%

Depreciation method used to calculate tax deduction

Declining-balance (*amortissement dégressif*), straight-line, other accelerated or exceptional methods

1. Entitlement to claim

As a matter of principle, the taxpayer is entitled to claim depreciation on assets that are owned. In case of the lease of the asset, the legal owner (the lessor) is entitled to claim depreciation.

An asset can be depreciated from its entry into service/use under the straight-line method and from its acquisition/construction date under the declining-balance method.

2. Allocation of tangible assets to tax depreciation lives and rates

The depreciation of fixed assets must be carried out component by component if these components have different lifetimes or if they provide economic benefits to the owner over different time scales. In this situation, they have to be depreciated separately, according to the lifetime of each (e.g., heating system or roofing, which are both by nature and their use intended to be replaced at regular intervals).

The French tax authorities have provided – for informational purposes only – a list of the most commonly accepted depreciation rates for some assets (see below).

2.1 Assets that qualify for tax depreciation

The French tax authorities provide a list of the most commonly accepted depreciation rates for the most common asset types. This list is for informational purposes only.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment	5-10 years	Straight-line basis	10%-20%	
Motor cars	4-5 years	Straight-line basis	20%-25%	
Industrial buildings	20 years	Straight-line basis	5%	
Furniture	5-10 years	Straight-line basis	10%-20%	
Computer hardware	3 years	Straight-line basis	33.33%	41.67% rate can be applied if declining-balance method is used.
Computer software	Life of the software	Straight-line basis	Depends on life of the software	
Office building	20-50 years	Straight-line basis	2%-5%	
Transport other than motor cars (matériel roulant)	4-5 years	Straight-line basis	20%-25%	
Tools/equipment	5-10 years	Straight-line basis	10%-20%	If used for scientific and technical research, tools/equipment may be depreciated on an accelerated declining-balance basis. The acceleration multiples in this case range from 1.5 to 2.5.
Office equipment (including office furniture and fixtures)	5-10 years	Straight-line basis	10%-20%	To be immediately deducted as expenses if the acquisition price of the equipment does not exceed EUR500.
Property used in R&D (patents)	5 years	Straight-line basis	20%	

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Land does not qualify for any tax depreciation because there is no foreseeable limit to the period during which the land will provide economic benefits to the company.
Goodwill (Fond commercial)	It is not subject to any decrease in value by the effect of time.
Leasehold right	It is not subject to any decrease in value by the effect of time.
Ongoing (Fonds de commerce)	In principle, it is not subject to any decrease in value by the effect of time.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

The preliminary cost (frais d'établissement) and in particular legal fees, notary fees and legal formalities expenses can either be immediately deducted for tax purposes or be amortized over a five-year period.

Removing asbestos

These may be amortized.

Own labor capitalized – work on developing software, for example, or carrying out work on property

These may be amortized.

2.4 Availability of immediate deductions for repairs

As a matter of principle, expenditures that are not aimed at replacing identified components, that are not the subject of a multiannual program of major maintenance, that do not result from compliance for security reasons or that are not specific spare parts of a fixed asset can be immediately deducted for tax purposes. Otherwise, the expenditures must be recorded as an asset and be amortized (e.g., carpentry works, masonry).

3. Depreciation and calculation methods

Methods used	Straight-line is the typical method. Declining-balance (amortissement dégressif) is allowed for certain types of new or recovered assets (e.g., handling equipment, central heating, plants). The assets must have a useful life in excess of three years.
Frequency	Annually
Year of acquisition	Straight-line depreciation is calculated proportionately in the year of acquisition, from the date the asset enters into use. The computation is based on the number of days in use. If the declining-balance method is used, depreciation is calculated from the first day of the month in which the asset was purchased.
Year of disposal	Depreciation is prorated in the year of disposal from the beginning of the financial period to the date of disposal. The calculation is based on the number of days. For declining-balance, depreciation is prorated from the beginning of the financial period to the beginning of the month of the disposals.
Ability to use different methods for different assets	The decision made by a company to depreciate an asset on a straight-line, declining-balance or exceptional method constitutes a binding management decision. As a result, after having made that choice, the company cannot ask to substitute one method for another. Depreciation is prorated in the year of disposal from the beginning of the financial period to the date of disposal. The calculation is based on the number of days.
Ability to switch methods	No

Declining-balance method rate

The constant rate of the declining balance is obtained by multiplying the straight-line rate by a coefficient that varies according to the depreciation duration. The coefficients are 1.25 for a depreciation duration of three or four years, 1.75 for a depreciation duration of five or six years and 2.25 for a depreciation duration longer than six years.

4. Preferential and enhanced depreciation availability

Equipment and tools mainly used for R&D operations may benefit from an accelerated depreciation. The depreciation is increased with reference to coefficients. The applicable coefficients are 1.5, 2 and 2.5, depending on the standard duration of amortization of the equipment or the tools for tax purposes. Equipment designed to save energy and equipment for the production of renewable energies can benefit from an accelerated depreciation. The applicable coefficients are 2, 2.5 and 3, depending on the standard duration of amortization of the equipment or the tools for tax purposes.

Small and medium-sized companies that built commercial or industrial real estate in specific urban zones before 1 January 2016 may depreciate the asset by 25% the first year after the construction is finished. The subscription to the capital of innovative small and medium-sized companies allows the depreciation of the shares on a five-year period.

Small and medium-sized companies that purchase, manufacture, order or rent specific goods in robotic and digital transformation between 1 January 2019 and 31 December 2020 can claim an additional special super-deduction on the original value of these goods. The tax deduction is equal to 40% of the original value of the good and is allocated over the normal period of use. This deduction is applicable to goods acquired after 31 December 2020 with three conditions: the good has to be ordered before this date, the purchaser provides a 10% deposit at the date of the order and the good has to be acquired within 24 months of the order. The special deduction reduces the base of the CIT.

Some sectorial super-deductions of 20% to 60% of the original value, depending on the goods, are available under certain conditions for investments in energy-efficient vessels or trucks made between 1 January 2019 and 31 December 2024. A sectorial super-deduction of 40% of the original value is also available made for investment in energy-efficient refrigerators acquired between 1 January 2019 and 31 December 2022.

5. Accounting for disposals

On disposal, the company must remove the asset from the balance sheet.

When preparing the computation, the capital gain should be equal to the difference between the sale price of the asset and the amount of its net book value. There are no specific consequences from an accounting standpoint if a loss arises.

In this case, no adjustment can be made if the asset is scrapped for no value.

6. Making a claim

From a practical standpoint, the decision regarding the choice of the depreciation method results from the statements made in the depreciation Form No. 2055 attached to the CIT return.

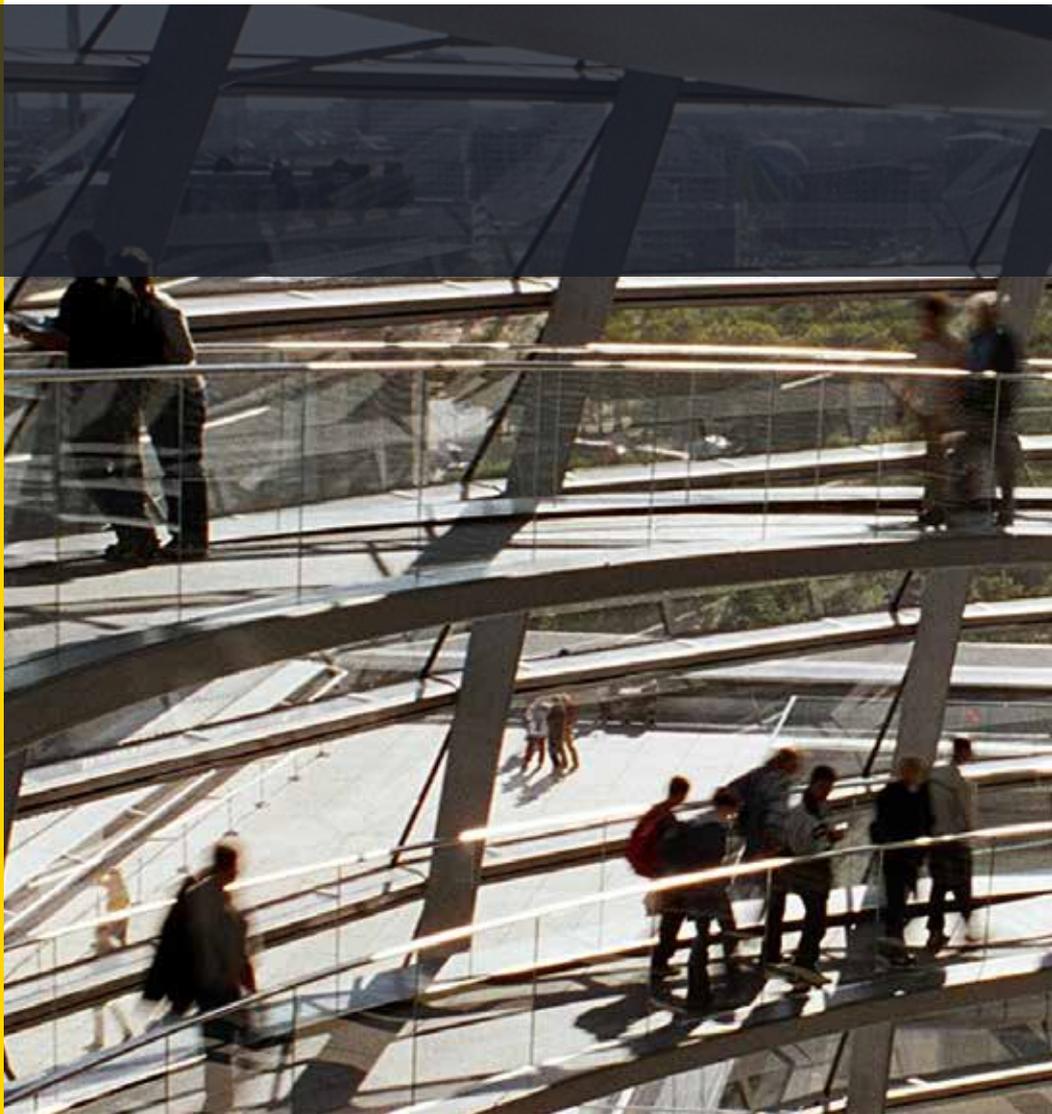

Supporting documentation is needed to book the asset in the balance sheet for it to be amortized later (for example, the purchase contract).

7. Intangible assets

Tax depreciation is available for purchases of software and patents.

Type of asset	Rates/lives
Trademarks	N/A
Patents, copyright, design, know-how or similar item	N/A, but by exception, patents may be amortized over a period of at least five years (since they will fall into the public domain).
Goodwill	N/A
License or permit	N/A

martin.brandscheid@de.ey.com

1. Entitlement to claim

The legal owner (any natural or legal person) may generally claim depreciation.

When beneficial owners take ownership rights, benefits, obligations and risks of an asset from the legal owner (e.g., by renting or leasing), they are entitled to claim depreciation. Ownership conditions are not given equal weight and do not have to be completed at the same time. When all conditions are not completed by the balance sheet date, beneficial ownership is determined based on foreseeable risks and changes of the asset.

The German tax authorities have set out general guidelines on identifying who (legal or beneficial owner) is entitled to capitalize and depreciate the respective asset.

2. Allocation of tangible assets to tax depreciation lives and rates

Tax depreciation is based on accounting depreciation. Special tax rules are then applied and given priority. Assets are assessed on a "unit of use" basis. In other words, individual parts that are connected have to be allocated to that unit. When determining the depreciation amount for a building, the calculation is based on the total amount of acquisition costs or production costs of the whole building. The valuation of depreciation on individual parts, such as heating systems, windows or walls, is normally not permitted. However, using different useful lives for different parts is permitted in special cases – for example, when solar panels have been placed on the top of buildings or if a specific part of a building was built separately.

Guidelines are provided by the tax authorities.

2.1 Assets that qualify for tax depreciation

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment*	See comments	Straight-line/depreciation according to performance	See comments	Depends on the industry in which the asset is used, such as use in shift work. Machine types within any particular industry denote its useful life. For example, packaging machines – 13 years, whereas office equipment (e.g., computers) – 3 years.
Motor cars*	6 years	Straight-line	16.7%	N/A
Buildings (general)* Buildings as business assets not used for residential purposes and built after 31 March 1985	33 years	Straight-line	3%	Regarding the useful life, several exemptions exist. This is not the complete list but serves as an indication of possible cases.
In all other cases, finished after 31 December 1924	50 years	Straight-line	2%	
In all other cases, finished prior to 1 January 1925	40 years	Straight-line	2.5%	
Useful life effective before 33, 40, 50 years		Straight-line		Varies in accordance to the respective useful life

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Fittings or fixtures*	8 years	Straight-line	12.5%	N/A
Computer hardware*	3 years	Straight-line	33%	N/A; see Section 3
Computer software*	3 years	Straight-line	33%	Only in the case of standard software. Depreciation periods for anything other than standard software have to be determined on a case-by-case basis (e.g., the useful life for business management software is typically five years). See Section 3.
Aircraft*	21 years	Straight-line	4.7%	N/A
Transport other than cars/trucks*		Straight-line		Depends on specific vehicle (e.g., campers – eight years).
Cars/trucks*	6/9 years	Straight-line	16.7%/11.1%	N/A
Office equipment, including office furniture and fixtures*		Straight-line		Depends on the type of equipment (e.g., office furniture – 13 years).
Land improvements		N/A		
Qualified leaseholder improvement property/tenant fixtures		Straight-line		May be qualified as single-standing assets or parts of buildings. Hence, rules regarding buildings may apply, if the asset is qualified as part of a building for tax purposes.
Agricultural machinery and equipment*		Straight-line		Depends on the type of machine/equipment (e.g., tractor – 12 years).
Property used in R&D*		Straight-line		Depends on the type of property or contractual period (e.g., laboratory equipment – 13 years).

* Extraordinary depreciation is applicable besides the abovementioned depreciation method.

2.2 Assets that do not qualify for tax depreciation

Any type of asset capitalized on the balance sheet may be subject to tax depreciation (depreciation rules in generally accepted accounting principles (GAAP) may differ from tax depreciation rules), whether it is classified as tangible or intangible. Local GAAP and tax GAAP generally distinguish between “depreciable” and “non-depreciable” assets. Depreciable assets qualify for regular depreciation, which reflects the impairment of assets (e.g., due to use). Non-depreciable assets do not qualify for regular depreciation, but extraordinary depreciations due to impairments are possible. Both depreciable and non-depreciable assets can be depreciated in case of an extraordinary impairment (e.g., land does not qualify for a straight-line impairment but will be written off in case of impairment).

2.3 Noteworthy items

The treatment of the following expenditures depends on the individual case – the following comments cannot be seen as individually applicable.

Preliminary costs – architect fees, legal fees, planning

As far as they are related to the acquisition or manufacturing of assets, the expenditures must be capitalized and amortized at the same rate as the assets to which they relate.

Land remediation – removing asbestos

As far as they are related to the acquisition of properties, the expenditures must be capitalized together with the land, which will typically be treated as not depreciable. Not-depreciable assets will not be depreciated regularly. If the land is impaired, the expenditures would also be impaired pro rata.

Own labor capitalized – work on developing software, for example, or carrying out work on property

As far as they are related to the acquisition of software or similar, the expenditures must be capitalized. If the software or similar is not acquired, a capitalization of assets in general is prohibited.

If a building is purchased, the expenditures for repairs and modernization incurred within three years after acquisition have to be capitalized when the total amount of the expenditures (without value-added tax) exceeds 15% of the purchase price of the building.

2.4 Availability of immediate deductions for repairs and low-value assets

Description	Detail
Low-value assets	<p>Low-value assets with acquisition or production costs up to EUR800 (total net amount) can be written off entirely in the year of acquisition.</p> <p>Tangible assets between EUR250 and EUR1,000 (net amount) can be stated as a collective item to be depreciated on an annual basis over a period of five years.</p> <p>For example, for office chairs, a useful life of 13 years has to be considered. If the taxpayer purchases office chairs for EUR500 (net amount) each, he or she can accelerate the depreciation by depreciating totally within 5 years by opting for the pooling method.</p>

Description	Detail
Repairs/ maintenance costs	A repair is the re-enabling of the asset's functions or the maintaining of the asset's condition. For tax purposes, the expenditures for repairs and maintenance can generally be fully deducted, as long as the repair/maintenance does not lead to a significant improvement of the item to be repaired.

3. Depreciation and calculation methods

Methods used	<p>Straight-line/prime cost, performance-related disposals (in case of economic reasons).</p> <p>The declining method is applicable for movable tangible assets acquired or produced in 2020 and 2021. A maximum of 25% per year can be written off for movable tangible assets, capped at 2.5 times the current depreciation rate. A degressive depreciation in the trade balance is not permissible, so deferred taxes may arise.</p> <p>Furthermore, the Federal Ministry of Finance gave out a public letter decree in February 2021. This public letter decree accepts the useful life of certain digital assets (hardware, software and peripherals) to be one year instead of three years, leading to immediate write-offs. The measure is applicable for fiscal years ending after 31 December 2020. It may be applied to digital assets acquired before that date if not fully depreciated.</p>
Frequency	Generally, depreciation is calculated on a monthly basis for simplification purposes.
Year of acquisition	Depreciation is generally calculated on an exact monthly basis (<i>pro rata temporis</i>). For example, if an asset is acquired in mid-November, the depreciation will be 2/12 of the year amount (year amount is derived from the acquisition costs divided through the years of standard useful life). In asset pooling (acquisition costs EUR250–EUR1,000 (net amount)), the depreciation is calculated on a yearly basis. In the year of acquisition, the respective assets are written down with one-fifth of the acquisition costs.
Year of disposal	In the year of disposal of capitalized assets, the asset will be derecognized out with the tax book value without any further adjustment. In case of disposal of pooling assets, the company continues to write off until the end of the five-year period.
Ability to use different methods for different assets	No. Generally, each asset requires an individual assessment. When valuing similar current assets, the depreciation method has to be applied to all like-minded assets within one class. Furthermore, if asset pooling is chosen for low-value assets, this method has to be applied across the board to all these assets purchased within this fiscal year.
Ability to switch methods	No. With regard to the change of valuation methods, the principle of consistency has to be followed. A deviation is only permitted for a serious reason.

4. Preferential and enhanced depreciation availability

Under certain conditions, small companies (companies with business assets of less than EUR235,000 in the year of the deduction) can claim “investment deductions” of up to 40% of the estimated future investment, provided they are made within a three-year period. The three-year deadline for investments can be currently extended under further conditions for one year. Such deductions have to be reversed upon investment. These types of businesses are also allowed to write off up to 20% of the total effective investment costs in the year of the investment up to the following four years. The aforementioned “investment deductions” are only applicable for movable tangible assets.

Through the Annual Tax Act 2020 (*Jahressteuergesetz 2020*), with effect from 2020, the investment deduction rate was increased from 40% to 50%. The asset threshold of EUR235,000 was replaced with a profit threshold of EUR200,000. The scope of the rule was extended to also include leased-out assets. The use criteria for partnerships and certain procedural issues have been regulated with effect from 2021. Furthermore, the three-year period for future investment, which would generally expire in 2020, has been extended for one year to end in 2021. This is a specific German tax depreciation measure that has been introduced to stimulate investment in response to the COVID-19 pandemic.

5. Special depreciation rule for new rental apartments and buildings

In addition to the regular straight-line depreciation for buildings, a special depreciation of 5% of acquisition or production costs in the year of acquisition or production and the following three years can be claimed by a taxpayer provided that he or she acquired/ produced a new rental apartment or building and acquisition or production costs are not higher than EUR3,000 per m² and the new apartment or building will be rented out for residential purposes against payment for the following 10 years. The special depreciation rule is restricted until 2026.

6. Special depreciation rule for new electric delivery vehicles

Further special depreciation of 50% of acquisition costs in the year of purchase of new electric delivery vehicles was newly introduced and will be available in addition to the regular straight-line depreciation. The deduction rule applies to new electric delivery vehicles purchased after 31 December 2019 and before 1 January 2031 and is subject to EU state aid approval (entry into force will be announced).

7. Accounting for disposals

In the case of disposal, capitalized assets will be derecognized. Only pooling assets will be depreciated until they are written off (within the five-year period).

8. Making a claim

Depreciation must be reported in the profit and loss statement.

In general, and not just for claims, German bookkeeping documentation requirements apply. For example, in cases of extraordinary depreciation, additional documents or a valuation report may be required.

9. Intangible assets

Acquired intangible assets are generally depreciated. The depreciation period depends on the (standard) useful life, contract periods, etc. Goodwill that has been acquired is depreciated within a period of 15 years for tax purposes. Intangible assets that have not been acquired cannot be capitalized in the tax balance sheet and, therefore, are not subject to depreciation.

Type of asset	Rates/lives
Trademarks	Depends on useful life
Patents, copyright, design, know-how or similar item	Depends on terms of use, terms of contract, etc.
Goodwill	15 years
License or permit	Depends on terms of use, terms of contract, etc.

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation or depreciation for tax purposes

Does the tax treatment follow book/statutory accounting depreciation?

No

Range of rates used

4%-100%

Depreciation method used to calculate tax deduction

Straight-line method

1. Entitlement to claim

As a rule, the taxpayer (generally an individual or legal person) may claim depreciation on assets that are owned. In the case of a finance lease, the lessee may claim tax depreciation on leased fixed assets, for which the lease contracts have been concluded after 1 January 2020. For tax depreciation purposes, the meaning of a finance lease must be defined either by reference to the Greek Generally Accepted Accounting Principles (GAAP) (L. 4308/2014) or the International Financial Reporting Standards (IFRS), depending on each particular case.

Annual depreciation is obligatory, and it begins in the month following the month when the asset is put into use.

2. Allocation of tangible assets to tax depreciation lives and rates

Depreciation of fixed assets should be applied item by item. Therefore, companies have to distinguish among assets, such as parts of a building, and apply different rates to each part (e.g., furniture, computers). Depreciation is claimed by applying a specific depreciation rate on the acquisition or construction cost per asset class of a business.

The Greek authorities have released a detailed list, which includes the depreciation rate of each asset type (see below).

2.1 Assets that may qualify for tax depreciation

The tax depreciation rates per asset type are depicted in the below table.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Buildings, construction, industrial and special installations, warehouses, etc.	25 years	Straight-line method	4%	
Quarries and special mining land pieces, except for those used for ancillary mining activities	20 years	Straight-line method	5%	
Airplanes, trains, ships and vessels (zero-emission or low emission up to 50 g/CO ₂ /km)	20 years	Straight-line method	5%	
Machinery and equipment, except for computers and software	10 years	Straight-line method	10%	
Means of transportation for people (exceeding emission 50 g/CO ₂ /km)	6, 25 years	Straight-line method	16%	
Means of transportation for goods (exceeding emission 50 g/CO ₂ /km)	8, 33 years	Straight-line method	12%	
PC equipment, principal and ancillary, and software	5 years	Straight-line method	20%	
Equipment used for research and development (R&D)	2, 5 years	Straight-line method	40%	
Other fixed assets*	10 years	Straight-line method	10%	

* Any asset that could not be included in the above table is subject to a 10% depreciation rate as "other fixed assets."

The aforementioned coefficients are increased by 100% in cases of costs related to energy efficiency or water saving. Note that airplanes, trains, ships and vessels, means of transportation for people and means of transportation for goods are excluded.

For tax years as of 1 January 2020, more favorable tax depreciation rates apply for zero- or low-emission means of transportation, as follows:

Asset type	Applicable tax depreciation rate
Zero-emission means of transportation for people	50%
Low emission (up to 50 g/CO ₂ /km) means of transportation for people	25%
Zero-emission means of transportation for goods	50%
Low-emission (up to 50 g/CO ₂ /km) means of transportation for goods	25%
Zero-emission means of public transportation	50%
Low-emission (up to 50 g/CO ₂ /km) means of public transportation	25%
Constructions and facilities for the charging of zero-emission or low-emission (up to 50 g/CO ₂ /km) vehicles	100%

It is also provided that where a 50% or 100% depreciation rate is offered, the enterprise is entitled to use a lower straight-line rate for all years of depreciation. Moreover, for the tax depreciation expense in relation to company cars of zero emissions with a retail price before taxes up to EUR40,000, the company is granted the right to an income tax deduction at increased rates by 50%, whereas increased depreciation rates by 25% are offered for the part of the price exceeding EUR40,000. Also, for such low emission cars (up to 50 g/CO₂/km) with a retail price before taxes up to EUR40,000, a company is granted the right to an income tax deduction at increased rates by 30% for the part of the price up to EUR40,000 and by 15% for the part of the price exceeding the EUR40,000 threshold. Especially for companies operating in Greek islands, these rates are increased even more to 75% and 35%, respectively, for zero-emission cars and to 35% and 20%, respectively, for low-emission (up to 50 g/CO₂/km) ones.

For expenses relating to the construction and operation of public available charging points of zero-emission or low-emission (up to 50 g/CO₂/km) vehicles, the company is granted the right to an income tax deduction at increased rates by 50%.

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land, artwork, antiques, jewelry and other	The related assets are not subject to any wear or obsolescence over the years. In other words, these respective assets are not devalued over time.
Fixed assets under construction	Expenditures aggregated in fixed assets under construction accounts should be transferred to relevant fixed asset accounts once the construction is complete and the asset becomes ready for use.
Inactive/idle assets	The assets that are not used under the company's regular activity are characterized as inactive/idle assets for tax purposes. Therefore, said assets are not subject to any depreciation.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Any costs incurred by a company that are directly linked to the acquisition of an asset and are necessary for the asset to become usable should be included in the asset's value. Additionally, any development cost that is directly linked with a specific asset should be included in that asset's cost and, therefore, should be depreciated as per the tax rate provided for the asset.

2.4 Availability of immediate deductions for bonus depreciation property and for eligible tangible property repairs

Description	Detail
Low-value assets	Tangible assets worth EUR1,500 can be depreciated one-off at the year of acquisition.
Repair/maintenance costs	The expenditure for repairs and maintenance can generally be fully deducted, as long as the repair/maintenance does not constitute the acquisition cost or lead to improvement of the item.

3. Depreciation and calculation methods

Methods used	Straight-line
Frequency	Annually
Year of acquisition	Straight-line depreciation is calculated proportionately in the year of acquisition, following the month when the asset is put into use.
Year of disposal	Depreciation is prorated in the year of disposal from the beginning of the financial period to the month of disposal. The calculation is based on the number of months.
Ability to use different methods for different assets	No
Ability to switch methods	No

4. Preferential and enhanced depreciation availability

New companies may postpone their assets' tax depreciation for the first three tax years of their operations. It should be noted that the related benefit is not mandatory.

5. Accounting for disposals

If a business asset (tangible or intangible) is disposed of, the difference between the disposal value and the tax book value is considered a taxable gain. If the proceeds are lower than the book value, the taxpayer will be taking a tax-deductible loss.

6. Making a claim

Depreciation should be reported in the tax balance sheet as well as in the tax fixed-asset register.

7. Intangible assets

Intangible assets and rights (as well as other assets that are depreciated at a long term) are generally depreciated at the rate of 10%. In cases in which a different economic life is provided by the agreement concluded for the specific asset, the depreciation rate would be adjusted based on the lifetime of the intangible (once per lifetime of the asset as provided by the agreement).

Type of asset	Rates/lives
Intangibles	10% (10 years)

rahul.patni@in.ey.com

1. Entitlement to claim

Generally, legal owners are entitled to claim depreciation subject to certain conditions, such as:

- ▶ The asset must be used for business.
- ▶ The asset must be used during the year.

However, in the case of a finance lease transaction, the lessor would be eligible to claim depreciation as long as the transaction is not re-characterized as a loan, and the lessor is accepted to be the person responsible for the risks and rewards of ownership.

2. Allocation of tangible assets to tax depreciation lives and rates

Accounting depreciation is not relevant for making a claim for tax depreciation.

Assets are classified as either tangible or intangible.

The classification is further divided into different categories. Accordingly, rates applicable to the relevant category shall be applied to claim depreciation.

2.1 Assets that qualify for tax depreciation – tangible asset

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment	–	Declining-balance	15%	List of rates of depreciation is mentioned in Income Tax Rules, 1962, available at incometaxindia.gov.in .
Motor cars	–	Declining-balance	15%	Motor cars and motor buses/lorries/taxis used in a business of running them on hire acquired between 23 August 2019 and 31 March 2020 and put to use before 1 April 2020 are eligible for a higher rate of depreciation of 30% and 45%, respectively.
Buildings - other than used for residential purpose Used for residential purpose		Declining-balance	10% 5%	List of rates of depreciation is mentioned in Income Tax Rules, 1962, available at incometaxindia.gov.in .
Furniture, fittings or fixtures	–	Declining-balance	10%	–
Computer hardware	–	Declining-balance	40%	–
Computer software	–	Declining-balance	40%	–
Aircraft	–	Declining-balance	40%	–

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Transport other than motor cars	–	Declining-balance	Various rates	List of rates of depreciation is mentioned in Income Tax Rules, 1962, available at incometaxindia.gov.in .
Car parks	–	Declining-balance	10%	Rate applicable for buildings
Office equipment (including office furniture and fixtures)	–	Declining-balance	10%	List of rates of depreciation is mentioned in Income Tax Rules, 1962, available at incometaxindia.gov.in .
Land improvements	–	–	–	Not eligible for depreciation unless the classification falls under any category mentioned in the Income Tax Rules, 1962, available at incometaxindia.gov.in .
Qualified leaseholder improvement property	–	–	–	Not eligible for depreciation unless the classification falls under any category mentioned in the Income Tax Rules, 1962, available at incometaxindia.gov.in .
Agricultural machinery and equipment	–	Declining-balance	Various rates	List of rates of depreciation is mentioned in Income Tax Rules, 1962, available at incometaxindia.gov.in .

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Property used in R&D	–	–	–	Separate deduction is given on all capital expenditures (except land) in the form of expenditures in the year in which they are incurred (subject to fulfillment of certain conditions/ approvals - refer to Section 4). However, if capital expenditure is not claimed, depreciation under normal provisions is available.
Ships	–	Declining-balance	20%	List of rates of depreciation is mentioned in Income Tax Rules, 1962, at incometaxindia.gov.in .

Assets of the same class and rate of depreciation are pooled together in a “block.” As a result, the individual identity of the asset is lost once it becomes part of the block.

If the asset is used for more than 180 days, depreciation at the prescribed rate can be claimed. However, if the asset is used for less than 180 days, the depreciation would be restricted to 50% of the prescribed rate.

2.2 Assets that qualify for tax depreciation – intangible asset

(A) Intangible Assets (other than Goodwill):

Depreciation is allowed on know-how, patents, copyrights, trademarks, licenses, franchises or any other business or commercial rights of similar nature. The depreciation rate on written-down value basis is 25%.

With respect to other intangible assets, such as customer databases, there is uncertainty about whether they would fall under “any other business or commercial rights of similar nature” and could, therefore, be considered as an intangible asset for income tax. Hence, a detailed evaluation is required based on the facts of each case to determine whether an intangible asset exists.

(B) On Goodwill:

The Finance Bill 2021 proposes to amend the treatment of depreciation on goodwill in a very significant manner. Henceforth from A.Y. 2021-22 onward, no depreciation will be admissible on goodwill, irrespective of its source of acquisition. Furthermore, wherever depreciation was allowed in the past, new rules for carving out goodwill from the block of assets will be prescribed shortly.

Hence, a detailed evaluation is required based on the facts of each case to determine the impact of the proposed amendment.

2.3 Assets that do not qualify for tax depreciation

This includes any asset that does not fall under the categories mentioned in Sections 2.1 and 2.2 above (e.g., land). Assets acquired in cash exceeding INR10,000 shall not be eligible for depreciation with effect from 1 April 2018.

Types of assets	Explanation
Land	Land does not qualify, as it does not fall under any tangible asset subcategory.

2.4 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

It may be possible to add the expenditure to the cost of the asset. Depreciation is allowed at the rates applicable to the asset (except land) based on the category in which the asset is classified.

Furthermore, certain expenses, such as expenditures incurred on the preparation of a feasibility report or project report, incurred at the time of incorporation or extension of the undertaking, can be amortized over a period of five years, subject to certain conditions.

2.5 Availability of immediate deductions for repairs

Typically, expenses that do not alter the useful life of an asset or expenses that are incurred to maintain the working condition of the asset are considered as repairs and are deductible as revenue expenditures.

The treatment from a tax perspective could differ from the accounting treatment.

3. Depreciation and calculation methods

Methods used	Declining-balance (straight-line is available for undertakings engaged in the generation and/or distribution of power)
Frequency	Annually
Year of disposal	Assets sold during the year are not eligible for depreciation.
Ability to use different methods for different assets	Not applicable
Ability to switch methods	Not applicable
Whether depreciation is optional/mandatory	Mandatory

4. Preferential and enhanced depreciation availability

Particulars	Comment on specific application and benefits available
Scientific expenditure on in-house approved research and development facility	A company engaged in the business of biotechnology or in any business of manufacture or production of any article or thing, not being an article or thing specified in the list of the Eleventh Schedule of the Income Tax Act, 1961, is eligible for deduction of specified revenue and capital expenditure on scientific research (except land) of 100%.
Additional depreciation on asset used in the business of manufacture or production of any article or thing or in the business of generation, transmission or distribution of power	Additional depreciation at the rate of 20% on the cost of the asset in the first year. If the asset is used for less than 180 days, additional depreciation will be available at 10% in the first year and the balance of 10% will be allowed in the next year.

The Government of India had notified a concessional corporate tax rates scheme of 22% for existing domestic companies and 15% for new domestic companies incorporated on or after 1 October 2019 and commencing manufacturing on or before 31 March 2023 subject to satisfaction of certain prescribed conditions. If a company opts for concessional tax rate, it shall not be permitted to claim preferential and enhanced additional depreciation as mentioned in table above. Such companies shall also not be permitted to claim setoff of any loss carried forward from any earlier year if the same is attributable to any of the benefits claimed in the past as summarized in table above.

5. Accounting for disposals

The sale value reduces the value of the “block of assets.” If the asset block ceases to exist or the sale value exceeds the block value, a capital gain or loss is computed. There is no impact on previously claimed depreciation.

In undertakings in which depreciation is allowed on actual cost, a deduction is allowed in respect of the amount by which the sale price falls short of the written-down value of the asset. The difference should be actually written off in the books of accounts. Where the sale price is higher than the written-down value of the asset disposed of, the difference is chargeable as business income.

6. Making a claim

Generally, no separate books of accounts are maintained for income tax. Separate calculations are prepared to calculate tax depreciation; however, companies and assessees having turnover of more than the specified amount are required to have a tax audit. In the tax audit report, the tax auditor must certify the depreciation computed by the assessee for income tax. Based on the tax audit report, a claim needs to be made in the return of income. The return of income provides for specific schedules where the depreciation details are to be filled in.

Documents justifying the ownership, the use in the business or profession, cost of acquisition and the date put to use must be maintained.

Straight-line basis

1. Entitlement to claim

Capital allowances are a form of tax relief that enable a taxpayer to write off the cost of qualifying assets against taxable profits over time at a predetermined rate. A taxpayer must satisfy the relevant criteria in the legislation to be eligible to make a claim. In the case of a taxpayer claiming capital allowances against taxable profits, capital allowances can be claimed if the taxpayer:

- ▶ Has incurred capital expenditure
- ▶ Uses the plant for the purposes of the trade at the end of the taxpayer's accounting period
- ▶ Bears the economic burden of wear and tear on the machinery, plant, fixtures and fittings installed
- ▶ Has ownership of the qualifying assets

2. Allocation of tangible assets to tax depreciation lives and rates

Claimants are required to break down assets into individual items to allow them to be categorized for capital allowances. It is necessary, therefore, to have a detailed cost breakdown of all capital expenditure incurred, particularly with respect to buildings.

