

Worldwide Corporate Tax Guide

2022

Preface

Governments worldwide continue to reform their tax codes at a historically rapid rate. Taxpayers need a current guide, such as the *Worldwide Corporate Tax Guide*, in such a shifting tax landscape, especially if they are contemplating new markets.

The content is straightforward. Chapter by chapter, from Albania to Zimbabwe, we summarize corporate tax systems in 160 jurisdictions. The content is current on 1 January 2022, with exceptions noted. Keep up-to-date on significant tax developments around the globe with the EY Global Tax Alert library [here](#). Only some of the chapters in this Tax Guide reflect COVID-19 tax policy measures. The United Kingdom chapter provides information regarding Brexit. Readers should obtain updated information regarding Brexit before taking actions.

Each chapter begins with contact information for the key people in that jurisdiction's EY member firm offices. Symbols precede the names of individuals who hold the following functions:

- ★ National director of the listed tax specialty
- ◆ Director of the listed specialty in the local office

We then lay out the facts about the jurisdiction's corporate taxes, beginning with an at-a-glance summary. With some variation, the topics covered are taxes on corporate income and gains, determination of trading income, other significant taxes, miscellaneous matters (including foreign-exchange controls, debt-to-equity rules, transfer pricing, controlled foreign companies and anti-avoidance legislation) and treaty withholding tax rates.

At the back of this Tax Guide, you will find a list of the names and codes for all national currencies and a list of contacts for other jurisdictions.

For many years, the *Worldwide Corporate Tax Guide* has been published annually along with two companion guides on broad-based taxes: the *Worldwide Personal Tax and Immigration Guide* and the *Worldwide VAT, GST and Sales Tax Guide*. In recent years, those three have been joined by additional Tax Guides on more-specific topics, including the *Worldwide Estate and Inheritance Tax Guide*, the *Worldwide Transfer Pricing Reference Guide*, the *Worldwide R&D Incentives Reference Guide*, and the *Worldwide Capital and Fixed Assets Guide*.

Each of the Tax Guides represents thousands of hours of tax research. They are available free online along with timely *Global Tax Alerts* and other great publications on [ey.com](#).

You can keep up with the latest updates at [ey.com/GlobalTaxGuides](#).

This material has been prepared for general informational purposes only and is not intended to be relied upon as accounting, tax, legal or other professional advice. Please refer to your advisors for specific advice.

About EY's Tax Services

Your business will only succeed if you build it on a strong foundation and grow it in a sustainable way. At the EY organization, we believe that managing your tax obligations responsibly and proactively can make a critical difference. Our 50,000 talented tax professionals, in more than 150 countries, give you technical knowledge, business experience, consistency and an unwavering commitment to quality service — wherever you are and whatever tax services you need.

EY Global Tax Desk Network

Over the last 38 years, the EY organization has made a significant investment in building a Global Tax Desk Network. It consists of highly integrated teams of more than 300 professionals spanning approximately 60 jurisdictions. The purpose of the Tax Desk Network is to help enable home-country tax experience to be integrated within other jurisdictions and provide services across several of our tax disciplines from hubs in the United States, Brazil, Europe, and Asia-Pacific and China Mainland. The Global Tax Desk Network offers clients a tremendous resource – accessible, timely and integrated tax-planning advice on cross-border investments, providing them worldwide with a forum for information and idea exchange as well as offering cross-disciplinary tax workshops for multinationals. Our Global Tax Desk Network can be contacted at the numbers listed below.

B. Taxes on corporate income and gains

Corporate income tax. Albanian companies are companies that are incorporated in Albania or have their place of effective management in Albania. They are subject to corporate income tax on their worldwide income. Foreign companies are subject to tax on profits generated from activities performed through a permanent establishment in the country and on income from Albanian sources.

Rates of corporate tax. The corporate income tax rate is 15% for taxpayers with annual turnover exceeding ALL14 million (approximately EUR113,000) while taxpayers with annual turnover up to ALL14 million (approximately EUR113,000) are subject to 0% income tax.

As of 1 January 2021, no corporate income tax is levied on businesses with annual turnover less than ALL14 million (approximately EUR113,000), while for taxpayers with annual turnover exceeding ALL14 million, the corporate income tax rate of 15% applies.

Tax incentives. Tax incentives in Albania are described below.

The corporate income tax rate is 5% for software production and development companies. Effective from 1 January 2019, a reduced corporate income tax rate of 5% also applies to agricultural cooperatives and agrotourism businesses that are awarded the status of “certified agrotourism entity” on or before until 31 December 2021. They benefit from the reduced corporate income tax rate of 5% for a 10-year period following their certification.

Investment in and operation of internationally recognized 4- or 5-star hotels and resorts that are awarded a special status by the Council of Ministers are exempt from corporate income tax for a 10-year period starting from the commencement of the economic activity, but no later than 3 years from the award of the special status. This exemption applies to 4- or 5-star hotels and resorts that are awarded the special status in or before December 2024.

Effective from 1 January 2020, legal entities that carry out economic activities in the automotive industry are subject to a reduced corporate income rate of 5%. The Council of Ministers will determine by decision the activities, criteria and procedures for the implementation of this reduced corporate income tax rate.

Capital gains and losses. Capital gains derived from the disposal of assets, including shares, are subject to tax at the standard rate of 15%. Capital losses are deductible for tax purposes.

Capital gains derived by nonresidents from the alienation of immovable property located in Albania, exploitation and other rights regarding minerals, hydrocarbons and other natural resources in Albania and information related to these rights are taxed in Albania. Also, capital gains derived by nonresidents from the alienation of shares deriving more than 50% of their value at any time during the last 365 days, directly or indirectly, from immovable property located in Albania or from any the abovementioned rights or information are taxed in Albania.

If a tax treaty is in place, capital gains derived from nonresidents arising from the transfer of shares are taxed in accordance with the provision of the treaty.

Administration. The tax year is the calendar year.

Taxpayers subject to corporate income tax make advance payments of corporate income tax on a quarterly basis. The payments must be made by 30 March for January through March, by 30 June for April through June, by 30 September for July through September and by 30 December for October through December. However, taxpayers may opt to make monthly advance payments of corporate income tax by the 15th day of each month. Newly established companies involved in production activities are not required to make quarterly advance payments for either a period of six months or the period until the end of the fiscal year, whichever is shorter.

The advance payments for January through March are calculated based on the corporate income tax of the tax year before the preceding tax year. The advance payments for April through December are calculated based on the corporate income tax of the preceding tax year. The tax rate for the calculation of the advance payment is 15%. If the company demonstrates to the tax authorities that the taxable income in the current year will be substantially lower than the taxable income of the reference period, the tax authorities may decide to decrease the advance payments. If the tax authorities approve the taxpayer's request for the reduction of the corporate advance payments and at year-end the corporate tax liability exceeds the amount of advance payments by more than 10%, default interest is applied to the difference. If the tax authorities determine that the taxable income of the current year will be increased by more than 10%, compared with the taxable income realized in the reference period, they may decide to increase the advance payments. Companies that generated losses in the reference years make advance payments based on their taxable profit projections for the current year.

By 31 March, companies must file the annual tax return and pay the corporate tax due for the tax year less advance payments made.

The annual tax return deadline for taxpayers who are subject to the simplified profit tax is 10 February of the following year. Taxpayers subject to this simplified profit tax regime make advance payments of profit tax (see *Rates of corporate tax*) on a quarterly basis. The payments must be made by 20 April for January through March, by 20 July for April through June, by 20 October for July through September and by 20 December for October through December. Taxpayers with turnover of ALL5 million to ALL8 million are provided with tax stamps for each payment made during the year (total of four). Taxpayers must place the tax stamps in the upper corner of their National Business Centre (Tax Identification Number) certificate.

As of 1 January 2021, no corporate income tax is levied on taxpayers with annual turnover less than ALL14 million (approximately EUR113,000). As a result, no advance payments are required to be made by these taxpayers.

During 2020, the Albanian government approved certain tax measures in response to the COVID-19 pandemic. During 2021, the following postponements of deadlines for income tax prepayments apply:

- For taxpayers with annual turnover exceeding ALL14 million (approximately EUR113,000), the tax prepayments for the second and the third quarter of 2020 were postponed to April 2021 to September 2021, except for businesses operating in banking, telecommunications and trading of pharmaceutical products, food and groceries.
- For taxpayers operating in the tourism, toll-manufacturing and call-center sectors, the tax prepayments for April 2020 to December 2020 were postponed to April to December 2021.

Companies not complying with the filing and payment deadlines described above are subject to interest and penalties. Late tax payments are subject to interest at a rate of 120% of the interbanking loan interest rate published by Bank of Albania. The interest is not deductible for corporate income tax purposes. Late tax payments and inaccurate tax return filings are charged with a penalty of 0.06% of the amount of the unpaid tax liability and contribution for each day of delay, capped at 21.9%. In addition, a penalty of ALL10,000 (EUR81) for taxpayers subject to corporate income tax or ALL5,000 (EUR40) for other taxpayers can be assessed if the tax return is not filed by the due date. If the unreported tax liability results from tax evasion, the penalty is 100% of the unpaid liability.

Capital gains derived from the transfer of shares or voting rights deriving more than 50% of their value, directly or indirectly, from immovable property located in Albania, exploitation and other rights regarding minerals, hydrocarbons and other natural resources in Albania or from information related to these rights are taxed at the level of the Albanian taxpayer, to the extent that the taxpayer meets both of the following conditions:

- It is subject to a direct or indirect change of ownership by more than 20%.
- It has an average turnover of ALL500 million for the last three years.

The tax liability is computed on the difference between the fair value and cost of the underlying asset, apportioned to the ownership change percentage. This is a final tax, and the transferor of shares is exempt from taxation on capital gains. If there is a capital gain and if the Albanian taxpayer is not liable to pay tax in accordance with the above rule, the obligation rests with the transferor of shares.

A nonresident person that is subject to capital gain taxation in Albania must declare the capital gains and pay the tax liability by submitting an annual income tax return by 31 March of the following year.

The Albanian taxpayer should also report these ownership changes with the tax authorities to the extent that the change is more than 20% for all types of companies and more than 10% for companies whose shares derive more than 50% of their value at any time during the last 365 days, directly or indirectly, from immovable property located in Albania or from exploitation and

other rights regarding natural resources and information related to these rights.

Failure to comply with these reporting obligations is subject to heavy penalties.

Dividends. Dividends paid by Albanian companies to resident and nonresident individuals and to foreign entities are subject to withholding tax at a rate of 8% unless the rate is reduced under an applicable double tax treaty (see Section F). Dividends received by Albanian companies are exempt from tax.

Foreign tax relief. Foreign direct tax on income and gains of an Albanian resident company may be credited against the corporate tax on the same profits. The foreign tax relief cannot exceed the Albanian corporate income tax charged on the same profits. If a company receives income from a country with which Albania has entered into a double tax treaty, other forms of foreign tax relief may apply, as stipulated in the provisions of the treaty.

C. Determination of trading income

General. The assessment is based on the financial statements prepared in accordance with the local standards or International Financial Reporting Standards (IFRS), subject to certain adjustments for tax purposes as specified in the Albanian Tax Code and other supplementary legal acts.

All necessary and reasonable expenses incurred for the business activity that are properly documented are deductible, except for the following:

- In-kind compensation.
- Wages and salaries not paid through the banking system.
- Write-off of debts if all legal means for their collection have not been exhausted.
- Expenses for cross-border technical services and consultancy and management fees if the corresponding withholding tax has not been paid by 20 January of the year following the year in which the service is provided, regardless of whether the payment of the invoice is made. In case of tax treaty protection, the restriction above does not apply, and the provisions of the applicable treaty apply.

Other types of expenses may be deducted up to a ceiling. These expenses include, but are not limited to, the following:

- Representative and entertainment expenses are deductible up to 0.3% of annual turnover.
- Production waste and losses, including losses from impairment, are deductible to the extent provided by the relevant legislation.
- Sponsorships are generally deductible up to 3% of the income before tax and up to 5% for media-related sponsorships.
- Per diems are deductible up to ALL3,000 per day for traveling inside Albania and up to EUR60 per day for traveling abroad, to the extent that the annual total of per diems is less than 50% of the annual gross salary budget.
- Interest is deductible only to the extent that the rate does not exceed the average interest rate published by Bank of Albania and that the amount of the debt does not exceed four times the equity. Effective from 1 January 2018, for related-party loans, the net interest expense balance (that is, the difference between

the interest expenses and interest revenues, exceeding 30% of earnings before interest, tax, depreciation and amortization [EBITDA]) is not deductible for the tax period. Such interest not deductible in the current period can be carried forward to future tax periods, provided that a change of 50% in the entity's ownership does not occur. Such limitation does not apply to banks, other financial institutions that are not banks, insurance companies and leasing companies.

- Costs of improvements and maintenance are fully deductible in the year in which they are incurred to the extent that they do not exceed 15% of the remaining value of the asset.
- Expenses settled in cash are tax deductible if they do not exceed ALL150,000 (approximately EUR1,150).
- Voluntary pension contributions made by employers in favor of their employees to professional pension plans are tax deductible up to an amount of ALL250,000 (approximately EUR1,920) per year.
- Monetary donations are deductible up to 5% of the income before tax during natural disaster emergencies.

Inventories. The inventory valuation rules stipulated in the accounting law also apply for tax purposes. Inventory is valued at historical cost, which is determined by using the weighted average, first-in, first-out (FIFO) or other specified methods. The method must be applied consistently. Changes in the method must be reflected in the books of the company.

Provisions. Companies may not deduct provisions, except for certain levels of special reserves specified by regulations regarding insurance companies and provisions of financial service companies created in compliance with International Financial Reporting Standards and certified by external auditors.

Tax depreciation. Buildings are depreciated separately for tax purposes using the declining-balance method at a rate of 5%. If the remaining value of the assets at the beginning of a tax period is less than 3% of their historic acquisition cost, the entire remaining balance is recognized as a tax-deductible expense in that tax period.

Intangible assets are depreciated using the straight-line method at a rate of 15%.

Other assets are depreciated in groups, using the declining-balance method. The applicable rates are 25% for computers, information systems and software, and 20% for all other fixed assets. If the remaining value of the assets at the beginning of a tax period is less than 10% of their historic acquisition cost, the entire remaining balance is recognized as a tax-deductible expense in that tax period.

Relief for losses. Losses may be carried forward for three consecutive years. However, if a change of 50% in the entity's ownership occurs, the remaining losses are forfeited. Loss carrybacks are not allowed. Taxpayers investing in business projects exceeding ALL1 billion (approximately EUR8 million) are allowed to carry forward the tax losses incurred in a certain year over a maximum period of five years.

Groups of companies. Each company forming part of a group must file a separate return. The law does not provide for consolidated tax returns or any other group relief.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax; exempt supplies include leases of land, supplies of buildings (optional) and financial services	
Standard rate	20%
Reduced rate for supplies of certain public transport vehicles	6% and 10% from 2022
Reduced rate for the supplies of agricultural inputs (products)	10%
Reduced rate for certain services, accommodation and restaurant (except for drinks) supplies from companies having the status of "agritourism certified entity," advertisement services from audiovisual media and supplies of books of any type	6%
Exports of goods and supplies of services relating to international transportation	0%
Real estate property tax	
Buildings	
Buildings used for business purposes; rate applied to value of building	0.2%
Buildings under construction; rate applied to value of the construction surface of buildings that have not been completed as per the time frame stipulated in the construction permit received	30%
Agricultural land	ALL700 to ALL5,600 per hectare
Plots of land	ALL0.14 to ALL20 per square meter
Social security contributions, on monthly salary up to ALL132,311; paid by	
Employer	15%
Employee	9.5%
Health insurance contributions on monthly gross salary; paid by	
Employer	1.7%
Employee	1.7%
Excise duties imposed on specified goods (tobacco products, coffee, alcoholic beverages, petrol, diesel, fuel, kerosene and lubricants); the tax is calculated as a specific amount per unit	Various
Consumption tax for petrol, gas, oil and coal	ALL27 per liter

E. Miscellaneous matters

Foreign-exchange controls. Albania has a free foreign-exchange market. The Albanian currency, the lek (ALL), is fully convertible internally.

Residents and nonresidents may open foreign-currency accounts in Albanian banks or foreign banks authorized to operate in Albania. Residents may also open accounts in banks located abroad. All entities must properly document all of their money transfers to comply with the regulations of Bank of Albania. No limits are imposed on the amount of foreign currency that may be brought into Albania. Hard-currency earnings may be repatriated after the deduction of any withholding tax.

Transfer pricing. Albanian transfer-pricing rules were introduced in June 2014 and are aligned with the Organisation for Economic Co-operation and Development (OECD) Transfer Pricing Guidelines of 2010. Under these rules, taxpayers engaged in controlled transactions are required to maintain transfer-pricing documentation, which must be submitted within 30 days following the tax authorities' request. Failure to prepare transfer-pricing documentation is not sanctioned with penalties, but fulfilling the requirement protects the taxpayer from the assessment of penalties in the event of transfer-pricing-related audit adjustments. Such penalties equal 0.06% of the amount of the unpaid liability for each day of delay, capped at 21.9% (equivalent of 365 days).

Only cross-border and controlled transactions are subject to the transfer-pricing rules. Consequently, domestic transactions are not subject to the rules. Controlled transactions are transactions between related parties, dealings between a permanent establishment and its head office, and transactions with an entity resident in a tax-haven jurisdiction. Two persons are considered related parties if either one of them participates directly or indirectly in the management, control or capital of the other, or the same person(s) participate(s) directly or indirectly in the management, control or capital of the two parties; that is, the same person owns 50% or more of the share capital of the other person or effectively controls the business decisions of the other person.

The transfer-pricing rules refer to the application of the most appropriate method among the OECD transfer-pricing methods, which are comparable uncontrolled price, resale price, cost-plus, transactional net margin and profit-split. If it can be proved that none of the approved methods can be reasonably applied, taxpayers are allowed to use other more appropriate methods.

Taxpayers are required to submit by 31 March of the following year a Controlled Transaction Notice, which lists the intercompany transactions and the transfer-pricing methods applied to these transactions, if their controlled transactions, including loan balances, exceed in aggregate ALL50 million (approximately EUR363,000).

Failure to timely submit the Controlled Transaction Notice subjects the taxpayer to a penalty of ALL10,000 (approximately EUR70) for each month of delay.

In October 2018, the Albanian government approved the agreement with the OECD for Albania to join the Inclusive Framework on Base Erosion and Profit Shifting.

Debt-to-equity rules. Albanian tax law includes thin-capitalization rules with respect to the deduction of interest on loans, which apply if the debt-to-equity ratio exceeds 4:1. The ratio applies to all debts owed to related and unrelated parties as well as to loans obtained from financial institutions. However, the limitation does not apply to banks and insurance and leasing companies. For related-party loans, the net interest expense balance (that is, the difference between the interest expenses and interest revenues, exceeding 30% of EBITDA) is not deductible. Such interest not deductible in the current period can be carried forward to future tax periods, provided that a change of 50% in the entity's ownership does not occur.

Reorganizations. As of 15 February 2021, new amendments on the income tax law entered into force with respect to the taxation of transactions between Albanian tax residents on exchanges of shares, transfers of a branch or branch activity, mergers, divisions or partial divisions. Any cash payment received in exchange for shares and quotas in a merger or division is recognized as a capital gain and is taxable up to the amount equal to the difference between the market value of the shares or quotas received and the purchase value of the shares or quotas transferred. Capital gains realized from the transfer of assets and liabilities in a merger with absorption, transfer of a branch or branch activity, merger or division may be deferred until their actual disposal by the acquiring company. The deferral is subject to meeting certain criteria and the submission of a request from both parties with the tax authorities.

F. Treaty withholding tax rates

Albania has entered into tax treaties with several jurisdictions. In October 2018, the Albanian Council of Ministers approved for Albania to become a signatory jurisdiction and party to the Multilateral Convention to Implement Tax Treaty Related Measures to Prevent Base Erosion and Profit Shifting (Multilateral Instrument, or MLI), announcing that Albania will enter its reservations and observations. In August 2019, Albania joined the Inclusive Framework on Base Erosion and Profit Shifting. In July 2020, Albania ratified the MLI.

The table below providing the treaty withholding tax rates is for illustrative purposes only. It does not reflect the various special provisions of individual treaties or the withholding tax regulations in domestic law.

	Dividends	Interest	Royalties

- (a) The lower rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 25% of the capital of the payer. The higher rate applies to other dividends.
- (b) Interest on government and central bank loans is exempt from withholding tax.
- (c) The 0% rate applies if the beneficial owner of the dividends is a company that holds at least 50% of the payer and that has invested at least USD250,000 in the capital of the payer. The 5% rate applies if the beneficial owner of the dividends is a company that holds at least 25% of the payer. The 15% rate applies to other dividends.
- (d) The 5% rate applies to interest paid on loans granted by banks or other financial institutions. The 10% rate applies in all other cases.
- (e) The 0% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 75% of the capital of the payer. The 5% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the payer. The 10% rate applies to other dividends.
- (f) The lower rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the payer. The higher rate applies to other dividends.

- (g) The 0% rate applies if the beneficial owner of the dividends is a government, a government institution or an agency of the other contracting state. The 5% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the payer. The 10% rate applies to other dividends.
- (h) The 0% rate applies if the beneficial owner of the dividend is a government, a government institution or an agency of the other contracting state. The 5% rate applies to other dividends.
- (i) The 5% rate applies if the beneficial owner of the dividend is a company that holds directly at least 25% of the capital of the payer or is a pension scheme. The 10% rate applies to other dividends.
- (j) The 5% rate applies if the license fee is related to industrial, commercial and scientific equipment. The 8% rate applies to other license fees.

Albania has signed tax treaties with India and Luxembourg, but these treaties have not yet entered into force.

(a) For details regarding these rates, see Section B.

(b) The higher rate applies to payments to nonresident individuals or companies.

B. Taxes on corporate income and gains

Corporate income tax. The following companies are subject to corporate income tax (Impôt sur le Bénéfice des Sociétés, or IBS):

- Resident companies (those incorporated in Algeria)
- Nonresident companies that have a permanent establishment in Algeria

In general, IBS is levied on income realized in Algeria, which includes the following:

- Income derived from trading activities carried out by companies
- Income of representative agents of companies
- Income of companies that do not have an establishment or a representative agent but realize a complete cycle of commercial activities

Tax rates. The following are the IBS rates:

- 10% (preferential rate) for companies carrying out a production activity if they reinvest during the fiscal year. Reinvestments can be made through acquiring production equipment and shares or equity interests or similar securities of up to at least 90% in the capital of another company.
- 19% for companies carrying out production activities.
- 23% for companies engaged in the construction sector and tourism.
- 26% for companies carrying out other activities, such as importation and resale in the same condition.

Companies carrying out activities that are subject to different rates of IBS are charged an IBS rate for each activity according to its portion (pro rata) of the consolidated turnover.

A complementary tax of 10% on company profits is introduced for tobacco manufacturing companies. The tax base of this tax is the same as the tax base subject to the corporate income tax.

Tax incentives. Law No. 16-09 relating to the development of investments, which amended Law 01-03, provides for different levels of investment incentives applicable to national and foreign investments made in the production of goods and services, and investments made within the framework of the granting of a license and/or a concession.

For purposes of the above law, investments include the following:

- Acquisition of assets included in the creation of new activities, capacity of production extension, rehabilitation and restructuring
- Participation in the share capital of an Algerian company

Before the investments are made, they must be registered with the National Agency for Investment Development (Agence Nationale pour le Développement des Investissements, or ANDI) to benefit from the incentives discussed below. Investments of DZD5 billion or more, as well as those that serve particular interest of the national economy are subject to the prior decision of the National Investment Council.

The advantages granted by the ANDI to investors depend on the investment's structure, as provided by Law 16-09.

Common advantages for all eligible investments. The advantages described below apply to national and foreign investments made in the activities of production of goods and services as well as investments made within the framework of the granting of a license and/or a concession.

For investment projects in northern areas, during the setting up of their investments, companies may benefit from the following advantages:

- Exemption from customs duties on imported equipment directly involved in the investment setup
- Exemption from value-added tax (VAT) on goods and services directly involved in the investment setup
- Exemption from property transfer tax and land publication fees on all property acquisitions made within the framework of the registered investment
- Exemption from registration duties, land publication fees and state-owned property remuneration, for granted built and unbuilt property assigned to the investment setup
- Ninety percent deduction on the annual rental fee amount set by the government property authority for the investment setup period
- Exemption from land tax on real estate within the framework of the investment for a period of 10 years from the acquisition date
- Exemption from registration duties on acts of incorporation and capital increases

When operating in northern areas, companies may be granted the following advantages for three years:

- IBS exemption
- Tax on professional activity (see Section D) exemption
- 50% deduction on the annual rental fee amount set by the state property department

For investment projects in southern areas (the highlands and areas whose development requires a particular contribution of the state), during the setting up of their investments, companies may benefit from the following advantages:

- Exemption from customs duties on imported goods directly involved in the investment setup.
- Exemption from VAT on goods and services directly involved in the investment setup, whether they are imported or purchased on the local market.
- Exemption from transfer tax payable on real estate acquisitions made within the framework of the investment.
- Exemption from registration fees, land advertisement tax and the state-owned property remuneration on built and unbuilt properties granted for the investment projects' setup. This benefit applies for the minimum duration of the granted concession.
- Partial or total support by the state, after the ANDI's assessment of expenditures concerning infrastructure works needed for the setup of the investment.
- Exemption from land tax on real estate within the framework of the investment for a period of 10 years from the acquisition date.
- Exemption from registration duties on acts of incorporations and capital increases.
- Reduction of the annual rental fee amount set by the state property department, on the land concession for the investment projects' setup, in the following amounts:
 - A symbolic dinar per square meter is paid for a period of 10 years and 50% of the annual rental fee amount is paid

beyond this period for investments located in localities within the highlands and other areas whose development requires a special contribution of the state.

- A symbolic dinar per square meter is paid for a period of 15 years and 50% of the annual rental fee amount is paid beyond this period for investment projects implemented in the regions of the south.

During the investment exploitation period in southern areas, companies may be granted the following advantages for 10 years:

- IBS exemption
- Tax on professional activity (see Section D) exemption
- Fifty percent deduction on the annual rental fee amount set by the state property department

Additional advantages for privileged and jobs-creating activities. Particular tax and financial incentives are available under legislation for tourist, industrial and agricultural activities, which cannot be cumulated with the advantages of Law No. 16-09 provisions. The investor benefits from the most advantageous incentive measure.

For investments that are set up in areas to be promoted and that are generating more than 100 permanent jobs, the duration of the tax exemption during the investment exploitation period is five years.

Exceptional advantages to investments serving a particular interest of the national economy. The following advantages are available to investments serving a particular interest of the national economy during the investment setup period:

- All the common advantages for the setup period
- Granting, according to the legislation in force, of exemptions or reduction of customs duties, taxes and other impositions with fiscal character and subsidies, aids or financial supports, and benefiting from any facilitation measures likely to be introduced
- After the National Investment Council agreement is signed, the possibility of the setup period advantages being transferred from the investor to contracting parties in charge of the investment setup for the investor

The following advantages are available to investments serving a particular interest of the national economy during the investment-exploitation period:

- Extension for a period of up to 10 years, of the duration of the common advantages granted during the exploitation period
- Granting of a duty-free purchase scheme for goods and materials used in the production of goods benefiting from the VAT exemption
- Granting for a period not exceeding five years exemptions or reductions of duties and taxes, including VAT, applied on the prices of goods produced within the framework of emerging industrial activities

Capital gains. Capital gains are included in ordinary income and taxed at the applicable IBS rate.

Capital gains derived from the sale of fixed assets are taxed differently, depending on whether they are short-term capital gains (on assets held for three years or less) or long-term capital gains (on assets held for more than three years).

The following percentages of capital gains derived from the partial or total sale of assets within the framework of industrial, commercial, agriculture or professional activities are included in taxable profits:

- 35% of long-term capital gains
- 70% of short-term capital gains

Capital gains derived from the sale of shares realized by nationals are taxed at a rate of 15%.

Unless otherwise provided by a double tax treaty, nonresident individuals and companies that derive capital gains from the sale of shares of an Algerian entity are subject to a final withholding tax at a rate of 20%.

Administration. An annual tax return must be filed with the tax administration within four months after the end of the financial year. Foreign companies carrying out activities in Algeria through a permanent establishment are subject to the same filing obligations as companies incorporated in Algeria. These obligations include the filing of an annual corporate tax return (IBS return, named G4 form or G4 Bis form), by 30 April of each year.

The IBS is generally paid in three down payments from 20 February to 20 March, from 20 May to 20 June and from 20 October to 20 November of the year following the financial year, if profit has been realized and used for the base of tax calculation. The amount of each down payment is equal to 30% of the IBS due on profits realized during the last closed financial year.

Permanent establishments of foreign companies must make an IBS down payment equal to 0.5% of the amounts billed every month. When filing the annual IBS return, these IBS down payments are offset against the IBS due.

Certain listed documents must be attached to the IBS return, including the balance sheet and a summary of the profit-and-loss account.

Taxes withheld at source and those paid in cash must be declared on a monthly tax return ("G 50" form). These taxes include the following:

- Personal income tax (Impôt sur le Revenu Global, or IRG)
- Withholding tax due on passive income and remuneration paid to nonresident service suppliers
- TAP
- Professional training tax and apprenticeship tax
- IBS down payments
- VAT

This form must be filed within 20 days following the end of the month of payment of the relevant remuneration together with the payment of the related taxes.

Dividends. Dividends paid are subject to a 15% withholding tax, subject to double tax treaties.

Royalties. Unless otherwise provided by double tax treaties, a 30% withholding tax is imposed on royalties and remuneration for services paid to nonresident entities.

For contracts relating to the use of computer software, a tax allowance at a rate of 30% is applicable on the amount of the royalties. Consequently, the effective rate of the withholding tax is 21%.

A tax allowance at a rate of 60% is applied to the amount of the rent amount paid under an international leasing contract. As a result, the effective rate of the withholding tax is 12%.

For royalties benefiting from allowances, VAT must be paid in addition to withholding tax.

Foreign tax relief. The Algerian Direct Tax Code does not provide for foreign tax relief.

C. Determination of taxable income

General. The computation of taxable income is based on financial statements prepared according to generally accepted accounting principles, provided they are not incompatible with the provisions of the Algerian Direct Tax Code.

Taxable income is determined on the basis of profits and losses. Taxable income includes operating income and “extraordinary income,” such as capital gains, gains from the revaluation of business assets and subventions, subject to certain exclusions and business incentives.

In the determination of taxable income, any expenditure that is wholly, exclusively and necessarily incurred for the purposes of the exploitation of the business and the generation of income is deductible from gross income.

Financial expenses related to overseas loans, royalties, technical assistance fees and other fees payable in foreign currencies may be deducted for tax purposes during only the financial year of their effective payment.

Certain expenses are not deductible for tax purposes, including the following:

- Expenses, costs and rents of any type that are not directly assigned to operations (for example, premises leased for accommodation of members of the company’s management)
- Fines, interest on late payments and penalties, interest and increases in duties as a result of defaults or insufficiencies in tax returns or payments
- Gifts (except those for advertisements, the value of which does not exceed DZD1,000 per beneficiary) in a global amount limit of DZD500,000
- Subsidies or donations except those made to humanitarian organizations or associations or those made to nonprofit research organizations up to DZD4 million
- Restaurant, hotel and entertainment expenses not directly linked to the business

- Expenses paid in cash in the case of an invoice exceeding DZD300,000
- The portion of rental of passenger vehicles exceeding DZD200,000 per year, and maintenance and reparation expenses of passenger vehicles that do not constitute the main tool of the activity that are higher than DZD20,000 per vehicle

Amounts allocated to sponsoring, patronage and godfathering of sports activities and the promotion of youth initiatives are allowed as a deduction for the determination of the taxable income, subject to being duly justified up to 10% of the turnover of the exercise and within the limit of a maximum of DZD30 million.

- Remuneration for services rendered by a company established abroad to the extent it exceeds 20% of general expenses of the debtor company and 5% of turnover or, for design and engineering consulting firms, to the extent that it exceeds 7% of turnover
- Interest paid to partners on account of sums made available to the company, in addition to capital shares, whatever the form of the company, to the extent that it exceeds the effective average interest rate reported by the Bank of Algeria (a deduction for such interest is allowed only if the capital has been fully paid up and if the sums made available do not exceed 50% of the capital)
- Expenses incurred on behalf of third parties without a link to the activities performed by the company
- Professional training tax and apprenticeship tax
- Expenses related to the promotion of pharmaceutical and parapharmaceutical products to the extent that they exceed 1% of annual turnover

Inventories. Inventories are valued at cost in accordance with the new Algerian accounting and financial system.

Provisions. Provisions are generally deductible for income tax purposes if they satisfy the following conditions:

- They are established for losses or charges that are clearly identified and likely to occur.
- They are recorded both in the books and financial statements.
- They are listed on the statement of reserves attached to the annual tax return.

Reserves or the portion of them that are not used in accordance with their intended purposes or no longer have a purpose in the following financial year must be added back to the income in such financial year. Abusive establishment of provisions may result in the provisions being added back to taxable income and related penalties applied.

Depreciation. Under the Algerian Direct Tax Code, depreciation of fixed assets must be calculated in accordance with the following:

- Generally accepted limits
- Applicable practices for each type of industry, business or operations
- Rules provided in tax laws with respect to the depreciation system

The following are the three depreciation methods:

- Straight-line method
- Progressive method
- Declining-balance method

The straight-line method is the standard method, while progressive or declining-balance methods may alternatively be used on election.

Under the Algerian Direct Tax Code, the basis of computation of deductible depreciation is limited for private passenger-type vehicles to a purchase value of DZD3 million. This cap of DZD3 million does not apply if such vehicles constitute the main object of the company's activities.

Relief for losses. Tax losses may be carried forward four years. They cannot be carried back.

Groups of companies. Under the Algerian Direct Tax Code, related companies subject to IBS may elect to form a tax-consolidated group. The parent company must make the election for this regime for a four-year period and the election must be accepted by the affiliated companies.

The group tax consolidation regime is based on the consolidation of the balance sheets of the related companies with the parent company.

A tax consolidation group may consist of an Algerian parent company and Algerian subsidiaries in which the parent company owns directly at least 90% of the capital if both of the following conditions are satisfied:

- The capital of the parent company is not owned partially or totally by the subsidiaries.
- 90% or more of the parent company is not owned by another company eligible to be a parent company.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
VAT; standard rate	19
Tax on professional activity	
General rates	0/1.5
Transport by pipeline of hydrocarbons	3
Apprenticeship tax	1
Training tax	1
Social security contributions (total rate of 35%); paid by	
Employer	26
Employees	9
Registration duties	
On sales of shares in stock companies and private limited companies	2.5
On sales of goodwill	5

E. Miscellaneous matters

Foreign-exchange controls. The currency in Algeria is the Algerian dinar (DZD).

Foreign-exchange regulations in Algeria are based on the principle of non-convertibility of Algerian dinars outside Algeria.

Payments or transfers made with respect to regular transactions within the meaning of Algerian regulations (including foreign-trade transactions involving goods and services) are free, provided that certain conditions are fulfilled (particularly the bank domiciliation [the procedure under which a local party registers a contract with a local bank] and the delivery of a transfer certificate by the tax authorities). Algerian accredited intermediary banks must operate these transactions.

Dividends, profits and net proceeds from investments or the liquidation of investments can also be freely transferred outside Algeria, subject to compliance with certain requirements (particularly, the delivery of a transfer certificate by the tax authorities).

The realization of foreign investments, directly or in partnership, except for share capital, must be financed through Algerian financing institutions.

Foreign loans from foreign banks are prohibited in Algeria. However, an exception is provided for foreign financing through a current-account contribution by a foreign shareholder. Executive Decree No. 13-320 of 26 September 2013 determines the terms and conditions for a current-account contribution by a foreign shareholder.

Nonresidents may open bank accounts in Algerian dinars and/or in foreign currencies at Algerian accredited intermediary banks. These bank accounts are subject to specific conditions on opening and operation.

Transfer pricing. Under the Algerian tax rules, for Algerian taxpayers that are owned or controlled by an enterprise located in Algeria or outside Algeria or that own or control an enterprise located in Algeria or outside Algeria, the income indirectly transferred to the related enterprise, either through an increase or decrease of purchase or sale price or through any other means, may be added back to the Algerian taxpayer's taxable income. In the absence of any relevant information for the reassessment of tax, the taxable income is determined by comparison with income of similar enterprises that are regularly operated.

Transfer-pricing documentation requirements. On request of the tax authorities, in the framework of a tax audit, enterprises or companies operating in Algeria and undertaking cross-border and domestic transactions with related parties are required to provide their transfer-pricing documentation within 30 days from the date of the notification. Failure to answer or providing an insufficient answer triggers a 25% penalty per fiscal year calculated on the basis of the transfer-pricing reassessments resulting from the tax audit.

In addition, certain Algerian-based taxpayers (mainly companies belonging to foreign international groups, legal entities or businesses operating in the hydrocarbon industry) must file transfer-pricing documentation with their annual tax returns to the tax authorities. The lack of documentation or insufficient documentation at the time of the tax return filing triggers a DZD2 million

tax penalty, and in the case of a tax audit, an additional penalty of 25% of deemed transferred profits applies.

A. At a glance

Corporate Income Tax Rate (%)	25 (a)(b)
Capital Gains Tax Rate (%)	25 (c)
Branch Tax Rate (%)	25 (a)(b)
Withholding Tax (%)	
Dividends	10 (d)
Interest	5/10/15 (e)
Royalties	10
Payments for Services	6.5 (f)
Branch Remittance Tax	10
Net Operating Losses (Years)	
Carryback	0
Carryforward	5 (g)

- The standard Corporate Income Tax rate is 25%. Income from certain activities, such as agriculture, forestry and cattle raising, is subject to tax at a rate of 10%. National oil and gas companies, banks, insurance companies and telecom operators are subject to tax at a rate of 35%.
- Tax exemptions or tax reductions are available under the Private Investment Law as well as specific legislation for micro, small- and medium-sized companies. For details, see Section B.
- Gains derived from the sale of securities that are not subject to Corporate Income Tax or Personal Income Tax are subject to Investment Income Tax at a rate of 10%. If such gains are derived from treasury bills, treasury bonds and titles issued by the Angolan Central Bank (Banco Nacional de Angola, or BNA) with a maturity of at least three years or from shares of listed companies, a 50% tax relief may apply.
- Certain dividends are exempt from tax (see Section B). A 5% rate applies to dividends paid by listed companies during a five-year period beginning on 19 November 2014.
- In general, interest is subject to a 15% rate. However, certain interest, such as interest on shareholders loans, corporate bonds, bank deposits, treasury bills, treasury bonds and titles issued by the BNA is subject to a 10% rate. Interest on treasury bills and treasury bonds and titles issued by the BNA is subject to a reduced rate of 5% if the maturity is at least three years.

- (f) Some exceptions are available. A general withholding tax rate of 15% applies to payments for services abroad. However, as per the 2022 State Budget, this rate will remain at 6.5% on service payments made to foreign service providers. An exception may be available through double tax treaties.
- (g) Mining companies may carry forward losses for seven years, up to a limit of 50% of the turnover.

B. Taxes on corporate income and gains

Corporate Income Tax. Companies carrying out industrial and commercial activities in Angola are subject to Corporate Income Tax (Imposto Industrial).

An Angolan company, which is a company that has its head office or effective place of management and control in Angola, is subject to Corporate Income Tax on its worldwide profits.

Foreign entities with a permanent establishment in Angola are subject to Corporate Income Tax only on profits allocated to the Angolan permanent establishment. The tax law provides a force of attraction principle for permanent establishments.

All companies, regardless of whether they have a permanent establishment in Angola, are subject to Corporate Income Withholding Tax on services provided to entities established in Angola for tax purposes.

Corporate Income Tax taxpayers are classified into the following two regimes:

- General Regime: applicable to all companies in general
- Simplified Regime: applicable to companies that are not subject to value-added tax

Rates of corporate tax. The standard Corporate Income Tax rate is 25%.

Income from certain activities, such as agriculture, forestry and cattle raising, is subject to a reduced tax rate of 10%. National oil companies, banks, insurance companies and telecom operators are subject to tax at a rate of 35%.

A Private Investment Law was approved as Law No. 10/18 of 26 June 2018. This law provides that no minimum amount is required for foreign or domestic (national) investments.

Benefits and incentives vary according to the type of regime to which the investment project is subject and the investment zones, among other factors.

The standard regime provides, among other benefits, a reduction of 20% on the final and provisional assessment rates for Corporate Income Tax purposes, and a 25% reduction on the Investment Income Tax rate on dividends. Both benefits have a duration of two years.

The special regime applies to investment projects in priority sectors. The benefits vary in accordance with the respective location, and include, among others, the following:

- Reduction of the Corporate Income Tax rate by a percentage ranging from 20% to 80%, for a period varying from two to eight years
- Fifty percent increase of the depreciation rates for an eight-year period

- Reduction of the Investment Income Tax rate on dividends and profits distributed or remitted, by a percentage ranging from 25% and 80%, for a period from two to eight years

The following are the priority sectors:

- Education, technical and professional training, higher education, scientific research and innovation
- Agriculture, food and agro-industry
- Specialized health services
- Reforestation, industrial transformation of forest resources and forestry
- Textiles, clothing and footwear
- Hotel and tourism
- Construction, public works, telecommunications and information technology
- Airport and railway infrastructure
- Production and distribution of electricity
- Sanitation and solid waste treatment

The following are the four investment zones:

- Zone A: Province of Luanda, the capital municipalities of the Benguela and Huíla provinces, and the municipality of Lobito
- Zone B: Provinces of Bié, Bengo, Cuanza-Norte, Cuanza-Sul, Huambo, Namibe and the other municipalities of Benguela and Huíla
- Zone C: Provinces of Cuando Cubango, Cunene, Lunda-Norte, Luanda-Sul, Malanje, Moxico, Uíge and Zaire
- Zone D: Province of Cabinda

Withholding tax. In general, resident companies are subject to a withholding tax rate of 6.5%, while foreign companies are subject to a withholding tax rate of 15%. An exception was introduced in the 2022 State Budget for income obtained by nonresident service providers, which will be subject to a withholding tax at a 6.5% rate during 2022.

The following services are excluded from withholding tax:

- Teaching and similar services
- Health services
- Passenger transportation services
- Lease of machinery and equipment subject to Investment Income Tax

A similar exclusion applies to financial and insurance intermediation services, hotel and similar services, and telecommunication services, if the service provider has a taxable presence in Angola. For local service providers, withholding tax does not apply to documented recharges between related parties. Payments for raw materials, parts and other materials used on services provided are also excluded from the withholding tax base if the service provider has a taxable presence in Angola.

The payer must withhold the tax from each payment and remit the withholding tax to the Angolan Revenue Authority. The tax withheld is considered to be an advance Corporate Income Tax payment if the service provider has a residence, head office or permanent establishment in Angola. Excess withholding tax can be carried forward if duly recognized by the Angolan Revenue Authority. If the tax is withheld from a nonresident entity service

provider with no permanent establishment in Angola, these values are considered to be final.

Special taxation regimes. Income from oil and gas extraction is subject to Petroleum Income Tax at a total rate of 50% (under production-sharing agreements) or 65.75% (under other types of joint ventures). Angolan companies benefit from a reduced Petroleum Income Tax rate equivalent to that of Corporate Income Tax. In addition, companies engaged in exploration and production of petroleum oil, gas and similar products must pay Petroleum Production Tax at a total rate of 20%. Petroleum Transaction Tax and a Surface Surcharge may also be levied at rates of 70% and USD300 per square kilometer, respectively. Petroleum Production Tax and Petroleum Transaction Tax are not payable under production-sharing agreements.

Contracts, such as production-sharing agreements, between oil and gas companies and the Angolan government generally override the Petroleum Production Tax and Petroleum Transaction Tax and may set forth different taxes and applicable rates.

Additional taxes and charges apply within the oil and gas and mining industries. Also, specific tax rules apply to the liquefied natural gas project, including withholding tax exemptions on certain interest, dividends, royalties and services income.

Capital gains. Capital gains on profits derived from the sale of fixed assets are subject to Corporate Income Tax at the regular tax rate of 30%. Capital gains derived from the disposal of shares or other instruments generating Investment Income Tax (not taxable for Corporate Income Tax or Personal Income Tax purposes) are subject to Investment Income Tax at a 10% rate.

However, a 50% relief is available for capital gains derived from the disposal of listed shares or from corporate bonds, other securities, treasury bonds, treasury bills and BNA securities, if they are negotiated in a regulated market and if their maturity is of at least three years.

Administration. The tax year is the calendar year.

All companies engaging in activities in Angola must register with the tax department to obtain a taxpayer number.

Companies, including foreign companies with a permanent establishment in Angola, must file an annual Corporate Income Tax return, together with their financial statements and other documentation, by the end of April (Simplified Regime) or May (General Regime) of the following year.

Penalties are imposed for a failure to file tax returns and other required documents. If, on the final assessment, the tax authorities determine that a further payment is required, in addition to the unpaid tax, a penalty of 25% and compensatory interest, assessed daily at a 1% monthly rate, will be due. Late payment interest also applies to nonpayment of the above tax debt.

Dividends. Companies are not subject to Corporate Income Tax on the gross amount of dividends received if the dividends have been subject to Investment Income Tax.

A 10% Investment Income Tax, which is withheld at source, is imposed on dividends.

The Investment Income Tax Code provides a participation exemption regime that sets an exemption whenever Angolan parent companies from Angolan subsidiaries subject to Corporate Income Tax hold a minimum of 25% of the share capital of the company distribution of the dividends, and this is held for one year.

Foreign tax relief. In general, no relief is granted for foreign taxes paid by Angolan taxpayers.

C. Determination of taxable income

General. Taxable income is the income reported in companies' financial statements, subject to certain adjustments. Expenses considered indispensable in the production of income and the maintenance of a production unit are deductible. The following expenses, among others, are not deductible and are added back to taxable income for Corporate Income Tax purposes:

- Provisions and depreciation deemed to be unlawful, excessive or unauthorized by the tax authorities
- Bad or irrecoverable debts
- Interest on shareholders loans, on the component exceeding the average annual rate published by the BNA
- Personal Income Tax, social security contributions by the employee, Investment Income Tax and Property Tax
- Costs associated with rented property, considered in the computation of Property Tax
- Costs related to previous years
- Donations not covered by the Law of Patronage
- Non-documented expenses and improperly documented expenses
- Confidential expenses (an expense is considered a confidential expense if no valid documentation legally supports the expense and if its nature, function or origin are not materially justifiable)
- Fines and penalties
- Unrealized foreign-exchange losses

Unrealized exchange gains are not part of taxable income.

Rental of immovable property income subject to Property Tax and income subject to Investment Income Tax are excluded from the Corporate Income Tax base.

Stand-alone tax for certain expenses that are nondeductible for Corporate Income Tax purposes. Certain expenses that are nondeductible for Corporate Income Tax purposes are subject to a stand-alone tax. This tax applies currently to confidential expenses (30%, or 50% in certain situations) and donations not made in accordance with the Law of Patronage (15%).

Inventories. Inventories may be valued by any currently acceptable method provided that the method is consistently applied and is based on documented purchase prices.

Provisions. Costs for provisions for the following items are deductible for Corporate Income Tax purposes:

- Bad debts up to 4% (for the annual allowance regarding the booking of a new provision or the increasing of a previous balance) or 10% (accumulated balance) of clients' receivables, if,

among other requirements, such credits have been claimed and are due for more than six months and if steps to collect the claim have been undertaken

- Provisions imposed by the public regulatory authorities of financial, insurance and gambling businesses
- Litigation processes regarding facts underlying the litigation claims that would represent costs of that year
- Depreciation in the value of inventory, provided that it does not exceed 0.5% to 3% in the current year (depending on the nature of the activity), up to a limit that can vary between 2.5% and 12% of the value of the inventory

Tax depreciation. Depreciation rates are provided in the law. The following are some of the applicable rates.

Asset	Rate (%)
Vehicles	16.67 to 25
Office buildings	4
Industrial buildings	4 or 6
Machinery, equipment and devices	12.5 to 33.33
Furniture	8.33 to 50

These rates may vary depending on the industry sector.

Relief for losses. Companies may carry forward tax losses for five years, starting from 2017. This period is increased to seven years for mining companies (up to a limit of 50% of the turnover). No carryback is allowed.

Groups of companies. The Large Taxpayers Statute establishes that Angolan Large Taxpayers that are integrated in a group of companies may be taxed on the sum of the taxable results obtained by the entities included in the group. For such purpose, a special request through a specific official form must be submitted to the tax authorities by the end of February of the tax year for which the application of this special regime is requested. The Head of the Large Taxpayer's Office must expressly approve this request and, accordingly, the application of the group taxation regime.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax	
General rate	14%
Reduced rates	5%/7%
Excise duties; levied on specific goods provided in Angola or imported into Angola (included in the Excise Duty Code, contained in Law 8/19 of April 24)	2% to 5%
Training levy, on oil and gas exploration and production companies and their subcontractors	
Production companies and companies engaged in refining and processing of petroleum	USD0.15 per barrel
Companies owning a prospecting license	USD100,000 a year
Exploration companies	USD300,000 a year

Nature of tax	Rate
Subcontractors under a contract with a term exceeding one year (levied on annual gross income) and entities engaged in the storage, transport, distribution and trading of petroleum (levied on revenue derived from such activities)	0.5%
Stamp duty	
On the acquisition of real estate	0.3%
On leasing and subleasing of real estate	0.1%/0.4%
On company's share capital	0.1%
On guarantees	0.1% to 0.3%
On financing	0.1% to 0.5%
On financial leasing of real estate	0.3%
On leasing of movable property	0.4%
Custom duties on imports	2% to 70%
Customs emoluments	2%
Property Tax	
Levied on 60% of the gross rent	25%
Levied on property transfers (levied on transaction value)	2%
Social security contributions, on salaries and additional remuneration; the contributions are not payable by expatriates working in Angola if they make contributions to the social security scheme or a similar scheme in their home countries; paid by	
Employer	8%
Employee	3%

E. Miscellaneous matters

Foreign-exchange controls. The BNA supervises foreign-exchange operations, which generally must be controlled by commercial banks that usually act as intermediaries of companies to obtain clearance from the BNA.

BNA issued Bank Order No. 2/20 of 9 January 2020. This order sets out new foreign-exchange procedures to be adopted with respect to current invisible operations carried out by resident companies. The order eliminates the obligation for prior approval of current invisible operations, regardless of their respective amount. Commercial banks are responsible for the evaluation and validation of all current invisible operations, registering them at the Integrated Foreign Exchange Operations System (SINOC) before their execution.

In general, repatriation of profits is allowed for approved foreign-investment projects if certain requirements are met.

The oil and gas sector is subject to a specific foreign-exchange control regime, which aims primarily to establish uniform treatment in this sector by replacing the multiple exchange regimes that have been applied to oil and gas upstream companies operating in Angola, thereby providing fair treatment to all investors.

These foreign-exchange control rules cover the trade of goods, current invisible operations (according to the Angolan National

Bank Instructive, these operations are services, royalties, interest, travel costs and salaries) and capital investments.

For purposes of the rules, exchange operations encompass the following:

- Purchase and sale of foreign currency
- Opening of foreign currency bank accounts in Angola by resident or nonresident entities and the transactions carried out through these bank accounts
- Opening of national currency bank accounts in Angola by nonresident entities and the transactions carried out through these bank accounts
- Settlement of all transactions of goods, current invisible operations and capital movements

Thin-capitalization rules. No thin-capitalization rules are in effect in Angola. However, the deductibility of interest costs with respect to shareholders' loans is limited for Corporate Income Tax purposes. Costs are deductible up to the average annual rate published by the BNA.

Anti-avoidance legislation. The arm's-length principle applies in Angola. Consequently, the tax authorities may adjust the taxable income derived from transactions between related parties.

Related-party transactions. The Large Taxpayers Statute contains specific rules governing "special relations" between taxpayers, which entered into force in October 2013. Under this regime, a special relationship is deemed to occur if one entity exercises, directly or indirectly, a significant influence on the management decisions of another entity. The law also establishes that a taxpayer that has annual turnover exceeding AOA7 billion at the date of closing the accounts must prepare and submit a transfer-pricing file to the Angolan tax authorities. This transfer-pricing file, which must be prepared on an annual basis, must detail the relationships and prices established by the taxpayers with the companies and entities with which they have "special relations." The transfer-pricing file must be submitted by the end of the sixth month following the year-end to which the file relates. With respect to the economic analysis of the transactions, the new regime provides for the application of the following methods only:

- Comparable uncontrolled price method
- Resale-minus method
- Cost-plus method

Invoice requirements. Requirements are imposed with respect to the keeping and archiving of invoices or equivalent documents by individuals or legal entities with their domicile, registered office, effective management or permanent establishment in Angola. Invoices should be issued through certified software, for certain taxpayers.

Standard Audit File for Tax reporting. Certain companies are required to file, on a monthly basis, a Standard Audit File for Tax (SAF-T). This file follows a standardized template, in an xml format, to be extracted from the accounting software, which must be duly certified. Currently, the monthly reporting corresponds to the sales and purchases carried out in the preceding month.

Tax-neutrality regime for mergers and demergers. A tax-neutrality regime for mergers and demergers applies for Corporate Income Tax purposes at the level of the merged or spun-off companies, but not at the level of the respective shareholders.

F. Tax treaties

Angola has double tax treaties in force with Portugal and the United Arab Emirates, which may allow for the potential reduction of the tax rates applicable to income paid to the relevant countries.

A. At a glance

Corporate Income Tax Rate (%)	25 to 35 (a)
Capital Gains Tax Rate (%)	0/15/25 to 35 (b)
Branch Tax Rate (%)	25 to 35 (a)
Withholding Tax (%)	
Dividends	0/7/35 (c)
Interest	15.05/35 (d)
Royalties from Patents, Know-how, etc.	21/28/31.5 (d)
Branch Remittance Tax	0/7/35 (c)
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) For fiscal years starting from 1 January 2021, the corporate tax is calculated through a progressive scale ranging from 25% to 35%. The scale is updated annually based on the consumer price index. For 2022, annual income from ARS0 to ARS7,604,948.57 is subject to a 25% rate; income from ARS7,604,948.57 to ARS76,049,485.68 is subject to a 30% rate; income exceeding ARS76,049,485.68 is subject to a 35% rate. The amounts are updated annually based on the consumer-price index. An increased rate of 41.5% applies for certain gaming activities.
- (b) The 15% rate generally applies to capital gains derived by foreign residents from sales of shares, quotas and other participations in entities. Capital gains derived by foreign residents from listed shares and corporate and government bonds, under certain circumstances, can benefit from an exemption. Argentine corporate residents are subject to the regular corporate tax at rates ranging from 25% to 35%.
- (c) A 7% dividend withholding tax rate applies to dividends paid out of profits accrued in fiscal years started from 1 January 2018. Such rate applies to distributions made to resident individuals or foreign investors, while distributions to resident corporate taxpayers are not subject to withholding. A 0% dividend withholding tax rate generally applies to dividends paid out of profits accrued during fiscal years that started before 1 January 2018; however, in these cases, a 35% withholding tax (known as “equalization tax”) is triggered if the distribution exceeds the after-tax accumulated taxable income of the taxpayer.
- (d) These are final withholding taxes imposed on nonresidents only. For details concerning the rates, see Section B.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are taxed on worldwide income. Any profits, including capital gains, are taxable.

Companies incorporated in Argentina and branches of foreign companies are considered to be resident companies.

Rates of corporate tax. Corporate tax is payable at a scale ranging from 25% to 35%. For 2022, annual income from ARS0 to ARS7,604,948.57 is subject to a 25% rate; income from ARS7,604,948.57 to ARS76,049,485.68 is subject to a 30% rate; income exceeding ARS76,049,485.68 is subject to a 35% rate. The amounts are updated annually based on the consumer price index. An increased rate of 41.5% applies for certain gaming activities.

Capital gains. Capital gains derived by tax-resident companies are included in taxable income and taxed at the regular corporate tax rate. Capital gains derived by foreign residents from the sale, exchange, barter or disposal of unlisted shares, quotas, participations in entities and titles are subject to a 15% tax (indirect sales are included under certain conditions). This tax may be calculated on actual net income or on 90% presumed income, thereby resulting in an effective 13.5% tax on the sale price.

Capital gains derived by foreign residents from the transfer of listed shares are covered by an exemption, to the extent that the investor is not resident in, and the funds do not arise from, “non-cooperating” jurisdictions.

Administration. The tax year for a company is its accounting year. Companies are required to make 10 advance payments of corporate income tax. The first payment is equal to 25% of the preceding year’s tax and the other payments are each equal to 8.33% of such tax. The payments are due monthly beginning in the sixth month after the end of the accounting year. The due dates depend on the company’s taxpayer registration number.

Companies must file their tax returns and pay any balance due by a specified date in the fifth month after their accounting year. If the payment is late, interest is charged.

Dividends. The dividend withholding tax rate is 7% for profits accrued in fiscal years started from 1 January 2018. The rates mentioned above apply to distributions made to resident individuals or foreign investors, while distributions to resident corporate taxpayers are not subject to withholding. A 0% dividend withholding tax rate generally applies for profits accrued during fiscal years that started before 1 January 2018; however, in these cases, a 35% withholding tax (known as “equalization tax”) is triggered if the distribution exceeds the after-tax accumulated taxable income of the taxpayer.

Withholding taxes on interest and royalties. Final withholding taxes are imposed on interest and royalties paid to nonresidents.

A withholding tax rate of 15.05% applies to the following types of interest payments:

- Interest on loans obtained by Argentine financial entities
- Interest on loans granted by foreign financial entities located in the following jurisdictions:
 - Jurisdictions not considered to be low- or no-tax jurisdictions under Argentine rules

- Jurisdictions that have signed exchange-of-information agreements with Argentina and have internal rules providing that no banking, stock market or other secrecy regulations can be applied to requests for information by the Argentine tax authorities
- Interest on loans for the importation of movable assets, except automobiles, if the loan is granted by the supplier of the goods

The withholding tax rate for all other interest payments to non-residents is 35%.

The general withholding tax rate for royalties is 31.5%. If certain requirements are satisfied, a 21% rate may apply to technical assistance payments and a 28% rate may apply to certain royalties.

Foreign tax relief. Resident companies may credit foreign income taxes against their Argentine tax liability, up to the amount of the increase in that liability resulting from the inclusion of foreign-source income in the tax base.

Foreign tax credits are also available on the tax paid by the foreign entities in which the Argentine shareholder invests. In the case of a direct participation, a 25% minimum ownership is required, while in the case of an indirect ownership, a participation of at least 15% is required.

C. Determination of trading income

General. Tax is applied to taxable income, which is the accounting profit earned in the tax period after adjustments provided for by the tax law. Exemptions are usually insignificant.

Expenses are deductible to the extent incurred in producing taxable income, subject to certain restrictions and limitations, including, among others, those applicable to the following:

- Representation expenses
- Directors' fees
- Royalties for patents and trademarks paid to nonresidents

Depreciation, rental payments and all other automobile expenses, such as license fees, insurance, fuel and maintenance, are also deductible, subject to certain restrictions. In general, certain limitations apply to the deductibility of interest payments to related entities (see Section E).

Any expense incurred by an Argentine company in favor of a foreign related party that is deemed Argentine-source income for the recipient of the payment can be deducted for tax purposes in the year of accrual only if the payment is made by the date when the income tax return for that year is due. Otherwise, such expenses must be deducted in the year of payment. This limitation also applies to expenses paid to individuals or entities located in "non-cooperating" or "low- or no-tax" jurisdictions, regardless of whether they are related parties.

Foreign-exchange losses. Foreign-currency gains and losses arising from customary business transactions are normally treated as business income or expenses for the year in which the exchange fluctuation occurs. In the case of debts with related parties, foreign-exchange losses are subject to the same deduction

restrictions as interest, except in those years in which the tax inflationary adjustment applies.

Inventories. Stock is valued according to procedures established by the tax law, which result in values nearly equal to its market value or replacement cost at the end of the tax period, depending on the type of goods.

Provisions. A provision for bad debts is allowed. However, it must be computed according to rules prescribed by the tax law.

Depreciation. Tangible assets may be depreciated using the straight-line method over the assets' expected lives. A method based on effective use may also be acceptable. In general, buildings are depreciated at an annual rate of 2%. However, a higher rate may be acceptable if it is established that, because of the materials used to construct the building, the expected useful life is less than 50 years. The law does not specify rates for movable assets. Intangible property may be depreciated only if it has a limited life based on its characteristics. Certain assets, such as goodwill and trade names, may not be depreciated.

Inflationary adjustment. Adjustment for inflation is allowed in accordance with the following rules:

- Inflation adjustment of new acquisitions and investments carried out from 1 January 2018 and onward.
- Application of an integral inflation adjustment mechanism for fiscal years beginning on or after 1 January 2018 if the variation of the Consumer Price Index supplied by the National Institute of Statistics and Censuses is higher than 100% for the 36-month period before the end of the fiscal period.

Relief for losses. Tax losses may be carried forward for five tax periods. Loss carrybacks are not permitted. Certain losses have a specific nature and can only offset the same type of income, such as losses from sales of shares and other types of securities, losses from foreign-source activities and losses from gaming activities.

Except for hedge transactions, losses resulting from the rights contained in derivative instruments or contracts may offset only the net income generated by such rights during the fiscal year in which the losses were incurred or in the following five fiscal years. For this purpose, a transaction or contract involving derivatives is considered a hedge transaction if its purpose is to reduce the impact of future fluctuations in market prices or fees on the results of the primary economic activities of the hedging company.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT), on goods delivered and services rendered in Argentina, on services rendered outside Argentina that are used or exploited in Argentina, and on imports	
Standard rate	21
Other rates	5/10.5/27

Nature of tax	Rate (%)
Tax on financial transactions; generally imposed on debits and credits with respect to checking accounts; a portion of the tax may be creditable against other taxes	
General rate	0.6
Other rates	0.05/0.075/0.1/ 0.25/0.5/1.2
Various local taxes on gross receipts, real estate and other items	Various
Social security taxes (including medical care contributions), on monthly salaries; paid by employer; a portion may be creditable against VAT; the creditable portion varies depending on where the employees render services	24/26.4
Export duties on goods; general rate; other rates apply to certain exports (oil, grains and others)	5
Tax on personal assets; imposed on all legal persons and individuals domiciled abroad holding ownership interests in Argentine companies; tax is calculated based on the equity value of the Argentine company; tax is paid by the Argentine company, but the company may recover the tax paid from the foreign shareholder	0.5

E. Miscellaneous matters

Foreign-exchange controls. From September 2019, the government has reintroduced certain foreign-exchange controls which are periodically reviewed and redefined.

Exporters must repatriate into Argentina the cash derived from exports of goods and services, among other items, within a specified time period.

Funds derived from loans granted from abroad must be settled in the Argentine foreign-exchange market in order to be able to make the repayment using the same mechanism.

Payment of debts to foreign parties can be routed through the foreign-exchange market subject to compliance with certain requirements.

Payments for imports of goods can be routed through the foreign-exchange market subject to certain conditions. In the case of payments for services rendered by nonresidents, prior clearance by the tax authorities is required through the Comprehensive System Monitoring Payments for Services Abroad (Sistema Integral de Monitoreo de Pagos al Exterior de Servicios, or SIMPES); in addition, prior Central Bank of Argentina approval is needed if the payment is made to a related party. Payment of dividends is also subject to the Central Bank of Argentina's approval. The Central Bank of Argentina's prior approval is also needed to access the foreign-exchange market to make investments abroad.

Interest deductibility limitation. Under general principles, transactions between related parties must be made on an arm's-length basis.

The Argentine income tax law establishes a limit for the deduction of interest arising from financial loans granted by related parties. The limit equals 30% of earnings before interest, taxes, depreciation and amortization (EBITDA) or a certain amount to be determined by the Executive Power (currently ARS1 million), whichever is higher. The limit each year is increased by the amount unused (if applicable) in the prior three years. In addition, if certain interest was not deductible in a given year due to the application of the limitation, it can be carried forward for five fiscal years. For this purpose, interest includes foreign-exchange differences (however, comprehensive inflationary adjustment applies).

The law provides exemptions from the deduction limit for certain situations (for example, the interest is derived on loans obtained by Argentine banks and financial trusts or the beneficiary of the interest has been subject to tax on such income in accordance with the Argentine income tax law). In addition, the limitation does not apply to situations in which it is proved that the ratio of interest to EBITDA of the Argentine borrower is equal to or lower than the same ratio for its economic group with respect to debt with unrelated lenders for the same fiscal year.

Transfer pricing. The Argentine law includes transfer-pricing rules that generally apply to transactions between related parties. In addition, transactions between unrelated parties may also be subject to these rules. Transactions with entities and individuals located in "non-cooperating" or "low- or no-tax" jurisdictions are deemed to be not carried out at arm's length.

In addition, the Argentine law includes rules on analyzing transactions involving the import or export of goods with the participation of a foreign intermediary that is not the actual importer at destination or exporter at origin, respectively, if at least one of the foreign parties involved (that is, the intermediary, importer or exporter) is a related party. In these cases, the law requires proof that the foreign intermediary's remuneration is in line with the risks it assumes, the functions it carries out and the assets involved.

The law provides for the following transfer-pricing methods:

- Comparable uncontrolled price method
- Resale price method
- Cost-plus method
- Profit-split method
- Transactional net margin method

For exports of goods with known prices and with the intervention of an intermediary that is related, or located in "non-cooperating" or "low- or no-tax" jurisdictions, the income tax law requires the Argentine exporter to file the agreements supporting the transactions with the federal tax authorities (Administración Federal de Ingresos Públicos, or AFIP). If the agreements are not filed, the Argentine-source income from the export is determined considering the known prices on the date the goods are loaded into the

transportation vehicle, with appropriate comparability adjustments, if applicable.

F. Treaty withholding tax rates

Some of Argentina's tax treaties establish maximum tax rates lower than those under general tax law. To benefit from a reduced treaty withholding tax rate, certain formal requirements must be met. The following table shows the lower of the treaty rate and the rate under domestic tax law.

	Dividends (a) %	Interest (c) %	Royalties (c) %
Australia	10/15 (b)	0/12	10/15
Belgium	10/15 (b)	0/12	3/5/10/15 (d)
Bolivia	0/7/35	15.05/35	21/28/31.5 (h)
Brazil	10/35 (b)	15	10/15 (e)
Canada	10/15 (b)	0/12.5	3/5/10/15 (d)
Chile	10/15 (b)	4/12/15	3/10/15
Denmark	10/15 (b)	0/12	3/5/10/15 (d)
Finland	10/15 (b)	0/15	3/5/10/15 (d)
France	15	15.05/20	18
Germany	15	10/15	15
Italy	15	15.05/20	10/18 (f)
Mexico	10/15 (b)	0/12	10/15
Netherlands	10/15 (b)	0/12	3/5/10/15 (d)
Norway	10/15 (b)	0/12	3/5/10/15 (d)
Qatar	5/10/15 (g)	0/12	10
Russian Federation	10/15 (b)	15	15
Spain	10/15 (b)	0/12	3/5/10/15 (d)
Sweden	10/15 (b)	0/12	3/5/10/15 (d)
Switzerland	10/15 (b)	0/12	3/5/10/15 (d)
United Arab Emirates	5/10/15 (g)	0/12	10
United Kingdom	10/15 (b)	0/12	3/5/10/15 (d)
Uruguay	0/7/35	15.05/35	21/28/31.5 (g)
Non-treaty jurisdictions	0/7/35	15.05/35 (f)	21/28/31.5 (g)

- (a) The rates shown in the table apply only if the corresponding domestic withholding rate is higher than the tax treaty rate. According to the domestic law, the dividend withholding tax rate is 7% for profits accrued during fiscal years starting from 1 January 2018. A 0% dividend withholding tax rate generally applies for profits accrued during previous fiscal years; however, in these cases, a 35% withholding tax (known as "equalization tax") may be triggered if the distribution exceeds the after-tax accumulated taxable income of the taxpayer.
- (b) These treaties establish maximum rates of 10% or 15%. The 10% rate applies if the beneficial owner of the dividend is a company that controls, directly or indirectly, at least 25% of the voting power of the payer. The 15% rate applies to other cases.
- (c) The rates listed are the lower of the treaty or statutory rates. For details concerning the domestic rates, see Section B.
- (d) In general, the rates apply to the following categories of payments:
- 3% for the use of, or right to use, news
 - 5% for the use of, or right to use, copyrights of literary, dramatic, musical or other artistic works (but not royalties with respect to motion picture films and works on film or videotape or other means of production for use in connection with television)

- 10% for the use of, or right to use, industrial, commercial or scientific equipment or patents, trademarks, designs, models, secret formulas or processes, or for the use of or information concerning scientific experience, including payments for the rendering of technical assistance
- 15% for other royalties

These categories may differ slightly from treaty to treaty.

- (e) The 15% rate applies to royalties for the use of, or right to use, trademarks. The 10% rate applies to other royalties, under certain conditions.
- (f) The 10% rate applies to royalties for the use of, or right to use, copyrights of literary, artistic or scientific works. The 18% rate applies to other royalties.
- (g) The 5% rate applies if the beneficial owner of the dividend is a government of the other contracting state. The 10% rate applies if the beneficial owner of the dividend is a company that controls, directly or indirectly, at least 25% of the voting power of the payer. The 15% rate applies to other cases.
- (h) For details concerning these rates, see Section B.

Because of the rapidly changing economic situation in Armenia, changes are expected to be made to the tax law of Armenia. As a result, readers should obtain updated information before engaging in transactions.

A. At a glance

Corporate Income Tax Rate (%)	18
Capital Gains Tax Rate (%)	18
Permanent Establishment Tax Rate (%)	18
Withholding Tax (%)	
Dividends	5
Interest	10
Royalties	10
Insurance Compensation, Reinsurance Payments and Income Received from Freight	5
Income from the Lease of Property, Capital Gains on Property (except Securities) and Other Passive Income	10
Capital Gains on Securities	0
Income from Rendering of Services	20
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

B. Taxes on corporate income and gains

Corporate income tax. Resident and nonresident entities pay corporate income tax in Armenia. Resident organizations are organizations that are state registered in Armenia. Nonresident organizations are organizations established in foreign countries. Resident entities are taxed on their worldwide income, which consists of income received from sources in and outside Armenia. Nonresident entities are taxed on Armenian-source income only.

Income earned through a permanent establishment in Armenia, net of tax-deductible expenses, is taxed at the regular corporate income tax rate of 18%. A permanent establishment is defined as

a fixed place of business activities in Armenia recognized by the tax authorities through which the enterprise carries on its business. It generally includes organizations or natural persons who represent foreign legal entities conducting commercial activities in Armenia. Domestic tax law and double tax treaties list activities that do not result in a taxable permanent establishment. Foreign legal entities deriving income from the source in Armenia without a permanent establishment are subject to withholding tax on their Armenian-source income at a rate of 5%, 10% or 20% (see the withholding tax rates in Section A).

Armenian law allows foreign investment in various forms, including investment through wholly or partially foreign-owned subsidiaries, share participations in joint stock companies and joint ventures with Armenian legal entities and citizens, permanent establishments and other types of presence.

Tax rates. The regular corporate income tax rate is 18%. For investment funds, the corporate income tax rate is 0.01% of net assets.

Capital gains. No separate capital gains tax is imposed in Armenia. Realized capital gains are included in taxable income and are subject to tax at the regular corporate income tax rate.

Realized capital losses can be carried forward together with other losses and be offset against taxable income of future tax years.

Administration. The tax year is the calendar year.

Both Armenian and foreign legal entities conducting business activities in Armenia through a permanent establishment must make advance payments of corporate income tax during the year. The amount payable is the lower of 20% of the amount of corporate income tax calculated for the preceding tax year or 2% of revenue received from the supply of goods, performance of works and/or provision of services during the preceding quarter. The advance payments must be made quarterly by the 20th day of the last month of each quarter.

If the total sum of advance payments exceeds the tax due for the tax year and if the taxpayer applies for a refund, the excess is refunded to the taxpayer. However, in practice, refunds are rare, and accordingly, taxpayers apply overpayments against future tax liabilities.

The annual corporate income tax calculation must be filed and submitted to the Tax Inspectorate by 20 April of the year following the tax year. The corporate income tax must be paid to the state budget by 20 April of the year following the tax year.

Fines are charged on late tax payments at a rate of 0.04% of the tax due for each day of delay, up to a maximum of 730 days. If the taxpayer fails to submit the corporate income tax declaration to the Tax Inspectorate by the due date, a penalty equal to 5% of the total amount of calculated tax is imposed on the taxpayer for each 15-day period. The total amount of the penalties cannot exceed the total amount of the principal tax liability. For the underreporting of taxable income, in addition to the collection of the underreported amount of tax, a penalty equal to 50% of the underreported amount is assessed to the taxpayer.

Corporate income taxpayers also submit annual information on the type of income, date and corporate income taxes withheld from income paid to state-registered companies in the member countries of the Commonwealth of Independent States. This information must be submitted to the Tax Inspectorate by 20 April of the year following the tax year.

Dividends. Dividend withholding tax at a rate of 5% is imposed on dividends paid from Armenian sources to individuals and nonresident legal entities.

For nonresident legal entities, dividends are considered to be paid on the date of the shareholders' decision on distribution of dividends from the reporting year's net profit. This rule applies to dividends attributable to periods after 1 January 2017.

Dividends paid to resident legal entities are not subject to withholding tax. Dividends received by resident taxpayers from participations in the equity of other legal entities or enterprises that do not have the status of a legal entity are not subject to tax.

Interest. Interest withholding tax at a rate of 10% is imposed on interest paid from Armenian sources to individuals and nonresident legal entities. Armenian legal entities receiving interest payments include such payments in their taxable income and are subject to tax on these payments at the normal corporate income tax rate.

Foreign tax relief. The amount of corporate income tax withheld from Armenian residents in foreign countries in accordance with the laws of the foreign countries is credited against the corporate income tax payable in Armenia. However, the amount of the credit may not exceed the amount of the corporate income tax payable in Armenia on the income received in the foreign country. If the amount of the credit exceeds the corporate income tax liability for the tax year, the excess amount may be credited against the corporate income tax in subsequent tax years.

C. Determination of taxable income

General. Taxable income is defined as a positive difference between gross income of the taxpayer and all deductions allowed by the law.

Gross income comprises all revenues of the taxpayer received in the reporting year, except for revenues that are not treated as income according to the law. Gross income includes the following:

- Trading income
- Capital gains
- Income from financial activities
- Gratuitously received assets and income from discounts or remissions of liabilities
- Other items of income

Income received in foreign currency is converted into drams at the daily exchange rate determined by the Central Bank of Armenia for the date of receipt of the income.

Deductible expenses include all documentary supported entrepreneurial expenses. However, certain expenses are nondeductible or partially nondeductible for tax purposes.

Nondeductible expenses include, among others, the following:

- Fines, penalties and other proprietary sanctions transferred to the state and municipal budgets or the funded pension system
- Assets provided, works performed and services provided free of charge and remitted (forgiven) debts
- Depreciation expenses of fixed assets owned by the taxpayer that are provided under leases (in their various forms) if the lease contract stipulates that the right of ownership to the leased property can pass to the lessee on expiration of the term of the contract or prior to such expiration
- Expenses related to the obtaining of income that is deductible from gross income
- Amount of value-added tax (VAT), excise tax and environmental tax that is offset (deducted) in accordance with the procedure established by the Republic of Armenia Tax Code
- The amount of VAT and excise tax calculated and paid in accordance with the procedure established by the Republic of Armenia Tax Code for goods delivered, works performed or services provided free of charge or at a substantially lower value
- For taxpayers other than banks and credit organizations, interest paid on loans and borrowings if such borrowings or loans are provided by the taxpayers to third parties free of interest
- Payments made by taxpayers for leased assets if the assets are provided by them to third parties for free-of-charge use

Partially nondeductible expenses include, among others, the following:

- Expenses for business trips outside Armenia that exceed 5% of the gross income for the tax year. The limit of 5% is not taken into account in the tax year of registration.
- Representative expenses exceeding 0.5% (but not more than AMD5 million) of the gross income for the tax year. The limit of 0.5% is not taken into account in the tax year of registration.
- Fees paid by the taxpayer for management services received from nonresident companies and individuals not having a permanent establishment in Armenia, exceeding 2% of the taxpayer's gross income for the reporting year. This measure does not apply to management services rendered to resident companies by their nonresident founders if the companies are engaged in innovative activities in the information technology and computer technique fields, as well as management services rendered to resident companies within the framework of international credit (grant) agreements.
- Payments made by the employer for an employee that are within the terms of voluntary pension insurance in accordance with the legislation and that exceed 7.5% of the employee's remuneration.
- Amounts of financial aid, food provided to individuals, costs for organization of social and cultural events and similar expenses, exceeding 0.25% of the taxable income for the tax year. If there is no gross income during the tax year, the limit is 1% of the total salaries and payments accrued during the tax year.

- Interest paid on loans and borrowings to the extent that it exceeds twice the bank interest rate defined by the Central Bank of Armenia (currently the deduction is limited to a rate of 24%).
- For taxpayers other than banks and credit organizations, the amount of interest payable on borrowings from entities other than banks and credit organizations in excess of twice the positive amount of equity on the last day of the tax year.
- For banks and credit organizations, the amount of interest payable on borrowings from entities other than banks and credit organizations in excess of nine times the positive amount of equity on the last day of the tax year.
- For taxpayers other than banks and credit organizations, the part of interest paid on loans and borrowings that exceeds the amount of interest on loans and borrowings received by them from lending the same amount to other taxpayers.
- The part of payments made by taxpayers for leased assets that exceeds the payments received by them for providing the same assets to other taxpayers under subleases.

To calculate taxable income, the taxpayer must account for income and expenses on an accrual basis. Income and expenses are accounted for, respectively, from the moment of the acquisition of the right to receive such income or to recognize the expenses, regardless of the actual period of the deriving of such income or the making of such payments.

Inventories. Inventories are valued at acquisition cost. Costs for storage and transportation must be included in the value of inventory. The first-in, first-out (FIFO) method must be used to value inventory.

Provisions. Bad debts are deductible in accordance with the procedure established by the government of Armenia. Banks, lending organizations, investment companies and insurance companies may deduct bad debts in accordance with the procedure established jointly by the authorized body of the government of Armenia and the Central Bank of Armenia.

In addition, the gross income of banks, lending organizations, stock funds, investment companies or insurance companies may be reduced by a reserve for possible losses in accordance with the procedure established jointly by the authorized body of the government of Armenia and the Central Bank of Armenia.

Tax depreciation. Depreciation (amortization) allowances for fixed and intangible assets are deductible for tax purposes in accordance with the terms and conditions provided by the Republic of Armenia Tax Code.

The annual amount of depreciation (amortization) allowances of fixed and intangible assets is calculated by dividing the acquisition cost or revalued cost (the revaluation is carried out according to the procedure established by the law) of fixed and intangible assets by the number of years in the depreciation period for the

appropriate group of fixed assets or for intangible assets. The following are the minimum depreciation periods.

Group	Assets	Minimum depreciation period (years)
1	Buildings and constructions of hotels, boarding houses, rest homes, sanitariums and educational institutions	10
2	Other buildings, constructions and transmission devices	20
3	Production equipment	5
4	Robot equipment and assembly lines	3
5	Computational and communication devices and computers	1
6	Other fixed assets, including growing cattle, perennial plants, and investments intended for improving the land	8

For purposes of the determination of taxable income, taxpayers may choose a depreciation period for fixed assets other than the periods mentioned in the above table, but the chosen period may not be less than one of the abovementioned periods for the appropriate group.

Fixed and intangible assets with a value up to AMD50,000 are depreciated in the tax year of their acquisition.

Intangible assets are amortized over their useful economic lives. If it is impossible to determine the useful life of an intangible asset, the minimum amortization period for the asset is set at 10 years, but it may not exceed the period of the taxpayer's activity.

Notwithstanding the abovementioned rules, taxpayers importing, acquiring, constructing or developing fixed assets between 1 July 2020 and 31 December 2021 may set the depreciation period at their discretion, but not less than one year.

Under the law, land cannot be depreciated.

Relief for losses. Enterprises may carry forward a loss incurred in a tax year to the following five years. Losses may not be carried back.

Groups of companies. Armenian law does not contain any measures allowing members of a group to offset profits and losses.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT); imposed on the delivery of goods and rendering of services (including free of charge or partially free of charge), the importation of goods through the "Release for Domestic Consumption" customs	

Nature of tax	Rate (%)
procedure and the importation of goods from the Eurasian Economic Union, with the exception of cases specified by law; reverse-charge VAT is imposed on entrepreneurial activities subject to VAT that are performed in Armenia by foreign entities (including the import of goods to be used by such entities)	0/20
Excise tax; imposed on certain goods (tobacco products, alcoholic beverages, petrol, diesel fuel and motor oils imported or produced in Armenia as well as natural gas filled in gas stations); the tax is calculated as a specified amount per unit of the volume, weight or quantity of goods subject to excise tax	Various
Real estate tax; generally imposed at local (municipal) level; applies to: Buildings and constructions; tax base is cadastral value (approximately the market value)	Various
Land; tax base is cadastral value (approximately the market value) or calculated net income	0.25 to 15
Vehicles tax; tax base is traction-motor power	Various

E. Foreign-exchange controls

The Armenian currency is the dram (AMD). The dram is a non-convertible currency outside Armenia. Enterprises may buy or sell foreign currencies through specialized entities in Armenia (banks, branches of foreign banks operating in Armenia, credit organizations, payment and settlement organizations, foreign-currency dealers and brokers licensed by the Central Bank of Armenia, foreign-currency exchange offices and foreign-currency auction organizers).

Armenia does not impose restrictive currency-control regulations. Individuals and enterprises may open bank accounts abroad without any restriction. In general, all transactions performed in Armenia between resident legal entities or individuals must be performed in Armenian drams. Transactions between resident legal entities or private entrepreneurs and nonresident legal entities or private entrepreneurs may be conducted in other currencies.

F. Treaty withholding tax rates

Armenia has entered into tax treaties with 49 jurisdictions. The following table lists the withholding tax rates under these treaties. In general, if the withholding tax rate provided in a treaty exceeds the rate provided by the Republic of Armenia Tax Code, the domestic rate applies.

	Dividends %	Interest (1) %	Royalties %
Austria	5/15 (a)	0/10 (v)	5
Belarus	10/15 (b)	10	10
Belgium	5/15 (a)	0/10 (v)	8
Bulgaria	5/10	5/10 (ff)	5/10 (gg)
Canada	5/15 (d)	10	10
China Mainland	5/10 (g)	10	10

	Dividends %	Interest (1) %	Royalties %
Croatia	0/10 (h)	10	5
Cyprus	0/5 (x)	5	5
Czech Republic	10	5/10 (e)	5/10 (f)
Denmark	0/5/15 (jj)	0/5/10 (kk)	5/10 (ll)
Estonia	5/15 (i)	10	10
Finland	5/15 (i)	5	5/10 (j)
France	5/15 (k)	0/10 (v)	5/10 (l)
Georgia	5/10 (g)	10	5
Germany	7/10 (hh)	5	6
Greece	10	10	5
Hungary	5/10 (g)	5/10 (ii)	5
India	10	10	10
Indonesia	10/15 (d)	0/10 (q)	10
Iran	10/15 (m)	10	5
Ireland	0/5/15 (bb)	5/10 (cc)	5
Italy	5/10 (n)	0/10 (w)	7
Kazakhstan	10	10	10
Kuwait	5	5	10

Lebanon	5/10 (g)	8	5
Lithuania	5/15 (i)	10	10
Luxembourg	5/15 (a)	10	5
Malta	5/10 (mm)	5	5
Moldova	5/15 (o)	10	10
Netherlands	0/5/15 (p)	0/5 (v)	5
Poland	10	5	10
Qatar	5/10 (q)	5	5
Romania	5/10 (r)	10	10
Russian Federation	5/10 (s)	10	0
Serbia	8	8	8
Singapore	0/5 (nn)	5	5
Slovak Republic	5/10 (dd)	10	5
Slovenia	5/10 (g)	10	5
Spain	0/10 (y)	5	5/10 (z)
Sweden	0/5/15 (ee)	5	5
Switzerland	5/15 (t)	0/10 (v)	5
Syria	10	10	12
Tajikistan	10	10	10
Thailand	10	10	15
Turkmenistan	5/15 (u)	10	10
Ukraine	5/15 (u)	10	0
United Arab Emirates	3	0	5
United Kingdom	0/5/10/15 (aa)	5	5
Non-treaty jurisdictions	5	10	10

- (1) In several treaties, a 0% rate applies to interest paid to governmental entities, political or administrative-territorial subdivisions, local authorities, central banks or financial institutions owned or controlled by the government. This provision is not reflected in the rates shown in the table.
- (a) The 5% rate applies if the actual owner of the dividends is a company (other than a partnership) that directly holds at least 10% of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (b) The 10% rate applies if the actual owner of the dividends is a company (other than a partnership) that directly holds at least 30% of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (c) The 5% rate applies if the actual owner of the dividends is a company that has invested in the payer more than USD100,000 (or the equivalent amount in Armenian currency). The 10% rate applies in all other cases.