All depreciation of tangible fixed assets is disallowed when calculating taxable profit. Ireland then provides a system of capital allowances to obtain tax relief on qualifying expenditure. The main type of capital allowance is known as wear and tear allowances, which are available for expenditure on plant and machinery. There is no statutory definition of what constitutes a plant for capital allowances purposes, nor is there an approved list of qualifying items of expenditure for capital allowances. Therefore, the capital allowances treatment on various assets has been discussed and agreed through years of case law, and this identification can be particularly complex as a result.

2.1 Assets that may qualify for tax depreciation

The writing-down allowances (WDAs) identified in the table below are calculated per year on a straight-line basis. Building works such as leasehold improvements should be analyzed so that allowances are allocated to the correct asset type.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment Furniture, fittings or fixtures Office equipment (including office furniture and fixtures)	8 years	Straight-line basis	12.5% per year WDA	Expenditure incurred on or after 4 December 2002 on plant and machinery, fixtures and fittings, etc.
Industrial buildings - broadly defined and includes a mill, factory or other similar premises	25 years	Straight-line basis	4% per year WDA	Industrial building allowances (IBAs) are available on assets that meet the definition of an industrial building.
Energy-efficient equipment	1 year	Straight-line basis	100% year one	The equipment must be approved and listed by the Minister for Communications, Energy and Natural Resources. Accelerated capital allowances of 100% of the capital expenditure incurred can be claimed for the year in which the equipment is provided and used.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Motor cars	8 years	Straight-line basis	<p>The rate of depreciation depends on the CO2 emissions of the car. The maximum qualifying cost of motor vehicles purchased on or after 1 January 2007 is EUR24,000.</p> <p>Cars with CO2 emission levels in Category A/B/C below will benefit from capital allowances at the current car value threshold under the existing scheme of EUR24,000, regardless of the cost of the car.</p> <p>Cars in Category D/E will receive allowances subject to a car cost limit of EUR12,000 or 50% of the cost of the car, if lower.</p> <p>Cars in Category F/G will not qualify for capital allowances.</p> <p>Category A vehicles: 0-120g/km Category B/C vehicles: 121-155g/km Category D/E vehicles: 156-190g/km Category F/G vehicles: 191g/km</p>	Since 1 January 2007, a car (new or secondhand) costing more than EUR24,000 gets an annual 12.5% wear-and-tear allowance as if the car's purchase price were EUR24,000. An electric car gets a 100% allowance in year one, but remains subject to the EUR24,000 limit.
Computer hardware and software	8 years	Straight-line basis	12.5% per year WDA	
Aircraft	8 years	Straight-line basis	12.5% per year WDA	

2.2 Assets that do not qualify for tax depreciation

Asset type	Explanation
Land	All costs relating to land
Dwellings	Usually no capital allowances if the expenditure is on a private dwelling

2.3 Noteworthy items

Energy-efficient equipment

Accelerated capital allowances (ACAs) provide 100% tax relief in the first year and are available to companies for expenditure on certain energy-efficient equipment. The equipment must meet the following criteria:

- ▶ The claimant is a company operating in Ireland and paying Irish tax.
- ▶ The equipment purchased is new.
- ▶ The equipment was bought on or after 31 January 2008.
- ▶ The equipment was purchased for use in a trade.
- ▶ The equipment is not leased, let or hired to any person.
- ▶ The equipment (unique product code) is included on the SEAI “specified list” in the year it is first provided and brought into use.

Capital allowances may be claimed at the accelerated rate of 100% in year one for the accounting period in which the expenditure is incurred and the energy-efficient equipment is first brought into use.

Preliminary costs – architect fees, legal fees, planning

Preliminaries and professional fees should be added to the cost of the asset to which they directly relate and may be assessed for capital allowances as long as they relate to plant and machinery. If the fees relate to a number of assets as part of a scheme of works, it is reasonable to apportion the costs over both qualifying and non-qualifying assets to which the fee relates.

Fees regarding obtaining a legal interest in the property could be deemed to be too far removed from plant and machinery and are not likely to qualify for capital allowances.

Own labor capitalized

The treatment of such costs according to Irish Revenue is that “costs attributable to a person’s own labor where the person carries out work themselves” are non-allowable in computing expenditure qualifying for IBAs. However, capitalized labor costs relating to plant and machinery can be apportioned over both qualifying and non-qualifying assets to which the fee relates.

2.4 Availability of immediate deductions for repairs

The general position is that:

- ▶ The cost of a repair is normally an allowable expenditure.
- ▶ The cost of replacing an asset is allowable as a deduction provided the nearest modern equivalent is used as the replacement.

A deduction for expenditure on repairs is given when the cost of the repair is deducted in the profit and loss account in line with generally accepted accounting practice (GAAP) (whether that is Irish GAAP or International Accounting Standards (IAS)). As a result, if a repair is capitalized for accounting purposes, the tax deduction will generally be given in line with the accounting depreciation charge over the life of the asset.

Repairs do not include the cost of replacing the entirety of an asset or of making an improvement to an existing asset. There is a body of case law and tax authority guidance around this subject. There is a concept of nearest modern equivalent for tax purposes when considering whether an asset has been improved. It is necessary to consider whether the asset's character has changed because of the work in determining whether expenditure is a repair.

3. Depreciation and calculation methods

Methods used	Straight-line basis
Frequency	WDAs calculated annually
Year of acquisition	Full capital allowances available; WDAs calculated as per balance at year-end
Year of disposal	Disposal proceeds deducted from capital allowances claimed; a balancing adjustment may occur in the year of disposal

4. Accounting for disposals

When an asset is disposed of, a balancing charge or allowance (i.e., an adjustment to the quantum of the allowances given) may arise in a chargeable period where any of the following events occurs in relation to any machinery or plant with respect to which capital allowances have been obtained by a person carrying on a trade:

- ▶ The machinery or plant ceases to belong to the person, whether on a sale or otherwise.
 - ▶ The machinery or plant ceases to be used for the purposes of the trade.
 - ▶ The trade permanently ceases.
- Or
- ▶ In the case of machinery or plant consisting of a specified intangible asset, computer software or the right to use or otherwise deal with computer software, the granting to another person of a right to use or otherwise deal with all or part of the software concerned.

A balancing allowance arises where the tax written-down value in respect of the machinery or plant is less than the sale, insurance, salvage or compensation moneys received for the machinery or plant.

A balancing charge arises when the amount of the sale, insurance, salvage or compensation moneys received exceed the unused capital allowances remaining with respect to the machinery or plant, except (other than where the machinery or plant is disposed of to a connected person) when the amount of those moneys is less than EUR2,000. A balancing charge is a way of ensuring that a business does not claim more tax relief than it was entitled to on the purchase of a business asset and effectively claws back any overclaimed capital allowances. The balancing charge works in the opposite way as a capital allowance and increases the amount of profit on which tax is due.

Special apportionment rules apply when the balancing event arises as a result of granting a right to use or otherwise deal with all or part of machinery or plant that consists of computer software or the right to use or otherwise deal with computer software.

5. Making a claim

A claim is made in a person's/company's tax return that operates on a system of self-assessment. A claim can be made, amended and withdrawn in most cases within two years of the end of the accounting period. There are occasions in which a claim could be made after this point; however, this will depend on the specific circumstances.

A claim should provide sufficient supporting information to substantiate the tax relief claimed and enable Irish Revenue to determine whether this has been calculated correctly. Should insufficient supporting information be provided, the window in which Irish Revenue could formally inquire into the tax computation could be extended.

6. Intangible assets

A company may claim capital allowances for capital expenditure incurred on specified intangible assets against the income from "relevant activities" of a company. Examples of specified intangible assets include patents, registered designs, copyrights, inventions and trademarks, as well as goodwill directly attributable to these assets. Intangible assets

are treated as plant and machinery for capital allowances purposes. The normal wear-and-tear rules apply. A company may claim the amount of amortization or any impairment charged in the Statement of Comprehensive Income in each accounting period. Alternatively, a company may elect to claim capital allowances over a fixed write-down period of 15 years at:

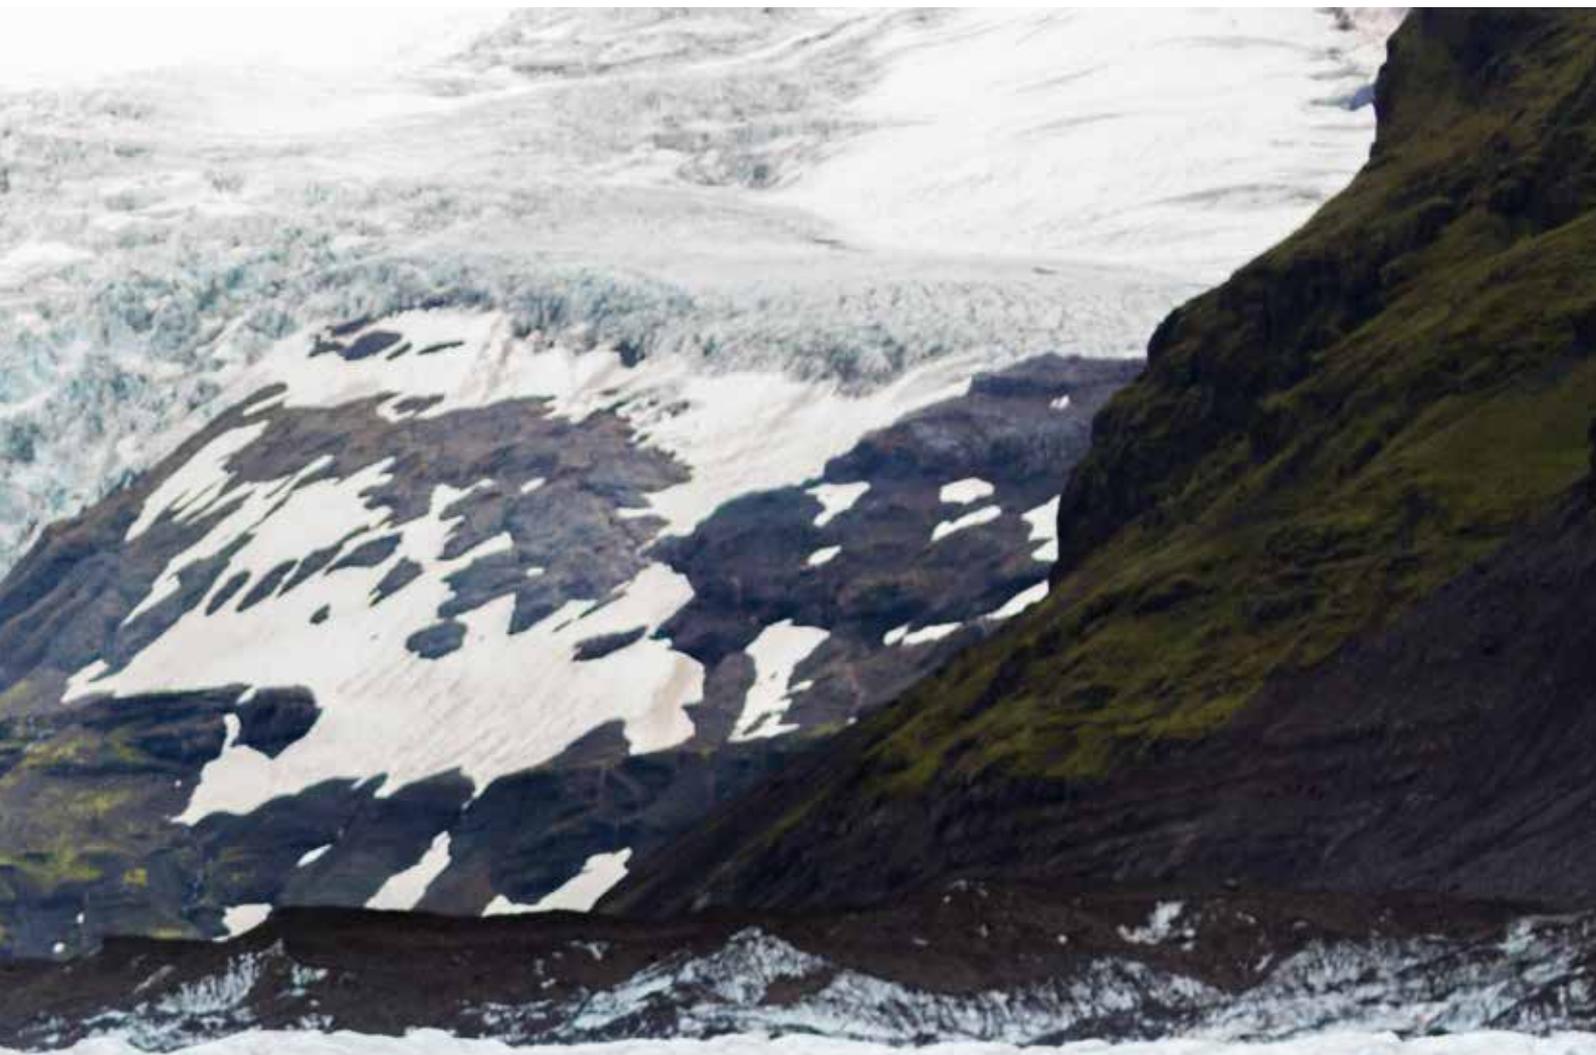

- ▶ 7% per annum of qualifying expenditure
- ▶ 2% in the final year

The Finance Act 2017 introduced a cap on the amount of relief that may be claimed in an accounting period. This cap applies to claims in respect of capital expenditure on specified intangible assets on or after 11 October 2017. The level of deduction cannot exceed 80% of the trading income of the relevant trade for the accounting period.

7. Childcare and fitness facilities

From January 2019, ACAs are also available for expenditure incurred on the construction of facilities used by employers to provide employees with childcare or fitness facilities. The relief will not be available to commercial childcare or fitness businesses, or to passive investors, rather where employers provide such facilities for their employees. The aim of the measure is to remove barriers to work, to promote more affordable and convenient childcare, and to promote the health of employees. The scheme has two rates of relief:

- ▶ 100% accelerated capital allowances in the year of expenditure for plant and machinery
- ▶ Accelerated relief over seven years for expenditure on buildings/structures (claimed at 15% per annum for six years and 10% in year seven)

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation

Does the tax treatment follow book/statutory accounting depreciation?

Yes, up to specific rates provided by the tax law

Range of rates used

1%-50%

Depreciation method used to calculate tax deduction

Straight-line (prime cost)

1. Entitlement to claim

In general, the person entitled to claim accounting depreciation is the legal owner of the asset. This rule also applies for financial lease agreements¹ and rentals. Tax rules follow the abovementioned accounting approach.²

An exception to this rule may apply for the lease of a going concern (“affitto d’azienda”). In this case, the economic owner is entitled to perform the depreciation of the assets representing the going concern, to the extent that the agreement does not provide that such right is in the hands of the legal owner.

¹ Please note that, for IAS/IFRS adopters, the economic owner (i.e., the lessee) also books in the income statement and depreciates for tax purposes the right of use obtained with the leasing agreement whether specific requirements are met.

² An exception has been introduced due to the COVID-19 pandemic that allows ITA GAAP adopters to partially or totally suspend the accounting depreciation process for fiscal year 2020, notwithstanding the prosecution of the depreciation for tax purposes (see Section 9 below).

2. Allocation of tangible assets to tax depreciation lives and rates

According to accounting rules, an item can be capitalized if its use can be spread over several years and it constitutes part of the business organization of the entity.

Assets that consist of several items should be capitalized identifying the cost of each component (certain exceptions may apply for IAS/IFRS adopters). Moreover, assets with different useful estimated lives must be recorded and tracked individually.

With reference to real estate assets, certain items (e.g., heating, telecommunications and alarm systems) can be accounted as separate assets and depreciated accordingly.

2.1 Assets that qualify for tax depreciation

Fixed assets may be depreciated for tax purposes only using the straight-line method. In general, depreciation may be taken in every fiscal year, regardless of whether the entity incurred in losses or made profits.

Italian generally accepted accounting principles (GAAP) do not set out a comprehensive table of assets and useful lives/rates to be applied. For tax purposes, the depreciation is set out by the Italian Tax Code and for fixed tangible assets is determined applying special rates set out by the Ministerial Decree issued on 31 December 1988, which is generally followed for accounting purposes.

An exception may apply in case of assets with a unit cost not higher than EUR516.46, for which the full depreciation of the acquisition cost in the year of purchase shall be allowed in the fiscal year during which such cost has been incurred. The mentioned rule is not mandatory.

The Ministerial Decree issued on 31 December 1988 defines rates to be applied for determining the yearly tax depreciation quota of tangible assets and is divided into 22 groups of industries, further divided into subcategories.

For instance, the Group 4, Subpart 4, related to the oil and gas industry (exploration and production sector), provides the following rates:

Asset type	Useful life for tax	Applicable tax depreciation rate
Buildings	18.18 years	5.5%
Lightweight construction	10 years	10%
Generic plants	12.5 years	8%
Wells	6.67 years	15%
Specific plants	4 years	25%
Sensors and recorders for geophysical surveys	4 years	25%
Equipment and small tools	2.86 years	35%
Plants for the processing and purification of water, harmful fumes, etc., through the use of chemical reagents	6.67 years	15%
Furniture and office machinery	8.33 years	12%

Asset type	Useful life for tax	Applicable tax depreciation rate
Electrical and electronic office equipment, including computers and telephone systems	5 years	20%
Transport vehicles (e.g., general heavy vehicles, forklifts, vehicles for internal transport)	5 years	20%
Cars, vehicles and similar	4 years	25%

Tax depreciation cannot exceed the accounting depreciation. Any excess of tax depreciation can be recovered only at the end of the accounting depreciation life.

2.2 Super depreciation and hyper depreciation

Benefit: depreciation for CIT purposes

Since fiscal year 2015, Italian entities purchasing certain new tangible assets (excluding certain vehicles not exclusively used for business purposes, real estate assets, assets with depreciation rates lower than 6.5%), might benefit from an extra depreciation only for tax purposes, consisting in a free step-up of the related purchase cost.

The extra depreciation does not affect the entity's Income Statement, nor does it affect the calculation of capital gains/losses for tax purposes.

Under the so-called super depreciation regime, the yearly depreciation relevant for tax purposes is increased up to a specific percentage as highlighted in the table below.

Relevant purchasing period	Extra depreciation	Extended purchasing period*	Investment limit
15 October 2015 - 31 December 2015	40%	N/A	N/A
1 January 2016 - 31 December 2016	40%	N/A	N/A
1 January 2017 - 31 December 2017	40%	1 January 2018 - 30 June 2018	N/A
1 January 2018 - 31 December 2018	30%	1 January 2019 - 30 June 2019	N/A
1 April 2019 - 31 December 2019	30%	1 January 2020 - 31 December 2020	Up to EUR2.5 million

*The relevant purchasing period could be extended if the relevant purchase order is accepted by the seller and at least 20% of the purchase price is paid by the 31 December of the fiscal year indicated in the first column of the table.

The extra depreciation quota is deductible for CIT purposes starting from the fiscal year in which the assets enter into operation and applies for every fiscal year in which the asset is used.

Under the so-called hyper depreciation regime, the extra depreciation is furtherly increased and applies only in case of new assets linked to digital and technological transformation processes promoted by the Italian Government within its Industry Plan 4.0 (qualifying assets are specifically listed in annex A to the Italian Budget Law for 2017, Law n. 232/2016). The table below shows the extra depreciation quotas depending on the relevant purchasing period.

Relevant purchasing period	Extra depreciation	Extended purchasing period*
1 January 2017 - 31 December 2017	150%	1 January 2018 - 30 June 2018
1 January 2018 - 31 December 2018	150%	1 January 2019 - 31 December 2019
1 January 2019 - 31 December 2019	170% for investments up to EUR2.5 million 100% for investments from EUR2.5 million to EUR10 million 50% for investments from EUR10 million to EUR20 million	1 January 2020 - 31 December 2020

*The relevant purchasing period could be extended if relevant purchase order is accepted by the seller and at least 20% of the purchase price is paid by the 31 December of the fiscal year indicated in the first column of the table.

For taxpayers benefiting from this tax incentive, the purchase of certain eligible intangible assets³ also grants an extra depreciation for tax purposes equal to 40%.

For assets that cost more than EUR500,000, to benefit from the hyper depreciation regime, the entity must obtain a technical report by a certified expert attesting that the assets purchased meet the law requirements, including that the assets must be integrated in the business operation/supply chain of the entity.

The entity shall benefit from the hyper depreciation as of the fiscal year in which the assets meet all the law requirements as highlighted above.

Benefit: tax credit

Starting from fiscal year 2020, the abovementioned regimes have been replaced with new tax credits for the purchase of new tangible assets and certain intangible assets (for qualifying assets please refer to the ones previously covered by the super and hyper depreciation regimes), allowing companies to benefit from these tax incentives even in a tax loss position. In fact, the tax credit could be offset against other taxes and/or social security contributions, but it cannot be transferred.

The tax credits are calculated as follows depending on the different kind of assets purchased and the period of time in which the purchase occurred.

³Qualifying assets are specifically listed in annex B to the Italian Budget Law for 2017.

Assets	Tax credit (percentage of the purchase cost)	Utilization	Relevant purchasing period*
New qualifying tangible assets (see above former super depreciation regime)	6% with a maximum investment equal to EUR2 million	Five annual equal installments, as of the year following the one in which the asset enter into operation	1 January 2020 31 December 2020
	10% (or 15% in case of assets qualifying for smart working) with a maximum investment equal to EUR2 million	Three annual equal installments, as of the year in which the assets enter into operation Single annual installment for companies whose turnover is lower than EUR5 million	16 November 2020 31 December 2021
	6% with a maximum investment equal to EUR2 million	Three annual equal installments as of the year in which the assets enter into operation	1 January 2022 31 December 2022
New qualifying intangible assets (excluding the ones listed in Annex B to the Italian Budget Law for 2017)	10% (or 15% in case of assets qualifying for smart working) with a maximum investment equal to EUR1 million	Three annual equal installments, as of the year in which the assets enter into operation Single annual installment for companies whose turnover is lower than EUR5 million	16 November 2020 31 December 2021
	6% with a maximum investment equal to EUR1 million	Three annual equal installments as of the year in which the assets enter into operation	1 January 2022 31 December 2022
New qualifying high-tech assets related to the Industry Plan 4.0 (as listed in Annex A to the Italian Budget Law for 2017)	40% for investments up to EUR2.5 million 20% for investments from EUR2.5 million to EUR10 million	Five annual equal installments, as of the year following the one in which the assets meet all the law requirements	1 January 2020 31 December 2020
	50% for investments up to EUR2.5 million 30% for investments from EUR2.5 million to EUR10 million 10% for investments from EUR10 million to EUR20 million	Three annual equal installments as of the year in which the assets meet all the law requirements Single annual installment for companies whose turnover is lower than EUR5 million	16 November 2020 31 December 2021
	40% for investments up to EUR2.5 million 20% for investments from EUR2.5 million to EUR10 million 10% for investments from EUR10 million to EUR20 million	Three annual equal installments as of the year in which the assets meet all the law requirements	1 January 2022 31 December 2022
New qualifying intangible assets connected to investments related to the Industry Plan 4.0 (as listed in Annex B to the Italian Budget Law for 2017)	15% with a maximum investment equal to EUR700,000	Three annual equal installments as of the year following the one in which the assets meet all the law requirements	1 January 2020 31 December 2020
	20% with a maximum investment equal to EUR1 million	Three annual equal installments as of the year in which the assets meet all the law requirements	16 November 2020 31 December 2022

*A six-month extension from the deadline listed in the column may apply provided that the relevant purchase orders are accepted by the seller by 31 December and at least 20% of their price is paid by the same date.

A third-party technical report is required in the case of any Industry Plan 4.0 purchase (high-tech and intangible assets related) with a value higher than EUR300,000.

The tax credit can be revoked if the qualifying assets are disposed of or transferred outside of Italy within 31 December of the second year following the one in which the assets enter into operation or in which the assets have the requirements provided by the Industry Plan 4.0.

2.3 Assets that do not qualify for tax depreciation

Type of assets	Explanation
Land	<p>Under Italian tax rules, land cannot be depreciated either for accounting or for tax purposes. Land is deemed to have an undefined useful life.</p> <p>If the historical cost (i.e., the purchase cost) of the building includes the value of the land, accounting and tax depreciation must be adjusted to identify the depreciation quota virtually attributable to land. The mentioned adjustment is equal to a lump-sum reduction of 20% or 30% of the accounting depreciation.</p>

2.4 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

These represent costs that can be directly computed, increasing the historical cost of the related asset, and consequently depreciated for the useful life period of the principal item. Ancillary costs can be defined as the whole of costs sustained by the purchaser to make the asset available and ready for use.

For tax purposes, ancillary costs follow the same approach described for accounting purposes. Indeed, they increase the historical cost of the related asset and consequently are subject to the depreciation process. Such costs can be deducted under the ordinary rules related to the depreciation process (using depreciation rates provided by the tax law).

Land remediation

Such costs are generally accounted for in profit and loss (P&L) as provisions for future risks and charges. The annual accrual of the mentioned provisions cannot be deducted for corporate income tax (CIT) purposes; thus, the deductibility is postponed to the fiscal year in which the costs are actually sustained.

Own labor capitalized

Own labor can be capitalized if it refers to internal realization of assets (e.g., in the case of patents, buildings, machines). In this case, it can be depreciated for the useful-life period of the principal item (both from an accounting and tax standpoint). Such costs can be deducted under the ordinary rules related to the depreciation process (using depreciation rates provided by the tax law).

2.5 Availability of immediate deductions for repairs

Under Italian legislation, repair expenses can be classified into two categories: routine maintenance and improvements.

Routine maintenance cannot be accounted for as an increase in the historical cost of the item, but it is recognized in the P&L of the financial year in which it is sustained.

Improvements represent costs that trigger a significant and tangible increase in productivity or useful life of the asset. Such costs must be accounted for as an increase of the historical cost and, therefore, they must be capitalized.

From a tax perspective, routine maintenance recognized in the P&L of the financial year in which it is sustained can be deducted for CIT purposes only up to 5% of the value of fixed tangible assets, according to the record of depreciable assets at the beginning of the financial year. Any excess can be deducted in equal quotas in the following five fiscal years.

Maintenance expenses in connection with a contract with third parties providing periodic maintenance of the company's assets are fully deductible, and the value of the asset is not considered in determining the above limit.

Improvements accounted for as an increase of the historical cost and, therefore, capitalized can be deducted for CIT purposes applying the general tax rules provided above.

3. Depreciation and calculation methods

Methods used	Straight-line/prime cost
Frequency	The depreciation is calculated on an annual basis.
Year of acquisition	Accounting depreciation starts when the asset is available and ready for use. The yearly quota is computed using a pro rata time. The term "ready for use" means that the asset is properly working and is, from a juridical point of view, at the disposal of the purchaser. For tax purposes, instead, the depreciation starts from the fiscal year during which the asset enters into operation. The tax rate for the first year of depreciation is reduced by 50%.
Year of disposal	In the year of disposal, accounting and tax depreciation is calculated following the ordinary rules described above.
Ability to use different methods for different assets	From an accounting perspective, the same method and depreciation rates must be used for the same class of assets.
Ability to switch methods	Italian GAAP n. 29 allows, respecting certain conditions, a change in accounting criteria. From a tax perspective, the only available depreciation method is the straight-line approach.

4. Accounting for disposals

In case of disposal, the company will recognize a capital gain or loss in the P&L of the financial year in which the operation takes place, comparing the historical cost of the asset (including the depreciation quota computed until the date in which the asset is removed from the production process) and the consideration received.

From a bookkeeping perspective, the asset is written off from the accounting ledgers. In principle, no adjustments should be made to the capital asset and previously claimed depreciations.

From a tax perspective, capital gains are taxed and capital losses can be deducted in the year in which the disposal takes place.

In case of the scrap of an asset, the company will recognize a capital loss equal to the residual historical cost of the asset (including the depreciation quota computed until the date in which the asset is removed from the production process) in the P&L of the financial year in which the operation takes place.

From a bookkeeping perspective, the asset is written off from the accounting ledgers. In principle, no adjustments should be made to the capital asset and previously claimed depreciations.

In case of the scrap of the assets previously booked, the company must be able to be compliant with specific provisions (e.g., communications to be filed with the relevant tax authorities) concerning the documental proof to overcome the legal “presumption of sale” for CIT and value-added tax purposes.

5. Making a claim

No specific claim is required for implementing the depreciation process. Compulsory rules are provided by the law with reference to bookkeeping procedures.

Among the required documentation, accounting ledgers related to the depreciation are the asset book and the book of inventories. However, all the relevant accounting documents (e.g., purchase invoices, agreements) related to the enterprise must be stored for 10 years or longer, depending on the statute of limitation provided by tax law.

6. Intangible assets

Tax depreciation is available for intangible assets.

From an accounting perspective, the depreciation starts when the asset is ready for use or when it starts to produce its benefits for the entity. Under Italian law, the depreciation period for goodwill is related to its useful life or for a maximum 10-year period. Goodwill can be capitalized only if a price was paid for it⁴ and with the formal authorization of the internal auditors committee. The depreciation of goodwill must be properly documented in the explanatory notes of the financial statements.

From a tax perspective, tax law expressly identifies a defined useful life for each category of intangible asset, determining the maximum depreciation quota of each fiscal year (see Article 103, Italian Tax Code).

Type of asset	Rates/lives
Trademarks	Costs for purchased trademarks can be deducted in at least 18 years in equal installments. Longer length of the amortization process is allowed.
Patents, copyright, design, know-how or similar item	Costs for patents, copyright, design and know-how can be deducted in at least two years in equal installments. A longer length of the amortization process is allowed.
Goodwill	Goodwill may be capitalized and depreciated for tax purposes only if a price was paid for it (e.g., goodwill arising from mergers cannot be deducted). Costs for goodwill can be deducted in at least 18 years in equal installments. A longer length of the amortization process is allowed.
License or permit	Licenses and permits can be deducted for a period equal to their contractual duration.

⁴ In principle, mergers, demergers and asset contributions are tax-neutral transactions, and consequently the depreciation related to higher value of goodwill or other assets arising from such transactions are not deductible for tax purposes. However, different kinds of step-up elections are available allowing the recognition of the higher accounting value (if any) for tax purposes by paying a substitutive tax at rates ranging from 12% to 16%.

6.1 Deferral of the deductibility of depreciation quotas for certain intangible assets

With reference to goodwill, trademarks and other intangible assets, the Italian Budget Law for 2019 (Art. 1, par. 1079, Law no. 145/2018) and the Italian Budget Law for 2020 (Art. 1, par. 714, Law no. 160/2019) modified their depreciation plan relevant for tax purposes (i.e., usually 18 years for goodwill and trademarks). In particular, the remaining depreciable value relevant for tax purposes as of 31 December 2017, is deducted as follows:

- ▶ 0% of the value for fiscal years 2018 and 2019
- ▶ 3% of the value for fiscal year 2020
- ▶ 10% of the value for fiscal year 2021
- ▶ 12% of the value from fiscal year 2022 to fiscal year 2024
- ▶ 13% of the value from fiscal year 2025 to fiscal year 2027
- ▶ 6% of the value for fiscal years 2028 and 2029

7. Revaluation of assets

The book value as well as the tax basis of tangible or intangible assets cannot be generally increased. However, from time to time special laws have allowed the revaluation of the book value and/or the tax basis of business assets.

Recently, Article 110 of Law Decree n. 104/2020 introduced an optional revaluation regime allowing companies to increase the book value of their business assets (excluding goodwill) in the financial statements for 2020 up to their relevant fair market value. The revaluation can also be recognized for tax purposes by paying a 3% substitute tax (which can be paid in three yearly installments). The higher depreciation quota is recognized for tax purposes as of fiscal year 2021.

From an accounting perspective, the mentioned revaluation triggers the recognition of a dedicated net equity reserve equal to the higher book value of the assets. This tax-deferred reserve is in principle subject to tax in case of its distribution to the shareholders. However, no tax is due upon distribution if an additional 10% substitute tax is paid.

The benefits of the revaluation election are recaptured for capital gain/losses determination if the company disposes of the relevant assets before the beginning of the fourth year following the one in which the revaluation has taken place in the financial statements (i.e., before 2024 for companies adopting the calendar year).

Article 110 of Law Decree n. 104/2020 also allows companies to elect to eliminate existing differences between the book value and the tax basis of their business assets by paying a 3% substitute tax (realignment). This election is applicable also to goodwill and other intangible assets.

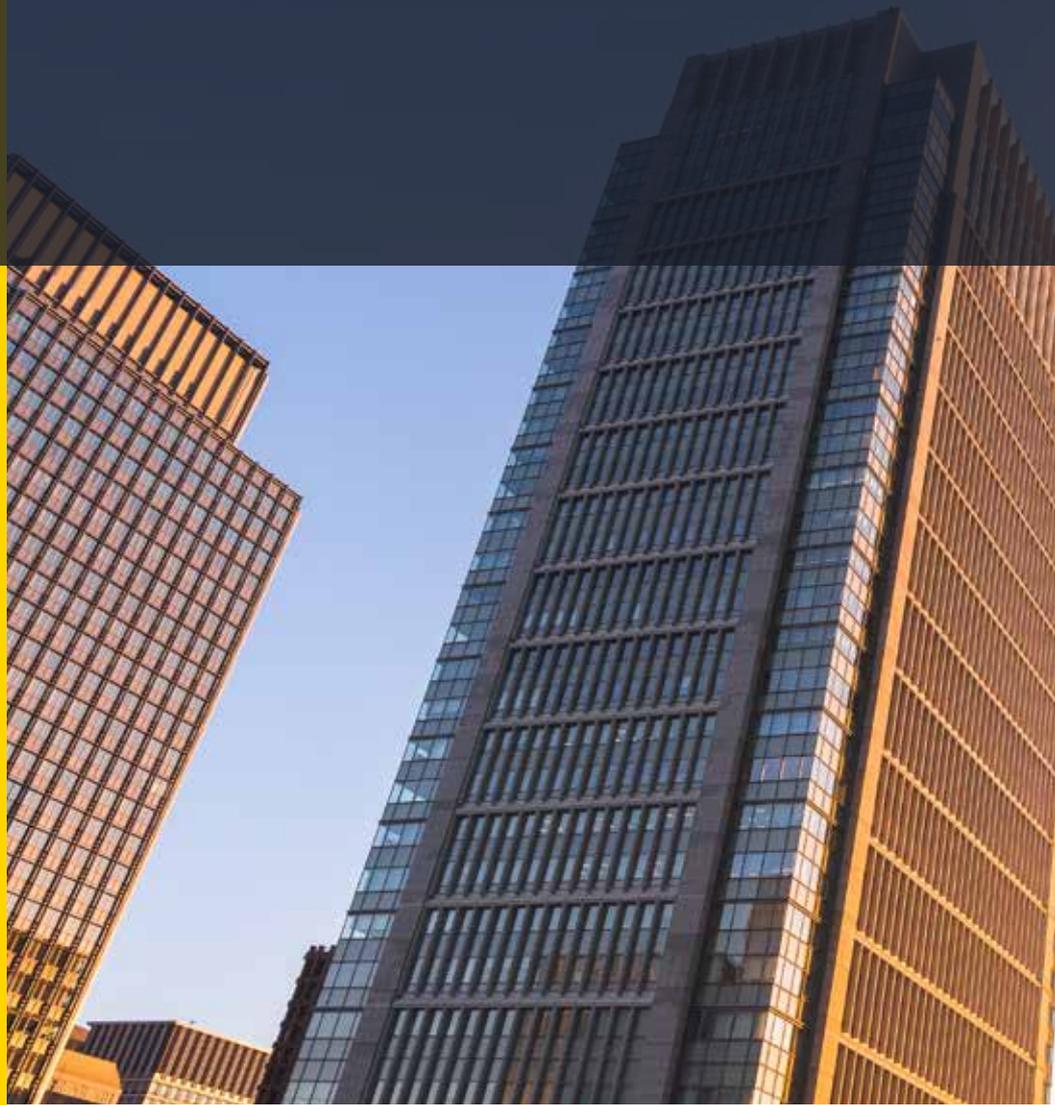

8. Suspended depreciation

Article 60, paragraphs from 7-bis to 7-quinquies of Law Decree No. 104 of 14 August 2020 (Decreto Agosto) introduced the possibility for ITA GAAP adopters to partially or totally suspend the depreciation process (and therefore extending for one year the depreciation plan) only for accounting purposes for fiscal year 2020 for both tangible and intangible assets.

An amount corresponding to the depreciation not recognised in the Income Statement must be allocated to a specific net equity reserve.

The depreciation amount not recognised in the Income Statement is eligible for deduction for CIT and Local Tax purposes.

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Depreciation

Does the tax treatment follow book/statutory accounting depreciation?

No

Range of rates used

1.3%-100%

Depreciation method used to calculate tax deduction

Declining-balance, straight-line/prime cost, units of production, straight-line for over lease periods

1. Entitlement to claim

Economic owners, including finance leasing holders under certain conditions, are entitled to claim depreciation when they capitalize an asset in the books of account.

2. Allocation of tangible assets to tax depreciation lives and rates

Companies are required to break down assets by the following categories for Japanese tax purposes: buildings, building improvements, other structures, machinery, equipment, vessels, aircraft and vehicles.

2.1 Assets that qualify for tax depreciation

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Buildings and building improvements	3-50 years	Straight-line	2%-33.4%	
Car parks	10-50 years	Declining-balance Straight-line	4%-20% 2%-10%	For items regarded as buildings, only the straight-line method may be used.
Other structures (e.g., dam, tunnel, bridge, railway)	3-80 years	Straight-line	1.3%-33.4%	
Plant, machinery and equipment	2-22 years	Declining-balance Straight-line	9.1%-100% 4.6%-50%	For items regarded as buildings, only the straight-line method may be used.
Property used in research and development	4-7 years	Declining-balance Straight-line	28.6%-50% 14.3%-25%	
Agricultural machinery and equipment	7 years	Declining-balance Straight-line	28.6% 14.3%	
Furniture, fittings or fixtures	2-20 years	Declining-balance Straight-line	10%-100% 5%-50%	
Office equipment (including office furniture and fixtures)	2-20 years	Declining-balance Straight-line	10%-100% 5%-50%	
Computer hardware	4 or 5 years	Declining-balance Straight-line	40% or 50% 20% or 25%	
Computer software	3 or 5 years	Straight-line	20% or 33.4%	
Motor cars	3-6 years	Declining-balance Straight-line	33.3%-66.7% 16.7%-33.4%	
Aircraft	5, 8 or 10 years	Declining-balance Straight-line	20%, 25% or 40% 10%, 12.5% or 20%	
Vessel	4-15 years	Declining-balance Straight-line	13.3%-50% 6.7%-25%	
Other transportation (e.g., train)	2-20 years	Declining-balance Straight-line	10%-100% 5%-50%	
Art object	8 or 15 years	Declining-balance Straight-line	13.3% or 25% 6.7% or 12.5%	If the acquisition cost is JPY1m or more, the art object cannot be recognized as a tax depreciation expense.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Finance lease asset	Lease periods	Straight-line method over the lease periods	Depends on lease periods	
Land improvements	N/A	N/A	N/A	

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Land does not qualify because the value of land (theoretically) does not decrease over time.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Add the expenditure to the acquisition costs of the fixed asset.

Own labor capitalized – work on developing software, for example, or carrying out work on property

Add the expenditure to the acquisition cost of the fixed asset.

2.4 Availability of immediate deductions for repairs

Description	Detail
Assets below a certain value	Assets with a value of less than JPY100,000 need to be included in the expenses.
Repairs	Repairs are ordinarily included in the current expenses.

Repair expenses are ordinarily included in the current expenses. However, repairs that extend the useful life or enhance the value of the property are included in the acquisition cost. The following expenses are treated as repair expenses:

- ▶ Expenses for the restoration of an asset damaged by a disaster
- ▶ A small amount of expenses (under JPY200,000 per year) for short-term (within three years) periodic maintenance
- ▶ Expenses amounting to less than JPY600,000 or 10% of the acquisition cost of the asset, unless such expenses are clearly recognized as capital expenditure

3. Depreciation and calculation methods

Methods used	Declining-balance, straight-line/prime cost, units of production, replacement
Frequency	Annually Depreciation is calculated on annual basis due in conjunction with the annual tax return.
Year of acquisition	Depreciation is calculated from the (full) month in which the asset has been used for the business for the first time (i.e., acquisition alone is not sufficient) and then if held at year-end.
Year of disposal	In case of disposal depreciation, in principle, it is only possible if the asset is held and disposed of at year-end.
Ability to use different methods for different assets	Different methods can be applied to the same assets by each business place if the business place meets certain requirements (e.g., the company has two factories in different places). In that case, the company can select different methods, factory by factory, for the same category of assets.
Ability to switch methods	Yes, an application must be filed with the National Tax Agency (NTA) with jurisdiction over the individual or corporation to change the depreciation method before the beginning of the tax year for which the change is to be effective. Once changed, individuals and corporations cannot change the depreciation method again for three years unless there are extraordinary circumstances, such as a corporate merger.

4. Preferential and enhanced depreciation availability

There are some important special depreciation regimes to note.

Asset used in	Comment on specific application and benefits available
Machinery, etc., for enhancement of high energy-saving	20% special depreciation
Building improvement, machinery and equipment for enhancement of disaster countermeasure acquired by small and medium-sized corporations	18% special depreciation
Machinery, etc., acquired by small and medium-sized corporations	30% special depreciation
Machinery, etc., acquired in a National Strategic Economic Growth Area	45% or 50% special depreciation (buildings and other structures – 23% or 25%)
Equipment for enhancement of business productivity for small and medium-sized corporations	Immediate depreciation
Building, etc., specifically in the local operation reinforcement plan under the Local Revitalization Act	25% or 15% special depreciation
Machinery and equipment related to 5G system acquired by telecom carriers or local 5G approvers	30% special depreciation

Asset used in	Comment on specific application and benefits available
Medium to long-term environmentally adaptable facilities acquired by companies whose "plans for medium to long term environmental adaption" are certified under the Amended Industrial Competitiveness Enhancement Act (carbon neutrality tax incentive)	50% special depreciation
Assets that are acquired by companies whose plans for business adaption are certificated under the Amended Industrial Competitiveness Enhancement Act (digital transformation tax incentive)	30% special depreciation

In many cases, tax credits are provided as tax incentives in certain time periods instead of special depreciation.

5. Accounting for disposals

No adjustments are made when a company disposes of an asset.

6. Making a claim

A claim is made in the tax return.

Corporations should attach Schedule 16 (the form of computing depreciation) to the tax return.

7. Intangible assets

The following intangible assets are also amortized:

- ▶ Goodwill
- ▶ Patents
- ▶ Trademark
- ▶ Utility model rights (industrial property rights)
- ▶ Design model rights
- ▶ Rights regarding mining; fishing; water use; use of railway property; use of electrical or gas supply facilities; and use of heat supply, water supply, or telegraph or telephone facilities, etc.

Type of asset	Rates/lives
Goodwill	20%/5 years
Patents	12.5%/8 years
Trademark	10%/10 years
Utility model rights	20%/5 years
Design rights	14.3%/7 years

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation

Does the tax treatment follow book/statutory accounting depreciation?

No

Range of rates used

4%-33.3%

Depreciation method used to calculate tax deduction

Straight-line

1. Entitlement to claim

Only legal owners are entitled to claim depreciation.

2. Allocation of tangible assets to tax depreciation lives and rates

Tax legislation sets out the rates that apply. Different classes of assets can be treated separately. For example, elevators in a building can be treated as plant and machinery.

2.1 Assets that qualify for tax depreciation

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment	5 years	Straight-line	20%	Depreciation rate for Drilling Equipment is 25% (useful life of 4 years).
Motor cars	5 years	Straight-line	20%	
Buildings	25 years	Straight-line	4%	Depreciation rate for Prefabricated Building is 15% (useful life of 6.67 years).
Furniture, fittings or fixtures	6.67 years	Straight-line	15%	
Computer hardware	3 years	Straight-line	33.3%	
Computer software	4 years	Straight-line	25%	
Aircraft		Straight-line		The law does not specify a depreciation rate. The tax authorities may apply the rate applicable for plant, machinery and equipment.
Transport other than motor cars	5-6.67 years	Straight-line	15%-20%	Depreciation rate for Trucks and Lorries is 15% (useful life of 6.67 years) and for Buses is 20% (useful life 5 years).
Car parks				The law does not specify a depreciation rate.
Office equipment	6.67 years	Straight-line	15%	This would also include Electric and Electronic Devices.
Land improvements				The law does not specify a depreciation rate.
Qualified leaseholder improvement property				The law does not specify a depreciation rate.
Agricultural machinery and equipment				The law does not specify a depreciation rate.
Property used in R&D				The law does not specify a depreciation rate.

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Excluded by Kuwait tax law

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

The Kuwait Tax Law does not explicitly provide a treatment for preliminary costs. However, based on the practice of the Kuwait Tax Authority, any costs incurred until the asset is ready for use may be capitalized and depreciated.

Land remediation – removing asbestos, Japanese knotweed

No specific provisions are provided in the Kuwait Tax Law.

Own labor capitalized – work on developing software, for example, or carrying out work on property

No specific provisions are provided in the Kuwait Tax Law. However, labor cost on development of any asset may be capitalized on case-by-case basis.

2.4 Availability of immediate deductions for repairs

The treatment of repairs is determined by the taxpayer's accounting method. Generally, the current repairs are allowed as a deduction for tax purposes, while the repairs that result in the increase in capital value or effective life of the asset are added to the value of the asset and depreciated.

3. Depreciation and calculation methods

Methods used	Straight-line
Frequency	Daily
Year of acquisition	The depreciation charge is calculated based on the carrying cost of the asset from the date of acquisition.
Year of disposal	Depreciation can be calculated until the disposal date.
Ability to use different methods for different assets	No
Ability to switch methods	N/A

4. Preferential and enhanced depreciation availability

There are no specific provisions to grant enhanced deductions for assets.

5. Accounting for disposals

For depreciable assets, taxable gain or loss on disposal of assets is computed by comparing the sales proceeds against the tax written-down value of such assets. For non-depreciable assets, the sale proceeds are compared against the cost of acquisition, and deduction for any expenses incurred in connection with the transfer is allowed. Capital gains are subject to tax as normal business income, while capital losses are allowed as a deduction.

6. Intangible assets

There are no specific provisions for tax relief for intangible assets. As a result, expenditure on intangibles does not attract any tax relief.

Capital allowances

Does the tax treatment follow book/statutory accounting depreciation?

No

Range of rates used

3%–100%

Depreciation method used to calculate tax deduction

Straight-line

EY contact:

Robert Yoon
+60 19 337 0991
robert.yoon@my.ey.com

1. Entitlement to claim

A taxpayer is entitled to claim capital allowance if:

- ▶ Capital expenditure is incurred in the basis period.
- ▶ The taxpayer is the owner of the asset at the end of the basis period.
- ▶ The asset is used for the business.

For assets acquired by hire-purchase, the amount paid as the down payment and the capital portion of each installment payment would qualify for capital allowance claims as and when the relevant amounts are incurred.

2. Allocation of tangible assets to tax depreciation lives and rates

The taxpayer must identify what costs are incurred on different assets.

Generally, rates of capital allowances are as follows:

A. Capital allowances rates for plant

Standard rates

Types of assets	Initial allowance (IA)	Annual allowance (AA)
Heavy machinery and motor vehicles ¹	20%	20%
Computer and information and communication technology (ICT) equipment ²	20%	20%
Plant ³ and machinery (general)	20%	14%
Others	20%	10%
Small-value assets ⁴	0%	100%

B. Industrial building allowance (IBA)

A building is an industrial building if it is used for business purposes and is used:

- ▶ As a factory
- ▶ As a dock, wharf, jetty or other similar building
- ▶ As a warehouse, and the business consists or mainly consists of the hire of storage space to the public
- ▶ For the business of a water or electricity undertaking that supplies water or electricity for consumption by the public
- ▶ For the business of a telecommunication undertaking that provides telecommunication services to the public
- ▶ In connection with the working of a farm
- ▶ In connection with the working of a mine

A taxpayer is entitled to claim the following IBA for the year of assessment in which the taxpayer incurs the capital expenditure for an industrial building:

Types of assets	IA	AA
Industrial buildings	10%	3%

¹ Qualifying expenditure on private motor vehicles is restricted to MYR50,000. However, if the vehicle is new and the total cost does not exceed MYR150,000, the qualifying expenditure will be restricted to MYR100,000.

² An accelerated rate of 20% initial allowance and 20% annual allowance is given for expenditure incurred on the purchase of ICT equipment and computer software packages (effective from year of assessment 2017) as well as the development of customized computer software consisting of consultation fee, payment for rights of software ownership and incidental fee relating to the development of customized computer software (effective from year of assessment 2018).

³ Effective from year of assessment 2021, "plant" means an apparatus used by a person for carrying on his or her business but does not include a building, an intangible asset, or any asset used and that functions as a place within which a business is carried on.

⁴ Effective from year of assessment 2020, small-value assets refer to assets in which the value of each does not exceed MYR2,000 and the total value of such assets for each year of assessment does not exceed MYR20,000. However, such limit is not applicable to a company that is resident and incorporated in Malaysia with paid-up ordinary share capital of MYR2.5 million or less at the beginning of the basis period of the year of assessment and is not otherwise related directly or indirectly to another company that has a paid-up capital of more than MYR2.5 million and its business income from one or more sources does not exceed MYR50 million for the relevant year of assessment (a small and medium enterprise, or SME).

Other types of buildings that do not fall within the above can also be deemed industrial buildings. In certain cases, conditions must be met for such structures to be considered industrial buildings, and all provisions that apply to industrial buildings generally also apply to them. The IBA rates for these special buildings may differ from the above. The rates are summarized below:

Types of assets	IA	AA
Buildings used for welfare/living accommodation of employees of a farm	10%	3%
Constructed buildings used as living accommodation of employees (employee does not include a director, an individual having control of that business or an individual who is a member of the management, administrative or clerical staff)	40%	3%
Buildings (constructed or purchased) used for living accommodation of employees for manufacturing, hotel or tourism business*	0%	10%
Buildings used for a childcare center provided by employer*	0%	10%
Buildings used as a childcare center or kindergarten registered with the relevant authority	0%	10%
Approved buildings for a school or an educational institution*	0%	10%
Buildings for industrial, technical or vocational training*	0%	10%
Approved licensed private hospitals, maternity homes and nursing homes*	10%	3%
Buildings used for approved research*	10%	3%
Buildings used for storage of goods for import and export*	0%	10%
Buildings used for an approved service project*	10%	3%
Public roads and ancillary structures recoverable through toll collection, buildings constructed on a build-lease-transfer basis, buildings constructed under approved privatization projects	10%	6%
Buildings used for registered hotels*	10%	3%
Airports (buildings, runway or ancillary structures)*	10%	3%
Approved motor racing circuits*	10%	3%
Approved buildings used as senior centers	0%	10%

Types of assets	IA	AA
Approved buildings used for BioNexus status companies	0%	10%
Approved buildings in Cyberjaya Flagship Zone	0%	10%
Commercial buildings (constructed or purchased) used for specific businesses by Tun Razak Exchange marquee status company	0%	10%

* As of the year of assessment 2016, taxpayers who own such a building and operate the relevant business in that building are entitled to claim industrial building allowances. If part of the building is used for letting property and it is not more than one-tenth of the floor area of the whole building, the whole building qualifies as an industrial building. However, if it is more than one-tenth of the floor area of the whole building, that part of the building that is let out will not be treated as an industrial building for claiming the industrial building allowance.

C. Agriculture allowances

When a taxpayer has incurred a capital expenditure on a qualifying agriculture expenditure, the taxpayer is entitled to an agriculture allowance as follows:

Types of qualifying agriculture expenditures	Rates
Clearing and preparation of land	50%
Planting (but not replanting) of crops on land cleared for planting	50%
Construction of a road or bridge on a farm	50%
Building used as living accommodation or welfare for employee of a farm	20%
Any other building on a farm	10%

D. Forest allowances

When a person (which includes a company, a body of persons, a limited liability partnership and a corporation sole) who has a concession or license to extract timber has incurred a capital expenditure on the construction of certain roads or buildings in a forest, such person is entitled to a forest allowance as follows:

Types of qualifying forest expenditures	Rates
Road or building	10%
Building used as living accommodation or for the welfare of employee	20%

2.1 Assets that qualify for tax depreciation

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Heavy machinery	4 years	Straight-line	IA=20%; AA=20%	
Plant and machinery	6 years	Straight-line	IA=20%; AA=14%	
Motor vehicle (licensed for commercial transportation of goods or passengers)	4 years	Straight-line	IA=20%; AA=20%	Must be licensed by appropriate authority
Motor vehicle	4 years	Straight-line	IA=20%; AA=20%	Qualifying expenditure on a private motor vehicle is restricted to MYR50,000. However, if the vehicle is new and the total cost does not exceed MYR150,000, the qualifying expenditure will be restricted to MYR100,000.
Buildings (industrial buildings)	30 years	Straight-line	IA=10%; AA=3%	See Section 2B for further details.
Furniture, fittings or fixtures	8 years	Straight-line	IA=20%; AA=10%	
Computer hardware	4 years	Straight-line	IA=20%; AA=20%	This accelerated capital allowance (ACA) rate applies if certain conditions have been met. See Section 2A for further details.
Computer software	4 years	Straight-line	IA=20%; AA=20%	
Aircraft	4 years	Straight-line	IA=20%; AA=20%	
Transport other than motor vehicle	4 years	Straight-line	IA=20%; AA=20%	
Car parks	6 years	Straight-line	IA=20%; AA=14%	Previously, car park buildings may be eligible for capital allowances under certain circumstances. However, as of year of assessment 2021, car parks will not be eligible for capital allowances as the "plant" definition does not include a building or any asset used and that functions as a place within which a business is carried on.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Office equipment (including office furniture and fixtures)	8 years	Straight-line	IA=20%; AA=10%	
Agricultural machinery and equipment	2 years	Straight-line	IA=20%; AA=40%	This rate applies if certain conditions have been met.
Building used for research	30 years	Straight-line	IA=10%; AA=3%	Research must be approved by the Minister of Finance.

2.2 Assets that do not qualify for tax depreciation

Building structures will not qualify for capital allowance claims unless they are industrial buildings. Industrial buildings are specifically defined in Income Tax Act 1967 (the Act). See Section 2B for further details.

2.3 Noteworthy items

Land remediation, dismantling, restoration

As of year of assessment 2009, the cost of dismantling and removing plant and machinery and restoring the site on which the plant and machinery is located can be claimed as a capital allowance on that cost and is part of the residual expenditure in computing the balancing adjustments (i.e., balancing allowance and balancing charge). To qualify for this, the requirement to dismantle and restore the site must be pursuant to a written law/agreement and the asset that has been dismantled must not be used for any business of the person (which includes a company, a body of persons, a limited liability partnership and a corporation sole).

Own labor capitalized

Capital allowance can be claimed on labor costs incurred in connection with the provision and installation of qualifying plant and machinery. Labor costs incurred by the company's own employees would qualify as a revenue deduction.

2.4 Availability of immediate deductions for repairs

Description	Detail
Assets with a life of less than two years	To claim as revenue expenditure on a replacement basis
Assets not exceeding MYR2,000 each and not exceeding a total value of MYR20,000	To claim AA=100%. However, such a limit is not applicable to SMEs (see Section 2A).

The expenses incurred for repair of premises, plant and machinery, or fixtures employed in the production of gross income are tax-deductible. Generally, repairs are activities undertaken merely to maintain assets in good and efficient operating condition. Thus, the objective of a repair is to preserve the asset rather than to alter or improve it.

Tax deductions for repairs are given on an incurred basis and are not limited by reference to turnover or depreciation in the financial statements.

3. Capital allowance calculation methods

Methods used	Straight-line/prime cost
Frequency	Annually
Year of acquisition	A capital allowance is calculated starting from the year of acquisition. If the expenditure is incurred and the asset is put into use (and other conditions, if relevant, are met) at any time during the basis period for a year of assessment, a full capital allowance claim is available for that year – no apportionment is necessary. If an asset is acquired before the commencement of business, it is deemed to be acquired (and capital allowances will start to be claimed) on the date that business commences.
Year of disposal	A balancing allowance or balancing charge adjustment is made in the year of disposal.
Ability to use different methods for different assets	No
Ability to switch methods	N/A

4. Availability of accelerated capital allowance (ACA)

To encourage modernization, selected business and purchasers of selected equipment and certain categories of plant and machinery may qualify for higher rates of capital allowances (i.e., ACA). In Malaysia, various types of ACAs are granted under separate tax gazette orders. Conditions stipulated in the respective order must be met by the taxpayer for the ACA to be claimed on the capital expenditure.

Types of assets	Initial allowance	Annual allowance
Machinery and equipment determined by the Minister of Finance used in agriculture sector	20%	40%
Prescribed equipment and facility for collecting wastes	40%	20%
Imported prescribed heavy machinery used in construction, plantation and timber industries	10%	10%

Types of assets	Initial allowance	Annual allowance
Machinery and plant (other than imported heavy machinery) used in:		
Building and construction	30%	20%/14% ⁵
Timber and tin mining	60%	20%/14% ⁵
Unless election made in writing	20%	20%/14% ⁵
Molds for industrialized building system	40%	20%
Natural gas for bus transport and buses using natural gas	40%	20%
Qualifying plant expenditure used to control the quality of electric power	20%	40%
Plant and machinery used for recycling wastes	40%	20%
Plant and machinery used for qualifying project in respect of a promoted activity	40%	20%
Renovation cost incurred on building located in Tun Razak Exchange ⁶	20%	40%
Qualifying plant expenditure incurred for carrying out petroleum operation ⁷	25%	15%
Automation equipment ⁸ :	20%	80%
i) Up to RM4 million – for a qualifying project relating to rubber, plastic, wood, furniture and textile (Category 1)		
ii) Up to RM2 million – other than Category 1, as determined by the Minister of Finance (Category 2)		
Machinery and equipment including information and communication technology equipment ⁹	20%	40%

⁵ Depending on whether the machinery or plant is heavy machinery (20%) or not (14%)

⁶ Effective from 1 January 2014 to 31 December 2020.

⁷ Effective from the years of assessment 2010 to 2024.

⁸ Effective from the years of assessment 2015 to 2023.

⁹ For capital expenditure incurred between 1 March 2020 and 31 December 2021. This proposal has not yet been legislated.

5. Accounting for disposals

When a company disposes of an asset, the disposal price or the market value of the asset (whichever is higher) will be used to calculate a balancing allowance (BA) or balancing charge (BC). BA arises when the tax written-down value exceeds the disposal price/market value (as the case may be). The BA is an additional allowance that is available to the taxpayer. BC arises when the disposal price exceeds the tax written-down value – a BC will increase taxable income.

If a disposal takes place within two years of the date of acquisition of the assets, a balancing charge equal to any allowance claimed must be made.

Different rules apply for transfers between parties that have control over one another or that are both controlled by another party.

If a company scraps an asset for no value (and assuming there is, in fact, no market value for the asset), BA can be claimed if there is still a tax written-down value for the asset. However, if the asset has been scrapped within two years of the date of acquisition of the asset, a balancing charge equal to any allowance claimed may apply.

6. Making a claim

Capital allowance claims should be submitted in the income tax return form. All the supporting documents are to be kept by the claimant for tax audit purposes.

Documentation required will be a fixed asset register, sales and purchase agreements of the assets, statements of account, invoices, receipts for services rendered for installation, stamp duty, expenditure in improving the asset and evidence that the asset is in use for the business.

7. Intangible assets

Intangible assets do not qualify for capital allowance except for computer software (subject to certain conditions being met).

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation

Does the tax treatment follow book/statutory accounting depreciation?

No

Range of rates used

3%-100%

Depreciation method used to calculate tax deduction

Straight-line (prime cost)

1. Entitlement to claim

All taxpayers who legally own a fixed asset or incur the investment, such as preoperative expenses, are entitled to claim depreciation.

2. Allocation of tangible assets to tax depreciation lives and rates

Varied lives and rates can be applied to different assets depending on the limits and percentages mentioned in tax law. Although it is not required, it is possible to consider parts of a building separately.

2.1 Assets that qualify for tax depreciation

Tax legislation provides a complete list of rates that may be applied to assets.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Machinery and equipment (M&E) for energy generation from renewable sources	1 year	Straight-line	5%-100%	M&E must be used and functioning for a minimum five-year period from the immediate year after the 100% deduction; otherwise, apply the general rule.
M&E Please note the tax legislation also establishes other percentages to depreciate other machinery and equipment according to the industry in which the asset is used.	2-20 years	Straight-line	25%	Construction industry; agriculture, livestock, forestry and fishing activities
			35%	Machinery and equipment used directly for research on new products or developing technology in Mexico
			16%	Air transport; transmission of communications services provided by telegraphs and by radio and television stations
			8%	Manufacturing of motor vehicles and parts thereof; construction of railways and ships; manufacture of metal products, machinery, and professional and scientific instruments; processing of food and beverages, etc.
Other M&E			5%-50%	Percentage applicable to other M&E not specified in this document (depending on each industry)
Motor cars	4 years	Straight-line	25%	Limit of US\$8,750 on traditional motor cars and limit of US\$12,500 on electric automobiles
Bicycles, electric bicycles and motorcycles	4 years	Straight-line	25%	
Buildings	10-20 years	Straight-line	5% or 10%	10% on historical buildings
Furniture, fittings or fixtures	10 years	Straight-line	10%	
Computer hardware	3 years	Straight-line	30%	

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Computer software	3 years	Straight-line	30%	
Aircraft	4-10 years	Straight-line	10% or 25%	25% on crop dusters
Ships	15 years	Straight-line	6%	
Car parks	20 years	Straight-line	5%	Car parks are considered as buildings.
Office equipment (including office furniture and fixtures)	10 years	Straight-line	10%	
Qualified leaseholder improvement property	20 years	Straight-line	5%	Qualified leaseholder improvement property is considered to be part of the building and is subject to the same depreciation rate.
Agricultural M&E	4 years	Straight-line	25% (if applicable)	
M&E used in research and development (R&D)	2.8 years	Straight-line	35%	M&E used for R&D purposes
Preoperative expenses	10 years	Straight-line	10%	
Technical assistance	1 or 7 years	Straight-line	100% or 15%	When the benefit is obtained in one year, the depreciation can be taken at the rate of 100%, as long as detailed analysis is provided. If, however, the benefit is taken after one year, then the depreciated rate shall be taken at 15% per year.
Deferred expenses Intangible assets represented by goods or rights that make it possible to reduce operating costs, improve quality or acceptance of a product, or use or enjoy a good for a limited time that is shorter than the duration of the activity of the legal entity; deferred expenses are also intangible assets that make it possible to exploit public property or provide a public service under concession.	7 years	Straight-line	15%	Detailed analysis is required to qualify the asset as a deferred expense.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Deferred charges Deferred charges are those that meet the aforementioned requirements, except those regarding the exploitation of public property or the provision of a public service under concession. The benefit of the charges is for unlimited time that will depend on the duration of the legal entity's activity.	20 years	Straight-line	5%	Detailed analysis is required to qualify the asset as a deferred charge.

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	The value of this kind of asset increases every year for inflationary restatement.
Goodwill	Goodwill is not deductible in Mexico.
Purchase price allocation (PPA)	PPA is not deductible in Mexico for tax purposes. However, when shareholders sell their shares, the cost of the shares sold is subject to being deducted until such shares are sold.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

If these costs are strictly necessary for the operation of entities and if certain tax formalities are met, then entities can claim the deduction of the full amount paid in the corresponding tax year. These concepts require specific analysis in order to determine deductibility, as there could be different interpretations from case to case.

Land remediation – removing asbestos, Japanese knotweed

The deduction can be fully claimed in the year that the expense is incurred if it is strictly necessary for the operation of the corresponding entity and certain tax formalities are met (case-by-case analysis is required).

Own labor capitalized – work on developing software, for example, or carrying out work on property

Case-by-case analysis is required, as much of the initial investments could be treated as yearly expenses not subject to capitalization.

Tax incentives in new fixed assets in the Northern and Southern Border Region

On 31 December 2018, the president of the United Mexican States issued a tax incentive decree published in the Official Gazette for the Northern Border Region (NBR) that states that taxpayers who receive income exclusively in the NBR may apply a tax credit equivalent to one-third of the income tax generated in such region during the year or the advanced payments, against the tax caused during the same year or its estimated payments.

To apply this incentive, taxpayers must prove that they have their tax domicile in the NBR for at least 18 months. If that entity is starting its activities in the NBR, it can also apply such benefit, but it must comply with specific requirements to prove that the envisioned activities will be carried out using new fixed assets, and their annual income attributable to that region represents at least 90% of their total annual income, among other requirements.

The decree also clarifies what a new fixed asset means, commenting that it has to be used for the first time in Mexico, or, if it has already been used in Mexico, the taxpayer must acquire the fixed asset from a person who is not a related party of the taxpayer.

It is important to note that this tax incentive was only given for two years and cannot be applied by hydrocarbon contractors. However, the Mexican Tax Authorities extended the term of the incentive until 31 December 2024 to encourage the economy on the NBR, stimulate and increase investment, promote production and contribute to the creation of employment.

The extension published included some modifications, mentioning that taxpayers who intend to apply for these benefits should file a notice by 31 March 2021 to be registered in the Registry of Incentive Beneficiaries for the NBR and should not be in the procedure of temporary restriction of the use of digital stamps for the issuance of digital tax invoices, nor have the certificates issued by the SAT for the issuance of digital tax receipts cancelled. In addition, the Mexican Tax Authorities published 30 December 2020 a new tax incentive for the Southern Border Region (SBR) to grant the same incentive, subject to comply with the already mentioned requirements to all the taxpayers who carry out business activities in such region. It is important to mention that the SBR is made up of certain municipalities in the states of Quintana Roo, Chiapas, Campeche and Tabasco. This incentive would also be in force until 31 December 2024.

2.4 Availability of immediate deductions for repairs

Mexican income tax law states that repairs of and adaptations to facilities shall be considered investments, provided they entail additions or improvements to the fixed asset. Income tax law establishes that repairs or adaptations that entail additions or improvements to fixed assets are deemed to be those that increase the productivity or the useful life thereof, as well as those that allow such assets to be used in a different manner.

Mexican income tax law states that expenses for conservation, maintenance and repair made to keep facilities in good operating condition are not to be considered as investments. If such expenses are capitalized for accounting purposes, it would be considered a non-book tax deduction in the year (case-by-case analysis is required).

3. Depreciation and calculation methods

Methods used	Straight-line (prime cost)
Frequency	Annually; depreciation should be added with inflationary adjustment.
Year of acquisition	Depreciation is calculated from the date of acquisition of the corresponding asset and for complete months on an annual basis (tax year). The deduction can be restated by inflation from the acquisition date to the last month of the half of the period in which the asset was used in the year (e.g., if the asset was used the whole year, the inflationary restatement should be from the acquisition date to June of the year in which it will be deducted).
Year of disposal	It depends on the use and full life of the asset (applicable depreciation rate) for tax purposes.
Ability to use different methods for different assets	Only the straight-line method can be used.
Ability to switch methods	No; however, the taxpayer can use lower rates than the maximum limit rates established for each kind of asset. Any change should be made for at least a five-year period.

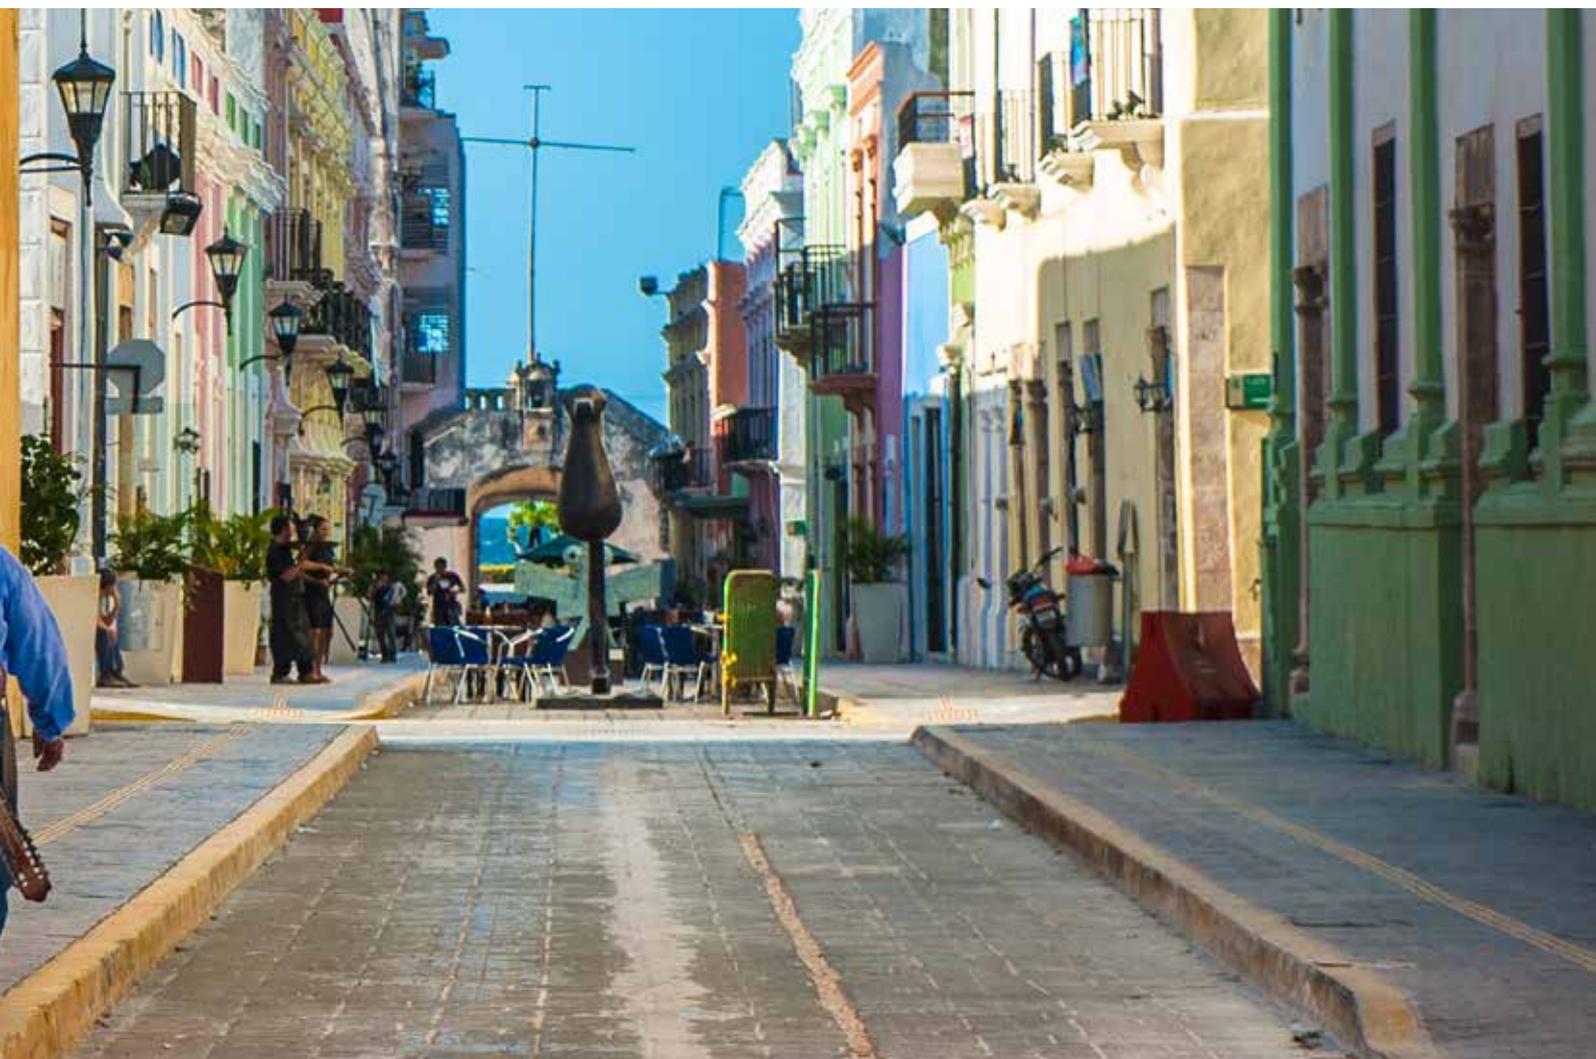

4. Preferential and enhanced depreciation availability

The depreciation rate for energy generation machinery and equipment from renewable sources or cogeneration systems of efficient electricity is 100%.