- (d) The 5% rate applies if the beneficial owner of the dividends is a company that holds directly at least 25% of the capital of the company paying the dividends and if the capital invested by the beneficial owner exceeds USD100,000 (or the equivalent amount in Armenian currency) on the date of declaration of the dividends. The 15% rate applies in all other cases.
- (e) The 5% rate applies to interest on loans or credits granted by banks. The 10% rate applies in all other cases.
- (f) The 5% rate applies to royalties for the use of, or the right of use, literary, artistic or scientific works, including television or radio content (films and compact discs). The 10% rate applies in all other cases.
- (g) The 5% rate applies if the actual owner of the dividends is a company (other than a partnership) that directly holds at least 25% of the capital (assets) of the company paying the dividends. The 10% rate applies in all other cases.
- (h) The 0% rate applies if the actual owner of the dividends is a company that directly or indirectly holds at least 25% of the capital of the company paying the dividends for a minimum period of two years before the payment of the dividends and if the dividends are not subject to tax in Croatia. The 10% rate applies in all other cases.
- (i) The 5% rate applies if the actual owner of the dividends is a company (other than a partnership) that directly holds at least 25% of the assets of the company paying the dividends. The 15% rate applies in all other cases.
- (j) The 5% rate applies to the royalties for the use of, or the right of use, computer software, patents, trademarks, designs or models, plans or secret formulas or processes, or for information concerning industrial, commercial or scientific experience (know-how). The 10% rate applies in all other cases.
- (k) The 5% rate applies if the actual owner of the dividends is a company that directly or indirectly holds at least 10% of the assets of the company paying the dividends. The 15% rate applies in all other cases.
- (l) The 5% rate applies to the royalties for the use of, or the right to use, copyrights. The 10% rate applies in all other cases.
- (m) The 10% rate applies if the actual owner of the dividends is a company (other than a partnership) that owns at least 25% of the assets of the company paying the dividends. The 15% rate applies in all other cases.
- (n) The 5% rate applies if the actual owner of the dividends is a company that directly holds at least 10% of the capital of the company paying the dividends for a minimum period of 12 months before the date of declaration of the dividends and if the capital invested by the beneficial owner exceeds USD100,000 or the equivalent amount in Armenian currency. The 10% rate applies in all other cases.
- (o) The 5% rate applies if the actual owner of the dividends is a company (other than a partnership) that holds at least 25% of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (p) The 0% rate applies if the profits out of which the dividends are paid have been effectively taxed at the normal rate for profits tax and if the dividends are exempt from tax in the hands of the company receiving such dividends. The 5% rate applies if the actual owner of the dividends is a company (other than a partnership) that directly holds at least 10% of the capital of the company paying the dividends. The 15% rate applies to dividends in all other cases.
- (q) The 5% rate applies if the capital invested by the actual owner of the dividends exceeds USD100,000. The 10% rate applies in all other cases.
- (r) The 5% rate applies if the actual owner of the dividends is a company that directly holds at least 25% of the assets of the company paying the dividends. The 10% rate applies in all other cases.
- (s) The 5% rate applies if the actual owner of the dividends is a company that directly holds at least 25% of the share capital of the company paying the dividends. The 10% rate applies in all other cases.
- (t) The 5% rate applies if the actual owner is a company (other than a partnership) that directly holds at least 25% of the capital of the company paying the dividends and if the capital invested by the beneficial owner exceeds CHF200,000 (or the equivalent amount in Armenian currency) on the date of receipt of the dividends. The 15% rate applies in all other cases.
- (u) The 5% rate applies if the actual owner of the dividends is a company that owns at least 25% of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (v) The 0% rate applies to interest connected to sales on credit of industrial, commercial or scientific equipment or business assets, and to interest on loans granted by banking enterprises.
- (w) The 0% rate applies to the interest on loans granted by banking enterprises. The 10% rate applies in all other cases.
- (x) The 0% rate applies if the capital invested by the actual owner of the dividends exceeds EUR150,000. The 5% rate applies in all other cases.

- (y) The 0% rate applies if all of the following conditions are satisfied:
- The beneficial owner of the dividends is a resident of the other contracting state.
 - The beneficial owner of the dividends has held, directly or indirectly, at least 25% of the capital of the company paying the dividends for at least two years before the date of such payment.
 - Such dividends are not liable to profit tax in the other contracting state.
- (z) The 5% rate applies to royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films or films or tapes used for radio or television broadcasting. The 10% rate applies in all other cases.
- (aa) The 0% rate applies if the beneficial owner of the dividends is a pension scheme. The 5% rate applies if the beneficial owner of the dividends satisfies all of the following conditions:
- It is a company that is a resident of the other contracting state.
 - It holds, directly or indirectly, at least 25% of the share capital of the company paying the dividends at the date of payment of the dividends.
 - It has invested at least GBP1 million (or the equivalent amount in any other currency) in the share capital of the company paying the dividends at the date of payment of the dividends.
- The 15% rate applies if dividends are paid out of income (including gains) derived directly or indirectly from immovable property within the meaning of Article 6 by an investment vehicle that distributes most of this income annually and if such vehicle's income from this immovable property is exempted from tax. The 10% rate applies in all other cases.
- (bb) The 0% rate applies if the beneficial owner is a company (other than a partnership) that satisfies the following conditions:
- It holds directly at least 25% of the capital of the company paying the dividends.
 - It owned the holding for a period of at least two years before it made the claim for the 0% rate.
 - In the contracting state in which the company is resident, the company is relieved from tax on dividends by an exemption or would, but for this measure in the tax treaty, be entirely relieved by a credit for tax paid with respect to dividends paid by the company paying the dividends.
- The 5% rate applies if the beneficial owner is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (cc) The 5% rate applies if interest is paid with respect to loans granted by banking enterprises. The 10% rate applies in all other cases.
- (dd) The 5% rate applies if the actual owner of the dividends is a company (other than a partnership) that directly holds at least 10% of the capital of the company paying the dividends. The 10% rate applies in all other cases.
- (ee) The 0% rate applies if the beneficial owner is a company (other than a partnership) that satisfies the following conditions:
- It holds at least 25% of the capital or the voting power of the company paying the dividends.
 - It has owned the holding for a period of at least two years before it made the claim.
 - The dividends are exempt from tax in its hands.
- The 5% rate applies if the beneficial owner is a company (other than a partnership) that holds at least 10% of the capital or the voting power of the company paying the dividends. The 15% rate applies in all other cases.
- (ff) The 5% rate applies to interest on loans or credit granted by banks or financial institutions. The 10% rate applies in all other cases.
- (gg) The 5% rate applies to royalties received as consideration for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films, and films or tapes for television or radio broadcasting. The 10% rate applies in all other cases.
- (hh) The 7% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that directly holds at least 25% of the capital of the company paying the dividends. The 10% rate applies in all other cases.
- (ii) The 5% rate applies if the interest is paid in connection with a loan or a credit granted by a bank. The 10% rate applies in all other cases.
- (jj) The 0% rate applies if either of these two conditions is satisfied:
- The beneficial owner is a company that holds directly at least 50% of the capital of the company paying the dividends and that has invested more than EUR2 million or its equivalent in Armenian or Danish currency in the capital of the company paying the dividends at the date of payment of the dividends.

- The beneficial owner is the other contracting state or the central bank of that other state, or any national agency or any other agency (including a financial institution) owned by the government of that other state.

The 5% rate applies if the beneficial owner is a company that holds directly at least 10% of the capital of the company paying the dividends and that has invested more than EUR100,000 or its equivalent in Armenian or Danish currency in the capital of the company paying the dividends at the date of payment of the dividends. The 15% rate applies in all other cases.

- (kk) The 0% rate applies if the interest is paid to a contracting state or a local authority thereof, including the central bank of that other state, or any institution, agency or fund owned by the government of a contracting state. The 5% rate applies if the interest is paid with respect to a loan of any kind granted by a banking enterprise. The 10% rate applies in all other cases.
- (ll) The 5% rate applies to royalties for the use of, or the right to use, computer software; patents; trademarks; designs, models or plans; any secret formulas or processes; or for information concerning industrial, commercial or scientific experience (know-how). The 10% rate applies to royalties for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films, or films or tapes for television or radio broadcasting.
- (mm) The 5% rate applies if the beneficial owner is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends and has invested at least EUR1,500,000 (or the equivalent amount in any other currency) in the share capital of the company paying the dividends at the date of payment of the dividends. The 10% rate applies in all other cases.
- (nn) The 0% rate applies if the beneficial owner of the dividends is a company that holds directly at least 25% of the capital of the company paying the dividends or has invested at least USD300,000 (or the equivalent amount in any other currency) in the share capital of the company paying the dividends. The 5% rate applies in all other cases.

A. At a glance

Corporate Income Tax Rate (%)	25
Capital Gains Tax Rate (%)	25
Branch Tax Rate (%)	25
Withholding Tax (%)	
Dividends	0/5/10 (a)
Interest	0
Royalties from Patents, Know-how, etc.	0
Foreign-Exchange Commission	1.3 (b)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) The 0% rate applies to dividends paid to resident holding companies. The 5% rate applies to dividends paid to nonresident publicly traded companies and to dividends paid on qualifying shareholdings under applicable tax treaties. The 10% rate applies in all other circumstances.
- (b) A foreign-exchange commission (FEC) is imposed on all payments by residents to nonresidents. The FEC is withheld by banks on behalf of the Central Bank of Aruba or paid directly to the Central Bank of Aruba by residents.

B. Taxes on corporate income and gains

Corporate income tax. Corporate income tax is levied on resident and nonresident entities. A domestic entity is an entity that is established in Aruba or incorporated under Aruban law.

Tax is levied on total profits earned from all sources during the company's accounting period. "Profit" means the total of net gains, under any name or in any form. Branches of foreign entities are

taxed on Aruban-source income, such as profits earned through a permanent establishment.

Permanent establishment. A permanent establishment is deemed to exist in Aruba in the case of the following:

- A permanent representative in Aruba.
- A foreign enterprise that builds, installs, maintains, cleans or repairs capital assets on Aruba for more than 30 days. These 30 days include, among others, days spent on the technical preparation and cleaning up of the site.
- Foreign shareholders (not natural persons) of Aruba fiscal transparent companies with real economic presence in Aruba.

Rate of corporate income tax. The corporate income tax rate is 25%.

Special tax regimes for certain companies. Special tax regimes available for certain companies in Aruba are described below.

Free-Zone Companies. Companies operating in the free-zone are subject to corporate income tax at a rate of 2% on profits derived from their qualifying activities and to a free-zone facility charge of up to 1% on their annual gross turnover. The free-zone is a defined territory in which no import duties are levied if the goods are not imported for use in the domestic market. On approval, services can be rendered outside of the defined territory. The import duties exemption mentioned above does not apply for service companies established outside the defined territory.

The free-zone law was amended as of 1 January 2020. The following are highlights of the amendments:

- Only services designated in a state decree can be rendered by a free-zone company. No such (draft) decree had been published at the time of writing.
- In addition to financial services (already prohibited prior to 1 January 2020), the following services cannot be rendered by a free-zone company:
 - Notary, lawyer, accountant, tax advisors and similar services
 - Intellectual property (IP) activities
 - Other services designated in a state decree (however, no such [draft] decree had been published at the time of writing)
- Qualifying services can be rendered to both foreign and local customers (so-called “ring-fencing” has been eliminated) at the corporate income tax of 2%.
- Companies engaging in the following geographically mobile activities must perform their so-called “core income generating activities” in Aruba with sufficient substance:
 - Shipping
 - Head office
 - Pure holding
 - Distribution and other services
 - Other service-related services

A grandfathering period of up to 30 June 2021 is applicable for free-zone service providers performing IP activities as of 1 September 2018 and other free-zone service providers performing non-IP activities as of 15 November 2018.

In addition, the following benefits are available to free-zone companies:

- Exemption from turnover taxes with respect to the supply of goods outside Aruba and the rendering of services to persons outside Aruba
- On request, exemption from the FEC for payments abroad that are not related to local sales
- A 0% dividend withholding tax rate

Imputation Payment Companies. Imputation Payment Companies (IPCs) were subject to the regular corporate tax rate (see *Rates of corporate income tax*). Under the IPC regime, part of the corporate income tax paid by a company was remitted to its shareholders in the form of an imputation payment. The IPC regime was available to all companies conducting qualifying activities such as hotel, financing, licensing or investment activities. The IPC regime was abolished as of 2016. However, existing IPCs can continue making use of this regime until 2026.

Special Purpose Companies. Special Purpose Companies (SPCs) were introduced as of 2016. In principle, qualifying SPCs are subject to a corporate income tax rate of 10%. However, for companies performing qualifying hotel operations, the applicable corporate tax rate can be 10%, 12% or 15%. In addition, SPCs are exempt from dividend withholding tax. SPCs may engage only in the following qualifying activities (in some cases, they must meet certain additional requirements):

- Hotel operations
- Aviation operations
- Shipping operations
- Generation of sustainable energy
- Scientific or cultural activities that enhance the knowledge economy
- Financing that is different from the financing offered by credit institutions
- Making portfolio investments (other than in real estate)
- Holding of shares and participation rights
- Primary sector operations (agriculture, fishing, beekeeping and livestock)
- Medical tourism
- Rehabilitation centers
- Sales of sustainable means of transportation with no or low CO₂ emissions
- Tech startups

As of 1 January 2021, SPCs performing the abovementioned qualifying activities are prohibited from deriving income from IP activities. Furthermore, SPCs engaging in the following geographically mobile activities must perform as of 1 January 2021 their so-called “core income generating activities” in Aruba with sufficient substance:

- Shipping
- Holding
- Financing
- Asset management

A grandfathering period of up to 1 January 2023 is applicable for SPCs whose activities and assets in terms of nature and size existed already on 15 November 2018.

Exempt Companies. An Exempt Company is exempt from corporate income tax and withholding tax on dividends paid if it performs one of the following activities:

- Financing (if the company does not qualify as a credit institution)
- Investing, other than in real estate
- Holding of shares and participation rights
- Insuring special entrepreneurial risks (activities of captive insurance companies)

As of 1 January 2020, Exempt Companies performing the above-mentioned qualifying activities are prohibited from deriving income from IP activities. In addition, Exempt Companies engaged in the abovementioned geographically mobile activities must perform as of 1 January 2020 their so-called “core income generating activities” in Aruba with sufficient substance. A grandfathering period of up to 1 July 2021 is applicable for Exempted Companies whose activities and assets in terms of nature and size existed already on 15 November 2018.

Fiscal transparency. Aruban limited liability companies can opt for fiscal transparency for Aruban corporate income tax and dividend withholding tax purposes within one month after incorporation. If fiscal transparency is granted, the limited liability company is treated as a partnership for Aruba income tax, corporate income tax and dividend withholding tax purposes; that is, only the partners are taxed in Aruba on Aruban-source income, unless the entity loses its fiscal transparency status.

As of 9 April 2019, all fiscal transparent entities are required to have real economic presence in Aruba (also referred to as “substance requirements”) and as a result have a taxable presence in Aruba. Fiscal transparent companies that existed prior to 9 April 2019 will have until 1 January 2022 to comply with the new real economic presence (substance) requirements.

Fiscal transparent companies engaged certain designated activities must now perform their so-called “core income generating activities” in or from Aruba with sufficient substance. The new substance requirements apply to the following designated geographically mobile activities:

- Head office activities
- Insurance
- Distribution and other services
- Shipping
- Financing and leasing
- Holding
- Asset management
- Banking
- IP activities (fiscally transparent companies engaged in certain so-called “enhanced risk IP activities” have an enhanced burden to prove that their income relates to activities performed in or from Aruba)

The existence of the “core income generating activities” in Aruba may also be determined on a group level, meaning that the required activities can be outsourced to affiliated entities established in Aruba.

If the new substance requirements are not met in a certain year, the fiscal transparent company will no longer be treated as a fiscal transparent company as of that year. Consequently, the formerly fiscal transparent company will become subject to profit and dividend withholding tax in Aruba.

Fiscal transparent companies are required to annually report their financial statements and the identity of their shareholder(s) to the tax authorities within six months after the end of their financial year. Noncompliance with this requirement may result in an administrative fine of a maximum AWG10,000, a monetary fine of AWG25,000, incarceration of a maximum of six months or a loss of the fiscal transparent status.

It is possible to obtain an advance ruling from the local tax authorities on the treatment of the local presence.

Branch profits tax. Branches of foreign companies are taxed at the same rate as resident companies. No additional withholding taxes are imposed on remittances of profits.

Capital gains. Capital gains are taxed as ordinary income. However, certain capital gains are exempt from corporate income tax under the participation exemption (see *Participation exemption*).

Administration. In principle, the corporate income tax return for the preceding accounting period must be filed and the corresponding corporate income tax due must be simultaneously paid within five months after the end of the accounting period.

Dividends. A 10% withholding tax is imposed on dividends distributed to nonresidents. The rate is reduced to 5% for dividends distributed to publicly traded companies. A 0% rate applies to dividends distributed to resident companies that qualify for the benefits of the participation exemption.

The Tax Regulation for the Kingdom of the Netherlands provides for special dividend withholding tax rates (see Section E).

Participation exemption. Aruban resident companies are exempt from corporate income tax on dividends and capital gains derived from shares with respect to qualifying participations. A qualifying foreign participation must satisfy both of the following conditions:

- The shares must not be held as inventory or as a portfolio investment.
- The participation must be subject to a tax on profits.

Foreign tax relief. Foreign tax relief is available through the Tax Regulation for the Kingdom of the Netherlands. Foreign tax relief is also available under the state decree for the avoidance of double taxation.

C. Determination of trading income

General. Commercial profits must be calculated in accordance with “sound business practice” and generally accepted accounting standards.

Inventories. Inventories are generally valued using the historical-cost, first-in, first-out (FIFO) or weighted average methods.

Depreciation. Depreciation may be calculated by the straight-line, declining-balance or flexible methods.

D. Miscellaneous matters

Foreign-exchange controls. The Central Bank of Aruba regulates the foreign-exchange market and carries out the necessary transactions as executor of exchange policy. Remittances abroad require an exchange license issued by the Central Bank of Aruba.

Debt-to-equity rules. Aruba does not impose a debt-to-equity ratio.

Controlled foreign companies. Aruba does not have specific controlled foreign company legislation. However, numerous measures limit tax deductions related to intercompany transactions that are not at arm’s length and intercompany transactions with low-taxed entities.

Transfer pricing. If a company or individual participates, directly or indirectly, in the management, supervision or the capital of two or more corporate entities, the conditions that apply to the supply of goods and the rendering of services between these related entities must be at arm’s length. These conditions are similar to the conditions that would have applied in transactions with unrelated parties. Information to substantiate arm’s-length transactions must include, among other items, the following:

- The agreement between the entities
- Transfer-pricing method that was chosen and why it was chosen
- How the consideration was determined

Country-by-Country Reporting. Local legislation implementing Country-by-Country Reporting (CbCR) obligations and additional transfer-pricing documentation requirements has been enacted as of 1 January 2020. The Country-by-Country (CbC) report is applicable to Aruba tax resident entities that are members of a multinational enterprise (MNE) group with a consolidated group turnover exceeding AWG1.5 billion (approximately USD833 million) in the fiscal year preceding the fiscal year to which the CbC report applies. In addition, a group entity of an MNE that is tax resident in Aruba should notify the tax authorities by the last day of the financial year of the MNE about the identity and tax residency of the CbC reporting entity.

Aruba tax resident entities of an MNE group are also required to have a master file and local file. This requirement only applies to Aruba tax resident entities of an MNE group that have a consolidated group turnover exceeding AWG100 million (approximately USD56 million) in the fiscal year preceding the year to which the tax return applies. The qualifying MNE group entity should have the master file and local file available at the level of the Aruba entity at the moment of filing the tax return. The Aruba tax authorities can request these files from the Aruba entity.

Noncompliance with the abovementioned transfer-pricing documentation requirements and the obligations to hold a master file and/or a local file may lead to the following:

- A reversal of the burden of proof
- A monetary fine up to AWG25,000
- Criminal charges (including a fine or imprisonment)
- Payment of the amount of taxes that have not been collected as a result of the noncompliance

E. Tax treaties

Provisions for double tax relief are included in the Tax Regulation for the Kingdom of the Netherlands. These provisions avoid double taxation between the countries of the Kingdom of the Netherlands (Aruba, Curaçao, the Netherlands [including Bonaire, Sint Eustatius and Saba; these islands are known as the BES-Islands] and Sint Maarten) regarding taxes on income, capital and other items.

Under the Tax Regulation for the Kingdom of the Netherlands, the general withholding tax rate of 10% on dividend distributions from an entity resident in Aruba may be reduced to the following rates:

- 7.5% if the recipient of the dividends is a company that has capital divided in shares and that has a share interest in the nominal paid-up capital of the Aruba entity of at least 25%
- 5% if such recipient of the dividends is also subject to tax on profit at a rate of at least 5.5%

Effective from 10 October 2010, the Netherlands Antilles (which consisted of five island territories in the Caribbean Sea) was dissolved as a country. As a result, the island territories of Curaçao and St. Maarten became autonomous countries within the Dutch Kingdom. The island territories of Bonaire, St. Eustatius and Saba (BES-Islands) have become a part of the Netherlands as extraordinary overseas municipalities.

The Tax Regulation for the Kingdom of the Netherlands remains in place until bilateral tax treaties have been concluded between the countries in the Dutch Kingdom.

Aruba has entered into tax information exchange agreements with Antigua and Barbuda, Argentina, Australia, the Bahamas, Belgium, Bermuda, the British Virgin Islands, Canada, the Cayman Islands, the Czech Republic, Denmark, the Faroe Islands, Finland, France, Germany, Greenland, Iceland, Mexico, Norway, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines, Spain, Sweden, the United Kingdom and the United States.

Aruba is recognized by the Organisation for Economic Co-operation and Development as a jurisdiction that has substantially implemented the internationally agreed tax standard and, as such, is approved-listed.

Interest Paid by Australian Branch of Foreign Bank to Parent	5 (f)
Interest (Debentures, State and Federal Bonds and Offshore Banking Units)	0 (g)
Royalties from Patents, Know-how, etc.	30 (h)
Construction and Related Activities	5 (i)
Fund Payments from Managed Investment Trusts	15 (j)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	Limited (k)
Carryforward	Indefinite

- (a) For the 2021-22 income year, a 25% company tax rate applies to eligible companies with less than AUD50 million of turnover.
- (b) Franking of dividends is explained in Section B.
- (c) This is a final tax that is imposed on payments to nonresidents only. A reduced rate (in recent treaties, reduced rates typically are 0%, 5% or 15%, depending on the level of ownership) applies to residents in treaty countries.
- (d) An exemption from dividend withholding tax applies to the part of the unfranked dividends that is declared in the distribution statement to be conduit foreign income.
- (e) In general, this is a final withholding tax that is imposed on payments to nonresidents only. However, withholding tax is imposed in certain circumstances on interest paid to residents carrying on business overseas through a

- permanent establishment (branch). Modern Australian tax treaties exempt government and unrelated financial institutions from withholding tax.
- (f) Interest paid by an Australian branch of a foreign bank to its parent is subject to a rate of 5% on the notional interest rate based on the London Interbank Offered Rate (LIBOR). The Australian Taxation Office (ATO) has issued a discussion paper on the tax implications from transitioning from the use of LIBOR (and other IBOR rates) to alternative risk-free rates; however, no law changes have been proposed yet.
 - (g) Unilateral exemptions from interest withholding tax are provided for certain publicly offered debentures, for state and federal government bonds and for offshore borrowing by offshore banking units (OBUs). Concessional tax treatment for OBUs will be removed from 2023-24.
 - (h) In general, this is a final withholding tax imposed on royalties paid to non-residents. A reduced rate may apply to residents of treaty countries (the rate is 5% in recent treaties).
 - (i) The filing of an Australian tax return to obtain a refund may be required if this withholding results in an overpayment of tax. A variation of the rate to mitigate the adverse cash flow impact is available to certain taxpayers that have previously filed tax returns in Australia.
 - (j) Managed investment trusts that hold only energy-efficient commercial buildings constructed on or after 1 July 2012 may be eligible for a 10% withholding tax rate.
 - (k) A new temporary tax loss carryback measure in 2020 provides for a tax offset. It is calculated based on the ability to notionally carry back eligible tax losses incurred in the 2020, 2021, 2022 or 2023 income years to offset taxable income in 2019 or later years. Eligible entities must meet all of the following conditions:
 - They must have aggregate turnover of less than AUD5 billion in the 2021, 2022 or 2023 income year in which the carryback offset is being claimed.
 - They must incur an eligible tax loss in the 2020, 2021, 2022 or 2023 income year.
 - They must have paid tax net of tax offsets in 2019 or a subsequent income year.
 - They must have sufficient franking credits at the end of the 2021, 2022 or 2023 income year in which they are claiming the carry back tax offset.

B. Taxes on corporate income and gains

Corporate income tax. An Australian resident corporation is subject to income tax on its non-exempt worldwide income. A nonresident corporation is subject to Australian tax only on Australian-source income.

Corporations incorporated in Australia are residents of Australia for income tax purposes, as are corporations carrying on business in Australia with either their central management and control (CMAC) in Australia or their voting power controlled by Australian residents.

Current guidance from the Australian Taxation Office (ATO) suggests that foreign companies with Australian CMAC might also be carrying on a business in Australia. Extensive scenarios cover the application of the CMAC test for foreign-incorporated companies; relevant factors include the high-level decision-making process of the boards, virtual decision-making and evidence of the decision-making.

In response to the uncertainty created by the ATO's interpretation, the government had committed to amend the law to treat a company incorporated offshore as an Australian tax resident if both the company's core commercial activities are undertaken in Australia and CMAC is in Australia, creating a "significant economic connection to Australia." The slow progress of developing enabling legislation is creating uncertainty, but taxpayers are to have the option of applying the new law from 15 March 2017.

For corporations, capital gains are taxed at the relevant corporate income tax rate.

Income of a nonresident corporation not operating in Australia through a permanent establishment may be subject to withholding tax, as discussed below.

Rates of corporate tax. The standard tax rate for resident corporations is 30%.

A 25% rate applies to base rate entities. These are defined as corporate tax entities with no more than 80% of their assessable income being passive income and with an aggregate turnover of less than AUD50 million.

A concessional patent tax rate of 17% was announced in May 2021 to apply from 1 July 2023 to certain income derived from medical and biotechnology patents registered after 11 May 2021.

Resource taxation

Petroleum resources. The Petroleum Resource Rent Tax (PRRT) is imposed at a rate of 40% on project profits from the extraction of non-renewable petroleum resources. The PRRT applies to offshore petroleum projects in Commonwealth waters. Onshore petroleum projects can reduce taxpayer's PRRT liabilities for offshore projects because of the transfer of exploration expenditure.

Minerals exploration. The Junior Minerals Exploration Incentive (JMEI) enables eligible companies to generate tax credits by giving up a portion of their tax losses from greenfield mineral exploration expenditure, which can then be distributed to shareholders. Tax credits can only be generated for shares of stock issued in that income year. The scheme applies until 30 June 2025, and the Australia-wide credit limit is AUD25 million in 2021-22.

Costs of acquiring exploration rights or information first used for exploration that are not eligible for an immediate deduction are depreciated over the lesser of 15 years or the effective life of the mine.

Carbon-pricing mechanism. Effective from 1 July 2014, the previous carbon-pricing mechanism was replaced by a Direct Action Plan.

Capital gains

Income and capital gains. Australia's tax law distinguishes income (revenue) gains and losses from capital gains and losses, using principles from case law. Broadly, capital gains and losses are not assessable or deductible under the ordinary income tax rules.

However, the capital gains tax (CGT) provisions in the tax law apply to gains and losses from designated CGT events. For corporations, capital gains are taxed at the relevant corporate income tax rate. Designated CGT events include disposals of assets, grants of options and leases, and events arising from the tax-consolidation rules (see Section C).

For CGT purposes, capital gains are calculated by identifying the capital proceeds (money received or receivable or the market value of property received or receivable) with respect to the CGT event and deducting the cost base. CGT gains are reduced by amounts that are otherwise assessable.

Special rules apply to assets acquired before 20 September 1985.

CGT deferrals (rollovers). CGT rollover relief may be elected for various transfers, restructures and takeovers, including scrip takeovers. The effect of the relief is to defer taxation until a subsequent disposal or CGT event, if further rollover relief is not available. Transfers within a tax-consolidated group are ignored for tax purposes (see Section C).

Capital losses are deductible only from taxable capital gains; they are not deductible from ordinary income. However, ordinary or trading losses are deductible from net taxable capital gains. The Australian Board of Taxation is conducting a review of CGT rollovers so that it can recommend legislative reform to the Australian government.

Foreign residents and CGT. Foreign residents are subject to CGT if an asset is “taxable Australian property,” which includes broadly the following:

- Taxable Australian real property: real property located in Australia including a leasehold interest in land, or mining and quarrying or prospecting rights, if the minerals, petroleum or quarry materials are located in Australia.
- Indirect Australian real property interest: broadly, a non-portfolio interest in an Australian or foreign entity if more than 50% of the market value of the entity’s assets relates to assets that are taxable Australian real property. Integrity rules to prevent the double counting of intercompany assets apply to consolidated and multiple-entry consolidated groups (see *Tax consolidation* in Section C).
- The business assets of an Australian permanent establishment.

Purchasers obligation to make a 12.5% non-final withholding to support foreign resident CGT regime. Purchasers are required, broadly, to make a non-final 12.5% foreign resident CGT withholding with respect to the purchase of certain direct or indirect taxable Australian property from foreign residents. The obligations apply to direct real property transactions with a value of AUD750,000 or more, to certain indirect property transactions including company and trust interests and to options and rights to acquire such property or interests. Australian resident vendors of direct property must provide an ATO clearance certificate to not be subject to withholding. These rules must be factored into all acquisition and disposal processes and allow for rate variations and declarations in some cases.

CGT participation exemption for disposals of shares in foreign companies. The capital gain or capital loss derived by a company from the disposal of shares in a foreign company may be partly or wholly disregarded to the extent that the foreign company has an underlying active business, if the holder company held a direct voting interest in the foreign company of at least 10% for a period of at least 12 months in the 2 years before the disposal. This

participation exemption can also reduce the attributable income arising from the disposal of shares owned by a controlled foreign company in another foreign company (see Section E).

Venture capital. Venture capital investment concessions provide a 20% nonrefundable tax offset on investments in eligible innovation companies, capped at AUD200,000 per investor per year and a CGT exemption up to 10 years (provided that investments are held for at least three years).

Investors receive a 10% nonrefundable tax offset on capital invested in registered Early Stage Venture Capital Limited Partnerships (ESVCLPs).

Startup financial technology businesses can also access the venture capital investment tax concessions.

Administration. The Australian tax year ends on 30 June. For corporate taxpayers with accounting periods ending on other dates, the tax authorities may agree to use a substituted accounting period (SAP).

In general, companies with an income year-end of 30 June must file an annual income tax return by the following 15 January. Companies granted permission to adopt an SAP must file their returns by the 15th day of the 7th month after the end of their income year.

Under a pay-as-you-go installment system, companies with turnover of AUD20 million or less continue to make quarterly payments of income tax within 21 days after the end of each quarter of the tax year. The amount of each installment is based on the income earned in the quarter. The installment obligations for larger companies with turnover in excess of AUD20 million involve monthly payments.

Measures affecting certain corporate tax entities with respect to public disclosures of their tax positions and their tax-governance processes are outlined below.

ATO reporting of selected tax data for larger companies. The ATO is required to publicly report selected tax data for all corporate entities paying PRRT and selected income tax data for large corporate entities (turnover exceeding AUD100 million [AUD200 million for Australian majority-owned private companies]). The ATO reports are made, broadly, in December and cover the data for the tax returns filed in the year ended 30 June of the preceding year. Some companies might want to consider supplementary disclosures in their own communications channels.

Voluntary Tax Transparency Code. The Australian government encourages larger companies to adopt a Voluntary Tax Transparency Code (TTC) to promote public understanding of businesses' compliance with Australia's tax laws. The TTC, developed by the Board of Taxation, is a set of principles and minimum standards to guide disclosure of tax information by businesses. The disclosures vary by companies' size, with larger businesses to consider, in addition to reconciliations of accounting to tax aggregates, their tax policy, strategy, governance, total tax contribution and foreign related-party dealings. Business groups

are encouraging companies to consider compliance, and over 190 companies and entities are listed on the public register of signatories.

Some companies to file General Purpose Financial Statements. Significant global entity companies (global turnover greater than AUD1 billion) with an Australian presence that do not file General Purpose Financial Statements (GPFS) with the Australian Securities and Investments Commission (ASIC) are required to file GPFS with the ATO. The ATO is then required to forward such GPFS to the ASIC. GPFS obligations apply to a narrower “country-by-country reporting entity” subset of significant global entities (SGEs; see Section E).

Payment Times Reporting Scheme. From 1 January 2021, the Payment Times Reporting Scheme imposes a mandatory reporting requirement for large businesses to disclose their payment terms and practices with small business suppliers. This scheme broadly applies to entities with a total income of AUD100 million or more, and entities may also voluntarily elect to register and report under the scheme.

ATO New Investment Engagement Service. Starting 1 July 2021, the ATO introduced the New Investment Engagement Service (NIES), an investor-initiated service for businesses planning significant new investments in Australia.

Dividends. Dividends paid by Australian resident companies are franked with an imputation credit (franking credit) to the extent that Australian corporate income tax has been paid by the company on the income being distributed. Tax rules constrain companies from streaming imputation credits to those shareholders that can make the most use of the credits, at the expense of other shareholders.

A company may select its preferred level of franking with reference to its existing and expected franking account surplus and the rate at which it franked earlier distributions. However, under the “benchmark rule” for private companies, all distributions made within a franking period must generally be franked to the same extent.

The franking credit is intended to equal the tax paid by the paying company. For base rate entities benefiting from the reduced corporate rate, the imputation rules require them to determine whether they frank at 25% or 30%, based on the prior year’s passive income and aggregated turnover.

A New Zealand company may choose to maintain an Australian franking account and attach Australian franking credits to dividends paid to Australian resident shareholders, for Australian company tax paid on that income.

The consequences of receiving a franked dividend vary depending on the nature of the recipient shareholder.

Resident corporate shareholders. Franked distributions received by resident companies from other Australian resident companies are effectively received free from tax. A recipient company receiving franked distributions grosses up the dividend amount received

by the amount of its franking credit, and includes the grossed-up amount in its assessable income. The recipient company is entitled to a tax offset (rebate) equal to the amount of the franking credit on the distribution received; the offset may be used against its own tax payable. In addition, the recipient company is allowed a franking credit in its own franking account; the franking credit may be distributed to its own shareholders.

A resident company is subject to tax on unfranked dividends received, but special rules apply for certain income passed to non-resident shareholders (see *Nonresident shareholders: corporate and non-corporate*).

If a company's entitlement to a tax offset exceeds its tax payable, it can convert the excess franking offset into an equivalent amount of tax loss. The tax loss may then be carried forward indefinitely for deduction in subsequent years.

Resident individual shareholders. The shareholder includes the dividend received plus the full imputation credit in assessable income. The imputation credit can be offset against personal tax assessed in the same year. Excess credits relating to dividends received are refunded to the shareholder.

Nonresident shareholders: corporate and non-corporate. Issues relevant to dividends and foreign shareholders include the following:

- Franked dividends paid to nonresidents are free from dividend withholding tax.
- Refunds of imputation credits are not available for nonresidents.
- A deduction may be available under dividend flow-through rules if an Australian company wholly owned by a nonresident company receives unfranked non-portfolio dividends (from holdings of at least 10% of the voting power in the company paying the dividends) and pays an unfranked non-portfolio dividend to its nonresident parent. Various conditions must be satisfied, and anti-avoidance rules apply.
- "Conduit foreign income" that flows through Australian companies to foreign investors may also achieve flow-through treatment. Broadly, "conduit foreign income" is foreign-source income earned by an Australian company that is not taxed in Australia. A conduit income distribution that an Australian corporate tax entity makes to a foreign resident is not subject to dividend withholding tax and is not assessable income, to the extent that the entity declares it to be conduit foreign income.

Foreign tax relief. Australian residents are subject to Australian tax on their worldwide income, but they may receive a foreign income tax offset (FITO) for foreign taxes paid on foreign-source income included in assessable income. FITOs must be used in the year in which the related foreign-source income is included in assessable income. Otherwise, they are lost without having provided any relief from double taxation. For controlled foreign companies (CFCs; see Section E), a modified system applies.

C. Determination of trading income

General. Taxable income is defined as assessable income less deductions. Assessable income includes ordinary income and statutory income (specifically listed in the tax law as being

assessable income). Non-cash business benefits may be included as income in certain circumstances.

Australia's tax law distinguishes income (revenue) gains and losses from capital gains and losses, using principles from case law. Broadly, capital gains and losses are not assessable or deductible under the ordinary income tax rules; however, the capital gains provisions in the tax law may apply (see Section B).

Broadly, the following types of income are not included in assessable income:

- Profits from foreign branches of Australian companies (other than, broadly, income that would be attributable under the CFC rules, see Section E).
- Amounts paid out of income previously taxed under the CFC rules (see Section E).
- Foreign equity distributions received by Australian corporate entities on participation interests. This covers dividends or non-share dividends received from a foreign company with respect to an interest in a company classified as equity under Australian tax rules, subject to a 10% participation requirement. Such distributions received through interposed entities, such as trusts and partnerships, may now also be eligible.

Expenses. Losses or outgoings are deductible to the extent they are incurred in gaining or producing assessable income or are necessarily incurred in carrying on a business for the purpose of gaining or producing assessable income. Provisions for amounts not "incurred" (this term is not defined in the law) during the year, such as leave entitlements of employees, are generally not deductible until payments are made.

Expenses of a capital nature (except business black hole expenditure; see *Five-year deduction for black hole business expenditure*) and those incurred in the production of exempt income are not deductible. Apportionment of expenses having dual purposes is possible.

Fringe benefits tax (see Section D) is deductible. Entertainment expenses are not deductible unless they represent fringe benefits provided to employees. Penalties and fines are not deductible.

Under commercial debt forgiveness rules, the net amount of debts forgiven during an income year reduces the debtor's accumulated revenue tax losses, capital losses, certain undeducted expenditure and cost bases of assets.

Research and development. A tax credit system applies for eligible research and development (R&D) expenditure of companies incorporated in Australia for R&D conducted in Australia.

Core and supporting R&D activities must be registered. Supporting R&D activities must be directly related to core R&D activities. Activities that result in the production of goods or services are eligible only if they are undertaken for the dominant (or sole) purpose of supporting the core R&D activity (the "dominant purpose" test).

Eligible R&D expenditure in excess of AUD20,000 is a notional deduction, which is not deductible but gives rise to tax offsets.

The following rules apply for R&D claims with respect to assessments for income years commencing before 1 July 2021:

- Larger R&D entities with an aggregate turnover of AUD20 million or more will be entitled to a non-refundable R&D tax offset equal to their corporate tax rate plus a premium based on the level of R&D intensity calculated by reference to notional R&D deductions of the R&D entity divided by total expenditure. Claimants will receive a benefit of 8.5% above the corporate tax rate or base rate up to a level of intensity of 2%. Incremental expenditure resulting in levels of intensity above 2% will receive a benefit of 16.5%. Notional deductions over and above AUD150 million will attract an offset of 30%.
- Small R&D entities with an aggregate turnover of less than AUD20 million are eligible for the refundable R&D tax offset, which equates to a single rate of 18.5% R&D premium linked to the company's corporate tax rate (base rate).
- Australia's general avoidance rules have been extended to deal with certain R&D schemes.

Debt and equity classification. Specific debt-and-equity rules focus on economic substance rather than on legal form. If the debt test is satisfied, a financing arrangement is generally treated as debt, regardless of whether the arrangement could also satisfy the test for equity. The test is complex and extends well beyond an examination of whether a borrower has a non-contingent obligation to repay an amount of principal.

The debt or equity classification affects the taxation of dividends (including the imputation requirements), payments received from nonresident entities, thin-capitalization regime, dividend and interest withholding taxes and related measures, but does not limit the operation of the transfer-pricing rules.

Hybrid mismatch rules. Australia introduced a law to adopt the Organisation for Economic Co-operation and Development (OECD) hybrid mismatch rules for income years beginning on or after 1 January 2019. Broadly, they prevent entities liable to income tax in Australia from being able to avoid income taxation or obtain a double non-taxation benefit, by exploiting differences between the tax treatment of entities and instruments across different countries. However, the imported mismatch rule (other than when an importing payment is made under a structured arrangement) applies to income years beginning on or after 1 January 2020. Imported mismatches are mismatches whereby receipts are sheltered from tax directly or indirectly by hybrid outcomes elsewhere in a group of entities or a chain of transactions.

A targeted integrity rule seeks to prevent arrangements circumventing the hybrid mismatch rules by routing investment or financing into Australia via an entity located in a no- or low-tax (10% or less) jurisdiction.

Under the rules, an amount is "subject to foreign tax" if income tax is payable under a law of the foreign country with respect to the amount because the amount is included in the tax base of that law for the foreign tax period. This is also the case if income is included under a provision equivalent to Australia's controlled foreign company (CFC) rules (see *Controlled foreign companies*

in Section E). However, as far as the US global intangible low-taxed income (GILTI) regime is concerned, the ATO maintains that the regime is not equivalent to Australia's CFC rules.

The ATO expects work to be undertaken to prove that the imported mismatch rules do not apply before a deduction can be taken for any payment made by Australia to foreign group entities and places a substantial burden of proof on taxpayers to demonstrate that an appropriate inquiry has been made to establish that no Australian payments have a nexus with an offshore hybrid mismatch (between non-Australian entities). The ATO has released final guidance providing taxpayers with a risk-zone framework ranging from white zone (the ATO has provided clearance), through green (low risk) to red (very high risk). Taxpayers may be required to self-assess the risk of the imported hybrid mismatch rule.

Financial arrangements. Extensive rules deal with the taxation of "financial arrangements" (as defined) for specified taxpayers.

The default methods are accruals and realization methods. These are supplemented by various methods available at a taxpayer's election, using accounting approaches with respect to certain financial arrangements. The elective accounting methods include hedge treatment, fair-value reporting, retranslation for foreign-currency arrangements and, in certain cases, use of the values in financial reports for the financial arrangements.

Individuals are not mandatorily covered by these rules. Superannuation entities must apply the rules if the value of their assets exceeds AUD100 million. Approved deposit-taking institutions or securitization vehicles must apply the rules if their aggregate turnover exceeds AUD20 million. All other entities must apply the rules if either their aggregate turnover exceeds AUD100 million or if the value of their assets exceeds AUD300 million. Taxpayers not covered by the rules can nevertheless elect to apply the rules.

Foreign-exchange gains and losses. Rules for the tax treatment of foreign-currency gains and losses provide broadly the following:

- Foreign-currency gains and losses are brought to account when realized, regardless of whether an actual conversion into Australian currency occurs.
- Foreign-currency gains and losses generally have a revenue character.
- Specific translation rules apply to payments, receipts, rights and obligations denominated or expressed in a foreign currency.
- Functional-currency rules allow an entity that operates predominantly in a foreign currency to determine its income and expenses in that currency, with the net results being translated into Australian currency for the purposes of calculating its Australian income tax liability.

Inventories. In determining trading income, inventories may be valued at cost, market-selling value (the current selling value of an article of trading stock in the taxpayer's trading market) or replacement price, at the taxpayer's option. The last-in, first-out (LIFO) method may not be used. If the cost method is elected, inventories must be valued using the full-absorption cost method.

Bad and doubtful debts. Provisions for doubtful trading debts are not deductible until the debt, having been previously brought to account as assessable income, becomes bad and is written off during an income year.

Capital allowances (depreciation)

Uniform capital allowance regime. Capital allowance rules allow a deduction for the decline in value of a “depreciating asset” held during the year.

A “depreciating asset” is an asset with a limited effective life that may be expected to decline in value over the time it is used. Land, trading stock and intangible assets not specifically included in the regime are not considered to be depreciating assets.

The depreciation rate for a depreciating asset depends on the effective life of the asset. Taxpayers may choose to use either the default effective life determined by the tax authorities or their own reasonable estimate of the effective life. A taxpayer may choose to recalculate the effective life of a depreciating asset if the effective life that was originally selected is no longer accurate because of market, technological or other factors.

Taxpayer re-estimation of effective life is not available for certain intangible assets; the law prescribes their effective lives (for example, 15 years for registered designs or 20 years for standard patents). Statutory life caps that result in accelerated rates are provided for certain assets used in the oil and gas, petroleum, agricultural, and transport industries, as well as for Australian-registered ships.

Taxpayers may choose the prime cost method (straight-line method) or the double diminishing value method (200% of the straight-line rate) for calculating the tax-deductible depreciation for all depreciating assets except intangible assets. For certain intangible assets, the prime cost method must be used. Treasury is consulting on an Exposure Draft Bill, allowing taxpayers to self-assess tax effective lives of certain depreciating intangible assets (including patents, copyrights and licenses) from 1 July 2023.

The cost of a depreciating asset is generally the amount paid by the taxpayer plus further costs incurred while the taxpayer holds the asset. The depreciable cost of a motor car is subject to a maximum limit of AUD60,733 for the 2021-22 income year.

Pooling of assets may be chosen for pool assets costing more than AUD300 but less than AUD1,000 as well as assets that have been depreciated to less than AUD1,000. The pool balance is depreciable at a rate of 37.5% (18.75% for additions during the year), applying the declining-balance method. If the choice is not exercised, the relevant assets are depreciated based on their respective effective lives.

Software development expenditure may be allocated to a software development pool. Beginning in the year following the year of the expenditure, the expenditure is deductible at a rate of 30% per year for three years, followed by a 10% rate in the final year.

The 2020-21 Federal Budget introduced temporary full expensing of depreciating assets, which broadly allows eligible businesses

to deduct the full cost of eligible depreciating assets first used or installed ready for use for a taxable purpose (and certain capital improvements) from 6 October 2020 until 30 June 2022. Legislation introduced into parliament in October 2021 proposes to extend this temporary regime to 30 June 2023.

Construction of buildings. Capital expenditure on the construction of buildings and structural improvements may be eligible for an annual deduction of either 2.5% or 4% of the construction expenditure, depending on the type of structure and the date on which construction began. The 2.5% rate applies to construction begun after 15 September 1987.

Disposals of depreciable assets. For assets other than buildings, if the proceeds received on the disposal of an asset exceed its adjustable value, the excess is included in taxable income. If the proceeds received on the disposal of an asset are less than its adjustable value, a deductible balancing adjustment is allowed.

Five-year deduction for black hole business expenditure. Certain types of business expenditure of a capital nature may be deducted under the capital allowance regime to the extent that the expenditure is not taken into account elsewhere in the income tax law and is not expressly nondeductible for tax purposes. This type of expenditure is known as “black hole business expenditure.” The deduction is available on a straight-line basis over five years. Expenditure qualifying for the deduction includes expenditure to establish or alter a business structure, expenditure to raise equity and expenditure in an unsuccessful takeover attempt or takeover defense. Eligible small business taxpayers are entitled to an immediate deduction for certain startup costs.

Relief for losses. Tax losses may be carried forward indefinitely against assessable income derived during succeeding years. A loss is generated after adding back net exempt income.

To claim a deduction for past losses, companies must satisfy either a continuity of ownership test (more than one-half of voting, dividend and capital rights) or a same business test. A modified continuity of ownership test applies to widely held companies. The modified rules simplify the application of the continuity test by making it unnecessary to trace the ultimate owners of shares held by certain intermediaries and small shareholdings. An alternative, more flexible “similar business test” is available with respect to losses incurred in income years beginning on or after 1 July 2015.

Losses are generally not transferable to other group members other than within a tax-consolidated group (see *Tax consolidation*).

The 2020-21 Federal Budget introduced a temporary loss carryback measure, which allows corporate tax entities the option to claim a carryback tax offset in their 2020 or 2021 income tax return. Broadly, the carryback tax offset is calculated based on the ability to notionally carry back eligible tax losses incurred in the 2020, 2021 or 2022 income years to offset taxable income in 2019 or later years. Legislation introduced into parliament in November 2021 proposes to extend this temporary regime to losses incurred in the 2023 income year.

Designated infrastructure projects loss concessions. Companies that only carry on activities for certain designated infrastructure projects are not required to test the recoupment of losses incurred in the 2012–13 and following income years under the continuity of ownership or same business tests. The losses are also increased by the long-term government bond rate. Projects must be designated by Infrastructure Australia by 30 June 2018, and a cap of AUD25 billion on the value for all projects applies.

Tax consolidation. Tax consolidation is available for groups of wholly owned companies and eligible trusts and partnerships that elect to consolidate. Australian resident holding (head) companies and their wholly owned Australian resident subsidiary members of the group are taxed on a consolidated basis. Consolidation is desirable because no grouping concessions (such as the ability to transfer losses to other group members) are otherwise provided.

The head company becomes the taxpayer, and each subsidiary member of the group is treated as if it were a division of the head company. Transactions between members of a consolidated group are generally disregarded for Australian income tax purposes. The head company assumes the income tax liability and the associated income tax compliance obligations of the group.

Tax consolidation is also available for Australian entities that are wholly owned by a single foreign holding company. The resulting group is referred to as a multiple-entry company (MEC) group, which includes the Tier-1 companies (Australian resident companies directly owned by a foreign member of the group) and their wholly owned Australian resident subsidiaries. A Tier-1 company is selected as the head company. The types of entities that may be subsidiary members of an MEC group are generally the same as those for a consolidated group.

The consolidation rules are very significant for merger and acquisition and restructuring transactions. If a tax consolidated group acquires a “joining entity,” the tax cost base of the underlying assets of the joining entity is reset, under complex rules, which can affect the tax treatment of those assets (including the calculation of any tax deductions with respect to such assets). If an entity leaves a consolidated group, the group’s cost base of shares in the leaving entity is reset under specific exit rules. MEC groups are subject to cost base pooling rules to determine the cost base of shares in Tier-1 companies.

The tax-consolidation rules have been subject to various complex ongoing changes affecting ongoing tax positions.

Demergers. Tax relief is available if eligible company or fixed-trust groups divide into two separately owned entities. The demerging company (or fixed trust) must dispose of at least 80% of its ownership interests in the demerged entity, and the underlying ownership interests must not change because of the demerger. The rules provide investors optional CGT rollover relief, as well as dividend exemptions, which are available at the option of the demerging entity. The demerger group is also provided with limited CGT relief.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Goods and services tax	10
Fringe benefits tax on non-cash employee benefits	47
Payroll taxes paid by employers (vary by state)	4.75 to 6.85

Customs duty is levied on imports of various products into Australia. Other significant taxes include stamp duty and land tax.

E. Miscellaneous matters

General anti-avoidance regime. Australia's general income tax anti-avoidance regime (GAAR, or Part IVA) has been expanded by the following measures focused at significant multinational businesses:

- Multinational Anti-Avoidance Law targeting certain schemes to avoid Australian permanent establishments
- Diverted Profits Tax targeting certain international schemes with insufficient economic substance

Part IVA generally applies if, taking into account eight specified matters, it is determined that the dominant purpose of the parties entering into a scheme was to enable the taxpayer to obtain a tax benefit. If the Commissioner of Taxation makes a Part IVA determination, the tax benefit is denied, and significant penalties may be imposed.

Broader significant global entity definition. Several anti-avoidance and penalty regimes outlined below apply only to significant global entities (SGEs) which broadly are entities with global turnover greater than AUD1 billion. When the SGE definition was broadened from 1 July 2019 to also apply to groups of entities headed by an entity other than a listed company, a "country-by-country reporting entity" became a narrower subset to the SGE definition.

Multinational Anti-Avoidance Law. The Multinational Anti-Avoidance Law (MAAL) expands Part IVA and, broadly, allows the Commissioner of Taxation to potentially target schemes entered into by SGEs if all of the following apply:

- A foreign entity makes a supply of certain goods or services to an Australian customer.
- Activities are undertaken directly in Australia in connection with the supply by an Australian entity or permanent establishment that is an associate of or commercially dependent on the foreign entity.
- The foreign entity making the supply derives income, some or all of which is not attributable to an Australian permanent establishment of the foreign entity.
- Taking into account the relevant factors, it can be concluded that a principal purpose of the transaction is the enabling of a relevant taxpayer to obtain an Australian tax benefit and/or reduce tax liabilities arising under foreign law, including some deferrals of foreign taxes. A principal purpose is a lower threshold than

the dominant purpose discussed in *General anti-avoidance regime*. Relevant factors include the role of the parties in the value chain and their capacity, staffing and resources to carry out their designated functions (to distinguish the parties from insubstantial parties).

Diverted Profits Tax. The Diverted Profits Tax (DPT) expands Part IVA. Under the DPT, if SGEs divert certain profits from Australia and the Commissioner of Taxation issues a DPT assessment, the tax payable on the amount of the diverted profits is subject to a penalty rate of 40%. The DPT applies, broadly, if the following conditions are satisfied:

- The relevant Australian entity or permanent establishment is an SGE for the year of income.
- A scheme exists, and the Australian taxpayer obtains a tax benefit in connection with the scheme (considering reasonable alternative situations).
- A foreign entity that is an associate of the relevant taxpayer entered into the scheme or is otherwise connected to the scheme.
- It is concluded that the scheme (or any part of a scheme) was carried out for a principal purpose of enabling the relevant taxpayer (and/or associate) to obtain a tax benefit, or both to obtain a tax benefit and reduce a foreign tax liability of an associate.

Exclusions apply if it is concluded that one of the following tests applies:

- The relevant Australian entity has income of less than AUD25 million.
- The increase of the foreign tax liability is equal to or exceeds 80% of the tax that would have otherwise been paid in Australia.
- The profit derived by each covered entity reasonably reflects the economic substance of the entity's activities in connection with the scheme.

A limited exclusion applies for some entities that carry on predominately passive activities (for example, managed-investment trusts, pension funds, sovereign-wealth funds and selected collective-investment vehicles). Extensive ATO protocols and approvals are required to be met before the issuance of a DPT assessment.

Transfer pricing. Australia's transfer-pricing rules, updated in recent years, include measures to ensure that Australian taxable income associated with cross-border transactions is based on arm's-length prices. Several methods for determining the arm's-length price are available. The ATO provides guidance in a binding tax ruling on the appropriate methods, and taxpayers can enter into Advance Pricing Arrangements.

For transactions with parties entitled to benefit from foreign tax treaties, the law confirms the ATO view that Australia's tax treaties provide a separate and unconstrained transfer pricing taxing power.

The OECD transfer-pricing guidance material is incorporated into domestic law.

Australia's transfer-pricing rules are integrated into the self-assessment regime and require broad and timely documentation.

The risk of transfer-pricing adjustments is magnified for companies that are involved in significant intragroup financing arrangements or business restructurings or that have losses or low levels of profits. Significant aspects include the following:

- The onus is on the Public Officer who signs the income tax return to confirm that the actual conditions are in line with arm's-length conditions. If the actual and arm's-length conditions do not align and if a transfer-pricing benefit is received, the taxpayer must adjust taxable income, tax losses or other tax attributes. Penalties apply for a false or misleading statement.
- As a basic rule, the arm's-length conditions should be based on the form and substance of the actual commercial or financial relations. However, documentation must address reconstruction, which refers to situations in which the transactions or arrangements actually entered into are ignored and (in some cases) other transactions or arrangements are substituted.
- Taxpayers are treated as not having a reasonably arguable position with respect to any international related-party transaction that is not appropriately documented at the time of the filing of the tax return. A transfer-pricing adjustment with respect to such undocumented transactions attracts a penalty of at least 25%. The penalties are doubled for income years beginning on or after 1 July 2015 for tax-avoidance and profit-shifting schemes, with respect to groups that have global turnover of greater than AUD1 billion. It is essential that appropriate transfer-pricing documentation be in place to have a reasonably arguable position.
- Adjustments can only be within seven years of the date on which the ATO gives the notice of assessment.

For business income tax returns, the International Dealings Schedule requires detailed disclosures designed to flag potential risk areas.

ATO transfer pricing practical compliance guides and risk ratings. The ATO strongly emphasizes transfer-pricing issues in relation to international business transactions. It has issued practical compliance guidelines (PCGs), which cover numerous cross-border transactions, to assist taxpayers in identifying if their conditions and pricing are likely to have a low risk of ATO examination (green zone) through to a high risk of ATO scrutiny (red zone). PCGs cover related-party debt including derivatives, offshore marketing, non-core procurement and shipping hubs, as well as inbound distribution arrangements.

Country-by-country reporting. “Country-by-country reporting entities,” a subset of SGEs, are required to prepare and file the following with the ATO:

- A Country-by-Country Report (CbCR) in line with the OECD standards
- A Master File in line with the OECD standards
- A Local File with requirements that include providing electronic copies of related-party agreements

Increased penalties for SGEs. Increased penalties for SGEs are calculated by multiplying the base penalty amount by 100. Although these heavy penalties were introduced to ensure compliance with new GPFS requirements (see *Requirement for some*

companies to file *General Purpose Financial Statements* in Section B) or the filing of documents required for CbCR, they can also apply to failure to file any ATO-approved form required to be filed by an SGE (for example, a tax return or activity statement), subject to ATO discretion to remit penalties. For example, an SGE filing an income tax return up to 28 days late risks a late filing penalty of AUD105,000, or up to AUD525,000 if it is more than 112 days late.

Debt-to-equity (thin-capitalization) rules. Thin-capitalization measures apply to the total debt of Australian operations of multinational groups (including foreign and domestic related-party and third-party debt). In addition, the transfer-pricing measures may affect the deductions available for related-party debt.

Thin-capitalization. The thin-capitalization measures apply to the following:

- Foreign-controlled Australian entities and foreign entities that either invest directly into Australia or operate a business through an Australian branch (inward investing entities)
- Australian entities that control foreign entities or operate a business through an overseas branch (outward investing entities)

Exceptions to the thin-capitalization rules apply in either of the following circumstances:

- The total debt deductions of the taxpayer are AUD2 million or less for the year of income.
- Australian assets account for 90% or more of total assets of outward investing entities (that are not also inward investing entities).

Debt deductions are partially denied if the company's adjusted average debt exceeds the maximum allowable debt.

In most cases, the maximum allowable debt is calculated by reference to the safe harbor debt amount. The safe harbor debt amount approximates a debt-to-equity ratio of 1.5:1 (or 60% debt-to-total-assets ratio). Separate methodologies apply to financial institutions or consolidated groups with at least one member classified as a financial entity.

Taxpayers can also determine the maximum allowable debt by reference to an arm's-length debt amount that is based on what amount an independent party would have borrowed from an independent lender. This determination requires the consideration of several factors.

Under changes enacted with application for income years beginning on or after 1 July 2019, companies can no longer revalue assets for the purpose of the safe harbor thin-capitalization test if the asset value is not contained in their financial statements. Foreign-controlled Australian consolidated entities and MEC groups that control a foreign entity are treated as both outward and inward investment vehicles from 1 July 2019, and as a result, cannot access tests (such the worldwide gearing test for outward investors) that were only intended for outward investors.

Inward investors can also determine the maximum allowable debt of an Australian entity by reference to the group's worldwide gearing debt amount.

The thin-capitalization measures restrict the use of multi-tiered gearing structures involving flow-through entities. The ownership threshold to be an “associate entity” is reduced in certain circumstances from 50% to 10% and, in determining the arm’s-length debt amount, an entity is required to consider the debt-to-equity ratios of any entities in which the entity has a direct or indirect interest that are relevant to the considerations of an independent lender or borrower.

Transfer pricing. The transfer-pricing provisions apply to the pricing of related-party debt, even if an arrangement complies with the thin-capitalization rules. The ATO can substitute a hypothetical arm’s-length capital structure to set an arm’s-length interest rate if the amount of debt is considered not to be arm’s length, even if the taxpayer is within the thin-capitalization safe harbor debt levels.

Cross-border related-party financing arrangements. ATO guidance sets out the ATO’s compliance approach with respect to cross-border related-party financing arrangements. This guidance provides a self-assessment tool for taxpayers to determine their risk profiles, and the taxpayer determination must be disclosed broadly to the ATO. A second schedule to the guidance applies from 1 January 2019 and sets out 14 specific risk indicators for cross-border related-party derivative arrangements used to hedge or manage the economic exposure of a company or group of companies. A third schedule on outbound interest-free loans applies from 1 January 2020 (with no guidance for inbound interest-free loans). The final compliance approach to the thin-capitalization arm’s-length debt test took effect from 1 January 2019, however, in practice the analytical approach and level of evidence outlined should guide prior years to meet the ATO’s expectation.

Controlled foreign companies. A foreign company is a CFC if five or fewer Australian residents hold at least 50% of the company or have de facto control of it, or if a single Australian entity holds a 40% interest in the company, unless it is established that actual control does not exist.

The tainted income of a CFC is attributed to its Australian resident owners, which are required to include such income in their assessable income. In general, the tainted income of a CFC is its passive income and income from certain related-party transactions.

Income is generally not attributable if the CFC passes an active-income test. To pass this test, the CFC’s tainted income may not exceed 5% of the CFC’s gross turnover.

Whether an amount earned by a CFC is attributable to Australian residents depends on the country in which the CFC is resident. The CFC rules identify “listed countries,” which have tax systems that are considered to be closely comparable to the Australian system. The following are the “listed countries”:

- Canada
- France
- Germany
- Japan

- New Zealand
- United Kingdom
- United States

All other countries are “unlisted countries.”

Certain amounts are unconditionally attributed regardless of whether the CFC is resident in a listed or unlisted country.

If a CFC resident in a listed country fails the active-income test, its attributable income includes “adjusted tainted income,” which is eligible designated concession income prescribed by the regulations on a country-by-country basis. This income includes items such as income subject to tonnage taxation or concessionally taxed capital gains.

If a CFC resident in an unlisted country fails the active-income test, its attributable income includes all of its adjusted tainted income, such as passive income (including tainted interest, rental or royalty income) and tainted sales or services income.

Income derived by a CFC is exempt from Australian income tax if it is remitted as dividends or non-share dividends made with respect to an interest in the company classified as equity under Australian tax rules to an Australian company.

Value shifting. A general value-shifting regime applies to counter certain transactions involving non-arm’s-length dealings between associated entities that depress the value of assets for certain income tax and CGT purposes.

Withholding taxes. Interest, dividends and royalties paid to non-residents are subject to Australian withholding tax (also, see Section F for treaty withholding tax rates).

The 10% withholding tax rate on interest is generally the same as the rate prescribed by Australia’s treaties (see Section F). However, modern treaties provide for a 0% rate for government and unrelated financial institutions. The interest paid by an Australian branch of a foreign bank to its parent is subject to a rate of 5% of the notional interest paid by the branch on internal funds of the foreign bank entity; the notional interest is limited by reference to the LIBOR. Unilateral exemptions from interest withholding tax are provided for certain publicly offered debentures, state and federal government bonds and offshore borrowing by OBUs. From 2023-24, the taxable income of an OBU on its offshore borrowing activities will be subject to the relevant corporate tax rate. The ATO has expressed concerns about financing arrangements involving related-party foreign currency-denominated financing with related-party cross-currency interest rate swaps to reduce withholding taxes.

For dividends paid, the withholding tax rate of 30% applies only to the unfranked portion of the dividend. A reduced rate applies if dividends are paid to residents of treaty countries. An exemption from dividend withholding tax applies to the part of the unfranked dividends that is declared in the distribution statement to be conduit foreign income.

A final withholding tax at a rate of 30% is imposed on gross royalties paid to nonresidents. The withholding tax rate is typically reduced under a double tax treaty.

A concessional withholding tax regime applies to distributions by eligible managed investment trusts (MITs) to nonresidents, other than distributions of dividends, interest and royalties. The withholding tax rate is 30%, but a reduced 15% rate applies if the nonresident's address or place of payment is in a country that is listed in the regulations as an "information exchange country" (see *Countries listed as "information exchange countries"*). MITs that hold only newly constructed energy efficient commercial buildings may be eligible for a 10% withholding tax rate.

The concessional MIT withholding tax rates are no longer available for certain cross-stapled structure income (see *Companies "stapled" to trusts and sovereign wealth funds*) and for funds with trading trust income or income from residential housing (other than "affordable housing") or agricultural land investments, from 1 July 2019, with transitional rules. In addition, new conditions apply when accessing foreign pension fund withholding tax exemptions and tax exemptions for sovereign wealth funds are codified and limited, also from 1 July 2019.

An optional attribution managed investment trust (AMIT) regime uses an "attribution model" to determine tax distributions from MITs that meet certain criteria. Specific rules deal with how this system interacts with withholding tax obligations.

Australian investment manager regime (IMR) rules allow certain foreign managed funds that have wide membership or use Australian fund managers, and their nonresident investors to qualify for income exemptions for certain income from qualifying investments (in particular, the income exemptions do not apply to income subject to withholding taxes).

Proposals for an Australian Corporate Collective Investment Vehicle (CCIV) regime with broadly the same tax outcomes as for AMITs, including concessional withholding tax rates, were introduced into parliament in November 2021, to be operational from 1 July 2022.

Countries listed as "information exchange countries." The concessional withholding tax rates for eligible MITs are restricted to investors in jurisdictions listed in the relevant regulation as an "information exchange country." Until recently, the regulation listed 60 jurisdictions but, as of 1 January 2019, another 54 were added, including the treaty jurisdictions of Austria, Chile, the Philippines, Switzerland and Turkey, which were previously not listed, and financial services centers, such as Lichtenstein and Luxembourg, and as of 1 January 2020, Curaçao, Lebanon, Nauru, Pakistan, Panama, Peru, Qatar and United Arab Emirates were added. From 1 July 2021, the Hong Kong Special Administrative Region (SAR) is added, as are the Dominican Republic, Ecuador, El Salvador, Jamaica, Kuwait, Morocco, North Macedonia and Serbia (Kenya was removed from that date). From 1 January 2022, Armenia, Cape Verde, Kenya, Mongolia, Montenegro and Oman were added.

Common Reporting Standard. Australia adopted the international Common Reporting Standard (CRS) for financial institutions, such as banks, asset managers, funds, custodians and certain insurance companies.

Foreign-exchange controls. The Financial Transaction Reports Act 1988 requires each currency transaction involving the physical transfer of notes and coins in excess of AUD10,000 (or foreign-currency equivalent) between Australian residents and overseas residents, as well as all international telegraphic and electronic fund transfers, to be reported to the Australian Transaction Reports and Analysis Centre. This information is then available to the Commissioner of Taxation, Federal Police, Australian Customs Service and other prescribed law enforcement agencies.

Companies “stapled” to trusts and sovereign wealth funds. Structures using companies and linked trusts (“stapled structures” with similar investors) have long been accepted in the real estate sector. Certain trusts flow eligible income through to lower-taxed investors and foreign entities benefiting from the 15% MIT withholding tax rules; stapled companies generate trading income for the same investors, after deducting cross-staple payments to the trusts. The tax law was amended with application from 1 July 2019 to limit access to the lower MIT withholding tax rate for certain stapled structures income, with substantial transitional rules for certain existing infrastructure projects and a rolling 15-year exemption for approved “nationally significant” infrastructure projects.

Strong focus of the Foreign Investment Review Board on tax issues. The Foreign Investment Review Board (FIRB) approval process for relevant foreign investments involves tax issues, and the ATO is playing an influential role. The national interest test contains standard tax conditions, which are imposed on a case-by-case basis. Additional conditions may be imposed if a significant tax risk is identified by the FIRB and ATO. The requirements affect new and existing inbound investors undertaking certain reorganizations. Tax discussions in FIRB approval processes may add time, particularly if the ATO requires further actions. The framework was strengthened in legislation passed in 2020, enhancing the national security review of sensitive acquisitions and providing extra powers and amendments to streamline investment in non-sensitive areas.

Multilateral Instrument to update Australia's tax treaties. Australia has ratified the Multilateral Instrument (MLI), and deposited final positions adopted with the OECD. As of 1 January 2019, the MLI commenced to alter Australia's covered tax arrangements.

Taxation of the digital economy. An Australian Treasury 2018 discussion paper explored implications of the digital economy for the corporate tax system. The Treasurer announced in 2019 that Australia is participating in the OECD-led initiative to develop a multilateral agreement with respect to the digitalization of global business and is not pursuing a digital services tax at this stage.

F. Treaty withholding tax rates

The table below provides treaty withholding tax rates for dividends, interest and royalties paid by Australian companies to nonresidents.

Under Australian domestic law, certain dividends and interest payments to nonresidents are exempt from withholding tax.

For dividends, Australian domestic law provides that no withholding tax is imposed on dividends to the extent they are franked under Australia's imputation system introduced in 1987 (see Sections B and E). Some of Australia's double tax treaties specifically refer to withholding taxes imposed on franked dividends in some circumstances but, under the domestic tax law, dividend withholding tax is not imposed with respect to franked dividends.

For interest, Australia does not impose withholding tax on interest paid to nonresidents on certain publicly offered company debentures or on interest paid on state and federal government bonds. No withholding tax is imposed on interest paid on off-shore borrowings by offshore banking units.

	Unfranked dividends	Interest	Royalties
	%	%	%
Argentina	10/15 (b)	12	10/15 (c)

Non-treaty jurisdictions	30	10	30

- (a) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the rate is 0% or 5%, if the beneficial owner of the dividends is a company that holds at least 80% or 10%, respectively, of the voting power in the payer. In all other cases, the rate is generally 15%.
- (b) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a rate of up to 10% for franked dividends paid to a person holding directly at least 10% of the voting power in the payer). To the extent dividends are unfranked, the withholding tax rate is 15%, regardless of voting power.
- (c) The 10% rate applies to specified types of royalties.
- (d) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the rate is 25%, or 15% if a tax rebate or credit is granted against Australian tax to the beneficial owner of the dividends.
- (e) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a rate of up to 5% for dividends paid out of fully taxed profits if the recipient is a company that holds directly at least 10% of the capital of the payer). To the extent dividends are unfranked, the withholding tax rate is 15%, regardless of voting power.
- (f) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the 20% rate applies to dividends paid to a company that holds directly at least 25% of the capital of the payer of the dividends. The 15% rate applies if the condition described in the preceding sentence is satisfied and if the payer is engaged in an industrial undertaking.
- (g) The 0% rate applies to government institutions and unrelated financial institutions.
- (h) The 10% rate applies if any of the following conditions are satisfied:
- The recipient is a bank or insurance company.
 - The interest is derived from bonds and securities traded on a recognized securities market.
 - The payer is a bank or the purchaser of machinery and equipment with respect to a sale on credit.
- (i) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the 0% rate applies if the recipient of the dividends is a company holding directly at least 10% of the voting power in the payer, and the 15% rate applies in all other cases.
- (j) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a rate of up to 5% for dividends paid out of fully taxed profits to a company that holds at least 10% of the capital of the payer and that has invested at least AUD700,000 [or the equivalent in Russian rubles] in the payer). To the extent dividends are unfranked, the withholding tax is 15%, regardless of voting power.
- (k) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a rate of up to 5% for franked dividends if the beneficial owner of the dividends is a company that controls at least 10% of the voting power in the payer). To the extent dividends are unfranked, the rate is 15%, regardless of voting power.
- (l) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a rate of up to 5% for franked dividends). To the extent dividends are unfranked, the rate is 15%.
- (m) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a rate of up to 10% for franked dividends). To the extent dividends are unfranked, the rate is 15%.
- (n) The 10% rate applies to interest derived by financial institutions or insurance companies.

- (o) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the rate is 0% or 5% if the recipient holds at least 80% or 10%, respectively, of the voting power in the payer and 10% in other cases. However, a 15% withholding tax rate applies to fund payments from managed investment trusts but, under Australian law, this rate is reduced to 10% for funds payments by clean building managed investment trusts.
- (p) The withholding tax rates listed in the table apply to income derived by non-residents on or after 1 January 2015.
- (q) Australia does not impose withholding tax on dividends to the extent they are franked (notwithstanding that the treaty provides for a 0% rate if the dividends paid out of profits that have borne the full company tax and if the recipient is a company that holds directly at least 10% of the voting power of the payer). To the extent dividends are unfranked, the rate is 15%, or it is 5% if the dividends are paid to a company that holds at least 10% of the voting power of the payer.
- (r) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the rate on unfranked dividends is 15%, or 5% if the beneficial owner of the dividends is a company that holds directly at least 10% of the voting power of the company paying the dividend.
- (s) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the 5% rate applies to dividends paid by a company that is resident in Australia to a company (other than a partnership) that holds directly at least 10% of the voting power in the company paying the dividends. The 15% rate applies in all other cases.
- (t) Australia is renegotiating its double tax treaty with the United Kingdom. An exemption from withholding tax for interest payments to related financial institutions is one area for potential change. However, further details are not yet available.
- (u) These countries are not currently listed as “information exchange countries” (see Section E).
- (v) Interest derived from the investment of official reserve assets by the government of a contracting state, its central bank or a bank performing central banking functions in that state is exempt from tax in the other contracting state. The 10% rate applies in all other cases.
- (w) Australia has most-favored-nation clauses in its treaties with Austria, Finland, France, Italy, Korea (South), Malaysia, the Netherlands, Norway and Switzerland. Under the most-favored-nation clause, Australia and the other treaty country must try to renegotiate their tax treaties if the withholding tax rates in another of Australia’s tax treaties are lower.
- (x) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the 0% rate applies if the recipient holds at least 80% of the payer or if the dividends are paid with respect to portfolio investments by government bodies including government investment funds. The 5% rate applies if the recipient holds at least 10% of the payer. The 15% rate applies to other dividends.
- (y) The 0% rate applies to interest paid to government institutions and unrelated financial institutions. The 10% rate applies in all other cases.
- (z) The withholding tax rates listed in the table apply to income derived on or after 1 April 2013.
- (aa) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the 5% rate applies if the recipient beneficially owns at least 10% of the voting power in the company paying the dividends. The 15% rate applies in all other cases.
- (bb) The 5% rate applies if the recipient is a financial institution that is unrelated to and dealing wholly independently with the payer. The 10% rate applies in all other cases.
- (cc) The 5% rate applies to royalties paid for the use of, or the right to use, industrial, commercial or scientific equipment. The 10% rate applies to other royalties.
- (dd) An amending protocol to the treaty signed on 16 December 2011 entered into force on 2 April 2013. It updates various aspects of the agreement including cross-border services, source-country taxation and assistance in collection of taxes. However, it does not contain any changes to withholding tax rates.
- (ee) Australia and Switzerland signed a revised tax treaty, which entered into force on 14 October 2014. It applies to withholding taxes on income that is derived by a resident of Switzerland on or after 1 January 2015.

- (ff) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, a 0% rate applies to dividends paid to the following:
- Publicly listed companies or subsidiaries thereof, and unlisted companies in certain circumstances, that hold 80% or more of the paying company
 - Complying Australian superannuation funds and tax-exempt Swiss pension schemes that did not hold more than 10% of the direct voting power or capital in the company, respectively, during the preceding 12-month period
- The 5% rate applies to dividends paid to companies that hold 10% or more of the paying company. The 15% rate applies in all other cases.
- (gg) Under the revised treaty, the 0% rate applies to interest paid to the following:
- Bodies exercising governmental functions and banks performing central banking functions
 - Banks that are unrelated to, and dealing independently with, the payer
 - Complying Australian superannuation funds and tax-exempt Swiss pension schemes
- The 10% rate applies in all other cases.
- (hh) Under the revised treaty, royalties are taxed in the source (of the royalty) country at a rate of up to 5%. The revised definition of “royalties” in the revised tax treaty excludes the right to use industrial, commercial or scientific equipment from the definition, and accordingly, may lower the costs for companies that lease such equipment.
- (ii) The revised treaty between Australia and Germany entered into force on 7 December 2016 and applies for withholding taxes from 1 January 2017.
- (jj) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, the rates are 0% if the recipient holds at least 80% of the voting power in the payer for at least 12 months, 5% if the recipient holds at least 10% for at least 6 months (including the date of payment) and 10% in other cases. However, a 15% withholding tax rate applies to fund payments from managed investment trusts but, under Australian law, this rate is reduced to 10% for funds payments by clean building managed investment trusts.
- (kk) The 0% rate applies if the interest is derived by bodies exercising governmental functions or performing central banking functions or by financial institutions unrelated to and dealing wholly independently with the payer. The 10% rate applies in all other cases.
- (ll) Australia does not impose withholding tax on dividends to the extent they are franked. To the extent dividends are unfranked, a 0% rate applies to dividends paid to the following:
- Governments (including government investment funds)
 - Central banks
 - Tax-exempt pension funds or Australian residents carrying out complying superannuation activities on direct holdings of no more than 10%
- The 5% rate applies to companies that hold 10% or more of the paying company throughout a 365-day period. The 15% rate applies in all other cases.
- (mm) The 0% rate applies to interest paid to government bodies (including government investment funds) and central banks. The 5% rate applies to interest paid to recognized pension funds, Australian residents carrying out complying superannuation activities and unrelated financial institutions. The 10% rate applies to all other interest payments.

A. At a glance

Corporate Income Tax Rate (%)	25 (a)
Capital Gains Tax Rate (%)	25
Withholding Tax (%)	
Dividends	25/27.5 (b)
Interest (from Bank Deposits and Securities only)	0/25 (c)
Royalties from Patents, Know-how, etc.	20 (d)
Net Operating Losses (Years)	
Carryback	0 (e)
Carryforward	Unlimited (f)

- (a) This rate applies to distributed and undistributed profits. For details see Section B.
- (b) In general, this withholding tax applies to dividends paid to residents and nonresidents. An Austrian corporation is generally required to withhold tax at a rate of 27.5%. However, if the distributing company has evidence of the corporate status of the investor, it may withhold tax at a rate of 25% (see Section B). Certain dividends paid to Austrian and European Union (EU) companies are exempt from tax (see Section B). In addition, a reduction in or relief from dividend withholding tax may be possible under double tax treaties.
- (c) For details, see Section B.
- (d) This withholding tax applies to nonresidents.
- (e) There is an exception for losses from 2020. For details, see *Relief for losses* in Section C.
- (f) The offset of loss carryforwards against taxable income is limited to 75% of taxable income in most cases (see Section C).

B. Taxes on corporate income and gains

Corporate income tax. In general, all companies resident in Austria and foreign companies with Austria-source income are subject to corporate income tax. (For the scope of income subject to tax, see

Foreign tax relief.) A company is resident in Austria if it has its legal seat or its effective place of management in Austria.

Rates of corporate income tax. The corporate tax rate is generally 25%. A reduction of the corporate income tax rate to 24% as of 2023 and to 23% as of 2024 is expected.

All companies, including those incurring tax losses, are subject to the minimum tax. In general, the minimum tax is EUR1,750 for an Austrian private limited company (Gesellschaft mit beschränkter Haftung, or GmbH), EUR3,500 for a stock corporation (Aktiengesellschaft, or AG) and EUR6,000 for a European stock corporation (Societas Europea, or SE). For banks and insurance companies, the minimum tax is EUR5,452. Minimum tax may be credited against corporate tax payable in future years.

A reduced minimum tax applies to newly formed Austrian private limited companies incorporated after 30 June 2013. For such companies, the minimum tax is EUR500 per year for the first five years and EUR1,000 for the following five years. This is known as the “foundation privilege.”

Participation exemptions. The Austrian tax law provides for national and international participation exemptions.

National. Dividends (including hidden profit distributions) received by an Austrian company from another Austrian company are exempt from corporate income tax (no minimum holding is required). Capital gains derived from the sale of shares in Austrian companies are treated as ordinary income and are subject to tax at the regular corporate tax rate. In general, capital losses on and depreciation of the participation may be deducted from taxable income, spread over a period of seven years.

International participation. An Austrian company is entitled to the international participation exemption if it holds at least 10% of the share capital of a foreign corporation that is comparable to an Austrian corporation for more than one year. The one-year holding period begins with the acquisition of the participation. The international participation exemption applies to dividends and capital gains.

A decrease in the value of an international participation is generally not tax deductible, but an Austrian company can irrevocably opt for such tax deductibility in the annual tax return for the year of acquisition. If this irrevocable option is exercised, capital gains are subject to tax, and decreases in value and capital losses are tax deductible. In general, capital losses and depreciation of the participation may then be deducted from the taxable income, spread over a period of seven years. In the event of insolvency or liquidation, final losses may be deducted even if the option for tax effectiveness was not exercised. The option does not affect the tax treatment of dividends.

International portfolio participation. Dividends from participations that do not meet the criteria for international participations are subject to the general corporate income tax rate of 25%. However, shareholdings in EU corporations, certain European Economic Area (EEA) corporations (currently only

Liechtenstein and Norway) and corporations that are resident in third countries and that have agreed to exchange tax information qualify as international portfolio participations. Dividends from such international portfolio participations are exempt from tax. Capital gains (and losses) are tax-effective (the treatment corresponds to the treatment of national participations).

Controlled foreign company and anti-abuse rules. On 1 January 2019, new controlled foreign company (CFC) rules entered into force. For details about the CFC rules and anti-abuse rules, see *Controlled foreign companies and anti-abuse rules* in Section E.

Hybrid financing. Dividends from international participations (including portfolio participations) are not exempt from tax in Austria if such payments are deductible for tax purposes in the country of the distributing company. Also, see *Hybrid mismatches* in Section E.

Expenses. Business expenses are generally deductible. However, an exception applies to expenses that are related to tax-free income. Although dividends from national and international participations and portfolio participations are tax-free under the Austrian participation exemption, interest incurred on the acquisition of such participations is deductible for tax purposes. However, interest from debt raised to finance the acquisition of participations from affiliates is generally not deductible. In addition, interest and royalty payments to domestic and foreign-affiliated corporations are not tax deductible if the income of the recipient corporation is not subject to tax or taxed at a (nominal or effective) rate of less than 10%. If the recipient corporation is not the beneficial owner, the taxation of the beneficial owner is relevant. An exception applies to payments to entities that meet the EU law privileges for risk capital measures, which are contained in Regulation (EU) No. 345/2013 of the European Parliament and of the Council of 17 April 2013 on European venture capital funds. If these specific rules of EU law are fulfilled and if the income of the recipient corporation is taxed at a rate of less than 10%, interest and royalty payments to domestic and foreign affiliated corporations remain deductible for tax purposes.

Capital gains. Capital gains derived from sales of shares in Austrian companies are treated as ordinary income and are subject to tax at the regular corporate tax rate. Capital gains derived from sales of shares in non-Austrian companies may be exempt from tax under the international participation exemption; otherwise, they are treated as ordinary income and subject to tax at the regular corporate tax rate.

Withholding taxes on dividends and interest

Dividends. Effective from 1 January 2016, the general withholding tax rate for dividends is 27.5% if the distribution does not constitute a repayment of capital. The withholding tax rate may be reduced to 25% if the investor is a corporation. In practice, this means that if the distributing entity lacks information on the status of an investor (corporate or individual), the 27.5% rate applies. In general, the 27.5% rate applies to dividends paid with respect to portfolio investments, including those paid to corporate investors.

If the person required to withhold has information that the investor is a corporation, the 25% tax rate can be applied at source (for example, intercompany dividends). If 27.5% is withheld, corporate investors may reduce their tax burden in Austria to 25% in an assessment and refund procedure, based on their corporate status.

However, this withholding tax does not apply to dividends (other than hidden profit distributions) paid to either of the following:

- An Austrian parent company (fulfilling certain criteria) holding directly or indirectly an interest of at least 10% in the distributing company.
- A parent company (fulfilling certain criteria) resident in another EU country holding directly or indirectly an interest of at least 10% in the distributing company for at least one year.

Furthermore, the withholding tax rate may be reduced for dividends paid to foreign shareholders in accordance with double tax treaties. Depending on the situation, this reduction may be in the form of an up-front reduction at source or a refund of withholding tax.

For dividends paid to parent companies resident in the EU or EEA (if the EEA country grants full administrative assistance; currently only Liechtenstein and Norway meet this condition) that are subject to tax in Austria, Austrian withholding tax is refunded if the shareholder can prove that the withholding tax cannot be credited in the state of residence of the shareholder under tax treaty law.