The depreciation rate for adaptations and improvements to facilitate the use of installations to people with different physical capabilities is 100%.

The contractors, according to the Mexican Law of Hydrocarbons, will be subject to different rates for machinery and equipment as follows:

Type of assets	Rates
Original amount of the investments made for exploration, secondary and improved recovery, and non-capitalized maintenance, in the fiscal year in which they occur	100%
Original amount of the investments made for the development and exploitation of oil or natural gas deposits, in each fiscal year	25%
Original amount of the investments made in storage and transport infrastructure essential for the execution of the contract, such as pipelines, gas pipelines, terminals, transport or storage tanks necessary to take the contractual production to the points of delivery, measurement or inspection determined in each contract, in each fiscal year	10%

A contractor, for purposes of the Mexican Law of Hydrocarbons, is Petróleos Mexicanos, or any other production company of the state or company that signs with the National Hydrocarbons Commission an agreement for exploration and extraction, either individually or in consortium or association in participation.

The depreciation rate for R&D purposes regarding M&E is 35%.

Mexico has not introduced any bonus provisions for investments during any specific time periods.

5. Accounting for disposals

When an asset is disposed of only because it is no longer required to generate income or it is obsolete, it can be deducted in one year for the remaining tax basis.

6. Making a claim

Claims are self-assessed.

Working papers must be prepared with the tax calculation of the tax depreciation from the date of the acquisition of the assets until the last month of the tax year in which the deduction is carried out. A statement should also be included to show the depreciation has been shared with the tax authorities.

7. Intangible assets

Maximum rates apply according to the type of asset and specific analysis that is required to determine the type of the intangible asset. In the case of royalties, they can be amortized at 100% in one year if the benefit is obtained in one year. However, if the benefit is obtained in more than one year, it should be amortized at 15% annually, and a deeper analysis is required to determine if the idea qualifies as a royalty for tax purposes.

Type of asset	Rates/lives
Trademarks	5% or 15% (further analysis is required).
Patents, copyright, design, know-how or similar item	5% or 15% for patents and copyright (further analysis is required) 15% for know-how (further analysis is required) 10% for design of products and services that qualify as preoperative expenses
Goodwill	Nondeductible
License or permit	If we are considering "License or Permits" as the intangible assets that make it possible to exploit public property or provide a public service under concession, the rate would be determined in accordance with the number of years for which the concession was granted.

8. Mandatory disclosure obligations

The Tax Reform of 2020 included a new obligation to make mandatory disclosures on a wide range of transactions that generate a benefit in Mexico. It is important to mention that this new reportable obligation is applicable from 1 January 2021, considering the transactions carried out during fiscal year 2020 or earlier.

Reportable transactions are broad and cover, among others, certain operations involving assets, as foreseen by the Federal Fiscal Code. Please note that there are additional cases that should be analysed in order to determine whether it is a reportable transaction or not. For this particular matter, article 199 of the Federal Fiscal Code, foresees the following:

“A reportable transaction shall be deemed to be any that generates or may generate, either directly or indirectly, a tax benefit in Mexico, and has any of the following features:

[...]

VI. It involves transactions between related parties where:

- (a) hard-to-value intangibles are transferred, in accordance with the Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations, approved by the Council of the Organization for Economic Cooperation and Development in 1995 or those that replace them. Hard-to-value intangibles shall be when at the moment of execution of the transactions, there are no reliable comparable or projections of flows or future income that the intangible concerned is expected to yield; or when the hypothesis for valuation thereof are uncertain and therefore, it is hard to anticipate the final success of the intangible at the moment in which it is transferred;
- (b) entrepreneurial reorganizations take place, where there is no consideration for transferring assets, functions and risks; or whereas a result of such reorganization, taxpayers subject to tax under Title II of the Income Tax Law, reduce operating profits in more than 20%. Entrepreneurial reorganizations are those described in the Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations, approved by the Council of the Organization for Economic Cooperation and Development in 1995 or those that replace them.

[...]

VIII. Whenever it involves the transmission of an asset totally or partially depreciated that allows depreciation thereof by a related party.

[...]

XIV. It involves transactions whose accounting and tax records present differences greater than 20%, except when they arise from differences in the calculation of depreciation.”

The abovementioned subsections are the main transactions that should be subject to report that involve assets; nevertheless, other subsections of Article 199 could apply. This is why it is important to analyze case by case and define the obligation of MDR.

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation

Does the tax treatment follow book/statutory accounting depreciation?

In principle, yes; however, adjustments need to be made with respect to the following:

- ▶ Goodwill
- ▶ Minimum depreciation period
- ▶ Buildings
- ▶ Low-cost assets

Production costs relating to immaterial assets

Depreciation method used to calculate tax deduction

Various depreciation methods may be followed, if in accordance with the "sound business" practice concept.

1. Entitlement to claim

Every taxpayer with business activities and every company subject to corporate income tax is entitled to claim tax depreciation.

A taxpayer with business assets may depreciate such assets if their value diminishes over time. Business assets are assets that are:

- ▶ Part of the fixed assets of the company
- ▶ Used within the conduct of business of the company

2. Allocation of tangible assets to tax depreciation lives and rates

For tax purposes, a business asset and all of its constituent parts are deemed to be one single asset and are depreciated as such. However, when calculating annual depreciation, in some cases, the different useful lives of separate parts may be considered.

General rule – all assets

Assets that make up more than one component/item should be capitalized as one asset if these components/items together form a separate functioning asset for the company (functional analysis). This should be assessed on the basis of the function and the place of that asset within the business of the company.

Separate business assets of low value (i.e., below EUR450) are depreciated in the year of purchase for the full-cost price amount.

Specific rules – buildings

All assets (e.g., plumbing) that are integral and inseparable parts of a building should be depreciated together with that building as one asset (subject to the limitations applicable to buildings).

2.1 Assets that qualify for tax depreciation

Dutch tax law maximizes depreciation for business assets to at most 20% of the cost price per year (at most 10% for goodwill), considering residual value, meaning that the minimum period for depreciation is 5 years (10 years for goodwill). Taxpayers may not depreciate business assets across a period of less than five years. However, if certain conditions are met – if the value of the asset has decreased permanently, for example – a business asset could be impaired to its lower “business value.”

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Tangible business assets	Useful life, with a minimum of five years	Under the “sound business” practice concept, various depreciation methods may be followed, provided that the method is in accordance with sound business practice and is consistently applied.	Depreciation is maximized to 20% of historical cost per year.	If certain conditions are met – if the value of the asset has decreased permanently, for example – a business asset could be impaired to its lower “business value.”

Specific rules for buildings

Depreciation of a building is only allowed if the tax book value of a building is higher than a defined minimum value (*bodemwaarde*), whereby the tax book value may not drop below the *bodemwaarde*. The *bodemwaarde* has been determined at:

- ▶ 50% of the WOZ value (i.e., market-assessed value) for buildings owned by a taxpayer who is a natural person and in use (for 30% or more) by the company or a related party
- ▶ 100% of the WOZ value for other buildings. This includes:
 - (i) Buildings held as an investment (i.e., buildings that are rented or leased (for 70% or more) to non-related parties
 - (ii) Buildings owned by taxpayers that are subject to corporate income tax and in use by that taxpayer or a related party (for 30% or more)

With respect to the latter subcategory, a temporary relief is provided for buildings that meet the following conditions:

- ▶ They could have been depreciated before 1 January 2019.
- ▶ The buildings were acquired and in own use between 1 January 2016 and 1 January 2019 and the taxpayer was not able to depreciate for three full years as a result of these rules.

For these cases, the depreciation may still take place for Dutch corporate income tax purposes until three full years of depreciation have been deducted.

The WOZ value is determined (annually) by the administration of the municipality in which the building is located and should approximate the estimated fair market value. Furthermore, the unit determination of what constitutes a building has become a relevant consideration as a result of this measure.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Buildings in own use and owned by a taxpayer who is a natural person	Useful life	Sound business practice concept	Various, but subject to a restriction that the tax book value may not drop below the <i>bodemwaarde</i> of 50% of the WOZ value	
Buildings held as an investment or in own use and owned by a corporate income taxpayer	Useful life	Sound business practice concept	Various, but subject to a restriction that the tax book value may not drop below the <i>bodemwaarde</i> of 100% of the WOZ value	

Specific rules for selected tangible assets

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Building improvements Maintenance cost Improvement cost	Not depreciable, immediately deductible (exceptions may apply, see below) N/A	N/A N/A	N/A N/A	Provisions for maintenance costs are, in principle, allowed. Further analysis is required as to whether the building improvements are subject to wear and tear.
Qualified leaseholder improvement	Useful life, with a minimum of five years	Sound business practice concept	At most, 20% of the cost price per year	
Agricultural machinery and equipment	Specific rules are applicable; however, in general, useful life for tax is at least five years	Sound business practice concept	Specific rules are applicable; however, in general, at most, 20% of the cost price per year	

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Business assets not subject to wear and tear, such as land, are not depreciable. However, if land is purchased to extract valuable minerals, etc., then depreciation is possible.
Right-of-use asset (IFRS 16)	The lease accounting method according to IFRS 16 is not followed for Dutch tax purposes. A right-of-use is not recognized as an asset.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Fees and costs should be capitalized if they are directly connected to an investment in an asset, i.e., when incurred in connection with the acquisition or improvement of an identifiable asset of the business (e.g., premises or plant). The general rule is that the tax book value of the fixed asset equals the cost price of the asset plus the costs related to the acquisition (or manufacturing).

Lease improvement

A “lease improvement” is also considered an asset.

Own labor capitalized – work on developing software, for example, or carrying out work on property

If an asset is manufactured or created in-house, all direct expenses and costs (*voortbrengingskosten*) should be capitalized, including in-house salary and wage costs. The taxpayer should also capitalize a part of the overhead costs, although no clear guidelines are provided on how the allocation should take place.

Production costs relating to intangible fixed assets (e.g., the development costs for software) may be depreciated at once in the financial year in which these costs are incurred.

2.4 Availability of immediate deductions

Description	Detail
Assets below a certain value	An asset with a value below EUR450 is fully depreciated in the year of purchase, unless the asset is part of a “complex of assets.”
Repairs	Maintenance or repair costs are, in principle, immediately tax deductible in the year that they occur.
Production costs of self-produced intangible assets	Yes

In the case of expenses whereby both repairs and improvement expenses are incurred, taxpayers should, in principle, be able to split the expenses between maintenance and improvements. However, should the expenses be considered for the purposes of a radical improvement, a split between repair and improvement should not be made and all expenses should be capitalized as improvement costs. Whether there is a radical improvement should be considered (objectively) from the perspective of the asset, and it should be assessed whether in essence a new asset has been created.

If there are no radical improvements, it is relevant to make a proper distinction between repair and improvement, as the tax treatment is significantly different. Repair costs should, in principle, be deductible for tax purposes, while improvement costs should be capitalized. The distinction is as follows:

- ▶ Repair costs are costs incurred to restore an asset to its usable condition and repair deterioration (i.e., bring a business asset back to its original state).
- ▶ Improvement costs are costs incurred to make a material change to the asset, relating to the structure, nature or volume. Further, it should be considered an improvement if the expenditure leads to an increase in the overall performance of the asset.

When reviewing whether the costs should be qualified as repair or improvement, taxpayers should review:

- ▶ The nature of the activities
- ▶ The condition of the asset at time of the creation or after any subsequent change

Furthermore, we note that repair costs related to a newly acquired business asset are not tax deductible to the extent that the repair costs are connected to a deterioration of the business asset in the period prior to the acquisition. Those costs are capitalized instead.

3. Depreciation and calculation methods

Methods used	Declining-balance, straight-line/prime cost, other
Frequency	Annually
Year of acquisition	Depreciation is applied from the date the asset comes into use. A business asset is only depreciated during the period the asset is used for business activities. Example: a machine is ordered on 1 May, delivered on 1 July and used as per that date. Depreciation then is 6/12 of the normal annual depreciation (assuming that the financial year is a calendar year).
Year of disposal	Depreciation is only available for the months during the period the asset is used for business activities.
Ability to use different methods for different assets	There is a choice of method that can apply for different business assets. For every single business asset, taxpayers may assess what they think is the optimal method of depreciation. The taxpayers are free in their choice, provided that the depreciation method chosen is in accordance with the sound business principle. However, in some cases, similar assets are aggregated into one single asset.
Ability to switch methods	In principle, a change of depreciation scheme is permitted (e.g., commercial depreciation has changed) if it is not aimed at realizing an incidental tax benefit. A taxpayer must pursue consistent behavior in tax accounting. The transition from one depreciation method to another depreciation method is a system change that goes against this consistent behavior. Nevertheless, a transition to another depreciation method is permitted if this new method is in line with the sound business principle and the transition is not motivated by gaining an incidental tax advantage.

4. Preferential and enhanced depreciation availability

Dutch tax law provides for various facilities:

Accelerated depreciation of several specific assets

Accelerated depreciation applies to:

- ▶ Investments in assets that are in the interest of the protection of the environment in the Netherlands and that appear on the so-called VAMIL (*Vervroegde Afschrijving Milieu-investeringen*) list
- ▶ Seagoing vessels
- ▶ Assets that are a part of the fixed assets of a startup (not available for companies subject to corporate income tax)

Accelerated depreciation of qualifying assets is available if certain conditions are met. Restrictions may apply.

Investment allowances

The investment allowances include:

- ▶ Small-scale investment allowance
- ▶ Energy investment allowance (EIA: *energie-investeringsaftrek*)
- ▶ Environmental investment allowance (MIA: *milieu-investeringsaftrek*)

These allowances are calculated as a percentage of the amount of an investment in a business asset and may be deducted in the year of investment. The EIA and MIA are available for investments in not previously used business assets that have been designated as investments that are important for efficient use of energy or designated as investments that are important for protecting the Netherlands environment.

Research and development facility

The WBSO (R&D tax credit) provides for a payroll tax benefit for R&D costs and expenditures.

5. Accounting for disposals

If a tangible or intangible business asset is disposed of, the difference between the disposal value (the proceeds) and the tax book value is considered a taxable gain. If the proceeds are lower than the book value, the taxpayer will be taking a tax-deductible loss.

The taxation of the gain may be deferred by creating a "reinvestment" reserve. The reinvestment reserve is not obligatory and is subject to strict rules. For example:

- ▶ The reserves can only be formed if and as long as the taxpayer has the intention to reinvest the proceeds in new assets. If the divested asset is not depreciable (e.g., land) or is usually depreciated over a period of more than 10 years (e.g., buildings), it is required that the new asset have the same economic function as the divested asset.
- ▶ The required reinvestment should not occur later than three years after the year in which the reserve was formed. If no reinvestment occurred within the three-year period, the original gain will be added to the taxable profit and taxed at the ordinary rate.
- ▶ The (proportional) tax book value of the new asset may not be lower than the (proportional) tax book value of the divested asset for which the reinvestment reserve was created.

In some cases, previous investment allowances are required to be undone by adding a disinvestment addition to the taxable profit of the year of disposal of the asset.

If an asset is scrapped, the tax asset value may be reduced to zero.

6. Making a claim

The claim for depreciation and devaluation is made within the corporate income tax return.

For some tax facilities, additional procedures need to be followed. An application needs to be filed with the *Rijksdienst voor Ondernemend Nederland* (RVO, a special government agency) if a taxpayer would like to apply for:

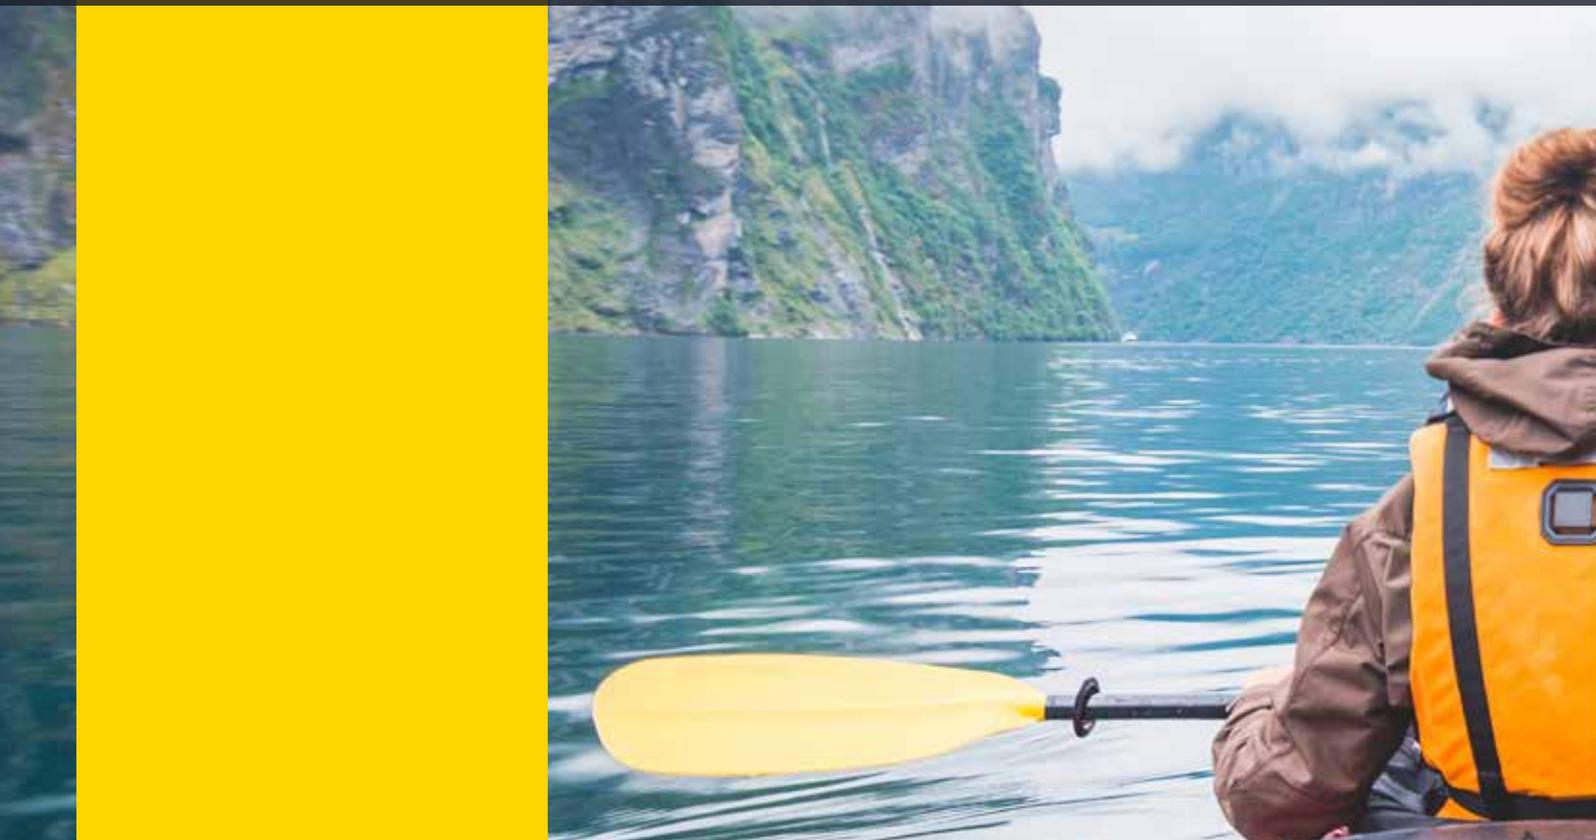

- Accelerated depreciation
- EIA
- MIA
- Research and development payroll tax credit (WBSO)

7. Intangible assets

For tax purposes, a business asset (intangible or tangible) is considered to be present if this asset is considered to be part of the fixed assets of the company, is used within the conduct of business of the company and fulfills an independent role with the company. Dutch tax law caps depreciation at 20% per year (10% for goodwill), considering residual value, meaning that the minimum period for depreciation is 5 years (10 years for goodwill).

Type of asset	Rates/lives
Trademarks	No guidelines, case-by-case analysis
Patents, copyright, design, know-how or similar item	No guidelines, case-by-case analysis
Goodwill	<p>Depreciation of goodwill is only allowed if the goodwill has been acquired from another party. Self-created goodwill cannot be capitalized and depreciated.</p> <p>Goodwill included in the acquisition price of shares forms part of the fiscal cost price value of the shares and cannot be depreciated for Dutch tax purposes.</p> <p>Dutch tax law restricts depreciation for goodwill to 10% of the cost price per year, meaning that the minimum period for depreciation for goodwill is at least 10 years.</p>
License or permit	No guidelines, case-by-case analysis

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation (*skattemessig avskrivning*)

Does the tax treatment follow book/statutory accounting depreciation?

No

Range of rates used

0%-100%

Depreciation method used to calculate tax deduction

Declining-balance, straight-line, residual value

1. Entitlement to claim

The legal owners are generally entitled to claim. Certain leasing/renting arrangements could qualify; however, case-by-case assessments are necessary.

2. Allocation of tangible assets to tax depreciation lives and rates

A depreciation obligation exists for all assets with a useful economic life of at least three years and a value of at least NOK15,000.

Generally, breaking down assets is not required, given that the asset represents one functional and physical unit.

Special rules apply to buildings. Depreciable buildings are subdivided as follows – allocation depends on a case-by-case assessment:

Type of building	Yearly deduction percentage
Buildings and plant, hotels, lodging houses, catering premises, etc.	4%
Office buildings	2%
Permanent technical installations in buildings	10%
Buildings of such simple construction that they must be assumed to have an economic life of not more than 20 years from construction. The same applies to installations with economic lives of not more than 20 years when new.	10%
Livestock buildings in agriculture and forestry	6%

2.1 Assets that qualify for tax depreciation

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plants, including technical ancillary and supplementary installations in industrial facilities	N/A	Declining-balance	4%	
Machinery and equipment	N/A	Declining-balance	20%	
Buildings	N/A	Declining-balance	2%-4% (6%, 10%)	See above
Furniture, fittings and fixtures	N/A	Declining-balance	20%	
Computer hardware and machines for office use	N/A	Declining-balance	30%	
Computer software	N/A	Declining-balance/straight-line (if stand-alone)	20%-30% – linear over life-span	Together with the computer/ machinery or stand-alone as an intangible asset

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Ships, vessels, rigs	N/A	Declining-balance	14%	
Aircraft, helicopters	N/A	Declining-balance	12%	
Heavy goods vehicles, lorries, buses, vans and taxis	N/A	Declining-balance	24% (30%)	The higher rate is applicable for full electric vans acquired 20 December 2016 or later.
Passenger cars	N/A	Declining-balance	20%	
Lessee's improvement on the rented asset	N/A	Declining-balance/ straight-line	0%-30%	Depends on who becomes the owner of the improvement; follows the ordinary rules for the improved asset if lessee is the owner (declining-balance method)
Dams, tunnels, penstocks and power stations that belong to a power generation facility	N/A	Straight-line	1.5%	Annual depreciation over 67 years
Machinery at power stations, generators, pipes, insulation in shafts/tunnels, hatches, grates, etc.	N/A	Straight-line	2.5%	Annual depreciation over 40 years
Facilities for the transmission and distribution of electricity and electrotechnical equipment in power enterprises, and such fixed assets used in other business activities	N/A	Declining-balance	5%	

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Investments in fixed assets used in extractive (i.e., upstream) activities that are subject to special oil taxation; mainly investments on the Norwegian continental shelf	N/A	Straight-line	16.67% (33.33%)	Annual depreciation over six years. The higher rate applies only for production, transportation by pipeline and processing of gas to be liquefied by cooling in a new large-scale cooling facility located in the county of Finmark or in some specific municipalities in the county of Troms (northern Norway).
Wind turbines, internal grids and concrete foundation for wind turbines	N/A	Straight-line	20%	Annual depreciation over five years (temporary rules for assets acquired between 18 June 2015 and 1 January 2022)

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Is considered not to have a decreasing value
Artwork, etc.	Is considered not to have a decreasing value
Apartments, living quarters, houses intended for living, etc.	Is considered not to have a decreasing value, even if it is a part of a business activity (such as renting); workmen's houses, "hotels," etc. can be depreciated, however – case-by-case assessment
Shares/equity	No loss incurred before realization (and no tax deduction for company shareholders due to exemption method)

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Costs could be directly deductible if connected to business activity and incurred in an early phase of an asset acquisition. If incurred in a later phase (especially if the target asset has been identified), these costs should normally be capitalized together with the asset.

R&D costs

Costs for own research and development relating to specific projects that may become or have become fixed assets must be capitalized together with the relevant fixed asset.

Land remediation – removing asbestos, etc.

No special rules apply. Treatment depends on the specific conditions and situation in general.

Own labor capitalized

The fair market value of one's own labor should normally be included as taxable income and the same value should be capitalized on the tax cost basis of the asset(s).

2.4 Availability of immediate deductions

Description	Detail
Asset with life of less than three years	Equipment with a general economic life-span of less than three years
Asset with a value of less than NOK15,000	Standardized amount
Repairs	Repairs to conserve the original conditions, including simulated necessary repairs in an upgrade

3. Depreciation and calculation methods

Methods used	Declining-balance, straight-line, residual value
Frequency	Annually
Year of acquisition	Depreciation is calculated for the whole year if held at year-end (some modifications for intangibles – time-limited rights).
Year of disposal	No depreciation is available if not held at year-end (some modifications because some assets are depreciated jointly).
Ability to use different methods for different assets	No
Ability to switch methods	No

4. Preferential and enhanced depreciation availability

- ▶ Only repairs and maintenance expenses can be fully deducted immediately.
- ▶ An additional 20.8% uplift applies against the special oil tax for upstream activities.

5. Accounting for disposals

Several of the minor assets with high depreciation rates are depreciated jointly in groups. These groups are:

- ▶ Office equipment, etc.
- ▶ Acquired goodwill
- ▶ Heavy-goods vehicles, lorries, buses, vans, taxis and vehicles for the transport of disabled persons
- ▶ Passenger cars, tractors, machinery, tools, instruments, furnishings, etc.

If an asset belonging to one of these groups is disposed of, the disposal compensation (if any) reduces the value of the depreciation group (and, therefore, future depreciations).

If the value becomes negative, there is a taxable income. Each year's taxable income will equal the negative residual value multiplied with the depreciation rate for the group.

For the following asset types, a separate asset balance must be recorded for each fixed asset:

- ▶ Ships, vessels, rigs, etc.
- ▶ Aircraft, helicopters
- ▶ Facilities for the transmission and distribution of electricity and electrotechnical equipment in power enterprises, and such fixed assets used in other business activities
- ▶ Buildings and plant, hotels, lodging houses, catering premises, etc. Plant shall include, *inter alia*, technical ancillary and supplementary installations in industrial facilities, including sewage treatment plant, compressed air plant, cooling systems and similar.
- ▶ Office buildings

If such an asset is disposed of, the compensation (if any) reduces the value of the separate asset balance. Gains and losses are transferred to a gain and loss account.¹

For the following assets, there is one joint group for permanent technical installations per building:

- ▶ Permanent technical installations in buildings, including heating plant, refrigeration and freezing facilities, electrical installations, sanitary installations, elevator installations

6. Making a claim

Depreciation is claimed on an annual basis to the tax authority through the income tax return.

¹ If the gain and loss account is positive, no less than 20% of the balance should be recognized as income. If the balance is negative, up to 20% shall be recognized as a deduction.

7. Intangible assets

Acquired goodwill (i.e., the residual amount when acquiring a business) can be depreciated by 20% in accordance with the declining-balance method. Self-developed goodwill cannot be depreciated.

Intangible assets with an unlimited economic life-span cannot be depreciated, except if there is an obvious reduction of value.

Intangible assets with a limited economic life-span can be depreciated with identical annual amounts over the life-span of the asset. Higher annual deductions are only granted if the reduction in value is obviously taking place more rapidly.

Type of asset	Rates/lives
Trademarks	Case-by-case assessment
Patents, copyright, design, know-how or similar item	Case-by-case assessment
Goodwill – acquired	20% declining-balance
License or permit	Case-by-case assessment

1. Entitlement to claim

Legal owners are entitled to claim depreciation.

2. Allocation of tangible assets to tax depreciation lives and rates

In Portugal, the rate applicable to each asset is established by the Portuguese tax legislation and depends on the type of asset and sector of activity (proxy for the intensity of use).

The Portuguese tax legislation provides a comprehensive table of assets and the applicable rates. The tables can be found in Decreto Regulamentar No. 25/2009. Please note that the table below applies to nonspecific sectors of activity. There are other depreciation rates for specific assets of various industries.

2.1 Assets that qualify for tax depreciation

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment	Plant – 20 years Machinery and equipment – 5-8 years	Generally, depreciation and amortization are calculated using the straight-line method, considering periods of minimum and maximum useful life of the asset, as well as the industry in which the asset is used and the conditions of its use.	Plant – 5% Machinery and equipment – 12.5%-20%	
Motor cars	4 years	Same method as above	25%	
Buildings	10 years	Same method as above	10%	
Furniture, fittings or TV fixtures	8 years	Same method as above	12.5%	
Computer hardware	3 years	Same method as above	33.33%	
Computer software	3 years	Same method as above	33.33%	
Aircraft	5 years	Same method as above	20%	
Transport other than motor cars	Motorcycles – 4 years	Same method as above	Motorcycles – 25%	
Car parks	20 years	Same method as above	5%	
Office equipment (including office furniture and fixtures)	8 years	Same method as above	12.5%	
Land improvements	Flooring – 20 years Seals – 12 years Walls – 20 years	Same method as above	Flooring – 5% Seals – 8.33% Walls – 5%	
Qualified leaseholder improvement property	N/A	N/A	N/A	
Agricultural machinery and equipment	6-20 years	Same method as above	5%-16.66%	
Property used in research and development	Depends on the amount of time of the exclusive use of the property	Same method as above	N/A	

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Land does not qualify, as it is not considered to be a production asset. However, when land is used for exploitation purposes, it may be possible to qualify for tax depreciation, considering only the part subject to exploitation.
Intangible assets	Intangible assets that may be used indefinitely are not subject to depreciation.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

May be added to the costs of the asset and depreciated accordingly

Land remediation – removing asbestos, Japanese knotweed

N/A

Own labor capitalized – work on developing software, for example, or carrying out work on property

Development projects, such as intangible assets, may be subject to depreciation at a rate of 33.33%.

2.4 Availability of immediate deductions for repairs

Assets below EUR1,000 may be written off in the year of acquisition, unless the asset forms part of a bigger asset that should be regarded as the entirety.

Portuguese tax legislation only allows significant repairs or improvements to be depreciated if the repairs or improvements increase the future economic benefits of the assets.

3. Depreciation and calculation methods

Methods used	Straight-line/prime cost, diminishing (declining) method
Frequency	Annually or monthly
Year of acquisition	As noted above, it is possible to choose a monthly basis in the year of acquisition or disposal.
Year of disposal	Depreciation may be claimed on a monthly basis in the year of disposal.
Ability to use different methods for different assets	Portuguese legislation allows two different methods that may be applied to all assets: straight-line/prime cost and double-diminishing (declining) method. These methods may be applied to the assets, but the company is not required to use the same method for all assets. When considering an individual asset, the depreciation method should be the same for its entire life cycle. However, if there is a sound economic change in the asset's use, the methodology and the rate of depreciation may be changed. In this case, the company must obtain the tax administration's authorization.
Ability to switch methods	Portuguese legislation allows the use of different methods in different years. However, the company must justify the reason for the change and ask for permission from the Portuguese tax authorities if the method to be used is different from the two methods allowed by Portuguese tax legislation.

4. Preferential and enhanced depreciation availability and tax credits

4.1 General allowances

Depreciation in Portugal depends on the number of shifts per day the company is in operation. Only assets subject to more intensive use are eligible for accelerated depreciation. This rule is not applicable to buildings and other assets that, because of their nature, are always subject to intensive use.

4.2. Bonus provision and tax credits

a) Special tax regime to support investment (RFAI)

This is a tax credit that is granted to companies that invest in fixed assets.

Form of funding

If there are insufficient profits in any year to use the credit, it can be carried forward for up to 10 years.

Funding quota

Twenty-five percent of the eligible capital expenditure regarding the investment amount of EUR15 million and 10% regarding the investment amount exceeding EUR15 million, up to a limit of 50% of the tax liability.

Assessment basis

All fixed assets with the exception of land – except when used to operate mining concessions, mineral waters and spring waters, quarries, clay pits and sand pits in mining projects; construction, acquisition, repair and expansion of any buildings, factories or those used for administrative activities; light passenger or mixed vehicles; furniture and accent pieces or decoration, except hotel equipment for tourist operations; social equipment, except equipment that the company is required to have by law; other capital goods not directly and indiscernibly associated with the company's production; investment in intangible assets, consisting of expenditures on technology transfers, in particular through the acquisition of patent rights, licenses, know-how or technical knowledge not protected by patent

Main funding conditions

Companies must be established in Portugal and have no debts to tax authorities or social security; taxable income cannot be determined by indirect methods; and job creation is necessary.

Productive investment must be considered an initial investment project. To be considered an initial investment project, the investment project must be related to:

- ▶ Creation of a new establishment
- ▶ Productive capacity increase in an existing establishment
- ▶ Diversification of the production of an existing establishment by producing products that were not produced in that establishment
- ▶ Fundamental change of the global production process of an existing establishment

During FY21, access to this tax incentive by large enterprises with a positive net income in FY20 is subject to the maintenance of employment level. The employment level to be maintained will result from comparing the average number of workers during FY21 and the number of employees on 1 October 2020.

Main funding obligations

Maintain the funded assets for a period of five years in the company, and create and maintain jobs within the same period

Application process

The incentive does not require any formal application. The estimated tax credit is directly included in the corporate income tax return. However, the beneficiaries need to prepare a defensive file that will be presented in case of inspection.

b) Productive investment tax benefit

This is a tax credit granted to investment projects that are relevant to the strategic development of the Portuguese economy. The projects should be relevant for reducing regional disparities, encourage the creation or maintenance of jobs, and contribute to driving Portugal's technological innovation and scientific research. This tax credit must be granted through a contractual agreement settled between the company and the Portuguese Government and must be presented through an application process. Only investment projects of more than EUR3 million are eligible.

Form of funding

If there are insufficient profits in any year to use the credit, the credit can be carried forward for up to 10 years.

Funding quota

Base rate of 10% of the eligible capital expenditure that can be increased up to 25%, depending on the location of the investment and the number of jobs created by the investment project, up to a limit of the maximum between 50% of the tax liability or 25% of the tax credit

Application process

The incentive is attributed through a formal application process prior to the start of the investment project.