Interest. Interest paid on loans (for example, intercompany loans) is generally not subject to withholding tax in Austria. A 27.5% withholding tax is imposed on interest income paid by Austrian banks, Austrian branches of foreign banks or Austrian paying agents. An exception from the 27.5% rate applies to interest on bank savings and other non-securitized loans from banks (except for compensation payments and lending fees), which are subject to a 25% tax rate. Interest paid to nonresident companies is generally exempt from Austrian withholding tax if certain evidence is provided. In addition, interest income is exempt from withholding tax if the debtor has neither an ordinary residence nor a registered office in Austria and if it is not a domestic branch of a foreign bank. EU withholding tax is abolished, effective from January 2017.

Interest income earned by a company engaged in business in Austria through a permanent establishment is considered business income and must be included in the taxable income of the permanent establishment. For such companies, the withholding tax (if due) is credited against the corporate income tax. If the withholding tax exceeds the tax due, it is refunded. The withholding tax is not imposed if a declaration of exemption stating that the interest is taxed as business income is filed with the Austrian bank.

Administration. In principle, the Austrian tax year corresponds to the calendar year. However, other fiscal years are possible. The tax base is the income earned in the fiscal year ending in the respective calendar year. Annual tax returns must be filed by 30 April (30 June, if submitted electronically) of the following calendar year. Extensions may be granted. A general extension to

31 March (or 30 April) of the second following year is usually granted if a taxpayer is represented by a certified tax advisor (tax returns may be requested earlier by the tax office).

Companies are required to make prepayments of corporate income tax. The amount is generally based on the (indexed) amount of tax payable for the preceding year, and payment must be made in equal quarterly installments on 15 February, 15 May, 15 August and 15 November.

Interest is levied on the amount by which the final tax for the year exceeds the total of the advance payments if this amount is paid after 30 September of the year following the tax year. To prevent interest, companies may pay the amount due as an additional advance payment by 30 September of the year following the tax year.

Foreign tax relief. In general, resident companies are taxed in Austria on their worldwide income, regardless of where that income is sourced. However, the following exceptions exist:

- The Finance Ministry may, at its discretion, allow certain types of income that have their source in countries with which Austria has not entered into a double tax treaty to be excluded from the Austrian tax computation, or it may allow foreign taxes paid to be credited against Austrian corporate income tax. Under a decree of the Ministry of Finance, an exemption is granted in case of active income and taxation of at least 15%. Otherwise, only a credit of foreign taxes is allowed.
- Income earned in countries with which Austria has a double tax treaty is taxable or exempt, depending on the treaty.
- Dividends and capital gains derived from participations of 10% or more in foreign subsidiaries can be exempt from corporate income tax under the international participation exemption (see *Participation exemptions*).
- Dividends from foreign portfolio shareholdings in companies resident in countries that have agreed to exchange tax information are exempt from tax unless the subsidiary is low-taxed (see *Participation exemptions*).

C. Determination of trading income

General. In general, taxable income is based on the profit or loss shown in the financial statements prepared in accordance with Austrian generally accepted accounting principles. The financial statement profit or loss must be adjusted in accordance with special rules set forth in the tax acts. Taxable income is calculated as follows:

Profit per financial statements	X
+ Nondeductible taxes (such as corporate income tax)	X
+ Nondeductible expenses (such as certain interest)	X
– Special allowances and nontaxable income (intercompany dividends and loss carryforwards)*	<u>(X)</u>
= Taxable income	<u>X</u>

* The offset of loss carryforwards against taxable income is limited to 75% of taxable income in most cases.

General interest expense limitation. The interest expense limitation rule applies as of 1 January 2021 to all loans (that is, group and third-party loans, regardless of recourse) and to businesses resident in Austria, companies residing abroad with a permanent establishment in Austria and partnerships with an Austrian branch.

Under the interest expense limitation rule, the deduction of interest expense exceeding interest income (net interest expense) is limited to 30% of taxable earnings before (net) interest, tax, depreciation and amortization (EBITDA). Tax-exempt income and partnership income should not be considered in the calculation of the taxable EBITDA.

The limitation rule does not apply if one of the following exemption rules applies:

- **Exemption threshold.** The annual net interest expense is less than EUR3 million.
- **Group clause.** The company is a member of a tax group (see *Groups of companies*). In the case of tax groups, the interest limitation rule is only to be applied at the level of the head of the tax group when determining the combined taxable profit. In principle, tax groups are also entitled to an allowance of EUR3 million (group allowance), but this amount applies to the entire group of companies (that is, to the head of the tax group and all group members together). Any group interest surplus exceeding the allowance of EUR3 million is in turn only deductible to the extent that it is covered by the offsettable group EBITDA (30% of the taxable group EBITDA). Any group interest surplus or offsettable group EBITDA can be carried forward in accordance with the general rules and can be offset in subsequent years. The head of the tax group that is fully included in consolidated financial statements can deduct the interest surplus for tax purposes without restriction if the equity ratio equals or exceeds the equity ratio of the group.
- **Escape clause.** This clause applies to entities that are fully included in consolidated financial statements prepared in accordance with Austrian generally accepted accounting principles (GAAP), International Financial Reporting Standards (IFRS) or other comparable accounting standards, such as US GAAP. For these corporations, interest expense may be fully deducted if the equity ratio of the entity equals or exceeds the equity ratio of the consolidated group, whereby a shortfall of up to two percentage points (rule of tolerance) is not harmful. The equity ratios are determined on the basis of the consolidated and individual financial statements, respectively.
- **Grandfathering rule:** Interest expenses arising from contracts concluded prior to 17 June 2016 will not be affected by the interest barrier rules. However, such grandfathering exemption is temporary and may finally be applied in the course of the tax assessment for 2025.

Unused EBITDA can be carried forward over a five-year period. However, the carryforward does not apply if one of the above-mentioned exemptions from the interest expense limitation rule applies or if a positive net interest balance exists. Nondeductible interest expense can be carried forward indefinitely but is subject to the change of ownership rules (see *Relief for losses*). A

deduction is possible in the following years in accordance with the interest expense limitation rules.

Inventories. In determining trading income, inventories must be valued at the lower of cost or market value. Cost may, at the taxpayer's option, be determined using any of the following methods:

- Historical cost
- Average cost
- First-in, first-out (FIFO)
- Under certain circumstances, last-in, first-out (LIFO)

The highest-in, first-out (HIFO) method is not allowed.

Provisions. Accruals for severance payments and pension costs are allowable to a limited extent. Accruals for corporate income tax are not deductible for tax purposes. Provisions with a term of 12 months or more are subject to a mandatory fixed discounting rate of 3.5%, except for accruals for severance payments and pension costs, which are tax deductible to the extent of 100% of their tax value.

For financial years beginning after 31 December 2020, the formation of lump-sum value adjustments and lump-sum accruals is now also recognized for tax purposes. The prerequisite is a prudent assessment of the amount of the lump sum value adjustment or accrual. In addition, general bad debt provisions are accepted for tax purposes for financial years ending after 31 December 2020.

Depreciation. In general, depreciable assets are depreciated over the average useful life. For certain assets, such as buildings and passenger cars, the tax law provides depreciation rates. The following are some of the applicable annual rates.

Asset	Rate (%)
Buildings	1.5/2.5*
Office equipment	10 to 25
Motor vehicles	12.5
Plant and machinery	10 to 20

* The rate of 1.5% applies to buildings that are leased for residential use.

For buildings acquired or constructed after 30 June 2020, an accelerated straight-line depreciation up to a maximum amount of three times the statutory percentage rate is allowed in the first year, and two times the statutory percentage rate is allowed in the second year. Furthermore, in the first year, the half-year depreciation does not apply to buildings.

A declining-balance method for depreciation is optional and allows companies to depreciate fixed assets by up to 30% of the residual book value per year. However, the regime is only applicable for fixed assets purchased or constructed after 30 June 2020. The declining-balance method does not apply to intangible assets; used assets; buildings; goodwill; certain kinds of passenger vehicles and estate cars; station wagons; fixed assets used for promotion, transport or storage of non-renewable energy sources; and fixed assets that make direct use of non-renewable energy sources (for example, planes). A change from the declining-balance method to the straight-line method during the useful life is permissible, but not vice versa.

Research and development. Companies may claim a research and development (R&D) bonus (cash payment) equal to 14% of certain expenses for research and experimental development (according to the Frascati manual, these expenses consist of material costs, labor costs, energy costs and attributed interest). The R&D must be conducted by an Austrian company in Austria or by an Austrian permanent establishment of a foreign company.

Relief for losses. Losses incurred by resident companies may be carried forward without time limit. The offset of loss carryforwards against taxable income is in most cases limited to 75% of the taxable income. The remaining balance of the loss carryforward may be offset against income in future years, subject to the same 75% limitation.

The loss carryforward is attributable to the corporation, not to the shareholders. Consequently, a change in shareholders does not affect the loss carryforward, provided no corresponding substantial change in the business and management of the company occurs. Foreign companies with permanent establishments in Austria may claim tax losses only under certain circumstances.

Losses generally may not be carried back. However, for the first time, the Austrian authorities have enabled a tax loss carryback for losses from the 2020 tax year. This does not represent a change in general Austrian tax rules regarding the usage of losses, but a one-off possibility as a result of the COVID-19 pandemic. Consequently, tax losses from 2020 can be used to offset profits generated in 2019 and 2018. The tax loss carryback for 2020 is limited to a maximum amount of EUR5 million. In the event that the EUR5 million threshold cannot be fully utilized in the tax assessment for 2019, the remaining losses can be considered in the tax assessment for 2018, but only up to a maximum of EUR2 million. Any remaining 2020 tax losses can be carried forward.

Groups of companies. The group taxation regime allows parent and subsidiaries to consolidate their taxable income. Under the Austrian law, the head of the tax group must be an Austrian corporate entity or branch of an EU/EEA corporate entity that has held more than 50% of the capital and voting rights in the subsidiary since the beginning of the subsidiary's fiscal year. The shareholding can be direct, or it can be held indirectly through a partnership or a group member. Only corporations (not partnerships) qualify as group members. If the holding requirement is satisfied, 100% of the taxable income (profit or loss) of domestic group members is allocated to the taxable income of the group parent, regardless of the percentage of the shareholding in the subsidiary. No actual profit or loss transfer takes place (only an agreement on the split of the tax burden is required). The tax group must exist for at least three full financial years. Otherwise, retroactive taxation on a stand-alone basis applies.

Group taxation also allows a cross-border tax consolidation if the foreign subsidiary is directly held by an Austrian parent (first foreign tier) and if the type of entity is comparable to an Austrian

corporation from a company law perspective. Effective from 1 March 2014, certain companies are excluded from the group taxation regime. Only corporations resident in the EU and in countries with which Austria has agreed on comprehensive administrative assistance can be included in a tax group. The Austrian Ministry of Finance has published a list of all qualifying third countries.

Foreign losses must be recalculated under Austrian tax law. In addition, the deductibility of foreign losses is limited to the lower of the amount according to Austrian tax law and actual losses calculated under foreign tax law. Losses from foreign group members can be deducted from the Austrian tax base in proportion to the shareholding only. Beginning with the 2015 tax year, the utilization of losses of foreign group members is limited to 75% of the domestic group income. Excess losses are included in the loss carryforwards for subsequent years. Profits of a foreign group member are generally not included in the Austrian group parent's income.

To avoid double utilization of losses of a foreign group member, foreign losses that have been deducted from income of the Austrian group shareholder are added to the Austrian profit if the losses can be offset in the foreign jurisdiction at a subsequent time. Consequently, if the foreign country uses the losses in subsequent years (as part of a loss carryforward), the tax base in Austria is increased by that amount in order to prevent a double dip of losses. Foreign losses must also be added to the Austrian income tax base if the foreign subsidiary leaves the group. A recapture is also required if a significant reduction occurs in the size of the foreign subsidiary's business. This measure is designed to prevent dormant foreign entities from remaining in the group to avoid the recapture of foreign losses. Relief for capital losses is provided only in the event of a liquidation or insolvency.

Depreciation to the fair market value of a participation within the group is tax-neutral.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT)	
Standard	20
Reduced	10/13
(A temporary reduced VAT rate of 5% applied to sectors hard hit by the COVID-19 pandemic, such as gastronomy, the lodging industry, the cultural sector and the publishing sector, until 31 December 2021.)	
Payroll taxes, paid by employer	
Family allowance fund; varies by state	4.24 to 4.32
Community tax	3
Real estate sales tax (including 1.1% registration fee)	4.6
Stamp duties, on certain legal transactions, such as leases and hire contracts	0.8 to 2

Nature of tax	Rate (%)
Environmental taxes; comprising energy taxes, transport taxes, resource taxes and pollution taxes; according to the final government bill for the Eco Social Tax Reform Act, a new carbon tax will be introduced beginning on 1 July 2022 (starting with EUR30 per ton and increased annually up to EUR55 per ton in 2025); a carbon leakage rule will prevent companies from relocating; a hardship clause for companies with high energy intensity will be introduced	Various

E. Miscellaneous matters

Foreign-exchange controls. No restrictions are imposed on the transfer of nominal share capital, interest and the remittance of dividends and branch profits. Royalties, technical service fees and similar payments may be remitted freely, but routine documentation may be required.

Debt-to-equity rules. Austrian tax law does not provide special debt-to-equity rules. Although, in general, shareholders are free to determine whether to finance their company with equity or loans, the tax authorities may reclassify loans granted by shareholders, loans granted by group companies, and loans granted by third parties guaranteed by group companies as equity, if funds are transferred under legal or economic circumstances that typify equity contributions, such as the following:

- The equity of the company is insufficient to satisfy the solvency requirements of the company, and the loan replaces equity from an economic point of view.
- The company's debt-to-equity ratio is significantly below the industry average.
- The company is unable to obtain any loans from third parties, such as banks.
- The loan conveys rights similar to shareholder rights, such as profit participations.

If a loan is reclassified (for example, during a tax audit), interest is not deductible for tax purposes and withholding tax on hidden profit distributions may become due. Capital duty was abolished, effective from 1 January 2016.

Transfer pricing. Austria has accepted the Organisation for Economic Co-operation and Development (OECD) transfer-pricing guidelines and published a summary of the interpretation of the OECD guidelines by the Austrian tax administration in 2010. Under these guidelines, all transactions with related parties must be conducted at arm's length. If a transaction is considered not to be at arm's length, the transaction price is adjusted for corporate income tax purposes. This adjustment may be deemed to be a hidden profit distribution subject to withholding tax or a capital contribution. An updated version of the Austrian transfer-pricing guidelines is currently under review. It takes into account the changes that have occurred since 2010 in the area of the interpretation of the arm's-length principle at the OECD level, particularly in the context of the Base Erosion and Profit Shifting (BEPS) project.

In 2016, Austria introduced the Transfer Pricing Documentation Law (TPDL), which follows the three-tier documentation approach consisting of a Country-by-Country Report (CbCR), the master file and the local file. The master file and local file must be prepared if an Austrian constituent entity generated over EUR50 million turnover in the two preceding fiscal years. A CbCR must be prepared if the whole multinational group exceeded a threshold of consolidated turnover of EUR750 million in the preceding fiscal year. By the last day of the fiscal year for which a CbCR is prepared, each Austrian constituent entity of a multinational group exceeding the threshold must inform the competent Austrian tax office of the entity that is preparing or filing the CbCR and where this entity is a resident. An Austrian entity that does not reach the threshold for filing a master file and a local file still must file a master file if the multinational group is required to prepare one by another country. In addition, the TPDL clarifies that documentation obligations existing in addition to the TPDL (for example, accounting and filing obligations imposed by the Austrian Federal Fiscal Code [FFC]) are not affected by the TPDL. Therefore, it is strongly suggested that constituent entities resident in Austria of multinational groups that do not exceed the stipulated turnover of the TPDL prepare Transfer Pricing Documentation Reports in accordance with the FFC.

Controlled foreign companies and anti-abuse rules. On 1 January 2019, new CFC rules entered into force. The CFC regime (in line with the EU Anti-Tax Avoidance Directive [ATAD; 2016/1164 of 12 July 2016]) of 12 July 2016 applies if more than one-third of the income of a low-taxed foreign company is passive income and if the entity is lacking sufficient economic functions and substance.

Passive income is defined in line with the ATAD as consisting of the following:

- Interest or other income from financial assets
- Royalties and other income from intellectual property
- Dividends and capital gains from the disposal of shares, insofar as they would have been taxable at the level of the Austrian shareholder
- Income from capital leasing
- Income from activity as an insurance company, bank and other financial activities
- Income from invoicing companies, which derive income by selling goods and services that generate no or little economic value from and to affiliated companies

Low taxation means that the effective actual tax burden of the foreign company does not exceed 12.5%. The basis of assessment for the tax burden must be calculated according to Austrian tax law and compared to the actual foreign tax paid. For purposes of the CFC regime, low taxation does not exist if the low taxation stems only from a shorter depreciation period or a more favorable use of losses under the foreign tax law.

An Austrian company controls a foreign company if it holds alone or together with an associated entity directly or indirectly a participation of more than 50% in the foreign company. An

associated entity is an entity in which the Austrian entity holds directly or indirectly a participation of at least 25%, as well as any entity that is held by the same entity or person that owns directly or indirectly a participation of at least 25% of the Austrian entity and the other entity. If more than a one-third of the income of a low-taxed controlled foreign entity is passive income, the passive income is attributed to its controlling entity or entities to the extent of their participation, unless the foreign entity carries out substantial economic activity based on personnel, equipment, assets and premises. Foreign tax on the attributed passive income can be credited against the Austrian tax.

In addition, the tax exemptions for international participations and international portfolio participations (see Section B) do not apply if the participation is in a company that generates mostly passive income and is located in a low-tax country (low taxation as defined in the CFC regime). Instead, they are taxed at the general Austrian corporate income tax rate of 25%. For international participations and international portfolio participations of at least 5%, foreign tax is credited (switchover to credit method). If the income has already been attributed to the Austrian controlling entity according to the CFC rules, no switchover to the credit method is allowed.

Hybrid mismatches. To implement the Anti-Tax Avoidance Directive 2 (ATAD 2), which amends the ATAD, into Austrian domestic law, a special regulation for hybrid mismatches entered into force on 1 January 2020. A hybrid mismatch occurs if expenses are deducted in one state and there is no taxation of the corresponding revenue in the other state (deduction/no inclusion) or if expenses can be deducted in more than one state (double deduction). Under the new Austrian anti-hybrid provision, tax effects of hybrid mismatch arrangements must be neutralized if a certain type of defined tax discrepancy occurs in a group of companies or a structured arrangement. The neutralization is achieved either by non-deductibility of the expenses in Austria or inclusion of the corresponding revenue in Austria.

DAC6. The EU directive on cross-border tax arrangements (DAC6) introduces mandatory disclosure requirements for certain cross-border tax arrangements, provided that the main benefit of such arrangements is the expectation of a lower tax burden and/or of other specific characteristics (so-called “hallmarks”) defined in the EU-Meldepflichtgesetz, which implements the EU Directive on Administrative Cooperation.

F. Treaty withholding tax rates

The following summary is intended purely for orientation purposes; it does not reflect the various special provisions of individual treaties or the withholding tax regulations in domestic tax law.

A General.

B Dividends received from subsidiary company. Shareholding required varies from 10% to 95%, but generally is 25%.

C General.

- D Mortgages.
- E General.
- F Royalties from 50% subsidiary.
- (a) Under domestic tax law, a 25% withholding tax is imposed only on interest income from bank deposits and securities. However, interest paid to nonresidents is generally not subject to withholding tax. For details, see Section B.
- (b) No reduced rate applies.
- (c) No withholding tax is imposed, but the income is subject to tax at the regular corporate rate.
- (d) Austria is honoring the USSR treaty with respect to the republics comprising the Commonwealth of Independent States (CIS), except for those republics that have entered into tax treaties with Austria. Austria has entered into tax treaties with Armenia, Azerbaijan, Belarus, Kazakhstan, Kyrgyzstan, Moldova, the Russian Federation, Tajikistan, Turkmenistan, Ukraine and Uzbekistan. The withholding tax rates under these treaties are listed in the above table.
- (e) Interest paid by banks is subject to a 4.95% withholding tax.
- (f) Trademark royalties are subject to a 25% withholding tax. The withholding tax rate is 15% for royalties paid for literary, artistic and scientific items.
- (g) The rate is 10% for royalties paid for the use of films or other means of production used for radio or television.
- (h) The 5% rate applies if the participation of the recipient of the dividends exceeds USD250,000. The 10% rate applies if the participation of the recipient of the dividends exceeds USD100,000 but does not exceed USD250,000.
- (i) The rate is 5% for royalties paid for technologies not older than three years.
- (j) The rate is 0% for royalties paid for literary, artistic and scientific items.
- (k) Royalties paid for computer software, patents and know-how are exempt if the royalties are taxed in the state of residence of the recipient.
- (l) The rate is 5% for royalties paid to licensors engaged in industrial production.
- (m) This rate applies to dividends received from a 10%-subsidiary.
- (n) The rate is 2% for amounts paid for the use of commercial or scientific equipment.
- (o) The rate is 20% for dividends paid by non-industrial Pakistani corporations.
- (p) The rate is 10% for royalties paid for literary, artistic and scientific items.
- (q) The 5% rate applies to amounts paid for the use of industrial or scientific equipment.
- (r) The 5% rate applies to dividends received from a 25%-subsidiary; the 10% rate applies to dividends received from a 10%-subsidiary.
- (s) The rate is 10% for interest paid to a bank if the interest arises from the transacting of bank business and if the recipient is the beneficiary of the interest.
- (t) The 5% rate applies to participations of at least 70%. The 10% rate applies to participations of at least 25%.
- (u) The rate is 7.5% for technical services.
- (v) The rate is reduced to 10% for interest received from a bank. Interest on loans granted by the Österreichische Kontrollbank to promote exports or similar institutions in Turkey is subject to a withholding tax rate of 5%.
- (w) A shareholding of at least 5% is required.
- (x) The 10% rate applies to industrial royalties.
- (y) See Section B.
- (z) The 5% rate applies to interest derived from loans granted by banks and insurance companies, and bonds or securities that are regularly and substantially traded on a recognized securities market, as well as to interest on sales on credit paid by the purchaser of machinery and equipment to a beneficial owner that is the seller of the machinery and equipment.
- (aa) The 5% rate applies to royalties for the use of, or the right to use, industrial, commercial or scientific equipment.
- (bb) No withholding tax is imposed if any of the following circumstances exist:
- The interest is paid to the government of the other contracting state, or a political subdivision, a local authority or the central bank thereof.
 - The interest is paid by the government of the other contracting state, or a political subdivision, a local authority or the Central Bank thereof.
 - The interest is paid to a pension fund or similar arrangement that is a resident of the other contracting state.
 - The interest is paid to a resident of the other contracting state on corporate bonds that are traded on a stock exchange in the first-mentioned state (state of source) and that were issued by a company that is a resident of that state.
 - The interest is paid with respect to a loan, debt claim or credit that is owed to or made, provided, guaranteed or insured by the first-mentioned state (state of source), or political subdivision, local authority or export financing agency thereof.

- (cc) In general, no withholding tax is imposed. However, in the case of Austria, income derived from debt claims carrying a right to participate in profits, including income derived from profit-participating loans and profit-participating bonds, may also be taxed in Austria according to the laws of Austria if it arises in Austria; in the case of Japan, interest arising in Japan that is determined by reference to receipts, sales, income, profits or other cash flow of the debtor or a related person, to any change in the value of any property of the debtor or a related person, to any dividend, partnership distribution or similar payment made by the debtor or a related person, or to any other interest similar to such interest arising in Japan may also be taxed in Japan according to the laws of Japan.
- (dd) The 15% rate applies if the dividend is paid by a relevant investment vehicle. If the dividend is paid by any other entity, the general withholding tax rate is 10%.

On 14 June 2021, a protocol amending the treaty with Korea (South) was signed. Also in 2021, for the treaties with Tajikistan, Ukraine and the United Arab Emirates, protocols implementing Austria's international obligation to align its double tax treaties with the new OECD standard on tax transparency and administrative assistance entered into force.

The tax treaty with Argentina was suspended by Argentina, effective from 1 January 2009.

Austria signed and ratified the Multilateral Instrument in 2017. It entered into force in 2018.

- (a) These are final withholding taxes applicable to payments to Azerbaijani and foreign legal entities.
- (b) This is a final withholding tax applicable to payments to Azerbaijani and foreign legal entities, excluding Azerbaijani banks and leasing entities, and foreign banks and leasing entities operating in Azerbaijan through a permanent representation.
- (c) This is a final withholding tax applicable to payments to foreign legal entities.
- (d) Direct or indirect payments made by residents of Azerbaijan or permanent establishments of nonresidents located in Azerbaijan to persons incorporated or registered in jurisdictions with a preferential tax regime or payments made to bank accounts located in such jurisdictions are considered to be income from an Azerbaijani source and are subject to a 10% withholding tax on the gross amounts of the payments. The list of jurisdictions with a preferential tax regime is approved by the President of Azerbaijan on an annual basis. Certain

payments are specifically excluded from the list of payments considered to be made to the countries and territories with preferential tax regimes (principal amount of a loan, dividends derived from investments to Azerbaijan, interest from deposits held in financial institutions of Azerbaijan and purchase of bonds, and others).

- (e) Transfers of funds to accounts created in the electronic wallets of nonresidents (online payment systems) by residents of Azerbaijan not registered for tax purposes are subject to a 10% withholding tax. This tax must be withheld by a local bank, branch of a foreign bank located in Azerbaijan or national postal operator from the residents making the transfers.

B. Taxes on corporate income and gains

Corporate profit tax. Enterprises carrying on activities in Azerbaijan, including enterprises with foreign investment, joint ventures and legal entities operating through a permanent representation, are subject to tax.

Azerbaijani resident legal entities are subject to tax on their worldwide income. For tax purposes, Azerbaijani resident legal entities are entities incorporated in Azerbaijan and entities that have their effective management located in Azerbaijan, including 100%-owned subsidiaries of foreign companies.

Nonresident legal entities are subject to tax on profits earned through a permanent representation only. A permanent representation is defined as a place where the entrepreneurial activities of a nonresident are carried out in Azerbaijan for a period amounting to or exceeding 90 days in the aggregate. The term permanent representation includes, but is not limited to, the following:

- Persons who are performing the function of a permanent establishment of a nonresident legal entity or a person acting on their behalf, accumulating a client base for their benefit and organizing works with their clients, entitled to prepare and conclude contracts in the name thereof and commonly carrying out the enlisted responsibilities
- A place of management, a bureau, an office, a branch or an agency
- Construction and repair sites, installation, commissioning or assembly object, as well as supervisory activities associated therewith
- A place of exploration, exploitation or extraction of natural resources or drilling equipment or a vessel used for such purposes, as well as supervisory activities over such items
- A place where the business activity of a nonresident is carried out, including a place where goods are produced or services, including consulting services, are performed
- A person who acts in Azerbaijan on behalf of a nonresident and who has and habitually exercises an authority to negotiate and conclude contracts on behalf of that nonresident

The Azerbaijan Law on the Protection of Foreign Investments allows foreign investment in various forms, including investment through 100% foreign-owned subsidiaries, share participations in joint stock companies and in joint ventures with Azerbaijani legal entities, individuals and establishments of branches and representative offices.

Tax rate. All entities operating in Azerbaijan are subject to corporate profit tax at a rate of 20%.

Capital gains. Capital gains are included in taxable income and taxed at the regular rate.

Administration. The tax year is the calendar year. The tax year for newly created enterprises or permanent representations of foreign legal entities runs from the date of formation through 31 December of the year of formation.

All entities operating in Azerbaijan must make advance payments of corporate profit tax by the 15th day following the end of each quarter. Each advance payment must equal at least one-quarter of the profit tax liability for the prior tax year. Alternatively, the amounts of the advance payments may be determined by multiplying the company's revenues for the quarter by the company's effective tax rate for the prior year. Advance tax payments for corporate profit tax of taxpayers that did not have an activity or taxable profit (income) in the prior tax year is calculated only based on the second option. The effective tax rate is equal to tax as a percentage of revenues.

If, at the end of the tax year, it is determined that the total of the advance payments exceeds the tax due for the year, the excess may be credited against future tax obligations or refunded. In practice, however, the tax authorities rarely, if ever, issue refunds. Consequently, entities generally credit overpayments against future taxes.

Dividends. Dividends paid are subject to income tax withholding at a rate of 10%. This is considered a final tax, and companies do not include the dividends in taxable profits. An allocation to a shareholder as a result of the liquidation of a company of its share of undistributed net profit or any asset sourced from such undistributed profit is also treated as a dividend distribution.

Foreign tax relief. Corporate income taxes paid by residents of Azerbaijan in foreign countries on their income derived from those foreign countries may be credited against Azerbaijani profit tax imposed on the same corporate income. However, the amount credited may not exceed the tax calculated on such income under the tax legislation of Azerbaijan.

C. Determination of trading income

General. Taxable profit is determined by computing the profit or loss from business activities and then adding income from non-trading operations, such as leasing income and capital gains, but excluding dividends received. Income received in foreign currency is converted into manats (AZN) at the daily exchange rate determined by the Central Bank of Azerbaijan.

Statutory norms limit the deductions for certain categories of expenses, such as business travel expenses, repair expenses, interest paid on foreign borrowings and interest paid between related parties. Expenses for meals and entertainment as well as for the providing of food and housing to employees are disallowed except for companies providing therapeutic nourishment items, milk and similar products to their employees. Such deductions are allowed within norms approved by the Cabinet of Ministers.

Foreign legal entities doing business through a permanent representation in Azerbaijan are taxed on actual profits. If actual profits cannot be determined, the tax authorities may determine taxable profits based on either income or expenses, with a deemed profit margin of 20%.

Tax depreciation. Fixed assets, other than buildings, are subject to depreciation by a group method. Under this method, fixed assets are allocated to groups, and the groups are depreciated in aggregate. Depreciation rates, which are specified by law, are applied to the aggregate book values for each of the groups. The depreciable balance for a group is reduced by the depreciation accrued for the year by the group. If any assets of a group are sold during the year, the depreciable balance of the group is reduced by the residual value of such assets. The profit or loss on the sale of such assets is separately determined.

An acquisition of assets under a finance lease is treated as a loan from the lessor to the lessee and a purchase of assets by the lessee. The lessee may then claim depreciation on the assets.

Relief for losses. An enterprise incurring a loss in a tax year may carry forward the loss to the following five years, without limitation on the amount, to offset the profit in such following years.

Groups of companies. There are no provisions permitting related enterprises to offset profits and losses among members of a group.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT), on goods sold and services rendered, in Azerbaijan; the tax law contains specific rules for determining when services are deemed to be provided in Azerbaijan; Azerbaijani taxpayers that make payments to entities that are not registered taxpayers in Azerbaijan for services provided in Azerbaijan must calculate VAT on the payments	18
Assets tax, on the annual average net book value of fixed assets or the market price of the asset if the insurance value of assets exceeds the net book value	1
Import tariffs	0 to 15

E. Miscellaneous matters

Foreign-exchange controls. The manat (AZN) is a non-convertible currency outside Azerbaijan. Enterprises may buy or sell foreign currency through authorized banks or foreign-exchange offices in Azerbaijan.

To receive foreign-currency income in Azerbaijan, an enterprise must obtain a license issued by the Central Bank of Azerbaijan.

Transfer pricing. Recent legislative amendments to the Tax Code of the Republic of Azerbaijan introduced transfer-pricing rules, effective from 1 January 2017. These rules are conceptually based on the arm's-length principle outlined in the transfer-pricing

guidelines developed by Organisation for Economic Co-operation and Development (OECD). The new rules apply to Controlled Transactions, as defined in the rules. The following are Controlled Transactions:

- Transactions between residents of Azerbaijan and nonresident related parties of such residents, as well as between the same residents and any of their establishments, branches or other subsidiaries located in another country or territory
- Transactions between permanent establishments of nonresidents and such nonresidents, as well as representative offices, branches and other establishments of such nonresidents in other countries and any other persons located in other countries that are related parties of such nonresidents
- Transactions between residents of Azerbaijan and/or permanent establishments of nonresidents in Azerbaijan and persons incorporated or registered under the laws of the jurisdictions recognized as preferential tax regime countries under the laws of Azerbaijan
- Transactions between a resident of Azerbaijan or a permanent establishment of a nonresident in Azerbaijan and an unrelated nonresident party if the following conditions are met:
 - The transaction involves sales commodities traded on international commodity exchanges.
 - The total turnover of a resident of Azerbaijan or a permanent establishment of a nonresident in Azerbaijan exceeds AZN30 million and the share of a transaction with any nonresident exceeds 30% of total revenue or expenses, respectively.

Except for the last two abovementioned listed transactions, Controlled Transactions are subject to reporting requirements if the annual turnover of transactions per each counterparty exceeds AZN500,000 (approximately USD294,100).

For the last two abovementioned listed transactions, there is no annual turnover threshold for the reporting requirement. Therefore, they should be reported regardless of the annual turnover. Reporting is achieved through the submission of a Notification on Controlled Transactions by 31 March of the year following the reporting year. The taxpayers must submit documentation on request of the tax authorities. There is no specifically prescribed form for documentation.

Controlled Transactions can be subject to review by the tax authorities largely based on arm's-length principles assuming a comparability analysis under five transfer-pricing methods that are outlined in OECD transfer-pricing guidelines and recognized in local transfer-pricing rules, subject to certain specific provisions. These provisions in the local transfer-pricing rules must be considered while performing the comparability analysis.

If the tax authorities make a price correction during the on-site tax audit, the additional tax accrual could be subject to 50% financial sanction.

Country-by-country reporting. Effective from 1 January 2020, constituent entities of a Multinational Enterprise Group (MNE Group) that are residents of Azerbaijan should report their operations in the established form to the tax authorities for country-by-country reporting purposes. An MNE Group is a group of two or

more enterprises that are resident in different jurisdictions or a group that includes an enterprise resident in one jurisdiction that carries out business activities through a permanent establishment located in another jurisdiction. A constituent entity of an MNE group consists of the entity and its subsidiaries, affiliates, branches and representative offices. Reporting obligations are imposed on constituent entities of MNE Groups whose overall income within a financial year exceeds EUR750 million.

F. Treaty withholding tax rates

Azerbaijan currently considers none of the tax treaties of the former USSR to be in force, except for the tax treaty between the USSR and Japan. This treaty is kept in force based on a separate exchange of diplomatic notes between the Ministries of Foreign Affairs and ratification by the Azerbaijan parliament. Azerbaijan has entered into tax treaties with various countries.

The withholding rates under Azerbaijan's ratified treaties are listed below. Because of recent reductions in domestic withholding tax rates, the tax treaties may now specify rates that are the same as, or in excess of, domestic rates and, consequently, offer little or no savings with respect to withholding taxes. The rates in the table reflect the lower of the treaty rate and the rate under domestic tax law.

	Dividends %	Interest %	Royalties %

Business Tax Advisory

Bill Bailey (*resident in* +1 (441) 294-5319
Hamilton, Bermuda) Email: bill.bailey@bm.ey.com

A. At a glance

Corporate Income Tax Rate (%)	0
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	0
Withholding Tax (%)	0

B. Taxes on corporate income and gains

No taxes are levied on corporate income or capital gains.

C. License fees and other duties

Business license fees. All individuals and resident and nonresident entities seeking to do business within The Bahamas must apply with the regulating authorities and be granted approval for a business license to conduct such activities. Application requirements differ depending on the business activity and entity. The entity must seek approvals from the regulatory authorities, and when applicable, provide the requisite supporting documents, and remit applicable fees to meet the business license application criteria. Foreign entities with no physical presence within The Bahamas conducting business in The Bahamas, including the provision of digital and/or e-commerce services, are also subject to business license compliance requirements.

For corporations designated as residents for exchange-control purposes, their business revenue in The Bahamas is subject to an annual license fee, which varies according to annual revenue or turnover. Businesses that have annual turnover not exceeding BSD50,000 are required to pay a business license fee of BSD100. If the turnover exceeds BSD50,000 per year, the fee varies from 0.5% to 1.25%, based on the business annual revenue or turnover. Instead of the regular fees, businesses that are involved in telecommunication services and insurance companies are subject to a business license fee of 3% of turnover.

Annual business licenses are renewed annually. The occasional business license, which is mainly for approved events, is granted

for a period of seven days at a fee of BSD25 per application. The temporary business license is granted to foreign individuals or companies for a fee that equals 1.5% of gross turnover. Nonresident companies (excluding international business companies [IBCs]), as defined by the Exchange Control, that conduct business within The Bahamas are subject to a BSD300 business license tax.

As an anti-tax avoidance measure, a subsidiary in The Bahamas is subject to the same business license tax rate as is its parent in The Bahamas.

The deadline for the submission of business license renewal applications is one month following the end of the financial year of the business. The beginning of the financial year must coincide with the first day of a calendar quarter (1 January, 1 April, 1 July or 1 October). Accordingly, the end of the financial year must coincide with the last day of the calendar quarter (31 December, 31 March, 30 June or 30 September, respectively). The payment of business license fees must be made within three months following the end of the financial year (31 March, 30 June, 30 September or 31 December). Together with the payment of business license fees, proof of payment of real property tax must be produced before the license is issued.

Corporations regulated by specific legislation may not be subject to this fee.

Bank and trust company license fees. Offshore banks and trust companies licensed under the Bank and Trust Companies Regulation Act are subject to license fees, which vary depending on the value of the assets under management. The Banks and Trust Companies Regulations (Amendment) Act, 2019 revised the license fee structure for Domestic Systemically Important Institutions (DSIIs), which include all retail banks in The Bahamas. DSIIs are assessed a levy of 0.3% and are subject to annual license fees ranging from BSD80,000 to BSD2 million per license. The 0.3% levy is calculated as follows: 0.3% is multiplied by the consolidated total domestic liabilities amount of the DSII less the levy threshold plus the regulatory capital amount equivalent to 16% of the DSII's risk-weighted assets.

International business companies. IBCs pay an annual license fee based on authorized capital. Government fees related to the creation of an IBC equal BSD400 for capital up to BSD50,000 and BSD1,200 for capital over BSD50,000. IBCs are not subject to business license fees because their return corresponds to export turnover. However, IBCs must still obtain an annual business license if they carry on a business in or from The Bahamas. IBCs may also be subject to value-added tax (VAT) registration if they exceed the BSD100,000 threshold of domestically generated sales. Generally, IBCs were exempt from all other taxes and stamp duties for a period of 20 years, excluding transactions involving real estate within The Bahamas. However, The Bahamas government enacted the Removal of the Preferential Exemption Act, 2018 in an effort to adhere to international tax leading practices, avoid ring-fencing and remove preferential tax treatment. The previous tax exemptions enjoyed by IBCs expired on 31 December 2021. With the expiration of this legislation, the

treatment of IBCs is comparable to domestic companies in that IBCs are subject to compliance and reporting requirements, such as stamp duty and other nominal taxes. IBCs are normally created through corporate service providers that charge separate fees for their services.

Limited duration companies. Limited duration companies (LDCs) pay an application fee of BSD850 and an annual license fee based on authorized capital. LDCs may be classified as partnerships for US tax purposes. By complying with certain formalities, an existing IBC may change its status to an LDC.

Insurance companies. Insurance companies that are incorporated in The Bahamas pay stamp tax on authorized capital (for details, see Section D). They also pay the fees described below.

Resident insurance companies that write local business pay an initial registration fee of BSD1,000.

Restricted offshore insurance companies pay an initial registration fee of BSD2,500 and an annual fee of BSD2,500 in subsequent years. Unrestricted companies pay an initial registration fee of BSD3,500 and an annual fee of BSD3,500 in subsequent years. Offshore insurance companies also pay an annual fee of BSD1,000 for each licensed resident insurance manager who provides underwriting as a service. Offshore insurance companies are exempt from all other taxes for a period of 20 years from the date of registration.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax (VAT); on any taxable supply of goods and services, as well as importations; applied at the standard rate, unless an exception applies such as a zero-rating or a VAT exemption; standard and zero-rated supplies allow input VAT recovery on purchases made, but VAT exemption results in input VAT being a cost; the government mandates that nonresident entities who provide e-commerce and/or digital services for which the benefit is obtained in The Bahamas are subject to the provisions of the VAT Act; as a result, they are responsible for charging, collecting, reporting, and paying the relevant VAT at the standard rate in accordance with the VAT Act; this applies to business-to-business (B2B) and business-to-consumer (B2C) transactions; the VAT Act does not differentiate between B2B and B2C transactions the legislation provides limited exceptions; VAT registration is mandatory for a person or business making taxable supplies or taxable importations and having turnover exceeding BSD100,000 in any period of 12 months or less; the legislation also provides for voluntary registration; standard rate	10%

Nature of tax	Rate
VAT on conveyances, long-term leases and other real property transactions; VAT rate based on value of an assignment or transfer of personality or realty	
BSD100,000 and under	2.5%
BSD100,001 and above	10%
VAT flat rate scheme; suppliers charge standard rate for output and apply flat rate to determine input tax	7.5%
Customs duties, on imported items; exemptions may be granted to businesses licensed under certain legislation; rate varies by type of item	Various
Stamp duty (some of the most common)	
A resolution increasing the capital of a domestic limited company; for every BSD50,000 or fraction thereof	BSD10
Repatriation of substantial profits generated in The Bahamas by trading concerns; tax is imposed on each transfer of funds exceeding BSD500,000 per year if the transfer represents dividends, profits or payments for services rendered by a related party	
Repatriated foreign currency	5%
Repatriated Bahamian dollars	1.5%
Transaction, instrument or receipt whereby funds are converted into foreign currency regardless of whether such funds are remitted or transferred out of The Bahamas	1.5%
Leasing, subleasing or licensing of marina slips; tax rate applied to value	
BSD0 to BSD100,000	2.5%
BSD100,001 and above	10%
Real property tax; application of tax varies depending on appraised value, location, nationality of owner and development of property; different categories at progressive rates	Various
National insurance contributions on weekly wages up to BSD710, on monthly wages up to BSD3,077, or on annual wages up to BSD36,924; paid by	
Employer	5.9%
Employee	3.9%

E. Miscellaneous matters

Foreign-exchange controls. Corporations doing business in The Bahamas fall into the categories of resident or nonresident.

A resident company is a company that deals in or holds assets in The Bahamas. Business is carried out in Bahamian dollars. Specified transactions requiring foreign currency need prior approval of the Central Bank of The Bahamas to convert Bahamian dollars into another currency.

A nonresident company is one whose shareholders are not designated residents of The Bahamas and whose principal business

activity takes place outside The Bahamas. Bank accounts in all currencies other than the Bahamian dollar can be operated free of any exchange controls. Shares of nonresident companies incorporated under the Companies Act cannot be transferred without the prior permission of the Central Bank of The Bahamas. Exchange-control regulations generally do not apply to companies incorporated under the International Business Companies Act.

Nonresident companies are subject to an annual fee of BSD300.

Economic substance. The Bahamas enacted economic substance legislation, named the Commercial Entities (Substance Requirements) Act 2018 (CERSA) to comply with the global compliance standards under the Organisation for Economic Co-operation and Development (OECD) Action 5, effective from 1 January 2019. CERSA applies to all entities registered in The Bahamas and captures companies incorporated or registered under the following legislation:

- The Company Act
- International Business Company Act
- Partnership Act
- Partnership Limited Liability Act
- Exempt Limited Partnership Act

CERSA further provides that the following activities serve to qualify for CERSA:

- Banking business
- Insurance business
- Fund management business
- Finance and leasing business
- Headquarters' business
- Distribution and service center business
- Shipping business
- Commercial use of intellectual property
- Holding company or one or more of the company's subsidiaries is engaged in one of the activities mentioned above

The new substance requirements apply to entities that perform certain activities, generally described as relevant activities. These requirements apply to entities engaged in banking, insurance or fund management; headquarter companies; companies engaged in financing and leasing; companies engaged in distribution; service centers; shipping companies; and intellectual property businesses, among others. An included entity carrying on relevant activities must conduct core income generating activities (CIGA) in The Bahamas, which presupposes adequate amounts of annual operating expenditure, levels of qualified full-time employees, physical offices, and levels of board management and control in The Bahamas.

In addition, no included entity may outsource any of its CIGA to an entity or person outside of The Bahamas. Special considerations must be taken into account for holding companies and intellectual property companies. Entities are required to file the requisite form or forms with the Department of Inland Revenue within nine months after the end of the fiscal year in the manner specified by the CERSA. The reporting for 2021 and future years must be submitted within nine months after the fiscal year end of the entity as per the CERSA.

Country-by-Country Reporting. The Multinational Entities Financial Reporting Act, 2018, outlined potential Country-by-Country Reporting (CbCR) requirements for the 2018 year-end. Under Sections 4(1) and 4(2) of this act, constituent entities resident in The Bahamas whose reporting fiscal year began during 2018 were required to provide a certain notification to the competent authority by 31 May 2019. The Country-by-Country Exchange of Information portal was reopened on 16 December 2021 for approximately one month to account for any outstanding year-end filings and notifications. Opening and closing dates for 2021 reporting have not yet been made available. CbCR XML Schema Version 2.0 is also in effect from 1 February 2021. Following the Guidance Notes released in December 2020, only Bahamas-based Ultimate Parent Entities (UPE) and Surrogate Parent Entities of multinational enterprise groups are required to notify and prepare Country-by-Country (CbC) Reports. Constituent Entities in The Bahamas of UPEs elsewhere need only notify the competent authority. Notification is a one-off process and does not need to be submitted annually except that changes must be notified by email before the end of the year in which the change occurred.

Beneficial ownership reporting. Registration under the Beneficial Ownership Act, 2018 (BOSS) was implemented to foster greater transparency within the global financial sector and align with the OECD and Financial Action Task Force (FATF) recommendations. BOSS provides for a “private” searchable register of beneficial owners, domestic and international companies that operate within The Bahamas and is only accessible to approved authorized persons. Licensees are required to notify the Registered Agent or Registrar General of beneficial owners and provide updated information within 15 days of becoming aware of a change in the beneficial owners and registrable legal entities. Licensees under the following acts are required to comply with the BOSS:

- Bank and Trust Regulations Act
- Investment Funds Act
- Security Industry Act 2011
- The Insurance Act
- The Financial and Corporate Service Providers Act

The following facilities are exempted from the obligation of identifying the beneficial owner:

- A legal entity the securities of which are listed on a regulated securities exchange
- An entity incorporated, registered, continued or otherwise established in accordance with Companies Act (Ch. 308) or International Business Companies Act (Ch. 309) as well as any licensees previously defined (licensees or registrants under the Bank and Trust Regulations Act [Ch. 316], the Investment Funds Act [Ch. 369A], the Security Industry Act 2011 [No. 10 of 2011], the Insurance Act [Ch. 347], the External Insurance Act [Ch. 347], or the Financial and Corporate Service Providers Act [Ch. 363])
- Any other legal entity the Attorney general may exempt by regulations

Failure to comply may result in fines ranging from BSD5,000 to BSD40,000 on summary of conviction and BSD10,000 to

BSD250,000 on conviction on indictment. Summary of conviction is only triable in the Magistrate's Court (no jury and limited sentences); however, summary of conviction is triable in the Crown Court with a jury after committal proceedings in the Magistrate's Court and may result in higher penalties if the person is found guilty.

F. Tax treaties

The Bahamas does not have any existing tax treaties. The Bahamas has entered into tax information exchange agreements with various countries.

On 3 November 2014, The Bahamas and the United States signed and released a Model 1 Intergovernmental Agreement (IGA) for the implementation of the US Foreign Account Tax Compliance Act (FATCA).

The Bahamas has committed to adopting the OECD Common Reporting Standard (CRS). Reporting Financial Institutions were expected to report to The Bahamas Competent Authority by 31 August 2018 for the reporting year ended 31 December 2017. The reporting deadline for these submissions is August following the calendar year end; however, the deadline does not presently have a fixed date.

Bahamian-domiciled financial institutions are required to remain compliant with both the FATCA and CRS tax regimes as per the IGAs signed by the Bahamian government.

A. At a glance

Corporate Income Tax Rate (%)	0*
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	0
Withholding Tax (%)	0

* Oil and gas companies are subject to a special income tax (see Section B).

B. Taxes on corporate income and gains

Except for the income tax levied on oil and gas companies, no taxes are levied on corporate income or gains. Oil and gas companies are subject to tax on income derived from the sale of finished or semifinished products manufactured from natural hydrocarbons in Bahrain and from the sale of such raw materials if produced from the ground in Bahrain. The rate of tax is 46%.

C. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax (VAT); the scope of VAT includes supplies of all goods and services made in Bahrain as well as imports; certain supplies are zero-rated or exempt	
Standard rate	10%
Customs duties; effective from 1 January 2003, the customs duties of the Gulf Cooperation Council (GCC) countries (Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and the United Arab Emirates) are unified; Bahrain applies the unified tariff in accordance with the Harmonized System codes, issued by the World Customs Organization (WCO); under the unified customs tariff, for all products, except for tobacco and tobacco-related products, customs duties are calculated by applying percentage rates; for tobacco and tobacco-related products, the customs duty equals the higher of an amount calculated by applying a rate of at least 100% to the value of the product or an amount based on the quantity or weight; in general, products are divided into four groups	
Rates for the four groups	Free duty/ 5%/20%/100%/125%
Social insurance contributions; payable on compensation of up to BHD4,000 per month for each employee	
Pension fund contributions; applicable to base salaries of Bahraini nationals	
Employer	12%
Employee	6%
Insurance against employment injuries; payable by employers; applicable to base salaries of Bahraini nationals and expatriates; paid by	
Employer	3%

Nature of tax	Rate
Employee (The above contributions are to cover employment injuries and do not include any pensions or gratuities.)	1%
Municipal tax; payable by companies and individuals renting property in Bahrain; the tax rate varies according to the nature of the property and the payer of the utilities (that is, landlord or tenant)	7% to 10%
Foreign workers levy; payable monthly by all private and public companies with respect to each employed expatriate	BHD5 for the first five expatriate employees and BHD10 for each additional expatriate employee
Excise duty; imposed on goods harmful to human health and the environment that are listed by the GCC Financial and Economic Cooperation Committee	
Carbonated drinks	50%
Energy drinks	100%
Tobacco	100%

D. Miscellaneous matters

Foreign-exchange controls. Bahrain does not impose foreign-exchange controls.

Base Erosion and Profit Shifting. On 11 May 2018, the Organisation for Economic Co-operation and Development (OECD) announced that Bahrain has joined the Base Erosion and Profit Shifting (BEPS) Inclusive Framework (BEPS IF). As a member jurisdiction of the BEPS IF, Bahrain is now a BEPS Associate and will be able to work alongside the OECD and G20 countries on developing standards on BEPS-related issues and the implementation of monitoring processes. Bahrain is also now committed to implementing the minimum standards of the BEPS plan, which are Actions 5, 6, 13 and 14. Bahrain is also in compliance with the international standard on transparency and exchange of information, which incorporates beneficial ownership information of all the relevant legal entities and arrangements in line with the definition used by Financial Action Task Force Recommendations.

In line with the BEPS Action 5, Bahrain enacted legislation concerning economic substance requirements for certain regulated financial activities, effective from 1 January 2019, as well as for certain non-regulated activities, effective from 1 July 2019. Companies engaged in banking, insurance, fund management, investment holding, financing and leasing, distribution and service center, headquarter companies and intellectual property activities in Bahrain should ensure that they meet the substance requirements. All in-scope entities are required to file an annual report to the authorities within three months after the end of their financial year. Failing to do so may result in penalties, fines, spontaneous exchange of information and potentially deregistration.

Country-by-Country Reporting. In line with BEPS Action 13, Bahrain introduced Country-by-Country (CBC) Reporting legislation which is applicable for fiscal years beginning on or after 1 January 2021. The rules apply to multinational groups with consolidated revenue above BHD342 million (USD907 million). Bahrain-headquartered multinational groups are required to file their CBC Report and notification in Bahrain. Bahrain entities belonging to foreign multinational groups may be subject to CBC notification requirements.

E. Tax treaties

Bahrain has entered into tax treaties with Algeria, Austria, Bangladesh, Barbados, Belarus, Belgium, Bermuda, Brunei Darussalam, Bulgaria, China Mainland, Cyprus, the Czech Republic, Egypt, Estonia, France, Georgia, Hungary, Iran, Ireland, Isle of Man, Jordan, Korea (South), Lebanon, Luxembourg, Malaysia, Malta, Mexico, Morocco, the Netherlands, Pakistan, Philippines, Portugal, Seychelles, Singapore, Sri Lanka, Sudan, Switzerland, Syria, Tajikistan, Thailand, Turkey, Turkmenistan, the United Kingdom, Uzbekistan and Yemen.

In addition, Bahrain has initialed agreements with Guernsey, Liechtenstein and Spain. It is currently in negotiations with the Hong Kong Special Administrative Region, Jersey, Kyrgyzstan and Latvia.

On 27 November 2020, Bahrain signed the Multilateral Convention to Implement Tax Treaty Related Measures to Prevent Base Erosion and Profit Shifting (Multilateral Instrument or MLI). The MLI will amend tax treaties between Bahrain and other countries listed as Covered Tax Agreements (CTAs), subject to the ratification of the MLI by both Bahrain (that had not yet occurred as of the date of writing) and the other CTA party and the subsequent entry into force of the MLI. A tax treaty is considered a CTA if both Bahrain and the other treaty jurisdiction have indicated that it is subject to the MLI. The most important impact will be introduction of (or amendments of the existing) clauses related to the principal purpose test and prevention of treaty abuse as well as an enhancement of dispute resolution processes through the mutual agreement procedure.

Bahrain has listed 25 tax treaties to be CTAs, namely its tax treaties concluded with Barbados, Belgium, Bulgaria, China Mainland, Cyprus, Egypt, Estonia, France, Hungary, Ireland, the Isle of Man, Jordan, Korea (South), Luxembourg, Malaysia, Malta, Mexico, Morocco, the Netherlands, Pakistan, Portugal, Seychelles, Singapore, Turkey and the United Kingdom.

The list of CTAs and MLI effects can be changed, subject to the signing of the MLI by other jurisdictions and/or changes in positions by Bahrain and/or other jurisdictions.

- (a) For other corporate income tax rates, see *Rates of corporate tax* in Section B.
- (b) A surcharge of 2.5% is imposed on the business income of manufacturers of cigarettes, bidi, zarda, gul and other tobacco products.
- (c) A Tax Identification Number (TIN) is a unique number assigned to a taxpayer in Bangladesh on registration with the Bangladesh tax authorities. The TIN is a unique 12-digit code allotted to each person. The TIN is a mandatory requirement for filing a tax return in Bangladesh. If an income recipient fails to furnish its TIN, tax must be withheld at a rate of 50% higher of the rate specified in the relevant provision of the Income Tax Ordinance, 1984 (the Tax Ordinance).

- (d) Taxes withheld from dividends, interest, royalties and technical services fees paid to nonresidents are treated as a minimum discharge of tax liability on such income under the domestic tax laws and no refunds, adjustments or set-offs of such taxes are permitted. The Tax Ordinance provides that in determining corporate income tax liability in Bangladesh, a nonresident company may apply the tax treaty rate if it is more beneficial to the nonresident, subject to receiving a specific tax withholding order from Bangladesh tax authorities.
- (e) For residents, the withholding tax rate on royalties and technical services fees is 10% if the base amount does not exceed BDT2,500,000 and 12% if the base amount exceeds BDT2,500,000. For this purpose, the base amount is the higher of the contract value, the bill or invoice amount, or the payment amount.
- (f) Only business losses may be carried forward. Unabsorbed depreciation may be carried forward indefinitely to offset taxable profits in subsequent years.

B. Taxes on corporate income and gains

Corporate income tax. For corporate income tax purposes, a “company” means a company as defined in the Companies Act.

For Bangladesh income tax purposes, company income comprises the following:

- Income from house property
- Income from a business or profession
- Capital gains
- Agricultural income
- Income from other sources

A company is considered to be resident for tax purposes if it is a Bangladeshi company (that is, the company registered in Bangladesh or if a company’s control and management of its affairs is situated wholly in Bangladesh in that year).

A company resident in Bangladesh is subject to tax on its worldwide income, unless the income is specifically exempt. A company not resident in Bangladesh is subject to Bangladesh tax on Bangladesh-source income and on income received in Bangladesh.

Rates of corporate tax. The following are the corporate income tax rates in Bangladesh.

Nature of company	Rate (%)
Resident companies	
Publicly traded companies	
General rate	22.5
Banks, insurance companies and financial institutions	37.5
Cigarette manufacturing companies	45
Non-publicly traded companies (private limited companies)	
General rate	30
Banks, insurance companies and financial institutions	40
Mobile phone operator companies	45
Nonresident companies	30*

* A branch profit tax is imposed on profit remittances of nonresident companies.

The Tax Ordinance provides that in determining corporate tax liability in Bangladesh, a nonresident company may apply the tax treaty rate if it is beneficial to the nonresident, subject to

receiving a specific tax withholding order from Bangladesh tax authorities.

Tax incentives. Tax incentives available in Bangladesh are described below.

Tax holidays or exemptions are available for the following:

- Newly set up industrial undertakings
- Identifiable expansion units
- Physical infrastructure facilities (for example, water treatment plants, solar energy plants and compressed natural gas and liquefied natural gas transmission and terminal lines)
- Computer data entry and software development
- Tourist industries, depending on location
- Independent private sector power companies
- Agricultural machinery
- Furniture
- Home appliances (for example, rice cookers, blenders and washing machines)
- Mobile handsets
- Toys
- Leather and leather goods
- LED televisions
- Plastic recycling
- Mobile phone towers or tower-sharing infrastructure
- Electrical transformers
- Artificial fiber or manmade fiber manufacturing
- Automobile parts and components manufacturing
- Automation and robotics design manufacturing, including parts and components thereof
- Artificial intelligence-based system design and/or manufacturing
- Nanotechnology-based products manufacturing
- Aircraft heavy maintenance services, including parts manufacturing

Fifty percent of the income of a taxpayer (other than a company not registered in Bangladesh) attributable to export sales is exempt from tax. This exemption does not apply to a taxpayer enjoying a tax exemption or rate reduction by a notification made under the Tax Ordinance.

A reduced tax rate of 12% applies to the business income of a company engaged in the business of the manufacturing of knitwear or woven garments for the purpose of export. If the company has obtained a green building certification, the tax rate is 10%.

A company registered under the Companies Act that is engaged in garment production, including thread production, dyeing, finishing, coning, cloth making and printing, may qualify for a reduced tax rate of 15% on the income earned by them from these activities.

Capital gains arising from the sale of government securities are exempt from tax.

Capital gains arising from the transfer of land or buildings to a new company registered under the Companies Act for setting up

an industry are exempt from tax if the whole amount is invested in the equity of the company.

Income from the export of handicraft, as well as income derived by cinema halls or cineplexes or by industrial undertakings engaged in the production of rice bran oil that begin commercial exhibition or production before June 2024, are entitled to tax exemption at various rates for various time periods, depending on the location of the business.

Income from the business of certain information technology services, such as software development, information technology process outsourcing, information technology support and software maintenance services, and cybersecurity services, is exempt from tax until June 2024.

Tax exemptions. The following types of income are exempt from tax:

- Dividend income from a listed company up to BDT25,000 (annually; BDT50,000 if received by an individual)
- Dividend income received by a company resident or nonresident in Bangladesh if the company distributing such taxed dividend has maintained a separate account for the taxed dividend
- Income from a mutual fund or unit fund up to BDT25,000 (annually)
- Interest on tax-free government securities

Minimum tax. The tax deducted or collected under specified sections of the Tax Ordinance is considered minimum tax.

The minimum tax for companies with annual gross receipts of more than BDT5 million are calculated by applying the following percentages to the annual gross receipts.

Type of company	Percentage
Manufacturers of cigarettes, bidi, chewing tobacco, smokeless tobacco or other tobacco products	1%
Mobile phone operators	2%
All other companies	0.6%

The rate of minimum tax for industrial undertakings engaged in the manufacturing of goods is 0.1% of gross receipts for the first three years of production.

If the taxpayer has income that is exempt from tax or is subject to a reduced rate, special rules apply.

If the regular tax is higher than the minimum tax, the regular tax is payable.

No refunds, adjustments or setoffs of minimum tax is allowed.

Capital gains. Capital gains derived from the transfer of capital assets is taxable at a rate of 15%.

Capital assets include property of any kind held by a taxpayer, regardless of whether the asset is connected to a taxpayer's business or profession, with the exception of the following:

- Any stock in trade (not stocks and shares)
- Personal effects

The transfer of a share in a company that is not a resident of Bangladesh is deemed to be the transfer of an asset located in Bangladesh to the extent that the value of the share transferred is directly or indirectly attributable to the value of any assets in Bangladesh.

In computing capital gains, deductions are made from the sales proceeds or the fair market price (whichever is higher) of the capital assets.

A capital gain may be exempt if it is derived from the transfer of a capital asset that immediately before the date on which the transfer took place was being used for the purposes of business and if the taxpayer has, within a period of one year before or after that date, purchases a new capital asset for its business. In these cases, if the amount of the capital gain is equal to or less than the acquisition cost of the new asset, no tax is imposed on the capital gain. The term “capital asset” for this provision now refers to specified assets, such as plant, machinery, equipment, motor vehicles, furniture, fixtures and computers.

Capital gains arising on shares listed in the stock exchange are taxable at a rate of 15% for nonresidents. However, no tax is payable by nonresidents with respect to profits and gains arising from transfers of stock or shares of public limited companies that are listed, as defined in the Companies Act, if such nonresidents are entitled to a similar exemption in the nonresident’s home country.

The transfer of shares of a company may not take place unless the relevant tax on capital gains, if any, arising on such transaction is paid.

Capital losses in excess of BDT5,000 can be carried forward and set off against income from capital gains derived during the next six successive tax years.

The tax deducted by the local custodian (at a rate of 15%) from capital gains of nonresident investors is generally deemed to be the minimum tax applicable to such nonresidents in Bangladesh. Consequently, such nonresidents are not subject to any other compliance obligations, such as tax registration and filing of an income tax return, if they do not have a permanent establishment in Bangladesh.

Withholding tax. Payment to resident companies are subject to the following withholding taxes.

Payment	Rate (%)
Dividends	20
Interest	10
Royalties and fees for technical services	10/12 (a)
Payments on the supply of goods and the execution of contracts	3 to 7 (b)
Other miscellaneous services not specifically mentioned in the Tax Ordinance	10/12 (a)

(a) The 10% rate applies if the amount of the payment does not exceed BDT2,500,000. The 12% rate applies to other payments.

(b) The applicable rate depends on the amount of the payments.

Payments to nonresident companies are subject to the following withholding taxes.

Payment	Rate (%)
Dividends	20
Interest	20
Royalties and fees for technical services	20
Supply of goods and execution of contract	7.5
Payments for services not mentioned above	20
Any other payments	30

Taxes withheld from the income of nonresidents is the minimum tax liability for such payments, and no refunds, adjustment or setoffs of such taxes are allowed.

If a nonresident believes that because of a tax treaty or any other reason, the nonresident is not liable to pay any tax in Bangladesh, or is liable to pay tax at a reduced rate, the Bangladeshi tax authorities may issue a certificate to the effect that the payments to the nonresident shall be made without any deduction or, in applicable cases, with a deduction at reduced rate as mentioned in the certificate.

A recommended timeline of 30 days is prescribed for the issuance of a nil or lower withholding certificate with respect to an application filed by a nonresident for obtaining treaty benefits or for any other reason.

Administration

Tax year. Under the Tax Ordinance, the mandatory income year is the 12-month period commencing from the first day of July of the relevant year. However, for the purpose of consolidation of accounts, if a subsidiary company or a liaison or branch office in Bangladesh desires to follow the financial year of its parent company, the approval of the Jurisdictional Tax Officer is required.

Income tax filing and payment process. The Tax Ordinance requires that the income tax return be filed by the 15th day of the 7th month following end of income year (or 15 September following the end of the income year if such 15th day falls before 15 September). Consequently, companies with an income year running from 1 July through 30 June must file the income tax return by 15 January of the subsequent year.

On request, the return filing date may be extended up to four months with the approval of the tax authority.

A nonresident company without a permanent establishment in Bangladesh is exempt from the obligation of filing an annual income tax return in Bangladesh.

Advance payment of tax. Every taxpayer is required to pay advance tax in four equal installments on 15 September, 15 December, 15 March and 15 June of each year if the most recently assessed income exceeded BDT600,000. A penalty and interest are imposed for default in payment of an installment of advance tax.

Foreign tax relief. Foreign tax relief for the avoidance of double taxation is governed by tax treaties with several countries. If no

such treaties apply, resident companies may claim a foreign tax credit for the foreign tax paid under domestic law provisions.

The amount of the credit allowed for foreign tax against Bangladesh tax with respect to any type of income may not exceed the amount calculated by applying the average rate of such tax to the doubly taxed income.

A claim for a foreign tax credit must be made to the Deputy Commissioner of Tax of the district in which the claimant is subject to income tax.

The average rate of tax is the rate arrived at by dividing the amount of tax calculated on total income by such income.

C. Determination of trading income

General. All income classifiable under the head “Income from business or profession” is computed in accordance with the method of accounting regularly employed by the business or profession.

The company determines the income from business or profession and resulting tax liability based on its financial result reported in statutory profit and loss account, and after applying adjustments (upward and downward) as provided by the Tax Ordinance.

The tax under the head “Income from house property” is payable with respect to the annual value of any property, whether used for commercial or residential purposes, consisting of any buildings, furniture, fixtures, fittings and similar items, and lands appurtenant thereto, of which the taxpayer is the owner, other than such portions of the property as the taxpayer may occupy for the purposes of any business or profession carried on by the taxpayer, the income from which is assessable to tax under the Tax Ordinance.

Business-related expenses are deductible; capital expenditures and personal expenses are not deductible.

Expenses from which taxes are required to be withheld are not allowable as deductions until the required taxes have been withheld and paid to the government.

Salary and remuneration, other than by crossed check or bank transfer, paid to an employee having gross monthly salary of BDT15,000 or more are disallowed in determining the taxable income of the employer.

An expenditure exceeding BDT550,000 by an employer on the provision of perquisites, as defined in the domestic tax law, to an employee is disallowed in determining the taxable income of the employer.

An expenditure exceeding 10% of the net profits disclosed in the statement of accounts as “head office expenses” or “intra-group expenses,” or under another name, by a company not incorporated in Bangladesh under the Companies Act is disallowed.

The payment of an incentive bonus exceeding 10% of the net profit disclosed in the statement of accounts is disallowed.

Any “promotional expenditure” exceeding 0.5% of business turnover is disallowed. “Promotional expenditure” is defined to mean any expense incurred by way of giving any benefit in kind or cash or in any other form to any person for the promotion of a business or profession.

An expenditure for overseas traveling exceeding 0.5% of the turnover disclosed in the statement of accounts is disallowed.

Payments of royalties, technical service fees and certain other payments exceeding 10% of the “net profit” disclosed in the statement of accounts for the first three income years from the date of commencement of business or profession and 8% of the “net profit” disclosed in the statement of accounts for subsequent income years are disallowed. For this purpose, the term “net profit” has been clarified to mean net profit from a business or profession, excluding any profit or income of a subsidiary, associate or joint venture.

Depreciation allowances. Business fixed assets that are depreciable for financial accounting purposes are also depreciable for corporate income tax purposes, subject to the tax rules discussed below.

A depreciation allowance may be claimed for any asset owned by a taxpayer and used for the purpose of the business or profession carried on by the taxpayer.

For building, machinery, plant or furniture not wholly used for the purpose of the business or profession, the depreciation allowance is restricted to the proportional part of the amount that could be claimed if such building, machinery, plant or furniture were wholly so used for such purpose.

A depreciation allowance may not be claimed for assets unless the particulars substantiating such claim are filed with the tax authority at the time of the filing of the income tax return and if such assets are used during the year.

Depreciation is calculated using the declining-balance method and is allowed on classes of assets. Depreciation rates vary according to the class of assets. The following are the general rates.

Class of asset	Rate (%)
Plant and machinery*	20
Office equipment	10
Buildings*	
General	5
Factory	10
Furniture and fittings	10
Computer and computer equipment	30
Imported computer software	10

* Subject to the fulfillment of prescribed conditions, initial depreciation equal to 10% of the actual cost is allowed in the first year with respect to buildings and 25% with respect to plant and machinery (other than ships and motor vehicles) if they are not used for hire and if they are acquired or installed after 30 June 2002.

For passenger motor vehicles or sedan cars not used for hire, the actual cost to the taxpayer is deemed not to exceed BDT2,500,000.

Relief for losses. Business losses, excluding losses resulting from unabsorbed depreciation of business assets (see below), may be carried forward to be set off against taxable income derived from business in the following six years.

Unabsorbed depreciation may be carried forward indefinitely to be set off against taxable income of subsequent years.

Losses under the heading “Capital Gains” (that is, resulting from transfers of capital assets) may not be set off against other income, but may be carried forward for six years to be set off against capital gains.

Taxability of the disallowances made under specified sections of the Income Tax Ordinance are deemed as business income, regardless of whether the entity has incurred an overall business loss or has business profits and regardless of the minimum tax paid by the entity. Consequently, in the case of a loss-making entity, tax is separately payable on the amount of the disallowances made under specified sections of the Income Tax Ordinance.

Loss sustained by an Association of Person (AOP) under any head of income is permitted to be set off only against the income of the AOP under any other head and may not be set off against the income of the members of the AOP. In addition, any member of AOP is not entitled to carry forward and set off his or her income against any loss sustained by the AOP.

D. Tax for owners of private motor cars

The tax authorities collect advance tax on the registration or renewal of fitness of cars (in the case of vehicles, the transport authorities issue a certificate mentioning the duration for which the vehicles are legally permitted to be used) in the following amounts.

The following are the amounts of the tax for cars and jeeps, which are based on engine capacity.

Engine capacity	Amount of tax (BDT)
Not exceeding 1,500 cc	25,000
More than 1,500 cc but not more than 2,000 cc	50,000
More than 2,000 cc but not more than 2,500 cc	75,000
More than 2,500 cc but not more than 3,000 cc	125,000
More than 3,000 cc but not more than 3,500 cc	150,000
More than 3,500 cc	200,000

The amount of the tax for a microbus is BDT30,000.

The tax is 50% higher for persons who own more than one car in their name or in a joint name. The minimum tax liability for such persons subject to regular income tax is at least equal to the tax collected for the motor car. Tax collected above that amount is not refunded. Cars owned by specific persons are exempt from this tax.

E. Miscellaneous matters

Foreign-exchange controls. All cross-border transactions with nonresidents are subject to foreign-exchange controls contained in the Foreign Exchange Regulation Act.

Transfer pricing. Under the transfer-pricing rules, the amount of any income or expenditure arising from an international transaction must be determined based on the arm's-length price.

For this purpose, an international transaction is a transaction between associated enterprises, either or both of which are nonresidents, in any nature of purchase, sale or lease of tangible or intangible assets, provision of service, lending or borrowing of money, or any other transaction having a bearing on the profits, income, losses, assets, financial position or economic value of the enterprise.

Under the transfer-pricing rules, companies having international transactions with associated enterprises must determine the arm's-length price and maintain certain documents if the value of the transactions exceeds BDT30 million in a year. Such companies also need to submit statements of international transactions to the tax authority with the annual income tax return, regardless of the volume of the international transactions. If any transaction is determined not to be at an arm's-length price, the tax authority may determine the price.

A report of chartered accountants or chartered cost and management accountants may be required on notice of the Deputy Commissioner of Taxes in writing if the value of international transactions exceeds BDT30 million in the books during the income year.

F. Treaty withholding tax rates

The table below contains the withholding tax rates that apply to dividends, interest and royalties paid from Bangladesh to nonresidents under the tax treaties in force as of the time of writing. If the treaty provides for a rate lower than the domestic rate, the reduced treaty rate may be applied at source.

	Dividends		Interest (a)	Royalties
	A	B		
	%	%	%	%
Belgium	15	15	15	10
Canada	15	15	15	10

A Individuals and companies

B Qualifying companies

- (a) Some of the treaties provide for an exemption or a reduced rate for certain types of interest, such as interest paid to public bodies and financial institutions, including specified financial institutions, or interest with respect to sales on credit or approved transactions. Such exemptions are not reflected in this column.
- (b) The rate applies to dividends paid to a beneficial owner that is a company holding directly at least 10% of the capital of the payer.
- (c) The rate applies to dividends paid to a beneficial owner that is a company holding directly at least 25% of the capital of the payer.
- (d) The lower rate applies to interest derived by a bank or other financial institution (including an insurance company).
- (e) The rate applies to dividends paid to a beneficial owner that is a company owning at least 25% of the voting shares of the payer during the period of six months immediately before the end of the accounting period for which the distribution of profits takes place.
- (f) The lower rate applies if interest is paid with respect to a sale on credit of industrial, commercial or scientific equipment.
- (g) A most-favored-nation clause applies. Under this clause, if Bangladesh enters into a tax treaty with another country subsequent to entering into the treaty with Mauritius and if this treaty provides for a lower rate for dividends than the 10% rate specified under the treaty with Mauritius, such lower rate applies under the Mauritius treaty.
- (h) The domestic rate applies. The treaty does not provide a reduced rate.
- (i) Interest related to the construction of industrial, commercial or scientific installations or public works is exempt. The 7.5% rate applies to interest received by a bank or other financial institution (including an insurance company), as long as the Netherlands does not levy a withholding tax on interest.
- (j) The rate applies to dividends paid to a beneficial owner that is a company holding directly at least 20% of the capital of the payer.
- (k) A most-favored-nation clause may apply with respect to royalties.
- (l) The rate applies to dividends paid to a beneficial owner that is a company owning at least 3% of the shares of the payer.
- (m) The lower rate applies to interest derived by a bank or other financial institution (including an insurance company) and interest paid with respect to a sale on credit of industrial, commercial or scientific equipment or merchandise.
- (n) On 15 January 2021, a double tax treaty between Bangladesh and the Czech Republic entered into force. The treaty is effective from 1 July 2021 in the case of Bangladesh and 1 January 2022 in the case of the Czech Republic.

Barbados is a member country of the Organisation for Economic and Co-operation and Development (OECD)/G20 Inclusive Framework on Base Erosion and Profit Shifting (BEPS) to tackle tax avoidance, improve the coherence of international tax rules, ensure a more transparent tax environment and address the tax challenges arising from the digitalization of the economy. As part of the new two-pillar plan to reform international taxation rules, which includes the proposal of a global minimum tax of 15%, to address the incentives to shift profits to lower tax regimes and ensure that multinational enterprises pay a fair share of tax wherever they operate, Barbados is in the process of formulating its position. In view of the potential changes to the local law, readers should obtain updated information before engaging in transactions.

A. At a glance

Corporate Income Tax Rate (%)	5.5 to 1*

Carryforward	7

* These rates apply to all companies (including branches of nonresident companies).

B. Taxes on corporate income and gains

Corporate income tax. Companies and societies with restricted liability that are resident in Barbados are subject to corporation tax. Resident and domiciled companies are subject to corporation tax on their worldwide income, regardless of whether the income is remitted to Barbados. Resident companies that are not domiciled in Barbados are subject to corporation tax on income derived from Barbados and income from foreign sources to the extent that such foreign income is remitted to Barbados. Nonresident companies carrying on business through a branch pay tax on Barbados-source income only. Income is considered to be Barbados-source if the property that constitutes the source is physically located in Barbados.

A company is considered to be resident in Barbados if its management and control are located in Barbados. The domicile of a company is based on the country of incorporation. Consequently, a company incorporated in Barbados is domiciled there.

Rates of corporate tax. All domestic companies, including branches of nonresident companies, are subject to tax at the following rates:

- Taxable income up to USD500,000: 5.5%
- Taxable income between USD500,000 to USD10 million: 3%
- Taxable income between USD10 million and USD15 million: 2.5%
- Taxable income over USD15 million: 1%

Income derived from Barbados government securities by domestic companies is taxed at a rate of 15%.

A branch operating in Barbados pays an additional 5% on its after-tax profits if those profits are remitted or deemed to be

remitted to the branch's head office. Branches earning foreign-source income are subject to branch profits tax at a rate of 0%.

Rates of tax for the 2021 income year for grandfathered entities. For the purposes of the rules discussed in this section, grandfathered entities are International Business Companies and International Societies licensed before 17 October 2017 and corporate entities carrying on business in the international insurance sector that elected to be grandfathered under the corresponding regimes.

Pursuant to a guidance note issued by the Barbados Revenue Authority, a grandfathered entity whose fiscal period ends during the period of 1 January 2021 to 30 June 2021 (both dates inclusive) should file a return of assessable income for the 2021 income year on or before 15 March 2022, using the rates for grandfathered entities.

A grandfathered entity whose fiscal period ends during the period of 1 July 2021 to 30 September 2021 (both dates inclusive) should file a return of assessable income for the 2021 income year on or before 15 March 2022, using the rates applicable for entities not grandfathered.

A grandfathered entity whose fiscal period ends during the period 1 October 2021 to 31 December 2021 (both dates inclusive) should file a return of assessable income for the 2021 income year on or before 15 June 2022, using rates applicable for entities not grandfathered.

The following are the tax rates for companies grandfathered in the International Business and Financial Services Sector, as well as for International Societies licensed before 17 October 2017 and corporate entities carrying on business in the international insurance sector that elected to be grandfathered under the corresponding regimes.

Types of companies	Rate (%)
International Business Companies	2.5 reducing to 1
International Banks	2.5 reducing to 1
International Societies with Restricted Liability	2.5 reducing to 1
Exempt Insurance Companies	0
Exempt Insurance Management Companies	0
Qualifying Insurance Companies	
General insurance	1.75 *
Life insurance	0.35 *

* This is the minimum effective tax rate.

No tax is required to be withheld from the payment of dividends, interest, royalties, management fees and rents if paid to nonresidents by companies operating as grandfathered entities in the International Business and Financial Services Sector.

Insurance sector. The following are the three classes of licenses for the insurance sector and the rates at which they are taxed:

- Class 1: Insurance companies that restrict the business underwritten by them to related-party business. These insurance companies are taxed at a rate of 0%.

- Class 2: Insurance companies that can underwrite risks of third parties. These companies are taxed at a rate of 2%.
- Class 3: This class includes entities, such as brokers, intermediaries, insurance management companies and insurance holding companies. These entities are taxed at a rate of 2%.

Change in tax base for life insurance companies. Life insurance companies were previously taxed on gross investment income. Effective from the 2020 income year, they are taxed based on net profit before tax, plus or minus certain adjustments for tax purposes. For example, depreciation is added back but capital allowances can be claimed. Changes in actual reserves are now either allowed as a deduction (increases) under Section 10 of the Barbados Income Tax Act or taxable (decreases) under Section 8 of the Act.

Increases in actual reserves are usually capped at an “appropriate amount” for the purpose of the deduction under the provisions of Section 10. Any excess is not deductible in computing taxable income.

There is a one-time, irrevocable election in which unrealized gains and losses arising on mark-to-market securities held by the company can be treated as taxable or deductible when computing taxable income.

Tax incentives. Tax incentives available in Barbados are described below.

Foreign Currency Permit. Effective from 1 January 2019, all entities that earn 100% of their income in foreign currency are entitled to apply for a Foreign Currency Permit, which provides the following benefits:

- Exemption from exchange controls
- Reduced stamp duty and certain property transfer tax exemptions
- Exemption from payment of value-added tax and duties on the importation of plant, machinery and raw materials
- Income tax concessions for specifically qualified individuals

Small Business Development Act. Under the Small Business Development Act, small businesses qualify for the following tax benefits:

- Corporation tax rate of 15% (this rate is under review and may change)
- Exemption from withholding tax on dividends or interest paid
- Exemption from import duty on plant and equipment
- Exemption from stamp duty on the execution and registration of financial documents

Only income directly related to the business qualifies for the above tax benefits.

To qualify as a small business, a company must meet the following requirements:

- Its authorized capital does not exceed BBD1 million.
- Its annual sales do not exceed BBD2 million.
- It does not have more than 25 employees.
- It is not a wholly owned or majority-owned subsidiary in a group of companies.

Tourism Development Act. Under the Tourism Development Act, duty-free and income tax concessions are available for approved tourism projects and certain tourism entities. These concessions include the following:

- Exemption from the payment of customs duty on specified items
- Tax deduction equal to 100% of expenditure incurred with respect to the development of a tourism product, tourism research, an apprenticeship scheme or the organization and hosting of tourism exhibitions and trade fairs
- Offset of approved capital expenditure against assessable income
- An investment tax credit (subject to conditions)
- Exemption from withholding tax on dividends paid to shareholders

Special Development Areas Act. Under the Special Development Areas Act, persons carrying out work in designated special development areas in Barbados, as well as persons financing such work, are entitled to certain tax relief. An approved developer is entitled to a reduced corporation tax rate of 30% and exemption from certain taxes, such as the following:

- Import duty, environmental levy and value-added tax on inputs for the construction of new buildings and the renovation or refurbishment of existing buildings
- Charges on the repatriation of interest and capital
- Land tax on the improved value of land
- Property transfer tax on the initial purchase of property

Renewable Energy Incentives. Persons engaged in the development, manufacturing, installation or repair of renewable energy systems and energy-efficient products may be entitled to one or more of the following tax benefits if the required criteria are met:

- Ten-year income tax holiday
- Tax deduction of 150% for the following expenditure with respect to the generation, supply and sale of renewable energy, or the installation or supply of renewable energy systems or energy-efficient products:
 - Interest paid on loans with respect to the construction or upgrading of a property
 - Expenditure on the training of staff
 - Expenditure on the marketing of products
 - Expenditure on research and development
- Ten-year exemption from withholding tax on dividends paid to shareholders

In addition, interest earned by financial intermediaries from financing the development, manufacturing and installation of renewable energy systems and energy-efficient products is exempt from tax for 10 years.

Capital gains. Capital gains are not taxed in Barbados.

Administration. The fiscal (income) year is the period for which the accounts of the business are normally prepared. Tax is calculated on the profits for the accounting period that ends during the fiscal year.

A corporation is required to determine its own tax liability and to prepare and file a corporation tax return. Corporations with

year-ends from 1 January to 30 September must prepay tax on or before 15 September and file their returns by 15 March of the following year. If the year-end is after 30 September, the tax must be prepaid on or before 15 December of the income year and 15 March of the following year. The return is filed by 15 June of the following year. Each tax prepayment is based on 50% of the preceding year's tax. Any balance of tax due is paid when the return is filed. Tax returns may be filed using the Barbados Revenue Authority's electronic filing system.

The Revenue Commissioner of the Barbados Revenue Authority may levy a penalty of BBD500 plus 5% of tax payable for failure to file a return. A further penalty of 5% and interest at 1% per month is charged for a failure to pay any tax payable. If a person fails to make a required prepayment of tax, a penalty of 10% and interest at 0.5% per month is charged on the amount of the prepayment.

Dividends. Dividends received by a resident company from another resident company are not taxable.

Dividends received from a nonresident company are not subject to tax in Barbados if the Barbados company owns 10% or more of the share capital of the nonresident company and if the shareholding in the nonresident company is not held as a portfolio investment.

Foreign tax relief. A tax credit is allowed for taxes paid to foreign jurisdictions by Barbados resident companies on profits, income or gains earned from such foreign jurisdictions, regardless of whether Barbados has entered into a double tax treaty with the foreign jurisdiction. This credit is allowed up to the amount of the Barbados taxes payable on the income. The foreign tax credit is not permitted to reduce the total tax payable by an entity in Barbados for an income year to less than 1% of its taxable income for that income year. An underlying tax credit is also allowed with respect to foreign dividends if the Barbados company owns at least 10% of the capital of the foreign company. Some form of unilateral relief may be granted on income arising from British Commonwealth countries that provide reciprocal relief.

C. Determination of trading income

General. Taxable income is determined on the basis of accounts prepared in accordance with International Financial Reporting Standards, subject to specific adjustments identified in the Income Tax Act.

Management fees. Management fees paid or payable to nonresidents are not deductible for tax purposes. Management fees include fees for management and/or administrative services provided by a member of a group of companies to other members of the group.

Inventories. The authorities generally accept a method of valuation of inventory that conforms to standard accounting practice in the trade or business, provided it is applied consistently. Average cost or first-in, first-out (FIFO) are the generally accepted methods.

Provisions. Reserves or provisions of a general nature for doubtful accounts receivable are not allowable. However, write-offs of specific amounts or balances are generally allowed.

Tax depreciation. Depreciation and amortization reported in the financial statements are not allowed as deductions in calculating taxable income. However, a company may claim capital allowances. Annual allowances of between 5% and 33 $\frac{1}{3}$ % are given on the original cost of fixed assets, calculated on a straight-line basis. An annual allowance of 100% is granted with respect to capital expenditure on software. Fifty percent of expenditure on intellectual property is deductible over a 10-year period. In addition, 20% of expenditure on energy audits and the retrofitting of buildings or on the installation of systems to provide electricity from sources other than fossil fuels is deductible over a period of five years.

Relief for losses. Losses may be carried forward seven years to offset taxable income derived in those years. Tax losses available for offset are restricted to 50% of taxable income in the current year. Losses may not be carried back.

Groups of companies. Group relief is not available.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT), on the supply of goods and services in Barbados and on goods imported into Barbados; these include digital services (that is, goods or services purchased by electronic means on the Internet and are for use or consumption in Barbados)	
Standard rate	17.5
Hotel accommodation and supplies related to tourism	10
(The 10% rate was announced by a policy note issued by the Barbados Revenue Authority but has not yet been legislated. It is being applied in practice.)	
Mobile voice, data and text messaging services	22
Basic food items and exports of goods and services	0
Excise tax, on imports of vehicles; this tax is imposed in addition to the VAT	46.95 to 120
Import duty	5 to 20
National insurance contributions, on monthly insurable earnings up to BBD4,880; paid by	
Employer	12.75
Employee	11.1
Self-employed individual	17.1

E. Miscellaneous matters

Foreign-exchange controls. Foreign-exchange controls in Barbados are administered by the Central Bank, which considers all

applications. Certain transactions and routine commercial matters are delegated to the commercial banks. The Central Bank generally allows the repatriation of funds previously registered as an investment if it has been established that all local tax liabilities have been met. Entities that hold a Foreign Currency Permit are exempted from foreign-exchange controls.

Debt-to-equity rules. Barbados has thin-capitalization rules, which provide for a maximum debt-to-equity ratio of 1.5 to 1. If the debt-to-equity ratio is in excess of the prescribed maximum, restrictions are imposed on the deductibility of interest expense. This applies to interest expenses payable to nonresident entities if the shareholding in the Barbados entity exceeds 10%.

Anti-avoidance legislation. Anti-avoidance provisions may be applied to transactions between related persons that are not carried out at arm's length and to artificial transactions if the primary purpose of the transaction is the reduction of taxable income.

Economic substance. Barbados has economic substance legislation that provides for the imposition of an economic substance test on companies carrying on business in Barbados.

Under this legislation, a resident company that derives income from carrying on certain defined relevant activities must satisfy the economic substance test. For the purposes of the economic substance legislation, a company is resident in Barbados if it meets any of the following conditions:

- It is managed and controlled in Barbados, regardless of its place of incorporation.
- It is a company incorporated outside Barbados and is registered in Barbados as an external company, but it is not regarded as tax resident in the jurisdiction of incorporation.
- It is incorporated in Barbados but is not tax resident in any other jurisdiction.

A resident entity under the economic substance legislation also includes a partnership formed in Barbados that is carrying on one or more relevant activities.

Under the legislation, relevant activities include, but are not limited to, the following:

- Banking business
- Insurance business
- Fund management business
- Finance and leasing business
- Headquarters business
- Shipping business
- Holding company business
- Intellectual property business
- Distribution and service center business

A resident company meets the economic substance test in relation to a relevant activity carried on by a company if it conducts its core income-generating activity (CIGA) in Barbados, and the company is directed, managed and controlled in Barbados in relation to that activity.

A company is considered to conduct its CIGA in Barbados if, having regard to the level of income derived from carrying on of the relevant activity, the following conditions are satisfied:

- There is an adequate number of qualified full-time employees in relation to that activity in Barbados.
- There is an adequate number of employees who are physically present in Barbados in relation to that activity.
- There is adequate operating expenditure incurred in Barbados.
- There are adequate physical assets in Barbados.

In the case of the banking business sector, CIGAs include, but are not limited to, the following:

- Raising funds and managing risk, including credit risk, currency risk and interest risk
- Taking hedging positions
- Providing loans, credit or other financial services to customers
- Managing capital and preparing reports and returns to the Central Bank of Barbados

Entities conducting intellectual property business with high-risk intellectual property (that is, intellectual property acquired from a related party and licensed to other related parties) are presumed to fail the economic substance test. However, this presumption is rebuttable.

Entities in Barbados must file an economic substance declaration annually with the Ministry of International Business within 12 months after the end of each fiscal period.

If an entity fails to meet economic substance requirements, the Ministry of International Business in Barbados may impose a penalty of up to USD150,000 and, if there is a continued failure to meet the requirements, the entity may be removed from the Register of Companies in Barbados.

Country-by-Country Reporting. Barbados recently enacted Country-by-Country Reporting requirements, effective from 31 December 2021. Any Multinational Enterprise (MNE) Group that has a total consolidated group revenue of more than USD850 million as reflected in its consolidated financial statements during the fiscal year, immediately preceding the reporting fiscal year, are required to file a Country-by-Country Report (CbCR) with the competent authority.

A group that has a total consolidated group revenue of less than USD850 million during the fiscal year immediately preceding the reporting fiscal year is considered an “excluded” MNE, which means it is not required to file a CbCR.

The legislation requires each ultimate parent entity of an MNE Group that is resident for tax purposes in Barbados to file a CbCR. Subject to the conditions prescribed in the legislation, the MNE Group may designate one of the constituent entities as a surrogate parent. The surrogate parent entity would then be responsible for filing the CbCR on behalf of all the Barbados tax resident constituent entities of that MNE Group.

An MNE Group includes the following:

- Two or more enterprises for which the tax residences of the enterprises are in different jurisdictions, and are not part of an excluded MNE Group as defined by the legislation

- An enterprise that is resident for tax purposes in one jurisdiction and is subject to tax with respect to the business carried out through a permanent establishment in another jurisdiction; and is not an excluded MNE Group as defined by the legislation

Any constituent entity of an MNE Group that is resident for tax purposes in Barbados is required, when applicable, to notify the competent authority whether it is the ultimate parent entity or the surrogate parent entity of the MNE Group no later than the last day of the reporting fiscal year of the MNE Group. If a constituent entity of an MNE Group that is resident for tax purposes in Barbados is not the ultimate parent entity nor the surrogate parent entity, it is required to notify the competent authority of the identity and tax residence of the reporting entity no later than the last day of the reporting fiscal year of the MNE Group.

A CbCR must be filed with the competent authority no later than 12 months after the last day of the reporting fiscal year of the MNE group. The first reporting fiscal year is any fiscal year beginning on or after 1 January 2021. Therefore, if an MNE Group's fiscal year end is 31 December, the first reporting fiscal year would run from 1 January to 31 December 2021. The first CbCR will be due for filing on 31 December 2022, and subsequent CbCRs should be filed annually on every 31 December thereafter.

Written guidelines containing directions or specifications with respect to the content, format and method of filing of the CbCR will be issued by the competent authority in due course.

For making or submitting a false CbCR, there is a penalty of USD25,000 or 10 years of imprisonment or both. A fine of USD5,000 or one year of imprisonment or both in each separate instance of tampering or destroying a report without written authorization from the competent authority and of obstruction of the competent authority in its functions.

There is a penalty of USD5,000 for a failure of an enterprise to comply with the requirements under the legislation and for a failure to pay the penalty within 30 days after receiving notice of a penalty for failure to comply with the requirements under the legislation. The enterprise is liable to a further penalty of USD2,500 for each day or part thereof for which the failure continues after the date on which the original penalty became due and payable.

Global minimum tax. Barbados has joined the two-pillar plan to reform international taxation rules. Under Pillar 2, the inclusive framework members have agreed to introduce a global minimum corporate tax rate of 15%, and Global Anti-Base Erosion (GloBE) rules provide for a coordinated system of taxation intended to ensure that MNEs with global revenue exceeding EUR750 million pay a fair share of tax in each of the jurisdictions where they operate. It does so by imposing a top-up tax on profits arising in a jurisdiction whenever the effective tax rate, determined on a jurisdictional basis, is below the minimum rate. The GloBE rules are not mandatory but have been agreed to as a "common approach." This means that jurisdictions are not required to adopt the GloBE rules, but if they choose to do so, they

agree to implement and administer them in a way that is consistent with the agreed outcomes set out under those rules. Even if they do not implement the rules, agreement on a common approach means that one jurisdiction accepts the application of the GloBE rules by another with respect to MNEs operating in their jurisdiction. If Barbados agrees to apply the GloBE rules from 2023, they must first be implemented into domestic law.

F. Treaty withholding tax rates

The withholding tax rates in the table below apply to payments made to nonresidents of Barbados under the various treaties entered into by Barbados. The treaty rates indicated below represent the maximum rates under the treaties. However, if a lower domestic tax rate exists, the lower rate should be applied. The domestic withholding tax rates are under review and may be subject to change.

(a) The rate is reduced to 5% if the beneficial owner of the dividends is a company that owns at least 10% of the capital of the payer of the dividends.

(b) The rate is reduced to 5% if the beneficial owner of the dividends is a company that owns at least 25% of the capital of the payer of the dividends.

- (c) The Caribbean Community and Common Market (CARICOM) multilateral treaty has been entered into by 10 member states of CARICOM. The treaty follows a source-based model of taxation, with double tax relief typically provided in the form of an income exemption in the state of residence.
- (d) The rate is reduced to 5% if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 25% of the capital of the company paying the dividends.
- (e) This treaty is awaiting ratification and entry into force. Consequently, the provisions of the treaty are not yet in effect.
- (f) The rate is reduced to 5% if the interest is derived by a bank that is resident in Ghana.
- (g) The rate is reduced to 0% if the beneficial owner is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends for an uninterrupted period of at least 12 months before the decision to distribute the dividends.
- (h) The rate is reduced to 5% if the beneficial owner of the dividends is a company that owns at least 5% of the capital of the payer of the dividends.
- (i) The term "royalties" includes payments derived from the alienation of rights or property that are contingent on the productivity, use or disposition of such property.
- (j) The rate is reduced to 0% if the beneficial owner of the dividends is a company that owns at least 10% of the capital of the payer of the dividends and if the recipient of the dividends is a company resident in the Netherlands that is not subject to Netherlands company tax on the dividends.
- (k) The rate is reduced to 0% for royalties paid for the use of, or the right to use, literary, artistic or scientific works, including royalties with respect to cinematographic films, and films, discs or tapes for radio or television broadcasting.
- (l) The rate equals 75% of the statutory nominal rate applicable at the time of the dividend distribution. It is reduced to 5% if the beneficial owner of the dividends is a company that owns at least 25% of the capital of the payer of the dividends.
- (m) The rate is reduced to 5% if the interest is derived by a bank that is resident in Panama.
- (n) The treaty does not contain an interest article. Consequently, the normal tax rate applies.
- (o) The rate is 15% for royalties paid for motion picture or television films.
- (p) The rate is reduced to 5% for interest paid to banks.
- (q) The rate is reduced to 0% if the dividends are paid out of income earned from foreign sources.
- (r) The treaty language is unclear and may be read either as providing an exemption from Barbados withholding tax, or as providing no restriction of Barbados withholding tax. The government has not yet issued guidance as to the correct interpretation.
- (s) The rate is reduced to 5% if the beneficial owner of the dividends is a company that directly owns at least 25% of the capital of the company paying the dividends.
- (t) The rate is reduced to 0% if the beneficial owner of the dividends is a company that directly owns at least 25% of the capital of the company paying the dividends.
- (u) The rate is reduced to 5% for royalties paid for copyrights of literary, artistic or scientific works, including cinematographic films, and films or tapes for radio or television broadcasting.
- (v) The rate is reduced to 0% if the interest is paid to the government of the other contracting state or any agency or instrumentality thereof, including the central bank of that contracting state (subject to certain restrictions).

Carryforward	Unlimited (e)

(a) For further details, see Section B.

(b) Certain capital gains are exempt from tax (see Section B).

(c) The standard withholding tax rate for dividends is 30%. For further details, see Section B.

(d) The standard withholding tax rate for interest is 30%.

(e) For further details, see Section C.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are subject to tax on their annual worldwide income. Nonresident companies are subject to tax on their annual Belgian-source income only. A company is resident in Belgium if its central management or its registered address is located in Belgium.

Rates of corporate income tax. The corporate tax rate is 25%. A reduced rate of 20% on the first EUR100,000 of taxable income applies to small companies, as defined under corporate law; above this amount, the normal rate applies. One of the principal conditions for the reduced rate is that the company must pay an annual remuneration of at least EUR45,000 to at least one director. For salaries lower than EUR45,000, the salary should at least be equal to the taxable income. The minimum salary requirement does not apply to startup companies incorporated less than four years prior to 1 January of the tax year.

Notional interest deduction. Belgian companies and Belgian branches of nonresident companies may deduct a deemed interest expense in connection with qualifying equity. This deduction is known as the notional interest deduction (NID). The NID is calculated on the incremental adjusted equity in excess of the average equity of the preceding five years. Qualifying equity is determined at the beginning of the tax period (for the current and five preceding tax periods). To prevent potential abuse and duplication of tax benefits, certain items must be deducted from the equity, such as the fiscal net value of own shares, the fiscal net value of financial fixed assets qualifying as “participations and other shares” and the fiscal net value of shares issued by investment companies. Furthermore, capital contributed from entities resident in jurisdictions that do not provide for exchange of information should be deducted from the calculation basis of the NID, unless a business purpose test is met. A similar rule applies to loans granted by the company to entities resident in jurisdictions that do not provide for exchange of information. The NID is disallowed at the level of the subsidiary in situations in which the direct or indirect parent financed the equity contribution with a loan.

Equity allocated to foreign branches and foreign real estate qualifies for the NID. However, in such case, this portion of the NID must be imputed first on that foreign-source income. Only excess NID relating to branches and real estate located in the European Economic Area (EEA) can be effectively used against Belgian taxable income.

The deduction may not be carried forward in the event of a loss, but other limitations on the carryforward also apply (see *Limitation on certain tax deductions* in Section C).

For the 2022 tax year, the NID rate is set at 0.16% (0.34% for small companies). However, a negative NID rate is not applicable and is deemed to be zero for the relevant tax year.

Tax regime for the diamond industry. Belgian tax law provides for a special lump-sum tax regime for the diamond industry.

The gross taxable result of the company equals 2.1% of the diamond trade turnover. This taxable result is subsequently subject to the application of the common corporate tax rules.

However, the net taxable result cannot be lower than 0.55% of the diamond trade turnover.

The special tax regime is subject to the condition that the company manager's salary paid during the tax period be higher than a certain threshold (also depending on the diamond trade turnover of the company).

Tax incentive for audiovisual investments. Belgian tax law includes a tax incentive to attract investments of Belgian companies or branches in audiovisual productions.

Companies planning to invest in a European audiovisual production (to be recognized by the competent departments of the French, Flemish or German communities) and who want to benefit from the tax incentive must conclude a framework agreement with a qualifying audiovisual production company (including a television channel). In this framework agreement, the expected tax value for the production, which is based on the budgeted production expenses (direct as well as indirect expenses, including expenses incurred up to six months before the conclusion of the framework agreement), needs to be included. The estimated tax exemption is based on this tax value. The framework agreement needs to be notified to the tax authorities within one month after it is signed.

The invested amounts must be effectively paid to the production company within three months after the contract is signed. They do not create a receivable, nor exploitation rights linked to the underlying project. The invested amount is irrevocably paid to the production company (as an expense; the expense as such is not tax deductible) and is not regarded as an asset. Except for commercial gifts with limited value (under reference of value-added tax [VAT] legislation), no other economic or financial benefit can be granted to the investor.

The investors are entitled to a tax exemption of 421% of the invested funds. For a specific project, the exemption is limited to 203% of the expected final tax value of the tax-shelter certificate as specified in the framework agreement.

However, the exemption in a given tax year remains limited to a maximum of 50% of the investor's increase of taxable reserves (mainly the net accounting profit before application of the tax-shelter exemption but after deduction of distributed dividends and other tax corrections) during that same tax year, with an absolute maximum of EUR1 million.

In the financial statements of the investor, the exempt amounts must be recorded as an "unavailable reserve," which needs to be maintained until the date the tax-shelter certificate is received.

In principle, the exemption is granted in the year in which the framework agreement is concluded or the payments are made. Excess exemptions (exemptions that could not be used based on the above maximum) can be carried forward to the end of the

fourth tax period following the year in which the framework agreement is signed.

The tax exemption is obtained immediately but is not definitive, and only becomes final if a number of conditions are met. The exemption only becomes final when a tax-shelter certificate confirming the tax value of the investment is issued by the tax authorities on request of the production company as soon as the production is finalized. The certificate must be sent to the tax authorities of the investor as an enclosure to the investor's corporate income tax return. The certificate needs to be received by the investor by 31 December of the fourth year following the year in which the framework agreement is signed.

In addition, the final exemption is only granted to the extent that the tax value of the certificate corresponds to the value that was included in the agreement and to the extent that the limits and maximum amounts per tax period are respected. If the tax-shelter exemption is claimed incorrectly, corporate income tax on the difference becomes due, increased with late payment interest.

For the period between the first payment after the conclusion of the framework agreement and the receipt of the tax-shelter certificate, interest can be granted. This period is legally limited to 18 months, and the maximum interest rate that is allowed is fixed at the 12-month Euribor (increased by 450 basis points).

The conditions to apply for the tax-shelter regime are temporarily changed in light of the COVID-19 pandemic. Among other changes, the maximum amount of the exemption is temporarily increased to EUR2 million (for the financial year in which the framework agreement is signed and that closes in the period of 31 December 2020 and 31 December 2022, inclusive) and for agreements signed on 12 March 2021, at the latest, investors are temporarily and conditionally allowed to postpone the payment of the invested amounts by three months.

Tax incentive for stage art performances. The tax incentive for audiovisual investments also applies to "European stage art performances" (productions recognized as such by the competent authorities of the French-, Flemish- or German-speaking communities).

To qualify, the production expenses must be incurred within a maximum time limit of 24 months since the date of the signing of the framework agreement and no later than one month after the premiere of the stage art performance. Expenses incurred before the signing of the framework agreement are not considered eligible production expenses (in contrast to the audiovisual productions' time frame of six months).

In addition, as is the case for audiovisual productions, limitations apply with respect to the maximum amount that can be financed through tax-shelter funding. This amount is calculated based upon the eligible direct and indirect expenses incurred in Belgium and/or the EEA.

From the investor's side, the same limitations apply with respect to the maximum amount of the exemption in a given tax year (an absolute maximum of or EUR1 million and limited to 50% of the

increase in taxable income). In this respect, investments in audiovisual productions and stage art performances should be counted together and offset against these limitations.

The entity that is using the tax-shelter funding is subject to corporate income tax. This is particularly important for entities (such as nonprofit organizations) that are in principle only subject to a so-called legal entity tax. These entities are subject to corporate income tax in the tax year in which the first framework agreement is concluded and in the three following tax years.

The conditions to apply for this tax incentive are also temporarily changed in light of the COVID-19 pandemic. Among other changes, the maximum amount of the exemption is temporarily increased to EUR2 million (for the financial year in which the framework agreement is signed and that closes in the period of 31 December 2020 to 31 December 2022, inclusive).

Tax incentive for video games. The tax-shelter regime for the audiovisual sector and the performing arts was extended to the gaming industry. However, the legislation did not effectively enter into force due to criticism from the European Commission. New draft legislation is being developed and will be resubmitted to the European Commission for approval.

Tax incentives for startups. Tax incentives for startups are described below.

Tax shelter regime for equity investments in startups. The tax shelter for equity investments in startups is designed to encourage individuals to invest in new shares of startups on incorporation or within four years after incorporation, as well as in shares in qualifying regulated starter funds. For investments in startups that qualify as small companies and for investments in starter funds, the personal income tax reduction amounts to 30% of a maximum investment of EUR100,000 per tax period. The rate is 45% for investments in startups that qualify as “micro-undertakings,” as defined in European Union (EU) accounting directive 2013/34. For investments made as of 1 January 2021, the total amount of qualifying investments may not exceed EUR500,000 per startup. The incentive applies only to cash investments that represent a maximum of 30% of the capital of the startup. The shares must be held for at least four years. Individuals who at the moment of the investment are part of the company’s management are excluded.

As of the 2019 tax year (financial years starting on or after 1 January 2018), a deduction is introduced for investments in growth companies (“scale ups”), following almost the same rules (equity increase, contribution in cash, issuance of new shares, holding period of four years and certain other rules). The personal income tax reduction amounts to 25%, and the total amount of qualifying investments made as of 1 January 2021 may not exceed EUR1 million per growth company.

Tax exemption for loans to startups through crowdfunding. Individuals benefit from a tax exemption for interest on loans through a regulated crowdfunding platform for a maximum amount of loans per taxpayer per year of EUR15,630. The loan must have a maturity of at least four years. The exemption applies to loans to companies as well as to individuals who meet the

criteria for small companies and who are registered for maximum of 48 months at the Crossroads Bank for Enterprises. The tax exemption does not apply to refinancing loans.

Partial payroll tax exemption for startups. Belgian law provides for a partial payroll tax exemption to decrease the wage costs for startups. The incentive applies to companies and to individual employers who are registered for a maximum of 48 months at the Crossroads Bank for Enterprises, starting from the first day of the month following the registration. If the startup meets the criteria for small companies, the exemption rate is 10%. The exemption rate is 20% for “micro-undertakings,” as defined in EU accounting directive 2013/34.

Capital gains. Capital gains derived from the disposal of tangible and intangible assets are taxed at the ordinary rate. Tax deferral is possible if certain conditions are met.

Capital gains on shares are exempt if all of the following conditions are met:

- The subject-to-tax (STT) requirement for the application of the dividend-received deduction (DRD) (see *Dividends*)
- The minimum holding requirement (uninterrupted period or at least one year) of the DRD (see *Dividends*)
- The minimum shareholding requirement of at least 10% or EUR2,500,000

If there is at least one condition not met, the ordinary tax rate of 25% (20% for SMEs) applies.

A reduced rate of 15% applies to capital gains on shares in companies holding real estate (unless the general anti-avoidance rule applies). Any capital losses on these shares are generally not tax deductible, except to the extent of the loss of fiscally paid-up capital in a liquidation.

Capital gains realized on an exchange of shares in a tax-neutral restructuring are exempt from tax under certain conditions.

Administration. A tax year refers to the year following the financial year if the financial year ends on 31 December. If the financial year ends before 31 December, the tax year refers to the year in which the financial year closes. Consequently, the 2022 tax year relates to a financial year ending between and including 31 December 2021 and 30 December 2022.

To avoid a surcharge (6.75% for the 2022 tax year), tax must be paid in advance in quarterly installments. The balance of tax payable is due within two months after receipt of the notice of assessment.

Reporting obligation for payments to tax havens. Both resident and nonresident companies are required to report all direct or indirect payments (regardless whether these payments are expenses) in excess of EUR100,000 made to beneficiaries with an address or financial account in “tax havens.”

For the purpose of this obligation, a country is considered to be a “tax haven” if it is mentioned on one of the following lists:

- Belgian prohibited list of countries with zero or low taxation.

- European prohibited list of non-cooperative jurisdictions (applicable for payments made as from 1 January 2021).
- List of the Organisation for Economic Co-operation and Development (OECD) Global Forum on Transparency and Exchange of Information for Tax Purposes, including countries that are “non-compliant” with the minimum OECD standards regarding the exchange of information on request (EOIR or transparency standard). Payments made to “partially compliant” countries are also targeted as from 1 January 2021 (2022 tax year).

It is sufficient for the reporting obligation to be triggered when the country is on one of the above prohibited lists at the moment the payment is made. It is therefore not required for the country to be qualified as a tax haven during the entire tax period in which the payment is made.

The rules apply to payments to the following:

- Branches located in a tax haven, but with a head office in a listed state.
- Permanent establishments located in such jurisdictions. Payments made to an establishment in a non-tax haven are also targeted if the head office of that establishment is located in a tax haven.
- Bank accounts managed by or held with individuals or permanent establishments located in such jurisdictions.
- Accounts managed by or held with credit institutions or their permanent establishments located in such jurisdictions.

A specific reporting obligation for financial institutions requires financial institutions to automatically and periodically notify their operations with and payments to tax havens.

The payments must be reported in euros on a special form, which must be annexed to the annual corporate income tax return. These payments are tax deductible only if they relate to real and genuine transactions and if they are made to persons that are not artificial constructions.

Extended investigatory and assessment periods up to 10 years apply in cases in which use was made of legal structures in tax havens, aimed at hiding the origin or the existence of capital.

Reporting obligation for remuneration paid or attributed by foreign entities. Belgium has introduced additional reporting and withholding tax requirements for all Belgian employers with respect to remuneration paid or attributed by a foreign parent company or affiliate (mostly share-based incentive programs).

Advance rulings. An advance decision in tax matters (tax ruling) is a unilateral written decision by the Belgian tax authorities at the request of a (potential) taxpayer about the application of the tax law in a specific situation that has not yet occurred, as described by the taxpayer. The purpose of such a ruling is to provide up-front certainty to the taxpayer.

The tax authorities must respond to a ruling request within a three-month period, which may be extended by mutual agreement. A ruling may be valid for a period of five years, except innovation deduction rulings for software that are only valid for three years.

However, advance rulings are not issued in certain circumstances such as the following:

- Transactions that have already been implemented or that are in a tax litigation phase
- Transactions that lack economic substance in Belgium
- Transactions, essential parts of which involve tax havens that do not cooperate with the OECD

Ruling requests filed with the Belgian tax authorities that relate to multinational investments and transactions must disclose other ruling requests filed in EU or treaty countries regarding the same matters.

In principle, the advance rulings are published.

Belgium also implemented the directives relating to the automatic and compulsory exchange of cross-border tax rulings and advance pricing arrangements (DAC3).

Dividends. A 100% DRD applies to dividends received by a qualifying Belgian company or Belgian branch. To qualify for the DRD, dividends must meet all of the following requirements:

- The recipient company (shareholder) must own a minimum participation of 10% of the share capital or a participation with an acquisition value of at least EUR2,500,000.
- The shares must be held by the shareholder (in full ownership) for an uninterrupted period of at least one year.
- The company distributing the dividends must be a normally taxed company. Companies located in countries applying a significantly more advantageous tax regime are explicitly excluded from the DRD, as well as companies located in countries included in the EU prohibited list of non-cooperative tax jurisdictions (for dividends paid or attributed on or after January 2021).

In the case of insufficient profits, the excess DRD can be carried forward indefinitely to the extent that it relates to qualifying dividends. However, a general limitation on certain tax deductions, including the carried forward excess DRD applies (see *Limitation on certain tax deductions* in Section C). In addition, limitations may apply in cases of restructurings and changes of control. The DRD cannot be offset against several types of disallowed expenses as well as against part of the taxable basis, derived from abnormal or benevolent advantages, by a resident company or branch from a related entity.

The standard withholding tax rate for dividends is 30%, but exemptions and reduced withholding tax rates are applicable under Belgian law or tax treaties.

As a consequence of the implementation of the EU Parent-Subsidiary Directive, no withholding tax is due on dividends distributed to a Belgian company or a company, resident of another EU member state or a country with which Belgium has concluded a tax treaty containing an exchange-of-information clause, that owns at least 10% of the shares for an uninterrupted period of one year.

A 30% withholding tax is also imposed in the event of the liquidation of a company.

However, small and medium-sized enterprises (SMEs) may allocate all or a part of their taxed profits to a liquidation reserve, booked to a separate account, at a tax charge of 10%. If the liquidation reserve is maintained until the liquidation of the company, no additional tax is levied on these funds. The distribution of the funds to the shareholders before the liquidation of the company is subject to an additional but favorable withholding tax rate of 5% (distribution of a dividend after five years following the last day of the tax period in which the reserve is formed), 17% or 20% (distribution within five years).

Capital reductions, as well as qualifying reimbursements of share premiums and profit certificates, are pro rata allocated to the paid-in capital and to the reserves. The portion allocated to the reserves is considered a dividend for tax purposes that is in principle subject to withholding tax. That portion is first allocated to the taxed reserves (whether or not incorporated in capital; no withholding tax is imposed) and then to the tax-exempt reserves (if any) incorporated in capital. Therefore, to the extent taxed reserves are available, the tax-exempt reserves (if any) are not affected. Non-distributable reserves and other (non-incorporated) tax-exempt reserves (for example, provisions) fall out of scope of this new pro rata rule.

Foreign tax relief. Income derived from a permanent establishment abroad may be exempt under the provisions of a tax treaty. A Belgian company that receives foreign-source interest income and royalties subject to a foreign withholding tax can claim a foreign tax credit in Belgium if certain conditions are satisfied. The maximum foreign tax credit that may be claimed equals ¹⁵/₈₅ of the net income at the border.

C. Determination of trading income

General. Taxable income is based on income reported in the annual financial statements and includes all gains, profits, costs, dividends, interest, royalties and other types of income.

Deductible expenses. Certain business expenses are not deductible for tax purposes, such as certain car expenses, 31% of restaurant expenses and 50% of entertainment expenses.

Decrease and abolition of tax deductions for carbon-emitting company cars. The tax treatment of company cars will evolve, and as of 2026, costs related to company cars will only be eligible for tax deductions in case of a zero-emission company car. A grandfathering rule is foreseen for tax deductions related to non-hybrid company cars purchased, rented or leased before 1 July 2023 as well as a transitional regime for non-hybrid company cars purchased, leased or rented between 1 July 2023 and 31 December 2025 (phasing-out principle).

The electrification of the Belgian company car fleet will increase the need for infrastructure to charge electric cars. Companies are encouraged to invest in publicly accessible (to third parties) charging infrastructure by introducing an increased cost deduction for the depreciation of newly installed publicly accessible charging stations, applicable conditionally on eligible investments

made from 1 September 2021 until 31 August 2024. The following rates apply:

- Investments made between 1 September 2021 and 31 December 2022: 200%
- Investments made between 1 January 2023 and 31 August 2024: 150%
- Investments as of 1 September 2024: 100%

A special reporting obligation is introduced as from the 2022 tax year (financial years starting as from 1 January 2021).

Limitation on certain tax deductions. The use of certain deductions is limited to EUR1 million plus 70% of the taxable income in excess of EUR1 million. Therefore, 30% of the tax base in excess of EUR1 million cannot be offset and is a minimum tax base. The limitation applies to the following:

- Carried forward tax losses
- Carried forward DRD
- Carried forward innovation income deduction
- Carried forward NID (calculated before the 2019 tax year) (see *Notional interest deduction* in Section B)
- Incremental NID (calculated as of the 2019 tax year)

However, other deductions can be applied without the limitation, including the following:

- Nontaxable items (for example, gifts and exemptions in accordance with double tax treaties)
- Current year DRD
- Patent income deduction
- Current year innovation deduction
- Current year and carried forward investment deduction
- Group contributions in the context of the new tax consolidation regime

The limitation does not apply to startup companies for the first four tax years.

Inventories. Stock values may not exceed the lower of cost or market value; cost is defined as the purchase price of raw materials plus direct and indirect production costs. However, the inclusion of indirect production costs is optional. Accepted valuation methods are first-in, first-out (FIFO); last-in, first-out (LIFO); and weighted average. Valuation of stocks at replacement cost is not allowed.

Provisions. Provisions for liabilities and charges are exempt from tax if they relate to contractual, legal or regulatory obligations existing at the end of the financial year. This rule applies only for provisions and additions as of 2018 and for additions as of 2018 to provisions recorded before 2018.

Depreciation. In principle, depreciation rates are determined based on the anticipated useful economic life of the assets. The following straight-line rates are generally accepted.

Asset	Rate (%)
Office buildings	3
Industrial buildings	5
Chemical plants	8 to 12.5

Asset	Rate (%)
Machinery and equipment (including information technology)	10 to 20
Office furniture and equipment	10 to 15
Rolling stock (motor vehicles)	20 to 33
Small tools	33 to 100

The accelerated depreciation method (for some assets, a higher depreciation rate could be applied during the first years of the investment with a maximum of 40% of the acquisition value) is no longer allowed for assets acquired or established from 1 January 2020.

Research and development (R&D) investments must be amortized for tax purposes using the straight-line method over a period of at least three years. All other intangible assets must be amortized for tax purposes using the straight-line method over a period of at least five years.

Investment deduction. A 13.5% investment deduction is available for specific investments and under certain conditions (for example, investments in environmentally friendly R&D, energy savings and related patents) and a 3% investment deduction is available for reusable packaging. A company can opt for a spread investment deduction of 20.5% (2021 tax year) and can accordingly deduct each year 20.5% of the annual amortization. For other investments, and as from 1 January 2020, SMEs can apply an investment deduction of 8%. These companies are also entitled to a specific investment deduction of 13.5% for investments in fixed digital assets, such as payment systems and cybersecurity systems and a 20.5% investment deduction for security-related investments. As a result of the COVID-19 pandemic, the investment deduction for SMEs is increased to 25% for fixed assets obtained or established between 12 March 2020 and 31 December 2022. If the company has insufficient taxable income, the investment deduction can be carried forward to the subsequent tax year. The amount of unused investment deduction with respect to fixed assets obtained or established until 31 December 2021 can be carried forward to the following two tax years.

For investments in R&D, a company can irrevocably opt for a tax credit instead of a deduction at the same rate as the investment deduction. As opposed to the investment deduction, this tax credit is effectively paid out if a company has insufficient taxable income for five consecutive tax years.

Tax incentives exist for investment in Belgian audiovisual works (see Section B) and for the shipping industry (tonnage tax).

Under the recent law on the tax and social greening of mobility, an increased investment deduction of 35% (2022 fiscal year) is available for investments in the following:

- Newly acquired zero-emission trucks
- Charging stations for zero-emission trucks
- Infrastructure for hydrogen.

The total investment deduction for these investments is limited to EUR60 million and a company can only benefit from this increased investment deduction under certain conditions (among

other conditions, no social security debts and no regional grants received for the investment).

Innovation deduction. The OECD required Belgium to abolish the patent income deduction and replace it with a Base Erosion and Profit Shifting (BEPS)-compliant regime.

Under the innovation deduction regime, the taxpayer should be owner, co-owner, licensee, usufruct or (economic) rights holder of intellectual property (IP) rights. The regime (under conditions) applies to, among others, patents, medicinal products, software and plant-variety rights. The IP should not be recorded as an asset on the balance sheet in order to qualify for the innovation deduction, unless the taxpayer will apply the innovation deduction to capital gains.

The innovation deduction provides for a deduction of 85% of the qualifying net income from IP, effectively reducing the related maximum effective tax rate to 3.8% for the 2021 financial year.

The income derived from the qualifying IP should be included in the Belgian tax base and should be at arm's length. The following is the equation for calculating the innovation deduction:

$$\text{Innovation deduction} = \text{Net IP income} \times \text{nexus ratio} \times 85\%$$

In the above equation, “net IP income” means the income after deduction of overall expenditures incurred for the development or acquisition of the IP right to the extent included in expenses. In addition, a recapture of prior year expenses (incurred after 30 June 2016) up to seven years is possible.

The following is the “nexus ratio”:

$$\frac{\text{Qualifying expenditures} \times 130\%}{\text{Overall expenditures}}$$

“Qualifying expenditures” relate to R&D expenditures incurred by the taxpayer, including outsourcing to unrelated parties and excluding expenditures for the acquisition of IP or outsourcing to related parties.

The following are other significant features of the innovation deduction:

- Carryforward of unused innovation deductions to subsequent tax periods (however, see *Limitation on certain tax deductions*)
- Tax neutrality in the context of reorganizations
- Possible combination with other R&D incentives
- No R&D center requirement
- No limitations in time or amounts

When applying the innovation deduction, a taxpayer should keep specific information and documentation available for the tax authorities, such as the following:

- Determination of the gross innovation income (for example, transfer-pricing methods)
- Determination of the costs that must be deducted from the gross innovation income
- Methodology used to calculate the nexus ratio

A set of analytical accounts should be the basis for certain information.

Taxpayers may request tax rulings to obtain legal certainty regarding the conditions and the calculation of the innovation deduction (see *Advance rulings* in Section B).

Relief for losses. In general, companies may carry forward tax losses without limitations. However, a general limitation on certain deductions, including carried forward tax losses, applies (see *Limitation on certain tax deductions*) and certain limitations may apply in cases of restructurings and changes of control.

Tax losses cannot be carried back.

As of the 2020 tax year (financial years starting on or after 1 January 2019), it is also possible to offset losses suffered by a group company for tax purposes with profits from another group company (see *Groups of companies*). Belgian legislation provides for a limitation of losses incurred by foreign permanent establishments (as of the 2021 tax year [financial years starting on or after 1 January 2020]). Tax losses incurred by a foreign permanent establishment of a Belgian company of which the income is treaty exempt in Belgium is no longer tax deductible from the tax base of the Belgian company. The losses remain deductible only if they cannot be used to offset the profits of the Belgian branch abroad and are considered as final losses incurred in a branch located in the EEA. If such losses cannot be fully used, they are in principle transferable and can be deducted in a later tax period to the extent that they exceed the profits exempted by the double tax treaty. These losses will not be considered final if the company resumes (the same or other) activities in the permanent establishment state within three years after terminating the initial activities and deducting the losses (recapture rule applies in the financial year in which the activities are recommenced).

Groups of companies. As of the 2020 tax year (financial years starting on or after 1 January 2019), new rules of group taxation are applicable. Under this new regime, a group company that is in a taxpaying position can make a tax-deductible group contribution to another group company that is in a loss position. This group contribution is taxable in the hands of the receiving group company and may be offset with the current year tax loss. The receiving group company is remunerated for the use of its tax loss by the contributing company for the amount of the tax saving realized by the latter.

Group contributions are available for Belgian resident group companies and Belgian establishments of EEA group companies. They may be made between parents and subsidiaries with direct 90% participation and between sister companies with a direct joint 90% (Belgian or foreign) resident parent. The minimum participation must have been maintained for an uninterrupted period of at least five years as of 1 January of the fourth calendar year before the tax year. As a result, newly established group companies must wait five years before group contributions are possible.

A group contribution agreement (template agreement provided by the Belgian tax authorities) should be concluded by the contributing and receiving company. The agreement is a mandatory attachment to the corporate income tax return.

Specific rules apply if, during the five-year period, one of the parties to a group contribution agreement was involved in, or incorporated pursuant to, a restructuring (regardless of whether it was tax-neutral).

Group contributions are not possible by or with an entity that benefits from a special tax regime (for example, tonnage tax regime).

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, standard rate	21
Social security contributions, on gross salary	
Employer (approximately)	35
Employee	13.07
Real estate tax; rate depends on location (allowed as a deductible expense for corporate income tax purposes)	Various
Environmental tax; rate depends on the location and the activity or product; tax is not deductible for corporate income tax purposes	Various
Registration duties, on contributions to companies	0
Registration duties on the transfer of immovable property	6/12.5

E. Miscellaneous matters

Foreign-exchange controls. Payments and transfers do not require prior authorization. However, for statistical purposes, financial institutions are required to report all transactions with foreign countries to the National Bank of Belgium. Resident individual enterprises are also subject to this reporting obligation if they conclude the transactions through nonresident institutions or directly.

Transfer pricing. The Belgian Income Tax Code (ITC) contains anti-avoidance provisions that relate to specific aspects of transfer pricing. “Abnormal and gratuitous advantages” granted by a Belgian enterprise are added to the tax base of the Belgian enterprise, unless the advantages are directly or indirectly part of the taxable income of the recipient in Belgium. The ITC also contains anti-avoidance provisions concerning royalties, interest on loans and other items, as well as a provision on the transfer of certain types of assets abroad. Under these provisions, the taxpayer must demonstrate the bona fide nature of the transaction.

Qualifying multinationals must fulfill transfer-pricing documentation requirements (Master File, Local File and Country-by-Country Reporting).

A Transfer Pricing Circular provides the Belgian interpretation of the OECD Guidelines, without the intention to deviate from it. The Transfer Pricing Circular also states that any future changes

to the OECD Guidelines can be assumed to be generally followed by the Belgian tax authorities.

Interest limitation rule. As part of the Belgian corporate tax reform, Belgium implemented the EU Anti-Tax Avoidance Directive (ATAD), which resulted in the introduction of the interest limitation rule into Belgian legislation, applicable from the 2020 tax year (financial years starting on or after 1 January 2019).

Under the new interest limitation rule, the tax deductibility of net interest charges (“exceeding borrowing cost”) is limited to the higher of the following:

- 30% of the taxable earnings before interest, taxes, depreciation and amortization (EBITDA) of the Belgian company or permanent establishment.
- Minimum threshold of EUR3 million. The EUR3 million threshold is the total amount for all Belgian group companies and permanent establishments and should be divided proportionally between all the Belgian group companies and permanent establishments. Multiple alternatives to proportionally allocate this amount are available.

The net interest charges are equal to the positive difference between interest expenses (interest and economically equivalent expenses) and interest income (interest and economically equivalent income). Economically equivalent income and expenses are, for example, foreign-exchange differences related to interest payments in the framework of a loan agreement, guarantee provisions and discounts on interest-free or abnormally low-interest loans.

Calculating the taxable EBITDA requires the application of a specific and very technical methodology, particularly if the group has more than one Belgian company or permanent establishment.

Positive taxable EBITDA should be compensated with negative taxable EBITDA within the Belgian group, which may significantly reduce the overall deduction capacity. However, companies are allowed to opt out of the calculation of the taxable EBITDA if the exceeding borrowing cost is below EUR3 million.

Excess deduction capacity can be shared by a Belgian company or permanent establishment with another Belgian company or permanent establishment of the group. The shared amount is added to the threshold of one company and deducted from the threshold of the other company. This transfer requires the conclusion of a compulsory yearly agreement (template provided by the Belgian tax authorities), to be attached to the corporate income tax return.

The net interest charges, to the extent that they are disallowed under the 30% EBITDA rule (resulting from a lack of sufficient deduction capacity), can be carried forward to future tax periods.

The new interest limitation rule does not apply to interest on loans concluded for the purpose of long-term public infrastructure projects and to interest related to grandfathered loans (loans concluded before 17 June 2016 that have not fundamentally changed since that date). These grandfathered loans remain subject to the old 5:1 thin-capitalization rules (if applicable). The tax

authorities have clarified the notion “fundamentally modified” and identified a number of fundamental modifications and non-fundamental modifications (non-exhaustive).

Controlled foreign companies. Part of the Belgian corporate tax reform and the implementation of the EU Anti-Tax Avoidance Directive (ATAD) was the introduction in Belgium of controlled foreign company (CFC) legislation (applicable from the 2020 tax year [financial years starting on or after 1 January 2019]). This new legislation targets artificial constructions that are set up with the essential purpose of obtaining a tax advantage (that is, when profit is shifted from a controlling Belgian entity for the benefit of the CFC).

Under the new legislation, the non-distributed profits should be realized by the CFC in the context of a non-genuine (series of) arrangement(s), set up with the essential purpose of obtaining a tax advantage (determination on a transfer-pricing basis [transactional approach]); that is, there is a mismatch between the ownership of certain assets and risks undertaken by the CFC on the one hand and the exercise of significant people functions relating to these assets and risks by the controlling Belgian entity on the other hand.

To the extent that they arise from a non-genuine arrangement, these non-distributed profits are added to the tax base of the Belgian parent, but only if both of the following conditions are met:

- **Control condition:** For foreign subsidiaries, the Belgian company should directly or indirectly hold the majority of the voting rights, should own a participation of at least 50% of the capital or should be entitled to receive at least 50% of the profits. Permanent establishments of the Belgian company are also in scope.
- **Low taxation condition:** The foreign subsidiary or permanent establishment should be located in a jurisdiction where it is not subject to income tax or where it is subject to income tax that is less than one-half of the Belgian corporate income tax or supplementary Belgian corporate income tax that would have been due if the foreign subsidiary or permanent establishment would have been located in Belgium (“as if” provision), provided that the income tax calculated under Belgian rules for the CFC is not less than 12.5% (at a rate of 25%).

If the foreign company is located in a jurisdiction listed on the EU prohibited list of non-cooperative jurisdictions, the non-distributed profits will automatically be added to the taxable basis of the Belgian taxpayer without testing the effective tax rate and without limiting the inclusion to the income controlled and attributed to the Belgian parent company. The measure applies to tax periods ending on or after 31 December 2020.

A special reporting obligation should be fulfilled if all or part of the CFC profits are taxed in Belgium in a given year with the application of the CFC rules. The name, legal form, address and identification number of the CFC of which the profits are entirely or partially taxed in the hands of the controlling Belgian entity should be reported in the yearly corporate income tax

declaration. No reporting obligation applies if there is a CFC but no CFC profit is taxed in Belgium.

Hybrid mismatches. From the 2020 tax year (financial years starting on or after 1 January 2019), a complex set of domestic rules enters into force to target so-called hybrid mismatches (transposition of the EU ATAD I and II).

The anti-hybrid rules distinguish between hybrid entities, hybrid transfers, reverse hybrids, hybrid PEs and dual residents, targeting so-called double deduction and deduction non-inclusion outcomes.

As a result of Belgium's proactive approach, it will be key to timely identify hybrid situations involving Belgium (or other early-moving jurisdictions) and take appropriate action when necessary. New legislation that will contain some substantial amendments of the existing definitions and rules is expected.

Exit taxation. In addition to a step-up to market value on inbound relocations of assets, migrations and restructurings, the exit tax regime is broadened as of the 2020 tax year (financial years starting on or after 1 January 2019) in order to capture the transfer of assets from a Belgian head office to a foreign permanent establishment as a taxable event.

Broadened Belgian permanent establishment definition. In the context of the corporate tax reform and in order to tackle the artificial avoidance of permanent establishment status through commissionaire arrangements and similar strategies, a more economic approach is implemented for the recognition of permanent establishments for domestic purposes (applicable as of 2020), further aligning the Belgian permanent establishment definition with BEPS Action 7. In particular, the rules on independent agents target a broader range of situations. For example, a Belgian permanent establishment exists if an independent agent acts on behalf of foreign company, even if there is no authority to conclude contracts on behalf of that company. Because these new rules may result in a higher risk of having a permanent establishment in Belgium, foreign companies should review potential permanent establishment situations and re-evaluate past assessments. They should also consider the impact of the Multilateral Convention to Implement Tax Treaty Related Measures to Prevent BEPS in this respect (Multilateral Instrument, or MLI; see *Multilateral Convention to Implement Tax Treaty Related Measures to Prevent BEPS*).

Multilateral Convention to Implement Tax Treaty Related Measures to Prevent BEPS. The MLI entered into force for Belgium 1 October 2019 and is effective with respect to taxes withheld at source from 1 January 2020 and with respect to all other taxes levied as of tax periods beginning on or after 1 April 2020.

Mandatory disclosure regime. Belgium transposed EU Directive (2018/822) (DAC6), and the new Belgian Mandatory Disclosure Rules (MDR) legislation is broadly aligned to the requirements of the directive. EU intermediaries and relevant taxpayers must report cross-border arrangements that meet at least one of the hallmarks listed in the directive. The Belgian tax authorities published Frequently Asked Questions with respect to the

interpretation of certain DAC6 requirements and terminology. The reporting obligations were already challenged before the Belgian Constitutional Court because the definition of an intermediary is broad, capturing lawyers and advisers who must maintain professional secrecy. In this respect, a preliminary ruling request was introduced before the European Court of Justice (Case C-694/20).

Tax dispute resolution mechanism. EU Directive 2017/1852 on tax dispute resolution mechanisms in the EU is implemented in Belgian law. More specifically, in addition to the current procedures relating to transfer-pricing disputes and the allocation of profits to permanent establishments, Belgian law provides for a specific procedure for the settlement of disputes between member states arising from interpretational differences regarding double tax treaties when these differences result in double taxation.

Reconstitution reserve. The reconstitution reserve is introduced as a COVID-19 pandemic tax measure and intends to help companies reconstitute their solvency that has suffered due to the COVID-19 pandemic. The reconstitution reserve is introduced as a COVID-19 pandemic tax measure and intends to help companies reconstitute their solvency, which has suffered due to the COVID-19 pandemic. In practice, this reserve would allow companies, during three consecutive tax periods relating to the 2022, 2023 and 2024 tax years (financial years starting on or after 1 January 2021, 1 January 2022 and 1 January 2023), to exempt profits corresponding to the amount of losses they incurred in 2020 (COVID-19-year), under the conditions of maintaining their equity position as well as at least 85% of their existing employment spending. The reserve is subject to the intangibility condition, meaning that the reserve may become taxable on the liquidation of the company or when the reserve is used for distribution.

The measure does not apply to the following:

- Companies performing a capital decrease or a share buyback or paying dividends in the period from 12 March 2020 until the day of filing the tax return relating to a tax year in which a reserve is built up
- Companies making payments to companies located in tax havens (unless supported by valid business reasons and unless they do not exceed EUR100,000) or having share participations in companies located in tax havens
- Companies that benefit from a special tax regime such as cooperative participation companies, companies subject to the special tax regime for shipping companies and real estate investment companies

For each tax year concerned, a special form must be annexed to the annual corporate income tax return.

Expatriate tax regime. For all employments or assignments starting as of 1 January 2022, a new tax regime for foreign executives and researchers entered into force.

Under the new regime, individuals assigned to Belgium (or recruited from abroad) and living in Belgium are considered

Belgian tax residents and are taxable in Belgium on their worldwide income. The new regime is applicable conditionally.

According to the new rules, an employer can reimburse or compensate the employee for recurring additional “costs proper to the employer” (for example, cost of living and housing and home leave) resulting from the assignment or recruitment from abroad. The tax-free character of the reimbursement is limited to 30% of the employee’s gross remuneration (excluding the cost reimbursements itself), limited to a maximum amount of EUR90,000 per year. In addition, some costs can be reimbursed tax free by the employer without any specific cap (for example, moving and relocation costs, costs for furnishing the accommodation in Belgium [up to one month of rent] and certain school fees [from the age of 5]).

The new regime and its benefits will be available for a fixed period of five years, with a possible extension of three years.

F. Treaty withholding tax rates

The rates in the table below reflect the lower of the treaty rate and the rate under domestic tax law on outbound dividends. Belgium provides an exemption from dividend withholding tax for companies located in jurisdictions with which Belgium has entered into a tax treaty. The exemption is subject to the same conditions as those contained in the EU Parent-Subsidiary Directive. However, the treaty must contain an exchange-of-information clause. As a result, certain jurisdictions are excluded.

With respect to taxes withheld at source, from 1 January 2020, the applicability of the Principle Purpose Test (PPT) as embedded in the MLI (see *Multilateral Convention to Implement Tax Treaty Related Measures to Prevent BEPS* in Section E) to individual treaties must be reviewed. In addition, Belgium has elected the optional inclusion of a discretionary relief provision of Section 4 of Article 7 of the MLI when treaty benefits are denied under the PPT.

- (a) Reduced rates apply to outbound dividends if the recipient holds directly or indirectly the level of participation indicated in the treaty. The level of participation is generally 25% of the capital or voting power, unless stated otherwise in a footnote.
- (b) As a consequence of the implementation of the EU Parent-Subsidiary Directive, no withholding tax is due on dividends distributed to a Belgian company or a company, resident of another EU member state or a country with which Belgium has concluded a tax treaty containing an exchange-of-information clause, that owns at least 10% of the shares for an uninterrupted period of one year.
- (c) The lower rate applies conditionally to interest paid on commercial debt claims and to banks.
- (d) The lower rate applies to copyright royalties (excluding royalties with respect to copyrights on films and certain other items).
- (e) A most-favored-nation clause may be applicable.
- (f) The rates are 3% for news items, 5% on copyrights (excluding copyrights on films and certain other items) and 10% on computer software, patents, trademarks, equipment leasing and know-how.
- (g) The minimum holding requirement is 10%.
- (h) The 10% rate applies if the Austrian company owns more than 50% of the capital in the Belgian company.
- (i) The rate is 5% if either of the following circumstances exist:
- The Azerbaijani company owns at least 30% of the capital in the Belgian company and has invested at least USD500,000 in that company.
 - The Azerbaijani company has invested at least USD10 million in the Belgian company.

The rate is 10% if the Azerbaijani company owns at least 10% of the capital in the Belgian company and has invested at least USD75,000 in that company.

- (j) The 0% rate applies to interest on commercial debt claims.
- (k) The lower rate applies to copyright royalties with respect to films and certain other items.
- (l) The tax treaty between Belgium and the former Yugoslavia is applicable.
- (m) The 10% rate applies to copyright royalties with respect to films and certain other items. The 20% rate applies to royalties with respect to trademarks and commercial names. The 15% rate applies to other royalties.
- (n) The lower rate applies conditionally to interest on bank deposits.
- (o) The lower rate applies to royalties with respect to copyrights (excluding copyrights on films and certain other items), computer software, patents and know-how.
- (p) The minimum holding requirement is 10% for an uninterrupted period of 12 months.
- (q) The 5% rate applies to interest on loans granted by banks and insurance companies, and interest on bonds or securities that are regularly and substantially traded on a regulated securities market.
- (r) The rates under the treaty are in principle 5% and 15%, but by application of the most-favored-nation clause, the applicable rate can differ (tax treaties with Australia and Japan).
- (s) The rates under the treaty are in principle 5% and 10%, but by application of the most-favored-nation clause, the applicable rate can be 2% (Chile-Japan tax treaty).
- (t) The rate under the treaty is 10%, but by application of the most-favored-nation clause, the applicable rate can differ (tax treaties between the Czech Republic and the Slovak Republic, and between Austria and Belgium).
- (u) The rate under the treaty is 15%, but by application of the most-favored-nation clause, the applicable rate can differ (China Mainland-Ecuador tax treaty).
- (v) The 25% rate applies to royalties with respect to trademarks.
- (w) The rates under the treaty are 5% (equipment leasing) and 10%, but by application of the most-favored nation clause, the rates can be reduced to 0% for royalties (as defined).
- (x) The lower rate applies to interest on current accounts and on advance payments between banks.
- (y) The 5% rate applies if the beneficial owner is an enterprise of Georgia.
- (z) The 0% rate applies if the recipient is an enterprise. This does not apply to the following:
 - Interest on bonds
 - Interest paid by a company to a company owning at least 25% of the paying company's voting power or shares
- (aa) The 0% rate applies if the Hong Kong company has owned directly at least 25% of the capital in the Belgian company continuously for at least 12 months. The 5% rate applies if the Hong Kong company owns directly at least 10% of the capital in the Belgian company.
- (bb) The rate under the treaty is 20%, but by application of the most-favored-nation clause, the applicable rate can differ.
- (cc) These are the rates under a new treaty between Belgium and Japan, which is effective from 1 January 2020.
 - It has owned directly or indirectly at least 10% of the voting power of the paying company for at least six months ending on the date on which entitlement to the dividends is determined (excluding dividends that are deductible in computing the taxable income of the company paying the dividends in its resident state).
 - It is a qualifying pension fund.

The general withholding tax for interest will be 10%. This rate can be conditionally reduced to 0% (for application of the lower rate, consult the tax treaty). A 0% withholding tax rate will apply to royalties.
- (dd) This rate applies to dividends paid to the Kuwaiti government or to a company that is at least 25%-owned by the Kuwaiti government.
- (ee) The tax treaty between Belgium and the former USSR applies.
- (ff) The rates for royalties under the treaty are 5% for equipment leasing and 10% in all other cases. A most-favored-nation clause may be applicable under which the rate is reduced to 0% (Japan-Latvia tax treaty).
- (gg) The rates for royalties under the treaty are 5% for equipment leasing and 10% in all other cases. A most-favored-nation clause may be applicable under which the rate is reduced to 0% (Japan-Lithuania tax treaty).
- (hh) The minimum holding requirement is 25% or a purchase price of at least EUR6,197,338.

- (ii) The 0% rate applies if the North Macedonian company has owned directly at least 25% of the capital in the Belgian company continuously for at least 12 months. The 5% rate applies in the case of a 10% shareholding.
- (jj) The domestic rate applies, unless the interest is paid by an enterprise engaged in an industrial undertaking. In that case, the rate may not exceed 10%.
- (kk) The domestic rate applies to artistic copyright royalties (including royalties with respect to films and certain other items). For other royalties, the rate may not exceed 10%.
- (ll) The lower rate applies to dividends paid to the following:
- A company that holds at least 10% of the capital of the company paying the dividends for an uninterrupted period of at least 12 months
 - A qualifying pension fund
- (mm) The minimum holding requirement is 25%.
- (nn) The 5% rate applies if the beneficial owner is a pension fund. Conditions apply. The 0% rate applies if the beneficial owner is either of the following:
- A company that holds directly at least 10% of the capital of the company paying the dividends for an uninterrupted period of at least 12 months
 - A Norwegian political subdivision or local authority, the Central Bank of Norway, the Norwegian Government Pension Fund Global, a statutory body or any institution wholly or mainly owned by the government of Norway, or a political subdivision or local authority thereof
- (oo) The 5% rate applies to royalties on patents and industrial and scientific know-how. The 10% rate applies to royalties on trademarks and commercial know-how.
- (pp) The general withholding tax for interest is 10%. This rate can be conditionally reduced to 0% (for application of the lower rate, consult the tax treaty).
- (qq) The rate is 0% royalties on copyrights (excluding royalties with respect to films and certain other items.). The rate is 15% with respect to royalties on know-how.
- (rr) The 0% rate applies to interest on government bonds or on guaranteed or insured loans or credits.
- (ss) The 0% rate applies if the beneficial owner is a company that satisfies either of the following conditions:
- It has owned directly or indirectly at least 10% of the voting power of the paying company for at least six months ending on the date on which entitlement to the dividends is determined (excluding dividends that are deductible in computing the taxable income of the company paying the dividends in its resident state).
 - It is a qualifying pension fund.
- (tt) The 0% rate applies to dividends paid to the following:
- A Polish company that owns directly at least 10% of the capital of the Belgian company for a for an uninterrupted period of at least 24 months
 - A qualifying pension fund
- (uu) The 0% rate applies to interest on loans granted by banking enterprises, excluding loans represented by bearer securities, and to interest paid to qualifying pension funds.
- (vv) The 0% rate applies if the Rwanda company has owned directly at least 25% of the capital in the Belgian company continuously for at least 12 months and does not enjoy the benefit of special measures to promote economic development.
- (ww) The lower rate applies if both of the following conditions are satisfied:
- The Rwanda company holds directly or indirectly at least 35% of the capital in the Belgian company.
 - The amount of the loan(s) granted by the Rwanda company does not exceed the amount of the equity of the Belgian company.
- (xx) The 0% rate applies if the San Marino company has owned directly at least 25% of the capital in the Belgian company continuously for at least 12 months. The 5% rate applies if the San Marino company has owned directly at least 10% but less than 25% of the capital in the Belgian company continuously for at least 12 months.
- (yy) The 0% rate applies if the company receiving the dividends holds shares representing directly at least 25% of the capital of the company paying the dividends for an uninterrupted period of at least 12 months. The 5% rate applies if the company receiving the dividends holds directly at least 10% of the capital of the company paying the dividends.
- (zz) In the case of equipment leasing, the 5% rate is levied on 60% of the gross amount of the royalties.

- (aaa) The 0% rate applies to dividends paid to the following:
- A Swiss company that owns directly at least 10% of the capital of the Belgian company for an uninterrupted period of at least 12 months
 - A pension fund
- (bbb) The 0% rate applies to interest on loans and credits granted by a company and to interest paid to a pension fund.
- (ccc) The 10% rate applies to interest paid to a financial institution.
- (ddd) Under the protocol to the treaty, the rate is 5% dividends paid to Turkish companies provided that the dividends received by a Belgian company from a Turkish company are exempt, which is currently the case (the general participation exemption). Otherwise, the treaty rate is 15% if the Turkish company owns directly at least 10% of the capital of the Belgian company and 20% in other cases.
- (eee) The minimum holding requirement is 20%.
- (fff) The higher rate applies to copyright royalties (including royalties with respect to copyrights on films and certain other items).
- (ggg) The 0% rate applies to payments to financial institutions and public bodies.
- (hhh) The higher rate applies to dividends paid out of income derived directly or indirectly from immovable property by an investment vehicle that distributes most of this income annually and whose income from such immovable property is exempted from tax.
- (iii) The lower rate applies to dividends paid to the following:
- A company that holds at least 10% of the capital of the company paying the dividends for an uninterrupted period of at least 12 months
 - A pension scheme (conditionally)
- (jjj) The 0% rate applies to interest paid on loans or credits granted by an enterprise to another enterprise and to interest paid to pension funds.
- (kkk) The 0% rate applies if the United States company owns at least 80% of the voting power in the Belgian company for a 12-month period ending on the date on which the dividends are declared. The 5% rate applies if the United States company owns directly at least 10% of the voting power in the Belgian company.
- (lll) The 15% rate applies to interest on profit-sharing bonds.
- (mmm) The 0% rate applies to interest paid to pension funds in the context of administering or monitoring pension schemes.
- (nnn) The 5% rate applies if the Vietnamese company owns directly or indirectly at least 50% of the capital in the Belgian company. The 10% rate applies if the Vietnamese company owns directly or indirectly at least 25%, but less than 50%, of the capital of the in the Belgian company.
- (ooo) The 5% rate applies if the beneficial owner is a pension fund. Conditions apply.
- (ppp) The lower rate applies if a company in Pakistan is engaged in an industrial undertaking and pays dividends to a Belgian company of which it owns not less than 20% of the voting shares.
- (qqq) Consult the tax treaty for more information.

A. At a glance

Corporate Income Tax Rate (%)	0
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	0
Withholding Tax (%)	0

B. Taxes on corporate income and gains

Bermuda does not impose income, withholding or capital gains taxes.

C. Fees and other taxes

Annual fee. An annual government fee, based on the assessable capital, is imposed on companies. The following is a schedule of the fees for exempted companies (see Section D).

Capital of company		Annual fee BMD
Exceeding BMD	Not exceeding BMD	
0	12,000	2,095
12,000	120,000	4,275
120,000	1,200,000	6,590
1,200,000	12,000,000	8,780
12,000,000	100,000,000	10,980
100,000,000	500,000,000	19,605
500,000,000	—	32,676

Certain types of entities are not subject to the annual fee described above. These entities are required to pay the following annual fees.

Entity	Annual fee (BMD)
Overseas (Permit) company whose principal business is	
Finance, insurance or operation of an open-end mutual fund	4,335
Any other business	25,000

Entity	Annual fee (BMD)
Overseas (Permit) company with a physical presence in Bermuda	2,095
Overseas (Permit) company that does not have a physical presence in Bermuda whose principal business falls within one of the specified categories	2,095
Unit trust management company	3,050
Exempted and overseas partnerships	2,350
Segregated accounts companies	295

Payroll tax. Payroll tax is imposed on all employers on the remuneration paid in their business. Taxable remuneration equals the sum of wages, salaries and benefits paid in cash or in kind to employees for services rendered during the tax period.

For payroll tax compliance purposes, the fiscal year in Bermuda runs from 1 April through 31 March.

The Payroll Tax Amendment Act 2017 took effect on 1 April 2017. It increased the tax cap on gross earnings from BMD750,000 to BMD900,000, effective from 1 April 2017. It also changed the structure of the payroll tax into the following two separate portions:

- Employer portion
- Employee portion

These two portions must be calculated separately and reported by employers on the quarterly payroll tax returns. The sum of the two portions is the total payroll tax payable.

The employers remain responsible for the payment of both portions. However, they have the option of deducting the employee portion from employee remuneration in full or in part.

The employers are responsible for calculating the full employee portion regardless of whether they deduct it from the employees.

The following are the payroll tax rates for the employer portion, which are based on gross annual remuneration:

- Annual payroll greater than BMD1 million: 10.25%
- Annual payroll from BMD500,001 to BMD1 million: 9%
- Annual payroll from BMD200,000 to BMD500,000: 7%
- Annual payroll less than BMD200,000: 1.75%

Effective from 1 April 2017, the employee portion of payroll tax is a separate amount and must be calculated separately from the employer portion.

Although as noted above, employers have the option to deduct the employee portion of payroll tax from employee remuneration, the responsibility to pay the full amount of tax (employer and employee portions) to the Office of the Tax Commissioner still rests with the employers.

Effective from 1 April 2020, the employee portion is calculated using the following marginal tax rate structure:

- On the first BMD48,000 of annual payroll: 2%
- On the next BMD48,000: 8.5%
- On the next BMD139,000: 9%
- Thereafter: 9.5%

Items exempt from the payroll tax base include employers' contributions to social insurance, the Hospital Insurance Plan, approved retirement plans, hospital and health schemes, life insurance schemes, and workers' compensation schemes.

Social security. All employers and employees must contribute to the national insurance scheme. The social insurance contribution rate is BMD71.84 per employee per week (based on a 52-week year). The cost is typically shared equally between the employee and the employer. As a result, BMD179.60 is generally deducted from each employee's monthly paycheck in a five-week month and BMD143.68 is deducted from each employee's monthly paycheck in a four-week month. This amount, together with the employer's matching contribution, is remitted to the Bermuda Social Insurance Department.

Incorporation fees. The Bermuda Monetary Authority charge for an application to register a company is BMD305. The government fee for registering a memorandum of association is BMD90.

Financial Services Tax. Effective from 1 April 2017, Financial Services Tax (FST) is imposed on the following financial services providers:

- Banks: 0.005% on consolidated gross assets at the end of a tax period
- Domestic insurers: 2.5% of gross premiums written in a tax period, excluding premiums relating solely to health insurance
- Money service businesses: 1% of aggregated income and outgoing money transmission volume in a tax period

For purposes of the FST, the tax period is each period of three calendar months beginning with the months of April, May and June 2017.

Every financial services provider subject to FST must within 30 days after the end of each tax period submit to the Office of the Tax Commissioner a return specifying the consolidated gross assets, gross premiums or aggregated income, and outgoing money transmission volume and pay the FST due with respect to that tax period.

General Services Tax. Under a proposal, a General Services Tax (GST) would be levied on turnover from the provision of most services by service providers to the public. It is proposed that the GST would be levied at a rate of 5%. This proposed tax would not be implemented until 1 April 2019, at the earliest. Notable exceptions to the GST would be in the sectors of banking, insurance and health care. Small service providers would also be exempt from GST.

D. Stamp duty

Stamp duty is charged on various legal instruments, including those detailed below.

Conveyance or transfer on sale of land or property. The following are the rates of stamp duty for the sale of Bermuda land or property:

- On the first BMD100,000 of the amount or value, or any part thereof: 2%

- On the next BMD400,000 of the amount or value, or any part thereof: 3%
- On the next BMD500,000 of the amount or value, or any part thereof: 4%
- On the next BMD500,000 of the amount or value or any part thereof: 6%
- Amount in excess of BMD1,500,000: 7%

For non-Bermuda property, the rate is 1%.

Lease or agreement for lease. The following are the amounts of stamp duty for a term lease:

- Term of up to three years: 1% of the aggregate rent
- Term of more than three years: 1% of the aggregate rent payable for the first three years of the lease, plus 0.5% of the aggregate rent payable for any additional period beyond three years

E. Miscellaneous matters

Types of companies. The limited liability company is the most common form of business entity in Bermuda. Limited liability companies may be local, exempted or permit, as described below.

Local companies. Local companies are required to have at least 60% of their issued share capital beneficially owned and controlled by Bermudians. Because this type of company is usually formed for the benefit of residents of Bermuda, the local companies may transact business worldwide or in Bermuda only.

Exempted companies. An exempted company is the most common form used by international businesses to transact business from Bermuda. Exempted companies are exempted from the requirement imposed on local companies that at least 60% of the equity be owned and controlled by Bermudians, as provided for by the Companies Act of 1981. In general, exempted companies may not compete with local companies in the Bermuda market nor own real estate in Bermuda. However, they may carry on business outside Bermuda or with other exempted undertakings in Bermuda. Examples of exempted companies include investment holding companies, trading companies, mutual fund companies, insurance companies and foreign sales corporations.

Permit overseas companies. Permit overseas companies are companies incorporated in jurisdictions other than Bermuda, but have a permit to transact business from Bermuda. Permits are obtained through a license granted by the Ministry of Finance. An example of a permit overseas company is a ship-owning company that is incorporated and has ships registered in another country, but by permit conducts business from Bermuda.

Exempted Undertakings Tax Protection Act, 1966. Under the Exempted Undertakings Tax Protection Act, 1966, as amended, all exempted undertakings in Bermuda, such as exempted and permit companies, partnerships and unit trusts, may apply for an undertaking by the government that taxation introduced in Bermuda will not apply to the exempted company until 28 March 2016. Under a recent amendment to this act, the assurance of tax-neutrality is extended from 28 March 2016 until 31 March

2035 if proper application is made with the Registrar of Companies and if a fee of BMD160 is paid.

Foreign-exchange controls. Exempted companies and permit companies are designated as nonresident for exchange control purposes. The nonresident designation allows these entities to operate free of exchange control regulations and enables them, without reference to the Bermuda Monetary Authority, to make payments of dividends, distribute capital, open and maintain foreign bank accounts, maintain bank accounts in any currency and purchase securities. However, the issuance and transfer of shares and the change of beneficial ownership of shares in a Bermuda exempted company must be approved by the Bermuda Monetary Authority. The remittance and repatriation of funds by exempted companies and permit companies are not subject to exchange controls. Similarly, trust settlements on behalf of nonresidents are generally free from exchange controls. Under the Exchange Control Act 1972 and the Exchange Control Regulations 1973, certain exchange controls apply to Bermuda residents and to local companies. No capital or exchange control regulations apply to non-residents.

The Bermuda dollar (BMD) is pegged to the US dollar at an equal exchange rate, and the two currencies are used interchangeably in Bermuda.

The Bermuda-dollar accounts of residents and local companies are subject to a 1% tax on the purchase of a foreign currency.

Transfer of shares. Although the consent of the Bermuda Monetary Authority is ordinarily required for the issue or transfer of any share or security, blanket permission for share issues and transfers may be granted, such as for publicly traded securities.

A. At a glance

Corporate Income Tax Rate (%)	25
Capital Gains Tax Rate (%)	25 (a)
Branch Tax Rate (%)	25
Withholding Tax (%) (b)	
Dividends	12.5
Interest	12.5
Royalties	12.5
Professional Services	12.5 (c)
Branch Remittance Tax	12.5
Net Operating Losses (Years)	
Carryback	0
Carryforward	3/5 (d)

(a) See Section B.

(b) A 12.5% withholding tax is imposed on all payments of Bolivian-source income to foreign beneficiaries (see Section B).

(c) This withholding tax applies to services fees received for specified professional services, including consulting, expert services, and technical, commercial or other advice.

- (d) A Bolivian-source loss incurred in a year may be carried forward to offset taxable income derived in the following three years. Loss carryforwards are not subject to inflation adjustment. For the oil and mining production sector and new projects with a minimum capital investment of BOB1 million, the carryforward period is five years. On the reorganization of companies, the carryforward period is four years.

B. Taxes on corporate income and gains

Corporate income tax. Bolivian companies and foreign companies with permanent establishments in Bolivia are subject to income tax on their Bolivian-source income.

Rates of corporate tax. The standard rate of corporate income tax is 25%.

Mining operations. Act No. 535 (New Mining Code), dated 28 May 2014, confirms the additional rate of corporate income tax of 12.5% (previously established by Act. No. 3787, dated 24 November 2007). This additional rate applies to additional taxable profits resulting from favorable price conditions for minerals and metals. The following are significant aspects of this additional rate:

- The 12.5% tax rate applies if mineral and metal quotations are equal or higher than the base quotations established by law.
- The 12.5% tax does not apply to taxable profits attributable to sales that have lower quotations than the base quotations.

The tax referred to above must be paid on a monthly basis. The date of payment depends on the last digit of the Tax Identification Number. The monthly payments are considered advance payments of the tax determined at the end of the year. If the total of the advance payments is less than the amount determined at the end of the year, this difference must be paid. If the total of the advance payments exceeds the amount determined at the end of the year, the difference can be claimed as a tax credit against the standard corporate income tax for the year or the additional amount of corporate income tax for the following year.

Surtax. A 25% surtax is imposed on net income derived from mining, reduced by the following two special deductions:

- A percentage of up to 33%, which varies according to the type of business, of accumulated investment in exploration, development, assets that qualify for environmental incentives and environmental protection, which is directly related to mining extractive activities performed after the 1991 tax year.
- 45% of net income derived from minerals and/or metals extractive activities. This deduction is limited to BOB250 million (USD35.9 million). This limit was established by Supreme Decree No. 24780 and is adjusted by inflation on an annual basis.

For mineral-producing companies, the net income for an extraction operation is the value of the commercialized product in the mining market.

Hydrocarbon Direct Tax. The Hydrocarbon Direct Tax is imposed at a rate of 32% on hydrocarbon production in oil wells located in Bolivia. The Hydrocarbon Direct Tax is calculated and paid in the same manner as the 18% royal prerogatives, which apply to

all extractive fields. The 18% royal prerogatives consist of the following:

- A regional royal prerogative equal to 11% of the gross hydrocarbon production from oil wells, which is paid to the region where the hydrocarbons are produced
- A national royal prerogative equal to 1% of the gross hydrocarbon production
- An amount equal to 6% of the gross hydrocarbon production in oil wells, which is paid to the National Treasury after the deduction of the necessary amounts for the management of the contracts

Capital gains. In general, capital gains are taxed in Bolivia.

Administration. The law specifies the following tax year-ends, which vary according to the type of business.

Business	Tax year-end
Industry (including oil and gas)	31 March
Agriculture and agribusiness	30 June
Mining	30 September
All other businesses	31 December

Annual tax returns and financial statements must be filed with the Internal Revenue Service (IRS) and income tax paid within 120 days after the end of the tax year. Advance payments are not required except for mining companies, which must make payments of income tax when they export minerals or metals.

Debts owed to and credits due from the state are adjusted to reflect changes in the Unidad de Fomento de Vivienda (UFV), which is the inflation index established by the Central Bank of Bolivia.

Fines and interest charges apply to late tax payments and other non-compliance with tax obligations. Under Act No. 812, the interest is calculated based on the age of the debt. The following are the interest rates:

- 4% until the last day of the fourth year
- 6% until the last day of the seventh year
- 10% until the last day of the eighth year

The tax code provides that fraud exists if a tax debt exceeds an amount equal to 10,000 UFV, calculated as of the date of determination of the fraud.

Under Act No. 812, dated 30 June 2016, the statute of limitation for tax audits is eight years.

The statute of limitation period may be increased by two years if the entity does not comply with the obligation to register, registers under a different tax regime, commits tax crimes or carries out commercial and/or financial operations with companies located in countries with low or null taxation (there is a list of countries and regions that is periodically updated).

Withholding taxes. Local entities, including Bolivian permanent establishments of foreign companies, that pay Bolivian-source income to foreign beneficiaries must withhold 12.5% of the amounts paid. For this purpose, Bolivian-source income includes

all dividends, interest payments, branch remittances, royalties, professional service fees (includes consulting, expert services, and technical, commercial or other advice), commissions and other income. In general, Bolivian-source income is revenue that is derived from assets located, placed or economically used in Bolivia, or from activities developed in Bolivia. This rule applies regardless of the nationality, address, or residence of the recipient of the income or the parties involved in the activities, or where the relevant contract is executed.

For dividends paid by Bolivian companies, the withholding tax is payable when the dividends are actually paid, remitted or credited. However, branch profits are deemed remitted when the corporate income tax return is due (120 days after the end of the tax year; see *Administration*).

Dividends. The 12.5% withholding tax on payments to foreign beneficiaries applies to dividends paid by Bolivian companies (see *Withholding taxes*). Dividends received from Bolivian companies subject to Bolivian corporate income tax are not taxed.

Foreign tax relief. The Bolivian tax code does not provide foreign tax relief.

C. Determination of taxable income

General. Taxable income is the revenue reported in the companies' financial statements prepared in accordance with generally accepted accounting principles in Bolivia, subject to certain adjustments for tax purposes. In general, all expenses necessary to generate income and to maintain the existence of the company (for example, contributions to regulatory-supervisory organizations, contributions for social benefits and certain national and municipal taxes) are deductible. Donations and other gratuitous transfers to nonprofit organizations that are exempt from income tax may be deducted up to a maximum limit of 10% of taxable income derived in the year of the donation or gratuitous transfer.

Certain expenses are not deductible, including the following:

- Personal withdrawals by owners or partners
- Corporate income tax
- Bonuses and other benefits that are not paid to employees within the time period in which the annual form must be presented for the year of payment
- Interest paid to related parties, to the extent it exceeds, for foreign loans, the London Interbank Offered Rate, plus 3%, or, for local loans, the official lending rate. In addition, interest paid to related parties may not exceed 30% of the interest paid to third parties

Royalties paid with respect to mining activities are creditable or deductible, depending on the price of the minerals and subject to certain limits established by law.

Revenue and expenses are reflected in the year they are accrued.

Documentation for deduction of expenses. To deduct expenses in an amount of BOB50,000 or greater, the taxpayer must have

payment supports issued by a financial intermediation entity regulated by the Authority of Supervision of the Financial System (Autoridad de Supervisión del Sistema Financiero, or ASFI). These documents must have the following information:

- Financial institution (issuer) business name
- Transaction or operation number
- Transaction date
- Transaction amount

In June 2015, the IRS issued Normative Resolution No. 10-0017-15, which states that payment supports of transactions equal or greater than BOB50,000 (the Banking Report) must be prepared on an annual basis and must be sent to the IRS between the fifth and ninth day of the following February; the due date depends on the last digit of the taxpayer's Tax Identification Number.

Inventories. Inventories are valued at the lower of market value or replacement cost.

Provisions. Provisions and reserves are not deductible for tax purposes, with the exception of the following:

- Technical reserves in insurance companies
- Mandatory provisions for financial entities
- Severance provisions
- Bad debt provisions
- Provisions for environmental restoration

To claim deductions, certain conditions must be satisfied.

Depreciation and amortization. Fixed assets are generally depreciated using the straight-line method at rates specified by law. The following are some of the annual depreciation rates.

Assets	Rate (%)
Buildings	2.5
Machinery, equipment and installations	12.5
Vehicles	20
Furniture and office equipment	10
Computer equipment	25

Trademarks and similar intangible assets may be amortized in five years if they are valued using the purchase price.

Depreciation charges resulting from changes in value based on professional appraisals carried out after 31 December 1994 are not deductible for tax purposes.

Groups of companies. Groups of companies may not file consolidated returns in Bolivia.

Relief for losses. A Bolivian-source loss incurred in a year may be carried forward to offset taxable income derived in the following three years. Loss carryforwards are not subject to inflation adjustment. For the oil and mining production sector and new projects with a minimum capital investment of BOB1 million, the carry-forward period is five years. On the reorganization of companies, the carryforward period is four years.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax (VAT), on all sales of goods and services and on imports; VAT on capital goods imported by companies in the agriculture and cattle raising industries and non-extractive industries that will be used to produce goods for export may be deferred for up to 3 years if an advance payment of 10% is made	13%
Transactions Tax, on gross revenue; corporate income tax from the preceding year may be credited against Transactions Tax; sales of a limited liability partnership's capital quota are exempt	3%
Real estate tax, imposed annually on the assigned value of real property and vehicles	Various
Excise tax, on the production or importation of specified goods	
Beer	BOB3.96 per liter plus 1%
Wine	BOB3.63 per liter plus 5%
Tobacco products; rate applied on the price	50%
Blond tobacco cigarettes	BOB147.50 per 1,000 units
Black tobacco cigarettes	BOB78.52 per 1,000 units
Cigar	BOB147.50 per 1,000 units
Vehicles; rate applied on the price	5% to 50%
Electric motor vehicles	0%
Special Tax on Hydrocarbons and Derived Products; as of December 2021; the maximum rate is BOB8.10; prices that include the tax rate	
Vehicular natural gas	BOB1.66 per cubic meter
Petroleum liquid gas	BOB2.25 per kilogram
Special gasoline	BOB3.74 per liter
Premium gasoline	BOB4.79 per liter
Aviation gasoline	BOB4.57 per liter
Kerosene	BOB2.72 per liter
National jet fuel	BOB2.77 per liter
Fuel oil	BOB3.72 per liter
Mining royalty; imposed on gross revenue; rates vary according to the type of mineral	Various
Financial Transactions Tax (ITF); imposed on the amounts of debits and credits to savings and checking accounts; ITF is not deductible for purposes of any other tax; the ITF Act was effective from	

Nature of tax	Rate
13 April 2012 for a period of three years; however, in July 2015, the Bolivian government issued Act No. 713, which extended the term of the ITF until 31 December 2018 and introduced increasing rates for each year; certain items are exempt including transactions regarding savings accounts in US dollars if the available balance is not greater than USD2,000, savings accounts in local currency or in UFV, securities transactions and payments resulting from foreign remittances; tax is withheld by banks and other financial institutions and other entities carrying out transactions in payment system; rates under Act No. 713	
2015	0.15%
2016	0.20%
2017	0.25%
2018	0.30%
2019 to 2023 (established by Act No. 1135)	0.30%
(It is expected that at the end of December 2023, the Bolivian government will again extend the term of the ITF and the rate could change.)	
Additional financial aliquot (tax rate) for corporate income tax; applicable to financial entities, financial leasing companies, general deposit warehouses, investment fund management companies, brokerage firms and securitization companies, regulated by the ASFI, insurance and reinsurance companies, regulated by the Autoridad de Fiscalización y Control de Pensiones y Seguros (APS); tax applicable if return on equity exceeds 6%; tax is neither deductible nor able to be offset	25%
Social security contributions	
Employer	
Health care; on monthly gross revenue per employee	10%
Housing fund; on monthly gross revenue per employee	2%
Professional risk insurance; on monthly gross revenue per employee	1.71%
Solidarity Fund	3%
Solidarity Fund for mining entities	2%
Employees	
Retirement fund	10%
Common risk insurance	1.71%
Solidarity Fund (fixed contribution)	0.5%
Solidarity Fund (variable and cumulative contribution)	
Difference between the total salary and BOB35,000	10%
Difference between the total salary and BOB25,000	5%
Difference between the total salary and BOB13,000	1%

Nature of tax	Rate
Christmas bonus (Aguinaldo); general paid between 1 December and 20 December each year; if employment is less than a year, the bonus is reduced pro rata	One month's salary
Second Christmas bonus (second Aguinaldo); must be paid if Bolivian gross domestic product increases by more than 4.5%	One month's salary
Termination compensation; bonus for termination of employment; amount depends on length of employment and whether the employee was fired or resigned	Various

E. Miscellaneous matters

Foreign-exchange controls. The Bolivian currency is the boliviano (BOB).

No restrictions are imposed on foreign-exchange transactions, including the repatriation of capital and the remittance of dividends and royalties abroad. A system of free-floating exchange rates exists in Bolivia. No special registration requirements apply to foreign investment.

The current exchange rate is BOB6.96 = USD1.

Transfer pricing. In July 2014, Act No. 549 introduced a transfer-pricing regime in Bolivia, effective from the 2015 fiscal year. Under this regime, commercial and/or financial transactions performed between related parties must be valued using the arm's-length principle. The transactions must be valued as if they were performed between unrelated parties in comparable markets.

The following methods may be used to value transactions between related parties:

- Comparable uncontrolled price
- Resale price
- Cost-plus
- Profit-split
- Transactional net margin
- Notorious price in transparent markets (applicable to the import or export of commodities)

For this purpose, the IRS may verify if the transactions are valued according to the above methods and make any adjustments or revaluation if the agreed value, regardless of the adopted legal form, does not conform to the economic reality or causes lower taxation in Bolivia.

In April 2015, the IRS issued Normative Resolution No. 10-008-15, which imposes the following obligations:

- If annual operations with related parties are greater than BOB15 million (USD2,155,172), a transfer-pricing study and Form No. 601 must be delivered to the IRS.
- If annual operations with related parties are between BOB7,500,000 (USD1,077,586) and BOB15 million (USD2,155,172), only Form No. 601 must be delivered to the IRS.

- If annual operations with related parties are less than BOB7,500,000 (USD1,077,586), the company must retain information to demonstrate that the operations were made at market values.

In January 2017, the IRS issued Normative Resolution No. 101700000001, which established a tax-haven list that included 76 “low tax countries and regions.” This list was updated in March 2018 by Normative Resolution No. 1018000000006, and then included 82 “low tax countries and regions.” In February 2019, Normative Resolution No. 1019000000002 added Curaçao to the tax-haven list of “low tax countries and regions.” Parties from these jurisdictions must be considered related parties if any commercial or financial transaction occurs with them.

In Bolivia, the interquartile formula is not applied to calculate the range of value differences. Normative Resolution No. 10-0008-15 established certain formulas to calculate the ranges.