Assessment basis

All fixed assets, with the exception of:

- ▶ Land, except when used to operate mining concessions, mineral waters and spring waters, quarries, clay pits and sand pits in mining projects
 - ▶ Construction, acquisition, repair and expansion of any buildings, except factories or those used for administrative activities
 - ▶ Light passenger or mixed vehicles
 - ▶ Furniture and accent pieces or decoration, except hotel equipment for tourist operations
 - ▶ Social equipment
 - ▶ Other capital goods not directly and indiscernibly associated with the company's production
- Or
- ▶ Investment in intangible assets, consisting of expenditures on technology transfers, in particular through the acquisition of patent rights, licenses, know-how or technical knowledge not protected by patent

Main funding conditions

Companies must be established in Portugal, have no debts to tax authorities or social security, have taxable income that cannot be determined by indirect methods, and create jobs.

Productive investment must be considered an initial investment project. To be considered an initial investment project, the investment project must be related to:

- ▶ Creation of a new establishment
- ▶ Productive capacity increase of an existing establishment
- ▶ Diversification of the production of an existing establishment by producing products that were not produced in that establishment
- ▶ Fundamental change of the global production process of an existing establishment

During FY21, access to this tax incentive by large enterprises with a positive net income in FY20 is subject to the maintenance of employment level. The employment level to be maintained will result from comparing the average number of workers during FY 2021 and the number of employees on 1 October 2020 .

Main funding obligations

Maintain the funded assets for a period of five years in the company; create and maintain jobs

c) Extraordinary tax credit to support investment

This is a tax credit that is granted to companies that invest in fixed assets during the period between 1 July 2020 and 30 June 2021.

Form of funding

If there are insufficient profits in any year to use the credit, it can be carried forward for up to five years.

Funding quota

Twenty percent of the eligible capital expenditure with an investment amount limit of EUR5 million, up to a limit of 70% of the tax liability

Assessment basis

All fixed assets, with the exception of:

- ▶ Land
- ▶ Construction, acquisition, repair and expansion of any buildings, except factories or those used for administrative activities
- ▶ Light passenger or mixed vehicles, pleasure boats and tourism aircraft, except when these goods are used for the operation of the public transport service or are intended for rental or for the transfer of the respective use or enjoyment in the normal activity of the taxable person
- ▶ Furniture and accent pieces or decoration, except when used for productive or administrative activities

Expenses incurred on assets related to activities under concession or public-private partnership agreements entered into with public sector entities are also excluded.

Intangible assets:

- ▶ Expenditures on development projects
- ▶ Expenses with industrial property, such as patents, trademarks, permits, production processes, models or other assimilated rights, acquired against payment and whose exclusive use is recognized for a limited period of time

Main funding conditions

Companies must be established in Portugal and have no debts to tax authorities or social security; taxable income cannot be determined by indirect methods; and maintain jobs level.

Main funding obligations

Maintenance of jobs: prohibition of termination of employment contracts for a period of three years from the one in which the incentive computed, under collective dismissal or dismissal for the extinction of the job

Holding and accounting period: The assets related to the eligible expenses must be held and booked in the accounts, in accordance with the rules that determined their eligibility for a minimum period of five years or, when less, during the respective minimum useful life or until the period in which the destruction, abandonment or dismantlement occurs (in this case, provided that the rules foreseen in the article 31-B of the CIT Code are fulfilled).

The expenses used to obtain this benefit cannot be used to obtain any other similar tax benefits.

Accessory obligations: The tax incentive is justified by a document detailing its computation and the compliance with all the conditions. Financial statements must mention the CIT, which is not paid due to the tax incentive.

Application process

The incentive does not require any formal application. The estimated tax credit is directly included in the corporate income tax return. However, the beneficiaries need to prepare a defensive file that will be presented in case of inspection.

5. Accounting for disposals

When a company disposes of an asset and performs a sale, a capital gain or loss is realized. Regarding the depreciation that has been tax-deductible, there is no adjustment, and the depreciation is considered in the capital gain or loss computation. However, for assets that have been depreciated using depreciation rates below the minimum (for tax purposes), the computation of the capital gain or loss must consider the minimum depreciation rate.

If a company has scraps as an asset, the dismantling or destruction of the asset is accepted as an expense for tax purposes of the net value of the assets without having to request prior acceptance from the tax authorities, if the tax dossier includes:

- ▶ Dismantling, decommissioning, abandonment or destruction of goods, signed by two witnesses, proving the facts leading to the occurrence
- ▶ Itemized list of goods scrapped
- ▶ Copy of the notice sent to the local tax office, with a minimum of 15 days' notice, communicating the location, date and hour of the scrap

6. Making a claim

Claims are normally made in a written document (i.e., not a part of the formal tax return document) that is presented to the tax authorities.

7. Intangible assets

Intangible assets are amortizable when subject to depreciation, especially because they have a limited time period. Tax depreciation is available for the following intangible assets:

- ▶ Expenditure on development projects
- ▶ Elements of industrial property (such as patents, trademarks, licenses, processes, designs or other similar rights), acquired against payment whose use is recognized for a limited time

Type of asset	Rates/lives
Trademarks	The depreciation rate is determined by the time period during which the exclusive use takes place.
Patents, copyright, design, know-how or similar item	The depreciation rate is determined by the time period during which the exclusive use takes place.
Goodwill	Tax depreciation is not available for goodwill.
License or permit	The depreciation rate is determined by the time period during which the exclusive use takes place.
Development projects	Subject to a depreciation rate of 33.33%

Tangible assets – tax depreciation
Intangible assets – tax amortization

Does the tax treatment follow book/statutory accounting depreciation?

No

Range of rates used

Declining-balance – 0.7%-14.3%
Straight-line – 0.1%-7.7%

Depreciation method used to calculate tax deduction

Declining-balance (in Russian tax law – nonlinear method), straight-line (prime cost) (in Russian tax law – linear method)

EY contact:

Ivan Rodionov
+7 495 755 9719
ivan.rodionov@ru.ey.com

1. Entitlement to claim

Only legal owners of the asset are entitled to claim tax depreciation. The exception to this rule is for lessees with respect to inseparable improvements of property made by lessee with consent of lessor.

2. Allocation of tangible assets to tax depreciation lives and rates

For tax purposes, assets qualify for depreciation groups/write-off periods based on whether they are permanent or movable assets. While permanent structures may qualify for building allowances, movable assets (e.g., heating systems, partition walls, air conditioners) may qualify for shorter write-off periods.

2.1 Assets that qualify for tax depreciation

According to the Tax Code of the Russian Federation (the Tax Code), all depreciable assets should be classified under 10 depreciation groups that have different useful-life periods. A government decree establishes useful-life periods for each depreciation group and contains a detailed description of assets included in each group. The useful-life periods for groups are as follows:

- ▶ Group 1 – 1-2 years
- ▶ Group 2 – 2-3 years
- ▶ Group 3 – 3-5 years
- ▶ Group 4 – 5-7 years
- ▶ Group 5 – 7-10 years
- ▶ Group 6 – 10-15 years
- ▶ Group 7 – 15-20 years
- ▶ Group 8 – 20-25 years
- ▶ Group 9 – 25-30 years
- ▶ Group 10 – 30 years and more

Taxpayers have the right to apply for either a linear or nonlinear method. However, a declining-balance method cannot be applied to assets of groups 8-10, such as buildings, transmission equipment, intangible assets, nor to fixed assets used only in activities related to the extraction of hydrocarbons at a new offshore field of hydrocarbons.

Linear is calculated as:

Monthly depreciation = initial value of asset x 1/n, where n is the useful-life period of an asset in months

Nonlinear depreciation is calculated as:

Monthly depreciation = $B \times K/100$, where B is the aggregated balance value of assets of one depreciation group and K is the depreciation rate, which equals:

Depreciation group	Asset description	Monthly depreciation rate for nonlinear method
Group 1	Machines and equipment	14.3
Group 2	Machines and equipment Transport vehicles Perennial plantings Production and household equipment	8.8
Group 3	Structures and transfer mechanisms Machines and equipment Transport vehicles Production and household equipment	5.6

Depreciation group	Asset description	Monthly depreciation rate for nonlinear method
Group 4	Buildings Structures and transfer mechanisms Machines and equipment Production and household equipment Draught animals Perennial plantings Transport vehicles	3.8
Group 5	Buildings Machines and equipment Structures and transfer mechanisms Transport vehicles Production and household equipment Fixed assets not included in other headings	2.7
Group 6	Structures and transfer mechanisms Housing Machines and equipment Transport vehicles Production and household equipment Perennial plantings	1.8
Group 7	Buildings Structures and transfer mechanisms Machines and equipment Transport vehicles Perennial plantings Fixed assets not included in other headings	1.3
Group 8	Buildings Structures and transfer mechanisms Machines and equipment Transport vehicles Production and household equipment	1.0
Group 9	Buildings Structures and transfer mechanisms Machines and equipment Transport vehicles	0.8
Group 10	Buildings Structures and transfer mechanisms Housing Machines and equipment Transport vehicles Perennial plantings	0.7

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment	1-30 years and more: Useful-life periods are very diverse, ranging from 1 to more than 30 years, depending on nature, complexity and durability of assets. For example: Assembly lines, hammers, engines – 1-2 years Oilfield equipment – 2-3 years Pipelines, diesel generator – 3-5 years Well for exploratory drilling – 5-7 years Metalworking machines – 7-10 years	Linear or nonlinear (if useful life is more than 20 years, only linear is possible)	See comments above	
Motor cars	Passenger cars – 3-5 years Trucks – 7-10/5-7/3-5 years Specialized vehicles – 7-10/5-7/2-3 years	Linear or nonlinear	See comments above	
Buildings	Wooden buildings, frame constructions (except residential buildings) – 15-20 years Building from concrete, bricks, armored concrete (except residential buildings) – 20-25 years Residential buildings – 30+ years	Linear or nonlinear (if useful life is more than 20 years, only linear method is possible)	See comments above	
Furniture, fittings or fixtures	5-7 years	Linear or nonlinear	See comments above	
Computer hardware	2-3 years	Linear or nonlinear	See comments above	
Computer software	Not less than 2 years (if classified as intangible asset)	Linear or nonlinear	See comments above	
Aircraft	10-15 years	Linear or nonlinear	See comments above	
Transport other than motor cars	7-30 years	Linear or nonlinear (if useful life is more than 20 years, only linear method is possible)	See comments above	
Office equipment	5-7 years	Linear or nonlinear	See comments above	
Land improvements	7-10 years	Linear or nonlinear	See comments above	
Qualified leaseholder improvement	Depends on useful-life period of property and duration of lease agreement	Linear or nonlinear	See comments above	

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Agricultural machinery and equipment	2-10 years	Linear or nonlinear	See comments above	
Property used in R&D	7-10 years	Linear or nonlinear	See comments above	

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land, natural resources (water, mineral resources, etc.)	Disallowed (non-depreciable asset) – according to Article 256 of the Tax Code, these types of assets do not qualify for tax depreciation.
Artworks, books, items of cultural value	Disallowed (non-depreciable asset) – according to Article 256 of the Tax Code, these types of assets do not qualify for tax depreciation.
Objects of urban landscaping; land improvements constructed with government/municipal financing	Disallowed (non-depreciable asset) – according to Article 256 of the Tax Code, these types of assets do not qualify for tax depreciation.
Certain categories of property of noncommercial and budget organizations	Disallowed (non-depreciable asset) – according to Article 256 of the Tax Code, these types of assets do not qualify for tax depreciation.
Inventories, construction-in-progress, securities and derivatives (forwards, futures, options)	Disallowed (non-depreciable asset) – according to Article 256 of the Tax Code, these types of assets do not qualify for tax depreciation.
Intellectual property ownership rights if the contract concerning the acquisition of the abovementioned rights stipulates that the payment shall be made by periodical installments within the whole term of the contract's validity	Disallowed (non-depreciable asset) – according to Article 256 of the Tax Code, these types of assets do not qualify for tax depreciation.
Property acquired/created at the expense of budgetary funds (except for property gained as a result of privatization)	Disallowed (non-depreciable asset) – according to Article 256 of the Tax Code, these types of assets do not qualify for tax depreciation.
Assets in respect to which a taxpayer used a right for investment tax deduction	Disallowed (non-depreciable asset) – according to Article 256 of the Tax Code, these types of assets do not qualify for tax depreciation. This position was effective since 1 January 2018.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

One-off deduction as current period expenses

Land remediation – removing asbestos

Special tax treatment:

- ▶ Expenses on land remediation that are associated with development of natural resources are recognized evenly during the two-year period.
- ▶ Expenses on land remediation not associated with resources development are subject to one-off deduction.

Rights in the plots of land

Expenses associated with the acquisition of a right in the plots of land are recognized at the taxpayer's choice:

- As expenses of an accounting (tax) period on an even basis over a period which is to be determined by the taxpayer independently and must not be less than five years
Or
- As expenses of an accounting (tax) period to the extent of an amount not exceeding 30% of the tax base of the preceding tax period until the entire amount of the expenses in question has been fully recognized

Own labor capitalized – work on developing software, for example, or carrying out work on property

Capitalized on the value of assets

2.4 Availability of immediate deductions for repairs

Description	Detail
Assets below a certain value with minimum 12-month useful life	Assets with value below RUR100,000 since 2016, according to the Federal Law of 08.06.2015 No. 150 FZ, are not recognized as fixed assets and are written off at the moment of purchase/putting into production.
Repairs	See comments on repairs below

Russian tax legislation differentiates between current repairs and capital repairs. Current repairs are written off in the period in which they are incurred, while capital repairs are capitalized in the cost of fixed assets and are written off as depreciated.

Current repairs are repairs that neither improve the technical characteristics of assets nor lead to lengthening the useful life of assets.

Capital repairs that improve technical characteristics or lead to lengthening of useful-life period should be capitalized in the value of fixed assets.

Taxpayers are also allowed to create a provision (reserve) for repair expenses.

However, if the taxpayer creates a provision (reserve) for repair expenses, the amount of the provision (reserve) cannot exceed the average amount of repair expenses during the past three years. Where a taxpayer accumulates resources for the purpose of carrying out especially complex and expensive types of capital repairs to fixed assets over more than one tax period, the maximum amount of allocations to the reserve against future expenses for the repair of fixed assets may be increased by the amount of allocations for the financing of those repairs insofar as they fall in the tax period in question in accordance with the schedule for the performance of those types of repairs, provided that the same or similar repairs were not carried out in previous tax periods.

3. Depreciation and calculation methods

Methods used	A taxpayer may choose to apply linear or nonlinear method of depreciation.
Frequency	Depreciation is calculated and recognized on a monthly basis.

Year of acquisition	<p>Capital allowances can only be claimed from the date the asset is brought into use, not from the acquisition date.</p> <p>Capital allowances in the form of tax depreciation are claimed starting from the month after the asset was brought into use according to the depreciation rate and depreciation method.</p> <p>Taxpayers also have the right to apply a depreciation premium (a one-off deduction of 30% or 10% of the fixed asset's value); the depreciation premium is applied voluntarily by the taxpayer. The depreciation premium can be claimed as a one-off deduction of 30% or 10% (depending on the depreciation group) of the initial value of the asset in the month after putting the asset into use.</p> <p>The amount of capital allowances percentage is:</p> <ul style="list-style-type: none"> ▶ 30% for assets belonging to depreciation groups 3-7 ▶ 10% for assets belonging to depreciation groups 1-2 and 8-10
Year of disposal	<p>Tax depreciation is calculated and recognized until the month when the asset is disposed of. The remaining value of the fixed asset is recognized as expense on the sale of the asset.</p>
Ability to use different methods for different assets	<p>The same method should be applied to all assets except when the company applies the nonlinear method, which should be applied to all assets except for assets belonging to depreciation groups 8-10 (see Section 2.1). Taxpayers may also elect to change the method from the linear to nonlinear method or vice versa. Proper records must be kept.</p>
Ability to switch methods	<p>Taxpayers have the right to change depreciation methods once within five years. The new method of depreciation must be applied at the beginning of the new tax period (one calendar year). Taxpayers need to establish depreciation methods in tax accounting policy for the respective tax period.</p>

4. Preferential and enhanced depreciation availability

Tax depreciation method	Comment on specific application and benefits available
Assets used in research and development (R&D)	<p>Depreciation of assets used in R&D activities meeting the criteria in the Decree of the Government:</p> <p>Depreciation expenditure 100% + 50% additional (i.e., super allowance of 150%)</p> <p>Examples of R&D activities qualifying for this allowance: development of nanotechnology information telecommunication systems, biosciences, environmental conservancy, transport and space systems, development of energy-efficient and nuclear technologies and fixed assets used only in R&D activities (special coefficient up to three)</p>
Energy-efficient assets (excluding buildings)	<p>Special coefficient up to two is applied to depreciation rate (accelerated deduction of depreciation)</p> <p>Examples of assets qualifying for this allowance are specified and updated by the Government and include oil pumps, oil filters, various oil refinery equipment, turbines, furnaces, railway engines and heating equipment.</p>

Tax depreciation method	Comment on specific application and benefits available
Industry-specific <ul style="list-style-type: none"> ▶ Agricultural ▶ Oil and gas 	Special coefficient up to two is applied to depreciation rate (accelerated deduction of depreciation) Assets owned by agricultural organizations (poultry farms, animal production units, greenhouse complexes, fur production plants) Special coefficient up to three is applied to depreciation rate (accelerated deduction of depreciation). Fixed assets used by holders of oilfield development licenses for production of hydrocarbons from new subsea oil and gas fields
Fixed assets owned by residents of industrial production and tourism and recreation special economic zones	Special coefficient up to two is applied to depreciation rate (accelerated deduction of depreciation).
Assets used in harsh environments or in intensive shifts working arrangement	Special coefficient up to two is applied to depreciation rate (accelerated deduction of depreciation), except for: <ul style="list-style-type: none"> ▶ Fixed assets put into operation after 31 December 2013 ▶ Fixed assets belonging to groups 1-3 of taxpayers using nonlinear method
Financial leasing agreement	Special coefficient up to three is applied to depreciation rate of leased fixed assets, except for fixed assets belonging to groups 1-3.
Assets used in water supply and water disposal	Special coefficient up to three is applied to depreciation rate of assets specified by the Government. This provision is effective until 1 January 2023 and applied to assets put into operation after 1 January 2018.
Assets characterized by best available technology	Special coefficient up to two is applied to depreciation rate (accelerated deduction of depreciation) for assets put into operation after 1 January 2019. Types of assets qualifying for this allowance are specified by the Government and include both technological equipment designed to perform main technological operations in chemical, physical-chemical and other technological processes that result in the production of target products and devices of environmental significance like steam generators and coils.
Investment tax deduction	One-off deduction of up to 90% of investment expenditure (expenses on certain fixed assets stated by law and on the extension, refitting, reconstruction, modernization and retooling of such assets) from the regional portion of profits tax and the remaining 10% from the federal portion. There is an upper limit on the regional part of investment tax deduction equal to the difference between tax payable to the regional budget when calculated at the standard rate and tax payable to the regional budget when calculated based on a rate of 5%. However, the federal portion of profits tax may be reduced to zero. The usage of the deduction is restricted for certain groups of taxpayers (e.g., to taxpayers that already enjoy particular tax preferences).

5. Accounting for disposals

The company recognizes income from disposal of an asset (income from sale) and cost of an asset (its balance value). The company does not make any changes to previously claimed depreciation.

If the company recognizes a loss on the sale of an asset, such loss should be recognized evenly during the remaining period of useful life of an asset. For example, if the loss from the sale of an asset is RUR10 million and the remaining useful life period of this asset is five years, the loss will be recognized partially as RUR2 million during each of the five years.

If an asset is scrapped, no changes to previously claimed depreciation are made. The remaining balance value of the asset is recognized as other expenses for tax purposes in the period of asset disposal (liquidation).

6. Making a claim

Capital allowances are claimed as part of the profits tax return.

In Russia, there are two ways of making a claim. Generally, taxpayers should submit interim profits tax returns after the first, second and third quarters of the tax year. The Tax Code also allows the taxpayer to change the general approach and submit interim profits tax returns monthly from the beginning of a new tax year based on notification of the tax authority until the end of a current year. The final profits tax return is submitted no later than 28 March of the year following the reporting year. Selected approaches should be recognized in the profits tax base and profits tax return.

The company should establish the depreciation method, application of depreciation premium and special coefficients for depreciation that are applied in its tax accounting policy that is updated on a yearly basis. The useful-life period (and corresponding depreciation rate) should be determined by the taxpayer depending on the period of license/patent/certificate for trademark. If determination of the useful-life period is not possible, the useful-life period should be set as 10 years.

Taxpayers are also obliged to maintain tax depreciation registers and primary documentation that should be submitted with tax authorities during tax audits upon request.

7. Intangible assets

Intangible assets are depreciated with linear or nonlinear methods (selected by a taxpayer, except for intangible assets from groups 8-10, for which, according to the Tax Code, the linear method is used). Russian tax law establishes the following criteria for recognition of intangible assets:

- ▶ Intangible assets must have the capability to gain income.
- ▶ The company must have properly executed documentation for intangible assets (i.e., patent, contract or certificate).

Type of asset	Rates/lives
Trademarks	The useful-life period (and corresponding depreciation rate) should be determined by the taxpayer depending on the period of license/patent/certificate for trademark. If determination of the useful-life period is not possible, the useful-life period should be set as 10 years.
Patents, copyright, design, know-how or similar item	The useful-life period (and depreciation rate) is determined by the taxpayer but cannot be less than two years.
Goodwill	Russian legislation does not recognize goodwill as an intangible asset.
License or permit	This depends on the type of license: <ul style="list-style-type: none"> ▶ Licenses on development of natural resources are written off during a two-year period as expenses on resource development. ▶ Other licenses are depreciated similarly to patents/copyrights.

Saudi Arabia

mirza.ashraf@sa.ey.com

1. Entitlement to claim

All taxpayers are entitled to claim tax depreciation.

2. Allocation of tangible assets to tax depreciation lives and rates

Saudi tax law categorizes the capital assets into five groups/pools as follows:

Group/Pool	Asset Type	Rate
1	Fixed buildings	5%
2	Industrial and agricultural movable buildings	10%

Group/Pool	Asset Type	Rate
3	Factories, plant, machinery, computer hardware and application programs (computer software), and equipment, including passenger cars and cargo vehicles	25%
4	Expenses for geological surveying, drilling, exploration and other preliminary work to extract natural resources and develop their fields	20%
5	All other tangible and intangible assets of depreciable nature not included in previous categories, such as furniture, planes, ships and trains, and goodwill	10%

Where land and buildings are purchased, a reasonable amount must be apportioned between the building and the land.

2.1 Assets that qualify for tax depreciation

Asset type	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment	Declining-balance	25%	
Passenger and cargo vehicles	Declining-balance	25%	
Buildings	Declining-balance	5%	For industrial and agricultural movable buildings, the depreciation rate is 10%.
Furniture, fittings or fixtures	Declining-balance	10%	
Computer hardware	Declining-balance	25%	
Computer software	Declining-balance	25%	
Aircraft	Declining-balance	10%	
Transport other than motor cars	Declining-balance	25%	Passenger and cargo vehicles at 25%; ships and trains at 10%
Car parks			The law does not specify the depreciation rate. Documents need to be reviewed to determine the tax depreciation rate.

Asset type	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Land improvements			The law does not specify the depreciation rate. Documents need to be reviewed to determine the tax depreciation rate.
Qualified leaseholder improvement property	Declining-balance	10%	Leasehold improvements are subject to depreciation at 10%.
Agricultural machinery and equipment	Declining-balance	25%	
Property used in research and development	Declining-balance		No special treatment. The law does not specify the depreciation rate. Documents need to be reviewed to determine the tax depreciation rate.
Geological survey, drilling, etc.	Declining method	20%	
Build, own, operate and transfer (BOOT) contracts assets	Amortized based on duration of contract	Amortized based on duration of contract	

2.2 Assets that do not qualify for tax depreciation

The tax legislation provides a comprehensive table of assets and rates that must be applied.

Types of assets	Explanation
Land	Specifically excluded from the law

2.3 Availability of immediate deductions for repairs

Deductions for repairs and maintenance with respect to fixed assets are limited to 4% of the relevant asset category's closing balance; the excess must be disallowed and capitalized in the tax pool for tax purposes.

3. Depreciation and calculation methods

Methods used	Declining-balance; contractual period for BOOT assets
Frequency	Annually
Year of acquisition	In the year of acquisition, 50% of the value of an asset is added to the relevant category. The remainder is added to the asset category in the subsequent year.
Year of disposal	Sale proceeds from disposal reduce the balance of an asset category. The proceeds are split 50/50 in the year disposed of and the subsequent year. Accounting profit or loss arising from disposal of fixed assets is disallowed for tax purposes.
Ability to use different methods for different assets	There is no choice of depreciation method. The same method should be applied for all fixed assets.
Ability to switch methods	No

4. Preferential and enhanced depreciation availability

There are no incentives to reward investment in capital expenditure.

5. Accounting for write-offs/impairment and disposal/transfers

Tax depreciation would continue on any scrapped fixed assets written off/impaired or disposed-off/transferred. Any disposal proceeds are adjusted against relevant asset pool.

Accounting losses arising from the write-off/impairment of fixed assets would be disallowed for tax purposes.

6. Transfer of assets between group companies

Certain reliefs are available under the Saudi Tax Law for intra-group transfer of assets.

Any accounting gain or loss which arises upon transfer of assets between group companies should not be taxable provided the following criteria are met:

- ▶ The companies are wholly owned, directly or indirectly, within the same group.
- ▶ The asset should not be disposed of to a company outside the group within two years from the date of transfer.
- ▶ The transfer should happen between Saudi resident entities.

7. Making a claim

A taxpayer must attach a prescribed schedule to its tax return to support the claim for depreciation expense.

8. Intangible assets

Intangible assets are included in group / pool five (5) and amortized for tax purposes as explained in Section 2 above.

9. Depreciation for zakat purpose

Saudi Arabia has two tax regimes (i.e. corporate tax and zakat) based on company shareholdings . Companies with respect to shares wholly owned by Saudi or other GCC nationals (Bahrain, Qatar, United Arab Emirates, Oman, Kuwait) are required pay zakat based on their respective share of profit / zakat base according to the Zakat regulations.

No adjustment is required to be done to the accounting depreciation for zakat purposes.

The limitation of deductibility of the repairs and maintenance expense discussed in Section 2.3 above is not applicable for calculation of zakat.

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Capital allowances

Does the tax treatment follow book/statutory accounting depreciation?

No

Range of rates used

Varying rates, up to 100%

Depreciation method used to calculate tax deduction

Straight-line

1. Entitlement to claim

A person (includes a company or body of persons) carrying on a trade, profession or business who incurs capital expenditure on the provision of machinery or plant for the purpose of that trade, profession or business is entitled to claim capital allowance on the machinery or plant.

2. Allocation of tangible assets to tax depreciation lives and rates

Capital allowances can be claimed on plant or machinery. The parts of a building that are plant or machinery are eligible for capital allowance claims.

2.1 Assets that qualify for tax depreciation

Singapore's tax legislation provides a prescribed list of assets for which a capital allowance claim is granted on a straight-line basis and is calculated by reference to the number of years of working life.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment	3 years or applicable number of years of working life, depending on nature of asset	Straight-line See also note 1, below table	See note 1	
Motor cars	3 years or applicable number of years of working life, depending on nature of asset	Straight-line See also note 1	See note 1	This generally applies to commercial vehicles.
Buildings	N/A	N/A	N/A	No claim for buildings unless a tax incentive (land intensification allowance) is applied for and granted
Furniture, fittings or fixtures	3 years or applicable number of years of working life, depending on nature of asset	Straight-line See also note 1	See note 1	
Computer hardware	1 year or 3 years or the applicable number of years of working life	Straight-line See also note 1	See note 1	
Computer software	1 year or 3 years or the applicable number of years of working life	Straight-line See also note 1	See note 1	
Aircraft	3 years or the applicable number of years of working life	Straight-line See also note 1	See note 1	For companies with an aircraft leasing scheme, the useful life of the aircraft may be extended up to 20 years.
Transport other than motor cars	3 years or applicable number of years of working life, depending on nature of asset	Straight-line See also note 1	See note 1	
Office equipment	3 years or applicable number of years of working life, depending on nature of asset	Straight-line See also note 1	See note 1	

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Qualified leaseholder improvement property	The useful life will depend on the nature of the asset. For example, if it is office equipment, capital allowance will be claimed over 3 years or the applicable number of years of working life.	Straight-line See also note 1	See note 1	Capital allowance on plant or machinery will be granted to the person (lessor or lessee, depending on the type of lease) who incurred the capital expenditure.
Agricultural machinery and equipment	3 years or applicable number of years of working life, depending on nature of asset	Straight-line See also note 1	See note 1	
Property used in R&D	The useful life will depend on the nature of the asset. For example, if it is office furniture, capital allowance will be claimed over 3 years or the applicable number of years of working life.	Straight-line See also note 1	See note 1	

Note 1:

Accelerated capital allowance claim (i.e., written off over one or three years):

- ▶ Straight-line basis over one or three years on the qualifying cost incurred
- ▶ For plant and machinery acquired in the basis period for the year of assessment 2021, the option is available to accelerate the capital allowance claim over two years as follows:
 - ▶ 75% of the cost incurred in the first year (i.e., year of assessment 2021)
 - ▶ 25% of the cost incurred in the second year (i.e., year of assessment 2022)
 This option, if exercised, is irrevocable.

Capital allowance claim based on number of years of working life:

- ▶ Initial allowance of 20% of qualifying cost incurred
- ▶ Annual allowance computed (if the asset is in use at the end of the basis period) as follows:
 - ▶ (Qualifying cost minus initial allowance) divided by working life

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land, car parks, improvements	Land does not qualify.
Motor vehicle (private cars)	Capital allowance for private cars (with certain exceptions) is specifically prohibited under the Singapore Income Tax Act.
General electrical fittings, lightings, sanitary fittings, etc.	They are considered as being integral to and forming part of the building or structure.*

Please note that the above are some examples of assets that do not qualify for capital allowance claims. These expenditures may qualify for a tax deduction on qualifying renovation or refurbishment expenditure, subject to certain conditions and expenditure cap.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

The architect fees, legal fees and planning costs for a building generally do not qualify for capital allowances.

Land remediation – removing asbestos, Japanese knotweed

N/A

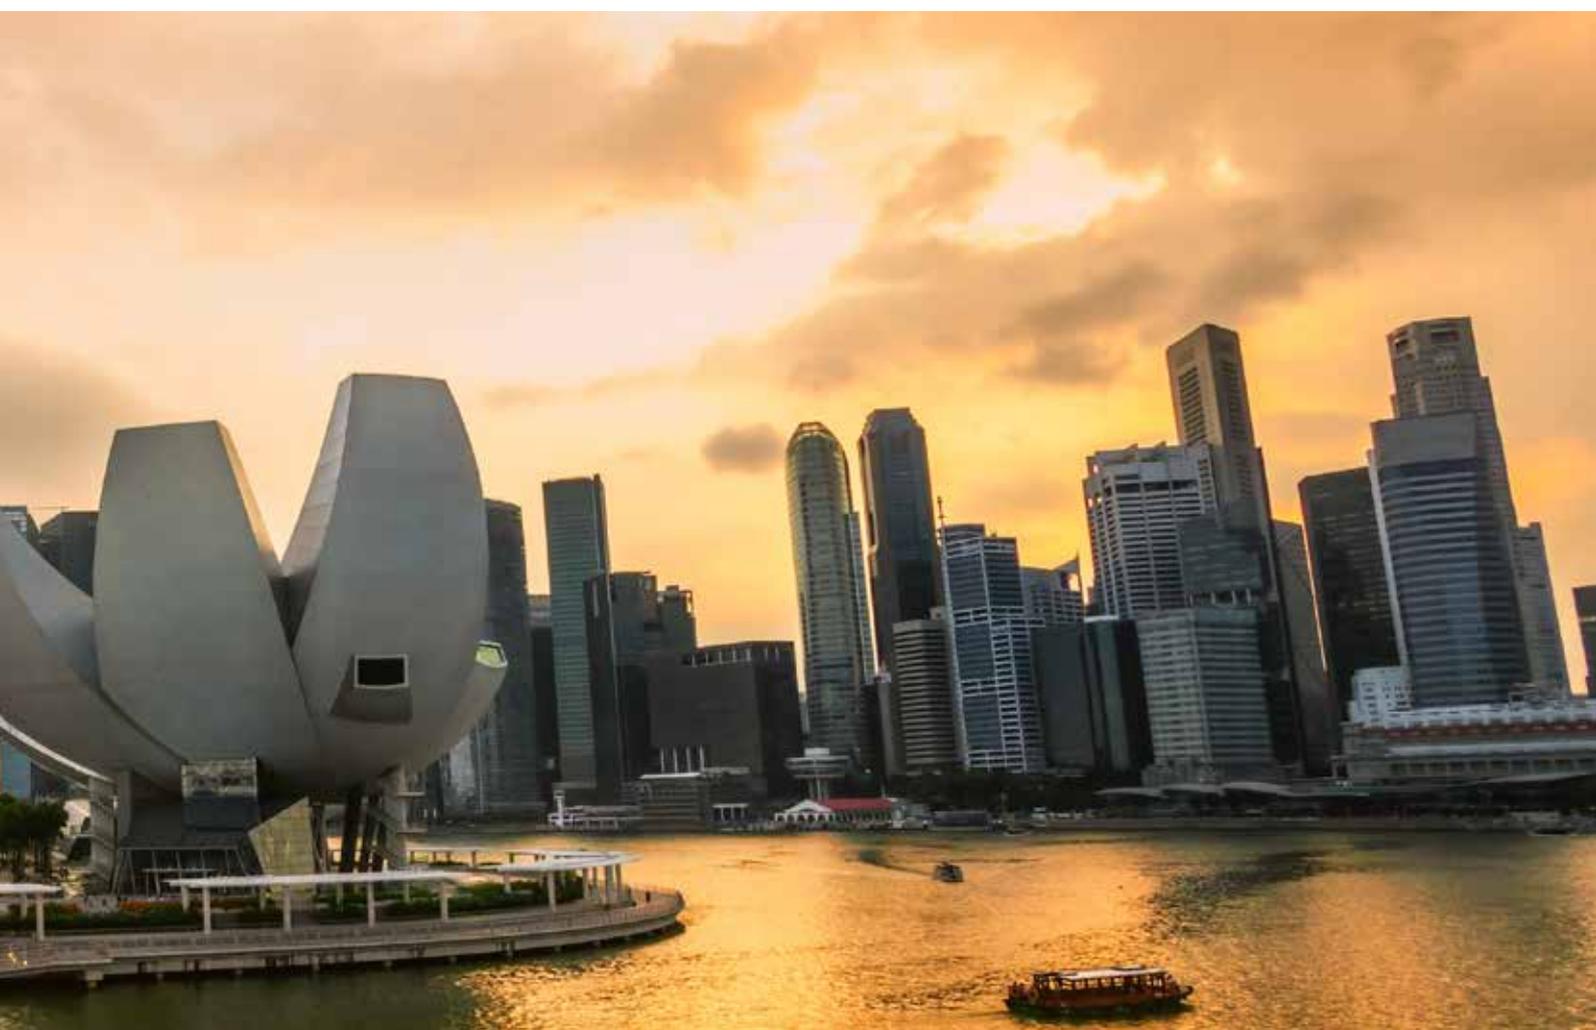

Own labor capitalized – work on developing software, for example, or carrying out work on property

Generally, the capitalized labor cost for the development of software qualifies for capital allowance over one year (i.e., 100% over one year).

2.4 Availability of immediate deductions for repairs

Tax deduction is claimable on any expenses incurred for repair of premises, plant, machinery or fixtures employed in acquiring the income or for the renewal, repair or alteration of any implement, utensil or article so employed, provided that no deduction shall be made for the cost of renewal of any plant, machinery or fixture, which is subject to capital allowance claims, or for the cost of reconstruction or rebuilding of any premises, buildings, structures or works of a permanent nature.

In this regard, repairs and replacements with no element of improvement should qualify for tax deduction. The costs of repairs and replacements are immediately written off when they are incurred.