Reorganizations. Profits arising from company reorganizations, which are mergers, divisions or transformations, are not subject to corporate income tax. Regulations on reorganizations are expected to be issued in the near future.

F. Tax treaties

Bolivia has entered into tax treaties with Argentina, France, Germany, Spain, Sweden, the United Kingdom and the United States (income tax with respect to income derived from the international operation of ships and aircraft). It has also signed the Andean Pact, which includes a tax treaty, with Colombia, Ecuador and Peru. However, the government is reviewing these treaties to determine whether they accomplish new government policies. As a result, these treaties may be ratified or revoked.

On December 2017, Normative Resolution No. 10170000030 implemented a procedure and requirements for applying tax-treaty benefits. The Tax Residence Certificate of the foreign company must be obtained, and the local company must report transactions subject to any benefit to the tax authority through the applicable web page.

Bonaire, Sint Eustatius and Saba (BES-Islands; extraordinary overseas municipalities of the Netherlands)

On 10 October 2010, the country Netherlands Antilles, which consisted of five island territories in the Caribbean Sea (Bonaire, Curaçao, Saba, Sint Eustatius and Sint Maarten), was dissolved. On the dissolution of the Netherlands Antilles, the islands of Bonaire, Sint Eustatius and Saba (BES-Islands) became part of the Netherlands as extraordinary overseas municipalities. Curaçao and Sint Maarten have both become autonomous countries within the Kingdom of the Netherlands. A new tax regime applies to the BES-Islands, effective from 1 January 2011. The following chapter provides information on taxation in the BES-Islands only. Chapters on Curaçao and Sint Maarten appear in this guide.

A. At a glance

Profit Tax	– (a)
Capital Gains Tax	– (a)
Real Estate Tax Rate (%)	10/17.5 (b)
Yield Tax Rate (%)	5 (c)

- (a) The BES-Islands do not have a profit tax or capital gains tax.
- (b) The profit is fixed at 4% of the fair market value of the real estate. The standard rate of the real estate tax is 17.5% of the fixed profit. Consequently, in principle, the effective annual tax rate is 0.7% of the fair market value of the real estate. A reduced rate of 10% applies to hotels, unless the hotel is owned by an individual. Consequently, the effective annual tax rate with respect to hotels is 0.4%. In addition, a 30% surtax is levied over the real estate tax due. Real estate tax applies if an entity using the real estate, by virtue of ownership, possession or a limited right, is deemed to be resident in the BES-Islands. If the entity is deemed to be resident in the Netherlands, the Dutch corporate income tax and the Dutch dividend withholding tax apply instead. For further details, see Section B.
- (c) This tax applies if the entity from which distributions of profits are derived is deemed to be resident in the BES-Islands. If the entity is deemed to be resident in the Netherlands, the Dutch corporate income tax and the Dutch dividend withholding tax apply instead. For further details, see Section B.

B. Taxes on corporate income and gains

New BES-Islands tax regime. Effective from 1 January 2011, a new tax regime applies in the BES-Islands. This tax regime does not include a profit tax. A yield tax and a real estate tax have been introduced in the BES-Islands to replace the profit tax.

Residency fiction. The yield tax and real estate tax mentioned above are not automatically applicable as a result of a residency fiction. In principle, all entities established on the BES-Islands are deemed to be established in the Netherlands for tax purposes and accordingly subject to Dutch corporate income tax (up to 25%) and Dutch dividend withholding tax (in principle, 15%). For details on the Dutch taxes, see the chapter on the Netherlands in this guide.

However, on request, entities that have sufficient nexus with the BES-Islands may be subject to the fiscal system of the BES-Islands. In such case, no Dutch corporate income tax applies, but the yield tax and real estate tax apply. Entities are deemed to have sufficient nexus with the BES-Islands if any of the following circumstances exist:

- The entity is a foundation or trust that is a resident of the BES-Islands.
- The entity has been admitted to a special trade and service depot.
- On request, the entity has obtained a ruling from the tax authorities that, for tax purposes, the entity is deemed to be a resident of the BES-Islands. A request for such a ruling should be made with the tax authorities within six months after the beginning of the calendar year.

The ruling referred to above is issued in the following cases:

- The assets of the entity in the BES-Islands consist of less than 50% of mobile assets, including, among other portfolio investments, participations and cash.
- An entity that does not meet the requirement above can still obtain a ruling if it employs at least three residents of the BES-Islands that manage the entity's assets and if it has at its

disposal business premises in the BES-Islands for a period of at least 24 months with a value of at least USD50,000.

- The entity is a holding company that holds at least 95% of the shares in an entity that is admitted to a special trade and service depot or already has obtained such a ruling.
- The entity has a small business with a turnover of no more than USD80,000, the assets of the company in general do not exceed USD200,000, and the company does not carry out financial services, insurance or trust (fiduciary) activities.

Yield tax. The yield tax is levied on distributions (in whatever form) of profits by entities resident in the BES-Islands. The rate of the yield tax is 5%. The entity making the distribution acts as withholding agent. Interest and royalty payments are not subject to the yield tax. The yield tax is not levied on the remittances of profits by branches to their foreign head offices.

Real estate tax. The real estate tax is levied on gains derived from real estate located in the BES-Islands. The real estate tax is levied on a taxpayer (person or entity) that, at the beginning of the year, has the use of real estate by virtue of ownership, possession or a limited right.

The profit is fixed at 4% of the fair market value of the real estate. The rate of the real estate tax is 17.5% of the fixed profit. Consequently, the effective annual tax rate is 0.7% of the fair market value of the real estate. A reduced rate of 10% applies to hotels, unless the hotel is owned by an individual. Consequently, the effective annual tax rate with respect to hotels is 0.4%. In addition, a 30% surtax is levied over the real estate tax due. The value of the real estate is determined by the Tax Inspector. The value is set at the beginning of the period for which the value is determined and is in principle determined for five consecutive calendar years.

Real estate tax is not levied on owner-occupied homes, real estate included in the business assets of a privately run enterprise (that is not operating in the form of an entity) and real estate with a value of less than USD70,000, if the person having use of the real estate is a resident of the BES-Islands.

In addition, entities that are deemed to be residents of the Netherlands (see *Residency fiction*) are exempt from real estate tax.

Administration

Real estate tax. The real estate tax is levied over a period of one calendar year. The Tax Inspector imposes a tax assessment, and the filing of a tax return is not required.

Yield tax. The withholding agent must withhold the yield tax at the time the profit distribution is put at the disposal of the recipient. The withholding agent must file a quarterly tax return and remit the yield tax due within 15 days after the end of the quarter. The tax return does not need to be filed for periods in which no distributions take place.

C. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
General expenditure tax; levied on the delivery of manufactured goods in the BES-Islands by a manufacturer as part of its business, on the rendering of services in the BES-Islands by an entrepreneur as part of its business and on imports of goods	
Bonaire	
Delivery of goods (different rates apply to passenger cars)	8
Insurance	7
Other taxable activities	6
St. Eustatius and Saba	
Delivery of goods (different rates apply to passenger cars)	6
Insurance	5
Other taxable activities	4
Real estate transfer tax	5
Customs duties	0

D. Tax treaties

The Dutch treaty network does not apply to entities deemed to be residents of the BES-Islands. However, the Dutch standard treaty does not exclude entities deemed to be residents of the Netherlands (by the residency fiction) from the application of the treaty.

Provisions for double tax relief are included in the Tax Regulation for the Netherlands. Under a measure in the Tax Regulation for the Netherlands, on request, dividend distributions by a qualifying Dutch subsidiary to its BES-Islands parent company can be exempt from Dutch dividend withholding tax.

A. At a glance

Corporate Income Tax Rate (%)	22 (a)
Capital Gains Tax Rate (%)	22 (b)
Branch Tax Rate (%)	30
Withholding Tax (%)	
Dividends	10
Interest	15
Royalties	15
Management and Technical Fees	15
Payments to Entertainers	10
Payments under Construction Contracts	3 (c)
Brokerage Commission	10 (d)
Rent Paid for Use of Buildings and Land	5 (d)
Purchases of Livestock	4 (e)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) For approved manufacturing companies, the rate is 15%.
 (b) See Section B.
 (c) This tax is imposed on gross receipts derived from construction contracts. This tax is an advance payment that may be offset against the actual tax due.
 (d) This tax is an advance payment that may be offset against the actual tax due.
 (e) This withholding tax applies to payments for purchases of livestock for slaughter or for feeding for slaughter.

B. Taxes on corporate income and gains

Corporate income tax. All companies operating in Botswana are subject to tax on earnings in Botswana.

Rates of corporate tax. The corporate tax rate for companies other than manufacturing companies is 22%. Approved manufacturing companies are subject to tax at a reduced tax rate of 15%.

The tax rate for a branch is 30%. Botswana does not impose a branch remittance tax.

International Financial Services Centre (IFSC) companies (as defined) are taxed at a rate of 15%.

Accredited Innovation Hub business taxable income is taxed at 15%.

Special Economic Zone accredited businesses are taxed at 5% for the first 10 years and 10% thereafter.

Diamond-mining companies are taxed in accordance with tax agreements entered into by the companies with the government. Other mining companies are taxed at a rate of 22% or at a rate determined by a formula, whichever is higher. The following is the formula:

$$x = \frac{70 - \frac{1,500}{x}}{\frac{\text{Taxable income}}{\text{Gross income}}} \times 100$$

Capital gains. The capital gains tax applies to gains on the sale of capital assets of a business carried on in Botswana and on the sale of corporate shares and debentures of private companies.

For computing gains on sales of immovable property acquired before 1 July 1982, the cost of acquisition and improvements is first increased by a 10% rate, compounded for each complete 12-month period from the date of acquisition to 1 July 1982. It is then indexed for inflation from 1 July 1982 to the date of sale. For computing gains on immovable property acquired on or after 1 July 1982, the cost of acquisition and improvements is indexed for inflation during the period of ownership.

Only 75% of the gain derived from the sale of shares is subject to capital gains tax. Gains on the sale of shares held for at least one year that are listed on the Botswana Stock Exchange are exempt from capital gains tax if the shares are actually traded on the Botswana Stock Exchange or if the company has released for trading 49% or more of its equity shares on the Botswana Stock Exchange. Sales of shares in IFSC companies are exempt from capital gains tax.

Taxable capital gains are subject to tax at a rate of 22% for resident companies and 30% for nonresident companies.

Administration. The tax year ends on 30 June. Companies are taxed on the profits reported in their latest completed accounting period.

Under an advance payment of tax and self-assessment system, companies must estimate their tax in advance and pay the estimated

tax in four equal quarterly installments. The first payment is due three months after the beginning of the accounting period and the subsequent payments are due at the end of every subsequent three-month period. Tax returns must be filed, and any balance of tax due must be paid, within four months of the end of the tax year, or in the case of a company with an accounting period that is different from the tax year, within four months from the end of such accounting period. Underpayments and late payments are subject to interest at a rate of 1.5% per month or part of a month (compounded).

Dividends. A withholding tax of 10% is imposed on dividends paid to residents and nonresidents. It is a final tax.

Dividends distributed by investment or similar companies are exempt from tax if they are paid out of dividends received that suffered withholding tax.

C. Determination of trading income

General. Taxable income is net income reported in the financial statements, modified by certain provisions of the tax law. Expenses are deductible to the extent incurred in producing assessable income.

The rules for determining taxable income for an IFSC company are different from those for a normal company.

Collective-investment undertakings (as defined) are subject to tax on their undistributed income only.

Interest deductibility. Interest expenses claimed as deductions are limited to 30% of the earnings before interest, tax, depreciation and amortization. The excess is claimable over 10 years for mining companies and 3 years for the non-mining entities. However, the limitation does not apply to companies whose main business is banking or insurance or are variable rate loan stock entities.

Inventories. For tax purposes, inventory is valued at the lower of cost or net realizable value.

Provisions. Specific identifiable provisions are allowable for tax purposes; general provisions are not allowed.

Depreciation. Depreciation is computed using the straight-line method. Official rates vary according to the type of asset. The following are some of the official straight-line rates.

Asset	Rate (%)
Industrial buildings	2.5*
Commercial buildings	2.5
Office equipment	10
Motor vehicles	25
Plant and machinery	15 to 25

* An initial allowance of 25% is also granted.

Capital allowances are subject to recapture on the sale of an asset to the extent that the sales proceeds exceed the tax value after depreciation.

Mining companies may deduct 100% of their mining capital expenditure (as defined) in the year in which the expenditure is incurred.

Relief for losses. In general, tax losses may be carried forward for five years. Mining and prospecting losses may be carried forward indefinitely.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on almost all supplies of goods and services consumed in Botswana	14
Capital transfer tax, paid by the recipient on all gratuitous receipts of property, corporate shares and inheritances, less allowable deductions	12.5

E. Miscellaneous matters

Foreign-exchange controls. No foreign-exchange controls are imposed in Botswana. However, certain forms must be completed for statistical purposes.

Transfer pricing. Botswana introduced transfer-pricing legislation in December 2018 that is effective from 1 July 2019. The Regulations, which are based on the Organisation for Economic Co-operation and Development (OECD) Guidelines, are cited in the legislation as a relevant source of interpretation.

F. Treaty withholding tax rates

	Dividends	Interest	Royalties	Management and technical fees
	%	%	%	%
Barbados	5/12 (a)	10	10	10 (f)
China (Mainland)	5	7.5	7.5	15
Eswatini	10/15 (e)	10	10	10
France	5/12 (a)	10	10	7.5
India	7.5/10 (c)	10	10	10
Ireland	5	7.5	5/7.5 (h)	—
Lesotho	10/15 (e)	10	10	10
Malawi	5/8 (i)	10	12	10
Mauritius	5/10 (b)	12	12.5	15
Mozambique	10/12 (j)	10	10	10
Namibia	10 (c)	10	10	15
Russian Federation	5/10 (b)	10	10	10
Seychelles	5/10 (b)	7.5	10	10
South Africa	10/15 (e)	10	10	10
Sweden	15 (d)	15 (d)	15 (d)	15
United Kingdom	5/12 (a)	10	10	7.5
Zambia	5/7 (g)	10	10	10
Zimbabwe	5/10 (b)	10	10	10
Non-treaty jurisdictions	10	15	15	15

- (a) The 5% rate applies if the recipient is a company that holds at least 25% of the share capital of the payer. The 12% rate applies in all other cases. (Although the treaty provides for a 12% rate in all other cases, the domestic rate of 10% applies because it is lower than the treaty rate of 12%.)
- (b) The 5% rate applies if the recipient holds at least 25% of the shares of the payer. A 10% rate applies in all other cases.
- (c) The 7.5% rate applies if the recipient is a company that holds at least 25% of the capital of the payer of the dividends. The 10% rate applies in all other cases.
- (d) If a lower rate is negotiated with any other state in a future treaty, such rate also applies under the Sweden treaty.
- (e) The 10% rate applies if the recipient is a company that holds at least 25% of the capital of the payer of the dividends. The 15% rate applies in all other cases. (Although the treaty provides for a 15% rate in all other cases, the domestic rate of 10% applies because it is lower than the treaty rate of 15%.)
- (f) If a lower rate is negotiated with any other state in a future treaty, such rate also applies under the Barbados treaty.
- (g) The 5% rate applies if the recipient is a company that holds at least 25% of the capital of the payer of the dividends. The 7% rate applies in all other cases.
- (h) The 5% rate applies for royalties paid with respect to the use of, or the right to use, industrial, commercial or scientific equipment. The 7.5% rate applies in all other cases.
- (i) The 5% rate applies if the recipient is a company that holds at least 25% of the capital of the payer of the dividends. The 8% rate applies in all other cases.
- (j) The 10% rate applies if the recipient is a company that holds at least 25% of the share capital of the payer. The 12% rate applies in all other cases. (Although the treaty provides for a 12% rate in all other cases, the domestic rate of 10% applies because it is lower than the treaty rate of 12%.)

A possible tax reform is currently being discussed in Brazil, which could affect the dividend withholding tax rate and the corporate income tax rate. For details, see Section B.

A. At a glance

Corporate Income Tax Rate (%)	15 (a)
Capital Gains Tax Rate (%)	15 to 25 (a)(b)
Branch Tax Rate (%)	15 (a)
Withholding Tax (%)	
Dividends	0
Interest	15 (c)(d)
Royalties from Patents, Know-how, etc.	15 (c)(d)(e)
Services	15 (c)(d)(e)(f)(g)(h)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	Unlimited (i)

- (a) A 10% surtax is also levied (see Section B). As detailed in Section B, a Social Contribution Tax (SCT) is also imposed at the general rate of 9%. In view of the surtax and the SCT, the corporate income tax (CIT) rate in Brazil is generally considered to be 34%.
- (b) Under Law 13,259/16, which applies to capital gains derived by Brazilian individuals, effective from 2017, the capital gains tax rate is increased from a 15% flat rate to a progressive rate system with rates ranging from 15% to 22.5%. According to Normative Instruction 1732/17, such increased rates also apply to capital gains derived by nonresident companies and individuals. A 25% rate applies to nonresidents located in low-tax jurisdictions.
- (c) The withholding tax is imposed on payments, credits, deliveries or remittances abroad, and on the use of amounts in Brazil for the benefit of non-residents.
- (d) The withholding tax rate may increase to 25% if the recipient is resident in a prohibited list jurisdiction, which means a jurisdiction that taxes income at a rate lower than 20% (or 17% if the jurisdiction or regime complies with the international standards of tax transparency) and/or the jurisdiction's legislation does not allow access to information on the shareholders of legal entities or on the effective beneficiaries of income of nonresidents.
- (e) A 10% Contribution for Intervention in the Economic Domain (Contribuição de Intervenção no Domínio Econômico, or CIDE) is imposed on royalties and on technical and administrative service payments. CIDE is payable by the Brazilian payer, and it is not a withholding tax.
- (f) The withholding tax rate may increase to 25%, depending on the type of service rendered.

- (g) Based on interpretations of tax treaties by the Brazilian tax authorities, it may be possible to claim that withholding income tax is not due on payments for technical services to Austria, Finland, France, Japan and Sweden.
- (h) Imports of services generally also trigger the Social Integration Program (PIS) tax and the Social Security Financing Contribution (COFINS), at a combined rate of 9.25%, as well as the Municipal Tax on Services (ISS), which is imposed at rates ranging from 2% to 5%, depending on the municipality and the service.
- (i) For details, see Section C.

B. Taxes on corporate income and gains

Corporate income tax. Brazilian resident companies are subject to CIT on their worldwide income. Companies resident in Brazil are those incorporated under the Brazilian laws and managed in Brazil.

Foreign branches, agencies or representative offices of Brazilian companies are also subject to Brazilian tax on their income earned overseas. In general, foreign-source losses may not offset Brazilian-source income. A foreign tax credit is available (see *Foreign tax relief*).

In addition to CIT, SCT is imposed on worldwide income (see *Rates of tax*).

Rates of tax

Corporate income tax. The basic rate of CIT is 15%, increased by a surtax of 10% on annual taxable profits exceeding BRL240,000 (approximately USD44,100).

Exemption from, or reduction of, CIT is granted to businesses in certain underdeveloped areas.

Social Contribution Tax. SCT is levied at a general rate of 9%. For financial institutions, private insurance companies and capitalization companies, the SCT rate is 15%. For all banks, the rate is 20%.

SCT is not deductible in calculating CIT. The tax bases for SCT and CIT are basically the same. The total effective tax rate on corporate profits is 34% (25% CIT [including the 10% surtax] plus 9% SCT).

Losses for SCT purposes are subject to the same tax rules applicable to losses for CIT purposes.

At the time of writing, there were certain tax reform bills being discussed in Brazil. The most advanced bill (approved by the House of Deputies but still pending approval by the Senate) proposes that the CIT be reduced from 34% to 26% (potentially 27%, depending on other factors under discussion). The likelihood of this bill being approved is uncertain.

Capital gains. Capital gains are treated as ordinary income for Brazilian resident companies and, accordingly, are subject to CIT and SCT.

Capital gains derived by nonresidents on shares and other assets located in Brazil are subject to capital gains tax at progressive rates ranging from 15% to 22.5%.

Such increased rates result from Law 13,259/16, which refers only to the capital gains tax rate for Brazilian individuals but is generally applied to nonresident companies and individuals. In Normative Instruction 1732/17, the Brazilian tax authorities confirmed their understanding that the progressive rates also apply to nonresidents.

A 25% rate applies to nonresidents located in prohibited list jurisdictions.

Administration

Filing and payment. The fiscal year is the calendar year. In general, companies must file returns in an electronic format by the last working day of July of the following year. Extensions to file returns are generally not available.

Effective from the 2014 calendar year, income tax returns were replaced by a new electronic filing called Escrituração Contábil-Fiscal (ECF), which must be submitted to by the end of July of the following calendar year.

Companies may elect to pay CIT and SCT on an annual or quarterly basis. In general, this election may not be changed during the calendar year. Companies that elect the annual basis must make advance monthly payments of CIT and SCT. The advance payments are equal to the income tax applicable to either the company's actual taxable income or the company's income calculated in accordance with an estimated method, whichever is lower.

For monthly payments of CIT that are calculated based on the estimated method, the tax base is generally 8% of the company's gross income. Different percentages apply to specific industries, such as the following:

- 16% for financial institutions and transportation services
- 32% for services in general
- 1.6% for gas distribution

For the purpose of computing the advance income tax payments, the applicable rate is 15%. An additional 10% rate is applied to monthly taxable income in excess of BRL20,000 (approximately USD3,676).

The tax base for monthly estimated payments of SCT is generally 12% of gross income plus capital gains and other income, including financial income. This percentage is increased to 32% for service companies. SCT payments must be made at the same time as the income tax payments. The applicable tax rate is generally 9%.

The difference between the tax shown on the annual tax return and the amounts paid in advance must be paid by the last working day of March following the end of the fiscal year. If the amounts paid in advance exceed the tax shown on the annual tax return, the excess may be used to offset the tax due in a month following the fiscal year-end. A refund may be requested from the tax authorities within five years of the tax payment.

Alternatively, companies may pay tax quarterly based on actual quarterly income, computed under the accrual method.

Interest and penalties for late payments. The late payment of taxes is generally subject to the following:

- Interest calculated at the rate applicable to the Special Liquidation and Custody System (Sistema Especial de Liquidação e Custódia, or SELIC), which is published each month by the government
- A daily fine of 0.33% of the tax due, up to a maximum penalty of 20% of the tax due (excluding interest)

In general, assessments resulting from a tax audit are subject to a penalty of 75% on the tax due. The penalty increases to 150% in the case of fraud. These penalties can be reduced by 50% if the payment is made by the last day of the appeal period (other penalty reductions are available during the appeal process). In such case, the effective penalty is 37.5%.

Dividends. Withholding tax is not imposed on dividends paid to residents and nonresidents out of profits generated on or after 1 January 1996.

For earnings recognized in 2014, the excess of dividends paid based on the statutory financial statements over the dividends determined under a “tax balance sheet” is subject to tax. A 15% withholding tax applies to such excess dividends paid to nonresidents. Dividends generated before 2014 are not subject to tax even if they are in excess of the dividends determined under the “tax balance sheet.” Dividends generated after 2014 are not subject to tax because the concept of “tax balance sheet” has ceased to exist.

Brazilian companies are allowed to pay a “deductible dividend,” which is called interest on net equity (INE), to their shareholders. INE is calculated by applying a benchmark interest rate called Taxa de Juros de Longo Prazo (TJLP) to the net equity of the Brazilian company, followed by certain adjustments provided by the tax law. INE is treated as deductible interest for tax purposes, which is subject to a 15% withholding tax when paid to residents and nonresidents. A 25% rate applies to nonresidents located in prohibited list jurisdictions. Payments to Brazilian residents are fully taxable and are also subject to the PIS tax and the COFINS. (For details regarding the PIS tax and COFINS, see Section D.)

At the time of writing, there were certain tax reform bills being discussed in Brazil. The most advanced bill (approved by the House of Deputies but still pending approval by the Senate) proposes to impose a 15% withholding tax on dividends and to eliminate INE. The likelihood of this bill being approved is uncertain.

Foreign tax relief. A foreign tax credit is available to Brazilian companies on income taxes paid overseas. In general, the foreign tax credit is limited to the amount of Brazilian CIT and SCT on the foreign-source income. Compliance with certain formalities is required to support the foreign tax credit.

C. Determination of taxable income

General. CIT and SCT are due on a company’s taxable income, which is the net book income, as adjusted by the tax law. In

general, operating expenses are deductible if the following conditions are satisfied: they are necessary, usual and common to the company's activity; they are actually incurred; and they are supported by proper documentation. However, the following expenses, among others, are not deductible:

- Expenses related to fixed assets, including financial and operating lease payments, depreciation and amortization, if the assets are not directly used in the production or commercialization of products and services.
- Fringe benefits furnished to shareholders and officers if the beneficiaries are not identified and individualized (a 35% [effective rate of 53.84%] withholding tax is imposed on such payments). Neither the fringe benefits nor the withholding tax is deductible.
- Donations in general, gifts and other non-compulsory payments.

Simplified methods are available for calculating the tax liability applicable to small businesses.

Inventories. Companies that have an integrated cost system must value inventory for tax purposes at the lower of cost or market value, using either the average cost or the first-in, first-out (FIFO) method. Direct cost and last-in, first-out (LIFO) methods cannot be used. In general, companies that do not have an integrated cost system must value finished products at 70% of the highest sales price of the product sold in the tax period. Work-in-process must be valued at either 80% of the finished product cost or 1.5 times the highest cost of the material content. Supermarkets and similar enterprises that sell a large number of goods may use a specific system for inventory valuation based on periodic and simplified counting.

Provisions. In general, the only deductible provisions are those for vacation pay and the 13th month salary (annual bonus).

Depreciation. Fixed assets may be depreciated using the straight-line method at rates provided by the Brazilian tax authorities. The following are some of the annual depreciation rates:

- Real estate assets: 4%
- Machinery and equipment: 10%
- Vehicles: 20%
- Computer hardware and software: 20%

Companies that operate two work shifts per day may depreciate machinery and equipment at 1.5 times the normal rate. If the company operates three shifts, it may double the normal rate.

For accounting purposes, companies may calculate depreciation at different rates (taking into account International Financial Reporting Standards [IFRS] criteria, which can affect, in addition to depreciation rates, inventory and other items).

Tax losses. Tax losses may be carried forward indefinitely, but can only offset up to 30% of the company's taxable income for a tax period. No carryback is allowed.

Tax losses may be jeopardized if a company experiences a change in business activity and ownership control between the period in which losses were generated and the period in which losses

would otherwise be used to offset taxable income. In general, non-operating tax losses can be offset only against non-operating gains if certain conditions are met. In a corporate restructuring involving a merger, the tax losses of the merged company must be forgone.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
State value-added tax (ICMS)	0 to 25
General rate for intrastate transactions	17/20
General rate for interstate transactions	12
General rate for interstate resale transactions involving imported goods	4
Transactions in which taxpayers located in the South or Southeast (except for Espírito Santo State) regions that remit goods and services taxable under ICMS to taxpayers resident in the states of the North, Northeast or Centre-West regions or Espírito Santo State	7
Exports	Exempt
Federal value-added tax (IPI); the top rate applies to luxury or superfluous goods, such as alcoholic beverages and cigarettes	0 to 330
Tax on Financial Operations (IOF); imposed on credit transactions, foreign-exchange transactions, insurance operations and financial investments	
Loan operations	
Daily rate (maximum annual rate of 1.5%) for corporations	0.0041
Daily rate (maximum annual rate of 3%) for individuals	0.0082
Additional rate	0.38
Foreign-exchange transactions	0.38 to 6.38
Insurance operations	0.38 to 7.38
Financial investments	Various
Social Integration Program (PIS) tax; levied on gross income at a rate of 1.65%; the tax is a non-cumulative (VAT-type) tax for certain taxpayers; under the non-cumulative regime, some companies are subject to the "single-phase" regime, with the manufacturer being responsible for the contribution collection, usually at a higher rate (2.1% for pharmaceuticals; 2.2% cosmetics and 2.3% auto parts); certain companies, including local financial institutions and companies that manufacture goods in the Manaus Free Trade Zone, are subject to the cumulative regime and make the contribution at a 0.65% rate; the tax is also levied on imports of goods at a rate of 2.1% and on services at a rate of 1.65%, in most cases; however, for certain imported goods, different rates apply; in certain cases, the rate is reduced to 0%	0/0.65/1.65/2.1 to 3.52

Nature of tax	Rate (%)
Social Security Financing Contribution (COFINS); levied on gross income at a rate of 7.6%; the tax is a non-cumulative (VAT-type) tax for certain taxpayers; under the non-cumulative regime, some companies are subject to the "single-phase" regime, with the manufacturer being responsible for the contribution collection, usually at a higher rate (9.9% for pharmaceuticals; 10.3% for cosmetics and 10.8% for auto parts); certain companies, including local financial institutions and companies that manufacture goods in the Manaus Free Trade Zone, are subject to the cumulative regime and make the contribution at a 3% rate; the tax is also levied on imports of goods at a rate of 9.65% and on services at a rate of 7.6%, in most cases; however, for certain imported goods, different rates apply; in certain cases, the rate is reduced to 0%	0/3/7.6/9.65 to 16.48 2 to 5
Municipal Tax on Services (ISS)	2 to 5
Social security contributions (INSS), on monthly salary; paid by	Approximately 28.8
Employer Employee; rate varies depending on amount of remuneration (amount of employee contribution may not exceed BRL642.34 [approximately USD155] a month)	8 to 11
Severance Pay Indemnity Fund (FGTS), on monthly salary	8
Withholding tax on local payments of professional service fees (creditable by the recipient against income tax)	Up to 27.5
Contribution for development of cinematographic and video phonographic works (Condecine); in general, tax rate applied to amounts paid to producers, distributors and intermediaries abroad for the exploitation of cinematographic and video phonographic works	11

E. Miscellaneous matters

Foreign investment. As a general rule, all foreign investments, such as equity or debt investments, must be registered with the Central Bank of Brazil (BACEN) to assure the payment of dividends, principal and interest, or the repatriation of capital. Nonresidents holding assets and rights in Brazil, such as equity investments, portfolio investments and debt investments, must be registered with the Brazilian tax authorities. On registration, the nonresidents obtain a tax identification number (CNPJ for entities or CPF for individuals). Failure to comply with the foreign-exchange regulations and associated requirements is subject to significant penalties. This particularly applies to evasion, false statements and private offsetting transactions.

Contracts for the supply of technology and technical services with the transfer of technology, and for the use of trademarks and patents between residents and nonresidents must be registered with the National Institute of Industrial Property (INPI). To allow Brazilian companies to pay and deduct the royalties up to the amounts prescribed by law, it must also be registered under the Financial Operations Registration – ROF module of the Electronic Declaratory Registration (RDE) of BACEN's electronic system (SISBACEN).

Transfer pricing. Brazilian transfer-pricing rules apply only to cross-border transactions entered into between Brazilian companies and foreign related parties. A transaction entered into between a Brazilian company and a resident of a low-tax jurisdiction or a resident in a jurisdiction with a privileged tax regime is also subject to the transfer-pricing rules, even if the parties are not related. In general, Brazilian transfer-pricing rules do not follow the transfer-pricing guidelines outlined in the Organisation for Economic Co-operation and Development (OECD) Model Convention and the US rules. For example, Brazilian transfer-pricing rules adopt fixed-profit margins on transactions carried out between related parties. Safe harbor measures may be applied to Brazilian exports.

On 29 January 2019, the Brazilian tax authorities published Normative Instruction (NI) 1.870/19 to clarify the application of the Brazilian transfer-pricing rules. NI 1.870/19 applies from the 2019 calendar year. The following are summaries of the relevant changes introduced by the NI 1.870/19:

- Transfer-pricing methods for commodities: goods that are simply quoted in one of the commodities exchanges listed in Appendix II of the Normative Instruction 1.312/12 are no longer considered commodities for Brazilian transfer-pricing purposes. The NI 1.870/19 also clarified that taxpayers must perform a transfer-pricing analysis on a transaction basis. Taxpayers are not allowed to group all the transactions that occurred on the same day to calculate a single actual intercompany price to be tested under the Quotation Price on Imports (PCI) method and the Quotation Price on Exports (PCEX) method.
- Discrepancy margin: NI 1.870/19 clarified that the difference between the actual intercompany price and the comparable price must be calculated by considering the weighted average benchmark price differing from the actual price up to 5% for transactions carried out before 31 December 2018. However, from 1 January 2019, NI 1.870/19 provides that taxpayers must use the weighted average of the comparable price as the denominator for the calculation of the discrepancy margin.
- General rule for imports: NI 1.870/19 introduces two significant changes to the provisions applicable to imports. The comparable prices under the Comparable Independent Price (PIC) method and the Production Cost Plus Profit (CPL) method must be calculated exclusively in the calendar year in which the good, service or right was imported. On the other hand, the Resale Minus Profit (PRL) method calculation must be performed in the calendar year in which the imported good, service or right is sold.

- PIC method: NI 1.870/19 makes clear that a PIC comparable must not be calculated by considering transactions involving parties (related or unrelated) located in countries considered to be a tax haven or privileged tax jurisdiction.
- PRL method: To define the actual price for imports, taxpayers must consider the International Commercial Terms. Furthermore, export transactions must not be considered in calculating the PRL comparable.

Low-tax jurisdiction and privileged tax regime. The Brazilian low-tax jurisdiction (LTJ) list (prohibited list) and privileged tax regime (PTR) list (gray list) are contained in regulations issued by the Brazilian tax authorities. New definitions of LTJ and PTR were introduced in 2015 and in 2016. In 2016, Ireland was added to the prohibited list, and Austria holding companies without substantial economic activity were added to the gray list. In addition, new rules on the meaning of substantial economic activity were issued in 2016. As of 2018, Costa Rica, Madeira and Singapore were removed from the prohibited list; however, specific regimes in all three jurisdictions were added to the gray list. In 2019, Brazil removed San Marino from the prohibited list. There have been no changes since then.

Thin-capitalization. Under thin-capitalization rules, interest expense arising from a financial arrangement with a related party is deductible only if the related Brazilian borrower does not exceed a debt-to-net equity ratio of 2:1. In addition, interest expense arising from a financing arrangement executed with a party established in a LTJ or benefiting from a PTR is deductible only if the Brazilian borrower does not have a debt-to-net equity ratio of greater than 0.3:1.

Controlled foreign companies. Profits realized by a controlled foreign company (CFC) of a Brazilian company are subject to income taxation on 31 December of each year regardless of any actual distribution by the CFC. Law 12,973/2014 introduced a new CFC regime. Under the new regime, qualifying CFCs are taxed on an entity-by-entity basis (that is, individually regardless of the design of the corporate structure outside of Brazil). If certain conditions are met, a tax consolidation of CFCs can be performed at the level of the Brazilian shareholder, through which the accounting losses of a qualifying CFC may offset taxable income of another CFC.

The earnings of CFC entities whose business is connected to oil and gas activities are exempt from tax in Brazil. Foreign tax credits of CFCs can be used against Brazilian corporate income tax, limited to the Brazilian corporate income tax due on CFC income. Under regulations issued by the Brazilian tax authorities (Normative Instruction 1,520/2014), the Brazilian shareholder can elect which non-Brazilian entities are subject to tax consolidation. Qualifying non-CFC entities are subject to tax in Brazil on an actual or deemed dividend distribution to a Brazilian shareholder. A deemed credit of 9% of the CFC income subject to tax in Brazil is available for qualifying entities.

The Brazilian corporate income tax on CFC income may be subject to installment payments over a period of eight years (12.5% payment per year), but the deferred tax liability is subject

to adjustment based on London Interbank Offered Rate plus the US dollar currency exchange variation.

Digital bookkeeping. The Public System of Digital Bookkeeping (Sistema Público de Escrituração Digital, or SPED) is a unified electronic storage of accounting and tax bookkeeping. It is intended to replace bookkeeping prepared on paper and to unify the preparation, storage, and certification requirements of the Board of Trade and of the tax authorities at the municipal, state and federal levels. Most companies are now required to comply with the SPED.

International Financial Reporting Standards. Law 11,638/07 introduced changes to the Brazilian Corporate Law (Law 6,404/76) with respect to the preparation of financial statements for corporations as well as for large companies, regardless of whether they are organized as corporations. This law represents a major step in the process toward harmonization of Brazilian GAAP with IFRS. Under this law, which took effect on 1 January 2008, large companies must prepare their financial statements under new Brazilian GAAP, which is consistent with IFRS principles.

This harmonization process was not intended to generate any tax consequences in Brazil. Consequently, the Brazilian IRS issued guidance on achieving such tax neutrality (called the Transitional Tax Regime). Effective from 2015, Law 12,973/2014 revokes the Transitional Tax Regime by realigning the income tax rules with the accounting rules (Brazilian GAAP), unless otherwise prescribed by the tax law. The early adoption of Law 12,973/2014 for the 2014 calendar year was optional.

Special tax benefits. The Brazilian government has issued laws providing tax incentives to increase investments in Brazil. The following are the main programs:

- Law 11,196/2005: tax benefits for investments in infrastructure and research and development (R&D)
- Special Tax Regime for the Renewal and Expansion of Port Structures (Regime Tributário para Incentivo à Modernização e à Ampliação da Estrutura Portuária, or REPORTO): suspension of IPI, PIS, COFINS and import tax for investments in ports, warehousing and surveillance and monitoring systems
- RECOF-SPED: a special customs regime that enables companies to import or acquire in the local market with suspended taxes (Import Duty [II], IPI, PIS, COFINS, Marine Fee (AFRMM) and ICMS (only the states of São Paulo [SP], Rio de Janeiro [RJ] and Parana [PR]) goods that will be used in the industrial process for export destination or sales in the local market

F. Treaty withholding tax rates

The rates reflect the lower of the treaty rate and the rate under domestic tax law.

	Dividends %	Interest %	Royalties (k) %

Venezuela	0	15 (d)	15
Non-treaty jurisdictions	0	15 (j)	15 (j)

- (a) The withholding rate is 10% for interest on certain bank loans with a minimum term of seven years.
- (b) The withholding rate is 10% for royalties for the use of, or the right to use, copyrights of literary, artistic or scientific works, excluding cinematographic films and films or tapes for television or radio broadcasting, produced by a resident of a contracting state.
- (c) The withholding rate is 10% for royalties for the use of, or the right to use, copyrights of literary, artistic or scientific works or for the use of, or the right to use, cinematographic films or television or radio films or tapes produced by a resident of a contracting state.
- (d) Interest paid to the government of the other contracting state, a political subdivision thereof or an agency (including a financial institution) wholly owned by that government or political subdivision is exempt from tax.
- (e) The withholding rate is 15% for royalties with respect to copyrights of cinematographic films and films or tapes for radio or television broadcasting.
- (f) The withholding rate is 10% for interest on certain long-term (at least 10 years) bank loans.
- (g) The withholding rate is 10% for interest on certain long-term (at least eight years) bank loans.
- (h) Brazil is honoring the Czechoslovakia treaty with respect to the Czech and Slovak Republics.
- (i) This rate applies to royalties related to the use of, or the right to use, trademarks. For other royalties, including payments for technical assistance and technical services, the rate is 10%.
- (j) The withholding tax rate may increase to 25% if the recipient is resident in a low-tax jurisdiction or benefits from a privileged tax regime (see Section E).
- (k) The tax treaties do not apply to the CIDE (see footnote [d] to Section A).
- (l) The withholding tax rate is 25% for royalties paid for the use of trademarks.
- (m) The withholding tax rate is 20% for royalties paid for the use of trademarks.

- (n) Argentina and Brazil signed a protocol amending the treaty, which entered into force on 1 January 2019. The protocol provides for new maximum rates for dividends (10% and 15%), interest (15%) and royalties (10% and 15%), as well as other changes. The previous wording of the treaty did not provide a maximum rate for royalties, but provided that the domestic rate applied.
- (o) The withholding rate is 15% for royalties for the use of, or the right to use, trademarks.
- (p) The withholding tax rate applicable to royalties was reduced as a result of the most favorable clause contained in the protocol to the treaty. This clause provides for a rate reduction if a future treaty establishes a lower rate. Because of the treaty between Brazil and Israel, the withholding tax rate on royalties was reduced to 10% (except for trademark royalties).
- (q) Interest paid from Turkey to the Brazilian government, Central Bank of Brazil or the National Economic and Social Development Bank (BNDES) are exempt from Turkish tax. Interest paid from Brazil to the Turkish government, the Central Bank of the Republic of Turkey (Türkiye Cumhuriyet Merkez Bankası) or the Turkish Bank of Exportation and Importation (Eximbank) are exempt from Brazilian tax.
- (r) The protocols of these treaties do not expressly classify payments for technical services as royalties. Based on recent interpretations of the Brazilian tax authorities, it may be possible to claim that technical services fees paid to beneficiaries located in these countries are not subject to withholding income tax.
- (s) Brazil's Superior Administrative Court has ruled that under the Brazil-Austria double tax treaty, Brazilian CFC rules do not violate the OECD model tax treaty.
- (t) Brazil has published Decree 75.106/74/2019, which approves a protocol to the Brazil-Denmark double tax treaty. The protocol changes the previous methodology used to prevent double taxation (that is, exemption to credit methodology).
- (u) Brazil's Superior Administrative Court has ruled that the Brazil-Netherlands double tax treaty does not prevent the application of Brazilian CFC rules.
- (v) The withholding rate is 10% if the beneficial owner is a bank and the loan has been granted for a minimum of five years for the financing of the purchase of equipment or of investment projects.

In 2018, Brazil signed a double tax treaty with Singapore for which the internal approval measures are still pending. Therefore, the treaty is not yet in force.

In 2019, an agreement between Brazil and the United Kingdom for the exchange of information entered into force.

A. At a glance

Corporate Income Tax Rate (%)	0
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	0
Withholding Tax (%)	0

B. Taxes on corporate income and gains

The BVI Business Companies Act, 2004 (BVI BC Act) entered into force on 1 January 2005. Under the BVI BC Act, companies incorporated under the British Virgin Islands (BVI) Companies Act are exempt from all taxes provided under the BVI Income Tax Ordinance. The BVI BC Act is essentially an amalgamation of the International Business Companies (IBC) Act and the BVI Companies Act, which contained a regime under which all domestic companies incorporated in the BVI were governed. In addition, on 1 January 2007, all International Business Companies on the companies register in the BVI were automatically reregistered under the BVI BC Act and, consequently, the IBC Act was repealed in full.

All Business Companies (BCs) are statutorily exempt from BVI taxes. However, such companies must pay an annual license fee (see Section C). In general, a BC may not transact business with persons resident in the BVI or own interests in real property located in the BVI unless it obtains the relevant trade license from the BVI government. In addition, a BC may not carry on business as a bank, trust company, insurance company or reinsurance company without a license from the BVI Financial Services Commission.

C. Other taxes

Payroll tax. Payroll tax is imposed on every employer and self-employed person who carries on business in the BVI. The tax rates are 10% for Class 1 employers and 14% for Class 2 employers. The tax is applied to the remuneration paid or deemed to be

paid, 8% of which may be reclaimed and paid by the employees or deemed employees. Class 1 employers are those meeting the following conditions:

- Payroll during the financial year that does not exceed USD150,000
- Annual turnover that does not exceed USD300,000
- A total of seven or less employees and deemed employees

All employers not falling within the Class 1 category are deemed to be Class 2 employers.

The first USD10,000 of actual remuneration paid to an employee, deemed employee or self-employed person is exempt from tax.

Social tax. Social tax requires both the employer and employee contribute to the mandatory National Insurance Scheme. The total contribution rate is 8.5%, of which 4.5% is paid by the employer and the remaining 4% can be passed on to the employees. These contributions are based on the amount of weekly wages up to a maximum of USD865 or monthly wages up to a maximum of USD3,750. The maximum insurable earnings is USD44,200.

National health insurance. BVI implemented a new national health insurance regime, effective from 1 January 2016. This regime requires employers and employees to pay 3.75% each on the employees' monthly income. The maximum income on which national health insurance premiums is assessed is two times the upper wage limit for social security contributions, which currently equals USD7,500 per month. Consequently, the maximum amount payable monthly by employees and employers is USD281.25 each. Employees are also required to contribute an additional 3.75% on behalf of an unemployed spouse.

D. Fees and stamp duties

The following table summarizes the fees and stamp duties payable in the BVI.

Nature of fees and duties	Rate
Annual license fees	
BCs incorporated under the BVI BC Act, with authorized share capital of	
Up to USD50,000 or foreign-currency equivalent or authorized to issue up to 50,000 shares	USD450
Exceeding USD50,000 or foreign-currency equivalent or authorized to issue more than 50,000 shares	USD1,200
Restricted Purpose Company	USD5,000
General banking license	USD250,000
Restricted Class I banking license	USD150,000
Restricted Class II banking license	USD150,000
Insurance company license	Up to USD10,000
Class I trust license	USD16,000
Class II trust license	USD14,000
Class III trust license	USD12,000
Class IV trust license	USD7,000
Class V trust license	USD5,000
Restricted Class II trust license	USD1,000 to USD3,000
Restricted Class III trust license	USD500

Nature of fees and duties	Rate
Stamp duties, on various instruments and transfers of ownership	
Real estate, on higher of consideration or market value	
Sales to belongers (individuals born in the BVI or those granted BVI status and BVI companies that are at least 67% owned by such persons and do not have any non-belongers as directors)	4%
Sales to non-belongers	12%
Other instruments and transfers	0.2% to 5%

E. Miscellaneous matters

Foreign-exchange controls. The BVI does not have any foreign-exchange control regulations.

European Union Savings Tax Directive. As a result of the BVI's status as a British Overseas Territory, it is required to comply with the requirements of the European Union (EU) Savings Tax Directive (the Directive). Banks and other paying agents in the BVI must exchange certain information pertaining to EU residents.

Under the Mutual Legal Assistance (Tax Matters) (Automatic Exchange of Information) Order, 2011, effective from 1 January 2012, the former 35% withholding option under the Directive is no longer applicable because the BVI transitioned to the automatic exchange-of-information option instead of the withholding-tax option under the Directive. This order provides that BVI-based paying agents are no longer subject to the withholding tax option as a means of complying with the Directive. Instead, BVI institutions must disclose the minimum information to the BVI Inland Revenue, which in turn complies with the information-exchange policy under the Directive.

On 24 March 2014, the EU revised the Directive to strengthen the existing rules on exchange of information on savings income. The principal changes to the Directive are the following:

- A look-through approach based on “customer due diligence,” which prevents individuals from circumventing the Directive by using an interposed legal person located in certain non-EU countries
- Enhanced rules aimed at preventing individuals from circumventing the Directive by using an interposed legal person located in an EU member state
- Extending the scope of the Directive to include financial products that have similar characteristics to debt claims
- Inclusion of income obtained through undertakings for collective investment in transferable securities authorized by Directive 85/611/EEC (UCITS)

F. Tax treaties

Although the United Kingdom's double tax treaties with Japan and Switzerland have been extended to the BVI, these treaties are not used in practice. The BVI has not entered into any other tax treaties. However, the BVI has entered into tax information

exchange agreements with various jurisdictions, including Canada, China Mainland, Japan and the United States, and with 16 European countries, including France, Germany, Ireland, the Netherlands and the United Kingdom.

On 30 June 2014, the BVI and the U.S. Treasury signed and released a Model 1 Intergovernmental Agreement for the implementation of the US Foreign Account Tax Compliance Act (FATCA).

All BVI institutions must comply with FATCA regulations. In addition, if required, they must report to the BVI International Tax Authority via the authority's Automatic Exchange of Information website.

The BVI was an early adopter of the CRS. The BVI recently issued its initial CRS regulations, which took effect on 1 January 2016. The first reporting for the 2016 tax year was due by the end of July 2017. The expected deadline for subsequent years is 31 May. All BVI institutions must comply with the CRS.

The BVI has adopted Economic Substance regulations in response to the work of the Organisation for Economic Co-operation and Development (OECD) and the EU with respect to fair taxation and has implemented them as of 1 January 2019. All BVI institutions must comply with the Economic Substance regulations as applicable.

A. At a glance

Corporate Income Tax Rate (%)	18.5 (a)
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	18.5 (a)
Withholding Tax (%) (b)	
Dividends	0
Interest	2.5
Royalties	10
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	6

(a) This is the standard rate. The rate of petroleum income tax is 55%.

(b) For a listing of withholding taxes, see Section D.

B. Taxes on corporate income and gains

Corporate income tax. Limited companies, regardless of whether they are incorporated overseas or locally or are registered as a branch of a foreign company, are subject to a tax on income accruing in, derived from or received in Brunei Darussalam.

Branches of foreign companies are taxed on their profits arising in Brunei Darussalam at the same rates as corporations.

Rate of corporate income tax. The income tax rate is 18.5% for resident and nonresident companies, except for those engaged in petroleum operations. The rate of petroleum income tax is 55%.

The first BND100,000 of chargeable income is taxed at a reduced rate of one quarter of the full rate, while the next BND150,000 is taxed at half the full rate. The balance of chargeable income is taxed at the full rate. For a new company, the first BND100,000 of chargeable income is exempt from tax. This exemption applies for a company's first three consecutive years of assessment.

Certain enterprises and industries may be exempted from taxation if they are considered essential for the development of the country.

Companies that have gross sales or turnover of BND1 million or less are exempted from corporate income tax or charged with a 0% corporate income tax.

Capital gains. Capital gains are not taxed. Capital losses are not deductible. However, if assets have been acquired for resale rather than for a company's use, any profit from the sale is regarded as taxable income.

For the 2022 tax year, a tax discount of 50% on the tax payable is given for companies in the tourism, hospitality (including registered hotels and lodging houses), restaurant and cafés, and sea and air passenger transport services sectors.

Administration. The tax year is the calendar year.

Tax returns must be filed by electronic means.

Corporations must file an annual tax return by 30 June of each year and pay any tax due by the same date. Corporations must also file an Estimated Chargeable Income (ECI) return within three months after their accounting year-end if they are unable to file their annual tax return within this period. Any tax due under an ECI return must be paid by the due date for filing the ECI return. If tax is paid under an ECI return, the tax is adjusted accordingly in the annual tax return. In general, extensions of time are not granted.

Foreign tax relief. Foreign income that is not received in Brunei Darussalam is free from tax. Brunei Darussalam has entered into double tax treaties with Bahrain, Cambodia, China Mainland, the Hong Kong Special Administrative Region (SAR), Indonesia, Japan, Korea (South), Kuwait, Laos, Luxembourg, Malaysia, Oman, Pakistan, Qatar, Singapore, the United Arab Emirates, the United Kingdom and Vietnam. Both resident and nonresident companies may also apply for unilateral relief on income arising from British Commonwealth jurisdictions offering reciprocal relief. However, the maximum relief cannot exceed half the Brunei Darussalam rate.

C. Determination of trading income

General. The following sources of income are subject to tax:

- Gains or profits from any trade, business, profession or vocation
- Gains or profits from employment
- Net annual value of land and improvements occupied or used rent-free for residential or enjoyment purposes
- Dividends, interest or discounts
- Pensions, charges or annuities
- Rents, royalties, premiums and any other profits arising from property

In computing taxable income, normal business expenses may be deducted.

Interest expenses are allowed as a deduction only if the loan generating the charge is used for the production of taxable income.

Provisions. A provision for doubtful debts is not tax-deductible. Trade debts written off as bad are generally allowable as tax deductions when there is sufficient evidence of reasonable steps taken for recovery.

Tax depreciation. Depreciation charged in the financial accounts is not deductible for tax purposes. Instead, capital allowances (tax depreciation) are permitted.

Industrial buildings. An initial allowance of 40% of the qualifying expenditure is given on industrial buildings in the year of expenditure, with a further annual allowance of 20% of qualifying expenditure provided on a straight-line basis until the total expenditure is written off.

Plant and machinery. An initial allowance of 40% of the cost of plant or machinery is given on the qualifying expenditure, and an annual allowance is given on the declining value of the asset. Effective from 1 January 2016, the rates of the annual allowance for all types of assets were changed to 25%. Alternatively, a company may choose to write off such expenditure over three years on a straight-line basis. For plant and machinery not exceeding BND2,000 per item, a company may choose to write off such expenditure fully in the year of acquisition subject to an aggregate cap of BND30,000 per year. For computer and office automation equipment, a company may also choose to write off such assets fully in the year of acquisition.

Effective from 1 January 2014, the capital allowance rate was increased to 150% for assets categorized as plant and machinery for companies in the manufacturing sector. This capital allowance applies only to plant and machinery installed between 1 January 2014 and 31 December 2019.

Mining. All expenditure incurred in connection with the working of a mine or other source of mineral deposit of a wasting nature is considered qualifying mining expenditure. An initial allowance of 10% of the qualifying expenditure is given in the year of expenditure, with annual depletion allowances deductible over the life of the mine. These are determined by multiplying the residue of the capital expenditure by the greater of the fraction of 1/20 and the following fraction:

$$\frac{\text{Output for the year}}{\text{Output for the year plus estimated future output}}$$

Disposals. When an asset is sold, scrapped or destroyed, a balancing allowance or charge is made, based on the difference between the disposal price and the depreciated value on disposal. The balancing charge may be deferred if the plant and machinery disposed of are replaced by similar assets.

Relief for losses. Losses may be carried forward for up to six years to offset future profits. Continuity of trade or ownership is not required to carry forward losses. Losses in one trade or business may be set off against other sources of income for the same year of assessment.

Unabsorbed capital allowances may be carried forward indefinitely, provided the company continues to carry on the same trade or business.

Groups of companies. No special rules or reliefs apply to groups of companies; each company is taxed on its own income as appropriate.

D. Domestic and treaty withholding tax rates

Brunei Darussalam's domestic tax law imposes withholding tax on various payments made to nonresident persons, which include companies and bodies of persons. A company is considered to be a nonresident company if the control and management of its business are not exercised in Brunei Darussalam. The following are the withholding tax rates.

Type of payment	Rate (%)
Interest, commissions, fees or other payments with respect to loans or indebtedness	2.5
Royalties or other lump-sum payments for the use of movable properties	10
Payments for the use of, or the right to use, scientific, technical, industrial or commercial knowledge or information	10
Technical assistance and service fees	10
Management fees	10
Rent or other payments for the use of movable properties	10
Nonresident directors' remuneration	10

The above withholding tax rates may be reduced under tax treaties. Brunei Darussalam has entered into double tax treaties with Bahrain, Cambodia, China Mainland, the Hong Kong SAR, Indonesia, Japan, Korea (South), Kuwait, Laos, Luxembourg, Malaysia, Oman, Pakistan, Qatar, Singapore, the United Arab Emirates, the United Kingdom and Vietnam.

A. At a glance

Corporate Income Tax Rate (%)	10
Capital Gains Tax Rate (%)	10 (a)
Branch Tax Rate (%)	10
Withholding Tax (%) (b)	
Dividends	5 (c)(d)
Interest	0/10 (e)(f)(g)
Royalties from Patents, Know-how, etc.	0/10 (e)(f)
Fees for Technical Services	10 (f)
Rent and Payments Under Lease, Franchising and Factoring Agreements Derived from Sources in Bulgaria	10 (f)

Net Operating Losses (Years)

Carryback	0
Carryforward	5

- (a) Capital gains are exempt from tax if they are derived from the following:
- Shares, rights and government bonds through the Bulgarian stock market or stock exchanges in European Union (EU) or European Economic Area (EEA) countries
 - Shares through a third country market that is considered equivalent to a regulated market and for which the European Commission has adopted a decision on the equivalence of the third country's legal and supervisory framework in accordance with Directive 2014/65/EU
- (b) An EU/EEA recipient of Bulgarian-source income that is subject to withholding tax may claim a deduction for expenses incurred in earning that income by filing an annual tax return. The return must be filed by 31 December of the year following the year of accrual of the income.
- (c) This tax does not apply to payments to entities that are resident for tax purposes in Bulgaria or EU/EEA countries (no requirements for participation percentage and minimum holding period are imposed). However, under the general anti-tax avoidance rule provided in the domestic corporate income tax law, no exemption from withholding tax is granted to an arrangement or a series of arrangements that, taking into account all of the relevant facts and circumstances, are not genuine and result in tax avoidance.
- (d) This rate may be reduced by tax treaties for dividends distributed to entities not resident for tax purposes in EU/EEA countries.
- (e) The zero rate applies to Bulgarian-source interest or royalty income accrued to EU associated companies (a minimum holding of 25% of the share capital must be maintained for at least two years) if the income recipient is its beneficial owner. The zero rate can be availed before the expiration of the two-year period if the minimum 25% share capital holding is not interrupted as of the moment of the income accrual (if the share capital holding is interrupted before the expiration of the two-year period, a 10% withholding tax is due together with penalty interest for delay). The exemption from tax does not apply to income accrued on hybrid financial instruments. The zero rate is disallowed if the Bulgarian-source payment is, in substance, a profit distribution or capital decrease or aims at tax avoidance or tax evasion.
- (f) This tax applies to payments to nonresidents only and may be reduced in accordance with an applicable tax treaty. In certain cases, the withholding tax applies to income accrued by a nonresident entity through its Bulgarian permanent establishment to other parts of the same entity located outside Bulgaria. Advance payments are not subject to the withholding tax.
- (g) Interest on debt (other than government or municipality bonds) extended to the Bulgarian state or a municipality is exempt from withholding tax. Interest income on bonds or other debt instruments issued by Bulgarian resident companies, the Bulgarian state or municipalities on a regulated EU/EEA market is exempt from withholding tax. The exemptions mentioned in the two preceding sentences are granted to all corporate investors, regardless of their tax residency. Interest income paid to nonresident issuers of bonds or other debt instruments is not subject to withholding tax in Bulgaria if all of the following conditions are met:
- The issuer of these bonds or debt instruments is a tax resident of an EU/EEA member state.
 - The purpose for the issuance of the bonds or other debt instruments is that the proceeds will be used for granting a loan to a Bulgarian tax resident company.
 - The bonds or other debt instruments are issued on a regulated market in Bulgaria or another EU/EEA member state.

B. Taxes on corporate income and gains

Corporate income tax. Bulgarian companies are subject to corporate tax on their worldwide income. Bulgarian companies are companies incorporated in Bulgaria. Foreign companies are taxed in Bulgaria on their profits generated from activities conducted through a permanent establishment in the country and on income from Bulgarian sources.

If one or more nonresident entities that are associated or related parties hold in aggregate directly or indirectly 50% or more of the voting rights, capital interests or rights to a share of profit in a hybrid entity that is incorporated or established in Bulgaria, but not a taxable person under the Bulgarian Corporate Income Tax Act, and if these nonresident entities are located in a jurisdiction or jurisdictions that regard the hybrid entity as a taxable person in Bulgaria, then such hybrid entity should be equated to a legal person. The profits and income of any hybrid entity referred to in the above sentence are taxed according to the rules established by the Bulgarian Corporate Income Tax Act to the extent that such profits and income are not otherwise taxed in the country or according to the legislation of any other jurisdiction. This rule does not apply to a collective-investment vehicle, which is an investment fund or vehicle that fulfills the following conditions:

- It is widely held.
- It holds a diversified portfolio of securities.
- It is subject to investor-protection regulation.

Rates of corporate tax. The corporate tax rate is 10%.

A 10% tax is imposed on certain expenses, such as employee-related, in-kind fringe benefits and representation-related expenses, thereby increasing the effective tax rate for companies incurring such expenses (see Section D).

Capital gains and losses. Capital gains from disposals of assets, including shares, derived by Bulgarian tax residents are included in the current year tax base and are subject to tax at the standard corporate tax rate of 10%. No rollover relief is provided. Capital losses are deductible for tax purposes.

Capital gains are exempt from tax if they are derived from the following:

- Shares, rights and government bonds through the Bulgarian stock market or stock exchanges in European Union (EU) or European Economic Area (EEA) countries
- Shares through a third country market that is considered equivalent to a regulated market and for which the European Commission has adopted a decision on the equivalence of the third country's legal and supervisory framework in accordance with Directive 2014/65/EU

Similarly, losses from the sale of shares, rights and government bonds through such stock exchanges are not deductible for tax purposes.

Administration. The tax year is the calendar year. Annual tax returns must be filed by 30 June of the year following the tax year. The tax return must be accompanied by an activity report for statistical purposes. Taxpayers that did not carry on business activity during the respective year are not required to submit annual tax returns and activity reports.

Companies subject to tax must make advance payments of tax. Only persons that have net sales revenue from the year preceding the previous year above BGN3 million must make monthly advance payments. Newly established companies and companies

with sales of less than BGN300,000 for the year preceding the previous year are not required to make advance payments. These taxable persons may opt for quarterly advance payments. Companies with sales ranging from BGN300,000 to BGN3 million for the year preceding the previous year must make quarterly advance corporate tax payments. The tax base for the monthly advance payments is one-twelfth of the company's forecasted annual taxable income for the tax year. The tax base of the quarterly advance payments is one-fourth of the company's forecasted annual taxable income for the tax year. The tax rate for calculating the advance payments is 10%.

The monthly advance payments for January, February and March are due on 15 April of the current tax year. For the months from April through November, the monthly advance payments are due on the 15th day of the respective month; the only exception is that for December the monthly advance payment is due on 1 December. The quarterly advance payments for the first and second quarters are due on the 15th day after the end of the respective quarter. For the third quarter, the advance payment is due by 1 December. No quarterly payment is required for the last quarter. Changes in the amount of the initially reported advance corporate income tax payments can be made with a declaration for adjustment of the advance payments under Article 88 of the Corporate Income Tax Act (CITA) until 15 November of the respective year. Companies must pay the corporate tax due for the tax year, less the advance installments, by 30 June of the following year.

In the case of errors (including accounting errors) related to the prior year for which the tax return was filed, companies can file a one-off corrective corporate income tax return by 30 September of the year.

The tax on certain expenses (see Section D) is payable on an annual basis by 30 June of the following year.

Dividends. A 5% withholding tax is imposed on dividends paid by Bulgarian companies to companies resident for tax purposes in non-EU/EEA countries, as well as on hidden profit distributions to residents of EU/EEA countries.

Remittances of profits by branches to their home countries are not subject to withholding tax.

Foreign tax relief. Bulgarian companies are entitled to a tax credit for identical or similar foreign taxes imposed abroad. The tax credit is limited to the amount of the Bulgarian tax that would have been paid in Bulgaria on the income subject to the foreign tax. In addition, a per-country limitation applies. Bulgarian tax treaties normally provide an exemption from Bulgarian taxation for income from foreign real estate and foreign permanent establishments.

C. Determination of taxable income

General. Taxable income is based on annual accounts prepared in accordance with International Financial Reporting Standards

(IFRS) or, for small and medium-sized enterprises, Bulgarian accounting standards. However, taxable income does not equal the profit shown in the accounts, because certain adjustments to revenue and expenses are required for tax purposes with respect to items such as accrual for bonuses, unused leave, depreciation and impairment of assets.

The write-down of assets as a result of impairment is not deductible for tax purposes. The loss is deductible on realization.

IFRS 16 (Leases) related amendments. The expenses and revenues related to operating lease contracts, according to the International Accounting Standards (IAS), and accrued for accounting purposes by the lessee are not recognized for tax purposes. In addition, the assets that the lessee has a right to use under the operating lease contract, according to the International Accounting Standards, are not recognized as tax-depreciable assets.

The measure also provides that the expenses or revenues determined under the National Accounting Standard 17 (Leases) with respect to operating lease contracts are recognized for tax purposes. These amounts are treated as accounting expenses or revenues for corporate tax purposes.

The expenses, income, gains and losses realized from the sale-and-leaseback contracts classified as operating leases in accordance with the IAS at the lessee sellers are not recognized for tax purposes. The right-of-use assets arising from the sale-and-leaseback contracts, classified as an operating lease under the IAS and recognized at the lessee sellers, are not tax-depreciable assets. The assets eligible for use in connection with leaseback agreements, classified as operating leases in accordance with IAS recognized at the lessee sellers, are not tax depreciable assets.

Also recognized for tax purposes are expenses, income, gains and losses determined in accordance with the rules of Accounting Standard 17 "Leasing" with respect to sale-and-leaseback contracts classified as operating leases, attached to the relevant contracts.

Inventories. All cost methods that are applicable under IFRS may be used for tax purposes. For manufacturing entities, the quantity of raw material exceeding the usual quantity of raw materials required for the production of a particular unit is treated as avoidance of taxation and is subject to adjustment for tax purposes.

Impairment of receivables and provisions. Impairments and write-offs of receivables are not deductible for tax purposes until their materialization or the expiration of the five-year statute of limitation to pursue the claim at court. This rule does not apply to financial institutions, which may deduct impairments and write-offs of receivables in the year in which they are booked. Provisions for payables are not deductible for tax purposes until their materialization.

Tax depreciation. The law provides the following maximum tax depreciation rates for categories of assets.

Category	Assets	Rate (%)
1	Buildings, facilities, communication devices, electricity carriers and communication lines, as well as accounting expenses incurred after or on 1 January 2020, for the construction or improvement of the elements of the technical infrastructure (public state or municipal property) that are related to the business activity of the taxpayer and wholly or partially unrecognized for tax purposes	4 (a)
2	Machines, manufacturing equipment and other equipment	30 (b)
3	Transportation vehicles, excluding automobiles, road coverings and aircraft runways	10
4	Computers, mobile phones, software and the right to use software	50/100 (c)
5	Automobiles	25
6	Intangibles and other tangible assets that are legally protected for a limited time period	– (d)
7	Other tangible assets	15

- (a) The new rules in the CITA for accounting expenses related to the repair, construction or improvement of elements of the technical infrastructure (public state or municipal property) are applicable since 1 January 2020. However, the transitional provisions were adopted in the CITA, which state that the Bulgarian entities can treat such accounting expenses incurred or booked in the period of 1 January 2015 to 31 December 2019 in the same manner if the following conditions are met:
- The expenses were treated as tax nondeductible expenses for donations or tax nondeductible expenses for non-business-related activities in this prior period.
 - The construction, improvement or repair of elements of the technical infrastructure was actually related to the business activity of the company.
- (b) The rate may increase to as high as 50% for new machines for investment purposes.
- (c) The upper limit of 100% is applicable for the following:
- Software for management of sales in stores or trade premises (under Article 118, Paragraph 16 of the Value-Added Tax Act (VATA))
 - The right to use such software: computers, peripherals for them or mobile phones on which such software is installed
- (d) The depreciation rate is determined by dividing 100 by the number of years of the legal restriction. The maximum rate is 33⅓%.

The CITA contains measures requiring companies to prepare tax depreciation plans.

Goodwill arising from business combinations is not treated as a depreciable asset for tax purposes.

Relief for losses. Tax losses may be carried forward to the next consecutive five years, after the year in which the loss was realized. Losses may not be carried back.

Groups of companies. Bulgarian law does not include measures for filing consolidated returns or relieving losses within a group.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax; imposed on all domestic supplies of goods and services, imports and intra-EU acquisitions in Bulgaria	20
Tax on expenses; imposed on payers for representation and social expenses; the amount of the representation and social expenses is not subject to tax in the hands of the recipient	10
Tax on expenses; imposed on expenses for fringe benefits resulting from the provision of company assets and personnel to employees, directors and shareholders; companies have the option to apply the 3% tax on corporate expenses triggered by the personal use of company assets and personnel by employees, directors and shareholders or to treat them as fringe benefits taxed at the personal level; companies must choose the method for taxation in their annual corporate tax return	3
	(as of 1 January 2022)
Real estate property tax; rate varies by municipality	0.01 to 0.45
Real estate transfer tax; rate varies by municipality	0.1 to 3

E. Miscellaneous matters

Foreign-exchange controls. The Bulgarian currency is the leva (BGN). The exchange rate of the leva against the euro (EUR) is fixed at BGN1.95583 = EUR1.

Bulgaria does not impose foreign-exchange controls. However, some reporting requirements exist.

Each business transaction between local and foreign persons that involves financial credits or direct investment of a local company or sole proprietor abroad, must be declared for statistical purposes to the Bulgarian National Bank (BNB) within 15 days after the date of the transaction.

Under the Foreign Exchange Act, bank payments of up to BGN30,000 may be made freely after the payer declares the purpose of the payments. For payments over BGN30,000, certain requirements must be satisfied, including the submission of certain documents to the bank.

The act does not restrict the amount of foreign currency that may be purchased or imported into Bulgaria. Bulgarian and foreign individuals may export foreign currency of up to the equivalent of EUR10,000 without filing a declaration. The individual must file a declaration for exports exceeding EUR10,000. For exports of cash exceeding EUR15,000 or the equivalent in another currency, the customs authorities should check in the National

Revenue Agency's system to determine whether the individual has any outstanding tax liabilities.

Debt-to-equity rules. An interest-limitation rule and thin-capitalization provisions regulate the deductibility of interest expenses, as well as other expenses related to loans.

As of 2019, the interest-limitation rule is applied to corporate taxpayers that incur net interest and other borrowing costs exceeding EUR3 million for the calendar year. The tax deduction of such costs is limited to 30% of the respective entity's tax-adjusted earnings before interest, tax, depreciation and amortization (tax EBITDA). The borrowing costs include the following:

- Interest on all types of debt arrangements, regardless of the creditor status
- Interest-like items, such as depreciation of real estate that includes capitalized borrowing cost and currency losses

All taxpayers (including those below the threshold of EUR3 million) should also adhere to the thin-capitalization regime. This regime is triggered when a company's total debt exceeds three times its equity (both figures should be calculated as an average of the opening and closing balances for the year).

Thin-capitalization provisions regulate the deductibility of interest expenses related to certain transactions, such as the following:

- Nonbank loans from related parties
- Financial leases entered into with related parties
- Bank loans obtained from related parties or guaranteed by related parties (special rules on the deductibility of expenses apply if both the third party and the borrower provided a security or guarantee for the loan)

The tax deductibility for the net amount of the regulated interest expenses subject to the thin-capitalization provisions (after deduction of any interest income) is limited to 75% of earnings before interest and tax (EBIT). If the financial result before taking into account the interest expense is a loss, the entire amount of the interest expense is not deductible.

Taxpayers that are both thinly capitalized and that have net borrowing costs of more than EUR3 million should apply both tests and limit their deduction to the outcome that is more restrictive.

The interest not deducted under both regimes can be carried forward indefinitely.

Hidden distributions of profit. Adjustments to taxable income as a result of violations of the arm's-length principle are treated as hidden distributions of profit. The definition of hidden profit distribution also includes the following:

- Amounts not related to the business activity or amounts exceeding the customary market levels, which were accrued, paid or distributed in any form in favor of shareholders, partners or persons related to them, excluding dividends
- Interest on certain hybrid instruments (debt contracts that, subject to a specific test provided for in the CITA seem to be more akin to equity)

Hidden distributions are treated like dividends. Accordingly, they are disallowed for corporate income tax purposes and subject to a 5% withholding tax (if distributed to nonresidents).

In addition, an administrative sanction in the amount of 20% of the distributed amount is imposed. However, voluntary disclosure of hidden profit distributions in the annual corporate income tax return relieves taxpayers of this penalty.

Exit taxation. New rules provide that when a taxpayer transfers assets or an activity to outside Bulgaria or ceases being a tax resident of Bulgaria, the amount of potential capital gain generated in Bulgaria is taxed, but such gain is not realized at the moment of the transfer. The taxation takes place when Bulgaria loses in whole or in part its right to tax the result of subsequent disposal of the transferred assets or activity.

The new rule covers the following cases:

- Transfer of assets or activity from a Bulgarian headquarter to a permanent establishment of the same entity located outside the country
- Transfer of assets or an activity from a permanent establishment in Bulgaria to another part of the entity located out of the country
- Transfer of assets or an activity in the case of a change in the tax residence from Bulgaria to another country (not applicable if the assets continue to be effectively connected to a permanent establishment in Bulgaria)
- Transfer of an activity conducted through a permanent establishment in Bulgaria to another jurisdiction

In case of an assets transfer, the accounting financial result should be adjusted with the difference between the fair market value and the tax value of the transferred asset as of the time of the transfer. In case of transfer of activity, the result is to be adjusted with the difference between the fair market value of the transferred activity and its tax value decreased by the tax value of the transferred liabilities as of the time of the transfer.

F. Treaty withholding tax rates

The rates of withholding tax in Bulgaria's tax treaties are described in the following table.

	Dividends (y) %	Interest (ss) %	Royalties %
Albania	5/15 (h)	10	10
Algeria	10	10	10
Armenia	5/10 (m)	5/10 (ll)	5/10 (mm)
Austria	0/5 (tt)	0/5 (uu)	5 (vv)
Azerbaijan	8	0/7 (dd)	5/10 (ee)
Bahrain	0/5 (nn)	0/5 (pp)	0/5 (oo)
Belarus	10	10	10
Belgium	10	0/10 (rrr)	5
Canada	10/15 (n)	0/10 (aaa)	0/10 (sss)
China Mainland	10	10	7/10 (a)
Croatia	5	5	0
Cyprus	5/10 (r)	7	10

	Dividends (y)	Interest (ss)	Royalties

Russian Federation	15	15	15
Saudi Arabia	5 (lll)	5 (mmm)	5/10 (nnn)
Singapore	5	5	5
Slovak Republic	10	10	10
Slovenia	5/10 (b)	5	5/10 (x)
South Africa	5/15 (h)	5	5/10 (z)
Spain	5/15 (i)	0	0
Sweden	10	0	5
Switzerland	10 (xx)	0/5 (zz)	0/5
Syria	10	10	18
Thailand	10	10/15 (s)	5/15 (t)
Turkey	10/15 (o)	10	10
Ukraine	5/15 (i)	10	10
United Arab Emirates	0/5 (ii)	0/2 (jj)	0/5 (jj)

	Dividends (y) %	Interest (ss) %	Royalties %
United Kingdom	0/5/15 (jjj)	0/5 (kkk)	5
United States	0/5/10 (bb)	0/5/10 (cc)	5
Uzbekistan	10	0/10 (yy)	10
Vietnam	15	10	15
Yugoslavia	5/15 (h)	10	10
Zimbabwe	10/20 (k)	10	10
Non-treaty jurisdictions	5	10	10

- (a) The 7% rate applies to royalties for the right to use industrial, commercial and scientific equipment; the 10% rate applies to other royalties.
- (b) The 5% rate applies if the beneficial owner is a company, other than a partnership, holding directly more than 25% of the capital of the payer.
- (c) This rate applies to dividends paid from Finland to Bulgaria. The treaty does not provide a withholding rate for dividends paid from Bulgaria to Finland.
- (d) The 5% rate applies to royalties for specified types of intellectual property. The rate for other royalties is 0%.
- (e) The 5% rate applies if the beneficial owner of the dividends is a company, other than a general partnership, that holds directly at least 15% of the capital of the payer; the 15% rate applies to other dividends.
- (f) The 10% rate applies if the recipient is a legal person owning at least 25% of the voting shares of the payer for at least six months before the end of the accounting period for which the distribution of profits is made. The 15% rate applies to other dividends.
- (g) The rate is 0% for dividends paid from Bulgaria to Malta. For dividends paid from Malta to Bulgaria, the withholding tax is the lower of 30% of the gross dividend or the tax imposed on the profits out of which the dividends are paid.
- (h) The 5% rate applies if the recipient is a company owning directly at least 25% of the capital of the payer; the 15% rate applies to other dividends.
- (i) The 5% rate applies if the recipient is a company, other than a general partnership, owning directly at least 25% of the payer. The 15% rate applies to other dividends.
- (j) The 5% rate applies if the recipient is a company that is the beneficial owner of the dividends and holds at least 15% of the capital of the payer. The 10% rate applies to other dividends.
- (k) The 10% rate applies if the beneficial owner of the dividends is a company that holds at least 25% of the capital of the payer. The 20% rate applies to other dividends.
- (l) The Bulgarian Council of Ministers authorized the signing of a new tax treaty between Bulgaria and Italy. After the new treaty is signed, enters into force and takes effect, it will replace the 1988 income and capital tax treaty between the countries.
- (m) The 5% rate applies if the beneficial owner of the dividends has invested at least USD100,000 or an equivalent amount in another currency in the capital of the payer. The 10% rate applies to other dividends.
- (n) The rate of 10% applies to dividends paid by a Canadian investment company, of which at least 10% of the voting shares are controlled directly or indirectly by a foreign company. The 15% rate applies to other dividends.
- (o) The 10% rate applies if the beneficial owner of the dividends is a company, other than a general partnership, that holds at least 25% of the payer. The 15% rate applies to other dividends.
- (p) The 5% rate applies if the beneficial owner of the dividends is a company, other than a partnership, holding directly at least 25% of the payer. The 15% rate applies to other dividends.
- (q) The 7% rate applies if the beneficial owner of the dividends is a company, other than a partnership, holding directly at least 15% of the capital of the payer. The 10% rate applies to other dividends.
- (r) The 5% rate applies if the recipient is a company owning directly at least 25% of the payer. The 10% rate applies to other dividends.
- (s) The 10% rate applies to interest paid to financial institutions, including insurance companies. The 15% rate applies to other interest payments.
- (t) The 5% rate applies to royalties received for the use of, or the right to use, copyrights. The 15% rate applies to other royalties.

- (u) The 5% rate applies to interest on loans from banks or financial institutions. The 10% rate applies to other interest payments.
- (v) The 0% rate applies if the beneficial owner is a company, other than a partnership, holding directly more than 25% of the capital of the payer.
- (w) The 7% rate applies to royalties received for the use of, or the right to use, copyrights, patents, logos, models, plans, secret formulas or processes. The 5% rate applies to other royalties.
- (x) The 5% rate applies to royalties received for the use of, or the right to use, copyrights (except for cinematographic movies), or scientific, commercial or industrial equipment. The 10% rate applies to other royalties.
- (y) A 0% rate applies to dividends paid to entities from EU countries if certain conditions are satisfied.
- (z) The 5% rate applies to copyright royalties and other similar payments with respect to the production or reproduction of cultural, dramatic, musical or other artistic works (but not including royalties with respect to motion picture films and works on film or videotape or other means of reproduction for use in connection with television) and to royalties paid for the use of industrial, commercial or scientific equipment. The 10% rate applies to other royalties.
- (aa) The 0% rate applies if the beneficial owner of the dividends is a company, other than a general partnership, that holds at least 10% of the payer. The 10% rate applies to other dividends.
- (bb) The 5% rate applies if the beneficial owner is a company that owns directly at least 10% of the voting stock of the company paying the dividends. The 0% rate applies if the beneficial owner is a pension fund resident for tax purposes in the United States. Other conditions must also be observed.
- (cc) The 0% rate applies if any of the following circumstances exist:
- The beneficial owner is an institution wholly owned by the state.
 - The beneficial owner is a financial institution, provided the interest is not paid with respect to a back-to-back loan.
 - The beneficial owner is a pension fund, provided that the interest is not derived from the carrying on of a business, directly or indirectly, by such pension fund.
 - The interest concerns debt claims guaranteed, insured or financed by the state.
- The 10% rate applies to the following payments:
- Contingent interest arising in the United States that does not qualify as portfolio interest under US law
 - Interest arising in Bulgaria that is determined with reference to receipts, sales, income, profits or other cash flow of the debtor or a related person, to a change in the value of any property of the debtor or a related person or to a dividend, partnership distribution or similar payment made by the debtor or a related person
- The 5% rate applies to other cases.
- (dd) The 0% rate applies if either of the following applies:
- The payer or the recipient of the interest is the government, an administrative territorial subdivision or a local authority thereof, the national bank of either contracting state, the state or the State Oil Fund of Azerbaijan.
 - The interest is paid with respect to a loan guaranteed by any of the institutions mentioned in the first bullet.
- The 7% rate applies to other cases.
- (ee) The 5% rate applies to royalties received for the use of patents, designs or models, plans, secret formulas or processes, or for information, regarding industrial, commercial and scientific experience (know-how). The 10% rate applies in all other cases.
- (ff) The 0% rate applies if the beneficial owner of the dividends is a company holding directly at least 10% of the capital of the payer. The 5% rate applies in all other cases.
- (gg) The 0% rate applies if any of the following circumstances exists:
- The interest is paid to the government, local authority or the central bank of a contracting state.
 - The interest is paid on a loan granted, insured or guaranteed by any of the institutions mentioned in the first bullet.
 - The interest is paid with respect to the sale on credit of industrial, commercial or scientific equipment.
 - The interest is paid on a loan granted by a bank.
- (hh) The 0% rate applies to interest originating from one of the contracting states that is paid to the government or the central bank of the other state.
- (ii) The 0% rate applies if the beneficial owner of the income derived from one of the contracting states is any of the following:
- The other state or a political subdivision, local government, local authority or the central bank of the other state

- The Abu Dhabi Investment Authority, Abu Dhabi Investment Council, International Petroleum Investment Company or any other institution created by the government, a political subdivision, a local authority or a local government of the other state, which is recognized as an integral part of the government, as agreed in an exchange of letters between the competent authorities of the contracting states
- (jj) The 0% rate applies to income originating from one of the contracting states that is paid to any of the following:
- The other state, a political subdivision, a local government, a local authority or the central bank of the other state
 - The Abu Dhabi Investment Authority, Dubai Investment Office, International Petroleum Investment Company, Abu Dhabi Investment Council or any other institution created by the government, a political subdivision, a local authority or a local government of the other state, which is recognized as an integral part of the government, as agreed through the exchange of letters between the competent authorities of the contracting states
- (kk) The 0% rate applies if any of the following circumstances exists:
- The interest is paid with respect to the sale on credit of industrial, commercial or scientific equipment.
 - The interest is paid with respect to the sale on credit of goods or merchandise delivered by an enterprise to another enterprise.
 - The interest is paid on a loan, not represented by bearer shares, granted by a financial institution or by the government.
- (ll) The 5% rate applies to interest paid on loans granted by banks or financial institutions. The 10% rate applies to the gross amount of interest in all other cases.
- (mm) The 5% rate applies to royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films, and films or tapes for television or radio broadcasting.
- (nn) The 0% rate applies to dividends paid to the government, a local authority, statutory body, agency, the national bank or a wholly owned company of a contracting state.
- (oo) The 0% rate applies to royalties paid to the government, a local authority, statutory body, agency, the national bank or a wholly owned company of a contracting state.
- (pp) The 0% rate applies to interest paid to the government, a local authority, statutory body, agency, the national bank or a wholly owned company of a contracting state.
- (qq) The 5% rate applies if the recipient of the income (other than partnership or a German Real Estate Investment Trust Company) owns at least 10% of the capital of the company paying the dividends.
- (rr) The 0% rate applies to interest paid on the following loans:
- Loans granted or guaranteed by the Bulgarian government or municipal and state institutions
 - Loans guaranteed by Germany with respect to exports or foreign direct investment or granted by the government of Germany, the Deutsche Bundesbank, the Kreditanstalt für Wiederaufbau or the Deutsche Investitions- und Entwicklungsgesellschaft
 - Loans related to the sale on credit of equipment and merchandise
 - Loans granted by banks
- (ss) A 0% rate (unless explicitly indicated otherwise in the table) broadly applies to interest paid to governments, statutory bodies or central banks. Under certain treaties, it may also extend to other financial institutions and/or local authorities, subject to explicit reference in the respective double tax treaty.
- (tt) A 0% rate applies to dividends distributed to beneficial owners that are companies (other than partnerships). A 5% rate applies to distributions to partnerships and in all other cases.
- (uu) A 0% rate applies to interest paid on the following loans:
- Loans granted by banks
 - Loans granted to the government of Austria or to the government of Bulgaria
 - Loans granted, insured or guaranteed by the Oesterreichische Kontrollbank AG or any comparable Bulgarian institution for purposes of promoting exports
 - Loans granted in connection with the sale on credit of industrial, commercial or scientific equipment
- A 5% rate applies in all other cases.
- (vv) A 5% rate applies to royalties.
- (ww) The 0% rate applies to interest paid on loans granted by the Bulgarian National Bank, the Qatar Central Bank, the Qatar Investment Fund, the

capital pension authority of Qatar, administrative authorities, the Qatar Development Bank, other financial institutions wholly owned by the government of Qatar and other banks or institutions mutually agreed on by the contracting states.

- (xx) A 0% rate applies to dividends distributed to the following beneficial owners:
- Resident companies holding directly at least 10% of the capital in the company paying the dividend for at least one year before the payment of the dividend
 - Pension schemes
 - The central bank of the other contracting state
- A 10% rate will apply to distributions to partnerships and in all other cases.
- (yy) A 0% rate applies to interest paid on loans granted by the Bulgarian National Bank or, in the case of Uzbekistan, by the Central Bank or the National Bank of the Foreign Economic Activity of the Republic of Uzbekistan, or any other similar financial institution as agreed through an exchange of letters between the competent authorities of the contracting states.
- (zz) A 0% rate applies to interest paid on the following loans:
- Loans related to the sale on credit of equipment, merchandise or services
 - Loans granted by financial institutions
 - Loans granted to pension schemes
 - Loans granted to the government of Bulgaria or the government of Switzerland, a political subdivision or local authority, or the central bank of Bulgaria or Switzerland
 - Loans granted by a company to a company of the other contracting state if such company has directly held 10% of the capital for at least one year before the payment of the interest or if both companies are held by a third company and such company has directly held at least 10% of the capital of the first company and 10% of the capital of the second company, for at least one year before the payment of the interest
- (aaa) The 0% rate applies to interest paid on the following loans:
- Bonds or similar obligations of the government, political subdivisions or local authorities
 - Loans granted by the government or state-owned central banks
 - Loans and credits made, guaranteed or insured by the Export Development Corporation
 - Loans made, guaranteed or insured by the Bulgarian National Bank, the Bulgarian Foreign Trade Bank or other entity as agreed through an exchange of letters between the competent authorities of the contracting states
- (bbb) The 0% rate applies to interest paid on the following loans:
- Loans granted by the government, political subdivisions, local authorities or the central banks
 - Loans and credits extended or endorsed by the Bulgarian Foreign Trade Bank and the Export-Import Bank of India (Exim Bank) to the extent such interest is attributable to financing of exports and imports only, as well as by other institutions in charge of public financing of external trade
 - Loans and credits extended or endorsed by other persons to the extent that the loan or credit is approved by the government
- (ccc) The 15% rate applies to royalties relating to copyrights of literary, artistic or scientific works, other than cinematographic films or films or tapes used for radio or television broadcasting. The 20% rate applies to other royalties and technical service fees.
- (ddd) The 10% rate applies if the beneficial owner held directly 25% of the capital of the paying entity for an uninterrupted period of at least two years before the payment of the dividend.
- (eee) The 0% rate applies to interest paid on the following loans:
- Loans granted by the government, political subdivisions, local authorities or the central banks
 - Loans or credits made or guaranteed by the Export Import Bank of Korea and Korea Development Bank, as well as by the Bulgarian Foreign Trade Bank, or any other institution as agreed through an exchange of letters between the competent authorities of the contracting states
 - Loans related to the sale on credit of industrial, commercial or scientific equipment
- (fff) The existing treaty is being renegotiated.
- (ggg) The 0% rate applies if the interest income is accrued and beneficially owned by the state, a local authority, the central bank or other state-owned institution or bank or if the loan receivable is guaranteed, insured or financed by an institution that is wholly owned by the state.

- (hhh) The 0% rate applies if the Bulgarian-source dividends are distributed to the Central Bank of Norway, the global government pension fund or an institution in which the government participation is more than 75%. The 5% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends. The rate is 15% in all other cases.
- (iii) The rate is 0% for interest on the following loans:
- Loans granted by a bank, the government, a political subdivision or local authority
 - Loans granted, insured or guaranteed by a governmental institution for the purpose of promoting exports or loans in connection with the sale on credit of industrial, commercial or scientific equipment
 - Loans granted by banks
- (jjj) The 0% rate applies to dividends distributed to companies and pension funds. The 15% rate applies if the dividends are paid out of income (including gains) derived directly or indirectly from immovable property by investment vehicles. In all other cases, the withholding tax rate is 5%.
- (kkk) The rate is 0% for interest on loans other than loans granted by financial institutions or pension schemes, the government, a political subdivision or local authority, loans by the central bank, loans between associated companies (that is, a direct holding relationship of at least 10% was maintained for at least one year before the payment of the interest) and loans in connection with the sale on credit of any equipment, merchandise or services.
- (lll) The term "dividends" as used in Article 10 of the double tax treaty means income from shares, "jouissance" shares or "jouissance" rights, mining shares, founders shares or other rights, not being debt-claims, participating in profits, as well as income from other rights that is subject to the same taxation treatment as income from shares by the laws of the state of which the company making the distribution is a resident. With reference to Article 10 of the double tax treaty, the following is understood:
- The term "dividends," as defined in Paragraph 3 of Article 10, also includes income derived from full or partial liquidation of a company.
 - If profits derived by an enterprise of a contracting state through a permanent establishment situated in the other contracting state have been taxed under Article 7 of the double tax treaty, the remaining amount of such profits may be taxed in that other contracting state, and the tax so charged shall not exceed 5%.
 - Dividends that are hidden profit distribution under the law in force in Bulgaria shall be taxed according with the laws of Bulgaria.
- (mmm) Article 11 of the double tax treaty is applicable for "income from debt-claims." The term "income from debt-claims" as used in this Article means income from debt-claims of every kind, whether secured by mortgage and whether carrying a right to participate in the debtor's profits and, in particular, income from government securities and income from bonds or debentures, including premiums and prizes attaching to such securities, bonds or debentures. Penalty charges for late payment shall not be regarded as income from debt-claims for the purpose of this Article. With reference to Article 11 of the double tax treaty, it is understood that income from debt-claims arising in a contracting state and paid to a pension fund that is a resident of the other contracting state and a beneficial owner of that income shall be taxable only in that other contracting state.
- (nnn) The 5% rate applies to royalties received for the use of, or the right to use, industrial, commercial or scientific equipment.
- (ooo) The 12.5% rate does not apply to dividends that are hidden profit distribution or other similar arrangements under the laws in force in either of the contracting states. In such cases, each contracting state shall apply its own domestic legislation to such income.
- (ppp) The 0% rate applies for interest on the following loans:
- Loans granted by the government, a political subdivision or local authority, or the central bank
 - Loans granted, guaranteed or insured by the government or any entity or financial institution wholly owned by the government. The competent authorities shall notify each other of such existing organizations and any subsequent changes thereof. For purposes of the above, the entities and financial institutions wholly owned by the government in Pakistan are the State Bank of Pakistan, the Export-Import Bank of Pakistan and the National Bank of Pakistan, while the entities and financial institutions wholly owned by the government in Bulgaria are the Bulgarian National Bank and the Bulgarian Development Bank.

- (qqq) The 10% rate applies to “fees for technical services.” The term “fees for technical services” for the purposes of this rate means payments of any kind received as a consideration for the rendering of any managerial, technical or consultancy services, including the services of technical or other personnel, but does not include the following:
- Consideration for any construction, assembly or similar project undertaken by the recipient
 - Consideration that would be income of the recipient from employment
- (rrr) The 0% rate applies to the following types of interest:
- Interest received, on its own account, by a contracting state or by an institution of which the capital is wholly owned by that state
 - Interest from commercial debt-claims, including claims represented by commercial documents, relating to installment payments for supplying merchandise, goods or services
 - Interest on loans, prepayments or credits of any kind, not represented by bearer instruments, from banks
 - Credit interest on current accounts opened with banks, or interest on cash deposits, not represented by bearer instruments, with such institutions
- (sss) The 0% rate applies to copyright royalties and similar payments with respect to the production or reproduction of cultural, dramatic, musical or other artistic works (but not including royalties with respect to motion picture films and works on film or videotape or other means of reproduction for use in connection with television).
- (ttt) The 0% rate applies to the following types of interest:
- Interest derived and beneficially owned by the government of the other contracting state, including any local authority thereof, the central bank or any financial institution wholly owned by that government or a resident of the other contracting state in connection with a loan or credit guaranteed by the government of that other state
 - Interest paid in connection with the sale on business credit of equipment or merchandise.
- (uuu) These are the rates under a new treaty with the Netherlands, which is effective from 1 January 2022.
- (vvv) The 0% rate applies to dividends if the beneficial owner is either of the following:
- A company (other than a partnership) that is a resident of the other contracting state and holds directly at least 10% of the capital of the company paying the dividends throughout a 365-day period that includes the day of the payment of the dividend (for the purpose of computing that period, no account should be taken of changes of ownership that would directly result from a corporate reorganization, such as a merger or divisive reorganization, of the company that holds the capital or that pays the dividend)
 - Pension fund
- (www) The 0% rate applies to interest if one of the following conditions is met:
- The recipient of the interest is a contracting state or a political subdivision or local authority thereof, a public body or the central bank of a contracting state.
 - The interest is paid in connection with a loan granted, approved, guaranteed or insured by a contracting state, the central bank of a contracting state, or an agency or entity (including a financial institution) controlled by a contracting state.
 - The recipient of the interest is Atradius Dutch State Business NV (or its legal successor) with respect to loans granted, approved, guaranteed or insured by the Netherlands or the recipient of the interest is the Netherlands’ Finance Company for Developing Countries (de Nederlandse Financierings-Maatschappij voor Ontwikkelingslanden NV) (or its legal successor).
 - The recipient of the interest is a pension fund.
 - The interest is paid in connection with a loan granted by a bank or an insurance company.
 - The interest is paid in connection with the sale on credit of any industrial, commercial or scientific equipment.
 - The interest is paid in connection with the sale on credit of merchandise by one enterprise to another enterprise.

A treaty negotiation between Bulgaria and Bosnia and Herzegovina with respect to taxes on income has been initiated.

A. At a glance

Tax on Income Rate (%)	20
Capital Gains Tax Rate (%)	20
Withholding Tax (%) (a)	
Dividends	14
Interest	14
Royalties	14
Income from Movable and Immovable Property	14
Fees for Services Performed in Cambodia	14
Technical, Management and Consultation Fees	14
Insurance Premiums	14 (b)
Branch Remittance Tax	14
Net Operating Losses (Years)	
Carryback	0
Carryforward	5 (c)

(a) These withholding tax rates apply to payments to nonresidents only. For a listing of withholding taxes applicable to payments to resident taxpayers, see Section B.

(b) This does not apply to reinsurance.

(c) See Section C.

B. Taxes on corporate income and gains

Tax on income. Tax on Income (ToI) is calculated on taxable income inclusive of capital gains and passive income, such as interest, royalties and rent.

The ToI is imposed on the worldwide income of resident taxpayers. It is imposed on the Cambodian-source income of nonresident taxpayers. For companies, resident taxpayers are enterprises organized, managed or having a principal place of business in Cambodia. A company that is not a resident taxpayer and that receives income from a Cambodian source is considered to be a nonresident taxpayer.

ToI rates. The standard rate of ToI for legal persons is 20%.

A tax rate of 30% applies to income derived from oil or natural gas production sharing contracts and from the exploitation of natural resources including timber, ore, gold and precious stones.

A tax rate of 5% is imposed on the gross premium income of insurance companies providing insurance or reinsurance products for property or other risks. However, insurance companies providing life insurance or reinsurance in the form of a savings product are taxed at a rate of 20%.

Minimum tax. Minimum tax is a separate annual tax imposed at a rate of 1% of annual turnover inclusive of all taxes, except value-added tax (VAT). If the ToI liability exceeds the amount of the minimum tax, the taxpayer is not liable for the minimum tax. If taxpayers' accounting records meet the criteria set by the tax authorities for the maintenance of proper accounting records, these taxpayers are exempt from the minimum tax.

Advance Income Tax on Dividend Distribution. The Additional Income Tax on Dividend Distribution has been renamed the Advance Income Tax on Dividend Distribution (AITDD). It is imposed on the distribution of retained earnings to local and overseas shareholders before ToI is declared to the tax department. The AITDD is payable by the distributing company. It is calculated based on the following gross up calculation of the annual ToI rate:

- Step 1: Divide the amount of the dividend by 0.8.
- Step 2: Apply a rate of 20% to the result of Step 1.

The AITDD becomes a tax credit to utilize against annual ToI. Any excess tax credit can be carried forward to offset against the annual ToI liability in the following year.

From 2020, dividends distributed by Qualified Investment Projects (QIPs) during the tax holiday period are exempt from AITDD.

Investment incentives. A QIP registered and approved by the Council for the Development of Cambodia is entitled to the incentives described below.

An exemption from ToI applies to the trigger period and the priority period. The trigger period begins on the date of final registration and ends on the earlier of the end of the third year after the first revenue is earned or the end of the year preceding the year in which the first taxable income is earned. The priority period, which is specified in the Finance Law and varies by project, may have a duration of up to three years. Under the new Law on Investment (LoI) issued in October 2021, after the ToI exemption period ends, a QIP will continue to be entitled to a reduced ToI rate for six years. The reduced rates are 25% of the standard rate for the first two years, 50% of the standard rate for the next two years and 75% of the standard rate for the last two years.

The taxpayer is entitled to an exemption from the minimum tax if it is confirmed by the tax authorities that the taxpayer is maintaining proper accounting records. Under the new LoI, a QIP is

exempt from minimum tax if its accounts are audited by an independent auditor.

QIPs can import construction materials, construction equipment, production equipment and production inputs with customs duty, Specific Tax and VAT borne by the government. However, the incentives of production inputs for domestically oriented QIPs are determined by the Law on Financial Management and/or a Sub-Decree.

Other incentives include a VAT exemption on the local purchase of production inputs, a deduction of 150% of expenses for certain expenses, an exemption from income tax for QIP expansion and additional special incentives for certain potential investments that will contribute to develop Cambodia's economy. These additional incentives are determined by the Law on Financial Management and/or a Sub-Decree.

Capital gains. All realized gains (including capital gains) are considered to be taxable income. Tax on capital gains is not separately imposed in Cambodia. Capital gains derived from the disposal of fixed assets are treated as ordinary income and generally taxed at the standard ToI rate of 20%.

Administration. Resident taxpayers must file annual ToI or minimum tax returns within three months after the end of the tax year.

Resident taxpayers must make monthly prepayments of ToI, which are each equal to 1% of monthly turnover inclusive of all taxes, except VAT. Effective from the December 2020 monthly tax return, the prepayments must be made by the 25th day of the following month in which the tax liability arose through an e-filing system. The tax payment can be used to offset the annual ToI or minimum tax liability. Prepayments of ToI are not required during the period of exemption from ToI.

Dividends. Dividends paid to nonresident taxpayers are subject to withholding tax at a rate of 14%.

Withholding taxes

Payments to resident taxpayers. Resident taxpayers carrying on business in Cambodia must withhold tax from payments made to other resident taxpayers at the following rates.

Payment	Rate (%)
Interest paid to recipients other than domestic banks	15
Interest paid on non-fixed term saving accounts by domestic banks	4
Interest paid on fixed-term saving accounts by domestic banks	6
Royalties	15 (a)
Rent paid for movable and immovable property	10 (b)
Payments to individuals for services, including management, consulting and similar services	15 (c)

- (a) This withholding tax is not applied to payments made to registered resident taxpayers with valid value-added tax (VAT) invoices on shrink-wrap software, site licenses, downloadable software and software bundled with computer hardware.

- (b) This withholding tax is not applied to payments made to registered resident taxpayers with a valid VAT invoice.
- (c) This withholding tax is not applied to payments if the amount is lower than KHR50,000 (approximately USD12.5).

Payments to nonresident taxpayers. Resident taxpayers must withhold tax at a rate of 14% on payments to nonresidents that earn Cambodian-source income, which is defined to include the following:

- Interest paid by resident enterprises, resident pass-through entities or Cambodian governmental institutions
- Dividends distributed by resident taxpayers
- Income from services performed in Cambodia
- Compensation for management and technical services paid by resident persons
- Income from movable or immovable property, if the property is located in Cambodia
- Royalties from the use of, or the right to use, intangible property paid by residents or by nonresidents through a permanent establishment that the nonresident maintains in Cambodia
- Gains from sales of immovable property located in Cambodia or from transfers of interests in immovable property located in Cambodia
- Insurance premiums paid on the insurance of risks in Cambodia
- Gains from the sale of movable property that is part of the business property of a permanent establishment maintained by a nonresident taxpayer in Cambodia
- Income from business activities carried on by nonresidents through a permanent establishment in Cambodia (branch remittance tax)

In general, the above withholding taxes are considered a final tax.

If withholding tax is not withheld from the recipient, it is borne by the payer. Accordingly, the withholding tax is not deductible for purposes of the ToI.

Withholding tax returns and payments. Effective from the December 2020 monthly tax return, resident taxpayers must submit withholding tax returns and remit withholding taxes to the tax authorities by the 25th day of the following month through an e-filing system. The hard-copy tax returns are no longer accepted, unless the taxpayer obtains specific approval from the tax authorities to submit hard-copy tax returns as a result of difficulties in implementing the e-filing system.

Foreign tax relief. Cambodia allows a credit against the ToI for foreign taxes paid on foreign-source income if supporting documentation exists.

C. Determination of trading income

General. Taxable income equals the difference between total income and allowed expenses that are incurred to carry on the business.

Allowable deductions include most expenses incurred in the course of carrying on a business enterprise with certain limitations. These limitations include the following:

- The deduction of charitable contributions to specified organizations is limited to 5% of taxable income before deducting the amount of the charitable contributions.

- Depreciation is allowed as a deduction in accordance with rates and methods set forth in the tax regulations.
- Deductions for interest are limited to interest income plus 50% of taxable income excluding interest income and expenses. The disallowed interest may be carried forward to subsequent years and deducted subject to the same limitations (also, see *Special rules for loans*). Effective from 2020, the disallowed interest can be carried forward for only five years.

Nondeductible expenses include the following:

- Expenses incurred on activities generally considered to be amusement, recreation, entertainment or on the use of any means with respect to such activities
- Losses on direct or indirect sales or exchanges of property between related parties
- Penalties, additional tax and late payment interest imposed for violation of the tax regulations
- Donations, grants or subsidies made to other than specified organizations

Special rules for loans. According to Cambodia's tax regulations, a limitation of interest rates on loans obtained from banks and other enterprises should be determined in accordance with the following rules:

- Before 19 March 2020, a taxpayer could not get a tax deduction for interest to the extent the rate on loans from third parties exceeded 120% of the market rate at the time of the loan transaction. From 19 March 2020, this limit on deductibility no longer applies.
- Before 21 August 2018, the interest rate for loans from related parties could not exceed the market rate at the time of loan transaction. From 21 August 2018, for loans from related parties, the interest rate is required to be at arm's length.

In this context, the term "market rate" is the average interest rate on loans from at least five of the largest commercial banks in Cambodia to their customers. The market rate is published annually by the General Department of Taxation (GDT) for the preceding year.

For loans referred to in the first two bullets above, the taxpayer is required to notify and submit the agreements and other supporting documents to the tax authorities within 30 days after entering into the transaction. If the taxpayer fails to notify the tax authorities by providing it with the supporting documents, the loan amount may be added to the taxpayer's taxable income for that year.

For loans referred to in the third bullet above, a copy of the loan agreement is not required to be submitted to the GDT. However, the taxpayer is required to maintain the following supporting documents to provide to the GDT on request:

- Loan agreement
- Business plan relating to the loan
- Benchmarking study of the interest rate
- Board of directors' resolution (for single membership)

In addition, deductions for interest are limited to interest income plus 50% of taxable income excluding interest income and

expenses. Any disallowed interest may be carried forward and a deduction can be claimed in subsequent years, subject to the same limitations. From 2020, the disallowed interest can be carried forward only five years.

Provisions. Provisions for losses or expenses that have not occurred are not allowed for tax purposes even if the incurrence of such losses or expenses is probable. However, domestic financial institutions may establish provisions for bad debts within the threshold provided by the GDT.

Tax depreciation and amortization. The tax regulations divide fixed assets into four classes for purposes of depreciation and specify the depreciation methods and rates for the classes. The following are the classes.

Classes	Assets	Method	Rate (%)
1	Concrete buildings and structures	Straight-line	5
	Non-concrete buildings	Straight-line	10
2	Computers, electronic information systems and data handling equipment	Declining-balance	50
3	Automobiles, trucks, office furniture and equipment	Declining-balance	25
4	Other tangible property	Declining-balance	20

A QIP (see Section B) may apply a special depreciation rate of 40% in the year of purchase or in the first year the tangible assets are placed into operation, if later. If the enterprise elects to use the exemption period for the ToI, the special depreciation rate does not apply.

Intangible assets with a limited useful life, such as patents, copyrights, drawings, models, and franchises, can be amortized over their useful life on a straight-line basis. If the life of intangible assets cannot be determined, the assets are amortized using the straight-line method at a rate of 10%.

Relief for losses. Losses can be carried forward to offset future taxable income for the following five years. The carryback of losses is not allowed.

The carryforward of losses is not forfeited by a change of ownership. However, it is required that there be no change in the business objectives and activities of the entity.

Groups of companies. Cambodia does not allow consolidated tax filing or provide other group tax relief.

D. Other significant taxes

Value-added tax. Resident taxpayers providing taxable supplies must register for VAT. Taxable supplies include supplies of goods or services by taxable persons in Cambodia.

The standard rate of VAT is 10%. A 0% rate of VAT applies to exports of goods and services including international transportation of passengers and goods and services with respect to such transportation. It also applies to enterprises in supporting industries and subcontractors that supply certain goods and services to exporters.

The tax law specifies certain nontaxable supplies.

A resident taxpayer must complete the registration for VAT within 30 days after the date on which it becomes a taxable person. The filing of VAT returns and payment of VAT must be made by the 25th day of the following month, effective from June 2020. Hard-copy tax returns are no longer accepted, unless the taxpayer has received approval from the tax authorities to submit hard-copy tax returns as a result of difficulties in implementing the e-filing system.

Other taxes. Cambodia imposed various other taxes, including the following:

- Specific Tax on Certain Merchandises and Service
- Tax for Public Lighting
- Accommodation Tax
- Patent Tax
- Registration Tax (property transfer tax)
- Fiscal Stamp Tax
- Tax on Immovable Property
- Tax on Unused Land
- Tax on Means of Transportation

E. Foreign-exchange controls

The Cambodian currency is the Khmer riel (KHR).

Cambodia does not impose any restrictions on the purchase of foreign currencies through authorized financial institutions.

F. Tax treaties

Double tax treaties with Brunei Darussalam, China Mainland, the Hong Kong Special Administrative Region (SAR), Indonesia, Korea (South), Malaysia, Singapore, Thailand and Vietnam have been ratified. A treaty with the Macau SAR is not yet effective. The treaties reduce the withholding tax rate from 14% to 10% on dividends, interest, technical services and royalties paid to residents of treaty jurisdictions. An application to apply treaty relief must be made to the Cambodian tax authorities.

A. At a glance

Corporate Income Tax Rate (%)	16.5/27.5/30.8/33 (a)
Capital Gains Tax Rate (%)	5/16.5/33 (b)
Branch Tax Rate (%)	33 (a)
Withholding Tax (%)	
Dividends	16.5 (c)(d)
Interest	0/16.5 (e)
Royalties from Patents, Know-how, etc.	15
Petroleum Subcontractors	3 (f)
Fees for Technical Services, Digital Services and Professional Activities, Public Procurement, and Ad Hoc Material Services from Abroad	2 to 15 (g)
Specific Payments to Resident Individuals or Companies	5.5 (h)
Branch Remittance Tax	16.5
Net Operating Losses (Years)	
Carryback	0
Carryforward	4/6 (i)

- (a) The minimum tax is generally 2.2% or 5.5% of turnover, or 15.4% of the gross margin. The 2022 Financial Law introduced a new tax regime for non-profit organizations that are now subject to income tax at a rate of 16.5% when they carry out commercial activities. The minimum tax for nonprofit organizations is 1.1%. For further details, see Section B.
- (b) In certain circumstances, the tax is deferred or reduced (see Section B). Capital gains realized in Cameroon or abroad from the direct or indirect transfer of stocks, bonds and other capital shares of enterprises located in Cameroon are taxed at a rate of 16.5%. Capital gains on the sale of real estate are taxed at a rate of 5%.
- (c) This withholding tax also applies to directors' fees, nondeductible expenses and adjustments of profits following a tax examination. The withholding tax also applies to allowances granted to members of commissions, ad hoc or

permanent committees and to members of public, semipublic, regional or local bodies.

- (d) This withholding tax applies to residents and nonresidents.
- (e) Interest on savings of up to XAF10 million is exempt from withholding tax. Interest on state bonds is exempt from corporate income tax and the tax on movable capital (this tax is withheld at a rate of 16.5% from income on shares and negotiable bonds and from certain other income). The 2014 Financial Law confirms that interest on loans paid to nonresident lenders or creditors is exempt from withholding tax. Special income tax applies to all types of deliveries that are part of public contracts or orders and that are paid for by state, regional or local authorities, public institutions, public corporations or semi-public companies, or that are paid for through external financing. The rate is 15%, which is withheld at source.
- (f) An optional final withholding tax is available for petroleum contractors and subcontractors of oil companies (foreign companies in Cameroon that have contracted with petroleum companies established in Cameroon). The rate of this special tax (TSR) is fixed at 15% of turnover. The 2011 Financial Law extended this tax regime to foreign individuals or companies that carry out activities on a casual (day-to-day) basis in Cameroon, subject to the prior authorization of the Director General of Taxation, issued on written request of the service providers (companies) or authorized clients. The 2022 Financial Law provides that oil contract holders and their subcontractors are exempt from the special income tax during the research and development (R&D) phase for remuneration on assistance, equipment rental, materials and all other services rendered to them for oil operations by foreign service providers, provided that the foreign service providers satisfy the following conditions:
- They do not have a permanent establishment in Cameroon.
 - They provide such services at cost price.
- Holders of oil contracts and their subcontractors in the R&D phase that do not meet the conditions listed above may opt for the reduced rate of the special income tax of 3%. Petroleum subcontractors admitted to the TSR regime must maintain supporting documentation that enables the tracing of the relevant tax bases. They must also display on all of their bills the gross amounts of the transactions, the TSR to be deducted at source, their customers and the net amount to be paid.
- (g) This withholding tax applies to nonresidents. This tax also applies to “software,” which is defined as computer applications and programs relating to the operation or functioning of an enterprise. The general rate of 15% applies to all remuneration subject to this tax except for the following:
- Remuneration for ad hoc material services (defined in the 2011 Financial Law) paid to non-domiciled companies without a permanent establishment in Cameroon carrying out economic activities there, which is subject to an average rate of 10%
 - Remuneration under public procurement for successful bidders not domiciled in Cameroon, which is subject to a reduced rate of 3%
 - Remuneration for the provision of access to audiovisual services with digital content, which is subject to a reduced rate of 3%
 - Remuneration for services of all kinds provided to oil companies during the R&D phase, which is subject to a reduced rate of 3%
 - Remuneration paid by Cameroonian shipping companies for leasing and chartering vessels, for leasing space on foreign vessels and for commissions paid to port agents abroad, which are all subject to a reduced rate of 3%
- (h) This withholding tax applies to fees, commissions, emoluments and remuneration for services that are paid to resident individuals or companies. These payments include the following:
- Payments made to persons in the self-employed professions, such as consultants, experts, architects, physicians, auditors in charge of damages, trade intermediaries and salesmen
 - Payments made to magistrates and representatives of the law (attorneys, bailiffs and notaries)
 - Payments made to forwarding agents, customs brokers, stevedores, accounting firms and internet service providers.
- The withholding tax does not apply to payments made for services related to transport, bank interest, insurance premiums and commissions, air ticket expenses and commissions, and water, electricity and telephone expenses. The 10% surtax applies to the withholding tax rate of 5%, resulting in a total withholding tax rate of 5.5%.
- (i) The 2021 Financial Law provides that credit institutions and companies that are in the portfolio of the state (companies in which the state or any other

legal person under public law has a share in the capital) and that are undergoing restructuring can carry forward the surplus of the loss until the end of the sixth year following the loss year.

B. Taxes on corporate income and gains

Corporate income tax. Income tax in Cameroon is imposed on undertakings deemed to be operating in Cameroon, which are the following:

- Undertakings headquartered in Cameroon or with an effective management office in Cameroon
- Undertakings that have a permanent establishment in Cameroon
- Undertakings that have a dependent representative in Cameroon

The profits of undertakings that do not fulfill the conditions referred to above are taxed in Cameroon if they carry out activities that form a full business cycle in Cameroon.

The 2022 Financial Law introduced a new tax regime for non-profit organizations when they carry out commercial activities. The tax regime of nonprofit organizations covers any entity with or without legal personality, whether public, private or religious, including foundations, whose purpose is not to seek profits for distribution among its members and whose activity is not in competition with those carried out by profit-making entities. These include the following:

- International bodies and non-governmental organizations, subject to conventions
- Public establishments and decentralized territorial authorities, as well as their public utility boards
- Companies or organizations recognized as being of public utility
- Public low-cost housing agencies
- Associations of any kind, legal or de facto, mutual societies, clubs and private circles
- Welfare and social security organizations
- Public and denominational educational and health institutions
- Generally, any organization with or without a legal personality and whose main mission is not to carry out commercial activities

Nonprofit organizations are subject to the income tax (*impôt sur le revenu* in French) and are exempt from corporate income tax, business license tax and real estate tax.

Tax rates. The regular corporate income tax rate is 30% (plus a 10% additional council tax).

The 2021 Financial Law provides the following corporate income tax rates:

- Taxpayers with a turnover equal to or less than XAF3 billion are subject to tax at a rate of 28% (plus a 10% additional council tax). This 28% rate is applicable from the fiscal year ending 31 December 2020.
- Companies that list their ordinary shares or that issue securities on the Central African Stock Exchange (BVMAC) are subject to tax at a rate of 25% (plus a 10% additional council tax).
- Companies that are deemed to make public offerings in accordance with the provisions of the OHADA (organization for the harmonization of business law in French-speaking Africa)

Uniform Act on Commercial Companies and Economic Interest Groups (UACCEIG), and that agree to admit and exchange all or part of their equity and debt securities on the BVMAC are subject to tax at a rate of 25% (plus a 10% additional council tax), from the date of admission of the securities.

The 2022 Financial Law provides that the income tax is levied on nonprofit organizations when they carry out commercial activities at a rate of 16.5% (15% plus a 10% additional council tax). A monthly advance payment of 1.1% (1% plus a 10% additional council tax) of their turnover is paid monthly to their tax center. This advance payment constitutes their minimum tax.

For companies operating under the real earnings tax regime, the minimum tax payable is 2% (plus 10% additional council tax) of monthly gross sales (turnover). For production companies in the milling sector, the minimum tax payable is 2% (plus 10% additional council tax) of monthly gross sales after a 50% rebate. However, for companies subject to the real earnings tax regime that are in the administered margin sectors, which are the distribution of petroleum, domestic gas, milling, pharmaceutical and press products, the minimum tax payable is 14% (plus 10% additional council tax) of the gross margin. Effective from 1 January 2018, these companies can opt for the minimum tax at 2% (plus 10% additional council tax) of monthly gross sales. This option is irrevocable over the year and is tacitly renewed for subsequent years until renunciation. It must be notified no later than 31 January by a simple letter to the center of affiliation (the tax center responsible for the assessment, control and recovery of all taxes, duties, and other fiscal and quasi-fiscal charges of companies within its jurisdiction). The minimum tax payable is 5.5% for companies under the simplified tax regime. For non-registered companies, the minimum tax payable is 10%. This rate is increased to 20% for forestry companies if they do not justify an operating permit issued by the competent authority. The 2018 Financial Law introduced a minimum tax of 5% (plus a 10% additional council tax) withheld at source for public procurements under XAF5 million, regardless of the provider's tax regime. The 2021 Financial Law provides that for companies that list their ordinary shares on the BVMAC, the minimum tax payable is 1.5% (plus 10% additional council tax). The minimum tax is creditable against corporate tax due for the current financial year.

Profits realized in Cameroon by branches of foreign companies are presumed to be distributed and are consequently subject to a branch withholding tax of 16.5% on after-tax income. This rate is subject to reduction by treaty.

Deductions at source or advance payments apply to all purchases and importations by traders, including the following:

- Purchases and importations by traders including those subject to the flat rate tax regime
- Purchases of goods from manufacturers, importers and forestry operators
- Purchases of petroleum products by petrol station owners
- Purchases of staple products by exporters
- Purchases and importations by enterprises that do not hold the taxpayer's card (non-registered enterprises)

Exceptions to the advance payment rule apply to the following:

- Importation of goods by traders under the Specialized Management Units of the Directorate General of Taxation
- Purchases of goods by the state, councils and persons living abroad
- Purchases by registered industrialists for the operation of their enterprises if they are assessed under the real earnings tax regime
- Local purchases of petroleum products by marketers registered in the active taxpayer logbook of the large taxpayers' unit

The following are the applicable tax rates for advance payments:

- 2% of the amount of operations realized by traders under the real earnings tax regime
- 5% of the amount of operations realized by taxpayers subject to the flat rate tax regime
- 5% of the amount of operations realized by traders under the simplified tax regime
- 10% of the amount of operations realized by registered importers that are subject to the flat tax regime and by enterprises without a taxpayer's card
- 14% of the gross margin for the purchase of goods with a regulated profit margin

The above rates are added to the sales price or customs value of the goods purchased. The advance payments are calculated without the council surtax of 10%. For persons subject to corporate income tax, advance payments are creditable against their future monthly tax installments or minimum tax.

Corporations may apply for various categories of priority status and corresponding tax exemptions. The priority status varies depending on the nature of the project and the level of investments.

Investment incentives. The law of 18 April 2013 introduced investment incentives, which are summarized below.

Installation phase. Incentives that are available during the installation phase (five years after the issuance of the approval) include exemption from registration duties, transfer duties, customs duties and value-added tax for certain items.

Operational phase. Incentives available during the operational phase (10 years for all companies qualifying for the incentives) include exemptions or reductions with respect to minimum tax, corporate tax, customs duties on certain items and other specified taxes and fees.

In addition, companies may carry forward losses to the fifth year following the year in which the losses are incurred.

Capital gains. Capital gains are taxed at a rate of 16.5%, subject to tax treaties. Capital gains include gains on the sale of real estate, corporate shares and business assets. Capital gains on the sale of real estate are taxed at a rate of 5%. However, the tax on capital gains can be deferred or eliminated in the event of a merger.

Capital gains realized in Cameroon or abroad from the direct or indirect transfer of stocks, bonds and other capital shares of enterprises located in Cameroon are subject to tax.

If the business is totally or partially transferred or discontinued (such as in the event of a merger, liquidation or sale of the business), only one-half of the net capital gains is taxed if the event occurs less than five years after the startup or purchase of the business, and only one-third of the gains is taxed if the event occurs five years or more after the business is begun or purchased.

Capital gains realized on the Cameroonian stock market are exempt from corporate income tax and the tax on movable capital. However, under the 2014 Financial Law, capital gains realized in Cameroon or abroad that are derived from the direct or indirect sale of shares by an individual or corporate entity holding an exploitation or exploration permit for natural resources extracted from the Cameroonian subsoil are subject to income tax on the gains.

Administration. The fiscal year runs from 1 January to 31 December. However, companies that started operating during the six-month period before the prescribed closing date can report their first results at the end of the fiscal year following the fiscal year in which they began activities.

Corporate income tax must be paid by the deadline for filing the tax return. Companies must file their income tax return by 15 March of the year following the fiscal year.

Nonprofit organizations carrying out commercial activities are subject to the same filing obligations under the same conditions as other taxpayers.

Enterprises falling under a specialized management unit are required to transmit their annual tax returns electronically through the computer system set up by the tax administration. The late filing of a nil monthly or annual return or a return with credit after an official warning is subject to a fixed fine of XAF1 million. Without prejudice to other penalties provided for in the Manual of Tax Procedures, the late filing of the annual tax return is subject to the following non-discountable fixed fines:

- XAF5 million for taxpayers falling under the large taxpayers' unit
- XAF1 million for taxpayers falling under the medium-sized taxpayers' unit
- XAF250,000 for taxpayers falling under divisional tax centers

Late returns are subject to interest of 1.5% of the tax due per month of delay. In addition, late payments are subject to a penalty of 10% per month of delay, up to a maximum of 30% of the tax due, and to the following non-discountable fixed fines:

- XAF500,000 for taxes amounting from 0 to XAF5 million
- XAF2 million for taxes amounting from XAF5 million to XAF25 million
- XAF5 million for taxes amounting from XAF25 million to XAF50 million
- XAF10 million for taxes of more than XAF50 million

As of 1 January 2019, any natural or legal person regularly engaged in the audit of the accounts or the tax review of a public or private entity must communicate a report of its work to the tax administration, no later than the 15th of the month following the

end of its duty. A failure to satisfy this requirement is subject to payment of a fixed fine of up to XAF50 million.

The tax administration is authorized to implement a special transaction procedure for tax receivables issued before 31 December 2018. This special transaction procedure runs from 1 January 2020 to 31 December 2020 and is carried out according to the conditions provided for by the 2020 Financial Law.

The minimum tax is paid in accordance with the same rules applicable to the payment of corporate income tax. Manufacturers, farmers, wholesalers, retail-wholesalers, forestry operators, petrol station owners and exporters must pay to the tax authorities the advance payment of tax on purchases by the 15th day of the month following the month of the purchase (for further details regarding advance payments, see *Tax rates*).

Dividends. Dividends paid to residents in Cameroon are subject to a 16.5% withholding tax (15% plus the 10% council surtax). Resident recipients must include the gross dividend in taxable income, but they receive a corresponding 16.5% tax credit to prevent double taxation. Dividends paid to nonresidents are subject to a 16.5% withholding tax, which is a final tax.

A parent corporation may exclude up to 90% of the dividends received from a 25%-owned subsidiary if the parent company and the subsidiary have their registered office in a Central African Economic and Monetary Community (CEMAC) country (Cameroon, Central African Republic, Chad, Congo [Republic of], Equatorial Guinea and Gabon). In this case, however, no withholding tax credit is allowed. Instead, the tax can be offset against any withholding tax due on its own dividend distributions.

Foreign tax relief. In general, foreign tax credits are not allowed; income of residents and nonresidents subject to foreign tax that is not exempt from Cameroonian tax under the territoriality principle is taxable, net of the foreign tax. The French tax treaty, however, provides a tax credit that corresponds to withholding tax on passive income.

C. Determination of trading income

General. Taxable income is based on financial statements prepared according to generally accepted accounting principles and the OHADA standard statements.

Business expenses are generally deductible unless specifically excluded by law or by the provisions of an international convention. Expenses that are not deductible include the following:

- Head office overhead, research costs and technical, financial and administrative assistance fees paid to residents or nonresidents that exceed any of the following:
 - 2.5% of taxable profits for ordinary law companies before their deduction
 - 1% of turnover for public works projects
 - 5% of turnover for design and engineering services
- Royalties from patents, brands, models or designs paid to a non-CEMAC corporation participating directly or indirectly in the management of, or owning shares in, the Cameroonian

- corporation are the deductible up to an overall limit of 2.5% of taxable income before the deduction of the expenses.
- Rent expense for movable equipment paid to a shareholder that manages the company in fact or by right and holds, directly or indirectly, more than 10% of the capital.
 - Losses related to bad debts that do not comply with the enforcement measures provided in the OHADA Uniform Act relating to the organization of simplified procedures for collection and enforcement. However, the 2022 Financial Law provides that losses relating to bad debts of less than XAF500,000 that have been provisioned over a minimum period of five years are automatically admitted as a deduction, without it being necessary to prove that the amicable or forced recovery procedures provided by the regulations in force have been exhausted.
 - Losses related to damages that have not been duly noted and validated in the presence of a tax agent having at least the rank of controller.
 - Losses related to damages and breakages exceeding the flat rate of 0.5% of the overall production volume, incurred by companies in the brewing sector.
 - Losses resulting from misappropriation by a shareholder or manager of the company, or losses attributable to the negligence of management.
 - Liberalities, gifts and subsidies exceeding 0.5% of the turnover of research, philanthropic, development, educational, sports, scientific, social and family institutions or bodies.
 - Gifts and subsidies exceeding 5% of turnover of clubs participating in official national competitions and the bodies in charge of organizing these competitions.
 - Interest paid to shareholders in excess of the central bank annual rate plus two points, if (as provided by the 2021 Financial Law) the following conditions are not satisfied:
 - Existence of a written and duly registered loan agreement
 - Full payment of the subscribed share capital
 - Under the 2014 Financial Law, the deductibility of interest paid to shareholders owning directly or indirectly at least 25% of the capital or voting rights of the company is subject to the following two cumulative conditions:
 - Interest paid may not exceed one and one-half of the amount of real capital for all shareholders.
 - Interest paid to such affiliates may not exceed 25% of the income before income tax and deduction of such interest and depreciation.
 - Commissions and brokerage fees for services on behalf of companies located in Cameroon that exceed 5% of purchased imports and sales of exports.
 - Remuneration granted to wage earners that are excessive in comparison to the services rendered and that do not correspond to effective work and conventional norms.
 - Amounts set aside for self-insurance.
 - Certain specific charges (such as contributions other than those for retirement paid to a foreign social security organization, which are deductible up to a limit of 15%, and premium insurance paid to companies located in Cameroon for employees' retirement indemnities), gifts, subsidies and penalties (to some extent).

- Expenses paid in cash of XAF500,000 or more. The XAF500,000 limit is assessed with respect to the total amount of specific expenses recorded in the expenditures account. Accordingly, splitting an expense worth XAF500,000 into two equal parts of XAF250,000 each and paying them in cash does not result in the deductibility of the expenses. Under the 2014 Financial Law, all reimbursements of loan advances to shareholders paid in cash are treated as dividends and are accordingly subject to dividend withholding tax.
- Expenses paid to local suppliers without reference to a Cameroonian tax identification number and without an invoice that complies with the standard requirements for the deductibility of expenses.
- Remuneration paid to liberal professionals in violation of the regulations governing their respective professions.
- Expenses for services and certain purchases paid to natural persons or nonresident legal entities established in territories or states considered to be tax havens.
- Expenses paid to affiliated companies established in Cameroon, especially when the affiliated companies benefit from a special tax regime.
- Disbursements from tax havens invoiced to local companies by other companies located in or outside tax havens.

Inventories. Inventory is normally valued at the acquisition cost or at the lower of cost or market value. Cost must be determined on a weighted average cost-price method. The first-in, first-out (FIFO) method is also generally acceptable.

Provisions. In determining accounting profit, companies must establish certain provisions, such as a provision for a risk of loss or for certain expenses. These provisions are normally deductible for tax purposes if they provide for clearly specified losses or expenses that are probably going to occur and if they appear in the financial statements and in a specific statement in the tax return.

The 2020 Financial Law provides that in addition to the general conditions for the deductibility of provisions mentioned above, provisions for doubtful receivables must satisfy the following conditions:

- They must be constituted on receivables entered on the assets side of the balance sheet and not covered by real guarantees.
- They have given rise against the debtor the implementation of the means of amicable or forced recovery provided for by the OHADA Uniform Act on the organization of simplified recovery procedures and means of execution.

Insurance companies may deduct technical provisions provided by the Conférence Interafricaine des Marchés d'Assurance (CIMA) Code.

Capital allowances. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at rates specified by the tax law. The 2022 Financial Law states that depreciation rates specific to certain sectors of activity may be fixed by a special

joint text of the ministers in charge of finance and the sector concerned. Small equipment and other items that have a value not exceeding XAF500,000 without tax are directly accounted for as charges and considered deductible expenses.

Legal revaluation of fixed assets. The 2011 Financial Law established a regime for the legal revaluation of tangible and intangible fixed assets, regardless of whether the assets are depreciable. The revaluation must occur by 31 December 2013. The capital gain resulting from revaluation is subject to a withholding tax at a rate of 5%. This is a final tax. The 5% withholding tax is not due if the amount of the capital gain is reinvested within two financial years.

Relief for tax losses. Losses may be carried forward for four years. Losses attributable to depreciation can be carried forward for a period of 10 years. They must be charged as of the first profitable year. Losses may not be carried back.

Groups of companies. The Cameroonian tax law does not provide for the fiscal integration of Cameroonian companies equivalent to a consolidated filing position.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on transactions carried out in Cameroon; certain transactions are exempt	
Standard rate	19.25
Exports	0
Business license; rate varies depending on the amount of turnover	Various
Radio-television tax, equal to the business license; payable by companies subject to the business license	Various
Registration duties, on transfers of real property or businesses	1 to 15
Payroll taxes, paid by employer	2.5
Social security contributions on an employee's annual gross salary, limited annually to XAF9,000,000, with a minimum of XAF750,000 per month	
Family allowances, paid by employer	3.7 to 7
Old age, disability and survivor's pension; paid by	
Employer	4.2
Employee	4.2
Social security contributions on an employee's annual gross salary for job-related accidents and diseases; paid by employer	1.75 to 5
Tax on money transfers	0.2

E. Miscellaneous matters

Foreign-exchange controls. Exchange-control regulations exist in Cameroon for financial transfers outside the franc zone, which is the monetary zone including France and Monaco. A CEMAC

rule (No. 02/18/CEMAC/UMAC/CM, dated 21 December 2018) applies to all of the CEMAC countries.

Transfer pricing. In 2020, the 2020 Financial Law reorganized the provisions of Article M19 bis (now “Article M19 bis (new)”) in Book II of the General Tax Code on Manual of Tax Procedures.

Companies with annual turnover excluding tax that is equal to or greater than XAF1 billion and that are under the control of or control other companies are required to present to the tax administration agents, on the date of the commencement of the accounting audit, documentation enabling them to justify the transfer-pricing policy practiced in the context of transactions of all kinds carried out with related companies. The content of the documentation relating to transfer pricing, which does not replace the supporting documents relating to each transaction, will be determined by a specific text (which has yet been published).

If the required documentation is not provided to tax officials or is only partially provided on the date the audit begins, the tax administration sends the company concerned a notice to produce or complete it within 15 days, specifying the nature of the documents and additions expected. This formal notice must indicate the sanctions applicable in the absence of a response or in the event of a partial response.

Failure to respond or partial response to the formal notice mentioned above results in the application, for each audited financial year, of a fine of 5% of the amount of the transactions related to the documents or supplements that have not been made available to the administration after formal notice. The amount of the fine, which applies per transaction, cannot be less than XAF50 million.

Under the 2020 Financial Law, companies that belong to the large taxpayers’ unit and that are under the dependency of other companies or control other companies are required to deposit an annual declaration on transfer pricing by electronic means no later than 15 March. This declaration notably includes general information on the group of associated companies and specific information concerning the reporting company. The declaration should be done according to a model to be established by the tax administration. However, the model has not yet been communicated to taxpayers.

The 2020 Financial Law provides that dependency or control links are deemed to exist between two companies if either of the following circumstances exist:

- One directly or through an intermediary holds 25% of the other’s share capital or in fact exercises decision-making power in the other company.
- They are both placed, according to the conditions mentioned above, under the control of the same company or the same person.

F. Treaty withholding tax rates

	Dividends %	Interest %	Royalties %
Canada	5/10/20 (a)	7/20 (b)	10/20 (c)
Central African Republic	5/10 (e)	10 (d)	10 (d)
Chad	5/10 (e)	10 (d)	10 (d)

Non-treaty jurisdictions	16.5	0/16.5 (j)	15

- (a) The 5% and 10% rates apply to payments from a Cameroonian source. The rate for payments from a Cameroonian source should in principle be 15%. However, by virtue of a most-favored-nation clause, the rate is reduced to 5% if the beneficial owner is a company that holds at least 25% of the capital of the company paying the dividends and 10% in all other cases. The wording of the most-favored-nation clause states that any lower rate shall be applied automatically, but only to payments that a resident of Canada receives from a resident of Cameroon. Under the CEMAC tax treaty, the qualifying dividend and general rates are 5% and 10% respectively. The 20% rate applies to payments from a Canadian source.
- (b) The 7% rate applies to payments from a Cameroonian source. The rate for payments from a Cameroonian source should in principle be 15%. However, by virtue of a most-favored-nation clause, the rate is reduced to 7%. The wording of the most-favored-nation clause states that any lower rate shall be applied automatically but only applies to payments that a resident of Canada receives from a resident of Cameroon. Under the Cameroon-United Arab Emirates tax treaty, the rate is 10%. The 20% rate applies to payments from a Canadian source.
- (c) The 10% rate applies to payments from a Cameroonian source. The rate for payments from a Cameroonian source should in principle be 15%. However, by virtue of a most-favored-nation clause, the rate is reduced to 10%. The wording of the most-favored-nation clause states that any lower rate shall be applied automatically but only applies to payments that a resident of Canada receives from a resident of Cameroon. Under the Cameroon-South Africa tax treaty, the rate is 10%. The 20% rate applies to payments from a Canadian source.
- (d) The 10% rate applies to the gross amount of the payments.
- (e) The 5% rate applies if the beneficial owner is a company that holds at least 25% of the capital of the company paying the dividends.
- (f) If from a Cameroonian source, the payments are subject to withholding tax under Cameroonian domestic tax law. See Section A.
- (g) The 7.5% rate applies to payments for financial services, accounting services and technical assistance. The 15% rate applies to other royalties.
- (h) The 10% rate applies if the beneficial owner is a company that holds at least 25% of the capital of the company paying the dividends.
- (i) Interest arising in a contracting state and paid to the government or the central bank of the other contracting state is exempt.
- (j) See footnote (e) to Section A.
- (k) The 10% rate applies to the gross amount of the dividends. However, no withholding tax is applicable to dividends paid by a Cameroonian company if the beneficial owner of the dividends in United Arab Emirates is one of the following:
- Federal or local governments, a political subdivision or a local authority
 - The following entities as long as they are wholly owned by the federal or local governments of the United Arab Emirates:
 - Central Bank of the United Arab Emirates
 - The Abu Dhabi Investment Authority

- The Abu Dhabi Investment Council
- Mubadala
- ICD
- United Arab Emirates Investment Authority
- IPIC
- Any other institution wholly owned or that held at least more than 50% of the capital of such institution by the government, a political subdivision, local authority or local government
- (l) The 7% rate applies to the gross amount of the interest. However, no withholding tax is applicable on interest paid by a Cameroonian company if the beneficial owner of the interest in United Arab Emirates is one of the following:
 - Federal or local governments, a political subdivision or a local authority
 - The following entities as long as they are wholly owned by the federal or local governments of the United Arab Emirates:
 - Central Bank of the United Arab Emirates
 - The Abu Dhabi Investment Authority
 - The Abu Dhabi Investment Council
 - Mubadala
 - ICD
 - United Arab Emirates Investment Authority
 - IPIC
 - Any other institution wholly owned or that held at least more than 50% of the capital of such institution by the government, a political subdivision, local authority or local government

A. At a glance

Federal Corporate Income Tax Rate (%)	15 (a)
Federal Capital Gains Tax Rate (%)	7.5 (a)(b)
Branch Tax Rate (%)	15 (a)
Withholding Tax (%)	
Dividends	25 (c)
Interest	0/25 (d)
Royalties from Patents, Know-how, etc.	25 (c)
Branch Remittance Tax	25 (e)
Net Operating Losses (Years)	
Carryback	3
Carryforward	20

- (a) These 2022 rates are applied to general income that is not eligible for the manufacturing and processing deduction or the small business deduction. The calculation of the rate is discussed in Section B. Additional tax is levied by the provinces and territories of Canada, and the combined federal and provincial or territorial rates on general income may vary from approximately 23% to 31%.
- (b) 50% of capital gains is subject to tax.
- (c) Final tax applicable only to nonresidents. This rate may be reduced by a tax treaty (see Section F).
- (d) In general, no withholding tax is imposed on interest paid to payees who are dealing at arm's length with the payer. However, withholding tax at a rate of 25% typically applies to interest paid or credited to related nonresidents (the rate may be reduced by a tax treaty). Other specific exemptions or specific inclusions may apply to change the general rules noted above.
- (e) This tax is imposed in addition to the regular corporate branch tax rate. For details, see Section B. The rate may be reduced by a tax treaty.

B. Taxes on corporate income and gains

Corporate income tax. Corporations resident in Canada (whether owned by Canadians or nonresidents) are taxed on their worldwide income from all sources, including income from business or property and net taxable capital gains. Nonresident corporations are taxed only on certain Canadian-source income. In general, a corporation is deemed to be resident in Canada if it is incorporated in Canada or has its central management and control located there.

If a tax treaty exists between Canada and the country in which a nonresident corporation is resident, the determination of whether a nonresident is taxable in Canada may be restricted or modified, and lower rates may apply. In general, Canada's tax treaties provide that a nonresident that is resident in a treaty country is subject to Canadian tax on income derived from carrying on business in Canada only if the nonresident has a Canadian permanent establishment.

Rates of income tax. Corporations are taxed by the federal government and by one or more provinces or territories. The basic rate of federal corporate tax for 2022 is 38%, but it is reduced to 15% by an abatement of 10 percentage points on a corporation's taxable income earned in a province or territory and a general rate reduction of 13 percentage points on a corporation's full-rate taxable income. Provincial and territorial tax rates are added to the federal tax and generally vary between 8% and 16% of taxable income.

The federal government and the provincial and territorial governments may apply lower rates of tax to active small business earnings and earnings derived from manufacturing and processing.

Nonresident corporations carrying on business in Canada through a branch are taxable at the full corporate branch tax rate plus applicable provincial tax rate on their net-business income earned in Canada, and they must pay an additional tax (branch tax) of 25% on their after-tax income, subject to an allowance for investment in Canadian property. This branch tax may be reduced by treaty.

Capital gains and losses. The taxable portion of capital gains and the deductible portion of capital losses is 50%. See Section E for details concerning the taxation of capital gains of nonresidents.

The deductible portion of capital losses (other than allowable business investment losses) in excess of taxable capital gains is termed “net capital loss” and may be carried back three years and carried forward indefinitely, but may be applied only against taxable capital gains.

Proceeds from the disposition of capital property that exceed the tax cost of such property are generally taxed as capital gains. For depreciable property, tax depreciation previously claimed that is recovered on disposition is generally fully included in income.

If control of a corporation is acquired by a person or group of persons, net capital losses incurred before the change of control cannot be deducted in a year after the acquisition of control. Also, the carryback of capital losses to years prior to such change of control is prohibited. A flow through of net capital losses is provided for on certain amalgamations and liquidations.

If a sale of what might otherwise be capital property is regarded as a sale in the course of a taxpayer’s business (such as dealers in real estate, securities or art) or as an adventure in the nature of trade, any resulting gain or loss is fully taxable or deductible.

Administration. A corporation’s tax year usually ends on the same date as the financial statement year-end. If an acquisition of control occurs, the corporation is deemed to have a tax year ending immediately before the acquisition of control.

Corporate income tax returns are required to be filed within six months following a corporation’s tax year-end. Subject to certain exceptions, nonresident corporations must file a Canadian income tax return if they carry on business in Canada or dispose of taxable Canadian property during the tax year. Nonresident corporations claiming relief from Canadian tax under a tax treaty with another country must disclose detailed information regarding their activities in Canada.

A penalty is levied on returns that are filed late, equal to 5% of the unpaid tax at the required filing date, plus an additional 1% per month (not exceeding 12 months) of such unpaid tax for each month that the return remains unfiled. Repeat offenders may be liable for additional penalties. Nonresident corporations that are required to file Canadian tax returns may be subject to another penalty of up to CAD2,500 even if no tax is payable.

Federal and provincial corporate tax installments must be made monthly during the corporation's tax year. The remaining balance of taxes owed must be paid by the end of the second month following the tax year-end (third month for Canadian-controlled private corporations that carry on an active business and claim a small business deduction).

Interest is charged on late or deficient tax payments based on the prescribed rate. The prescribed rate can vary each quarter. A penalty may apply to late or deficient tax installments.

Dividends. In general, dividends received by one Canadian corporation from another Canadian corporation are fully deductible. However, to prevent the use of private companies to obtain significant tax deferrals on portfolio dividend income, such corporations are subject to a special 38½% refundable tax on dividends received from portfolio investments. Additional taxes may be imposed on dividends paid on certain preference-type shares.

Dividends paid by a Canadian corporation to a Canadian resident individual are generally taxable, but the individual also receives a tax credit because the income has already been taxed within the corporation. A dividend received from a nonresident corporation that is a foreign affiliate of a Canadian taxpayer may be exempt from tax (see Section E).

Foreign tax relief. In general, taxpayers resident in Canada may deduct from their Canadian tax liability a credit for income or profits tax and for withholding tax paid to another country. The foreign tax credit is calculated separately for foreign business tax and foreign nonbusiness tax on a country-by-country basis.

If a Canadian corporation receives dividends from a foreign affiliate, the normal foreign tax credits are replaced by either a complete or partial deduction for such dividends (see Section E).

C. Determination of taxable income

General. Taxable profits are computed in accordance with generally accepted commercial principles, modified by certain statutory provisions in the Canadian Income Tax Act.

In general, only 50% of meal and entertainment expenses is deductible for income tax purposes.

Inventories. For tax purposes, inventories may be valued at the lower of cost or fair market value. The last-in, first-out (LIFO) basis is not permitted for tax purposes, despite its acceptability for accounting purposes in certain instances. Corporations may use a different inventory valuation method for tax purposes than the one used for accounting purposes.

Provisions. In general, provisions, such as warranty reserves, are not deductible for income tax purposes. Only actual expenses incurred are tax-deductible.

Depreciation and amortization. Depreciation or amortization included in the financial statements is added back, and tax depreciation, generally calculated on a declining-balance basis at prescribed rates, beginning when the asset is available for use, is deducted for tax purposes. The deduction is generally limited in

the first year the asset is available for use. Tax depreciation may be fully or partially claimed at the taxpayer's discretion.

The following are the depreciation rates under the declining-balance method for major categories of assets.

Asset	Rate (%)
Commercial and industrial buildings	4 (a)
Computers	55
Office equipment	20
Motor vehicles	30
Machinery and equipment	20 (b)

(a) Certain eligible nonresidential buildings may qualify for a rate of 6% or 10% (election required).

(b) For machinery and equipment used primarily in manufacturing and processing, the rate is generally 30%. A straight-line rate of 50% applies if the machinery and equipment is acquired after 18 March 2007 and before 2016.

Certain temporary tax measures provide for an enhanced first-year depreciation claim with respect to capital property of a taxpayer (for example, accelerated investment incentive property). These temporary measures apply to certain depreciable capital assets acquired after 20 November 2018 that become available for use before 2028.

Depreciable capital assets are generally pooled into various classes, but, in certain cases, a corporation may elect to include individual pieces of certain types of equipment in separate classes. In general, if an asset is disposed of, the balance of the assets in the class is reduced by the proceeds from the disposition. However, if the proceeds from the disposition of an asset exceed the tax value of the class after depreciation, the excess is recaptured and is subject to tax at the regular corporate tax rates. If the asset is the only asset in the class and if a balance remains after the proceeds of disposition are charged to the class, the balance may be deducted as a terminal loss, subject to certain loss denial rules.

Groups of companies. Canada does not allow consolidated tax reporting for related companies and does not provide relief for group losses.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Goods and Services Tax (GST), a value-added tax, applies to a broad range of goods and services	5
Harmonized Sales Tax, a value-added tax, applies to a broad range of goods and services in certain provinces	Up to 15
Part VI tax on financial institutions, effectively a minimum tax, which is reduced by income taxes paid; applies on a non-consolidated basis to capital in excess of CAD1 billion	1.25

Nature of tax	Rate (%)
Provincial/territorial income taxes, on taxable income allocated to jurisdictions in which corporations have permanent establishments (lower rates may apply to manufacturing or processing earnings and active small business earnings)	8 to 16
Provincial payroll taxes; varies by province; paid by employers	Up to 4.3
Canada Pension Plan, on pensionable earnings between CAD3,500 and CAD64,900 (amounts in effect for 2022)	
Employer	5.7
Employee	5.7
Self-employed individual	11.4
(The Province of Quebec offers a similar plan for residents of Quebec.)	
Employment Insurance, on insurable earnings up to a maximum of CAD60,300 (amount in effect for 2022)	
Employee	1.58
Employer (1.4 times the employee rate)	2.21
(Employment Insurance premiums for residents of the Province of Quebec are reduced, because residents of Quebec also must pay premiums for Quebec Parental Insurance. The aggregate amount for both is similar to the total Employment Insurance premiums computed with respect to persons resident outside Quebec.)	

E. Miscellaneous matters

Foreign-exchange controls. Canada does not impose foreign-exchange control restrictions.

Debt-to-equity rules. Canada imposes a thin-capitalization rule limiting the ability of nonresidents to withdraw profits through deductible interest charges. These rules apply to Canadian resident and nonresident corporations and trusts. The thin-capitalization rules may also apply to certain back-to-back (BTB) loan arrangements that would otherwise circumvent the application of the thin-capitalization rules. Special rules apply to partnerships to attribute the debts, activities and property of the partnership to its members.

In general, these rules restrict the deductibility of interest paid or payable by a corporation or trust to a specified nonresident shareholder or beneficiary (or to a nonresident person who does not deal at arm's length with a specified shareholder) on debts exceeding 1.5 times the "equity amount" of such corporation or trust. A specified shareholder is a shareholder who, either alone or together with persons with whom the shareholder does not deal at arm's length, owns shares that satisfy either of the following conditions:

- They give the shareholder 25% or more of the votes that could be cast at an annual meeting of shareholders.
- They have a fair market value representing 25% or more of the fair market value of all of the issued and outstanding shares of the corporation.

Interest paid or payable to a non-arm's-length person and deducted by a Canadian resident or nonresident corporation or trust is also subject to Canada's transfer-pricing rules, which require the terms and conditions made or imposed with respect of the loan be similar to those that would have been made between persons dealing at arm's length.

In general, the BTB rules apply to arrangements whereby a non-resident corporation (parent), or a person related to the parent, of a corporation resident in Canada (Canco) grants a loan (intermediary debt) or a specified right in a particular property (specified right) to an intermediary and the intermediary debt and/or specified right is "connected to" a debt owed by Canco to the intermediary (primary debt), provided that the amount of the intermediary debt and/or fair market value of the property subject to the specified right is not less than 25% of the amount of the primary debt. When applicable, the BTB rules deem the primary debt to be a debt between Canco and the parent for thin-capitalization purposes. The rules also deem interest payments from Canco to the intermediary to be interest payments from Canco to the parent.

The BTB rules also apply to royalties and similar payments.

Foreign affiliates. A nonresident corporation is considered a foreign affiliate of a Canadian corporation if the Canadian corporation directly or indirectly owns at least 1% of any class of shares of the nonresident corporation and if the Canadian corporation and related persons directly or indirectly own together at least 10% of any class of shares of that nonresident corporation. Dividends received by a Canadian corporation from a foreign affiliate are fully deductible in Canada if the dividends are derived from active business profits earned in a country with which Canada has entered into a tax treaty or a Tax Information Exchange Agreement (TIEA). Dividends are taxable in Canada if they are derived from passive operations (with certain exceptions) or any operations in a non-treaty or non-TIEA country, with relief for foreign tax on such income.

Foreign affiliate dumping rules. Rules, commonly known as the "foreign affiliate dumping (FAD) rules," are aimed at "surplus stripping" on the part of a corporation resident in Canada (CRIC) that is controlled by a nonresident corporation. The FAD rules broadly apply to certain investments in foreign affiliates. They apply to an "investment" in a nonresident corporation (a "subject corporation") by a CRIC if the following two conditions are met:

- The subject corporation must be a foreign affiliate of the CRIC or a foreign affiliate of another corporation resident in Canada that deals at non-arm's length with the CRIC immediately after the investment is made.
- The CRIC must be controlled by a nonresident corporation (parent) at the time the investment is made.

The concept of "investment" is broadly defined and includes equity and debt investments in foreign affiliates, as well as the acquisition of shares of another corporation resident in Canada if the fair market value of all of the foreign shares owned directly or indirectly by the Canadian corporation comprises more than 75% of the total fair market value of all the properties owned by the Canadian corporation.

If applicable, the FAD rules deem dividends to have been paid to the parent by the CRIC or will cause the paid-up capital (PUC) of the shares of the CRIC to be reduced. The rules also contain certain provisions to reduce PUC instead of triggering a deemed dividend, as well as a PUC reinstatement rule if the shares of the subject corporation (or substituted property) are later distributed (or sold) by the CRIC.

Certain exemptions limit the application of the FAD rules. For example, the rules do not apply if, broadly speaking, the business activities of the CRIC are more “closely connected” to the subject corporation than the business activities carried on by any related nonresident corporation, and if officers of the CRIC have and exercise the principal decision-making authority with respect to the investment. In addition, for the exception to apply, additional conditions need to be met regarding the officers of the CRIC. In particular, these conditions require that the officers be residents of Canada and that they work principally in Canada. In addition, the rules do not apply to certain internal reorganizations. The rules also do not apply if the debt owed by the foreign affiliate is a pertinent loan or indebtedness (PLOI). To qualify as a PLOI, the CRIC and the parent need to jointly elect to treat the debt obligation as a PLOI. In addition, the PLOI needs to generate a minimum amount of income for the CRIC in Canada (namely, interest computed based on the current government of Canada three-month Treasury bill rate plus 4%).

On 19 March 2019, the Finance Minister issued the annual Federal Budget for 2019/2020. This budget introduced measures to expand the above foreign affiliate dumping rules to apply to a corporation resident in Canada that is controlled by a nonresident individual, a nonresident trust or a group of non-arm’s-length persons that includes any combination of nonresident corporations, nonresident individuals and nonresident trusts. These measures will apply to transactions or events that occur on or after 19 March 2019. On 30 July 2019, Canada’s Department of Finance released for public comment draft legislative proposals for this measure. At the time of writing, the above measures had not yet been enacted.

In view of the complex nature of the rules, taxpayers are advised to reach out to their tax advisor to determine whether they could be affected by the rules.

Passive income of controlled foreign affiliates. Any Canadian taxpayer that controls (as defined) a foreign affiliate is taxed on its share of that entity’s passive investment income (with certain exceptions) in the year such income is earned, regardless of whether such income is currently paid to the shareholder, except in certain specified circumstances. In addition, any taxpayer is taxed on its shares of any other type of income if the income is earned through a permanent establishment located in a non-treaty or non-TIEA country (except a country with which Canada has entered into negotiations for a TIEA or has sought to enter into such negotiations within the last 60 months).

Upstream loans from foreign affiliates. The upstream loan rules are essentially anti-avoidance measures that are intended to prevent taxpayers from making synthetic dividend distributions from

foreign affiliates to avoid what would otherwise be an income inclusion in Canada that would not be fully offset by a corresponding dividends-received deduction as described in *Foreign affiliates*.

The rules have a very broad application. In general, Canadian taxpayers may be required to include in their income a portion of the principal amount (referred to as the “specified amount”) of loans made to them by their foreign affiliates. In addition, Canadian taxpayers may be required to include in their income a portion of the principal amount of loans made by their foreign affiliates to certain non-arm’s-length persons (other than controlled foreign affiliates that are effectively Canadian controlled). If loans are made to other foreign affiliates, taxpayers may be required to include in their income the portion of such loans to the extent that the taxpayer’s surplus entitlement percentage (SEP) in the creditor affiliate exceeds its SEP in the borrowing affiliate. Accordingly, a loan from one foreign affiliate to another foreign affiliate that is not a Canadian controlled foreign affiliate results in an income inclusion only to the extent that the taxpayer has a lower SEP in the borrowing affiliate than in the creditor affiliate.

Similar to the domestic shareholder loan rule, exceptions exist for indebtedness repaid within two years after the date on which the indebtedness arose, provided that the repayment is not part of a series of loans or other transactions and repayments, and for indebtedness arising in the ordinary course of business of the creditor. The rules contain further transitional relief with respect to indebtedness that existed before 19 August 2011, which essentially extends the effective date of the rules with respect to such indebtedness to 19 August 2016 (because any 19 August 2011 indebtedness still outstanding at 19 August 2014 is deemed to have arisen on 19 August 2014, thereby extending the two-year period to 19 August 2016).

Upstream loan continuity rules apply to reorganizations of corporations or partnerships. These continuity rules apply to transactions and events that occur on or after 16 September 2016. However, it is possible to elect to have the rules apply as of 20 August 2011.

The income inclusion arising under the upstream loan rule may essentially be offset in whole or in part by a deduction if the taxpayer demonstrates that a hypothetical dividend paid the year the loan is made would have enjoyed a full deduction from the income of the Canadian taxpayer with respect to the exempt surplus and/or taxable (and hybrid) surplus of a foreign affiliate of the taxpayer. In addition, the rules provide for a deduction equal to amounts previously included in income in the year that the loan is eventually repaid. The rules also extend the application of the reserve mechanism in certain circumstances to include a deduction for pre-acquisition surplus dividends (essentially equivalent to returns of tax basis), but only to the extent of the taxpayer’s Canadian tax basis in the shares of the top-tier foreign affiliate. However, this particular deduction is not available if the borrower under the relevant loan is a nonresident person with whom the taxpayer does not deal at arm’s length, which for example, includes a foreign parent or sister company. As a result,

this deduction is normally only available regarding upstream loans from the foreign affiliate to the Canadian taxpayer.

Cross-border cash redeployment and pooling using PLOI. As noted in *Foreign affiliate dumping rules*, the FAD rules include an elective exception for certain foreign affiliate indebtedness (a pertinent loan or indebtedness [PLOI]). Under a similar exception to the shareholder loan rules, loans are allowed to be made without triggering deemed dividends and withholding taxes, if they result in interest income inclusions at the higher of the prescribed rate (the prescribed rate for PLOI is equal to the three-month government of Canada treasury bill rate plus 4%) and essentially, any funding costs incurred by the CRIC to make the loan. The rules are relevant to all CRICs that are part of a foreign-based multinational group, not only to CRICs having foreign affiliates. In many cases, these proposals should facilitate commercially efficient and tax-neutral cross-border redeployments and pooling of cash among members of foreign-based multinational groups that include CRICs.

BTB rules and interest payments. As discussed in *Debt-to-equity rules*, the BTB rules apply to interest, royalties and similar payments between a person resident in Canada (Canco) and an intermediary if the following conditions are met:

- A nonresident (parent) grants a loan (intermediary debt) or a specified right with respect to a particular property (specified right) to the intermediary.
- The intermediary debt or specified right is “connected to” an outstanding debt owed by Canco.
- The amount of intermediary debt and/or fair market value of the property subject to the specified right is not less than 25% of the amount of primary debt.
- The amount of withholding tax payable by Canco is less than the amount of withholding tax that would have been payable had the interest payment been made to the parent rather than the intermediary.

If the above conditions are met, the rules will generally deem the interest payments to have been made to the parent rather than to the intermediary. In addition, specific rules will apply for determining the amount of interest deemed to have been paid to the parent.

Corporate reorganizations. In general, transactions between related corporations must be recognized at fair market value. However, certain common types of domestic and foreign corporate reorganizations may be accomplished with little or no immediate Canadian tax cost.

Anti-avoidance legislation. The Canada Revenue Agency (CRA) may apply a general anti-avoidance rule to challenge transactions that it perceives to result in abusive tax avoidance. This rule does not apply to a transaction that may reasonably be considered to have been undertaken or arranged primarily for bona fide purposes other than to obtain a tax benefit. The application of the rule may cause certain transactions to be ignored or recharacterized.

Transfer pricing. Under Canada's transfer-pricing rules, acceptable transfer-pricing methods are those recommended by the Organisation for Economic Co-operation and Development (OECD). These methods include comparable uncontrolled price, resale price and cost-plus. Other methods may be used if the result obtained is similar to the result that would be obtained from an arm's-length transaction.

Following the OECD's Base Erosion and Profit Shifting (BEPS) project, a Country-by-Country Report will need to be filed in a prescribed form with the Minister of National Revenue by entities of multinational enterprises (more than EUR750 million in consolidated group revenue) for their fiscal years beginning in 2016 and future years.

Annual information reporting is required for related-party transactions on a T106 information return.

In general, the CRA has a high level of audit coverage on transfer pricing and frequently makes adjustments to taxpayers' pricing. Dispute resolution for transfer-pricing disputes is available domestically through the CRA Appeals Branch, or bilaterally through the Mutual Agreement Procedure under Canada's tax treaties. It is possible to enter into Advance Pricing Agreements with the CRA.

Acquisition of control considerations. If control of a corporation has been acquired, the target corporation is deemed to have a year-end immediately before the acquisition of control. A new tax year begins immediately thereafter, and a new year-end may be selected by the target corporation. If an acquisition of control occurs, special rules apply to the determination and treatment of capital losses, business losses, and certain tax attributes with respect to foreign affiliates.

Capital gains realized by nonresidents. Subject to applicable tax treaties, nonresidents must pay Canadian tax on their net taxable capital gains derived from the disposition of "taxable Canadian property" (TCP). Such property includes, but is not limited to, the following:

- Real or immovable property situated in Canada
- Shares of private corporations or interests in partnerships or trusts that, within the preceding 60 months at any particular time, derived more than 50% of their value from real or immovable property situated in Canada, Canadian resource property, timber resource property, an option with respect to any of the foregoing or any combination thereof
- Shares of Canadian public corporations (in limited circumstances)
- Property used in a business carried on by the nonresident in Canada
- Any option or interest in the above property

A nonresident vendor of TCP (other than property that qualifies as excluded property), a Canadian resource property or timber resource property must obtain a tax clearance certificate from the CRA. To obtain such certificate, the nonresident vendor must provide the CRA with acceptable security or must pay tax on the disposition at the time of sale. Excluded property includes,

among other items, property that is treaty-protected property of the vendor. In the case of a disposition between a purchaser and a seller not dealing at arm's length, for treaty-protected property to qualify as excluded property, a notice in a prescribed form must be sent to the CRA.

The purchaser must generally withhold and remit to the Receiver General up to 25% (50% in certain circumstances) of the amount by which the cost to the purchaser of the property (other than excluded property) exceeds the amount stipulated in the CRA clearance certificate on account of the nonresident's potential tax liability resulting from the disposition. In the absence of a clearance certificate, the purchaser must generally withhold and remit 25% of the purchase price (50% in certain circumstances). The withholding and remittance obligation is referred to as the "source deduction." Similar requirements apply for the province of Quebec.

The purchaser remains liable for any source deduction not made in the event it is later determined that the property disposed of does not qualify as excluded property, unless one of the safe harbor rules described below applies. The first safe harbor rule provides that a purchaser is not liable for any source deduction if the purchaser had no reason to believe that the vendor was not resident in Canada after reasonable inquiry. Similarly, a purchaser is not held liable for any source deduction if the property is acquired from a nonresident vendor and if all of the following conditions are satisfied:

- After reasonable inquiry, the purchaser concludes that the vendor is a resident of a country with which Canada has a tax treaty.
- The property is treaty-protected property of the vendor under the tax treaty with the particular treaty country.
- The purchaser sends a notice in a prescribed form to the CRA within 30 days after the acquisition, setting out the date of acquisition, the name and address of the nonresident vendor, a description of the property, the amount paid or payable by the purchaser of the property and the name of the particular treaty country.

In addition, the requirement for the nonresident vendor to file a Canadian tax return may be removed. In general, a nonresident vendor is exempt from filing a Canadian tax return with respect to taxable Canadian properties if the following criteria are satisfied:

- No Canadian "corporate income tax" is payable for the tax year.
- The nonresident is not currently liable to pay any Canadian tax with respect to any previous tax year.
- Each TCP that is disposed of during the year is "excluded property," which now includes treaty-exempt property in certain circumstances (see above) and property with respect to which the Minister of National Revenue has issued a nonresident clearance certificate.

Functional currency reporting. In general, all Canadian taxpayers are required to use the Canadian dollar as their reporting currency for tax purposes. However, a corporation may now elect to determine its "Canadian tax results" in a currency other than the Canadian dollar if the currency is a "qualifying currency" and if such currency is the primary currency in which the taxpayer

maintains its records and books of account for financial reporting purposes.

The currency is a “qualifying currency” if it is the US dollar, the euro, the British pound, the Australian dollar or a prescribed currency (there are currently no currencies prescribed by regulation).

F. Treaty withholding tax rates

As noted in Section A, in general, Canada’s domestic tax law provides exemptions from Canadian withholding tax on interest paid or credited to arm’s-length nonresident persons, regardless of their country of residence. In addition, withholding tax does not apply to interest that is considered “fully exempt interest,” regardless of the recipient’s relationship to the payer. “Fully exempt interest” generally includes the following:

- Interest paid by a government body or crown corporation
- Interest on a mortgage or hypothecary obligation with respect to real property located outside of Canada (certain conditions apply)
- Interest paid to a prescribed international institution or agency
- Deemed interest amounts pertaining to securities lending arrangements (certain conditions apply)

However, regardless of the above general rules, a 25% withholding tax applies to all “participating debt interest.” “Participating debt interest” is generally interest, other than fully exempt interest, which satisfies either of the following conditions:

- It is paid or payable on an obligation, other than a prescribed obligation, and all or any portion of the interest is contingent or dependent on the use of or production from property in Canada.
- It is computed by reference to revenue, profit, cash flow, commodity price or any other similar criterion or by reference to dividends paid or payable to shareholders of any class of shares of the capital stock of a corporation.

Similarly, withholding tax applies to the following:

- Interest that is not “fully exempt interest” and is paid or payable to a person with whom the payer is not dealing at arm’s length
- Interest with respect to a debt or other obligation to pay an amount to a person with whom the payer is not dealing at arm’s length
- Dividends, including dividends deemed to be paid on assessment of a transfer-pricing adjustment
- Rents, royalties or similar payments

Canada has enacted legislation to implement the Multilateral Convention to Implement Tax Treaty Related Measures to Prevent Base Erosion and Profit Shifting (MLI). The MLI entered into effect for any particular covered tax treaty in accordance with the provisions set forth in its “entry into effect” articles and applies to some of Canada’s tax treaties with effect as early as 1 January 2020.

The MLI does not operate to modify the application of Canada’s tax treaties at the same time. For the MLI to come into effect for a particular bilateral tax treaty, both Canada and the other party to the treaty must have listed the treaty and ratified the MLI. Further, the impact of the MLI on any particular tax treaty will

depend on the notifications and reservations made, as well as certain positions taken, by the parties to that treaty under the MLI.

The rates in the table below generally reflect the lower of the treaty rate and the rate under domestic tax law for dividends, interest and royalties paid from Canada to residents of various treaty jurisdictions. Certain exceptions or conditions may apply, depending on the terms of the particular treaty. The following table includes tax treaties currently in force and tax treaties that are signed but not yet in force.

Residence of recipient	Dividends %	Interest %	Royalties (b)(c) %

Zambia	15	15/0	15
Zimbabwe	15/10 (u)	15/0	10
Non-treaty jurisdictions (k)	25	0	25

- (a) A 0% rate generally applies to royalties relating to computer software.
- (b) The lower rate usually applies to royalties on cultural works or to royalties relating to computer software, patents and know-how.
- (c) Withholding tax of 25% applies if the royalties relate to the use of real or immovable property, including resource property.
- (d) The treaty provides that the lower rate applies to dividends paid to a company that controls directly or indirectly at least 10% of the voting power in the payer. Interest on certain government-assisted debt and certain other categories of interest are exempt from withholding tax.
- (e) Belarus is honoring the USSR treaty, and consequently that treaty continues to be in force with respect to Belarus. Canada has entered into tax treaties with Estonia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, the Russian Federation, Ukraine and Uzbekistan. Canada has signed tax treaties with Azerbaijan and Armenia, but these treaties have not yet been ratified. The withholding rates under these treaties are listed in the above table. Tajikistan and Turkmenistan have announced that they are not honoring the USSR treaty, but negotiations for new treaties with these countries have not yet begun.
- (f) Mortgage interest on Egyptian property is not eligible for reduced rates under the treaty. As a result, the higher rate applies if such interest is not exempt under Canadian domestic law.
- (g) The 0% rate applies to certain copyright royalties and to royalties for the use of, or the right to use, computer software, patents or information concerning industrial, commercial or scientific experience. The 10% rate applies to other royalties.
- (h) The 5% rate applies to dividends paid to corporate shareholders owning at least 10% of the voting shares of the Canadian company. The 15% rate applies to other dividends.
- (i) The fifth protocol to the 1980 tax treaty between Canada and the United States, which entered into force on 15 December 2008, generally provides for a gradual reduction to the withholding tax rate on interest paid or credited to non-arm's-length US residents. Under the protocol, the following withholding tax rates apply:
- 7% for interest paid during the 2008 calendar year
 - 4% for interest paid during the 2009 calendar year
 - 0% for interest paid after the 2009 calendar year
- The reduced rates retroactively apply for the entire calendar year in which the protocol was ratified (that is, effective for interest paid as early as 1 January 2008). For further information regarding the protocol, see footnote (dddd). Withholding tax is not imposed on interest paid or credited to arm's-length nonresidents after the 2007 calendar year.
- (j) The 5% rate applies if the beneficial owner of the dividends is a company that controls directly or indirectly at least 20% of the voting power in the payer.
- (k) In general, no withholding tax is imposed on interest paid to payees who are dealing at arm's length with the payer. However, withholding tax at a rate of 25% typically applies to interest paid or credited to related nonresidents (the rate may be reduced by a tax treaty). Other specific exemptions or specific inclusions may apply to change the general rules. In addition, most copyright royalties are exempt from withholding tax.
- (l) The 6% rate applies to royalties paid on cultural works, copyrights, computer software, patents and certain types of information.
- (m) The 5% rate applies if the dividends are paid by a Canadian corporation to a French corporation that controls directly or indirectly at least 10% of the votes of the payer. The 10% rate applies if the dividends are paid by a non-resident-owned investment corporation that is a resident of Canada to a French corporation that controls directly or indirectly at least 10% of the votes of the payer. The 15% rate applies in all other cases.
- (n) The 5% rate applies to dividends paid to corporations owning at least 10% of the voting shares and capital of the payer. The 15% rate applies to other dividends. A protocol amending the tax treaty between Canada and Switzerland entered into force on 19 December 2011. The protocol provides that no tax will be withheld if a dividend is paid by a resident of a contracting state to a resident of the other contracting state that operates or administers pension or retirement plans for individuals who are resident in

- that other contracting state and if the dividend is not derived from the carrying on of a trade or a business.
- (o) The general rate is 15%, and payments for the use of, or the right to use, certain industrial, commercial or scientific equipment may qualify for a 10% rate.
 - (p) The 0% rate applies to royalties on cultural works as well as to payments for the use of, or the right to use, computer software, patents and information concerning industrial, commercial and scientific experience.
 - (q) The 5% rate applies if the beneficial owner of the dividends is a corporation that holds directly at least 25% of the capital of the payer. The 10% rate applies if the dividends are paid by a nonresident-owned investment corporation that is a resident of Canada to a beneficial owner that is a resident of Denmark and that holds directly or indirectly at least 25% of the capital of the company paying the dividend. The 15% rate applies in all other cases.
 - (r) The 5% rate applies if the beneficial owner of the dividends is a company that controls directly or indirectly at least 10% of the voting power of the payer.
 - (s) The 5% rate applies if the beneficial owner of the dividends controls at least 70% of the voting power of the payer. The 10% rate applies if the beneficial owner of the dividends controls at least 25% but less than 70% of the voting power of the payer.
 - (t) The 10% rate applies if the recipient of the dividends is a company that controls directly or indirectly at least 10% of the voting power of the payer.
 - (u) The 10% rate applies if the beneficial owner of the dividends is a corporation that controls directly or indirectly at least 25% of the voting power of the payer.
 - (v) The 12.5% rate applies if the recipient is a company that controls directly or indirectly at least 10% of the votes of the payer.
 - (w) The 5% rate applies to dividends paid to a resident of Croatia that controls at least 10% of the voting power of the payer or that holds at least 25% of the capital of the payer.
 - (x) The 5% rate applies if the beneficial corporate owner of the dividends controls directly at least 25% of the voting power of the payer of the dividends.
 - (y) The 0% rate generally applies to royalties for certain cultural works and copyrights. It also applies to royalties for computer software, patents and information concerning industrial, commercial and scientific experience, if the payer and recipient are not associated persons (as defined).
 - (z) The 10% rate applies to dividends paid to a company holding at least 25% of the capital of the payer.
 - (aa) The 5% rate applies if the recipient of the dividends controls directly or indirectly at least 10% of the voting power of the payer. The 10% rate applies to dividends that are paid by a nonresident-owned investment corporation resident in Canada to a company that is a resident of Hungary and that controls at least 25% of the voting power in the company paying the dividends and the beneficial owner of such dividends. The 15% rate applies to all other cases.
 - (bb) The 5% rate applies if the beneficial owner of the dividends is a corporation that controls directly at least 10% of the voting power of the payer or that holds directly at least 25% of the capital of the payer. The 10% rate applies to dividends paid by a nonresident-owned investment corporation resident in Canada to a beneficial owner resident in Sweden that controls directly at least 10% of the voting power, or holds at least 25% of the capital, of the corporation paying the dividends. The 15% rate applies to other dividends.
 - (cc) The 0% rate applies to copyright royalties and similar payments with respect to cultural, dramatic, musical or other artistic works.
 - (dd) The 5% rate applies to dividends paid to a company that owns at least 25% of the voting shares of the payer for the last six months of the accounting period for which the distribution of profits takes place.
 - (ee) The 10% rate applies if the recipient is a company that controls at least 10% of the votes of the payer.
 - (ff) The treaty was signed on 29 December 1998, but it is not yet in force. The 5% rate for dividends will apply if the recipient is a company that controls at least 10% of the votes of the payer. The 5% rate for royalties will apply to royalties for certain cultural works, and royalties for certain computer software, patents and know-how if the payer and the payee are not related.
 - (gg) The 10% rate applies if the recipient is a company that controls at least 25% of the voting power of the payer directly or indirectly.
 - (hh) The 5% rate applies if the recipient is a company that controls at least 10% of the voting power in the payer.
 - (ii) The 0% rate generally applies to royalties relating to computer software or patents.