3. Depreciation and calculation methods

Methods used	Straight-line
Frequency	Capital allowance is calculated on an annual basis (for the whole year) for the year of assessment notwithstanding that the asset may be acquired for less than 12-month period in a tax year.
Year of acquisition	Capital allowance is calculated for the whole year in the year of acquisition.
Year of disposal	A balancing allowance or charge may arise.
Ability to use different methods for different assets	Capital allowance may be claimed based on the number of years of working life or over one or three years (accelerated capital allowance claim).
Ability to switch methods	N/A

4. Preferential and enhanced depreciation availability

Accelerated capital allowances

Accelerated capital allowance (i.e., 100% over one year) may be claimed on certain assets (see table below).

Enhanced capital allowances

Companies may apply for the investment allowance incentive, subject to conditions wherein allowances of up to 100% of qualifying equipment cost may be granted on top of the normal capital allowance. This is a discretionary tax incentive and requires the taxpayer to go through an application process.

Asset used in	Comment on specific application and benefits available
All industries	Computer or other prescribed automation equipment and certain equipment (generator, robot, efficient pollution control, etc.) qualify for accelerated capital allowance (i.e., 100% over one year).

Description	Detail
Asset with cost not exceeding SGD5,000 individually	Accelerated capital allowance (i.e., 100% over one year), subject to a cap of SGD30,000 for any year of assessment

5. Accounting for disposals

The disposal will trigger a balancing adjustment event. A balancing allowance (a deduction) or charge (a taxable item) may arise.

In the event that an asset is scrapped, a deductible balancing allowance (equal to the tax written-down value) will arise if the capital allowance on the asset has not been fully claimed. If the capital allowance has been fully claimed, no adjustments will be made.

6. Making a claim

The claim for capital allowance is made in the income tax return filed with the tax authorities. Supporting documents are required to be maintained to substantiate the claims.

7. Intangible assets

Writing-down allowance is available on capital expenditure incurred by a company from 1 November 2003 to the last day of the basis period for year of assessment 2025 in acquiring qualifying intellectual property rights (IPRs) for use in its trade or business. The transferee must acquire the legal and economic ownership of the IPRs from the transferor, except for cases where approval of waiver from legal ownership has been granted. For qualifying IPRs acquired, the company may elect to claim writing-down allowances over 5, 10 or 15 years.

Type of asset	Rates/lives
Trademarks	See above
Patents, copyright, design, know-how or similar item	See above
Goodwill	N/A
License or permit	In general, a license fee is tax-deductible if incurred for purposes of a trade or business and in the production of income.

South Africa

heleen.etzebeth@za.ey.com

1. Entitlement to claim

Generally, only legal owners of the asset are entitled to claim depreciation, with the exception of:

- ▶ Section 11(g) – leasehold improvements such that improvements made by a lessee in terms of a contractual agreement may qualify for deduction.
- ▶ Section 13 – improvements made to a leased building, used wholly or mainly in the course of the taxpayer's trade for the process of manufacture, may qualify for an allowance should the improvement not fall within the scope of Section 11(g). Similarly, improvements in respect of buildings used by hotel keepers under section 13bis may qualify for an allowance.
- ▶ Section 12N – when the Government or certain exempt entities own the land or building, capital allowances would be allowed on improvements to the land and/or buildings.

2. Allocation of tangible assets to tax depreciation lives and rates

For tax purposes, assets qualify for different sections/write-off periods depending on whether they are permanent or movable. While permanent structures may qualify for building allowances (e.g., Sections 13, 13quin), movable assets (such as heating systems, partition walls, air conditioners, etc.) may qualify for shorter write-off periods in terms of Section 11(e). Furthermore, Section 12C allows for a specific write-off period for assets used in the process of manufacture. Sections 37B and 37C allow for deductions relating to environmental conservation, maintenance and expenditure.

2.1 Assets that qualify for tax depreciation

Useful life and depreciation rates indicated below are a general indication. Specific fact patterns may determine different depreciation rates.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Land	Disallowed	Disallowed	Disallowed	
Plant, machinery and equipment (used in the process of manufacture)	4-5 years	Straight-line method	40%/20%/20%/20% (new, unused and not apportioned) 20%/20%/20%/20%/20% (not new and unused plant and machinery, not apportioned)	Only applicable for assets used in manufacturing. Lists of processes of manufacture, processes similar to a process of manufacture and processes not regarded as processes of manufacture are detailed in the Income Tax Practice Note 42, which can be found on the South African Revenue Service website (sars.gov.za).
Other plant, machinery and equipment (non-manufacturing)	3-6 years	Straight-line method or diminishing-value method	16.66%-33.33%	Apportioned daily With reference to Interpretation Note 47, the useful life will be dependent on the underlying asset.
Motor cars (passenger vehicles)	5 years	Straight-line method or diminishing-value method	20% per year	Apportioned daily

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Buildings and improvements:				
Manufacturing	50/20 years	Straight-line method	2%/5% per year	Not apportioned
Urban development zones	4/5/7/11 years	Straight-line method	8%-25% per year	Not apportioned
Residential buildings	50 years	Straight-line method	2% per year and additional 10% once off	Not apportioned
Residential units	20/10 years	Straight-line method	5%/10% per year	Not apportioned
Low-cost residential units	10 years	Straight-line method	10% per year	Not apportioned
Commercial	20 years	Straight-line method	5% per year	Not apportioned
Hotels	50/20/5 years	Straight-line method	2%/5%/20% per year	Not apportioned
Furniture, fittings or fixtures	6 years	Straight-line method or diminishing-value method	16.66% per year	Apportioned daily
Computer hardware:				
Mainframe/servers	5 years	Straight-line method or diminishing-value method	20% per year	Apportioned daily
Personal	3 years		33.33% per year	Apportioned daily
Computer software:				
Purchased	3 years	Straight-line method or diminishing-value method	33.33% per year	Apportioned daily
Personal computers	2 years		50% per year	Apportioned daily
Self-developed	1 year		100% over one year	Apportioned daily
Aircraft:				
Light passenger	4 years	Straight-line method or diminishing-value method	25% per year	Apportioned daily
Commercial helicopters	4 years		25% per year	Apportioned daily
Aircraft and ships	4/5 years		40%/20%/20%/20% (new and unused) 20%/20%/20%/20%/20% (not new and unused)	Not apportioned
Office equipment:				
Electronic	3 years	Straight-line method or diminishing-value method	33.33% per year	Apportioned daily
Mechanical	5 years		20% per year	Apportioned daily
Qualified leasehold improvement property:				
Lease premiums	Lease premium/ number of years of lease contract (limited to 25 years)	Straight-line method	Over the term of the lease limited to 25 years	Apportioned monthly
Lessee: leasehold improvements	Stipulated value in contract/number of years of lease contract (limited to 25 years)	Straight-line method	Over the term of the lease limited to 25 years	Apportioned monthly

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Farming and agricultural machinery and equipment:	1 year	Straight-line method	100%	Not apportioned
Buildings (erection, extension, addition or improvement)	3 years	Straight-line method	50%/30%/20%	Not apportioned
Movable assets				
Property used in R&D:	20 years	Straight-line method	5% per year	Not apportioned
Buildings	3 years	Straight-line method	50%/30%/20%	Not apportioned; this was previously claimed under Section 11D but must be claimed under Section 12C going forward.
Machinery and plant				
R&D expenditure	1 year	Straight-line method	150% of qualifying expenditure	Claimed in the year incurred; claiming this super deduction requires preapproval from the Department of Science and Technology.
Deductions for environmental expenditure:				
Environment treatment and recycling asset (owned by taxpayer)	4 years	Straight-line method	40%/20%/20%/20%	Utilized in the course of trade that is ancillary to any process of manufacture
Environmental waste disposal asset	20 years	Straight-line method	5% per year	Must be required by law to protect environment
Buildings in urban development zones:				
Erection of new building	11 years	Straight-line method	20% in year 1 + 8% per year for 10 years	If the building is purchased from a developer, 55% of the purchase price will be deemed to be the cost to be used to calculate the allowances.
Erection of new low-cost residential unit	7 years	Straight-line method	25% in year 1 + 13% in years 2-6 + 10% in year 7	
Improvements	5 years	Straight-line method	20% per year	If the building is improved by a developer, 30% of the purchase price will be deemed to be the cost to be used to calculate the allowances.
Improvement to low-cost residential unit	4 years	Straight-line method	25% per year	

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Assets used in production of renewable energy:				
Wind power	3 years	Straight-line method	50%/30%/20%	Not apportioned
Photovoltaic solar energy of:				
▶ More than 1 megawatt	3 years	Straight-line method	50%/30%/20%	Not apportioned
▶ Not exceeding 1 megawatt	1 year	Straight-line method	100%	Not apportioned
Concentrated solar energy	3 years	Straight-line method	50%/30%/20%	Not apportioned
Hydropower to produce electricity of not more than 30 megawatts	3 years	Straight-line method	50%/30%/20%	Not apportioned
Biomass composed of organic wastes, landfill gas or plant material	3 years	Straight-line method	50%/30%/20%	Not apportioned
Assets used in production of biodiesel or bioethanol	3 years	Straight-line method	50%/30%/20%	Not apportioned

Mining assets and expenditure have separate sections in the South African Income Tax Act (Sections 15 and 36). For tax purposes, expenditure incurred on mining assets may be fully deducted in the year the expense is incurred, subject to certain requirements, such as limitation of deductions to taxable income.

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Land does not qualify.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Legal fees require analysis to determine whether they are capital or revenue in nature. If capital, the fees can be allocated to the cost of the asset and capital allowances claimed.

Own labor capitalized – work on developing software, for example, or carrying out work on property

Own labor is included in the cost of the asset/capitalized to the asset's cost; the capital allowances claimed are based on the asset classification.

2.4 Availability of immediate deductions for repairs, mining assets or small assets

Description	Detail
Assets below a certain value	Small items less than ZAR7,000 can be written off in full in the year acquired and brought into use (subject to certain requirements).
Repairs	See explanation below.
Mining assets	Certain mining assets may qualify for a 100% deduction in the year acquired, subject to certain requirements.

Repairs and maintenance vs improvements

Section 11(d) provides a deduction with regard to repairs and maintenance on property actually incurred for purposes of the taxpayer's trade.

Improvements will be disallowed as an expense, and therefore capitalized to the asset's cost and be written off over the same write-off period as the asset.

3. Depreciation and calculation methods

Methods used	Declining-balance, straight-line or 40/20/20/20
Frequency	Section 11(e): with IN47 – general wear and tear allowances – daily basis Section 12B: assets used for farming, production of renewable energy and production of biofuels – annually Section 12C: assets used by manufacturers or hotel keepers, assets used for storage and packing of agricultural products, and for aircraft and ships, and machinery or plant used for research and development – annually Section 13: buildings – annually Section 37B and 37C: environmental expenditure, conservation and maintenance – annually
Year of acquisition	Capital allowances can only be claimed from the date the asset is brought into use and not from the acquisition date. Depending on the type of asset (and section applicable), the allowance can be apportioned daily or be claimed as a percentage for the year.
Year of disposal	Depending on the type of asset (and section applicable), the allowance can be apportioned daily or be claimed as a percentage for the year.

Ability to use different methods for different assets	The taxpayer may elect either the straight-line or diminishing-value method to write off certain assets. The taxpayer may also elect to change the method from straight-line or diminishing-value method without notifying the tax authorities. Proper records must be kept in either case.
Ability to switch methods	See above.

4. Preferential and enhanced depreciation availability

There are numerous incentives available to companies that invest in capital projects during a certain time period (mainly manufacturing entities). These incentives may be cash grants or additional/accelerated allowances.

4.1. Tax allowance incentives

Small business corporations (Section 12E)

A "small business corporation" is:

- ▶ Any close corporation or cooperative or any private company as defined in Section 1 of the Companies Act in which all holders of the shares of the entity are natural persons
- ▶ A corporation with gross income for the year that does not exceed ZAR20 million
- ▶ One in which none of the shareholders or members hold any shares or any interest in the equity of any other company at any time during the year of assessment, other than:
 - ▶ A listed company
 - ▶ Any portfolio in a collective investment scheme
 - ▶ A body corporate or share block company
 - ▶ Less than 5% of the interest in a primary savings cooperative bank or primary savings and loan cooperative bank
 - ▶ Any friendly society
 - ▶ Less than 5% of the interest in a social or consumer cooperative or a burial society
 - ▶ A venture capital company
 - ▶ A dormant company, close corporation or cooperative
 - ▶ A company, close corporation or cooperative in the process of liquidation, windup or deregistration
- ▶ One with investment income plus income from rendering a personal service that does not exceed more than 20% of the total of all receipts and accruals of a revenue nature and all capital gains
- ▶ A company that is not a personal service provider as defined

Manufacturing assets are 100% deductible in the year that the assets are brought into use.

Non-manufacturing assets are written off over three years (50/30/20) or written off in terms of the allowances provided for in Section 11(e), depending on which one provides the most favorable deduction.

Buildings in special economic zones (Section 12S, read with Section 12R)

A special economic zone (SEZ) is a zone as defined by the Special Economic Zones Act by the Minister of Finance.

A qualifying company, as defined in Section 12R, will be allowed to receive a 10%-per-year capital allowance on the cost of any new and unused building or any new and unused improvements to buildings owned by the qualifying company, and those buildings or improvements are wholly and mainly used in the production of income within an SEZ in the course of the qualifying company's trade, other than the provision of residential accommodation.

The SEZ incentive is set to expire 1 January 2031.

Pipelines, transmission lines and railway lines (Section 12D)

This relates to expenditure actually incurred on acquisition of or improvements to pipelines, transmission lines or railway lines by the legal owner, or a taxpayer that is not the owner, if the improvement to be effected is one as set out in Section 12N, that is new and unused and brought into use for the first time. Allowances can be claimed as follows:

- ▶ 10% per year for pipelines used for transportation of natural oil
- ▶ 6.67% (10% as from 1 April 2019) on any line or cable used for the transmission of electronic communications
- ▶ 5% annually for all other affected assets

Industrial policy project additional investment and additional training allowance (Section 12I)

Additional investment allowance

In addition to the allowances already available to manufacturing entities in other sections of the act, an additional allowance may be deducted by applying the following percentages to the cost of any new and unused manufacturing assets (hereinafter referred to as assets) used in an industrial policy project (hereinafter referred to as project):

- ▶ 55% of qualifying assets or a maximum of ZAR900 million investment allowance in the case of any greenfield project with a preferred status (100% if located in an SEZ)
- ▶ 35% of qualifying assets or a maximum of ZAR550 million investment allowance in the case of any other greenfield project (75% if located in an SEZ)
- ▶ 55% of qualifying assets or a maximum of ZAR550 million investment allowance in the case of any brownfield project with a preferred status
- ▶ 35% of qualifying assets or a maximum of ZAR350 million investment allowance in the case of any other brownfield project

The Section 12I - Industrial Projects incentive expired on 31 March 2020 without further extension. Therefore, no new applications can be submitted for this incentive. However, for any projects that were approved, the recipient of the incentive still will have to comply with the reporting requirements for the remainder of the compliance period, which ends on the last day of the year of assessment, three years after the year of assessment in which the assets were first brought into use.

Additional training allowance

In the furtherance of an industrial policy project, an allowance limited to ZAR36,000 may be claimed for the cost of training provided to employees. This allowance may not exceed ZAR30 million (for an industrial policy project with preferred status) and ZAR20 million (for any other industrial policy project) within the six-year period from the date of approval.

4.2. Cash grant incentives

A number of cash incentives are administered by the Department of Trade and Industry, and these incentives typically tend to be industry-specific. Such cash incentives include, but are not limited to, the following:

Critical Infrastructure Programme (CIP) - cash grant

- ▶ The CIP offers a minimum grant of 10% to a maximum of 30% of the total qualifying bulk infrastructural development costs, up to a maximum of ZAR50 million.
- ▶ For projects that alleviate water and/or electricity dependency on the national grid (investment that is less dependent on national grid), the CIP will also offer a minimum grant of 10% to a maximum of 50%, up to a maximum of ZAR50 million.
- ▶ The applicant company must be at least a level 8 B-BBEE contributor in terms of the Codes of Good Practice for B-BBEE. Should the applicant company not be at least a level 8 B-BBEE contributor, a grace period of 15 months after date of submission of the application is given for it to comply.

- ▶ The project must coincide with an investment project (defined fixed investment, expansion or sustain/refurbishment for the existing fixed investment).

Infrastructure that should be considered:

- ▶ Electricity lines and substations
- ▶ Cogeneration/renewable energy (not part of Renewable Energy Independent Power Producer Procurement Programme (REIPPPP))
- ▶ Tar roads
- ▶ Bridges
- ▶ Water systems/reservoirs or purification
- ▶ Railway
- ▶ Infrastructure that alleviates water and/or electricity dependency on national grids

Agro-processing support scheme

The five key focus areas of agro-processing/beneficiation operation are as follows:

- ▶ Food and beverage value addition and processing (particularly black winemakers)
- ▶ Furniture manufacturing
- ▶ Fiber processing
- ▶ Feed production
- ▶ Fertilizer production

Qualifying projects:

- ▶ New and existing agro-processing/beneficiation projects

This can involve a wide range of processing or beneficiation activities of post-harvest that result in value addition and/or enhanced:

- ▶ Storage life, such as cleaning, sorting, grading and waxing
- ▶ Controlled ripening
- ▶ Labeling
- ▶ Packing and packaging
- ▶ Warehousing
- ▶ Canning
- ▶ Freezing, freeze drying
- ▶ Wood carving
- ▶ Extrusion
- ▶ Synthesizing
- ▶ Polymerization
- ▶ Various levels of processing that change agricultural product form. The forestry value chain may also include sawing, pulping, peeling and preservation.

Benefits:

Approved applicants can qualify for:

- ▶ A 20% to 30% cost-sharing grant to a maximum of ZAR20 million
- ▶ An additional 10% grant for projects that meet all economic benefit criteria

The grant is available over a two-year investment period.

The minimum amount of investment size to qualify for the grant is ZAR1 million (historical cost of assets less than ZAR10 million) or ZAR10 million (historical cost of assets greater than ZAR10 million).

The grant will offer support on a cost-sharing basis toward qualifying assets, including machinery and equipment, commercial vehicles, buildings and improved costs.

The grant will lead to the ability to claim between 20% and 30% of investment spent on qualifying assets and investment cost (capped at ZAR20 million).

Automotive Investment Scheme (AIS)

The purpose of AIS is to grow and develop the automotive sector through investment in new and/or replacement models and components that will increase plant production volumes, sustain employment and/or strengthen the automotive value chain. The grant is available to light motor vehicle manufacturers and component manufacturers, deemed component manufacturers or tooling companies.

This represents a cash grant of 20% plus an additional 5% to 10% (if the project significantly contributes to the development of the automotive sector) of the cost of assets required to establish a new production facility or to expand an existing production facility.

Film and television production

1. Foreign Film and Television Production and Post-Production Incentive

Foreign-owned qualifying productions with a minimum of qualifying South African production expenditure (QSAPE) of ZAR12 million and above may qualify for a grant equal to 20% of QSAPE.

In instances in which the shooting location is in South Africa and post-production with qualifying South African post-production expenditure (QSAPPE) of ZAR1.5 million occurs in South Africa, the incentive will be calculated on 22.5% of QSAPPE (additional 2.5%).

Where post-production occurs outside of South Africa for a minimum number of two weeks, the incentive is calculated as follows:

- ▶ The incentive is calculated at 22.5% of QSAPPE for foreign post-production with QSAPPE of ZAR1.5 million.
- ▶ The incentive is calculated at 25% of QSAPPE for a foreign post-production with QSAPPE of ZAR3 million and above.

If 100% of post-production is conducted in South Africa, the minimum requirement for the number of weeks will be waived.

If shooting on location in South Africa and conducting post-production with a QSAPPE of ZAR3 million and above in South Africa, the incentive will be calculated as 25% of QSAPE and QSAPPE (an additional 5% will be added).

2. South African Film and Television Production and Co-Production Incentive

The incentive is available to qualifying South African productions and official treaty co-productions with a total production of ZAR2.5 million and above. The incentive is calculated as 35% of the first ZAR6 million of QSAPE and 25% of the QSAPE on amounts above ZAR6 million.

Other incentives

Tax depreciation method	Comment on specific application and benefits available
R&D tax incentive	Section 12C and Section 11D: <ul style="list-style-type: none"> ▶ Capital assets 50%/30%/20% allowance or 40%/20%/20%/20% or 20% per year over five years ▶ Expenditure 100% + 50% additional (i.e., super allowance of 150%)

Tax depreciation method	Comment on specific application and benefits available
Assets used in farming or production of renewable energy (Section 12B)	A write-off period of 50%/30%/20% is allowed for the cost of and improvements to the following assets: <ul style="list-style-type: none"> ▶ Assets acquired for use in farming operations ▶ Assets acquired for use in the production of biodiesel or bioethanol ▶ Assets acquired for use in the generation of electricity from wind, solar power, hydropower and biomass
Energy-efficiency savings (Section 12L)	Section 12L provides for an energy-efficiency savings deduction of ZAR0.95 per kilowatt hour or kilowatt hour equivalent. Taxpayers can deduct all forms of energy-efficiency savings resulting from activities in the production of income, provided they have a certificate issued by an institution, board or body, such as the Minister of Finance, Minister of Energy or Minister of Trade & Industry, all of which will prescribe these regulations.

5. Accounting for disposals

Recoupments (Section 8(4)) are triggered if the proceeds (below original cost price) received on disposal exceed the tax value of the asset. Tax recoupment is included in the taxable income of the taxpayer.

The tax-scraping allowance will be allowed and deducted from taxable income of the taxpayer if the proceeds received on disposal are less than the tax value of the asset. This will only relate to assets in which the write-off period is less than 10 years and the asset is a moveable asset. Immovable assets – generally buildings – are excluded from claiming a tax-scraping allowance.

Capital gains arise if the proceeds exceed the cost.

6. Making a claim

In South Africa, other than for an individual, submission of an annual tax return must be completed within 12 months from the financial year-end. Wear and tear and capital allowances are claimed as part of the income tax returns.

In practice, the tax authority can request that the taxpayer provide supporting documentation, such as audited annual financial statements and supporting schedules of amounts being claimed on the return.

7. Intangible assets

Type of asset	Rates/lives
Trademarks, patents, copyright, design	Section 11(gB) provides a full deduction of expenditure actually incurred for the registration or renewal of registration for trademarks, patents, copyright or designs.
Patents, copyright, design, know-how or similar items	Section 11(gC) provides a 5%-10% allowance per year in respect of expenditure actually incurred to acquire an invention, patent, design, copyright or other similar property.
Goodwill	No tax deduction is allowed for purchased goodwill.
License or permit	Section 11(gD) provides an allowance for expenditure incurred with regards to government business licenses for the provision of certain products or services over the lesser of the term of the license or 30 years.

South Korea

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation

Does the tax treatment follow book/statutory accounting depreciation?

In principle, yes. Although special rules may be applied in certain circumstances, accounting depreciation is tax-deductible provided it is within the maximum allowable limit computed based on the useful life/depreciation method reported to the tax office.

Range of rates used

Generally, 2.5%-25.0%

Depreciation method used to calculate tax deduction

Declining-balance, straight-line, units of production

jungkee.lee@kr.ey.com

1. Entitlement to claim

Legal owners are entitled to claim depreciation/amortization on assets. In the case of finance leases, the lessee is entitled to claim depreciation/amortization on the leased assets.

2. Allocation of tangible assets to tax depreciation lives and rates

In general, corporations may depreciate tangible fixed assets using the straight-line, declining-balance or unit-of-production (output) depreciation methods. However, buildings and structures must be depreciated using the straight-line method. Intangible assets must be amortized using the straight-line method with a few exceptions for which another depreciation method may apply (e.g., unit-of-production depreciation method may also be used for amortization of mining rights).

A corporation can elect to use one of the depreciation methods and useful lives specified in the tax laws and notify the tax office of its choice in its first annual income tax return. If it does not elect a particular depreciation method or useful life, it must use the depreciation method or useful life applicable to the respective class of asset as designated in the tax laws.

The depreciation methods and standard useful lives for the purpose of calculating the tax depreciation of each respective class of asset are laid out below. In general, useful lives of assets can be selected within the range of standard useful life \pm 25% as prescribed in the tax laws.

The following are standard useful lives and methods of depreciation for fixed assets, including fixtures and furniture (Appendix 5 to the Enforcement Regulations to the Corporate Income Tax Law):

Asset type	Standard useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate
Vehicles and transportation vehicles (excluding vehicles used in transportation, machinery and consumer products lease businesses), tools and equipment	5 years	Straight-line or declining-balance	20%/45.1%
Ships and aircraft (excluding ships and aircraft used in fishing, transportation, machinery and consumer products lease businesses)	12 years	Straight-line or declining-balance	8.3%/22.1%
Buildings and structures made of bricks, blocks, concrete, adobe, mud wall, wood, wooden mortar, etc. (including attached fixtures)	20 years	Straight-line	5%
Buildings and structures made of steel frame, reinforced concrete, stone, brick, etc. (including attached fixtures)	40 years	Straight-line	2.5%

The following are standard useful lives and methods of depreciation for fixed assets deployed in specific industries (Appendix 6 to the Enforcement Regulations to the Corporate Income Tax Law). For the manufacturing industry, a more specified level of industry should be considered to determine the standard useful life for tax implications.

Industries	Subcategory of manufacturing	Standard useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate
Manufacturing Educational service	Manufacture of leather, luggage and footwear Manufacture of pesticides and other agricultural chemical products	4 years	Straight-line or declining-balance	25%/52.8%

Industries	Subcategory of manufacturing	Standard useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate
Agriculture, forestry and fishing Mining Manufacturing Sewage, garbage disposal treatment, raw material recycling and environmental restoration Construction Wholesale and retail Transportation Publishing, graphics, broadcasting and information services Finance and insurance Lease (excluding real estate) Professional, scientific and technological services Business facility management and business support services Public administration, national defense and social security Public health and social welfare services Arts, sports and leisure-related services Association and organization, repair and other individual services Employment within family and other uncategorized self-consumption activities International and foreign bodies	Printing and reproduction of recorded media Manufacture of pharmaceuticals, medicinal chemicals and botanical products	5 years	Straight-line or declining-balance	20%/45.1%
Manufacturing Mailing services	Manufacture of electronic components, computer, radio, television and communication equipment and apparatuses	6 years	Straight-line or declining-balance	16.6%/39.4%

Industries	Subcategory of manufacturing	Standard useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate
Manufacturing, construction and transportation industries Lodging and restaurant services Real estate and lease Association and organization, repair and other individual services	Manufacture of magnetic and optical medium Manufacture of apparel, clothing accessories and fur articles Manufacture of rawhides and tanning and dressing of leather Manufacture of chemicals and chemical products (except pharmaceuticals, medicinal chemicals)	8 years	Straight-line or declining-balance	12.5%/31.3%
Agriculture, forestry and fishing Mining Manufacturing	Manufacture of food/beverages Manufacture of textiles, except apparel Manufacture of wooden and paper products Manufacture of rubber, plastic and mineral products Manufacture of electronic coils, transformers and other inductors Manufacture of matches Manufacture of basic metal products Manufacture of other transport equipment Manufacture of furniture Manufacture of electrical equipment and machinery Other manufacturing	10 years	Straight-line or declining-balance	10%/25.9%

Industries	Subcategory of manufacturing	Standard useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate
Manufacturing Transportation	Manufacture of tobacco products Manufacture of motor vehicles, trailers and semitrailers	12 years	Straight-line or declining-balance	8.3%/22.1%
Manufacturing	Manufacture of coke, hard-coal and lignite fuel briquettes and refined petroleum products	14 years	Straight-line or declining-balance	7.1%/19.3%
Electricity, gas and steam		16 years	Straight-line or declining-balance	6.2%/17.1%
Waterworks		20 years	Straight-line or declining-balance	5%/14%

2.1 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Land is excluded from fixed assets for tax depreciation purposes.
Assets not used for business	While assets not used for business do not qualify for tax depreciation, idle facilities do.
Assets under construction	Assets under construction are not subject to depreciation.
Assets whose values do not decline over time	Examples include antiquities and fine art pieces.

2.2 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Incidental costs related to the acquisition of fixed assets are subject to depreciation, as they are included in the acquisition costs of the related assets.

Land remediation

Costs in relation to land remediation are not included in acquisition costs of assets and, hence, are not subject to depreciation.

Capitalization of labor – personnel expenses incurred to develop or improve products, process, systems, etc., prior to commercial production or use

Payroll and other payroll-related costs of employees directly involved in the development are included in development costs and are subject to depreciation/amortization.

2.3 Availability of immediate deductions for repairs

If a corporation deducts expenses incurred for the acquisition of fixed assets or expenditures that should be capitalized, these are deemed asset acquisitions and will also be subject to tax depreciation.

“Capital expenditures” refer to repair costs spent to extend the useful life of depreciable assets of a corporation or to raise the real value of the relevant assets. Capital expenditures shall include the following:

- ▶ Restructuring to change the original use
- ▶ Installation of elevators or cooling/heating equipment
- ▶ Installation of evacuation facilities in a building, etc.
- ▶ Restoration of buildings, machinery, facilities and equipment damaged or destroyed by a disaster or accident to the extent that they cannot be used for their original purposes
- ▶ Other improvements, expansions or installations that are similar in nature to those listed above

However, if a corporation incurs any of the following repair costs, the repair costs may be expensed in the business year in which they occur:

- ▶ If the amount expended as repair costs for each asset is less than KRW6 million
- ▶ If the amount expended as repair costs for each asset is less than 5/100 of financial book value at the end date of the immediately preceding business year
- ▶ If repair costs are periodically expensed with intervals of less than three years

Furthermore, acquisition costs of depreciable assets that amount to not more than KRW1 million per unit may be expensed as a periodic expense unless the assets are acquired in high volume or are used for the commencement or expansion of business.

3. Depreciation and calculation methods

Methods used	Declining-balance, straight-line, unit-of-production methods
Frequency	Monthly If the business year is less than 1 year, the depreciation amount allowed under the Korean tax laws is the amount calculated by multiplying the allowed depreciation amount by the number of months in the relevant business year and dividing it by 12. In such cases, the number of months shall be calculated by the calendar, and the remaining number of days less than one month shall be deemed as one month.
Year of acquisition	The depreciation of fixed assets can be calculated from the month in which the fixed assets are put into use.

Year of disposal	The depreciation is calculated until the month preceding the month in which the fixed assets are written off or sold.
Ability to use different methods for different assets	The identical method must be applied to the same class of assets.
Ability to switch methods of conditions set by the Korean tax laws	Provided certain conditions prescribed under the Korean tax laws are met, depreciation methods may be changed after obtaining approval from the head of the district tax office.

4. Preferential and enhanced depreciation availability

In any of the following cases, a corporation may apply a useful life that is within a range of plus or minus 50% of the standard useful life upon obtaining an approval from the regional tax office (for fifth and sixth items below, a range of plus or minus 25% of the standard useful life may apply).

- ▶ If the degree of corrosion, wear and tear or damage of the assets is considerable due to the nature of the business
- ▶ For corporations that have been in business for at least three consecutive years, if the rate of operation of production for the relevant business year is considerably higher than the average rate of operation for the preceding three business years
- ▶ If accelerated depreciation of existing production facilities is required on the grounds of the development, distribution, etc., of new production technology and new products
- ▶ If operations are suspended or the rate of operation of production facilities is reduced due to changes in economic conditions
- ▶ Where the change in useful life is made subsequent to the first year of adoption of the international accounting standards
- ▶ If the standard useful life of the depreciable asset is changed in the tax laws

Upon acquiring used assets (i.e., assets that are left with less than 50% of the standard useful life prescribed in the tax law), the company may elect to use a useful life for the used assets that can be shortened to 50% of the standard useful life by filing an application to the district tax office.

Furthermore, if a Korean corporation acquires the following fixed assets until 31 December 2021, accelerated depreciation where a Korean corporation may apply a useful life that is within a range of plus or minus 75% (50% for large companies) of the standard useful life is granted as reward for investment:

- ▶ Small and medium-sized companies with average yearly revenue of less than KRW300 billion for the most recent three years: business-purpose fixed assets, such as machinery, tools, furniture and equipment
- ▶ Large companies: research and development (R&D) expenditures and facilities for commercialization of the new growth engine sector technologies, energy saving facilities and improving productivity facilities

5. Accounting for disposals

The difference between the selling price and the book value of the fixed asset (including intangible asset) is recognized as a gain or loss upon disposal.

6. Special depreciation rules for business cars

Business cars

Business cars refer to all vehicles that are subject to individual consumption tax and may be used for both business-related and nonbusiness-related purposes.

Tax treatment and tax deductibility of business-use vehicles

The Korean tax law requires taxpayers to maintain the operation records of a business-use car to deduct expenses related to the business-use car, which include depreciation expense, rental expense, fuel, insurance, repairs, property tax, toll fees and interest expense on the financial lease obligation. In the absence of the operation records, taxpayers shall be allowed to deduct the actual expenses incurred related to the business use of the car or KRW15 million, whichever is less.

This provision for business-use vehicles (see above) does not apply to the following vehicles:

- ▶ Vehicles used for transportation business, car sales and lease business, security business, etc.
- ▶ Autonomous vehicles with temporary permission from the Minister of Land, Infrastructure and Transport for R&D purposes

Annual depreciation limits

The allowable depreciation per year is limited to the depreciation expense multiplied by the business-use percentage, which shall not exceed KRW8 million per vehicle. The depreciation expense exceeding the limit can be carried forward to subsequent tax years and be deducted when depreciation expenses multiplied by the business-use percentage is less than the tax limit of KRW8 million.

Loss from the disposal of business-use vehicles

Loss from the disposal of business-use vehicles is subject to a deductibility limit, which is KRW8 million per year per vehicle.

7. Making a claim

Tax depreciation is incorporated into the annual corporate income tax return.

8. Intangible assets

The following are standard useful lives and method of depreciation for intangible assets (see Appendix 3 to the Enforcement Regulations to the Corporate Income Tax Law).

Type of asset	Rates/lives
Trademarks	5 years
Patents, copyrights, design, know-how or similar items	Patents (7 years); copyright (depending on the term of copyright); design (5 years); know-how (5 years)
Goodwill	5 years
License or permit	5 years (if treated as goodwill)
Other (please provide details)	<p>Useful life of 10 years: Fishing rights, gathering rights under the Submarine Mineral Resources Development Act (unit-of-production method may be used), toll road management rights, irrigation rights, electricity and gas provision facility usage rights, industrial waterworks usage rights, waterworks usage rights and heating provision facility management rights</p> <p>Useful life of 20 years: Mining rights (unit-of-production method may be used), telephone and telegraph exclusive-use facility rights, exclusive rail line usage rights, sewage treatment and disposal plant management rights, and waterworks facility management rights</p> <p>Useful life of 50 years: Dam usage rights</p>

Spain

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation or amortization

Does the tax treatment follow book/statutory accounting depreciation?

Yes, for tax purposes, accounting depreciation is tax-deductible provided it is within the maximum allowable limit set by Spain's corporate income tax (CIT) regulations.

Range of rates used

0%-50%

Depreciation method used to calculate tax deduction

Straight-line/prime cost, sum-of-the-years'-digits method, double-diminishing (declining) method – constant percentage, a depreciation plan approved by the Spanish tax authority or accelerated depreciation in certain industries (e.g., mining)

EY contact

Alberto García Valera

alberto.garcia.valera@es.ey.com

1. Entitlement to claim

Taxpayers who have registered the assets in their balance sheet are entitled to claim depreciation.

2. Allocation of tangible assets to tax depreciation lives and rates

Tax depreciation should be applied element by element (i.e., companies are required to distinguish between parts of the building and apply lives/rates to each part (furniture, air-conditioning units, etc.)). However, elements that are similar in nature or used in the same way may be depreciated together if it is possible to know the accumulated depreciation of each element at all times.

Maximum depreciation rates for tax purposes are fixed by law. The rates vary depending on the industry. Spanish tax reform has amended the table of assets and the lives/rates.