- (jj) The lower rate applies to royalties for certain cultural works, and generally to royalties for computer software, patents and know-how.
- (kk) The 5% rate applies if the beneficial owner of the dividends owns at least 25% of the capital or controls, directly or indirectly, 10% of the voting power of the payer. The 10% rate applies to dividends paid by a nonresident-owned investment corporation that is a resident of Canada to a beneficial owner that is a company (other than a partnership) resident of the Netherlands and that owns at least 25% of the capital of, or controls directly or indirectly at least 10% of the voting power in, the company paying the dividends. The 15% rate applies to other dividends.
- (ll) The 5% rate applies to dividends if the beneficial owner of the dividends is a company that controls at least 10% of the voting power in the payer.
- (mm) The 5% rate applies if the recipient is a company that controls directly or indirectly at least 25% of the voting power in the payer.
- (nn) The 10% rate applies if the recipient is a company that controls directly or indirectly at least 10% of the voting power in the payer.
- (oo) The 5% rate applies if the recipient is a company holding directly or indirectly at least 10% of the capital of the payer.
- (pp) The 5% rate for dividends applies if the recipient is a company that controls directly or indirectly at least 10% of the voting power in the payer.
- (qq) The 10% rate applies if the recipient of the dividends is a company that holds directly 25% of the capital of the payer. The 15% rate applies in all other cases.
- (rr) The 5% rate applies to dividends if the beneficial owner of the dividends is a company that controls at least 10% of the voting power in the payer. The 15% rate applies in all other cases.
- (ss) The 5% rate applies if the recipient of the dividends is a company that owns at least 10% of the voting shares, or at least 25% of the value of the shares, of the payer.
- (tt) The 5% rate applies if the dividends are paid to a company that controls at least 10% of the voting power in the payer.
- (uu) The 5% rate applies to dividends if the beneficial owner of the dividends is a company that owns directly at least 10% of the voting stock of the payer. The 15% rate applies to other dividends.
- (vv) The 5% rate for dividends applies if the beneficial owner of the dividends is a company that controls directly or indirectly at least 10% of the voting power in the payer.
- (ww) Under the fourth protocol to the treaty, which was signed on 21 July 2014 but is not yet in force, interest paid to an arm's-length party is exempt from withholding tax.
- (xx) The 5% rate applies to dividends if the beneficial owner is a company that holds directly at least 10% of the voting power in the company paying the dividends.
- (yy) The 5% rate applies to dividends paid to a company (other than a partnership) that is a beneficial owner and controls directly at least 25% of the voting power in the payer.
- (zz) The 5% rate for dividends applies if the beneficial owner of the dividends is a company that controls at least 25% of the voting power in the payer.
- (aaa) The 10% rate applies to royalties for the use of, or the right to use, industrial, commercial, or scientific equipment.
- (bbb) The 5% rate applies to dividends paid to a company holding directly or indirectly at least 10% of the voting power of the payer. The 15% rate applies to other dividends. The 10% rate applies to dividends paid by a nonresident-owned investment corporation resident of Canada to a resident of the United Arab Emirates that holds directly or indirectly at least 10% of the voting power of the payer.
- (ccc) The 5% rate applies if the beneficial owner is a company that controls directly or indirectly at least 25% of the voting power in the company paying the dividend. The 15% rate applies in all other cases.
- (ddd) The 5% rate applies to dividends paid to a company that controls at least 10% of the voting power of the payer.
- (eee) The 0% rate applies to royalties pertaining to certain cultural works, computer software, patents or know-how.
- (fff) Payments for the use of computer software, patents and certain know-how are exempt.
- (ggg) The 10% rate applies if the recipient is a company holding directly or indirectly at least 10% of the voting power of the payer.
- (hhh) The 5% rate applies to certain royalties pertaining to certain computer software, patents or know-how.

- (iii) The general withholding tax rate for royalties is 10%. A 5% rate applies to royalties pertaining to certain cultural works, computer software, patents and know-how.
- (jjj) The general withholding tax for royalties is 10%. Royalties pertaining to certain cultural works, computer software, patents and know-how are exempt.
- (kkk) The general withholding tax rate is 10%. Royalties pertaining to certain cultural works, computer software, patents and know-how are exempt.
- (lll) The general withholding tax rate for royalties is 10%. Royalties pertaining to certain cultural works, computer software, patents and know-how are exempt from withholding tax.
- (mmm) The 5% rate applies to dividends paid to a company holding directly or indirectly at least 10% of the voting power of the payer. The 15% rate applies to other dividends.
- (nnn) The 5% rate applies to dividends paid to a company holding directly or indirectly at least 10% of the voting power of the payer. The 15% rate applies to other dividends.
- (ooo) The 15% rate applies if the recipient is a company that holds an equity percentage of at least 10% in the payer of the dividends.
- (ppp) The 10% rate applies if the recipient is a company that controls directly or indirectly at least 25% of the voting power in the payer.
- (qqq) The 5% rate applies to royalties with respect to certain cultural works, and to royalties for certain computer software, patents and know-how if the payer and payee are not related.
- (rrr) The general withholding tax for royalties is 10%. Royalties pertaining to certain cultural works and computer software and royalties for information concerning industrial, commercial or scientific experience are exempt.
- (sss) The 3% rate applies to royalties paid for rights to use news. The 5% rate applies to royalties pertaining to certain cultural works. The 10% rate applies to royalties pertaining to patents, trademarks, designs or models, plans, secret formulas and technical assistance.
- (ttt) The general rate for royalties is 15%. The 25% rate applies to royalties pertaining to the use of trademarks.
- (uuu) The 10% rate applies if the beneficial owner of the dividends is a company that owns at least 10% of the voting power in the payer of the dividends.
- (vvv) A protocol between Canada and Spain entered into force on 29 September 2015. The rates under the protocol are reflected in the above table.
- (www) The 15% rate applies if the beneficial owner of the dividends is a company that controls directly or indirectly at least 10% of the voting power in the payer.
- (xxx) The 15% rate applies to dividends paid to a company that owns at least 10% of the voting shares of the payer during the six-month period immediately preceding the date of payment of the dividend.
- (yyy) The 5% rate applies to royalties pertaining to cultural works.
- (zzz) The 20% rate applies if the beneficial owner of the dividends is a company that controls directly or indirectly at least 15% of the voting power in the payer.
- (aaaa) The 20% rate applies to the following:
- Patent royalties
 - Royalties for the use of, or the right to use, trademarks, motion picture films and films or videotapes for use in connection with television
 - Payments for the use of, or the right to use, industrial, commercial, scientific or harbor equipment
- (bbbb) The 7.5% rate applies to fees for technical services.
- (cccc) The 5% rate applies if, at the time the dividend is declared, the recipient is a company holding directly at least 25% of the capital of the payer and if the capital invested by the recipient exceeds USD100,000. The 15% rate applies in all other cases.
- (dddd) On 15 December 2008, the fifth protocol to the 1980 tax treaty between Canada and the United States entered into force. The following are amendments contained in the protocol that affect cross-border payments:
- The withholding tax on cross-border interest payments will be eliminated. The protocol provides that the withholding tax rate on interest payments is reduced to 0% (phased out over a three-year period with respect to debt between parties that are “related”). For further details, see footnote (i).
 - A “Hybrid Entity Clause” is introduced with respect to income, profits or gains derived through or from certain “fiscally transparent” entities. The protocol can extend treaty relief to income earned through certain “fiscally transparent” entities, such as limited liability corporations and certain other hybrid entities. The protocol may also deny

treaty benefits with respect to income derived through or from certain “fiscally transparent” entities.

- The protocol provides that the existing limitation on benefits (LOB) provisions, which are currently applicable for US tax purposes only, will also become operative for Canadian tax purposes. The comprehensive LOB article, designed to counter “treaty shopping” abuses, is a significant development in the Canadian tax landscape and could operate to deny treaty benefits in many situations in which treaty entitlement had never come under question, including situations in which treaty shopping was not a consideration. Consequently, an analysis is required in each case in which payments are made to an entity that may have non-qualifying US or Canadian owners or owners that are residents of other countries, including in certain circumstances, public companies.
- (eeee) The 0% rate applies to copyright royalties and similar payments with respect to the production or reproduction of literary, dramatic, musical or artistic works.
- (ffff) A renegotiated tax treaty between Canada and Israel was signed on 21 September 2016 and entered into force on 21 December 2016. In general, for withholding taxes, the treaty is generally effective in Canada for amounts paid or credited to nonresidents on or after 1 January 2017; for other taxes, the treaty is effective for tax years beginning on or after 1 January 2017. The new tax treaty replaces the tax treaty signed on 21 July 1975.
- (gggg) The 5% rate applies if, at the time the dividend is declared, the recipient is a company holding directly or indirectly at least 10% of the voting power of the payer. The 15% rate applies in all other cases.
- (hhhh) The withholding tax rate is 5% for copyright royalties and other similar payments with respect to literary, dramatic or artistic works and royalties for right-to-use patents or know-how. A 10% rate applies to royalties in all other cases.
- (iiii) The 5% rate applies if, at the time the dividend is declared, the recipient is a company holding directly or indirectly at least 25% of the capital of the payer. The 15% rate applies in all other cases.
- (jjjj) The 0% rate applies to copyright royalties and similar payments with respect to the production or reproduction of cultural or artistic works (excluding royalties with respect to motion picture films and royalties with respect to works on film or videotape or other means of reproduction for use in connection with television broadcasting).
- (kkkk) The 5% rate applies to copyright royalties and other similar payments with respect to the production or reproduction of literary, dramatic, musical or other artistic works (but does not include royalties with respect to motion picture films and works on film or videotape or other means of reproduction for use in connection with television), and royalties with respect to computer software, patents or information concerning industrial, commercial or scientific experience (but not including any such royalties provided in connection with rental or franchise agreements).
- (llll) The 5% rate applies if the recipient of the dividends is a company that controls directly or indirectly 25% of the voting power of the payer company that is a resident of Canada.
- (mmmm) A protocol to the tax treaty between Canada and Switzerland entered into force on 19 December 2011. It provides that interest payments made to a beneficiary in the other contracting state are not subject to withholding tax if the beneficiary is not related to the payer.
- (nnnn) The general withholding tax rate for royalties is 10%. The 5% rate applies to certain royalties pertaining to computer software and information concerning industrial, commercial or scientific experience. The withholding tax rate is 0% for copyright royalties and for similar payments with respect to literary, dramatic or artistic works.
- (oooo) The 15% rate applies if the beneficial owner of the dividends is a company that owns at least 10% of the voting power in the payer of the dividends.
- (pppp) The 0% rate applies to royalties pertaining to certain cultural works.
- (qqqq) The last paragraph of the royalties article contains a most-favored nation clause in favor of Canada.
- (rrrr) The 5% rate applies if the beneficial owner of the dividends is a corporation that holds directly at least 10% of the voting power of the payer. The 10% rate applies if the dividends are paid by a nonresident-owned investment corporation that is a resident of Canada to a beneficial owner that is a company (other than a partnership) resident in Luxembourg

- and that holds directly or indirectly at least 25% of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (ssss) Tax treaty negotiations with the government of China Mainland began on 6 December 2010. The tax treaty is currently being renegotiated.
- (tttt) Negotiations to update the tax treaty with the United Kingdom began on 1 October 2011. On 21 July 2014, the fourth protocol to the treaty was signed, but it is not yet in force.
- (uuuu) The withholding tax rate for dividends is 5% if the beneficial owner of the dividends is a company that holds directly at least 10% of the capital of the company paying the dividends. A 15% rate applies to dividends in all other cases.
- (vvvv) A renegotiated tax treaty between Canada and New Zealand was signed on 26 June 2015 and entered into force on 1 August 2015.
- (wwww) The 5% rate applies to dividends with respect to a direct holding of 10% or more of the voting power. The 15% rate applies to other dividends.
- (xxxx) The 5% rate applies to dividends if the beneficial owner of the dividends is a company that controls at least 10% of the voting power in the payer. A 15% rate applies to other dividends.
- (yyyy) Interest on certain government or government-assisted debt is exempt from withholding tax.
- (zzzz) The 0% rate applies to copyright royalties and other similar payments with respect to the production or reproduction of literary, dramatic, musical or other artistic works, but not including royalties with respect to the following:
- Computer software
 - Motion picture films
 - Works on film or videotape or other means of reproduction for use in connection with television broadcasting
- (aaaa) The 5% rate applies to dividends paid with respect to holdings of 10% or more of the voting power. The 15% rate applies to other dividends.
- (bbbb) The 5% rate applies to royalties for literary works, computer software, patents and information concerning industrial, commercial or scientific experience. The 10% rate applies to other royalties.
- (cccc) The tax treaty is currently being renegotiated.
- (dddd) The tax treaty is currently being renegotiated. The negotiations began on 26 November 18.
- (eeee) The 0% rate applies to copyright royalties and other similar payments with respect to the production or reproduction of literary, dramatic, musical or other artistic works, but does not apply to royalties with respect to motion picture films and works on film or videotape or other means of reproduction for use in connection with television.
- (ffff) The tax treaty is currently being renegotiated. The negotiations began in June 2017.
- (gggg) The treaty was signed on 25 March 2010, but is not yet in force.
- (hhhh) The 10% rate applies if the beneficial owner of the dividends is a company that holds directly or indirectly at least 20% of the capital of the payer. The 15% rate applies in all other cases.
- (iiii) The treaty was signed on 24 November 2016 but is not yet in force.

- (a) Corporate income tax (Imposto sobre o Rendimento das Pessoas Colectivas, or IRPC) applies to resident companies and nonresident companies with permanent establishments (PEs) in Cape Verde. Micro and small-sized companies can benefit from a 4% reduced rate, which is applied to their turnover. See Section B for details of other rates.

- (b) Depending on the situation, a 1% withholding tax is imposed on the consideration or a 20% tax is imposed on the capital gain, provided that the taxpayer is subject to the small-sized companies simplified regime. Also, see Section B.
- (c) These rates may be reduced or eliminated by tax treaties.
- (d) The 0% rate applies to dividends distributed by companies subject to and not exempt from IRPC.
- (e) Income must be declared and is subject to the normal tax rates. Amounts withheld may be credited against IRPC due. See Section B.
- (f) A withholding tax exemption is available regarding interest from shareholder loans and corporate bonds if the shareholder is a pure holding company (*sociedade gestora de participações sociais*, or SGPS) with voting rights in the subsidiary (this also applies if the participation is held jointly with other entities in which the holding company is dominant).
- (g) The 15% rate applies to most services and commissions and may be eliminated under a tax treaty.
- (h) The amount deductible each year is capped at 50% of the taxable profit for the year.

B. Taxes on corporate income and gains

Corporate income tax. Corporate income tax (Imposto sobre o Rendimento das Pessoas Colectivas, or IRPC) is levied on resident and nonresident entities.

Resident entities. Companies and other entities, including non-legal entities, whose principal activity is commercial, industrial or agricultural, are subject to IRPC on worldwide profits, but a foreign tax credit may reduce the amount of IRPC payable (see *Foreign tax relief*).

A 50% IRPC exemption applies to entities exclusively engaged in agricultural and fishing activities.

Companies and other entities, including non-legal entities, that do not carry out commercial, industrial or agricultural activities, are generally subject to tax on their worldwide income (for details regarding the calculation of the taxable profit of these entities, see Section C).

Nonresident entities. Companies or other entities that operate in Cape Verde through a PE are subject to IRPC on their profits attributable to the PE.

Companies or other entities without a PE in Cape Verde are subject to IRPC on their income deemed to be derived in Cape Verde.

The transfer of shares in a foreign or Cape Verdean company is subject to tax in Cape Verde if more than 50% of the assets owned by the company being transferred are composed directly or indirectly of immovable property located in Cape Verde.

For tax purposes, companies or other entities are considered to have a PE in Cape Verde if they have a fixed installation or a permanent representation in Cape Verde through which they engage in a commercial, industrial or agricultural activity, including the supply of services. Under rules that generally conform to the Organisation for Economic Co-operation and Development (OECD) model convention, a PE may arise from, among others, the following:

- A building site or installation project, including coordination, inspection and supervision activities
- The performance of services (including consultancy) that last for more than 183 days
- The existence of a dependent agent

Double tax treaties may limit the scope of a PE in Cape Verde.

Tax rates. For 2022, IRPC is levied at the following rates.

Type of enterprise	Rate (%)
Companies or other entities with a head office or effective management control in Cape Verde, whose principal activity is commercial, industrial or agricultural	22
Micro and small-sized companies with a head office or effective management control in Cape Verde	4
Entities other than companies with a head office or effective management control in Cape Verde, whose principal activity is not commercial, industrial or agricultural	22
PEs	22
Nonresident companies or other entities without a head office, effective management control or a PE in Cape Verde	
Income subject to withholding tax	10/20
Income not subject to withholding tax	22

Certain types of income earned by companies in the last category of companies listed above are subject to the following withholding taxes.

Type of income	Rate (%)
Interest payments	10/20
Royalties	20
Technical assistance	15
Income from shares (dividends)	0/10
Income from government bonds	10
Revenues derived from the use of, or the right to use, equipment	20
Other revenues from the application of capital	20
Payments for services rendered or used in Cape Verde	20

Applicable double tax treaties may reduce the above withholding tax rates.

A fire brigade surcharge (*imposto de incêndio*) is imposed on resident companies and nonresident companies with a PE in the municipalities of Mindelo (Island of São Vicente) and Praia (Island of Santiago). The fire brigade surcharge is applied at a rate of 2% to the taxable profit determined for IRPC purposes.

Companies licensed under the Cape Verdean International Business Centre (IBC) regime benefit from a reduced rate of IRPC. This tax benefit applies until 2030 and depends on the creation of a minimum of 10 jobs at the International Industry Center (CII) and the International Trade Center (CIC). The following are the reduced rates of IRPC:

- 5% for entities with 10 or more dependent workers
- 3.5% for entities with 20 or more dependent workers
- 2.5% for entities with 50 or more dependent workers

For companies operating in the International Services Center, the IRPC rate is 2.5% if the entity has at least four dependent workers.

The shareholders of the companies that are licensed under the IBC regime may benefit from exemptions on dividends received and on interest derived from shareholder loans. Customs duties exemptions may also be available to entities licensed under the IBC regime.

A tonnage tax applies to entities licensed in the IBC that develop activities related to the international maritime transport of cargo and passengers, provided that the following conditions are met:

- All the ships and similar vessels owned by the taxpayer are registered in Cape Verde's International Register of Ships, and the total activity developed falls within the scope of this regime.
- At least 85% of the income results from activities with other entities installed and functioning in the IBC or with foreign entities.

The tonnage tax profit is calculated using a notional daily profit per ship based on a sliding tariff by reference to the net tonnage of the ship. The following table shows the amounts of daily taxable income.

Net tonnage	Daily taxable income for each 100 net tonnes (CVE)
Up to 1,000	646
From 1,001 to 10,000	566
From 10,001 to 25,000	307
Greater than 25,000	103

Significant incentives are also available for qualifying investment projects under the Investment Law. Qualifying projects may enjoy the following tax benefits:

- A tax credit equal to 30% of relevant investments made in the health sector, the environmental sector, creative industries, tourism or tourism promotion industry and tourism property development, air and sea transportation services and port and airport services, renewable energy production, manufacturing and installation of renewable energy equipment, scientific research and investigation, and information and communication technology development
- A tax credit equal to 20% of relevant investments made in other areas
- An exemption from municipal real estate holding tax for buildings used in the project
- An exemption from property transfer tax for buildings used in the project
- An exemption from stamp duty with respect to financing necessary for the investment project
- An exemption from customs duties for certain goods and equipment

The abovementioned tax credits can be used in the year of investment for up to 50% of the IRPC liability. Any excess can be carried forward for 15 years.

Further incentives may be available for investment projects that meet the following conditions:

- They have a value exceeding CVE3 billion and create at least 20 jobs (CVE1.5 billion and 10 jobs in the case of investments located in a municipal area whose average gross domestic product [GDP] per capita is lower than the national average, with reference to the last three years).
- They are relevant for the promotion and acceleration of the development of the Cape Verdean economy.
- The promoter of the investment possesses technical and managerial capacities.

The exemptions granted cannot exceed five years.

Certain customs duties incentives are also available for fishing and industry activities, as well as for, among others, transportation activities and social communication activities.

In addition, tax benefits (IRPC, stamp duty and property transfer tax exemptions) are also available with respect to recovery and insolvency processes.

To promote the regular registration of immovable property in Cape Verde, significant stamp duty and real estate tax exemptions have been introduced.

In 2021, certain tax benefits applicable to startups were introduced, notably a reduction of IRPC, and customs duties, VAT and stamp duty exemptions, which are subject to the fulfillment of some conditions and which, in accordance with the 2022 State Budget Law, should remain in force.

Corporate shareholders that make cash contributions to the share capital of, among others, startups, and micro and small-sized companies, may benefit from a tax credit limited to 2% of the preceding year's tax liability, provided that certain conditions are met. This cannot be cumulated with the national interest deduction regime (see *Notional interest deduction*).

Limitation of benefits. The amount of tax payable cannot be lower than 90% of the amount that would be assessed if the taxpayer did not benefit from certain tax incentives and deduction of tax losses carried forward.

Notional interest deduction. Companies can benefit for a six-year period from a notional interest deduction of 10% on the amount of cash contributions or conversions of loans by shareholders to share capital that occur on or after 1 January 2018. The amount to which the notional interest deduction applies is capped at CVE100 million. The deemed interest deduction is considered for the net financial expenses limitation (see *Debt-to-equity rules* in Section E).

Simplified regime of taxation. Micro and small-sized resident companies that have annual turnover not exceeding CVE10 million or no more than 10 employees and that meet certain other conditions may opt to be taxed under a simplified regime of taxation. Companies under the simplified regime of taxation are subject to a rate of 4% levied on the turnover.

Capital gains. Capital gains derived from the sale of investment properties, tangible fixed assets, intangible assets, noncurrent assets held for sale and financial assets are included in taxable income subject to IRPC. The capital gain equals the difference between the sales value, net of expenses incurred on the sale, and the acquisition value, adjusted by depreciation, impairment relevant for tax purposes and an official index.

Fifty percent of the capital gains derived from disposals of certain assets held for more than one year may be exempt if the sales proceeds are invested in tangible fixed assets, intangible assets, investment property and shares during the period beginning one year before the year of the disposal and ending two years after the year of the disposal. A statement of the intention to reinvest the gain must be included in the annual tax return for the year of disposal. The remaining 50% of the net gain derived from the disposal is subject to tax in the year of the disposal.

If only a portion of the proceeds is reinvested, the exemption is reduced proportionally. If, by the end of the second year following the disposal no reinvestment is made, the net capital gain that remains untaxed (50%) is added to taxable profit for that year, increased by 15% and compensatory interest applies. A similar adjustment occurs if the assets in which reinvestment is made are not maintained by the taxpayer for at least two years from year-end of the tax period in which the reinvestment is made.

Losses from the transfer for consideration of shareholdings in tax-haven entities are not allowed as deductions. Losses resulting from shares are also not deductible if the seller has resulted from a transformation, including a change of the business purpose, of an entity for which such losses would not be deductible and if less than three years have elapsed since the date of transformation.

There is also an exclusion from taxable income for capital gains (or losses) realized by resident entities and nonresident entities with a PE in Cape Verde that are derived from the disposal of shares (and other equity instruments), provided the shares have been held for a period of at least 12 months. Such exclusion does not apply to capital gains realized on the transfer of shares acquired from entities domiciled or with a place of effective management in a territory subject to a more favorable tax regime. In addition, the exclusion cannot be applicable if real estate located in Cape Verde accounts for directly or indirectly more than 50% of the assets of the entity whose shares are being transferred.

In addition, an exemption is available for gains realized by nonresident entities without a PE in Cape Verde on the disposal of shares and other securities.

Nonresident companies that do not have a head office, effective management control or a PE in Cape Verde are taxed at a 1% rate on the sales proceeds derived from disposals of real estate, shares and intellectual property. In general, the tax due is paid through withholding tax. Certain gains may be taxed at a 22% rate and require filing of a tax return.

Administration. The tax year is the calendar year.

All companies engaging in activities in Cape Verde must register with the tax department to obtain a taxpayer number. Companies, including foreign companies with a PE in Cape Verde and foreign companies without a PE that had not been subject to withholding tax, must file an annual tax return, together with their financial statements and other documentation, by 31 May in the year following the tax year.

Companies with a head office, effective management control or a PE in Cape Verde must make advance payments of IRPC. Companies whose principal activity is commercial, industrial, agricultural or fishing must make payments in March, August and November of the current tax year. The tax base for the payments is 30%, 30% and 20%, respectively, of the preceding year's tax liability. The tax rate of 22% is applied to this tax base to compute the amount of the advance payment.

Companies with a head office, effective management control or a PE in Cape Verde that have adopted a financial year other than the calendar year must make estimated payments as outlined above, but in the 3rd, 7th and 11th months of their financial year. They must file a tax return by the end of the fifth month following the end of that year.

Companies under the simplified regime of taxation must make advance payments at the end of April, at the end of July, at the end of October and at the end of January of the following year. The IRPC rate of 4% is applied to the preceding quarter's turnover.

If the total amount of the advance payments exceeds the tax due for the tax year, the excess may be carried forward as a tax credit against the tax payable in the following four years or refunded on the occurrence of certain events.

A nonresident company without a PE in Portugal must appoint an individual or company, resident in Cape Verde, to represent it with respect to its tax liabilities.

Penalties are imposed for the failure to file tax returns and satisfy other compliance obligations. If, on the final assessment, the tax authorities determine that a further payment is required and that the taxpayer is at fault, interest is imposed on the amount of the additional payment. Fines, which are generally based on the amount of tax due, are also imposed. If the tax due is not paid, additional interest is imposed from the date of the tax authorities' notice that an additional payment is due.

Binding rulings. The General Tax Code provides the taxpayer the possibility of obtaining a binding ruling. The binding ruling is limited to a certain time period, which is determined on a case-by-case basis by the tax authorities. The ruling is subject to the payment of a fee.

Dividends. Dividends paid by companies to residents and non-residents are generally subject to withholding tax at rates of 20% and 10%, respectively.

On distributions to resident parent companies, the 20% withholding tax is treated as a payment on account of the final IRPC due.

The 20% rate applies, as a general rule, if dividends are distributed to entities resident in Cape Verde. If the entity distributing the dividends is subject to and not exempt from IRPC, a 0% rate applies.

The 10% rate is exclusively applicable to dividends paid to non-resident entities. Likewise, a 0% rate applies if the distributing entity (resident in Cape Verde) is subject to and not exempt from IRPC.

A resident company or a nonresident company with a PE subject to and not exempt from IRPC may deduct 100% of dividends received from another resident company.

The above regime also applies, under similar conditions, to dividends distributed by foreign affiliates if the underlying profits have been subject to and not exempt from income tax.

If the recipient benefits from a reduced IRPC rate, the recipient may deduct only 50% of the dividends.

If a recipient qualifies for the 100% deduction, the payer of the dividends does not need to withhold tax.

A withholding tax exemption applies to dividends distributed to nonresident companies if the requirements described above are met.

Positive liquidation proceeds are treated as deemed dividends in the portion corresponding to the difference between the liquidation proceeds attributed and the associated capital contributions. Any excess is treated as a capital gain. If the amount is negative, it is treated as a capital loss. Losses from the liquidation of subsidiaries are deductible only if the shares have been held for at least three years.

Foreign tax relief. Foreign-source income is taxable in Cape Verde. However, direct foreign tax may be credited against the Cape Verdean tax liability, limited to the lower of the following amounts:

- The amount of tax incurred in the foreign country
- The amount of IRPC attributable to the foreign-source income

If an applicable double tax treaty reduces the withholding tax rates, the tax credit is limited by the applicable treaty clause. The foreign tax credit cannot be carried forward.

C. Determination of trading income

General. Taxable profit is determined according to the following rules:

- For companies with a head office or effective management control in Cape Verde that are principally engaged in commercial, agricultural or industrial activities, the taxable profit is the net accounting profit calculated in accordance with Cape Verdean generally accepted accounting principles, as adjusted by the IRPC Code.
- For companies with a head office or effective management control in Cape Verde that do not principally engage in commercial, industrial or agricultural activities, the taxable profit is the net total of revenues from various categories of income described in the Personal Tax (Imposto sobre o Rendimento das Pessoas Singulares, or IRPS) Code, less expenses.

- For PEs, the taxable profit is determined as outlined in the first bullet above. In calculating taxable profit, general administrative expenses that are attributable to the PE may be deducted as a cost if justified and acceptable to the tax authorities.

Expenses that are considered essential for the generation or maintenance of profits are deductible. However, certain expenses are not deductible for IRPC purposes including, but not limited to, the following:

- Illicit expenses
- Depreciation and amortization claimed that exceed the rates fixed in the Cape Verdean tax law
- Provisions and impairments (except for those contained in the Cape Verdean tax law)
- IRPC, stand-alone taxes and surcharges
- Penalties and interest charges
- Improperly documented expenses
- Health or personal injury insurance premiums, and expenses or losses with respect to life insurance, contributions to pension funds or supplementary social security systems, except when they are taxed under the IPRS Code or when they are mandatory by law or contracts
- Real estate taxes (except for companies engaged in real estate trading activities)
- Expenses concerning pleasure boats and tourism airplanes, except for those allocated to public transportation companies or used for rental purposes as part of the company's normal activities

The 2022 State Budget Law provides that the taxpayers with organized accounting may deduct 130% of the costs incurred in the acquisition of water and electricity. A deduction of 130% of the costs is allowed with respect to the certification of products and systems and the acquisition of equipment and software for accounting and invoicing.

Assets under financial leases are deemed to be owned by the lessee. Consequently, the lessee may deduct only applicable tax depreciation and any interest included in the rent payments. Special rules apply to sale-and-leaseback transactions.

Thirty percent of expenses related to passenger or mixed-use vehicles, except when these vehicles are allocated to public service, which are depreciation, rent, insurance, repairs and fuel, and 50% of representation expenses, are not deductible for tax purposes.

Although representation expenses and expenses related to private cars are deductible with some limits, they are subject to a special stand-alone tax at a rate of 10% (this stand-alone tax may not apply in certain cases).

A 10% stand-alone tax rate also applies to tax-deductible daily allowances and compensation for costs incurred by employees when traveling in their own vehicles at the service of the employer if these amounts are not charged to clients and not subject to IRPS.

Undocumented expenses are not deductible. In addition, these expenses are subject to a special stand-alone tax rate of 40%.

A stand-alone tax at a rate of 10% also applies to certain fringe benefits attributed to the employer (if the amount exceeds CVE15,000), which are gifts made to employees, sales of vehicles to employees below market value, travel expenses paid to employees if not related to the company's activities and interest-free or low-interest-rate loans to employees.

The above stand-alone taxes are imposed regardless of whether the company earns a taxable profit or suffers a tax loss in the year in which it incurs the expenses. In addition, all stand-alone tax rates are increased by 10 percentage points if the taxpayer benefits from a privileged tax regime or incurs a tax loss in two consecutive years (with some exceptions).

Inventories. Inventories must be consistently valued by any of the following criteria:

- Effective cost of acquisition or production
- Standard costs in accordance with adequate technical and accounting principles
- Cost of sales less the normal profit margin
- Cost of sales of products cropped from biological assets, which is determined at the time of cropping, less the estimated costs at the point of sale, excluding transportation and other costs required to place the products in the market

Changes in the method of valuation must be justifiable and acceptable to the tax authorities.

Provisions. The following provisions, among others, are deductible:

- Bad and doubtful debts, based on a judicial claim or on an analysis of the accounts receivable
- Inventory losses (inventory values in excess of market value)
- Technical provisions imposed on insurance companies and financial institutions by the competent Cape Verdean regulatory authorities

Depreciation. In general, depreciation is calculated using the straight-line method. The declining-balance method may be used for new tangible fixed assets other than buildings, office furniture and automobiles not used for public transport or rental. Maximum depreciation rates are established by law. If rates that are less than 50% of the official rates are used, total depreciation will not be achieved over the life of the asset. The following are the principal official straight-line rates.

Asset	Rate (%)
Commercial buildings	3
Industrial buildings	5
Office equipment	12.5 to 33.33
Motor vehicles	12.5 to 20
Plant and machinery	16.66 to 20

Companies may request the prior approval of the tax authorities for the use of depreciation methods other than straight-line, declining-balance or rates increased up to 50%. Approval is granted only if the request is justified by the company's business activities.

Relief for losses. Tax losses may be carried forward for seven years. The amount deductible each year is capped at 50% of the taxable profit for the year. Loss carrybacks are not allowed.

Companies under the simplified tax regime cannot benefit from the relief for losses. Tax loss carryforwards are forfeited if the taxpayer states a zero annual turnover and does not obtain any income from its normal business activity for two consecutive tax years.

Groups of companies. The Cape Verdean Tax Law does not provide a special tax regime for groups of companies.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax; levied on goods and services, other than exempt services	15%
Excise duties	
General rate	10%
Other rates	0% to 50%
Social security contributions; on salaries; paid by	
Employer	16%
Employee	8.5%
Self-employed workers	11%/19.5%
Property transfer tax; payable by purchaser	1.5%
Municipal real estate holding tax; local tax; imposed annually on the assessed tax value of the property on 31 December; tax payable by the owner of the property	1.5%
Stamp duty	
Credit operations	0.5%
Interest on bank loans and bank services	3.5%
Guarantees	0.5%
Insurance premiums	3.5%
Bills of exchange, promissory notes and other negotiable debt securities	0.5%
Notarial acts of registrations and procedures	15%
Administrative acts and contracts	CVE1,000
Touristic contribution; for every overnight stay in a touristic establishment, up to a maximum of 10 nights; children under 16 years old are not subject to this contribution	CVE220 per night
Ecologic charge; imposed on some products imported or produced domestically that are non-biodegradable or made out of metal, glass or plastic; charge varies depending on the quantity or weight of the goods; payable by the local producer or importer; exemptions are available, including packing material used in medicine or for packing essential food, such as corn, rice, sugar, flour and milk	CVE2 to CVE200 per kilogram

E. Foreign-exchange controls

Foreign-exchange controls. The currency in Cape Verde is the escudo (CVE).

Cape Verde imposes foreign-exchange controls in certain situations.

Mergers and reorganizations. Mergers and other type of corporate reorganizations may be tax neutral in Cape Verde if certain conditions are met.

Controlled foreign entities. A Cape Verdean resident owning, directly or indirectly, at least 25% in the capital, voting rights or rights to income or estate of a controlled foreign entity (CFE) is subject to tax on its allocable share of the CFE's net profit or income. For computing the 25% threshold, the capital and rights owned, directly or indirectly, by related parties are also considered.

Several rules, which are based on the nature of the activity and whether the activity is predominantly directed to the Cape Verdean market, may result in the non-imputation of profits or income.

Payments by residents to nonresidents subject to a more favorable tax regime. In general, payments made by Cape Verdean residents to nonresidents subject to a more favorable tax regime as provided by the General Tax Code are not deductible for tax purposes, and the payers are subject to a stand-alone tax rate of 60%. However, these payments may be deducted and are not subject to stand-alone taxation if the payer establishes the following:

- The payments were made in real transactions.
- The payments are normal.
- The amounts of the payments are not unreasonable.

Related-party transactions. For related-party transactions (transactions between parties with a special relationship), the tax authorities may make adjustments to taxable profit that are necessary to reflect transactions on an arm's-length basis.

A special relationship is deemed to exist if one entity has the capacity, directly or indirectly, to influence in a decisive manner the management decisions of another entity. This capacity is deemed to exist in the following relationships:

- Between one entity and its shareholders, or their spouses, ascendants or descendants, if they possess, directly or indirectly, 20% of the capital or voting rights of the entity
- Between two entities in which the same shareholders, their spouses, ascendants or descendants hold, directly or indirectly, a participation of not less than 20% of the capital or voting rights
- Between any entities bound by dominance relations
- Between a nonresident entity and its Cape Verdean PE
- Between a resident entity and an entity located in territory with a favorable tax regime according to the General Tax Code

Foreign PE profits. Transactions between the head office and a foreign PE must respect the arm's-length principle.

Debt-to-equity rules. A limitation to the deduction of interest expenses (net of interest revenues) applies. The tax deduction for

net financial expenses is capped by the higher of the following amounts:

- CVE110 million
- 30% of the earnings before interest, taxes, depreciation and amortization

The nondeductible excess, as well as the unused fraction of the 30% threshold, may be carried forward to the following seven years.

F. Treaty withholding tax rates

	Dividends %	Interest %	Royalties %
Macau SAR	10	10	10
Mauritius	0/5 (a)	0/10 (b)	7.5
Portugal	10	0/10 (c)	10
Spain	0/10 (d)	0/5 (e)	5
Non-treaty jurisdictions	0/10	10/20	20

- (a) The 5% rate applies if the beneficial owner of the dividends is a resident of a contracting state and owns directly less than 25% of the capital stock of the company paying the dividends.
- (b) The 0% rate applies if the debtor or payee is the government of a contracting state, a political or administrative subdivision, a local authority or a statutory body thereof, or if the interest is paid to an institution (including a financial institution) in connection with any financing granted by it under an agreement between the governments of the contracting states.
- (c) The 0% rate applies to interest paid by the government of one contracting state or derived by the government of the other contracting state.
- (d) The 0% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 25% of the capital of the company paying the dividends.
- (e) The 0% rate applies if any of the following circumstances exist:
- The beneficial owner is the state or the central bank, or a political subdivision or local authority or statutory body.
 - The interest is paid by the state in which the interest arises or by a political subdivision or local authority or statutory body thereof.
 - The interest is paid with respect to a loan or credit owed to, or granted, made, guaranteed or insured by, the state or a political subdivision, local authority or export financing agency thereof.
 - The beneficial owner is a financial institution.
 - The interest is paid in connection with the sale on credit of equipment, goods or merchandise, or services.
 - The beneficial owner is a pension fund and the income of the fund is exempt from tax.

Cape Verde has also signed double tax treaties with Angola, Equatorial Guinea, Guinea-Bissau, Luxembourg, São Tomé and Príncipe, Senegal and Singapore, but these treaties are not yet in force.

A. At a glance

Corporate Income Tax Rate (%)	0
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	0
Withholding Tax (%)	
Dividends	0
Interest	0
Royalties from Patents, Know-how, etc.	0
Branch Remittance Tax	0

B. Taxes on corporate income and gains

The Cayman Islands does not impose taxes on income, profits, wealth or capital gains.

C. Corporate license fees

Ordinary resident company. An ordinary resident company may transact foreign and domestic business from within the Cayman Islands. A Trade and Business License is required if business is to be conducted within the Cayman Islands unless the business is exempted (see Section D). If Caymanians or persons with Cayman status do not own at least 60% of the issued share capital, hold 60% of board positions or otherwise control such a company, the company must also obtain a Local Companies (Control) Act License before it can do business in the Cayman Islands, unless the business is exempt from this requirement.

Incorporation fees range from a minimum of KYD300 to a maximum of KYD500. Annual fees range from a minimum of KYD300 to a maximum of KYD500. The fees are based on authorized capital.

Ordinary nonresident company. An ordinary nonresident company is similar to a resident company, but it is not permitted to conduct business within the Cayman Islands. However, it may transact within the Islands all matters necessary to conduct its business outside the Islands; for example, it can negotiate contracts or open bank accounts.

Incorporation fees range from a minimum of KYD575 to a maximum of KYD815. Annual fees range from a minimum of KYD675 to a maximum of KYD915. The fees are based on authorized capital.

Exempted company. An exempted company is the most common form of company used by the offshore investor. An exempted company, similar to an ordinary nonresident company, may not conduct business within the Cayman Islands, but may transact from within the Islands all the matters necessary to conduct its business outside the Islands. An exempted company has certain advantages over an ordinary resident or nonresident company, including the availability of a Tax Exemption Certificate, which make the exempted company attractive to an offshore investor. A Tax Exemption Certificate provides that no law enacted in the Cayman Islands imposing any tax on income, profits, capital gains or appreciations will apply to the exempted company and that no such tax, estate duty or inheritance tax will be payable on or with respect to the shares, debentures or other obligations (or the income derived from such instruments) of the exempted company. The exemptions provided in the certificate are for a renewable 20-year period.

Incorporation fees range from a minimum of KYD600 to a maximum of KYD2,468. Annual fees range from a minimum of KYD700 to a maximum of KYD2,568. The minimum fee applies to companies with authorized capital of up to KYD42,000; the fee increases on a sliding scale for authorized capital in excess of this amount until it reaches the maximum of KYD2,568, which applies to companies with authorized capital exceeding KYD1,640,000.

An exempted company, through its memorandum and articles of association, may be established as a company limited by shares, a company limited by guarantee or a limited duration company (LDC). LDCs may be treated by the authorities of the United States and other jurisdictions as partnerships for tax and other purposes. An exempted company is classified as an LDC if its corporate existence terminates on the happening of one or more specified events and if it has a maximum life of 30 years. If a company limited by shares has more than one share class, it may be established on the basis that some of its classes will have limited liability and some will have unlimited liability. LDCs must pay a fee of KYD200 on registration in addition to the regular fees described above.

D. Miscellaneous matters

Foreign-exchange controls. The currency of the Cayman Islands is the Cayman Islands dollar (KYD). The exchange rate of the US dollar against the Cayman Islands dollar is fixed at USD1.2 = KYD1.

The Cayman Islands has no foreign-currency exchange control regulations.

Business licenses. Unless exempted, every person or company carrying on a trade or business must have an annual license for each place where such trade or business is carried on. The amount of the fee depends on the type and location of the business, as well as on the number and type of employees.

Companies that engage in certain types of business, such as banking and insurance, may be required to be licensed or registered under relevant laws. These laws may expressly eliminate the requirement that a company obtain a Trade or Business License or a Local Companies (Control) Act License.

The following are the annual license renewal fees payable by insurance companies and banks registered in the Cayman Islands.

Insurance companies (KYD)

Class A (locally incorporated)	75,000
Class A (approved external insurer)	75,000
Class B(I) (at least 95% of the net premiums written originate from the insurer's related business)	8,500
Class B(II) (over 50% of the net premiums written originate from the insurer's related business)	9,500
Class B(III) (50% or less of the net premiums written originate from the insurer's related business)	10,500

Banking and trust companies (KYD)

Class A (unrestricted)	1,000,000
Class A (restricted)	300,000 or 350,000
Class B (unrestricted)	60,000 to 100,000
Class B (restricted)	37,000 or 40,000

The fees for Class B banking and trust licenses depend on the corporate structure of the relevant bank (the structures are branches, subsidiaries and private/affiliated companies) and slightly higher fees may be payable on the application and grant of the license. Restricted trust companies must pay an annual fee of KYD7,000 for a restricted trust license alone.

Mutual funds and private funds registered or licensed under the Mutual Funds Act and Private Funds Act, respectively, must pay an annual license fee of KYD3,500. Mutual fund administrators must pay the following license renewal fees:

- Restricted license: KYD7,000
- Unrestricted license: KYD30,000 or KYD35,000 (depending on the number of funds under administration)

Company managers and corporate service providers licensed under the Companies Management Act must pay an annual license fee. For managers, the annual license fee ranges from KYD750 to KYD20,000 (depending on the number of companies under management), plus KYD150 per managed company. For corporate service providers, the annual license fee ranges from KYD500 to KYD10,000, plus KYD75 per company.

Entities registered under the Securities Investment Business Act must pay an annual license fee ranging from KYD4,000 to KYD8,000.

Stamp duties. Stamp duties are charged on the sale, liquidation or transfers of real property, leases, mortgages and shares of underlying real estate, and the execution of various other documents within the Cayman Islands. Transfer duty is payable on transfers of shares in Cayman Islands companies that hold real property in the Cayman Islands, subject to certain exemptions.

Common Reporting Standard. On 16 October 2015, the Cayman Islands published The Tax Information Authority (International Tax Compliance) (Common Reporting Standards) Regulations, 2015, for the implementation of the Common Reporting Standards (CRS) Regulations. The CRS Regulations, which entered into force on 1 January 2016, require financial institutions to complete due diligence and reporting on investors, depending on their underlying classifications and tax residency.

Country-by-Country Reporting. The Cayman Islands has adopted Country-by-Country Reporting (CbCR) in accordance with the Base Erosion and Profit Shifting (BEPS) Action Plan. The CbCR regulations and guidelines were issued in December 2017. The regulations require certain multinationals to submit Country-by-Country Reports to the Cayman Islands tax authority.

Economic substance. As a member of the Organisation for Economic Co-operation and Development (OECD) Inclusive Framework on BEPS, the Cayman Islands enacted the International Tax Co-operation (Economic Substance) Act on 21 December 2018, which is effective from 1 January 2019. Related guidance was issued on 22 February 2019 and 30 April 2019. A draft for industry consultation was issued on 19 November 2019, and finalized guidance notes were issued on 13 July 2020, with updated Guidance v3.1 issued on 30 June 2021. Legislation requires “relevant entities” conducting “relevant activities” to complete notifications and reporting on an annual basis and maintain substance in the jurisdiction.

E. Tax treaties

As of January 2022, the Cayman Islands has entered into bilateral tax information arrangements with Argentina, Aruba, Australia, Belgium, Brazil, Canada, China Mainland, Curaçao, the Czech Republic, Denmark, the Faroe Islands, Finland, France, Germany, Greenland, Guernsey, Iceland, India, Ireland, Isle of Man, Italy, Japan, Malta, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, Qatar, Seychelles, Sint Maarten, South Africa, Sweden, the United Kingdom and the United States.

The Cayman Islands has also entered into a double tax treaty with the United Kingdom.

On 29 November 2013, the Cayman Islands and the United States signed and released a Model 1 IGA for the implementation of the US Foreign Account Tax Compliance Act (FATCA). All Cayman Islands financial institutions and trustee documented trusts must comply with FATCA per those regulations and, if required, must report to the local tax authority on the Cayman Department for International Tax Cooperation Portal.

Branch Remittance Tax	5/10/20 (j)
Net Operating Losses (Years)	
Carryback	0
Carryforward	3

- (a) The minimum tax equals 1.5% of turnover. For further details, see Section B.
- (b) In certain circumstances, the tax is deferred or reduced (see Section B).
- (c) An optional final withholding tax is available for CIE Petroleum Contractors and Subcontractors (foreign companies that have entered into subcontracts with oil companies registered in Chad). The rate of this final withholding tax is 25% of the net amount of the contract.
- (d) This withholding tax also applies to directors' allowances, nondeductible expenses and adjustments or reinstatements following a tax reassessment. This withholding tax applies to residents and nonresidents. The 5% and 10% rates apply to transactions between Chad and Central African Economic and Monetary Community (Communauté Économique et Monétaire de l'Afrique Centrale, or CEMAC) countries.
- (e) The rate of this withholding tax is 20% if the relevant interest is paid to a resident and 25% if it is paid to a nonresident. The 5% rate applies to transactions between Chad and CEMAC countries.

- (f) The 7.5% rate applies to transactions between Chad and CEMAC countries.
- (g) This withholding tax applies to payments by Chadian resident companies to nonresidents. The 7.5% rate applies to transactions between Chad and CEMAC countries.
- (h) This withholding tax applies to payments made to individuals in the self-employed professions, trade intermediaries, door-to-door salespersons and representatives of the law (attorneys, bailiffs and notaries).
- (i) The withholding tax rate is 15% if the beneficiary of the landlord is a tax resident and 20% if the beneficiary is a tax nonresident.
- (j) The income subject to tax corresponds to the net profit after corporate income tax. The 5% and 10% rates apply to transactions between Chad and CEMAC countries.

B. Taxes on corporate income and gains

Corporate income tax. Chadian companies are taxed on the territoriality principle. As a result, Chadian companies carrying on a trade or business outside Chad are not taxed in Chad on their foreign-source profits. Chadian companies are those registered in Chad, regardless of the nationalities of their shareholders or where they are managed and controlled. Foreign companies with activities in Chad are subject to Chadian corporate tax on Chadian-source profits.

Under the 2020 Finance Law, income tax in Chad is imposed on undertakings deemed to be operating in Chad, which are the following:

- Undertakings headquartered in Chad or with an effective management office in Chad
- Undertakings that have a permanent establishment in Chad
- Undertakings that have a dependent representative in Chad

The profits of undertakings that do not fulfill the conditions referred to above are taxed in Chad if they carry out activities that form a full business cycle in Chad.

Tax rates. Under the General Tax Code, the standard corporate income tax rate applicable to all companies is a flat rate of 35% of taxable income. Corporate income tax is calculated by applying the tax rate to taxable income, which is based on income reported in the audited financial statements.

Oil and gas contractors are subject to higher rates.

The minimum tax is paid on a monthly basis at a rate of 1.5% of the turnover of the previous month. The payment must be made by the 15th day of the month following the month of realization of the turnover.

Sales made by wholesale dealers to individuals are subject to withholding tax at a rate of 4%. Wholesale dealers must pay the amount due to the tax authorities by the 15th day of the following month. Purchases made by companies from individuals are also subject to withholding tax at the same rate.

Profits realized in Chad by branches of foreign companies are subject to a branch withholding tax of 20% levied on the net profit after corporate income tax.

Newly incorporated companies or new businesses conducted by existing companies can be exempt from corporate income tax for five years if they satisfy the following conditions:

- The newly incorporated company or new business must be operating in specific sectors, which are the industry, mining, agriculture, forestry and real estate sectors.
- The newly incorporated company or new business must demonstrate a particular interest for Chad development.
- The newly incorporated company or new business must not compete in any way with existing companies.
- The newly incorporated company must have a regular accounting conducted in Chad.

If the abovementioned conditions are met, the application can be submitted to the Ministry of Finance and Budget.

The 2022 Finance Law updated a special tax incentive for newly incorporated companies in the following sectors:

- Agriculture
- Breeding
- Renewable energies
- Information and communication technologies
- Industry
- Tourism
- Mining and exploration
- Fishing
- Hotels
- Industry
- Education
- Water
- Sport
- Transport

These categories of companies benefit from the following for two years or five years from the beginning of their activities:

- 50% reduction of the tax base for corporate income tax
- 50% reduction of the amount of a business license fee
- 50% reduction in the registration fee for deeds
- Exemption or 50% reduction in the taxable base for minimum income tax
- Exemption from or a 50% reduction of inclusive tax
- Exemption from or a 50% reduction of training tax

Also, for agropastoral companies, 25% of the minimum tax base is exempt.

Capital gains. Capital gains are taxed at the regular corporate rate. Capital gains include gains on the sale of real estate, corporate shares and business assets. However, the tax can be deferred or eliminated in the event of a merger under certain conditions.

For a business that is totally or partially transferred or discontinued (such as through a liquidation or sale of the business), only one-third of the net capital gains is taxed if the event occurs more than five years after the beginning or purchase of the business, and only one-half of the gains is taxed if the event occurs within the five years following the beginning or purchase of the business.

Administration. The fiscal year runs from 1 January to 31 December.

Companies must file income tax returns by 30 April of the year following the fiscal year. Late returns are subject to a penalty of 1.5% per month, up to 50% of the tax due. An additional penalty of 100% or 150% applies in case of bad faith or in case of fraud

discovered through a tax audit. Corporate income tax must be paid by the deadline for filing tax returns. Late payments are subject to a penalty of 2% per month of delay, excluding the application of an additional penalty.

Companies that started operating during the six-month period before the prescribed closing date of 31 December can report their first results at the end of the fiscal year following the fiscal year in which they began activities.

At the same time as the filing of the annual tax return, the company is required to submit a transfer-pricing report for all transactions carried out with its head office or affiliate entities located outside Chad. Noncompliance with this transfer-pricing documentation requirement (failure to submit the report or the submission of incomplete or incorrect information) is subject to the following sanctions:

- The rejection of relevant intercompany expenses as deductible costs
- A fine of 5% of the gross amount of the concerned transactions, with a minimum of XAF50 million

Late filing of the transfer-pricing report is subject to a fine of XAF10 million the first month of lateness, XAF 20 million for the second month and XAF25 million for any additional months of lateness beginning with the third month.

The 2022 Finance Law introduced a provision exempting from penalties taxpayers who spontaneously proceed to the regularization of their previous situation regarding taxes, duties and fees before 31 December 2022.

Dividends. Dividends paid to resident individuals in Chad are subject to a 20% withholding tax. Resident individuals must include the gross dividend in taxable income, but they receive a corresponding 20% tax credit to prevent double taxation. Dividends received by resident companies are included in their taxable income and are subject to corporate income tax at the regular rate of 35%. Dividends paid to nonresidents are subject to a final 20% withholding tax.

The participation exemption regime may exempt up to 90% of the dividends received from a 50%-owned subsidiary if the parent company and the subsidiary have their registered offices in a CEMAC member state. The CEMAC member states are Cameroon, Central African Republic, Chad, Congo (Republic of), Equatorial Guinea and Gabon.

Foreign tax relief. In general, foreign tax credits are not allowed. The income of residents and nonresidents subject to foreign tax that is not exempt from Chadian tax under the territoriality principle is taxable, net of the foreign tax.

C. Determination of trading income

General. Taxable income is based on financial statements prepared according to generally accepted accounting principles and the Organization for the Harmonization of Business Law in Africa (L'Organisation pour l'Harmonisation en Afrique du Droit des Affaires, or OHADA) standard statements.

Business expenses are generally deductible unless specifically excluded by law. Expenses that are not deductible include the following:

- Head office overhead, research costs, and technical, financial and administrative assistance fees paid to nonresidents that exceed 10% of taxable profits before their deduction. Local service providers are not subject to this limitation. This limitation does not apply to technical assistance fees related to the assembly of a factory, which are deductible in their entire amount. In addition, if the payments are made in a tax-haven country or territory, the deductible head office overhead cannot exceed 50% of the gross amount reported as a charge. The tax-haven countries and territories are jurisdictions that are defined with reference to the prohibited lists of noncooperative or privileged taxation countries and territories published by the Organisation for Economic Co-operation and Development, the European Union or the Minister of Finance of Chad and that do not have a tax treaty with Chad providing for the mutual exchange of information for tax purposes. The privileged taxation countries or territories are defined as those not applying a tax on companies' revenue or those applying a tax rate lower than half of the Chadian corporate income tax rate under the common regime. Interest paid to the head office with respect to intercompany loans are included in the calculation of head office overhead deductible costs.
- Charges from transactions with related parties, if the appropriate transfer-pricing documentation is not filed.
- Rent expenses for movable equipment paid to a shareholder that manages the company in fact or by right and holds, directly or indirectly, more than 10% of the capital.
- Interest paid to shareholders in excess of the central bank annual rate plus two points.
- Commissions and brokerage fees for services on behalf of companies located in Chad that exceed 5% of purchased imports and sales of exports.
- Amounts set aside for self-insurance.
- Certain specific charges (such as contributions other than those for retirement paid to a foreign social security organization, which are deductible up to 15%, and health insurance premiums paid to companies located abroad), gifts, subsidies and penalties (to some extent).
- Expenses paid to local suppliers without reference to a Chadian tax identification number.
- Expenses paid in cash of XAF500,000 or more.
- Disallowed expenses, such as personal expenses, family expenses, nonbusiness-related expenses, provisions for redundancy for economic purposes and for self-insurance and unsupported expenses.

Inventories. Inventory is normally valued at the acquisition cost or at the lower of cost or market value. Cost must be determined on a weighted-average cost-price method. The first-in, first-out (FIFO) method is also generally acceptable.

Provisions. In determining accounting profit, companies must establish certain provisions, such as a provision for a risk of loss or for certain expenses. These provisions are normally deductible for tax purposes if they provide for clearly specified losses or

expenses that are probably going to occur and if they appear in the financial statements and in a specific statement in the tax return.

Insurance companies may deduct technical provisions provided by the Conférence Inter africaine des Marchés d'Assurance (CIMA) Code to the extent that the General Tax Code does not contain any limitation for such deduction.

Credit institutions may deduct provision for bad debts. Such deduction is limited to 25% for the first year, 50% for the second year and 25% for the third year, if the concerned debt is not covered by a guarantee. If the bad debt is covered by a real guarantee, the deductibility is limited to 15% for the first year, 30% for the second year, 30% for the third year and 25% for the fourth year.

Capital allowances. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at rates specified by the tax law. Accordingly, if the rates used for accounting purposes are greater than the prescribed rates, the excess is disallowed for tax purposes.

Relief for tax losses. Losses may be carried forward for three years. However, losses attributable to depreciation may be carried forward indefinitely. Losses may not be carried back.

Groups of companies. The Chadian tax law does not provide for the fiscal integration of Chadian companies equivalent to a consolidated filing position.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on transactions carried out in Chad; certain transactions are exempt	
Standard rate	18
Reduced rate	9
Exports	0
African Union Tax; on imports from outside Africa	0.2
Business license; rate varies depending on the amount of turnover	Various
Registration duties, on transfers of real property or businesses	3 to 10
Social security contributions on an employee's annual gross salary, limited to XAF6 million	
Family allowances, paid by employer	7.5
Old age, disability and survivor's pension; paid by	
Employer	5
Employee	3.5
For job-related accidents; paid by employer	4
Inclusive tax; on gross salary and effective value of benefits in kind; paid by employer	7.5
Training tax; on gross salary and effective value of benefits in kind; paid by employer	1.2

E. Foreign-exchange controls

Exchange-control regulations exist in Chad for financial transfers outside the franc zone, which is the monetary zone including France and its former overseas colonies. A CEMAC rule (No. 02/18/CEMAC/UMAC/CM, dated 21 December 2018) applies to all of the CEMAC countries.

F. Treaty withholding tax rates

Chad has a limited tax treaty network. Chad has only entered into the CEMAC multilateral tax treaty, dated 13 December 1966 and revised in March 2019. Under this treaty, the following are the withholding tax rates.

	Dividends	Interest	Royalties
	%	%	%
Cameroon	5/10*	5*	7.5*
Central African Republic	5/10*	5*	7.5*
Congo (Republic of)	5/10*	5*	7.5*
Equatorial Guinea	5/10*	5*	7.5*
Gabon	5/10*	5*	7.5*
Non-treaty jurisdictions	20	25	25

* Payments from a Chadian source are subject to withholding tax under Chadian domestic tax law.

Other Fees and Compensation for Services Rendered Abroad	35 (b)
Branch Remittance Tax	35 (a)(g)
Net Operating Losses (Years)	
Carryback	0
Carryforward	Unlimited

- (a) For further details, see Section B.
- (b) The tax applies to payments to nonresidents.
- (c) The 35% tax applies to the amount of the grossed-up dividend. One hundred percent of the corporate tax paid by the company can be used as a credit against the withholding tax, with specific rules depending on the type of company and residence of the foreign shareholder or partner.
- (d) A reduced rate of 4% applies to certain interest payments including, but not limited to, interest paid on loans granted by foreign banks, insurance companies, financial institutions, and interest paid with respect to import operations.
- (e) No withholding tax is imposed on payments related to standard software if certain requirements are met. A reduced withholding tax rate of 15% applies to payments with respect to the following:
- Invention patents
 - Models
 - Industrial drawings and designs
 - Layout sketches or layouts of integrated circuits
 - New vegetable patents
 - Use or exploitation of computer programs (software)
- The reduced tax rate does not apply to payments made to companies resident in jurisdictions considered to be preferential regimes. As a result, the withholding tax rate for such payments is 30%. A reduced withholding tax rate of 20% applies to payments for television broadcasting and cinematographic materials.
- (f) A 15% rate applies to payments for engineering, technical assistance, professional and other technical services rendered in Chile or abroad. However, if the payments are being made to a company domiciled in a jurisdiction considered to be a preferential regime, the withholding tax rate is 20%. Exceptionally, payments abroad made as consideration for technical assistance may be exempted from withholding tax if ruled by Customs to be linked to the exportation of services.
- (g) The 35% tax applies to the amount of the grossed-up dividend. One hundred percent of the corporate tax paid by the branch can be used as a credit against the withholding tax, with specific rules depending on the type of company and residence of the foreign shareholder or partner.

B. Taxes on corporate income and gains

Corporate income tax. Chilean resident entities and branches of foreign entities are subject to income tax on their income from worldwide sources. A resident entity is one that is incorporated in Chile. Corporate income tax is applied annually to accrued net income, with the exception of foreign-source income, which is generally computed on a cash basis. Taxable results of foreign branches and passive income of controlled foreign corporations (see Section E) are recognized on an accrual basis.

Rates of corporate tax. The corporate income tax rate is 27%. Small to medium-size entities are subject to corporate income tax at a rate of 10% (for the 2021 and 2022 calendar years) and at a rate of 25% for the following calendar years (certain requirements need to be met).

Corporate tax paid by a company is creditable against the withholding tax applicable to the distribution of profits to the company's partners or shareholders.

Dividends. Dividends received from foreign subsidiaries are taxed as ordinary income. A foreign tax credit is available with respect to such dividends.

Dividend distributions between resident entities are exempt from tax.

Dividends paid by a Chilean company to a nonresident shareholder or partner (entity or individual) are subject to a 35% withholding tax.

Corporate tax paid by the company is creditable against the dividend withholding tax.

For distributions abroad, it is possible to use 100% of corporate tax paid by the company (27%) with the following distinctions:

- On dividend distributions to shareholders or partners who are resident in a non-tax treaty jurisdiction, 35% of the corporate tax credit is refunded to the treasury (in the manner of a higher resulting withholding tax), which translates to an overall tax of 44.45%.
- On dividend distributions to shareholders or partners resident of a tax treaty jurisdiction, no corporate tax credit refund is applicable, which translates to an overall tax of 35%.

For these purposes (that is, the refund of 35% of the corporate tax credit depending on country of residence of shareholder or partner), tax treaties signed before 1 January 2020 and not yet enforced will be deemed valid tax treaties until 2026.

For small and medium-size entities, it is possible to use 100% of the corporate tax paid by the company (10% for the 2021 and 2022 calendar years; 25% onward) with no corporate tax credit refund obligation, regardless of the jurisdiction of the residence of the shareholder or partner (overall corporate tax of 35%).

This withholding tax rate and structure are not reduced or modified, respectively, by Article 10 of valid tax treaties ("the Chilean clause").

Mining tax. A special tax on mining activities is imposed on individuals or legal entities that extract minerals subject to concession and sell these minerals in any state of production. The tax is imposed at progressive rates ranging from 0% to 14%, depending on the amount of the sales and the operational margin of the taxpayer. The tax base is corporate income with certain adjustments.

Sales made by related mining entities are attributed to the taxpayer for purposes of determining the tax rate.

The mining tax is imposed in addition to the income tax. However, the mining tax may be deducted as an expense for income tax purposes for the year in which the tax is due.

Capital gains. In general, capital gains recognized by foreign investors are subject to a 35% tax. As a general rule, direct or indirect transfers of Chilean shares must be done at fair market value.

Sales of shares of companies listed on the stock exchange are exempt from income tax under certain conditions. Under certain double tax treaties, the tax rate on capital gains related to direct transfer of shares may be reduced to 20%, 17% or 16%.

Indirect transfers of Chilean shares are subject to capital gains tax at a rate of 35% if a nonresident entity transfers its indirect interest in Chile under either of the following conditions:

- The nonresident seller transfers at least 10% of its shares in the indirect holding entity and either of the following circumstances exists:
 - At least 20% of the fair market value of the total shares held by the seller derives from the fair market value of the Chilean underlying assets.
 - If, at the date of the transfer, the fair market value of Chilean underlying assets is equal to or greater than approximately USD180 million proportionally.
- The seller is incorporated in a jurisdiction considered preferential (with certain exceptions).

Tax-free reorganization rules (among the same economic group) are available for both direct and indirect transfers if certain requirements are met.

Administration. All accounting periods in Chile must end on 31 December. Income taxes must be paid during the month of April.

Provisional monthly payments on account of final annual income tax are due on the 12th day of each month.

Foreign tax relief. A foreign tax credit may be claimed up to a limit of 35% of the foreign-source income, depending on the nature of the income and the existence of a tax treaty.

C. Determination of trading income

General. Taxable income, determined in accordance with generally accepted accounting principles, includes all profits, with the exception of specified items that are not considered income for tax purposes.

In general, all expenses that have the capability of producing income (in the corresponding calendar year or potentially in the future), duly sustained and justified, may be deducted to determine taxable income. Disbursements related to transaction contracts between unrelated parties (to prevent litigation or settle an existing one) are deductible. Bad debts over 365 days between unrelated parties are deductible.

Interest associated with investment in Chilean companies is deductible for corporate tax purposes.

In general terms, expenses are deducted on an accrual basis. However, cross-border disbursements to foreign related parties are deductible on a cash basis and only after the respective withholding tax is declared and paid.

Royalty payments to a related party abroad (a relationship strictly for the purposes of the application of this rule) may be subject to additional deductibility restrictions.

Inventories. For inventory valuation, the first-in, first-out (FIFO) method and the weighted average cost method are accepted by law. A corresponding monetary correction must be added to cost.

Monetary correction. The Income Tax Law contains monetary adjustment rules. These rules, known as monetary correction, require taxpayers to revalue certain assets and liabilities annually based on the changes reflected in the consumer price index (CPI) and in foreign-exchange rates. The different indices that are used to adjust assets and liabilities may result in taxable profits or losses.

The following adjustments must be made for monetary correction purposes:

- The initial net value of fixed tangible assets is restated based on the change in the CPI, which is fixed monthly by the National Statistical Service. Depreciation is computed on the value of the assets after restatement.
- Inventories existing at the balance-sheet date are restated to their replacement cost.
- Credits, rights and liabilities that are in a foreign currency or linked to price indices are adjusted based on the change in the foreign-exchange rate or the relevant index. Investments in foreign entities are treated as foreign-currency denominated assets.

Depreciation. Depreciation must be calculated using the straight-line method. The tax authority has established the following normal periods of depreciation.

Manufacturing industry and trade	Years
Machinery	15
Heavy tools	8
Light tools	3
General installations	10
Trucks	7
Cars, pickups, station wagons and buses	7
Computers, computer systems, peripherals and similar items	6

Building and mining industries	Years
Solid buildings	80
Semisolid buildings	20 to 50
Buildings of light materials	10
Bulldozers, tractors, Caterpillars and other machines employed in heavy construction	8
Drilling equipment, internal combustion engines, soldering equipment and similar equipment	6
Machines employed in mining activities (general rate)	9

Annual depreciation rates must be applied after the revaluation of fixed assets according to the rules of monetary correction (see *Monetary correction*). Accelerated depreciation may be applied to new or imported fixed assets and to imported fixed assets with normal useful lives of three years or more. The accelerated method allows the calculation of depreciation based on a useful life for an asset equivalent to one-third of the normal useful life established by the Chilean tax authorities. However, accelerated depreciation may be used only in determining trading income for corporate tax purposes.

One hundred percent of the value of fixed assets acquired during the period of 1 June 2020 to 31 December 2022 may be claimed as depreciation in the first year of the assets' useful life. Other transitory depreciation regimes and depreciation benefits are available depending on the size of the company and nature of the assets.

Relief for losses. Losses may be carried forward without a time limit. If a qualified change of ownership occurs, accumulated tax losses may not be deducted from income generated after the ownership change.

The carryback of losses is not available.

D. Value-added tax

Value-added tax (VAT) applies to sales and other transactions regarding tangible personal property, as well as to payments for certain services. It also applies to the habitual sale of real estate. The general tax rate is 19%. VAT is imposed under a credit-debit system.

E. Miscellaneous matters

Foreign-exchange controls. The Central Bank of Chile must be informed of all transactions exceeding USD10,000. Other annual information requirements are imposed.

Taxpayers must report annually (by a sworn statement that must be filed each year) their permanent investments in foreign companies, investments in foreign branches and details regarding their foreign-source income.

Individuals or entities domiciled or resident in Chile must inform the Chilean Internal Revenue Service (IRS) if they become trustees or administrators of trusts created in accordance with foreign law.

Transfer pricing. Chilean transfer-pricing regulations are in line with the Organisation for Economic Co-operation and Development (OECD) guidelines.

Acceptable transfer-pricing methods include the following:

- Comparable uncontrolled price
- Resale price
- Cost-plus
- Profit-split
- Transactional net margin

Any other method may be used if none of the above methods applies to the transaction. The most suitable method should be used, taking into account the facts and circumstances of each related-party transaction.

Taxpayers must file an annual sworn statement identifying related-party transactions and transfer-pricing methods, and providing other information requested by the Chilean IRS through regulations. In addition, taxpayers must keep all relevant information supporting compliance with the transfer-pricing rules.

County-by-Country (CbC) regulations have been in force in Chile since 2017.

In addition, Master File and Local File Sworn Statements must be submitted to the Chilean IRS if certain conditions are met.

Debt-to-equity rules. Excess indebtedness exists if the “debt” of a Chilean entity exceeds three times its tax equity (*capital propio tributario*; financial equity with certain adjustments). “Debt” includes all debt, regardless of whether it is foreign or local or related or unrelated, as well as the debt at the level of the company’s permanent establishments abroad.

If excess indebtedness is triggered, a 35% surtax applies on interest if both of the following circumstances exist:

- The interest is paid abroad due to related-party (or deemed related-party) debt.
- The interest benefits from a reduced withholding tax rate (4% under domestic law or tax treaty rate).

In this case, the applied withholding tax may be used as a credit by the Chilean debtor who must bear the 35% penalty tax. The concept of relationship also includes any type of guarantee.

Controlled foreign corporations. In general, foreign-source income is taxed on a cash basis. However, under the controlled foreign corporation (CFC) rules, Chilean resident taxpayers are taxed on an accrual basis on passive income received or accrued by a CFC.

Under the CFC rules, passive income includes the following:

- Dividends or profit distributions from non-controlled entities
- Interest (unless the controlled entity is a bank or financial institution)
- Royalties (unless derived from research and development projects)
- Capital gains
- Income from the lease of real property (unless the exploitation of real property is the principal activity of the controlled entity)

- Income from the assignment of certain assets
- Specified Chilean-source income

Control of a foreign entity is deemed to exist in any of the following circumstances:

- 50% or more of the capital, profit or voting rights is directly or indirectly owned by a Chilean taxpayer.
- The Chilean taxpayer has a decisive influence on the administration of the foreign entity.
- The foreign entity is domiciled in a country or territory with a preferential tax regime, unless proven otherwise (that is, a foreign entity is deemed controlled if it is domiciled in a tax haven or preferred jurisdiction, unless the Chilean taxpayer demonstrates that it does not control it).

F. Treaty withholding tax rates

The table below lists the withholding tax rates under the Chilean treaties in force. All of these treaties are based on the OECD model convention.

	Dividends %	Interest (f) %	Patent and know-how royalties %
Argentina	10/15 (a)	4/12 (b)(d)	3/10/15
Australia	15 (a)	5/10 (b)(d)	5/10 (c)

Non-treaty jurisdictions	35 (f)	4/35 (g)	15/30 (e)

- (a) With respect to Chile, the treaty withholding tax rates for dividends do not apply to the 35% withholding tax applicable under domestic law as long as the corporate tax is creditable against the withholding tax. The 35% tax applies to the amount of the grossed-up dividend. One hundred percent of the corporate tax paid by the Chilean company is creditable against the withholding tax borne by a nonresident shareholder.
- (b) These treaties have a most-favored nation (MFN) clause with respect to interest.
- (c) These treaties have an MFN clause with respect to royalties. In the case of the Peru treaty, the clause applies after a five-year period beginning on the effective date of the Chile-Peru treaty.
- (d) The rates have been expressly ratified by respective countries as a result of the applicability of an MFN clause.
- (e) The withholding tax rate is reduced to 15% for payments with respect to the following:
 - Invention patents
 - Models
 - Industrial drawings and designs
 - Layout sketches or layouts of integrated circuits
 - New vegetable patents
 - The use or exploitation of computer programs (software)The reduced tax rate does not apply to payments made to companies resident in jurisdictions considered to be preferential regimes. The withholding tax rate for such payments is 30%.
- (f) The 35% tax applies to the amount of the grossed-up dividend. Up to 100% of the corporate tax paid by the Chilean company is creditable against the withholding tax borne by the nonresident shareholder, depending on the tax regime of the Chilean company.
- (g) Under Chilean domestic law, a reduced 4% tax rate applies to the following interest payments:
 - Interest paid on loans granted by foreign banks, financial institutions and insurance companies
 - Interest paid on bonds
 - Interest paid with respect to import operations

Chile has signed a tax treaty with the United States, which is awaiting ratification by the United States. Chile has also signed tax treaties with India, Netherlands and the United Arab Emirates, for which ratification is pending.

(resident in Shanghai) Email: cong-c.zhang@cn.ey.com

This chapter refers only to the taxation of entities under the tax laws of the Mainland China tax jurisdiction.

A. At a glance

Corporate Income Tax Rate (%)	25
Capital Gains Tax Rate (%)	25 (a)
Branch Tax Rate (%)	25
Withholding Tax (%) (b)	
Dividends	10 (c)
Interest	10
Royalties from Patents, Know-how, etc.	10
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	5/10 (d)

- (a) Capital gains derived by foreign enterprises from disposals of interests in foreign investment enterprises are subject to a final withholding tax of 10% instead of income tax. This rate may be reduced by applicable tax treaties.
- (b) The statutory rate is 20%, which is reduced to 10% by the Enterprise Income Tax Law Implementation Regulations.
- (c) Effective from 1 January 2017, foreign investors are eligible for dividend withholding tax deferral treatment if they directly reinvest the attributable or distributable profits from its Chinese tax resident investees or portfolio companies in China, subject to meeting certain required conditions (see Section B).
- (d) Effective from 1 January 2018, for qualifying High and New Technology Enterprises (HNTEs) and technology-based small and medium-sized enterprises, the time period for carrying forward net operating losses can be extended to 10 years (see Section C).

B. Taxes on corporate income and gains

Corporate income tax. Corporate residents of China are taxed on their worldwide income, including income from business operations, investment and other sources. A foreign tax credit is allowed for income taxes paid in other countries. This credit is capped at the China income tax payable on the same income calculated under the corporate income tax law.

In general, a company is regarded as tax resident in China if it is incorporated in China or effectively managed in China. “Effective management” is defined as overall management and control over the production, business, personnel, accounting, and assets of a company.

Nonresident companies are taxed on China-source income only. However, if the nonresident company has an establishment in China, non-China source income effectively connected with the China establishment is also taxed.

The term “establishment” is broadly defined to include the following:

- A place of management
- A branch
- An office
- A factory
- A workshop
- A mine or an oil and gas well or any other place of extraction of natural resources
- A building site
- A construction, assembly, installation or exploration project

- A place for the provision of labor services
- A business agent

Rates of corporate tax. The statutory rate of enterprise income tax is 25%. The withholding tax rate on passive income (including dividends, interest, royalties and capital gains) of non-China tax residents is 10%.

A reduced tax rate applies to the following enterprises, subject to the satisfaction of certain conditions:

- During the period from 1 January 2021 to December 31, 2022, for qualifying small and less-profitable enterprises, a 20% rate and 87.5% reduction of annual taxable income apply to the annual income not exceeding CNY1 million, and during the period from 1 January 2019 to 31 December 2021, a 20% rate and 50% reduction of annual taxable income apply to the annual taxable income exceeding CNY1 million but not exceeding CNY3 million (further regulations to extend the above preferential income tax treatments are yet to be published). A qualifying small and less-profitable enterprise refers to an enterprise that is engaged in an industry not restricted or prohibited by China and that meets the following three conditions:
 - Its annual taxable income does not exceed CNY3 million.
 - The number of its employees does not exceed 300.
 - Its total assets do not exceed CNY50 million.
- 15% for HNTes.
- 15% for qualifying Technologically Advanced Service Companies nationwide (effective from 1 January 2017). Effective from 1 January 2018, companies engaging in the service trade should refer to the Scope of Recognition of Technology Advanced Services for Service Trade as stipulated in the attachment of Circular Caishui [2018] No. 44.
- 10% for key software enterprises, key animation and comics enterprises and integrated circuit designing enterprises.
- 15% for western region enterprises and enterprises in Ganzhou in Jiangxi Province engaging in and deriving 60% of their total income from certain encouraged industries as stipulated in a new western region catalog (from 1 January 2021 to 31 December 2030).
- 15% for qualifying enterprises that are registered in the Guangdong Hengqin New Area (Hengqin), the Fujian Pingtan Comprehensive Pilot Zone (Pingtan) or the Qianhai Shenzhen-Hong Kong Modern Service Industry Cooperation Zone (Qianhai) (for further details, see below).
- 15% for qualifying enterprises in encouraged industries registered in the Hainan Free Trade Port and engaged in substantive operations.
- 15% for qualifying third-party enterprises that are engaged in pollution prevention and abatement as entrusted by pollution-discharging enterprises or governments.

Tax incentives. A five-year tax holiday (exemption for the first two years and 50% reduction for the next three years) is granted to newly established and qualified HNTes that are incorporated after 1 January 2008 and that are located in the Shanghai Pudong New Area or one of the five Special Economic Zones (SEZs), which are Hainan Province, Shantou, Shenzhen and Zhuhai in the Guangdong Province, and Xiamen in the Fujian Province.

A five-year tax holiday also applies to qualifying software enterprises, animation and comics enterprises, integrated circuit designing enterprises and qualified integrated circuit production enterprises (or qualified projects in which investments are made on or after 1 January 2018).

For qualified integrated circuit production enterprises (or qualified projects), the tax holiday can be extended to 10 years (up to an exemption for 10 years) under certain conditions. The 5-year or 10-year tax holiday starts from the tax year in which a qualifying enterprise begins making profits or when a qualifying project generates its first business operating income. If a software enterprise, animation and comics enterprise or integrated circuit designing or production enterprise cannot satisfy the relevant requirements in a profit-making tax year, the enterprise enjoys the remaining tax holiday from its initial tax year in which it satisfies the relevant requirements. If qualifying integrated circuit designing enterprises and software enterprises did not have their first profit-making year by 2019, they can enjoy the above tax holiday subject to the newest requirements as listed in the regulations issued in 2020. Qualifying integrated circuit designing enterprises and software enterprises enjoying the tax holiday pursuant to the policies issued prior to 2020 are eligible for the original tax holiday or the newly regulated tax holiday (if more beneficial), provided that they also meet the provisions of the newly issued regulations.

Effective from 1 January 2020 to 31 December 2024, qualified income derived by enterprises in the tourism industry, modern service industry and high-tech industry established in the Hainan Free Trade Port from newly increased overseas direct investment may be exempted from corporate income tax.

Effective from 1 January 2020, eligible corporate enterprises that engage in relevant products (technology) business of the core links in such key areas as integrated circuits, artificial intelligence, biomedicine and civil aviation in the Lingang New Area in Shanghai and that carry out a substantive production or research and development (R&D) activities are subject to the enterprise income tax at a reduced rate of 15% within five years from the date of their establishment.

During the period from 2021 to 2030, certain specified industries in selected areas of Xinjiang, such as agriculture and forestry, irrigation, coal production and related industries, electricity, new energy, oil and gas, production of certain metals and related industries, petrochemical, pharmaceutical, transportation, modern logistics, environmental protection and resources conservation, can also benefit from a five-year tax holiday based on the statutory rate of 25%. A five-year exemption, starting from the year enterprises generate their first business operating income, applies to qualifying enterprises located in the Kashi and Huoerguosi Special Economic Development Zones of Xinjiang.

During the period of 1 January 2021 through 31 December 2025, enterprises that are established in Pingtan or Qianhai (the covered areas) and that engage in encouraged industries can be subject to a reduced corporate income tax rate of 15%. Enterprises

engaging in encouraged industries are enterprises that satisfy the following conditions:

- They have their core businesses in the covered area.
- Their businesses relate to industries and projects stipulated in preferential corporate income tax catalogs.
- Their income derived from such core businesses account for more than 60% of their total income.

If enterprises have establishments both inside and outside the covered areas, only the income attributable to establishments inside the covered areas is eligible for the preferential corporate income tax rate of 15%. There are currently no further regulations to extend the preferential income tax treatments (that is, a reduced corporate income tax rate of 15%) to 2022 and afterward for enterprises established in Hengqin. Local practice in Hengqin shall be confirmed separately.

From 1 January 2018 through 31 December 2023, China temporarily has raised the general pretax super deductions rate from 150% to 175% on an expanded scope of qualifying research and development expenditures (RDEs) incurred by China tax resident enterprises during the year; alternatively, if related qualifying RDEs are incurred for developing intangible assets, the companies may amortize the capitalized intangible assets based on 175% (also increased from the general super deduction rate of 150%) of the actual cost incurred on developing the intangible assets. Previously, the 175% super deduction rate was eligible only to qualified technology-based small and medium-sized enterprises from 1 January 2017 through 31 December 2019. The super deduction rate for the manufacturing industry was increased to 200% effective from 1 January 2021.

Effective from 1 January 2018, when an enterprise outsources its R&D activities to overseas entities (not including overseas individuals), the enterprise as consignor is eligible for a 50% super deduction (75% super deduction during the period of 1 January 2018 through 31 December 2023) based on 80% of expenses incurred for the R&D activities outsourced to overseas entities, provided that the expenses do not exceed two-thirds of the enterprise's total eligible R&D expenses incurred domestically. The actual amount of R&D expenses should be determined in accordance with the arm's-length principle. If the consignor and consignee are related parties, the consignee should provide the consignor with detailed R&D expense statements. The corporate income tax super deduction for expenses incurred for outsourcing R&D activities to overseas entities was not allowed under the rules.

Other tax incentives are available to enterprises engaged in industries, projects, or activities encouraged by national policies. The incentives granted to these encouraged industries, projects and activities typically include the following:

- Income from agriculture, forestry, animal husbandry and fishery projects is eligible for a full tax exemption or 50% reduction of tax, depending on the type of projects.
- Income from infrastructure projects is eligible for a full tax exemption for the first three years and a 50% reduction of tax for the next three years beginning with the first income-generating year. If certain requirements are met, enterprises that invest in a

- qualifying public infrastructure project and are approved to perform the project in phases are allowed to calculate the corporate income tax based on the taxable income of each phase and enjoy the tax holiday for different phases of the project separately.
- Income from environmental protection or water or energy conservation projects is eligible for a full tax exemption for the first three years and 50% reduction of tax for the following three years.
 - Income from technology transfer is eligible for a tax exemption for the first CNY5 million and a 50% reduction for the amount over that threshold.
 - 200% of qualified wages for disabled people can be tax deductible.
 - A venture capital company that makes equity investments in qualifying fledgling science and technology enterprises (QFSTEs) for at least 2 years (or 24 months) may offset 70% of its investments against its taxable income. Any excess amount can be carried forward and offset against the taxable income in the subsequent tax years.
 - A corporate partner of limited partnership venture capital companies (LPVCCs) that makes equity investments in QFSTEs for at least 2 years (or 24 months) may offset 70% of its investments against its taxable income generated from the LPVCC. Any excess amount can be carried forward and offset against the taxable income generated from the LPVCC by the corporate partner in the following tax years.
 - Income derived from recycling business is eligible for a 10% reduction in calculating taxable income.
 - Income derived from the provision of community care, child-care and housekeeping services is eligible for a 10% reduction in calculating taxable income from 1 June 2019 to 31 December 2025.
 - Interest income derived by company investors from railway bonds issued by China Railway Corporation during the period from 2019 to 2023 is eligible for a 50% reduction in calculating taxable income.
 - 10% of the cost incurred in purchasing environmental protection, water and energy saving or production safety equipment can be credited against income tax payable for the year of the purchase.

Capital gains and losses. In general, capital gains and losses are treated in the same manner as other taxable income and losses, and are taxed at the normal income tax rate of 25%. However, China-source capital gains derived by nonresident enterprises, such as gains from the disposal of a foreign investment enterprise (FIE), are subject to a 10% withholding tax. In addition to income tax, real property gains tax is imposed on gains derived from transfers of real properties (see Section D).

Administration. The tax year in China is the calendar year.

An annual corporate income tax return, together with audited financial statements issued by a certified public accountant registered in China and a set of annual reporting forms for related-party transactions, is due within five months after the end of the tax year. Enterprises must settle all outstanding tax liabilities within the same period.