2.1 Assets that qualify for tax depreciation

Useful life and depreciation rates noted below are a general indication. Specific fact patterns may determine different depreciation rates.

Asset type	Maximum useful life for tax	Type of tax depreciation method	Maximum applicable tax depreciation rate	Comments
Plant, machinery and equipment	14-40 years	To be chosen by the taxpayer	5%-15%	It depends on the specific kind of asset.
Motor cars	14 years	To be chosen by the taxpayer	16%	
Buildings	68-100 years	Sum-of-the-years'-digits method and constant percentage method (see definitions below) cannot be applied.	2%-3%	It depends on whether the building is used for industrial or administrative purposes. Warehouses are excluded.
Furniture, fittings or fixtures	4-20 years	Sum-of-the-years'-digits method and constant percentage method cannot be applied.	10%-50%	It depends on the specific kind of asset.
Computer hardware	8 years	To be chosen by the taxpayer	25%	

Asset type	Maximum useful life for tax	Type of tax depreciation method	Maximum applicable tax depreciation rate	Comments
Computer software	6 years	To be chosen by the taxpayer	33%	
Aircraft	20 years	To be chosen by the taxpayer	10%	
Transport other than motor cars	10-25 years	To be chosen by the taxpayer	8%-20%	It depends on the specific kind of asset.
Car parks	100 years	To be chosen by the taxpayer	2%	
Office equipment	20 years	Sum-of-the-years'-digits method and constant percentage method cannot be applied.	10%	It depends on the specific kind of asset.
Land improvements	N/A	N/A	0%	
Qualified leaseholder improvement property	N/A	N/A	0%	
Agricultural machinery and equipment	18 years	To be chosen by the taxpayer	12%	
Property used in research and development (R&D)				Accelerated depreciation allowed

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	The purchase price of undeveloped land shall include land preparation costs, such as enclosures, excavation, purification and drainage, demolition when required for new building construction, inspection costs and plans drawn up prior to the purchase and, where applicable, the initial estimate of the present value of existing obligations associated with land restoration. Land typically has an indefinite life and is therefore not depreciated. However, when the initial value includes restoration costs, in compliance with the property, plant and equipment standards, this portion of the land shall be depreciated over the period in which it generates economic benefits as a result of having incurred these costs.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Such costs are deductible for CIT purposes provided they comply with the general deductibility requirements, which may be summarized as follows:

- ▶ The expense must correspond to a real transaction.
- ▶ The expense must be related to the obtaining of income/to the activity performed by the taxpayer.
- ▶ The expense must be duly registered in the accounting books.
- ▶ The expense must be included in the tax year of its accrual.
- ▶ The expense must be duly justified according to the Spanish General Tax Act.
- ▶ The expense is not specifically considered as nondeductible according to the Spanish Corporate Income Tax Act.

Land remediation – removing asbestos, knotweed

It should increase the acquisition value of land, but not the deductible value for CIT purposes.

Own labor capitalized – work on developing software, for example, or carrying out work on property

Qualifying R&D capitalized expenses would be deductible for CIT purposes under the free depreciation regime.

2.4 Availability of immediate deductions for repairs

Generally speaking, an item of property, plant and equipment shall be considered impaired when its carrying amount exceeds its recoverable amount. The recoverable amount is the higher of the fair value of the asset, less costs to sell and its value in use. The expense derived from write-offs will not be deductible for CIT purposes.

Spanish regulations distinguish between repairs and improvements. The Spanish General Accounting Plan defines repairs as amounts relating to the upkeep of assets to be registered as an expense, which would be deductible for CIT purposes.

However, costs incurred to renovate, expand or improve items of property, plant and equipment that increase capacity or productivity or extend the useful life of the asset shall be capitalized as part of the cost of the related asset. Therefore, improvements would be tax-depreciated according to the pending useful years, and the depreciation method applies to the linked asset.

For fiscal years 2013 and 2014, for entities with revenue exceeding EUR10 million, a temporary restriction applied to the amortization or depreciation for tax purposes of fixed, intangible and real estate assets. Under this restriction, the tax-deductible expense was limited to 70% of the maximum depreciation or amortization amount, according to CIT regulations.

Depreciation expenses may be taken on a straight-line basis over a period of 10 years (or, if the taxpayer so chooses, the asset's useful life) starting from 2015.

3. Depreciation and calculation methods

Methods used	Straight-line/prime cost, sum-of-the-years'-digits method, double-diminishing (declining) method – constant percentage, a depreciation plan approved by the Spanish tax authority or accelerated depreciation in certain industries (e.g., mining)
Frequency	<p>Annually</p> <p>Depreciation is calculated on an ongoing basis. For instance, ongoing depreciation will have to be taken into consideration for filing the payments on account for CIT purposes. Listed below are definitions of the abovementioned methods:</p> <ul style="list-style-type: none"> ▶ The straight-line method results from the application of linear amortization rates in the officially approved amortization schedules and may be used for any depreciable asset. Companies may use higher rates if they can demonstrate that the actual depreciation is more than what the law allows. Additionally, the mentioned rates may be higher for assets used in more than a single shift worked and for secondhand assets that the company acquired. ▶ The sum-of-the-years'-digits method may be used for all assets, except building, furniture and household goods. ▶ The constant percentage method is determined by weighting the linear amortization rate obtained from the amortization period that is officially approved in the amortization schedules by the following rates: <ul style="list-style-type: none"> ▶ 1.5 weighting – should the asset have a useful life shorter than five years ▶ 2 weighting – should the asset have a useful life equal to or more than five years and less than eight years ▶ 2.5 weighting – should the asset have a useful life of at least eight years ▶ A tax authority-approved depreciation plan: On request, tax authorities may grant approval for accelerated depreciation if the company presents a plan specifying the assets, the date and price of the acquisition, the depreciation rates and the annual depreciation allowance desired, and supporting evidence for the granting of such a plan.
Year of acquisition	Generally speaking, depreciation is calculated from the time the asset is brought into operating conditions or purchase. In the year of acquisition, the annual tax depreciation would be proportionally calculated.
Year of disposal	In the year of disposal, the annual tax depreciation would be proportionally calculated. If an asset is owned for only a part of the year, the depreciation is calculated in proportion to the number of months it belonged to the taxpayer.
Ability to use different methods for different assets	The method has to be chosen for each element during its useful life and not by each class of assets.
Ability to switch methods	Under certain conditions, the method may be changed. It has to be justified in the annual account as an exceptional measure. Depending on the cause that required the change, it may impact the previously submitted CIT form. If this is the case, an amendment should be requested or submitted.

4. Preferential and enhanced depreciation availability

Tangible and intangible fixed assets of certain companies (e.g., small and medium-sized companies, labor-limited companies, mining companies, priority-exploitation companies (*explotaciones asociativas prioritarias*) can be depreciated under an accelerated depreciation regime.

For financial lease contracts, under certain conditions, tax depreciation shall not be higher than the result of applying twice the officially approved linear amortization rate corresponding to such asset. In addition, small and medium-sized companies may apply the coefficient of 1.5 to the specific tax depreciation for financial lease contracts.

Type of asset	Comment on specific application and benefits available
Tangible and intangible fixed assets of workers for incorporated companies and labor-limited liability companies	The assets assigned to the performance of these activities and acquired within the first five years of their qualification can be depreciated under a free depreciation regime.
Assets used in R&D	Tangible and intangible assets, excluding buildings, assigned to development and investigation activities can be amortized under a free depreciation regime.
Buildings assigned to R&D	They can be amortized, in equal parts, for a period of 10 years, if assigned to development and investigation activities.
Industry-specific	Assets used by mining companies
Intangible assets	If it is not possible to make a reliable estimate of an asset's useful life period, the amortization rate for accounting purposes is set at 5%.

In addition, new fixed assets can be freely depreciated on an annual basis if their unit cost is below EUR300, with an overall cap of EUR25,000.

Lastly, since 2020, certain assets linked to the automotive sector can be depreciated under the accelerated depreciation regime. In this sense, in order to promote process innovation investments in the value chain of the automotive industry in Spain, the CIT Law allows the application of the accelerated depreciation regime to certain tangible fixed asset investments.

The investment should be directly linked to any of the following objectives, not having an accumulative nature:

- (i) sensorisation of the production chain
- (ii) monitoring of the production chain
- (iii) implementation of manufacturing systems
- (iv) reduction of environmental impact

Additionally, further legal requirement should be met.

The amount of investment eligible for the free depreciation scheme would be a maximum of EUR500,000.

5. Accounting for disposals

When a company disposes of an asset for value, any difference between the accounting depreciation and the tax depreciation should be taken into consideration when calculating the tax benefit or loss to be included in the annual tax return. When a company scraps an asset for no value, the tax treatment would be the same, but the price-level adjustment would not be applicable.

6. Making a claim

Tax depreciation is claimed in the CIT return.

Companies must be able to prove the acquisition value with the acquisition contract. In addition, the depreciation could be done by any means allowed by the law.

7. Intangible assets

Generally, intangible assets may be amortized according to their useful life. If the useful life cannot be determined, intangible assets may be amortized with a limit of 5% annually.

Type of asset	Rates/lives
Trademarks	5%
Patents, copyright, design, know-how or similar item	5% for intangible asset with limited useful life (e.g., patents, copyright)
Goodwill	5%
License or permit	5%

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation (*skattemässig avskrivning*)

Does the tax treatment follow book/statutory accounting depreciation?

Only for machinery and equipment when the 30% declining or 20% straight-line method is used

Range of rates used

0%-100%

Depreciation method used to calculate tax deduction

Declining-balance, straight-line (prime cost), residual value

1. Entitlement to claim

The legal owners are generally entitled to claim.

2. Temporary tax reduction for equipment purchased in 2021

Within the budget bill for 2021, a temporary tax reduction equal to 3.9% of the acquisition value of machinery and equipment acquired in 2021 was announced. This includes so-called building equipment and land equipment. The tax relief will be available in the first tax year ending 31 December 2022 or later and is expected to be factored into preliminary tax calculations from 1 January 2022. The relief is in addition to the rules on depreciation of machinery and equipment.

3. Allocation of tangible assets to tax depreciation lives and rates

Generally, companies are not required to break down assets. Special rules apply to buildings: if a building is constructed or purchased, the company should distinguish between parts of the building and segregate these into the depreciation classes defined in the Income Tax Act such as building, building equipment, connection fees, land equipment and land improvements. The annual depreciation of the building themselves is determined by the economic lifetimes recommended by the tax authorities for different building categories.

Buildings are subdivided as follows:

Type of building	Yearly deduction percentage
Detached houses	2%
Rental buildings	
Car parks, malls, hotels and restaurant buildings	3%
Stands/kiosks	5%
Other rental buildings	2%
Farm buildings	
Greenhouses, silos, refrigerating buildings	5%
Other buildings	4%
Power plant buildings	
Thermal power generation buildings	4%
Hydroelectric power buildings	2%
Industrial buildings	
Industrial buildings that are not set up for specific use	4%
Other industrial buildings that have only a limited usefulness for any purpose other than that for which they are used; for example, gas stations, cold stores, dairies, slaughterhouses, sawmills and brickworks	5%
Special buildings	3%
Other buildings	
Treat as industrial buildings	

3.1 Assets that qualify for tax depreciation

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment	N/A	Combined declining/straight-line or declining	30% declining/20% straight-line or 25% declining	
Motor cars	N/A	Combined declining/straight-line or declining	30% declining/20% straight-line or 25% declining	
Buildings	20-50 years	Straight-line	2%-5% annually	

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Furniture, fittings or fixtures	N/A	Combined declining/straight-line or declining	30% declining/20% straight-line or 25% declining	
Computer hardware	N/A	Combined declining/straight-line or declining	30% declining/20% straight-line or 25% declining	
Computer software	N/A	Combined declining/straight-line or declining	30% declining/20% straight-line or 25% declining	
Aircraft	N/A	Combined declining/straight-line or declining	30% declining/20% straight-line or 25% declining	
Transport other than motor cars	N/A	Combined declining/straight-line or declining	30% declining/20% straight-line or 25% declining	
Car parks	20 years	Straight-line	5% annually	
Office equipment (including office furniture and fixtures)	N/A	Combined declining/straight-line or declining	30% declining/20% straight-line or 25% declining	
Land improvements	20 years	Straight-line	5% annually	
Qualified leaseholder improvement property	20 years	Straight-line	5% annually	
Agricultural machinery and equipment	N/A	Combined declining/straight-line or declining	30% declining/20% straight-line or 25% declining	

3.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Land does not qualify because the value is not decreasing.
Artwork, etc.	Tax depreciation is not allowed for assets that can be assumed to have a permanent value.

3.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Costs should be capitalized and depreciated in line with the asset to which they relate

Land remediation – removing asbestos, Japanese knotweed

No general rules can be applied. Treatment depends on the specific conditions and situations in general.

Requirements for declining depreciation of 30% or a straight-line depreciation claim of 20%

To make a declining depreciation claim of 30% or a straight-line depreciation claim of 20% per year, the bookkeeping must conform with generally accepted accounting standards, and the depreciation must be in line with the tax treatment. Deductions for depreciation of own labor capitalized can be made if accepted according to generally accepted accounting principles.

3.4 Availability of immediate deductions

Description	Detail
Assets with life of less than three years	Equipment with a general life-span of less than three years, typically mobile phones, etc.
Assets below a certain value	Below standardized amount, currently approximately SEK22,000
Repairs	Repairs to conserve or restore to the original condition
"Extended repairs" on buildings	Extended repairs are changes in a building that are considered minor changes (no significant change to the building or building elements) and are "normal" in the course of business undertaken by the taxpayer making the investment.
Assets that are acquired and disposed of in the same year	
Buildings for short-term use	Typically nonpermanent buildings, an example being temporary huts used at construction sites

- ▶ Legislation distinguishes between repairs and value-added improvements. Unlike repairs that can be written off immediately, improvements that qualify as value-added improvements are added to the asset's depreciable amount.
- ▶ Added improvements can, however, be considered as extended repairs. Extended repairs are changes in a building that are considered minor changes (no significant change to the building or building elements) and are "normal" in the course of business undertaken by the taxpayer making the investment.

4. Depreciation and calculation methods

Methods used	Reducing balance, straight-line/prime cost, residual value
Frequency	Annually
Year of acquisition	Depreciation of the asset if held at year-end is calculated, starting from date of use or purchase of the building and in case of land improvements, starting from date of use. Parts of the building qualifying as equipment can be depreciated as of the start of the financial year.
Year of disposal	No depreciation is available if not held at year-end.
Ability to use different methods for different assets	See below
Ability to switch methods	Generally, only one method can be applied. Different methods can, however, be used in different years for machinery, equipment and intangible assets, i.e., it is optional to use declining-basis or straight-line between years and it is possible to change methods throughout the life-span of an asset.

5. Preferential and enhanced depreciation availability

Expenditure connected to repairs and maintenance can be fully deducted immediately. Extended repairs are changes in a building that are considered minor changes (no significant change to the building or building elements) and are “normal” in the course of business undertaken by the taxpayer making the investment.

6. Accounting for disposals

On disposal of an asset, any gains are calculated in reference to the purchase price. Accumulated tax depreciation is added back to income in the year of the disposal. Losses arising on disposals are fully deductible. On demolition of a building, an immediate deduction is only allowed where the entire building, or a clearly identifiable element of the building, is permanently demolished.

7. Making a claim

Depreciation is claimed on an annual basis through the income tax return.

8. Intangible assets

Acquired intangible assets, including goodwill, can be depreciated by the same methods as for machinery and equipment: on a straight-line basis at 20% of cost annually, on a declining-balance basis at 30% of book value from previous year or by the “residual tax value” method. Only one method can be used at the same time on the same type of asset. Intangible assets without a time limitation cannot be depreciated at all.

Self-generated intangible assets and goodwill generated from mergers are depreciated in accordance with generally accepted accounting standards. They cannot be depreciated with the abovementioned rates of 20% or 30%. Self-generated goodwill is not treated as an asset on the balance sheet and can never be depreciated.

Type of asset	Rates
Trademarks	30% declining/20% straight-line or 25% residual value
Patents, copyright, design, know-how or similar item	30% declining/20% straight-line or 25% residual value
Goodwill	30% declining/20% straight-line or 25% residual value
License or permit	30% declining/20% straight-line or 25% residual value
Other	30% declining/20% straight-line or 25% residual value

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation

Does the tax treatment follow book/statutory accounting depreciation?

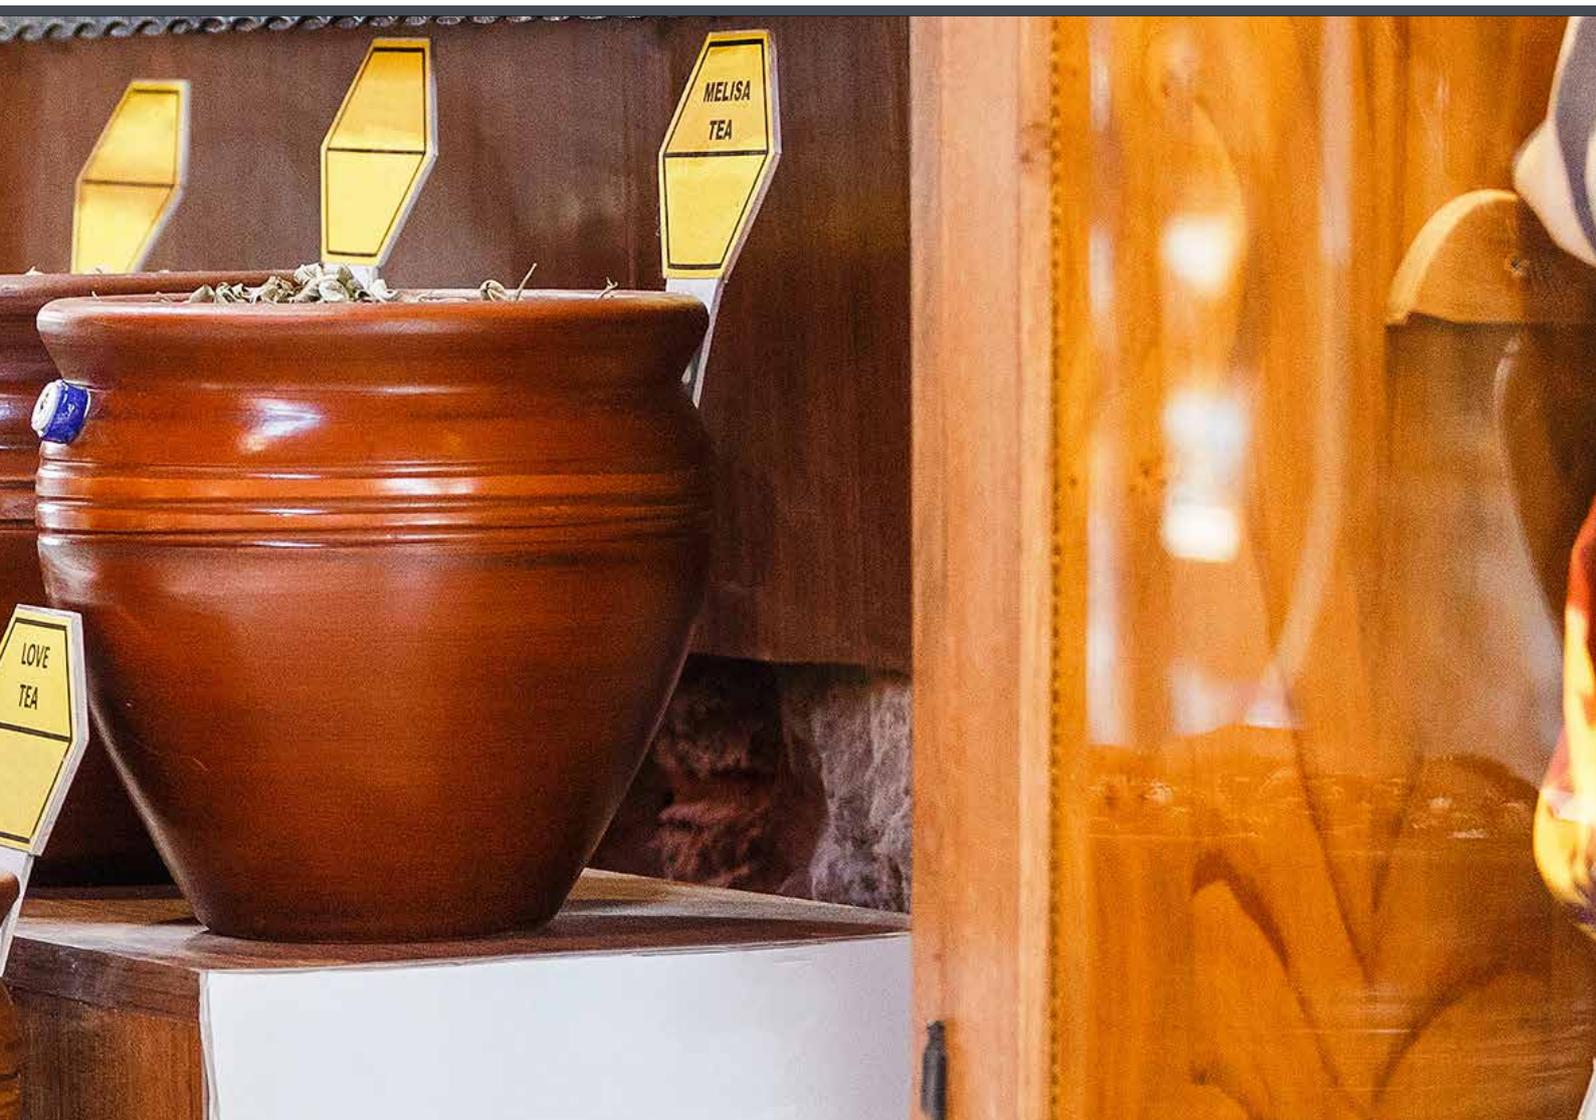

Yes

Range of rates used

1%-50%

Depreciation method used to calculate tax deduction

Straight-line, double-diminishing (declining), depreciation in mines or extraordinary depreciation

1. Entitlement to claim

As a general rule, legal owners of assets are entitled to claim depreciation.

However, if one or more of the following conditions is met, those who lease assets are also entitled to claim depreciation for these assets. In such cases, the subject asset is recorded as right in legal books, but for depreciation purposes, economical useful life determined for the asset leased is considered:

- ▶ Transferring ownership of the asset to the lessee at the end of leasing period
- ▶ Providing the lessee with a right allowing it to purchase the asset with a value that is less than its market price at the end of leasing period
- ▶ Setting a leasing period that is longer than 80% of the economical useful life of the asset
- ▶ Adding the sum of present values of lease payments to be made under leasing agreement being higher than 90% of the market price of the asset

2. Allocation of tangible assets to tax depreciation lives and rates

Granted the authority by Tax Procedure Code, the Ministry of Finance determines economical useful lives that should be considered while calculating depreciation based on the nature of asset and sector in which the asset subject to depreciation is used.

The Ministry of Finance has released a very detailed list that is approximately 730 lines and includes economical useful lives for assets used in different sectors. If an asset for which depreciation is claimed is not covered in this list, the taxpayer is required to ask the Ministry of Finance officially to determine the specific economical useful life for this asset.

2.1 Assets that qualify for tax depreciation

The table below lists corresponding assets for which single economical useful life is determined by the Ministry of Finance.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate
Plant, machinery and equipment	By reference to complex listing		
Motor cars	Five years	Straight-line or double-declining method	20%
Aircraft	Six years	Straight-line or double-declining method	16.66%
Car parks	15 years (40 years for multistory-parking buildings)	Straight-line or double-declining method	6.66% (2.5% for multistory-parking buildings)
Land improvements	15 years (8 years for roads)	Straight-line or double-declining method	6.66% (12.5% for roads)
Qualified leaseholder improvement property	Leasing period would be useful life (in case no leasing period is set, five years)	Straight-line method	In case economical useful life is five years, 20%

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Vacant land	Vacant land does not qualify for tax depreciation because it is stipulated so in the Tax Procedure Code (assets that are not subject to wear and tear or devaluation are not covered in depreciation application). Conversely, orchards formed in agriculture businesses, as well as lands on which buildings, roads or canals are established (the subject portion of the land that would be included in the cost of the building, road or canal and for which depreciation is claimed) qualify for tax depreciation.
Fixed assets under construction	Expenditures made for a fixed asset are to be followed up in fixed asset under construction accounts and not subjected to depreciation until the construction of the relevant asset is completed and the asset becomes ready for use. Expenditures aggregated in fixed asset under construction accounts should be capitalized in (transferred to) relevant fixed asset accounts once the construction is completed and the asset becomes ready for use. The term of depreciation shall begin in the year when the construction is completed and the capitalization is realized.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Expenditures incurred for making an asset ready to be used should be included in the cost of this asset in addition to acquisition value and subjected to depreciation. For example, customs duties, transportation and assembly expenses for machinery and equipment are expenses that should be included in the cost of the integral parts and accessories of immovable, installations and machinery, ships and other means of conveyance.

For constructed or manufactured assets, their building and production expenses shall serve as their acquisition value.

Taxpayers shall be free to include the expenses incurred in connection with notary public, court, valuation, commission, brokerage and real estate transfer and special consumption taxes in the cost value to be subjected to depreciation or to treat them directly as general expenses.

Land remediation – removing asbestos, Japanese knotweed

Expenditures arising from the demolition of an existing building upon its acquisition and the leveling of its plot (land remediation) should be included in the cost of the immovable, in addition to the purchase price. Therefore, if a new building is constructed on this land, the mentioned expenditures should be added to the cost value of the new building that shall be subject to depreciation.

Own labor capitalized – work on developing software, for example, or carrying out work on property

The cost of manufactured assets shall include the following elements:

- The cost of primary and raw materials used for creating the manufactured asset
- The cost of labor involved in the production of an asset
- The portion of general production expenses corresponding to the asset
- Any other expenses related to establishment of the asset

2.4 Availability of immediate deductions for repairs

Description	Detail
Assets with life less than a certain period	Assets with life of more than one year and subject to wear and tear or devaluation should be redeemed through depreciation. Assets with life of less than one year can be treated directly as expense. Economical useful lives are determined by the Ministry of Finance.
Assets below a certain value	This value/limit is set as TRY1,500 for 2021. This limit is considered collectively for assets constituting unity and integrity from economical and technical aspects.
Repairs	Regular maintenance, repair and cleaning expenses shall be regarded directly as expense.

- Regular repair refers to repair that does not enhance assets and increase their economical values continuously.
- Other than regular maintenance, repair and cleaning expenses, expenses incurred to enhance assets or continuously increase their economic values shall be added to the cost of these assets and redeemed through depreciation.
- For example, expenses incurred to increase the speed of a ship, to expand or modify its passenger and cargo storage capacity at the time of its acquisition, thus enhancing its economic value, or to replace the engine or body of a land transportation motor vehicle or to incorporate a new component that it did not have at the time of its acquisition are expenses that must be included in the cost.

3. Depreciation and calculation methods

Methods used	Straight-line method, double-diminishing (declining) method, depreciation in mines or extraordinary depreciation
Frequency	Annually
Year of acquisition	Depreciation application regarding an asset is initiated with the capitalization of this asset. Except for passenger cars, even if an asset is capitalized on the last day of a year, depreciation calculated for the whole year of acquisition can be claimed in that year. Depreciation for passenger cars has specific rules.
Year of disposal	No depreciation is calculated for the year of disposal.
Ability to use different methods for different assets	Different methods can be applied to different assets without limitation. The same method must be applied for all assets that create unity and integrity from economical and technical aspects.
Ability to switch methods	It is not possible to switch from the straight-line method to another method once this method has been initiated. However, it is possible to shift from the double-declining method to the straight-line method. The new method shall be considered as from the period related to the tax return containing this statement. In case of switching from the double-declining method to the straight-line method, the portion of value that has not been depreciated yet shall be depreciated in equal portions by being divided by the remaining term of depreciation.

4. Preferential and enhanced depreciation availability

Research and development (R&D) and innovation expenditures

The following expenses are considered within the scope of R&D/design and innovation activities:

- ▶ Raw material and supplies expenses
- ▶ Depreciation
- ▶ Personnel expenses (i.e., salaries and wages)
- ▶ General expenses
- ▶ Benefits and services obtained from the outside (cannot exceed 20% of total R&D and innovation expenses)
- ▶ Taxes, duties and charges that are directly related to R&D activities
- ▶ All R&D and innovation expenditures incurred in "R&D or design centers" or in projects supported/approved by The Scientific and Technological Research Council of Turkey (TUBİTAK):
 - ▶ If the R&D center achieves at least a 20% increase compared with the previous year in any one of the indicators below:
 - ▶ Ratio of the R&D or design expenditure to the total turnover
 - ▶ Number of national or international patents registered
 - ▶ Number of projects supported internationally
 - ▶ Ratio of the number of researchers with graduate degrees to the total number of R&D personnel
 - ▶ Ratio of the number of total researchers to the total R&D personnel
 - ▶ Ratio of the turnover generated from new products derived from R&D activities to the total turnover
 - ▶ Half of the increase of the R&D and innovation expenses of the current year (compared with the previous year) is also considered within the scope of the R&D reduction.

The above cases shall be treated as deduction in the determination of taxable corporate profit. R&D deduction amounts that may not be deducted due to insufficient income are carried forward to subsequent fiscal periods. Expenditures in the scope of R&D and innovation activities shall also be depreciated through amortization by being capitalized under the Tax Procedures Code. (The depreciation rate is 20%.) In total, 200% of the relevant expenditures would be treated as deduction from the corporate tax base (100% as R&D deduction and the other 100% through depreciation).

Under the Law, "R&D center" is described as the units within equity companies, the legal or business headquarters of which are located in Turkey, including the establishments of nonresident entities in Turkey that:

- ▶ Are organized in a separate unit and located within a single campus or physical space
- ▶ Perform R&D activities in Turkey
- ▶ Have adequate R&D management and technological assets, human resources, intellectual property, project and information resources management capability and capacity
- ▶ Have eligible projects with the subject, duration, budget and personnel needs defined
- ▶ Employ at least 15 (30 for determined sectors) full-time R&D personnel who possess sufficient R&D experience and skills

Under the Law, design activities have been included in the scope of the incentives and support for R&D activities. The number of minimum full-time equivalent personnel that can be employed at design centers is 10.

Corporate tax reduction for investments with incentive certificate (All the investments with incentive certificates do not qualify for this application. Investment sectors and regions are mainly considered in determination of whether an investment qualifies for this application.)

The Corporate Tax Law sets the corporate tax rate as 20% (corporate tax rate is increased to 22% for periods 2018-20). The reduced corporate tax application is an arrangement that ensures application of the corporate tax at a rate lower than 20% (22% for periods 2018-20) to gains from investments with incentive certificate.

A tax reduction shall be applied until the tax amount waived by the state reaches the investment contribution amount provided to the investment.

In expanding investments, where the gains derived can be determined by being followed in separate accounts in the framework of the integrity of the business, the reduced rate is applied to these gains. If the gains cannot be separately determined, the gains subject to a reduced rate shall be determined by proportioning the expanding investment amount to the total fixed asset amount registered in the company's assets at the end of the period (including amounts pertaining to ongoing investments). The term "gains" refers to business profits derived by the investor, as stated in the opinions provided by the Ministry of Finance.

5. Accounting for disposals

The only way specified in the legislation to dispose of assets from the legal records is to sell them.

If depreciable economic assets are sold, the difference between the amount collected and their value registered in the inventory register shall be transferred to the profit and loss account. The value of assets for which depreciation has been set aside is the amount remaining after the deduction of the depreciation set aside. Upon the realization of the sale, both capital asset and aggregated depreciation (previously claimed depreciation) accounts regarding the asset sold are eliminated from the legal records.

Transfer and barter are in the nature of sale.

If renewal of the economic assets sold is deemed necessary due to the nature of business or if the managers of the enterprise have decided and taken action on this issue, the profit derived from the sale may be retained for a maximum of three years in a provisional account in liabilities to cover the renewal expenses. Profits that have not been used during this term due to any reason shall be added to the tax base of the third year. If the business is terminated or transferred or the enterprise is liquidated before three years, these profits shall be added to the tax base of that year.

The profit used in the acquisition of new assets in the scope of the principles above shall be deducted from the depreciation to be set aside on new assets according to the provisions of this law. After this deduction is completed, depreciation shall continue for the assets that have not been amortized.

Scrapping an asset for no value is not allowed by the legislation. Instead, if an asset is sold as scrap, explanations made above for disposing of an asset for value can be considered.

6. Making a claim

Depreciation claimed for each year should be booked in aggregated depreciation/depletion accounts and the relevant expense accounts.

The cost of assets that constitute basis for depreciation should be substantiated with necessary documents and tables.

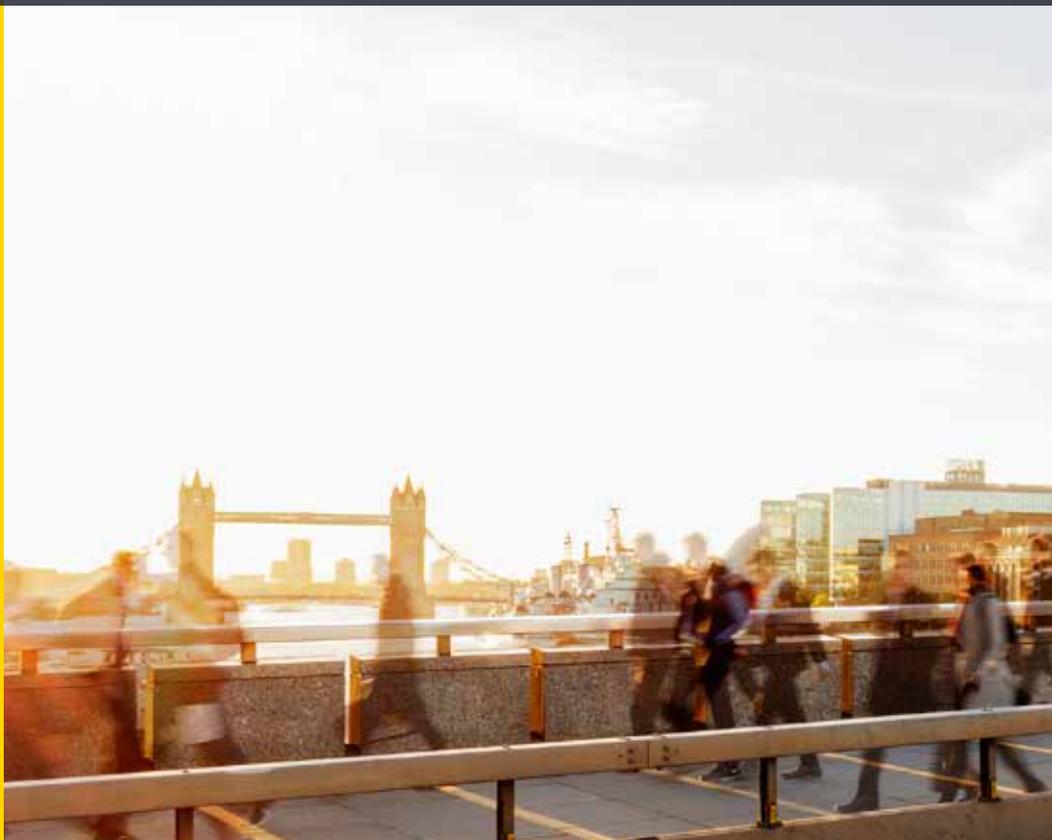

Lists, including detailed information for each asset subject to depreciation, may be requested by the tax authority to verify the accuracy of the depreciation calculated by the taxpayer.

7. Intangible assets

Intangible assets shall be redeemed through depreciation, again by considering economical useful lives set by the Ministry of Finance.

Type of asset	Rates/lives
Trademarks	6.66%/15 years
Patents, copyright, design, know-how or similar item	6.66%/15 years
Goodwill	20%/5 years (only straight-line method is applicable)
License or permit	6.66%/15 years

United Kingdom

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Capital allowances

Does the tax treatment follow book/statutory accounting depreciation?

Tangible assets – no (other than capitalized repairs)

Intangible assets – yes (for certain assets)

Range of rates used

0%-150%

Depreciation method used to calculate tax deduction

Straight-line and reducing-balance – depending on the type of expenditure incurred

1. Entitlement to claim

In principle, capital allowances are available when a person (sole trader, partnership or body corporate) carrying on a business activity incurs qualifying capital expenditures.

Generally, a person must legally own an asset to claim allowances. However, a number of “deemed” ownership rules allow entitlement to allowances under arrangements, such as leases, service agreements, hire purchase and contribution agreements. If expenditure has been incurred on an asset that becomes part of the land or property (a fixture), it is necessary for the person to have an interest in the relevant land prior to the asset being installed.

2. Allocation of tangible assets to tax depreciation lives and rates

Claimants are required to break down assets into individual items to allow them to be categorized for capital allowances. It is necessary, therefore, to have a detailed cost breakdown of all capital expenditure incurred, particularly with respect to buildings.

All depreciation of tangible fixed assets is disallowed when calculating taxable profit. The UK then provides a system of capital allowances to obtain tax relief on qualifying expenditure. The main type of capital allowance is known as plant and machinery allowances. There is no statutory definition of what constitutes plant for capital allowances purposes. Therefore, the capital allowances treatment on various assets has been discussed and agreed on in many test cases, and this identification can be particularly complex as a result. Expenditure that does not qualify for plant and machinery allowances may qualify for other relief, such as the Structure and Building Allowances (SBAs).

2.1 Assets that may qualify for tax depreciation

The writing-down allowances (WDAs) or first-year allowances (FYAs) identified in the table below are calculated per year on a reducing-balance basis. Building works such as leasehold improvements, construction projects, fit-outs and refurbishments should be analyzed so that allowances are allocated to the correct asset type.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment Furniture, fittings or fixtures Office equipment (including office furniture and fixtures)	N/A	Reducing-balance	18% per year WDA – main pool 6% per year WDA – special rate pool For expenditure incurred between 1 April 2021 and 31 March 2023, an enhanced Super-Deduction and First Year Allowance may be available for companies. Further information can be found in Section 4 below.	Main pool allowances are available on most types of assets within this category. The lower rate of relief applies to integral features or items of plant that are expected to last more than 25 years. Types of integral features include electrical systems, HVAC, water installations and elevators.
Structures and buildings (for contracts entered into after 29 October 2018)	N/A	Straight-line	3% per annum from 1 April 2020 2% per annum between 29 October 2018 and 31 March 2020	The relief will be available for all nonresidential structures and buildings. Certain exceptions to expenditure can be classified as SBAs.

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Motor cars	N/A	Reducing-balance	<p>The rate of depreciation depends on the CO₂ emissions of the car. The relevant rates change on 1 April 2021:</p> <p>Up to 31 March 2021</p> <p>100% per year FYA – enhanced capital allowances – 0-50 g/km (or electric cars)</p> <p>18% per year WDA – main pool – 51-109 g/km</p> <p>6% per year WDA – special rate pool – above 110 g/km</p> <p>Post-1 April 2021</p> <p>100% per year FYA – enhanced capital allowances – 0 g/km (electric cars)</p> <p>18% per year WDA – main pool – 1- 50 g/km</p> <p>6% per year WDA – special rate pool – above 51 g/km</p>	
Computer hardware and software	N/A	Reducing-balance	<p>18% per year WDA – main pool</p> <p>(Super-Deduction may be available for expenditure between 1 April 2021 and 31 March 2023)</p>	

Asset type	Useful life for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Aircraft	N/A	Reducing-balance	18% per year WDA – main pool 6% per year WDA – special rate pool For expenditure incurred between 1 April 2021 and 31 March 2023, an enhanced Super-Deduction and First Year Allowance may be available for companies. Further information can be found in Section 4 below.	The rate of relief depends on the type of aircraft acquired and its associated usage.
Commercial vehicles and agricultural machinery and equipment	N/A	Reducing-balance	18% per year WDA – main pool (Super-Deduction may be available for expenditure between 1 April 2021 and 31 March 2023)	

2.2 Assets that do not qualify for tax depreciation

Asset type	Explanation
Land	All costs relating to land (unless it qualifies for land remediation relief)
Dwellings	Usually no capital allowances if the expenditure is on a dwelling
Buildings and structures (prior to 29 October 2018)	A building (which includes floors, walls, ceilings, doors, etc.) does not normally qualify, as it is the setting in which a business carries on its qualifying activity, rather than the apparatus with which it carries on its qualifying activity. There are some exceptions to this, such as a facility where R&D is carried out or where the contract for the expenditures was entered into on or after 29 October 2018. The definition of a building includes structural external works (such as car parks, roads and hard landscaping). This definition of a structure includes tunnels, bridges, dams and various other types of structures.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

Preliminaries and professional fees should be connected with the asset to which they directly relate and may be assessed for capital allowances as long as they relate to plant and machinery. If the fees relate to a number of assets as part of a scheme of works, it is reasonable to apportion the costs over both qualifying and non-qualifying assets to which the fee relates.

Fees related to obtaining a legal interest in the property could be deemed to be too far removed from plant and machinery and are not likely to qualify for capital allowances.

Own labor capitalized

The treatment of such costs will typically follow the “treatment of the asset” that has been created as a result of the labor effort.

2.4 Availability of immediate deductions for repairs

The general position is that:

- ▶ The cost of a repair is a normally allowable expenditure.
- ▶ The cost of replacing an asset or of making a significant improvement to an asset is capital expenditure and not allowable as a deduction.

A deduction for expenditure on repairs is given when the cost of the repair is deducted in the profit and loss account in line with generally accepted accounting principles (whether UK GAAP or International Accounting Standards (IAS)). As a result, if a repair is capitalized for accounting purposes, the tax deduction will be given in line with the accounting depreciation charge over the life of the asset.

Repairs do not include the cost of replacing the entirety of an asset or of making an improvement to an existing asset. There is a body of case law and tax authority guidance around this subject. There is a concept of nearest modern equivalent for tax purposes when considering whether an asset has been improved. It is necessary to consider whether the asset's character has changed because of the work in determining whether expenditure is a repair.

3. Depreciation and calculation methods

Methods used	Reducing-balance
Frequency	WDAs calculated annually
Year of acquisition	Full capital allowances available; WDAs calculated as per balance of relevant pool at year-end
Year of disposal	Disposal proceeds deducted from relevant pool; a balancing adjustment may occur in the year of disposal Clawback of expenditure treated as qualifying for SBAs through reduction in the associated base cost for chargeable gains purposes
Ability to use different methods for different assets	Not applicable
Ability to switch methods	Not applicable

4. Preferential and enhanced depreciation availability

Investments in certain asset types are rewarded with preferential and enhanced depreciation. The rates are set out below. To encourage investment in certain areas, loss-making businesses may also have the opportunity for a payable credit regarding unrelieved losses created by these enhanced reliefs (subject to a maximum). This applies to loss-making companies that have incurred expenditure on the remediation of contaminated or derelict land.

Tax depreciation method	Description of relief	Specific application and benefits available
Super-Deduction and Enhanced First Year Allowance for Plant and Machinery Expenditure	130% Super-Deduction for items of main pool plant and machinery expenditure 50% First Year Allowance for special rate expenditure	The super-deduction provides an immediate tax deduction equal to 130% of the cost of new main pool assets and first year allowance of 50% for the special rate pool. It applies to capital expenditure incurred between 1 April 2021 and 31 March 2023 for contracts signed on or after 3 March 2021. There are a number of other exclusions, including expenditure on cars, second-hand assets and assets held for leasing. These enhanced reliefs apply to only companies and are not available for sole traders or partnerships. Businesses should note that there is a provision to clawback a proportion of the relief upon disposal of any assets obtaining the super-deduction through a balancing charge.
Annual investment allowance (AIA)	100% first-year allowance up to specified limit	An annual first-year allowance is given to most companies and individuals (but not partnerships with corporate members) for a given amount of expenditure on plant and machinery per year. The rates of relief are: 1 January 2019 to 31 December 2021 – GBP1 million From 1 January 2022 – GBP200,000 The AIA should be time-apportioned for short and long chargeable periods. The annual investment allowance operates on a group basis and allows companies within a group to allocate the allowance between group companies as they see fit. The AIA should be allocated against assets attracting the lowest rate of tax relief first. The AIA cannot be used against assets acquired from a connected party or on cars.
Assets used in R&D	100% allowance	Qualifying expenditure includes capital expenditure on carrying out development (R&D or providing facilities for R&D or research development allowances (RDAs)) but does not include acquiring R&D rights or rights arising out of R&D.
Electric car charging points	100% first-year allowances	Expenditure on the provision of electric car charging points will qualify for an immediate full deduction on the qualifying expenditure incurred in the year of acquisition. This relief is available for expenditure up to 31 March 2023.

Tax depreciation method	Description of relief	Specific application and benefits available
Plant and machinery in designated assisted areas	100% first-year allowances	<p>Expenditure on plant and machinery in locations designated as assisted areas (Enterprise Zones) and that have elected preferential capital allowances treatment qualify.</p> <p>Expenditure must be incurred between 1 April 2012 and 31 March 2021. There are restrictions on how the plant and allowances that have been claimed can be used in the future.</p>
Freeports	Plant and machinery - 100% first-year allowances Structures and buildings - 10% straight-line deductions	<p>Eight new Freeports in England - Scotland, Wales and Northern Ireland to be announced - East Midlands Airport, Felixstowe and Harwich, Humber, Liverpool City Region, Plymouth and South Devon, Solent, Teesside and Thames.</p> <p>Expenditure for the first year allowance must be on new or unused items of plant and machinery, and eligibility starts on the day the tax site is designated until 30 September 2026.</p> <p>Expenditure on structures and buildings must be on the construction of new, and renovation of existing, non-residential buildings or structures. The first contract must be entered into after the tax site is designated as a freeport and assets bought into use before 30 September 2026. There are clawbacks if the assets are sold within 5 years of acquisition.</p>
Short-life asset	Balancing adjustment for any remaining tax relief in year of disposal	<p>The short-life asset (SLA) legislation lets a taxpayer write off the cost of an asset over the life of the asset (up to eight years). It does this by putting the expenditure in a single asset pool and having a balancing adjustment when the asset is disposed of or scrapped.</p> <p>An asset is only a short-life asset if the taxpayer elects to treat it as one. Some assets are excluded from SLA treatment. If it turns out that the asset is not a short-life asset, the expenditure in the SLA pool is transferred to the main pool at the end of eight years.</p>
Land remediation relief	150% deduction for capital expenditure	<p>Examples can include remediation of asbestos, hydrocarbons and renovation of derelict land.</p> <p>Subject to certain restrictions, 150% of the qualifying expenditure can be deducted for tax purposes. The person incurring the expenditure must not be connected to the original contaminator. The contamination must have arisen as a result of an industrial activity.</p> <p>A 24% payable cash tax credit may also be available if land remediation causes a taxable loss, subject to restrictions.</p>

5. Accounting for disposals

When an asset is disposed of, the company is required to bring in a disposal value that is deducted from the remaining unrelieved balance of the relevant pool (with the exception of the Structure and Buildings Allowances). The maximum amount that can be deducted from the relevant pool is limited to the original cost of the asset. Capital allowances may then continue to be claimed on any remaining expenditure within the pools.

If that disposal value brings the balance of that pool below zero, then a balancing charge will be realized in the year of disposal for the excess. If an asset is in a single asset pool (e.g., a short-life asset election has been made), a balancing allowance or charge will be available in the year of disposal, depending on the disposal value received.

When calculating the disposal value, restrictions will apply if the disposal is to a connected party or is undervalued.

If the asset disposed of relates to the sale of a fixture to a third party, then the buyer and seller must enter into an election to agree on the value of the capital allowances to be transferred between the parties. The election must state what assets are being transferred and the value attributed to each capital allowances pool.

Where the asset which has been disposed of was subject to a claim for SBAs, the allowances claimed in a prior period will be deducted from the "base cost" when undertaking the calculation for chargeable gains purposes. The remaining value of the SBAs may be passed onto the buyer to claim the unrelieved expenditure over the remaining 33 years life of the asset.

6. Making a claim

A claim is made in a person's tax return that operates on a system of self-assessment. A claim can be made, amended and withdrawn in most cases within two years of the end of the accounting period. There are a number of occasions in which a claim could be made after this point; however, this will depend on the specific circumstances.

A claim should provide sufficient supporting information to substantiate the tax relief claimed and enable Her Majesty's Revenue and Customs (HMRC) to determine whether this has been calculated correctly. Should insufficient supporting information be provided, the window in which HMRC could formally inquire into the tax computation could be extended.

7. Intangible assets

Effective 1 April 2002, relief is given for expenditure on certain intangible fixed assets (excluding goodwill) on the basis of amortization shown in the accounts or (on election) at a fixed rate of 4% per year.

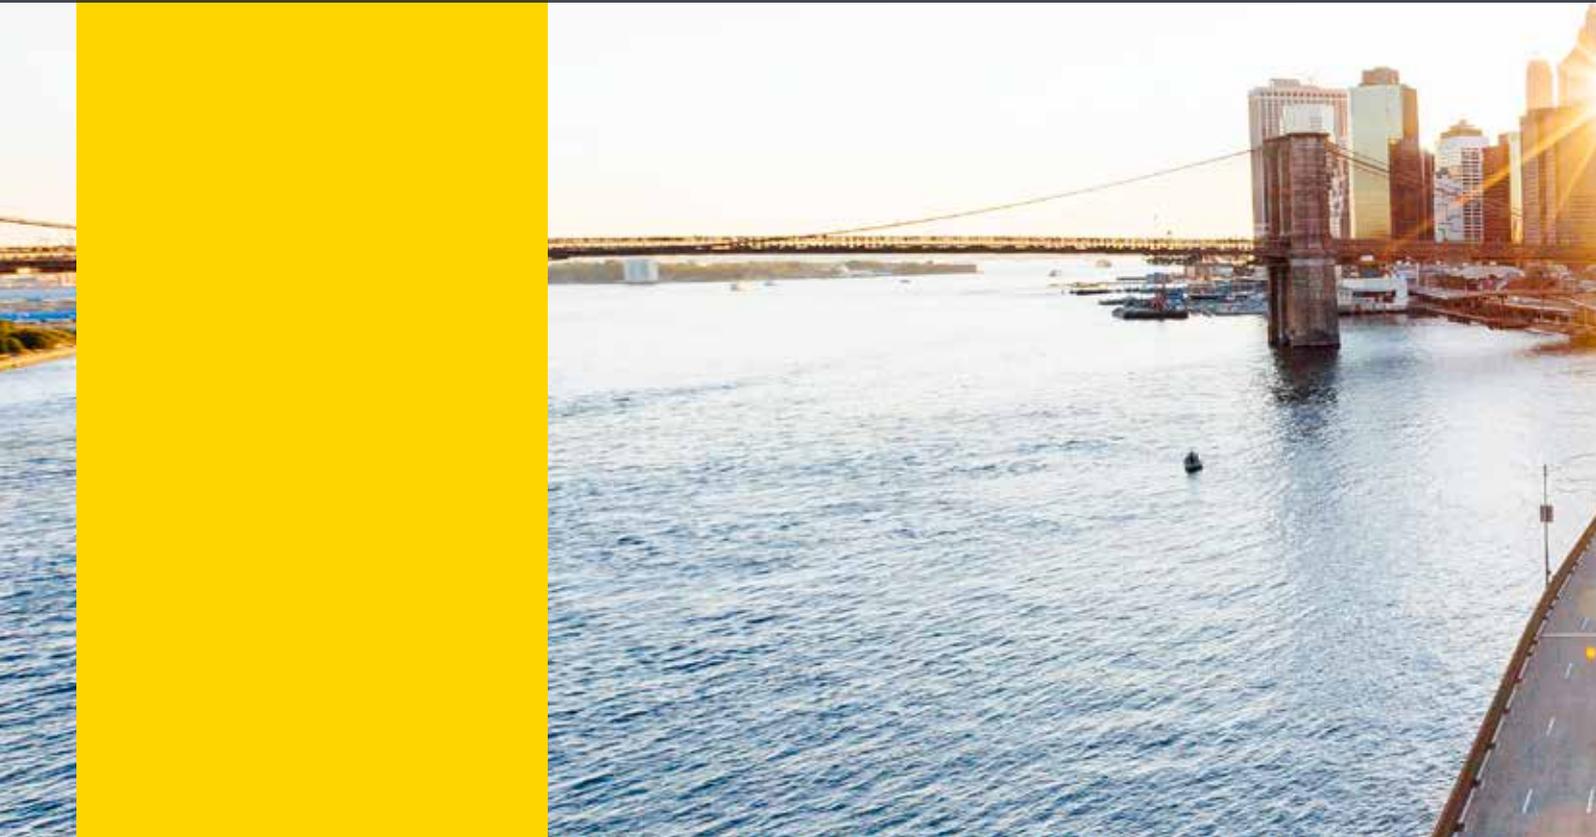

With respect to goodwill, from 8 July 2015, tax relief on the amortization of goodwill will no longer be received. If there is a disposal, on or after 8 July 2015, of goodwill that is subject to the new rules, any additional relief due for the qualifying expenditure will be allowed as a non-trading deduction. From 1 April 2019, tax relief for acquired goodwill that has a strong connection to acquired intellectual property (IP) will have its tax relief reinstated.

Further changes to the regime for receiving tax relief for intangible assets have been consulted upon and, therefore, further changes to the intangible regime may be announced and implemented with minimal notice. We recommend that advice be sought prior to expenditures being incurred, in case the tax treatment outlined within this Section has changed.

It is also possible to select software to be treated as eligible for plant and machinery allowances.

Type of asset	Rates/lives
Trademarks	<p>Provided an asset is an intangible asset for accounting purposes and held for use on a continuing basis in the course of the company's activities, it should constitute an intangible fixed asset. The corporate intangible assets regime links the tax treatment to that applied in the accounts of the company in question. Under these general rules, sums written off as intangible fixed assets are usually deductible as long as their treatment is compliant with the relevant accounting standard.</p> <p>Alternatively, a company may make an election for fixed-rate deductions in respect of a particular intangible fixed asset, regardless of its accounting treatment, and this is given at 4% per year.</p>
Patents, copyright, design, know-how or similar item	Capital allowances are potentially available at 25% WDA per year on a reducing basis.
Goodwill	<p>If goodwill is acquired from an unconnected party or created by a business between 1 April 2002 and 7 July 2015, tax relief is available in line with the amortization charged to the income statement or an election can be made for tax relief to be received at 4% per year.</p> <p>As outlined above, from 8 July 2015, goodwill acquired from an unconnected third party or created by a business already in existence before 1 April 2002 is a chargeable gains asset. No UK tax depreciation is allowable, and tax relief for the expenditure incurred is only given on the disposal of the old goodwill.</p> <p>From 1 April 2019, acquired goodwill that has a strong connection to acquired IP will have its tax relief reinstated in line with other intangible assets.</p>
License or permit	The general rules for the corporate intangible assets regime as detailed above are followed.

United States

At a glance

Terminology used by jurisdiction to describe the recovery of capital and fixed assets

Tax depreciation is referred to as “tax depreciation” in the United States. Specifically, Section 167(a) of the Internal Revenue Code (IRC) provides that there shall be allowed as a depreciation deduction a reasonable allowance for the exhaustion and wear and tear of property used in a trade or business or of property held for the production of income.

The terms “depreciation” and “amortization” generally are used interchangeably, although amortization often (but not exclusively) is used to refer to the recovery of basis related to eligible intangible assets.

sam.weiler@ey.com

Does the tax treatment follow book/statutory accounting depreciation?

No, there is no book and tax conformity requirement for federal income tax purposes.

Range of rates used

0%-200%

Depreciation method used to calculate tax deduction

Declining-balance (e.g., 200% double-declining-balance method) or straight-line

1. Entitlement to claim

Taxpayers must own (i.e., possess the benefit and burdens of ownership, pursuant to a facts and circumstances determination) the property to be allowed a depreciation deduction for federal income tax purposes.

2. Allocation of tangible assets to tax depreciation lives and rates

For federal income tax purposes, if a taxpayer is allowed a depreciation deduction, the deduction is generally computed using the “applicable depreciation method, recovery period and convention.” The method, convention and recovery period used to depreciate tangible property depends on the type of property in question and whether such property is eligible to be depreciated under the general depreciation system (GDS), which generally results in accelerated depreciation deductions, or is required to be depreciated under the alternative depreciation system (ADS) under Section 168(g), which generally results in slower recovery of basis. Most property is eligible to be depreciated under the GDS; however, certain property such as foreign use property is required to use the ADS. Taxpayers also have the option to elect into ADS if they desire.

Generally, an asset is not broken down into components for purposes of computing tax depreciation. There are special rules, however. For example, when a building is acquired, it is common to identify property items within the building that are separate assets from the building and that may be required to be depreciated differently. For example, identifying furniture and fixtures that are tangible personal property as opposed to the building, which is real property, is prevalent.

Revenue Procedure 87-56 generally provides the recovery period and class lives for tangible personal property. Sections 168(c) and (e) also provide guidance in determining the appropriate recovery period of tangible personal property as well as tangible real property. Section 168(b) provides rules for determining the appropriate depreciation method. Section 168(d) provides rules for determining the appropriate placed in service and disposition convention.

2.1 Assets that qualify for tax depreciation

Asset type	Recovery period for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Plant, machinery and equipment	Varies, see Rev. Proc. 87-56	Varies, the general rule is the 200% declining-balance (200% DB) method under Section 168(b)	The allowance is determined based on the method, recovery period and convention.	The recovery periods and methods will vary depending on what the property is used for and whether the property is subject to the ADS or GDS of Section 168.
Automobiles	Generally, five years	Generally, 200% DB	The allowance is determined based on the method, recovery period and convention; however, see depreciation limitations for luxury automobiles pursuant to IRC Section 280F.	Assumes the use of GDS.

Asset type	Recovery period for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Buildings	Generally, 39 years for nonresidential real property and 27.5 years for residential rental property. See below for certain improvements to buildings.	Straight-line	The allowance is determined based on the method, recovery period and convention.	Assumes the use of GDS.
Qualified improvement property (QIP)	15 years for QIP placed in service after 31 December 2017 and 39 years for QIP placed in service before 1 January 2018	Straight-line	The allowance is determined based on the method, recovery period and convention.	Assumes the use of GDS and that property meets requirements to be treated as QIP pursuant to IRC Section 168(e)(6).
Qualified leasehold improvement property (QLIP)	15 years	Straight-line	The allowance is determined based on the method, recovery period and convention.	Assumes the use of GDS and that property meets requirements to be treated as QLIP pursuant to former IRC Section 168(e)(6). Repealed for property placed in service after 31 December 2017.
Qualified retail improvement property (QRIP)	15 years	Straight-line	The allowance is determined based on the method, recovery period and convention.	Assumes the use of GDS and that property meets requirements to be treated as QRIP pursuant to former IRC Section 168(e)(8). Repealed for property placed in service after 31 December 2017.
Qualified restaurant property (QRP)	15 years	Straight-line	The allowance is determined based on the method, recovery period and convention.	Assumes the use of GDS and that property meets requirements to be treated as QRP pursuant to former IRC Section 168(e)(7). Repealed for property placed in service after 31 December 2017.
Furniture or fixtures	Generally, seven years for office location furniture, fixtures and equipment (see below); five years if for retail use assets that are not in an office location	Generally, 200% DB	The allowance is determined based on the method, recovery period and convention.	Assumes the use of GDS and that assets fall under Asset Class 00.11 of Rev. Proc. 87-56 (or Asset Class 57.0 for retail assets that are non-office location assets, such as store shelving).

Asset type	Recovery period for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Computer hardware	Generally, five years	Generally, 200% DB	The allowance is determined based on the method, recovery period and convention.	Assumes the use of GDS and assets that fit in Asset Class 00.12 of Rev. Proc. 87-56.
Computer software	Generally, 36 months	Generally, straight-line	The allowance is determined based on the method and recovery period.	Assumes the software is purchased and is not subject to Section 197. The costs of eligible self-developed software may be currently expensed in tax years beginning before 1 January 2022.
Aircraft	Generally, five years for aircraft not used in commercial or contract carrying of passengers	Generally, 200% DB	The allowance is determined based on the method, recovery period and convention.	Assumes the use of GDS.
Transport other than motor cars	Varies	Varies depending on recovery period	The allowance is determined based on the method, recovery period and convention.	Need to determine which asset class under Rev. Proc. 87-56 applies.
Car parks/parking garages	Generally, 39 years; however, in certain cases, parking lots may qualify as land improvements (see below)	Generally, straight-line	The allowance is determined based on the method, recovery period and convention.	Assumes the use of GDS. This property normally is classified as nonresidential real property.
Office equipment (including office furniture and fixtures)	Generally, seven years	Generally, 200% DB	The allowance is determined based on the method, recovery period and convention.	Assumes the use of GDS and that the assets fall under Asset Class 00.11 of Rev. Proc. 87-56 because they are office location tangible personal property.
Land improvements	Generally, 15 years	Generally, 150% DB	The allowance is determined based on the method, recovery period and convention.	Assumes the use of GDS and that the assets fall under Asset Class 00.3 of Rev. Proc. 87-56.

Asset type	Recovery period for tax	Type of tax depreciation method	Applicable tax depreciation rate	Comments
Property used in R&D	Varies depending on type of property and use	Varies	The allowance is determined based on the method, recovery period and convention.	It is necessary to determine which asset class the assets fall under; however, generally, personal property used in R&D activities is eligible for a five-year recovery period and the 200% DB method (see IRC Section 168(e)(3)(B)(v)).

2.2 Assets that do not qualify for tax depreciation

Types of assets	Explanation
Land	Land does not qualify because it is not subject to wear and tear, to decay or decline from natural causes to exhaustion, and to obsolescence. In contrast, land improvements with a determinable useful life (such as parking lots and fences) are depreciable.

2.3 Noteworthy items

Preliminary costs – architect fees, legal fees, planning

The origin of the costs will ultimately dictate tax treatment. However, costs incurred that directly benefit or that are incurred by reason of the production of property must be capitalized to the basis of such property under Section 263A. These costs may include preproduction costs.

Land remediation – remediation activities

A detailed analysis of the costs at issue must be performed to ascertain the proper tax treatment of land remediation costs. For instance, if a new depreciable asset is created from the remediation activities, such costs must be capitalized and depreciated.

Own labor capitalized – carrying out work on tangible property

Generally, internal labor is not required to be capitalized for tangible property acquired. See Treas. Reg. Section 1.263(a)-2. However, internal labor is required to be capitalized to property produced for sale or used in a taxpayer's business under Section 263A.

2.4 Availability of immediate deductions for bonus depreciation property and for eligible tangible property repairs

Description	Detail
Bonus depreciation under Section 168(k)	<p>Generally, eligible property includes MACRS property with a recovery period of 20 years or less and certain computer software (although certain other property may qualify as well, depending on the date acquired and placed in service). Property is generally treated as acquired no later than the date on which the taxpayer enters into a written binding contract to acquire such property, unless such property is considered self-constructed, which includes property constructed for the taxpayer by a third party under a written binding contract.</p> <p>Property acquired prior to 28 September 2017</p> <p>For eligible property acquired prior to 28 September 2017 and placed in service between 1 January 2016 and 31 December 2017, the bonus depreciation allowance is equal to 50% of the adjusted basis of the eligible property. There is a phase-down of the allowance to 40% for property placed in service during calendar year 2018 and to 30% for property placed in service during calendar year 2019. Special bonus depreciation rules exist for certain long-production-period property and certain aircraft.</p> <p>*As it pertains to property placed in service before calendar year 2016, the bonus depreciation rates and rules vary (i.e., the above rules should not be relied upon).</p> <p>Property acquired after 27 September 2017</p> <p>For eligible property acquired after 27 September 2017 and placed in service after 27 September 2017 and before 1 January 2023, the bonus depreciation allowance is equal to 100% of the adjusted basis of the eligible property. There is a phase-down of the allowance to 80% for property placed in service during calendar year 2023, 60% for property placed in service during calendar year 2024, 40% for property placed in service during calendar year 2025 and 20% for property placed in service during calendar year 2026. Special bonus depreciation rules exist for certain long-production-period property and certain aircraft.</p>
De minimis safe harbor election	<p>The de minimis safe harbor election allows taxpayers to follow their book capitalization thresholds and deduct amounts up to USD5,000 (USD2,500 if the taxpayer does not have an applicable financial statement) that are paid to acquire, produce or improve tangible property, provided certain requirements are met. The de minimis safe harbor election is an annual, irrevocable election made by attaching a statement to the timely filed (including extensions) federal tax return. See Treas. Reg. Section 1.263(a)-1(f) for more details.</p>
Eligible repairs	<p>Eligible repair expenditures for tangible property are deductible in the tax year incurred under Treas. Reg. Section 1.162-4. Note the determination as to whether an expenditure is eligible to be deducted as a repair is made by applying the improvement rules under Treas. Reg. Section 1.263(a)-3 (see below for additional details).</p>

Treas. Reg. Section 1.263(a)-3 sets forth the rules to determine whether an amount paid to repair, maintain or improve a unit of property is required to be capitalized and depreciated or may be deducted in the year incurred. An expenditure can generally be currently deducted if it does not result in a betterment to, the restoration of or a change in use of the underlying unit of property (assuming other provisions of the IRC, such as Section 263A relating to inventoriable costs, do not apply).

If a taxpayer applies the de minimis safe harbor election described in Treas. Reg. Section 1.263(a)-1(f), the amount must be expensed for book purposes for a taxpayer to follow such treatment for federal income tax purposes (in addition to certain other requirements of the safe harbor). Otherwise, treatment of costs for financial statement purposes alone would not govern the treatment of costs for federal income tax purposes. The relevant case law and regulatory tax principles, including the clear reflection of income doctrine, would determine the treatment of non-safe-harbor de minimis amounts deducted for federal income tax purposes.

3. Depreciation and calculation methods

Methods used	Includes, but is not limited to, 200% DB and 150% DB and straight-line
Frequency	Annually over the asset's proscribed recovery period Depreciation is generally computed for each "tax year" of a taxpayer. A tax year may be less than 12 months (short tax year); Rev. Proc. 89-15 provides guidance for computing depreciation related to property placed in service in a short tax year.
Year placed in service	Generally, the depreciation deduction in the year property is placed in service (i.e., the year it is ready and available for its intended use in the taxpayer's trade or business) is computed by applying the appropriate convention, depreciation method and recovery period. Generally, the appropriate convention is the half-year convention (unless the mid-quarter, mid-month convention or full-month convention applies), which assumes that the asset is placed in service halfway through the taxpayer's tax year. Through applying such convention, the depreciation deduction is computed as if the tax year is a full tax year and then the amount is reduced by 50%. If the half-year convention is applied in the year of acquisition, it is also applied in the year of disposition in the same manner. Other conventions include the mid-month convention (assume placed in service in the middle of the month acquired), mid-quarter (assume placed in service in the middle of the quarter acquired) and full month (assume placed in service on the first day of the month acquired) for certain types of property. See Section 168(d) (for tangible property) and Sections 167 and 197 (for intangible property) and the underlying regulations, which provide the rules for determining the appropriate convention.
Year of disposal	A disposition occurs when ownership of an asset is transferred or when the asset is permanently withdrawn from use either in the taxpayer's business or in the production of income. A disposition includes a sale, exchange, retirement, physical abandonment or destruction of an asset. A disposition also occurs when an asset is transferred to a supplier, scrap or similar account, or when a portion of an asset is disposed of in certain circumstances (e.g., casualty event or an elective partial disposition).

Ability to use different methods for different assets	Elections can be made to depreciate property differently from the general rule. For instance, taxpayers can elect for property that is required to be depreciated using the 200% DB method to depreciate it using the straight-line method.
Ability to switch methods	Generally, once a method is established for an asset, it must be used until the asset is retired, unless a change in accounting method is obtained for eligible method changes (e.g., a change from an improper to a proper recovery period). Another exception would be if the use of the property changes during the recovery period (e.g., the property is moved outside of the US).

4. Preferential and enhanced depreciation availability

The general rule of depreciating personal property under the GDS under Section 168 provides for accelerated depreciation, i.e., the general rule is a 200% declining-balance method (twice that of straight-line). Certain personal property with longer recovery periods or that are subject to the ADS are required to use slower depreciation recovery rates.

Tax depreciation method	Comment on specific application and benefits available
Personal property with a recovery period of less than 15 years	Generally, 200% DB under GDS
Personal property with a recovery period of 15 years or more	Generally, 150% DB under GDS

5. Accounting for disposals

When an asset is disposed of for value, the adjusted basis of the asset (commonly referred to as the net tax value of the asset) is recognized as an offset to proceeds received in the tax year of disposal. The IRS issued regulations under IRC Section 168 related to full and partial dispositions of tangible property that generally are effective for tax years beginning in 2014; partial disposition deductions are elective in certain cases.

6. Making a claim

Depreciation deductions are claimed on federal Form 4562 of a taxpayer's federal income tax return.

We suggest that detailed records be kept supporting the depreciation deductions claimed on a taxpayer's federal income tax returns, including documentation of the cost of acquisition.

7. Intangible assets

If intangible assets are subject to Section 197 of the IRC, costs incurred to acquire such intangible assets are recovered ratably over a period of 15 years, beginning in the month acquired. If intangible assets are subject to Section 167, the assets are generally recovered ratably (with certain exceptions, such as the income forecast method under Section 167(g)), but the period of recovery varies depending on the type of intangible asset.

Generally, for an intangible asset not subject to Section 197 to be eligible for amortization under Reg. Section 1.167(a)-3, a taxpayer must establish that: (1) the intangible property has an ascertainable cost basis and also (2) that such property has a limited useful life, the duration of which can be ascertained with reasonable accuracy. See also Section 167(f) and Treas. Reg. Section 1.167(a)-14, relating to intangible assets.

Type of asset	Rates
Trademarks	15 years under Section 197
Patents, copyright, design, know-how or similar item	15 years under Section 197 or, if excluded from Section 197, see, generally, Section 167(f) and Treas. Reg. Section 1.167(a)-3 and 1.167(a)-14
Goodwill	15 years under Section 197
License or permit	15 years under Section 197 or, if excluded from Section 197, see Section 167(f) and Treas. Reg. Section 1.167(a)-3 and Section 1.167(a)-14
Films, videotapes and other property specified in Section 168(g)	Generally, an "income forecast method" is utilized, whereby the recovery of basis through amortization is calculated based on an income-based computation. The principal alternative method is the straight-line method.

Foreign currencies

The following list sets forth the names and currency codes for the currencies of jurisdictions in this guide:

EY | Building a better working world

EY exists to build a better working world, helping to create long-term value for clients, people and society and build trust in the capital markets.

Enabled by data and technology, diverse EY teams in over 150 countries provide trust through assurance and help clients grow, transform and operate.

Working across assurance, consulting, law, strategy, tax and transactions, EY teams ask better questions to find new answers for the complex issues facing our world today.

EY refers to the global organization, and may refer to one or more, of the member firms of Ernst & Young Global Limited, each of which is a separate legal entity. Ernst & Young Global Limited, a UK company limited by guarantee, does not provide services to clients. Information about how EY collects and uses personal data and a description of the rights individuals have under data protection legislation are available via ey.com/privacy. EY member firms do not practice law where prohibited by local laws. For more information about our organization, please visit ey.com.

About EY's Tax Services

Your business will only succeed if you build it on a strong foundation and grow it in a sustainable way. At EY, we believe that managing your tax obligations responsibly and proactively can make a critical difference. Our 50,000 talented tax professionals, in more than 150 countries, give you technical knowledge, business experience, consistency and an unwavering commitment to quality service – wherever you are and whatever tax services you need.