In addition, enterprises must also file quarterly provisional corporate income tax returns within 15 days after the end of each quarter, together with payments of provisional tax based on actual profits. If an enterprise has difficulty in filing a provisional tax return based on the actual quarterly profits, it may pay tax based on estimated profits. The estimated profits are normally computed by reference to one-quarter of the enterprise's actual taxable profits for the preceding year. Otherwise, they are computed under other methods approved by the tax bureau.

Late filing or late payment triggers a surcharge of 0.05% per day and a discretionary penalty of 50% to 500% of the unpaid tax liabilities. For adjustments made under anti-avoidance provisions, such as adjustments with respect to transfer pricing, thin capitalization and controlled-foreign corporations (see Section E), an interest charge is imposed on a daily basis, beginning on 1 June of the year following the tax year to which the tax underpayment is related and ending on the day the tax underpayment is settled. This charge is based on the renminbi yuan (CNY) loan base rate published by the People's Bank of China (PBOC) plus 5%. If contemporaneous documentation and other prescribed documentation are provided or if the contemporaneous documentation is not needed in accordance with the relevant regulations but other relevant documents are provided as required by the tax authorities, the interest charge may be reduced to an amount based only on the CNY loan-based rate published by the PBOC.

Effective from 1 January 2015, the administrative approval requirements for tax incentives were removed and replaced by a record-filing mechanism.

Dividends. Profits of FIEs distributed as dividends are subject to withholding tax at a rate of 10% (this rate may be reduced under a tax treaty or arrangement) when the dividends are actually paid. Effective from 1 November 2015, the investor may determine and enjoy the treaty benefits itself when filing a tax return or making a withholding declaration through a withholding agent, keep relevant information and accept the subsequent post-filing administration from the in-charge tax authorities. Dividends paid between qualified resident companies may be exempted. For this purpose, resident companies are qualified if one tax resident has made a direct investment in the other tax resident. Dividends attributable to publicly traded shares are also treated as tax-exempt investment income if the holding period of the shares is longer than 12 months.

Effective 1 January 2017, if a foreign investor makes an investment directly with the profits that it obtains from a Chinese resident enterprise in an investment project in one of the designated encouraged industries listed under the Foreign Investment Industrial Guidance Catalogue and/or the Catalogue of Priority Industries for Foreign Investments in the Central and Western Regions, the withholding tax deferral policy applies, provided that certain requirements are fulfilled. Effective from 1 January 2018, the qualified application scope for dividend withholding tax deferral policy is expanded from encouraged industries to all non-prohibited industries. If the foreign investor recovers the investment by means of equity transfer, repurchase, liquidation or other ways from a direct investment that has enjoyed benefits

from the withholding tax deferral policy, it must declare and pay the deferred tax amount to the tax authority within seven days after actually receiving the relevant payments.

Interest income derived from perpetual bonds can be deemed as dividends for corporate income tax purpose; that is, if both the issuer and the investor are resident enterprises in China, the interest income received by the investor can be exempted from corporate income tax, while the interest expenses incurred by the bond issuer cannot be deducted for corporate income tax purposes. Alternatively, the interest income derived from perpetual bonds can also be included in the taxable income of the investor for corporate income tax purpose while the interest expenses incurred by the bond issuer can be deducted for corporate income tax purposes. The issuer shall notify the investors which of the two approaches mentioned above will be adopted when issuing the bonds.

Foreign tax relief. A tax credit is allowed for foreign income taxes paid, or indirectly borne, by China resident enterprises, but the credit is generally limited to the amount of China corporate income tax payable on the foreign-source portion of an enterprise's worldwide taxable income. A nonresident enterprise with an establishment or place of business (generally referred to as a permanent establishment [PE]) in China that derives foreign-source income effectively connected to the PE can also claim a tax credit for income taxes paid in foreign jurisdictions, but the credit is limited to China corporate income tax payable on such income. Excess foreign tax credits may be carried forward for a period of five years. Effective from 1 January 2017, Chinese companies may claim an indirect foreign tax credit with respect to five tiers of controlled overseas subsidiaries (previously three tiers). Also, effective from the 2017 tax year, Chinese companies may adopt a comprehensive basis instead of the current country-by-country basis to calculate its foreign tax credit limit. The comprehensive basis is perceived to be more favorable to taxpayers than the country-by-country basis in many cases. Under the country-by-country method, the tax credit limit for each country is calculated by apportioning the total income tax on worldwide taxable income through the application of an apportionment ratio of the taxable income sourced in the relevant country to worldwide taxable income. Under the comprehensive method, the tax credit limit is calculated based on the taxable income derived from all foreign jurisdictions. The enterprise may not change the method within five years after adopting one of the methods.

C. Determination of trading income

General. Taxable income is defined as total revenue less the following:

- Non-taxable income
- Tax-exempt income
- Allowable deductions
- Tax losses

No major differences exist between tax and accounting methods for income computation purposes. Dividends, bonuses, interest, royalties, rent and other income are included in taxable income.

In general, all necessary and reasonable expenses incurred in carrying on a business are deductible for tax purposes. However, specified limits apply to the deductibility of advertisement expenses, entertainment expenses, union fees, employee welfare costs, employee education expenses, commissions and handling fees, supplementary pensions and supplementary medical insurance. Charitable donations of up to 12% of the total annual profit are deductible. Effective from 1 January 2019 to 31 December 2022, qualified donations aiming to reduce poverty shall be fully deducted for corporate income tax purposes and excluded when calculating the annual deduction limitation of charitable donations. The same income tax treatment can be applied to qualified donation expenditure incurred by enterprises in the period from 1 January 2015 to 31 December 2018. Effective from 1 January 2017, charitable donations exceeding the deduction limitation can be carried forward for up to three years following the year in which the charitable donations are made for future deduction.

Management fees paid between enterprises, rental and royalty fees paid between business units of an enterprise, and interest paid between business units of nonbank enterprises are not deductible. Interest paid on related-party borrowing that does not meet debt-to-equity ratio rules (see Section E) may not be deductible. Other nondeductible expenses include the following:

- Sponsorship expenses
- Dividends and returns on equity investments
- Income tax payments including penalties and surcharges
- Donations not fulfilling prescribed requirements
- Provisions not yet approved
- Other expenses not related to production or business operations

For an establishment in China of an enterprise that is not a resident for tax purposes, reasonable expenses allocated from the overseas head office are deductible if these expenses are incurred by the head office for the production or business operations of such establishment and are supported by proper documents issued by the head office.

Inventories. For tax purposes, the cost of inventories is determined in accordance with the following rules:

- The cost of inventories that are paid for in cash is the sum of the purchase price and the related taxes and charges actually paid.
- The cost of inventories that are not paid for in cash is determined based on the fair market value of the consideration and the related taxes and charges actually paid.
- The cost of agricultural products generated from biological assets (for example, animals or woods) is determined based on the necessary raw material, labor and relevant overhead expenditure actually incurred.

Cost may be determined on a first-in, first-out (FIFO), weighted average, or specific identification basis. The last-in, first-out (LIFO) basis is not acceptable for tax purposes. The method chosen must be applied consistently.

Provisions. Provisions that have not been approved by the tax authorities are generally not deductible. These include various provisions and allowances for asset impairment and risk reserves.

Tax depreciation. Depreciation of tangible assets is generally computed using the straight-line method. The following are minimum useful lives for various assets.

Asset	Years
Buildings and structures	20
Aircraft, trains, vessels, machinery, equipment and other production plants	10
Appliances, tools, furniture and other assets related to production and business operations	5
Means of transport other than aircraft, trains and vessels	4
Electronic equipment	3
Productive biological assets in the nature of trees	10
Productive biological assets in the nature of livestock	3
Acquired software (subject to approval)	2

Accelerated depreciation is allowed with respect to certain fixed assets subject to rapid technological obsolescence and fixed assets exposed to constant shock and erosion. A qualified company can follow either the general depreciation rule or the accelerated depreciation rule.

Enterprises engaging in six specific industries may adopt a shortened depreciation life or accelerated depreciation method for corporate income tax purposes for fixed assets acquired on or after 1 January 2014. An additional four specific industries were added to the list, and enterprises in these industries are eligible to choose either a shortened depreciation life or accelerated depreciation method, effective from 1 January 2015.

Effective from 1 January 2019, the industry scope of accelerated depreciation for fixed assets is further extended to the whole manufacturing industry, instead of restricting it to the six and four industries referred to above.

Small and micro-sized enterprises engaging in the 10 specific industries mentioned above can claim a deduction for corporate income tax purposes in the year of acquisition for the cost of devices and equipment with a unit value not exceeding CNY1 million that are acquired on or after 1 January 2014 and used for R&D, as well as for production and business operations; these enterprises are no longer required to depreciate the fixed assets mentioned above over their useful lives. (For accounting purposes, the entire cost must still be depreciated over several years in accordance with accounting rules.) For those fixed assets with a unit value exceeding CNY1 million, the above enterprises may adopt a shortened depreciation life or accelerated depreciation methods for corporate income tax purposes.

Enterprises in various industries can claim a deduction for corporate income tax purposes in the year of acquisition for the cost of devices and equipment with a unit value not exceeding CNY1 million that are acquired on or after 1 January 2014 and used for R&D purposes only; these enterprises are no longer required to depreciate these fixed assets over their useful lives. (For accounting purposes, the entire cost must still be depreciated over several years in accordance with accounting rules.) For fixed assets with a unit value exceeding CNY1 million, the above

enterprises may adopt a shortened depreciation life or accelerated depreciation methods for corporate income tax purposes.

Enterprises in various industries can claim a deduction for corporate income tax purposes in the year of acquisition for the cost of fixed assets with a unit value not exceeding CNY5,000. Enterprises are no longer required to depreciate these fixed assets over their useful lives. (For accounting purposes, the entire cost must still be depreciated over several years in accordance with accounting rules.)

Effective from 1 January 2018 to 31 December 2023, an enterprise may claim a deduction for corporate income tax purposes in the year of acquisition for the cost of newly acquired equipment or appliances (referring to any fixed assets except for real estate or constructions) if the unit value of the equipment or appliance does not exceed CNY5 million. (For accounting purposes, the entire cost must still be depreciated over several years in accordance with accounting rules.) If an enterprise acquires any equipment or appliance with a unit value exceeding CNY5 million, the taxpayer may still choose the general depreciation method or the accelerated depreciation methods according to the old tax rules mentioned above.

Intangible assets, including technical know-how, patents and trademarks, are amortized over the contractual term or over a period of no less than 10 years if a time period is not specified. Self-developed goodwill cannot be amortized or deducted. Acquired goodwill is deductible only if the entire business is transferred or liquidated.

Relief for losses. Tax losses may be carried forward for up to five years. Effective from 1 January 2018, qualifying HNTes and technology-based small and medium-sized enterprises may carry forward for 10 years for future deduction the losses incurred in the five years preceding the year in which the enterprises gain the qualification, to the extent that the losses have not yet been offset. Carrybacks are not allowed.

Groups of companies. In general, consolidated returns of enterprises are not allowed, and all companies must file separate tax returns, unless specifically approved by government authorities. Tax resident enterprises in China must adopt combined filing for units (branches and establishments without legal person status) operating in different areas of China. On approval by the relevant tax authorities, nonresident enterprises that have two or more establishments in China may select a main establishment to file a combined tax return.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT)	
Standard rate (rate implemented from 1 April 2019)	13
Rate on specified products (primarily basic necessities), agricultural products and utility services (rate implemented from 1 April 2019)	9
Nationwide VAT pilot reform, effective from 1 May 2016, with expanded scope to cover	

Nature of tax	Rate (%)
the construction industry, real estate industry, finance industry and lifestyle services industry (China Business Tax has been phased out)	
Leasing of tangible properties (rate implemented from 1 April 2019)	13
Transportation services, postal services, basic telecommunication services, construction services, immovable property (operating and financial) leasing services, sales of immovable property and transfers of land-use rights (rate implemented from 1 April 2019)	9
Modern services (including R&D and technology services, information and technology services, cultural and creative services, logistics auxiliary services, verification and consulting services, radio, film and television services, business supporting services and other modern services), value-added telecommunication services, financial services (including loan services, financial services with direct service charges, insurance services and trading of financial instruments), lifestyle services (including cultural and sports services, education and medical services, tourism and entertainment services, catering and accommodation services, residents, daily services and other life services) and sales of intangible assets other than land-use rights	6
Other reduced levy rates (applicable to small-scale VAT payers other than those in the real estate industry and the construction industry [3%] or general VAT payers in the real estate industry and construction industry who choose to adopt the simplified computation method [5%]; a levy rate of 5% can be chosen for the supply of certain services)	3/5
Temporarily reduced levy rate (applicable to small-scale VAT payers); expired on 31 March 2022; from 1 April 2022 to 31 December 2022, small-scale taxpayers should be exempt from VAT	1
International transportation and space transportation services, some specific cross-border VAT-payable supplies conducted by domestic entities or individuals for overseas entities that are consumed entirely outside China (the entities or individuals can elect the VAT exemption instead of the 0% rate)	0
(VAT previously paid on the purchase of raw materials, parts and taxable services that are used in the production of export goods or in the provision of certain export services is refundable; applicable refund rates depend on types of goods or services that are exported.)	
Postal and collection and delivery services and insurance services provided for the exportation of goods, specified supplies of services and intangible assets that are provided to foreign entities and consumed entirely outside China, international transportation services provided by	

Nature of tax	Rate (%)
non-transport operating carriers (transportation operators that enter into transportation service agreements with their customers, charging freight and assuming carriers' responsibilities, and then subcontract the transportation services to real carriers that perform the transportation services for the customers), financial services with direct service charges provided between foreign entities that are not related to any goods, intangible assets or real estate in China; specific services provided by certain industries (for example, transportation and lifestyle industry in 2020) as a result of COVID-19	Exempt
Consumption tax (CT); on the production and importation of certain luxury items, such as cigarettes, gasoline, alcoholic beverages, jewelry, high-end cosmetics (including high-end beauty and makeup cosmetics, high-end skin care cosmetics and cosmetics sets), motor vehicles, motor vehicle tires, golf balls and equipment, luxury watches and yachts	Various
Real property gains tax; imposed on real property transfers (after various deductions)	30 to 60
City construction tax (CCT); based on indirect taxes (including VAT and CT) actually paid (effective from 1 September 2021, no CCT is due for the imported supply of services)	
Taxpayers located in urban areas	7
Taxpayers located in county or township areas	5
Taxpayers located in rural areas	1
Education surcharge (ES); based on indirect taxes (including VAT and CT) actually paid (effective from 1 September 2021, no ES is due for the imported supply of services)	3
Local education surcharge (LES); based on indirect taxes (including VAT and CT) actually paid (effective from 1 September 2021, no LES is due for the imported supply of services)	2

E. Miscellaneous matters

Foreign-exchange controls. In general, the Chinese government permits the free convertibility of current account items of China incorporated enterprises. Current account items are defined as transactions occurring daily that involve international receipts and payments. Current account foreign-exchange receipts and payments include trading receipts and payments, service receipts and payments, unilateral transfers and dividends paid from after-tax profits.

Recently, China has been further relaxing its foreign-exchange controls in phases by permitting settlement in renminbi yuans (CNY) for all cross-border transactions that were allowed to be settled in foreign currency, including cross-border trades in commodities, services and other current account items, as well as certain capital account items, on a nationwide basis and then

extending the CNY settlement to both inbound and outbound transactions. Remittances of dividends to foreign investors and other items including income derived from share transfers, capital reductions, liquidations and early withdrawals of investments may be settled in renminbi yuans.

Remittances of dividends and profits. Remittances of after-tax profits or dividends to foreign investors in FIEs must be supported by written resolutions of the board of directors and audited financial statements, and may not be made until a tax record filing form is issued by the tax authorities.

Remittances of interest and principal. Interest payments on foreign loans are considered current account items. In general, after performing a tax-record filing with the tax authorities, these payments may be made through the enterprise's special foreign-exchange bank account or through conversion at designated foreign-exchange banks.

Since 13 May 2013, enterprises are not required to submit any formal application to the State Administration for Foreign Exchange (SAFE) for the approval of principal repayments. In general, the enterprise may repay the principal from its special foreign-exchange bank account or through conversion at designated foreign-exchange banks. Since 23 October 2019, non-bank debtors are not required to perform foreign loans de-registration (to indicate the termination of foreign debt) at the local SAFE. Such de-registration of the foreign loans can be performed at designated foreign-exchange banks in the same location. In the meantime, nonfinancial enterprises in the pilot areas (the Guangdong-Hong Kong-Macao Greater Bay Area and Hainan province) are not required to register foreign loans with the local SAFE on a case-by-case basis.

Remittances of royalties and fees. Instead of applying for tax clearance for settling outbound payments that exceed USD50,000, effective from 1 September 2013, enterprises can file a record with the in-charge tax authorities by submitting copies of contracts (stamped by the official seal) together with registration forms before making payments of royalties and fees, either out of the enterprise's special foreign-exchange bank account or through currency conversion and payment at a designated foreign-exchange bank. With respect to royalties, the investor may determine and enjoy the treaty benefits when filing a tax return or making a withholding declaration through a withholding agent, and accept the subsequent post-filing administration from the in-charge tax authorities. Proper documentation (such as royalty agreements, invoices and other tax and business documents) is required for all payments of royalties and fees.

Debt-to-equity requirements. Foreign debt quota (including both the debt borrowed from related parties or from third parties) can be either the difference between the total investment and registered capital (refer to the following corporate law requirements) or no more than 2.5 times the net asset value effective from 11 March 2020. In general, FIEs can select one method and it cannot be changed randomly. If the latter method is selected, the FIE must provide the local SAFE with audited financials to support the net asset value.

For FIEs in China, the following debt-to-equity ratios are applicable for the purpose of obtaining foreign-currency loans from foreign parties (including foreign related parties) and meeting corporate law requirements:

- For investment projects of up to USD3 million, the capital contribution must equal or exceed 70% of the total investment.
- For investment projects of over USD3 million but not exceeding USD10 million, the minimum capital requirement is 50% of the total investment, but not less than USD2,100,000.
- For investment projects of over USD10 million but not exceeding USD30 million, the minimum capital requirement is 40% of the total investment, but not less than USD5 million.
- For investment projects in excess of USD30 million, the minimum capital requirement is 33.3% of the total investment, but not less than USD12 million.

The New Law provides for a separate set of debt-to-equity rules for tax purposes. Subject to certain exceptions, in general, the debt-to-equity ratio for financial institutions is 5:1 and the ratio for non-financial institutions is 2:1. The interest expense on funds loaned by a related party that exceed the maximum debt calculated under the debt-to-equity ratio is not deductible for tax purposes.

In addition, the deduction of expenses on a loan from an investor may be limited if the investor has not yet paid up its committed investment capital. The nondeductible interest expense is calculated by apportioning the total interest expenses based on the ratio of the outstanding capital commitment to the total loan balance.

Transfer pricing. China has introduced transfer-pricing rules under which all amounts paid or charged in business transactions between related parties must be determined based on an arm's-length standard. If the parties fail to meet this requirement, the tax bureau may make reasonable adjustments by using one of the following methods:

- Comparable uncontrolled price (CUP)
- Resale price method (RPM)
- Cost-plus method (CPM)
- Transactional net margin method (TNMM)
- Profit split method (PSM)
- Other methods, including asset valuation methods, such as the cost-based method, market-based method and income-based method, and other methods that are consistent with the arm's-length principle

On 29 June 2016, the State Taxation Administration (STA) issued STA Notice [2016] No. 42 (Bulletin 42), replacing the following items of 2009's Implementation Measures for Special Tax Adjustments (Trial Version; Guoshuifa [2009] No. 2 (Circular 2):

- Chapter 2: Related-Party Transaction (RPT) Reporting
- Chapter 3: Documentation Requirements
- Article 74: Cost Sharing Agreements (CSAs) Documentation
- Article 89: Thin Capitalization Documentation

It also replaced the Annual RPT Forms of Enterprises of the People's Republic of China (Guoshuifa [2008] No. 114), governing RPT disclosure in annual income tax filings. The provisions in Bulletin 42 apply for the 2016 fiscal year and thereafter.

Chinese enterprises must disclose RPTs in RPT forms, which should be submitted to the in-charge tax bureau together with the annual tax return by the due date for the annual return (that is, before 31 May of the following year).

Bulletin 42 replaces Circular Guoshuifa [2008] No. 114 and introduces significant new disclosure requirements with respect to RPTs. The major changes introduced by Bulletin 42 are described below.

RPT forms disclosure. Bulletin 42 increases the number of disclosure forms from 9 to 22, including the following:

- Reporting Entity Information Form
- Summary of Annual Related Party Transaction Forms
- Related Party Relationship Form
- Ownership Transfer of Tangible Asset Transaction Form
- Ownership Transfer of Intangible Asset Transaction Form
- Use Right Transfer of Tangible Asset Transaction Form
- Use Right Transfer of Intangible Asset Transaction Form
- Financial Assets Transaction Form
- Financing Transaction Form
- Related Party Service Transaction Form
- Equity Investment Form
- CSA Form
- Outbound Payment Form
- Overseas Related Party Information Form
- Financial Analysis Form of Annual Affiliated Transactions between Enterprises (unconsolidated)
- Financial Analysis Form of Annual Affiliated Transactions between Enterprises (consolidated)
- Three forms related to Country-by-Country Reporting (CbCR) (the CbCR forms need to be completed in both Chinese and English)

Documentation structure. Bulletin 42 adopts the three-tiered documentation structure set out in the final reports under Action 13 of the Organisation for Economic Co-operation and Development (OECD) Base Erosion and Profit Shifting (BEPS) Action Plan.

This structure consists of a CbCR (disclosed as part of the RPT Forms), a Master File and a Local File. In addition, special item files are required for taxpayers entering or implementing CSAs or falling under the thin-capitalization requirements.

Taxpayers that meet the conditions outlined below need to prepare a Master File and a Local File.

A Master File is required if annual RPTs exceed CNY1 billion, or if any cross-border RPTs occur and the entity's ultimate parent already prepares a Master File.

A Local File is required if RPTs during the year meet any of the following conditions:

- Annual RPTs of physical goods exceed CNY200 million (in the case of toll manufacturing [toll manufacturing refers to an arrangement under which raw materials or component parts are mainly purchased in the name of a foreign principal for use by a Chinese manufacturer in the production of finished goods], the value is based on annual import and export prices for customs purposes)

- Annual RPTs involving the transfer of financial assets exceed CNY100 million
- Annual RPTs involving the transfer of rights to intangibles exceed CNY100 million
- Annual RPTs of other types (for example, related-party service transactions, royalties for use of intangibles and related-party financing transactions) in aggregate exceed CNY40 million

Taxpayers that only deal with domestic related parties can be exempted from preparing the Master File, the Local File and any special item file.

Local Files and special item files are not required for RPTs that are covered under an Advance Pricing Agreement (APA). Furthermore, the amount of these covered transactions is not included when calculating Local File thresholds.

Bulletin 42 provides that resident enterprises that meet one of the following criteria should submit CbCR:

- The resident enterprise is the ultimate parent company of the multinational enterprise group, and total revenue of all kinds from the last fiscal year's consolidated financial statement was over CNY5,500,000,000.
- The resident enterprise is designated to submit CbCR by the multinational enterprise group.

If multinational enterprises are required to prepare CbCR according to relevant provisions of other countries' laws, the Chinese tax authorities can ask for CbCR from the Chinese subsidiaries when undertaking a special tax investigation under the following circumstances:

- The multinational enterprise has not submitted a CbCR to any country.
- The multinational enterprise has submitted a CbCR to another country, but China has not established an Information Exchange Mechanism with that country.
- The multinational enterprise has submitted a CbCR to another country, and China has established an Information Exchange Mechanism with that country, but CbCR has not in fact been successfully exchanged with China.

Bulletin 42 stipulates the deadline for the Master File is 12 months after the close of the financial year of the ultimate parent company; the deadline for the Local File and any special item file is 30 June of the year following the close of the financial year.

Bulletin 42 provides that contemporaneous documentation should be submitted to the tax authorities within 30 days on the request of the tax authorities.

Taxpayers may apply for APAs in China. An APA is an agreement between a taxpayer and one or more tax authorities regarding how transfer prices will be calculated in the future. Effective from 1 December 2016, STA Notice [2016] No. 64 (Notice 64) governs the administration of APAs in China. The APA process has the following six steps:

- Pre-filing meeting
- Intention discussion
- Analysis and evaluation

- Formal application
- Negotiation and conclusion of the arrangement
- Execution monitoring

In contrast to Circular 2, Notice 64 does not allow the pre-filing meeting to be anonymous and does not specify the time periods between each of the steps. It is noteworthy that extensive interactions between the taxpayer and the tax authorities occur well before the APA application is formally accepted. Taxpayers must be prepared to perform significant analysis and provide extensive documentation during the process.

Notice 64 makes numerous references to the analysis of the value chain and of Location Specific Advantages (LSAs), such as location savings and market premiums. This is in keeping with the contemporaneous documentation requirements that the STA put in place under Bulletin 42. Notice 64 provides that the role of LSAs is one of the topics for discussion at pre-filing meetings. Both value-chain analysis and analysis of LSAs are required elements of the draft application materials submitted before the intention discussion.

To further promote APAs, the STA issued STA Notice [2021] No. 24 (Notice 24), “Simplified Procedures for Unilateral Advance Pricing Arrangements,” on 26 July 2021. Notice 24 entered into force on 1 September 2021. Notice 24 provides a simplified procedure for a unilateral APA in which the tax authorities should decide whether to accept the application within 90 days, and once accepted, the tax authorities should complete the negotiation within six months (excluding the additional time that may be needed for collecting further information).

On 17 March 2017, the STA issued STA Notice [2017] No. 6 (Notice 6), “Supervisory Measures for Special Tax Investigation Adjustments and Mutual Agreement Procedures.” Notice 6 entered into force on 1 May 2017.

Notice 6 contains long-awaited guidance on the application of the arm’s-length principle, including guidance with respect to intangible property transactions, intercompany service transactions, location-specific advantages, transfer-pricing methods and various procedural matters. Detailed guidance on mutual agreement procedures (MAPs) under double taxation treaties is provided.

Notice 6 reflects the importance that the STA places on double taxation treaties and on the international consensus that has developed over the course of the BEPS project led by the OECD. Notice 6 moves Chinese transfer-pricing rules and proposed rules into closer alignment with the new international standards developed during the BEPS project in a number of aspects.

Anti-avoidance rules. The general anti-avoidance rules (GAAR) apply to transactions if the transactions may be considered to have been undertaken or arranged primarily for other than bona fide purposes and if the sole and dominant purpose for a company to enter into such transactions was the obtaining of tax benefits. The Administration Measures of GAAR, which are procedural guidelines on the application of the GAAR, are effective from 1 February 2015.

Controlled foreign corporations. The corporate income tax law contains controlled foreign corporation (CFC) rules, which are designed to counter income deferral strategies. A resident company that holds an interest in a CFC incorporated in a jurisdiction with an effective tax rate of lower than 12.5% may be taxed on its share of profits of the CFC, regardless of whether a dividend has been declared. A nonresident company is considered to be controlled by a China resident company if either of the following conditions is satisfied:

- The China resident company directly or indirectly holds 10% or more of the voting shares in the nonresident company and jointly holds an interest of 50% or more in the nonresident company.
- The China resident company exercises effective control over the nonresident company by means of shares, capital, business operations, purchases and sales or other mechanisms.

China has issued an approved list showing jurisdictions that are not subject to CFC rules, including Australia, Canada, France, Germany, India, Italy, Japan, New Zealand, Norway, South Africa, the United Kingdom and the United States. The CFC rules do not apply if one of the following conditions is satisfied:

- The CFC is located in one of the jurisdictions in the approved list.
- The CFC carries out substantial and positive business activities.
- The CFC reports an annual profit of CNY5 million or less.

F. Treaty withholding tax rates

The following table provides Chinese withholding tax rates for dividends, interest and royalties paid from Mainland China to residents of various treaty jurisdictions and arrangement jurisdictions (Hong Kong and Macau SARs). The rates reflect the lower of the treaty rate and the rate under domestic law. The following table is for general guidance only.

	Dividends	Interest	Royalties

- (a) The 5% rate applies if the beneficial owner of the dividends is a company that holds directly at least 25% of the capital of the company paying the dividends. The 10% rate applies to other dividends.
- (b) The 5% rate applies if the beneficial owner of the dividends is a company that holds directly at least 10% of the capital of the company paying the dividends. The 10% rate applies to other dividends.
- (c) The 5% rate applies if the beneficial owner of the dividends is a company that holds directly at least 25% of the voting shares of the company paying the dividends. The 10% rate applies to other dividends.
- (d) The 7% rate applies if the beneficial owner of the dividends is a company that holds directly at least 25% of the voting shares of the company paying the dividends. The 10% rate applies to other dividends.
- (e) The 0% rate applies if the beneficial owner of the dividends is a company that holds directly or indirectly at least 50% of the capital of the company paying the dividends and that has invested more than EUR2 million in the capital of the company paying the dividends. The 5% rate applies if the beneficial owner of the dividends is a company that holds directly or indirectly at least 10% of the capital of the company paying the dividends and that has invested more than EUR100,000 in the capital of the company paying the dividends. The 10% rate applies to other dividends.
- (f) The 5% rate applies if the beneficial owner of the dividends is a company that, before the moment of the payment of the dividends, directly held for an uninterrupted period of at least 12 months at least 25% of the capital of the company paying the dividends. The 10% rate applies to other dividends.
- (g) The 5% rate applies to interest paid to banks. The 10% rate applies to other interest payments.
- (h) The 7% rate applies to interest paid to banks or financial institutions. The 10% rate applies to other interest payments.
- (i) Payments for the use of industrial, commercial or scientific equipment are taxed on the basis of 60% of the gross payments. Consequently, the effective rate for such payments is 6%.

- (j) Payments for the use of industrial, commercial or scientific equipment are taxed on the basis of 70% of the gross payments. Consequently, the effective rate for such payments is 7%.
- (k) The 7% rate applies to royalties paid for the use of, or the right to use, industrial, commercial and scientific equipment. The 10% rate applies to other royalties.
- (l) The 5% rate applies to royalties paid for technical or economic studies or for technical assistance. The 10% rate applies to royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works including cinematographic films, films or tapes for radio or television broadcasting, patents, trademarks, designs or models, plans, or secret formulas or processes, or for the use of, or the right to use, industrial, commercial or scientific experience.
- (m) China is honoring the Czechoslovakia treaty with respect to the Slovak Republic until a new treaty is signed.
- (n) After the partition of the former Yugoslavia, China is honoring the double tax treaty with the former Yugoslavia with respect to Bosnia and Herzegovina.
- (o) China entered into a treaty with the Federal Republic of Yugoslavia. It has been indicated that China considers Serbia to have inherited the Yugoslavia treaty and that China is also honoring the treaty with respect to Montenegro. However, it is suggested that taxpayers check with the relevant tax authorities before relying on this treaty.
- (p) The 5% rate applies if the beneficial owner of the dividends is a company that holds directly at least 25% of the capital of the company paying the dividends. The 15% rate applies if the dividends are paid out of income or gains derived directly or indirectly from immovable property and such income or gains from such immovable property is exempted from tax. The 10% rate applies to other dividends.
- (q) The tax treaty with Romania entered into force on 4 July 2016 and applies to income derived on or after 1 January 2018.
- (r) On 10 March 2014, the STA released STA Announcement [2014] No. 16, which announced that the new tax treaty with Ecuador and its protocol, which were signed on 21 January 2013, entered into force on 6 March 2014. The Ecuador treaty and its protocol apply to income derived on or after 1 January 2015. The withholding tax rates under the new treaty are reflected in the table. In addition, the protocol states that the term "interest" also includes other income treated as income from money lent by the tax law of the contracting state in which the income arises if the income is from some type of debt-claim. In the case of divergence of interpretation, the contracting states must resort to the mutual-agreement procedure.
- (s) The 5% rate applies to royalties paid to aircraft and ship leasing businesses. The 7% rate applies to other royalties.
- (t) The 4% rate applies to interest paid to banks, insurance companies and other financial institutions. The 5% rate applies to interest derived from bonds or securities that are regularly and substantially traded on a recognized securities market. The 10% rate applies to other interest payments.
- (u) The 2% rate applies to royalties for the use of, or the right to use, industrial, commercial or scientific equipment. The 10% rate applies to other royalties.
- (v) The 5% rate applies if the beneficial owner of the dividends is a company that holds directly at least 25% of the capital, valued at least EUR80,000, of the company paying the dividends. The 10% rate applies to other dividends.
- (w) The 2.5% rate applies if the beneficial owner of the dividends is a company that controls directly or indirectly at least 25% of the company paying the dividends. The 7.5% rate applies to other dividends.
- (x) The 5% rate applies if the beneficial owner is a company that holds directly at least 25% of the capital of the company paying the dividends throughout 365 days, which includes the day of the payment of the dividend. The 10% rate applies to other dividends.

Mainland China has signed tax treaties with Uganda (11 January 2012), Kenya (21 September 2017), Gabon (1 September 2018), the Republic of Congo (5 September 2018), Angola (9 October 2018), and Argentina (2 December 2018) and signed new tax treaties with Italy (23 March 2019) and Rwanda (7 December 2021), but these treaties have not yet been ratified. On 25 August 2015, Mainland China signed a double tax agreement with Taiwan, which has not yet been ratified.

Carryback	0
Carryforward	12 (e)

- (a) The general corporate income tax rate from 2022 onward is 35%. Financial institutions with taxable income of more than 120,000 tax units (approximately USD1,140,000) are subject to a tax surcharge of three points between 2022 and 2025 (combined nominal rate of 38%).
- (b) Dividends paid to nonresidents are subject to a 10% dividend withholding tax. In the case of dividends paid to resident individuals, the dividend tax rate is 0% or 10%, depending on the amount distributed. In addition, if the dividends are paid to nonresidents out of profits that were not subject to income tax at the corporate level, a recapture tax applies at a rate of 35% for 2022 and future years; in this case, the 10% dividend tax is applied to the amount of the distribution after it is reduced by the recapture tax. A 7.5% dividend withholding tax on distributions between Colombian companies applies from 1 January 2019 (for further details, see *Dividends* in Section B).
- (c) Interest paid or accrued on loans payable to foreign entities is generally subject to a 20% withholding tax. Interest paid on loans that have a term equal or greater than one year is subject to a 15% withholding tax. Interest paid on loans that have a term equal or greater than eight years and that are related to certain infrastructure projects are subject to a 5% withholding tax. Interest paid by Colombian financial institutions and interest paid by Colombian residents to foreign entities with respect to certain international trade operations are deemed to be foreign-source income and are accordingly exempt from withholding tax. Certain qualified loans executed before 31 December 2010 do not generate Colombian-source income. As a result, interest on such loans is exempt from withholding tax.
- (d) The remittances of profits out of a branch are subject to the same tax treatment as dividends. Consequently, if the distribution is made out of profits that were not subject to tax at the entity level, a recapture tax applies at a rate of 35% for 2022 and future years). In this case, the dividend tax (10%) is applied to the amount of the distribution after it is reduced by the recapture tax.
- (e) For net operating losses generated until 2016, a grandfathering rule allows an unlimited carryforward.

B. Taxes on corporate income and gains

Corporate income tax. National corporations are taxed on worldwide income and capital gains. National corporations are corporations that have their principal domicile in Colombia or are organized under Colombian law or that during the respective tax year or period have their effective place of management in Colombia (holding board meetings in Colombia is not enough to qualify as a national company).

Foreign companies that obtain more than 80% of their income (other than passive income) in the jurisdiction of incorporation

are not considered to have their effective place of management in Colombia. These companies are known as “80% Foreign Income Companies.” Foreign companies that have issued stock or bonds in the Colombian stock exchange or in a recognized foreign stock exchange are not considered to have their effective place of management in Colombia. The subsidiaries of such companies are also not considered to have their effective place of management in Colombia to the extent they are consolidated in the financial statements of its parent; however, such subsidiaries can elect to be treated as a national corporation unless they are 80% Foreign Income Companies.

Branches of foreign corporations and permanent establishments are taxed on attributable worldwide income and capital gains. Attribution is generally based on accounting records, which should be supported by an analysis of functions, assets, risks and personnel.

Indirect transfers of Colombian assets or shares are subject to income tax in Colombia if the Colombian assets or shares account for 20% or more of the book value and/or the fair market value of the assets of the foreign entity that is being transferred.

Corporate income tax rates. The standard corporate income tax rate is 35% for 2022 and future years. Financial institutions with taxable income of more than 120,000 tax units (approximately USD1,140,000 for 2022) are subject to a surcharge of three points between 2022 and 2025 (combined nominal rate of 38%).

Foreign companies receiving Colombian-source income that is not attributable to a branch office or PE and that is not fully taxable through withholding tax are subject to income tax at the rates mentioned above.

A reduced corporate income tax rate of 20% applies to legal entities qualified as Industrial Users of Goods and/or Services in a free-trade zone. No surtax applies to these taxpayers. Commercial Users in a free-trade zone are subject to the general corporate income tax rate.

Subject to certain conditions and requirements, a special reduced rate of 9% applies to certain activities, such as some services in new or refurbished hotels and new projects involving theme parks, ecotourism parks, agritourism and nautical docks.

Certain tax credits are available (see *Foreign tax relief*).

Colombian Holding Company regime. The Colombian Holding Company (CHC) regime applies to Colombian entities as long as they comply with the following requirements:

- They hold at least 10% of the capital of two or more Colombian or foreign entities during at least 12 months.
- They have three or more employees and have human and material resources in Colombia.

To be included in the CHC regime, a request must be made to the tax authority.

Dividends distributed by foreign entities to CHCs are not taxed. When such dividends are distributed in turn by CHCs to Colombian residents, they are taxed, but when such dividends are distributed in turn to nonresidents, they are not taxed.

Income derived from the sale of shares or quotas in a CHC is generally exempt from income tax on the portion that relates to activities performed abroad. In addition, gain on the sale of foreign entities by the CHC is exempted in the hands of the CHC.

Mega investments. Taxpayers that generate at least 400 jobs and invest 30 million tax units (approximately USD285 million for 2022) or more over 5 years are considered to be engaged in mega investment projects. The investment requirement can be reduced to 2 million tax units (approximately USD19 million for 2022) for investments in the aeronautical sector if the investment began before 31 December 2021. Exceptionally, taxpayers that invest in sectors with a high technological component, with emerging technologies or with electronic commerce, may only be required to generate at least 250 jobs and satisfy the other requirement. These taxpayers may obtain the following special benefits during the subsequent 20 years:

- They are subject to a reduced income tax rate of 27%. Notwithstanding the rate mentioned in the preceding sentence, income derived from hotel services is taxed at a 9% rate or, if the activity is carried out in free trade zone by Industrial Users of Goods and/or Services, a 20% rate could apply.
- They may depreciate fixed assets during a minimum of two years (regardless of the asset's productive life).
- Presumptive income is not applicable (currently the presumptive income rate is 0% as a general rule).
- Equity tax is not applicable.
- The 10% dividend tax is not applicable.

Oil and gas projects may not be considered mega investment projects.

Capital gains. The following gains are considered capital gains, which are subject to tax at a rate of 10%:

- Gains on the transfer of fixed assets owned for more than two years
- Gains resulting from the receipt of liquidation proceeds of corporations in excess of capital contributed if the corporation existed for at least two years

Administration. The tax year is the calendar year.

Each year, the Colombian government sets the due dates for the filing of income tax returns and payment of taxes due. Tax payments are made in three installments between February and June for Large Taxpayers (large corporations, according to conditions set by the tax authorities) and in two installments between April and July for other legal entities.

Interest on the late payment of taxes is accrued at the daily effective rate of usury certified by the Superintendency of Finance for the consumption credits, less two points. A penalty for late filing is levied on the amount of tax assessed in the corresponding tax return at a rate of 5% or 10% for each month or a fraction thereof. The penalty for late filing cannot exceed 100% or 200% of the difference of the tax to be paid or the balance in favor, depending on the timing of the filing. The penalty for amending a return may be 10% or 20% of the difference between the amount shown on the original tax return and the correct amount, depending on the timing of the amendment.

Under certain circumstances, the applicable tax penalty can be reduced.

Dividends. Distributions of dividends to nonresidents are subject to dividends tax at a rate of 10%. The dividends tax rate for resident individuals is 0% or 10%, depending on the amount of the distribution. Effective from 1 January 2019, a 7.5% dividend withholding tax applies to distributions between Colombian companies. This dividend tax is charged only on the first distribution of dividends between Colombian entities and may be credited against the dividend tax due once the ultimate Colombian company (the last Colombian company in an ownership chain) makes a distribution to its shareholders (nonresident entity or individual shareholders or Colombian resident individual shareholders). The dividend tax on local distributions does not apply if the Colombian companies are part of an economic group or controlled companies duly registered with the Chamber of Commerce or if the distribution is to a Colombian entity qualifying for the new CHC regime.

In addition, if the dividend distribution is made out of profits that were not taxed at the entity level, the distribution is subject to withholding tax at the applicable corporate income tax rate of the specific period of the distribution (recapture tax). For 2022, the recapture tax rate is 35%. In this case, the 10% dividends tax applies to the distributed amount after it is reduced by the recapture tax. This results in a combined tax rate of 41.5 %.

If the profits subject to tax at the corporate level in a given year are higher than the commercial profits of that year, the difference can be carried back for two years or carried forward for five years to offset the profits of such periods, in order to reduce or eliminate the amount of the distribution subject to the recapture tax. These periods have a duration of 10 years for taxpayers engaged in concession agreements or public-private associations. This carryforward or carryback should not reduce the amount of the distribution to residents and nonresidents subject to the dividends tax of 7.5% or 10% (or the 0% or 10% dividends tax applicable for distributions to resident individuals).

Foreign tax relief. For national corporations and resident individuals, a credit for foreign taxes paid on foreign-source income is granted, up to the amount of Colombian corporate income tax payable on the foreign-source income.

An indirect tax credit is also granted for foreign taxes paid on income at the level of the foreign company that is distributing corresponding dividends to Colombian shareholders or quota holders. This tax credit equals the amount resulting from the application of the effective income tax rate of the foreign company to the amount of distributed dividends. The sum of the direct tax credit and indirect tax credit may not exceed the corporate income tax payable in Colombia on such dividends.

To be entitled to the direct and indirect tax credit, the domestic taxpayer must prove that the corresponding tax was effectively paid in each relevant jurisdiction. In addition, for the indirect tax credit, the investments must be qualified as fixed assets for the taxpayer. Consequently, indirect tax credits cannot be claimed on portfolio investments.

The tax credit may be claimed in the tax year in which the foreign tax is paid or in any of the following years.

C. Determination of taxable income

General. Taxable income is determined in accordance with the following calculation: gross income, minus non-taxable income, returns, rebates and discounts, equals net income, minus costs and expenses, equals taxable income. In the first instance, such values must be determined in accordance with the Colombian generally accepted accounting principles, which generally follow International Financial Reporting Standards and are subject to several adjustments provided in the tax rules.

In general, to be deductible, expenses must be related to the activity that generates taxable income and must be proportional and necessary with respect to the productive activity of the taxpayer. Some limitations and prohibitions may apply to the deductibility of certain expenses.

In determining taxable income, taxpayers may deduct all paid taxes related to their economic activity, except for certain items such as the debit tax (only 50% is deductible, regardless of whether the tax relates to an income-producing activity) and the equity tax, which is not deductible.

In addition, taxpayers can claim 50% of paid industry and commerce tax as a credit against their income tax liability.

Payments to entities resident outside Colombia are deductible if they meet the general rules above and, for expenses related to Colombian-source income, if the applicable withholding tax is paid. In general, if no withholding tax applies, the expenses are allowed as deductions, up to a maximum of 15% of the taxpayer's net income before considering all costs and expenses abroad not subject to Colombian withholding tax. Costs or expenses incurred abroad that are related to foreign-source income subject to income tax in Colombia are deductible if the general requirements are met, even if withholding tax is not imposed, and the 15% limitation mentioned above does not apply.

Royalty payments between related parties for the use of intangibles that were formed in Colombia and royalty payments related to the acquisition of finished goods are not deductible. However, in the latter case, deductibility can be accepted to the extent it is established that the royalty is not already included in the value of the acquired finished good.

Interest and other financial expenses resulting from liabilities owed to foreign related companies are deductible if they comply with the transfer-pricing rules (see Section E) and thin-capitalization provisions.

Payments made to foreign related parties that comply with the transfer-pricing rules (see Section E) may be deductible even if no income tax withholding is required. However, the 15% limitation described above applies to such payments.

Management and direction (overhead) expenses are deductible for Colombian tax purposes if all of the following conditions are satisfied:

- They are related to services rendered.

- The withholding tax has been applied.
- They are supported by transfer-pricing studies.

Income generated from the following activities is exempt from income tax (specific requirements, conditions and limitations apply in each case):

- Income received from another country in the Andean Community (Bolivia, Ecuador and Peru)
- Certain entrepreneurial, creative and technological activities (so-called orange economy)
- Certain agricultural activities
- Energy generated from nontraditional sources
- Construction and financing of low-income housing
- Certain new forest plantations
- Fluvial transportation services

Inventories. Inventories are generally valued using the permanent or periodic inventory methods.

Provisions. Provisions are not allowed as deductions in determining taxable income, except for provisions for accounts receivables, which are subject to special tax rules.

Depreciation. Depreciation for tax purposes should follow the depreciation for accounting purposes. However, the annual depreciation rate for tax purposes cannot exceed certain percentages, depending on the type of asset.

If machinery and equipment are used daily in 16-hour shifts, the taxpayer may request an additional 25% on the depreciation rate. If the use exceeds 16 hours, proportional additional depreciation can be requested. Land is generally not depreciable or amortizable.

The balance of the assets pending to be depreciated as of 31 December 2016 should be depreciated under the old rules applicable before 2017.

Amortization. In general, amortization of ordinary and necessary investments used for the purposes of the business is allowed under certain requirements. The amortization of the investments should be made during the time that the related income is expected to be earned, but the amortization period may not be less than five years.

Advance payments should be amortizable as the prepaid services are received.

Acquired identifiable intangibles can be generally amortized to the extent they have a useful limited life. Certain limitations on amortization may apply to identifiable intangibles acquired from related parties.

Goodwill is not amortizable.

Amortizable costs and expenses for the oil industry can be amortized using the units-of-production method. If investments in exploration are unsuccessful, the costs and expenses may be claimed as deductions in the year in which this is determined or in the following two years. Investments made between 2017 and 2027 with respect to the evaluation and exploration stages are amortizable using a five-year, straight-line method.

Assets and investments pending to be amortized as of 31 December 2016 should be amortized under the old rules applicable before 2017.

Relief for tax losses. Tax losses may be carried forward for 12 years. Tax losses generated up to 2016 can be carried forward with no time limitation.

Restrictions apply to the transfer of losses in mergers or spin-offs (tax-free events for the participating companies for Colombian tax purposes if certain requirements are observed). The surviving entity can offset losses originated in the merged entities (including the surviving entity itself), but only up to the percentage of the equity participation of the merged entities in the surviving entity's equity. Similar rules apply to spin-offs of companies.

The special treatment of tax losses in mergers and spin-offs applies only if the economic activity of the companies involved remains the same after the merger or spin-off occurs.

Inflation adjustment. An optional tax readjustment of fixed assets may be applied. This readjustment is calculated by applying the percentage certified by the government for the adjustment of the tax unit. The readjustment affects the tax basis for the transfer of fixed assets and the determination of taxable net equity. Although the inflation adjustments were eliminated, the accumulated inflation adjustments can be depreciated.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax; imposed, unless expressly excluded by law, on sales of tangible assets and intangibles related to industrial property, on imports of movable tangible assets and on most services rendered in Colombia or from abroad to a Colombian recipient of the services	
General rate	19%
Basic products, such as coffee and wheat	5%
National consumption tax; imposed on, among other items, food services in restaurants, mobile phone services and certain cars	4% to 16%
Industry and commerce tax; a municipal tax on annual or bimonthly gross revenue (other tax periods may apply, depending on the jurisdiction); rates vary depending on the company's activity and municipality; tax effectively paid during the year is a 100% deductible expense or 50% tax credit for income tax purposes	
Bogotá	0.414% to 1.38%
Municipalities other than Bogotá	0.2% to 1%
Signs and Posters Tax; imposed on enterprises with advertisements in public places; tax rate applied to the industry and commerce tax due	15%

Nature of tax	Rate
Tax on Visible Advertisement Hoardings; imposed on each advertisement on hoardings or billboards with a size equal to or larger than 8 square meters (86,111 square feet)	5 minimum wages
(The minimum wage for 2022 is COP1 million [approximately USD250].)	
Debit tax (financial transactions tax); imposed on the amount of each financial transaction, such as disposals of funds from savings accounts, current bank accounts and deposit accounts, which involve cash withdrawals by checks and through other mechanisms, and on the amount of certain accounting entries	0.4%
Social security contributions and payroll taxes Pension (foreigners who remain in Colombia in accordance with an employment agreement may voluntarily enroll in the pensions system); contributions calculated on the monthly ordinary salary of the employee; if the monthly salary is more than 25 times the minimum wage, contributions to the social security regime are calculated on a maximum base of 25 minimum wages; for employees earning integral (all-inclusive) salary, 70% of the salary is the base, but the maximum limit described above applies	
Employer	12%
Employee	4%
Health; contribution calculated on the monthly ordinary salary of the employee; subject to the same maximum limitation and integral salary rules as the pension contributions	
Employer	8.5%
Employee	4%
(Employers are not required to pay the 8.5% health contribution for employees earning less than 10 minimum legal wages.)	
Solidarity Fund; payable by employees on their monthly ordinary salary; contribution required only for employees who earn a monthly salary greater than 4 minimum wages; subject to same maximum limitation and integral salary rules as pension contributions; rates vary according to the amount of monthly salary earned by employee	
Employees earning up to 16 minimum wages	1%
Employees earning between 16 and 17 minimum wages	1.2%
Employees earning between 17 and 18 minimum wages	1.4%
Employees earning between 18 and 19 minimum wages	1.6%
Employees earning between 19 and 20 minimum wages	1.8%

Nature of tax	Rate
Employees earning between 20 and 25 minimum wages	2%
Labor risk; payable by employer on monthly ordinary salary; rate depends on a legally established scale based on the degree of risk represented by the economic activity of the company; the Social Security office makes the classification at the time of enrollment; subject to same maximum limitation and integral salary rules as pension contributions	0.348% to 8.7%
Payroll taxes to National Learning Service (SENA), Colombian Family Welfare Institute (ICBF) and Family Compensation Fund; payable by employer on the monthly ordinary salary earned by the employee; no ceiling applies; subject to same integral salary rules as pension contributions; reduced and progressive rates apply to small businesses (Employers are not required to pay the SENA [2%] and ICBF [3%] contributions with respect to employees earning less than 10 minimum legal wages. However, for these employees, employers are still required to pay the Compensation Fund contribution [4%.])	9%
Custom duty, on Cost, Insurance, Freight (CIF) value; general rates	0% to 15%
Real estate tax; municipal tax imposed on the ownership of land or immovable property; tax rate is applied to the commercial value of the property; rate set by the municipality and varies according to the location and use of the property; general range of rates	0.1% to 3.3%

E. Miscellaneous matters

Foreign-exchange controls. Colombia has a flexible foreign-exchange regime. However, the foreign-exchange regulation provides that some operations must be channeled through the foreign-exchange market (controlled operations). These operations have special reporting procedures and obligations. Any other operation is considered a free-market operation and consequently channeling through the foreign-exchange market is not mandatory. The following are the controlled operations:

- Foreign loans
- Foreign investment in Colombia and Colombian investment abroad
- Foreign-trade operations (imports and export of goods)
- Derivatives transactions
- Endorsements and warranties

The operations under the controlled exchange market must be channeled through authorized foreign-exchange intermediaries (financial institutions and commercial banks) or compensation accounts (foreign bank accounts that are registered with the Colombian Central Bank [Banco de la República de Colombia]).

Exchange operations that are not covered by the controlled market are conducted through the free market. These operations include the purchase of foreign currency that is used to open free-market bank accounts abroad.

Foreign investors may receive abroad, without limitation, annual profits derived from an investment that is registered with the Colombian Central Bank. This operation must be reported to the Colombian Central Bank within the legal term and the report must follow the procedures set forth in the law.

Nonresident individuals are not allowed to grant foreign loans to Colombian residents. However, some exceptions to this prohibition applies. The loans must be registered with a foreign-exchange intermediary, prior or simultaneously to the disbursement of the loan, and the cash flow of foreign currency related to the foreign loans must be channeled. These loans can be stipulated, disbursed and paid in Colombian or foreign currency, as agreed by the parties.

Controlled foreign companies. The controlled foreign company (CFC) regime applies to Colombian tax residents (individuals or entities) that directly or indirectly hold an interest equal to or greater than 10% of the capital or of the profits of a foreign entity that is considered a CFC.

CFCs are corporations, as well as investment vehicles, such as trusts, collective-investment funds, and private interest foundations, which meet the conditions to be considered a related party for transfer-pricing purposes.

For income tax purposes, Colombian taxpayers should immediately recognize the net profits of the CFC derived from passive income, in proportion to their participation in the CFC's capital or profits, without the need to wait to receive a distribution of profits in Colombia.

Under this regime, passive income generally includes the following:

- Dividend and profit distributions from a company or investment vehicle
- Interest
- Income derived from the exploitation of intangibles
- Income originated from the sale of assets that generates passive income
- Income from the sale or lease of immovable property
- Income derived from the sale or purchase of tangible goods acquired from (or sold to) a related party if the manufacturing and consumption of the goods occurs in a jurisdiction different from the one in which the CFC is located or is tax resident
- Income from the performance of certain services in a jurisdiction different from the one in which the CFC is located or is tax resident

A Colombian tax resident that recognizes taxable income under the application of the CFC regime may request a tax credit for taxes paid abroad with respect to the passive income.

Dividends and benefits that are distributed by a CFC and that have been already taxed in Colombia, should be considered non-taxable income for the Colombian taxpayer.

Debt-to-equity rules. Interest paid on direct or indirect loans with related parties that in average exceeds a 2:1 debt-to-equity ratio is not deductible. For this purpose, the equity taken into account is the taxpayer's net equity for the preceding year, and the debt taken into account is debt that accrues interest.

Transfer pricing. The transfer-pricing regime includes several of the methods contained in the Organisation for Economic Co-operation and Development (OECD) rules. Significant aspects of the transfer-pricing system in Colombia include the following:

- All events that create economic linkage are specifically mentioned in the tax code.
- The rules do not cover local operations between related companies established in Colombia, except for transactions between local entities and free-trade zone users.
- Parties that have gross equity exceeding 100,000 tax units (approximately USD950,000) as of the last day of the tax year or gross revenues for the year in excess of 61,000 tax units (approximately USD579,000) must prepare and file transfer-pricing information returns.
- For supporting documentation purposes, transactions above 45,000 tax units (approximately USD427,000) threshold, by type of transaction, are subject to transfer-pricing analysis. For financing transactions with related parties, the amount of the debt must be considered when determining the total transaction amount.
- Transactions with residents or those domiciled in tax havens or in preferential regimes are subject to transfer-pricing analysis if the amount, by type of transaction, exceeds 10,000 tax units (approximately USD95,000). The tax haven jurisdiction list is issued by the Colombian government. The preferential regime determination should be made based on certain criteria provided in the regulations.
- Penalties are imposed for not meeting filing requirements, submitting erroneous or incomplete reports or failing to meet other requirements.

Transfer-pricing documentation includes the Local File and the Master File with the multinational group's global relevant information.

In addition, for multinational groups with a Colombian parent entity, a Country-by-Country Report (CbCR) must be completed under the following circumstances:

- The parent is resident in Colombia.
- The parent has affiliates, subsidiaries, branches or PEs abroad.
- The parent is not a subsidiary of another entity resident abroad.
- The parent is required to prepare, submit and disclose consolidated financial statements.
- The parent has annual consolidated revenue equal to or exceeding 81 million tax units (approximately USD769 million).

A non-Colombian parent can designate an entity resident in Colombia or a resident abroad with a PE in Colombia as the responsible party for providing the CbCR to the Colombian tax authority.

Colombian taxpayers that do not provide a CbCR must file a notification indicating which entity of the multinational group is providing this report and the jurisdiction in which the report is being provided.

Anti-abuse rules. Under anti-abuse rules, tax abuse is defined as the use or implementation of a transaction or several transactions without apparent commercial or economic purpose and with the aim of obtaining a tax benefit.

The tax authority can recharacterize any abusive transaction. It is understood that a transaction has no commercial or economic purpose if the following circumstances exist:

- The transaction is developed in a way that is not economically or commercially reasonable.
- The transaction gives rise to a high tax benefit that is not in line with the economic or business risks assumed by the taxpayer.
- The legal agreement is not aligned with the real will of the parties.

F. Tax treaties

Colombia has entered into a multilateral tax treaty with Bolivia, Ecuador and Peru, which follows the source criteria. In addition, Colombia has double tax treaties in effect with Canada, Chile, the Czech Republic, France, India, Italy, Korea (South), Mexico, Portugal, Spain, Switzerland and the United Kingdom that are based on the OECD model convention.

Colombia has entered into tax treaties covering certain international air transportation services with several countries, including Argentina, Brazil, France, Germany, Italy, Panama, Turkey, the United States and Venezuela.

Colombia has also signed double tax treaties with Japan, the United Arab Emirates and Uruguay, which are not yet in effect.

The following table presents the withholding tax rates for dividends, interest and royalties under Colombia's double tax treaties.

	Dividends %	Interest %	Royalties %
Canada	5/15	10	10
Chile	0/7/35 (a)	5/15	10
Czech Republic	5/15/25	0/10	10
France (b)	5/15	0/10	10
India	5/15	0/10	10
Italy	5/15	0/5/10	10
Korea (South)	5/10/15	0/10	10
Mexico	0/33	0/5/10	10
Portugal	10/33	10	10
Spain	0/5/35 (a)	0/10	10
Switzerland	0/15	0/10	10
United Kingdom	0/5/15	0/10	10
Non-treaty jurisdictions (c)	10/35	0/5/15/20	20

- (a) Dividends that are not taxed at the corporate level are subject to a tax rate of 35% (for 2022) at the shareholder level. However, the 35% rate may be reduced if the dividends are exempt from income tax at the corporate level and are reinvested for a three-year term.
- (b) The double tax treaty entered into force on 1 January 2022. However, most of its provisions (including those that reduce income tax withholding in the state of source) will be effective as of 1 January 2023.
- (c) For details regarding these rates, see Section A.

A. At a glance

Corporate Income Tax Rate (%)	30 (a)
Capital Gains Tax Rate (%)	30
Special Capital Gains Tax Rate for Mining Companies	30 (b)
Branch Tax Rate (%)	30
Withholding Tax (%) (b)	
Dividends	20 (c)
Interest	20 (d)
Royalties	20 (e)
Services	14 (f)
Net Operating Losses (Years)	
Carryback	0
Carryforward	Unlimited (g)

- (a) The corporate income tax rate is 30% for all companies registered in the Democratic Republic of Congo (DRC).
- (b) See Section B.
- (c) The rate of dividend withholding tax for mining companies is 10%. A dividend withholding tax applies to branches. The rates of this tax are 8% for public limited liability companies and 10% for other limited liability companies.
- (d) Under the amended Mining Code, dated 9 March 2018, interest on loans abroad to mining companies is not subject to withholding tax if the following conditions are satisfied:
- The loan is exclusively used for the mining project.
 - The interest rates and other borrowing terms for carrying out the projects are established in accordance with the arm's-length principle.
- (e) The net amount of royalties is subject to tax. For this purpose, net royalties equal gross royalties minus professional expenses, or 30% of gross royalties (resulting in an effective tax rate of 14%).
- (f) This withholding tax applies to payments for services provided to Congolese companies by foreign companies and individuals without a permanent establishment in the DRC. The tax base is the gross amount of the applicable invoice.
- (g) Under the amended Mining Code, dated 9 March 2018, the carryforward period for mining companies is limited to five years following the year of the loss.

B. Taxes on corporate income and gains

Corporate income tax. Congolese companies are taxed on the territoriality principle. As a result, companies carrying on a trade or business outside the Democratic Republic of Congo (DRC) are not taxed in the DRC on the related profits. Congolese companies are those registered in the DRC, regardless of the nationality of the shareholders or where the company is managed and controlled. Foreign companies (for example, branches) engaged in activities in the DRC are subject to Congolese corporate tax on Congolese-source profits only.

A company is considered to have a permanent establishment in the DRC if it satisfies either of the following conditions:

- It has a fixed place of business in the DRC, including an effective place of management, branch, office, factory, plant, workshop, agency, store, offices, laboratory, buying and selling counter, warehouse, real estate property under rental agreement, a mine, an oil or gas well, a quarry or any other place of exploitation and extraction of natural resources or any other fixed or permanent place of business, or in absence of a fixed place of business, it carries out a professional activity directly, under its own name, during a period of at least six months.
- It provides services, including advisory services, through employees or other individuals engaged by a company for that purpose, and the activities of this nature continue for a period or periods that represent a total of more than 6 months within any 12-month period.

The 2018 Finance Law further provides that foreign companies are taxable on the benefits that they realize through their permanent establishment in the DRC. It further states that “when a person other than an agent with an independent status acts on behalf of a foreign company, that person is considered as having a permanent or fixed establishment in the DRC for all activities that this person carries out for this company, if the said person:

- has power in the DRC, which he usually exercises to allow it to enter into contracts on behalf of that company;
- does not have such power, he usually keeps in the DRC a regular stock of goods for delivery on behalf of the foreign company.”

Rates of corporate tax. The regular corporate income tax rate is 30%.

The minimum tax payable is 1% of the annual turnover for larger corporations.

For small corporations with annual revenues of less than CDF10 million, the corporate income tax is set at CDF30,000. For average-sized corporations with annual revenues between CDF10 million and CDF80 million, the corporate income tax rate is 1% of the annual revenue for sales of goods and 2% for the provision of services.

Capital gains. Increases resulting from capital gains and depreciation that are realized and either realized or expressed in the accounts or inventories are included in profits and are subject to tax at a rate of 30%.

Increases resulting from unrealized capital gains that are expressed in the accounts or inventories and that are not treated as profits are not yet taxable. This rule applies only if the taxpayer holds a regular accounting and if it fulfills its declarative obligations.

Increases resulting from realized capital gains on buildings, tools, materials and movable assets (regardless of whether they result from rent payments), as well as on participations and portfolios, are taxable to the extent that the sales price exceeds the acquisition price or cost. A deduction is made from the amount of the depreciation that has already been claimed for tax purposes.

Special tax on capital gains for mining companies. Law No. 007/2002 of 11 July 2002 on Mining Code and Decree No. 038/2003 of 26 March 2003 regarding the Mining Regulations, as amended and completed to date, introduced a special tax at a rate of 30% on capital gains from the sale of shares (Article 253 bis of the Mining Code and Article 529 bis of the Mining Regulations). Ministerial Order No. CAB/MIN/FINANCES/2020/021 of 3 December 2020 set out the terms of calculation, filing and settlement of the special tax on capital gains from the sale of shares.

Administration. The fiscal year extends from 1 January to 31 December. Tax returns must be filed by 30 April.

Corporate tax must be paid in four installments before 1 June, 1 August, 1 October and 1 December. Each installment must equal 20% of the preceding year's tax (increased by any tax reassessment received by the tax office during the current year). The balance of tax due must be paid by the following 30 April.

A penalty of 2% per month is assessed for late payment of tax. Tax is fixed automatically if a tax return is not filed.

Dividends. In principle, dividends paid are subject to a 20% withholding tax. The rate of dividend withholding tax for mining companies is 10%. A dividend withholding tax applies to branches. The rates of this tax are 8% for public limited liability companies and 10% for other limited liability companies.

Foreign tax relief. In general, foreign tax credits are not allowed. Income subject to foreign tax that is not exempt from Congolese tax under the territoriality principle is taxable.

C. Determination of trading income

General. Taxable income is based on financial statements prepared in accordance with principles set by the Organization for the Harmonization of Business Law in Africa (Organisation pour l'Harmonisation en Afrique du Droit des Affaires, or OHADA) Accounting Act, except for banks and insurance companies. The net amount of income is taxed. This amount equals gross income minus business expenses incurred during the tax year to acquire and retain the income. Business expenses are generally deductible unless specifically excluded by law. The following expenses are not deductible:

- Head office, remuneration or management fees for services paid to nonresidents that are not justified
- Head office overhead or remuneration for certain services (studies and technical assistance) paid to nonresidents

- Expenditure of a personal nature, such as maintenance of household, appraisal fees, holidays and other expenses not necessary for the profession
- Corporate income tax, as well as real tax (tax on movable assets, tax on vehicles or tax on mining concessions), to the extent that the real tax does not constitute an operating expense
- All judicial or administrative fines, and fees and charges relating to breaches by income beneficiaries
- Certain specific charges, gifts, subsidies and penalties
- Directors' fees allocated under the Corporations Act to members of the General Council
- Expenditures on leased property, including depreciation of the property
- Provisions for losses, expenses or depreciation of assets, excluding provisions for the recovery of mineral deposits and provisions for the recovery of bank capital
- Commissions and brokerage fees if it cannot be proven that the tax on turnover (see Section D) has been paid for these items
- Most liberalities (payments that do not produce a compensatory benefit, such as excessive remuneration paid to a director)

Inventories. Inventories are normally valued at their historical cost or acquisition cost.

Provisions. In determining accounting profit, companies must implement certain provisions, such as a provision for risk of loss or for certain expenses. These provisions are not deductible for tax purposes. However, provisions for recovery of bank capital and provisions for the recovery of the mineral deposit are deductible for tax purposes.

Tax depreciation. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at rates specified by tax law. The following are some of the specified annual rates.

Asset	Rate (%)
Buildings	2 to 5
Office equipment	10
Motor vehicles	20 to 25
Plant and machinery	10

Companies can also opt for a regressive method for tax depreciation of specific assets with an annual rate of two to three times the straight-line rate.

Relief for tax losses. Tax losses incurred in a tax year may be carried forward indefinitely. However, the deduction of the available tax losses is capped at 60% of the annual taxable income.

Under the amended Mining Code, dated 9 March 2018, the carryforward period for mining companies is limited to five years following the year of the loss.

Groups of companies. The DRC does not have a fiscal integration system equivalent to a consolidated filing position.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax	
Standard rate	16
Reduced rate	8
Payroll taxes	
Annual income not exceeding CDF43,200,000; progressive rates	3 to 40
Annual income exceeding CDF43,200,000; flat rate	30
Exceptional income tax for expatriates (IERE)	
Mining companies; Article 244 bis of Law No. 18/001 of 9 March 2018, which reformed the Mining Code, increases the exceptional income tax rate to 12.5% for the first 10 years of the project and provides for the common rate of 25% for the following years	12.5
Other companies	25
Social Security National Institute (Caisse national de sécurité sociale, or CNSS) contributions; payable monthly	
Employers	13
Employees	5
National Institute for Professional Preparation (Institut national de préparation professionnelle, or INPP); payable monthly by employers	1 to 3
National Agency for Labor (Office National de l'Emploi or ONEM); payable monthly by employers	0.2

E. Miscellaneous matters

Foreign-exchange controls. The currency in the DRC is the Congolese franc (CDF). The exchange rate is variable.

In the DRC, the Central Bank of Congo regulates foreign-exchange controls. It also supervises the regulation on the transfer of currency. Cash transfers from or into the DRC are not subject to restrictions if they do not exceed the equivalent of USD10,000. An exchange control fee of 0.2% is levied on payments to or from abroad.

Debt-to-equity rules. The DRC does not have any thin-capitalization rules, but several measures may apply to related-party transactions (see *Transfer pricing*).

Transfer pricing. The DRC has several measures applicable to related-party transactions that are not conducted on an arm's-length basis.

These provisions include the disallowance of loan interest with respect to rates exceeding the annual average of the effective rates charged by the credit institutions of the country in which the lending company is established and the repayment of principal beyond five years.

Management fees paid to a related party may be deducted from the corporate income tax base if the following conditions are satisfied:

- The services rendered can be clearly identified (that is, they are genuine services that are effectively rendered and directly related to operating activities).
- The services cannot be rendered by a local company (that is, overhead expenses recharged to the local entity are excluded).
- The amount paid for the services corresponds to the remuneration paid in identical transactions between independent companies.

These arm's-length requirements are consistent with those set forth in the Mining Code.

The 2015 Finance Law introduced transfer-pricing documentation requirements. As a result, companies must put at the disposal of the tax administration during a tax audit, general and specific information on an affiliated group of companies (Master File and Local File), including the following:

- General description of the deployed activity, including changes that occurred during the year
- A general description of the legal or operational structures of the affiliated group of companies, including identification of the related companies engaged in transactions involving the company established in the DRC (local company)
- A general description of the function performed and risk assumed by the affiliated companies as soon as they affect the local company
- A list of the main intangible assets owned, including patents, trademarks, trade names and know-how, relating to the local company
- A general description of the group's transfer-pricing policy
- A description of transactions made with other affiliated companies, including the nature and amount of cash flows, such as royalties
- A listing of the cost-sharing agreement, copies of preliminary agreements related to transfer pricing that are concluded under the conditions of the regulation, and the prescription relating to the determination of transfer pricing, affecting the results of the local company
- Presentation of the method or methods for determining transfer pricing, in compliance with the arm's-length principle, including an analysis of the functions performed, assets used and risks assumed, and an explanation concerning the selection and application of the methods used
- An analysis of comparative elements considered as relevant by the company if the selected method requires it

Under the 2019 Finance Law, the transfer-pricing documentation (a condensed version) must be filed with the tax administration within two months after the filing of the corporate income tax return.

In addition, the corporate income tax law disallows branches from deducting overhead charges incurred by the parent company and charged back to the branch.

F. Tax treaties

The DRC has entered into double tax treaties with Belgium and South Africa. The following are the withholding tax rates under the treaties.

	Dividends %	Interest %	Royalties %
Belgium	10/15 (a)	10	10
South Africa	5/15 (b)	10	10
Non-treaty jurisdictions (c)	20	20	20

- (a) The 10% rate applies if the Belgian recipient company was eligible under the Investment Code or another investment incentive and if it holds at least 25% of the capital of the payer. Otherwise, the rate is 15%.
- (b) The 5% rate applies if the South African recipient company holds at least 25% of the capital of the payer. Otherwise, the rate is 15%.
- (c) For further details, see Section A.

A. At a glance

Corporate Income Tax Rate (%)	28 (a)
Capital Gains Tax Rate (%)	20/28 (b)
Branch Tax Rate (%)	15 (c)
Withholding Tax (%)	
Dividends	15 (d)
Interest	15
Royalties from Patents, Know-how, etc.	20
Payments for Non-commercial Services and Activities	10
Revenues Earned by Certain Foreign Companies	7.26/20 (e)

Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	3

- (a) The minimum tax is 1% of turnover. The corporate income tax rate is 25% for agricultural companies.
- (b) In certain circumstances, the tax is deferred or reduced (see Section B). For foreign companies, a special capital gains tax rate of 20% applies.
- (c) The branch tax is calculated based on the net profit decreased by the amount of the corporate income tax, to which a tax rebate of 30% is applied.
- (d) This tax also applies to directors' fees, nondeductible expenses and adjustments of profits following a tax examination. For directors' fees, the rate is 17%.
- (e) For details, see Section B.

B. Taxes on corporate income and gains

Corporate income tax. Congolese companies are taxed on the territoriality principle. As a result, Congolese companies carrying on a trade or business outside Congo are not taxed in Congo on the related profits. Congolese companies are those registered in Congo, regardless of the nationality of the shareholders or where the company is managed and controlled. Foreign companies engaged in activities in Congo are subject to Congolese corporate tax on Congolese-source profits only.

Tax rates. The regular corporate income tax rate is 28%.

The minimum tax payable is 1% of the annual turnover and cannot be less than XAF1 million (or XAF500,000 if turnover is less than XAF10 million a year). For petroleum products retailers and businesses, the tax base for the minimum tax is the margin because the sales prices are regulated and capped by the state. For companies specializing in brokerage activities, the tax base consists of the commissions (brokerage fees). The minimum tax is fully deductible for corporate income tax purposes, unless the amount of the minimum tax exceeds the corporate income tax.

The corporate income tax rate is 25% for agricultural companies, micro-finance companies and private educational institutions registered as companies.

The branch tax is imposed at a rate of 15%. It is calculated on the basis of the net profit decreased by the amount of the corporate income tax, to which a tax rebate of 30% is applied.

A withholding tax at a rate of 7.26% is imposed on the turnover of foreign companies with a registered branch in Congo that are engaged in activities there. A 20% withholding tax is imposed on income sourced in Congo that is derived by foreign companies not established in Congo, unless otherwise provided by a double tax treaty between Congo and the residential country of the beneficiary.

Corporations may apply for various categories of priority status and corresponding tax exemptions. The priority status varies depending on the nature of the project and the level of investments.

The Charter of Investments may grant a tax exemption for a three-year period for new activities in industry, agriculture, forestry and mining. In addition, under the General Taxes Code, a tax exemption for a two-year period may be granted for such new activities.

Capital gains. Capital gains are taxed at the regular corporate rate. The tax, however, can be deferred if the proceeds are used to acquire new fixed assets in Congo within three years or in the event of a merger.

If the business is totally or partially transferred (directly or indirectly) or discontinued, only one-half of the net capital gains is taxed if the event occurs less than five years after the startup or purchase of the business, and only one-third of the gains is taxed if the event occurs five years or more after the business is begun or purchased. The total gain is taxed, however, if the business is not carried on in any form by any person.

Capital gains derived by natural or legal entities domiciled abroad on the sale of all or part of their shares in the capital of companies registered under Congolese laws are subject to a special tax at a rate of 20%. This withholding tax is payable at the time of registration of the deed of disposal.

Administration. The fiscal year extends from 1 January to 31 December. Financial statements must be filed by 20 May.

Companies must pay the minimum tax between 10 March and 20 March, and corporate tax must be paid in four installments between the 10th and 20th days of February, May, August and November. Each installment must be equal to 20% of the preceding year's tax. The balance of tax due must be paid by the following 20 May.

A 50% penalty is assessed for late payment of tax.

Dividends. Dividends paid are subject to a 15% withholding tax. Resident corporations are taxed on the gross dividend; a corresponding 15% tax credit is available for double tax relief.

After three years, business profits credited to the non-compulsory reserve are deemed to be dividends and are accordingly subject to the 15% withholding tax on dividends.

A parent corporation may exclude from taxation the net dividends received from a Congolese or foreign subsidiary if the following conditions are satisfied:

- The parent company is a Congolese public limited company or limited liability company that holds 30% or more of the capital of the subsidiary that is also a public limited company or a limited liability company.
- The subsidiary carries on only industrial, agricultural, mining, forestry, large-scale fishing or stock-breeding activities.

No withholding credit is allowed if the net dividends are excluded from taxation.

A Congolese public limited company or limited liability company may exclude from taxation 90% of the net dividends received from a public limited company or limited liability company located in Congo or in another Central African Economic and Monetary Community (CEMAC) country if the parent company holds 25% or more of the capital of the payer of the dividends.

Foreign tax relief. In general, foreign tax credits are not allowed; income subject to foreign tax that is not exempt from Congolese tax under the territoriality principle is taxable net of the foreign

tax. A tax treaty with France, however, provides a tax credit on dividends.

C. Determination of trading income

General. Taxable income is based on financial statements prepared according to generally accepted accounting principles and the standard statements of the Organization for Harmonization of Business Law in Africa (OHADA) treaty. The members of OHADA are Benin, Burkina Faso, Cameroon, Central African Republic, Chad, Comoros, Congo (Democratic Republic of), Congo (Republic of), Côte d'Ivoire, Equatorial Guinea, Gabon, Guinea, Guinea-Bissau, Mali, Niger, Senegal and Togo.

Business expenses are generally deductible unless specifically excluded by law. The following expenses are not deductible:

- Head office overhead or remuneration for services paid to non-residents that exceeds 20% of taxable income before the deduction of such items
- Head office fees or remuneration for certain services (studies and technical assistance) paid to nonresidents by companies engaged in building and public works, by engineering firms and by accounting firms, to the extent that the expenses exceed 2% of turnover
- Royalties from patents, brands, models or designs paid to a nonresident corporation participating in the management of, or owning shares in, the Congolese corporation
- Interest paid to a shareholder in excess of the central bank annual rate plus two points and, if the shareholder is in charge of management, interest on the portion of the loan exceeding one-half of the capital stock
- Commissions and brokerage fees exceeding 5% of purchased imports
- Certain specific charges, gifts, subsidies and penalties
- Most liberalities (payments that do not produce a compensatory benefit, such as excessive remuneration paid to a director)
- Corporate income tax

Inventories. Inventory is normally valued at the lower of cost or market value.

Provisions. In determining accounting profit, companies must establish certain provisions, such as a provision for a risk of loss or for certain expenses. These provisions are normally deductible for tax purposes if they are linked to clearly specified losses or expenses that are likely to occur and if they appear in the financial statements and in a specific statement in the tax return.

Tax depreciation. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at rates specified by tax law. The following are some of the specified annual rates.

Asset	Rate (%)
Commercial and industrial buildings	5
Office equipment	15
Motor vehicles	20 to 33.33
Plant and machinery	10 to 33.33

Heavy new assets acquired for manufacturing, transformation, transport and handling qualify for a special depreciation scheme at a rate of 40% in the year of acquisition if all of the following conditions are satisfied:

- The assets are used only in industrial, mining, hydrocarbons, forestry or agricultural activities. For mining, hydrocarbons and forestry activities, the various types of assets eligible for the special depreciation scheme are listed in the joint circular signed by the Minister of Finance and the minister of the concerned sector of activity.
- The assets can be used for a period exceeding three years.
- The total value of the assets exceeds XAF40 million.
- The assets will be intensively used.

The request for the special depreciation scheme must be addressed to the General Director of Taxes within three months following the acquisition of the asset. The authorization to use this scheme is granted by the Minister of Finance.

Relief for tax losses. Losses may be carried forward for three years. Losses attributable to depreciation may be carried forward indefinitely, but they must be reported on the depreciation table. Losses may not be carried back.

Groups of companies. The Congolese tax law provides for a fiscal integration system and a fiscal regime for holding companies with tax exemptions, particularly with respect to capital gains, dividends and interest on loans.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax	18.9
Business activity tax (<i>patente</i>); calculated based on annual turnover according to sliding scale	0.040
Registration duties	
On commercial deeds	1
On transfers of real property or businesses	4 to 10
Tax on salaries (TUS)	7.5
Social security contributions, on annual salaries; paid by	
Employer	
Family allowance contribution	10.035
Work accident insurance	2.25
Old-age pension	8
Employee	
Old-age pension	4

E. Miscellaneous matters

Foreign-exchange controls. The Congolese currency is the CFA franc BEAC (XAF). The fixed exchange rate for the CFA franc BEAC is XAF655,957 = EUR1.

Exchange-control regulations exist in Congo for financial transfers outside the franc CFA zone (XAF zone), which is the monetary zone including France and its former overseas colonies.

Transfer pricing. The Congolese tax law contains the transfer-pricing measures described below.

Amounts paid by a Congolese company to a company or a group of companies located outside Congo are considered indirect transfers or profits if the payer is dependent *de jure* or *de facto* on the recipient of the payments and if the tax authorities establish that the payments are excessive or unjustified. This measure applies to certain transactions, including the following:

- Overcharges for purchases
- Payments of excessive royalties
- Loans that are interest-free or have unjustifiable rates
- Discounts of debts
- Advantages granted out of proportion with the benefit provided by a service provider

Payments for the use of patents, marks, drawings and models, interest payments and payments for services made by a Congolese company to a nonresident company located in a country with low or no taxation (for example, tax haven or fiscal noncooperative states), are considered indirect transfers of benefits.

F. Treaty withholding tax rates

The withholding rates under a treaty with France are listed in the following table.

	Dividends	Interest	Royalties
	%	%	%
France	15	0*	15
Non-treaty jurisdictions	15	15	20

* Interest is subject to tax in the recipient's country. Withholding tax is not imposed in the country of source.

Net Operating Losses (Years)	
Carryback	0
Carryforward	3/5 (j)

- (a) The 30% rate is reduced to 20%, 15%, 10% or 5% for companies whose annual gross income does not exceed specified amounts (for further details, see Section B).
- (b) The ordinary Capital Gains Tax rate is 15%. For the first sale of goods and rights acquired before 1 July 2019, an alternative rate of 2.25%, assessed on the gross transaction value, is available. However, capital gains are subject to corporate income tax if they are derived from depreciable assets, goods or rights that are part of the taxpayer's activities or if the transaction is part of the ordinary trade or business of the company (for further details, see Section B).
- (c) The ordinary Capital Income Tax rate is 15%. However, capital income is subject to corporate income tax if it derives from goods or rights that are part of the taxpayer's activities, or if the transaction is part of the ordinary trade or business of the company (for further details, see Section B).
- (d) Dividends may be exempt if the recipient is a local entity that carries out an economic activity and is subject to income tax (for further details, see Section B). The withholding tax is considered a final tax.
- (e) This is a final withholding tax that is imposed on non-domiciled companies and non-domiciled individuals.
- (f) For further details regarding withholding tax on interest, fees and commissions, see Section B.

- (g) Non-domiciled companies engaged in these types of activities through a permanent establishment in Costa Rica that do not comply with requirements to report income or to file an income tax return may be subject to an imputed amount of taxable income equivalent to 10.5%, 15% or 30% of their total gross income derived from Costa Rica. Imputed taxable income is subject to the ordinary corporate income tax rate. For further details, see Section C.
- (h) Resolution DGT-R-036-2014 established a 2% withholding requirement for debit or credit card payments processed by financial institutions in Costa Rica. The amounts withheld by the financial institutions are treated as advance payments of the recipient's final income tax liability. The 2% withholding requirement applies only to 88% of the amount of the transaction made with a debit or credit card. The following persons are exempted from this withholding requirement:
- Entities not subject to income tax
 - Companies under the simplified tax regime
 - Transporters of persons or goods
 - Gas stations
 - Taxpayers engaged in agricultural activities that do not have an obligation to make partial income tax payments
 - Taxpayers that generally do not have an obligation to make partial income tax payments
- (i) Resolution DGT-R-55-2017 established that insurance companies must withhold 2% on payments made for "professional services" paid to individuals or companies selling their services through direct contracting or public bid.
- (j) Net operating losses may be carried forward for three years. Agricultural companies may carry forward net operating losses for five years. Initial costs (pre-operational expenses) incurred by a local entity may be deducted for corporate income tax purposes within the first five fiscal years from the date the company becomes operational.

B. Taxes on corporate income and gains

Corporate income tax. The Costa Rican tax system is a territorial regime; consequently, income derived from Costa Rican sources is subject to tax.

Corporate income tax rates. The corporate income tax rate is 30%. However, for companies with annual gross income of up to CRC109,337,000 (approximately USD178,395.79), the following progressive rates are applicable:

- 5% for annual net income (taxable income) up to CRC5,157,000 (approximately USD8,414.23)
- 10% for annual net income between CRC5,157,000 and CRC7,737,000 (approximately USD12,623.79)
- 15% for annual net income between CRC7,737,000 and CRC10,315,000 (approximately USD16,830.10)
- 20% on the amount of annual net income exceeding CRC10,315,000

The amount of the applicable annual gross income is adjusted on a yearly basis.

Free Trade Zone Regime. The Free Trade Zone Regime is an incentive system offered by the Costa Rican government to companies that invest in the country and meet the requirements and obligations set forth in the Free Trade Zone Law and its regulations. The regime is granted discretionally by the government, mainly based on the proposed investment value for the country's economic development.

Companies operating under the Free Trade Zone Regime that are in the Great Metropolitan Area (GMA) benefit from an income tax exemption of 100% for the first eight years and of 50% for the next four years. Companies located outside the GMA benefit from an income tax exemption of 100% for the first 12 years and

of 50% for the next 6 years. The Ministry of National Planning and Economic Policy specifies which areas are considered part of the GMA.

On 22 January 2010, the executive branch of the Costa Rican government published Law No. 8794, which amends and adds certain sections to the Free Trade Zone Regime Law No. 7210. This law created a new category of companies that can apply for the Free Trade Zone Regime. This category is for companies that produce or process goods, regardless of whether the goods are for exportation. Companies in this category are subject to income tax at reduced rates (0%, 5%, 6% or 15%) for a specified number of years depending on whether the company is located inside or outside the GMA or depending on the amount of the investment.

To comply with the international standard of Base Erosion and Profit Shifting (BEPS) Action 5, the Free Trade Zone Regime Law was modified to include the Strategic Eligibility Index for Service Companies as a condition of entry and permanence with respect to the Free Trade Zone Regime for service companies. Therefore, services companies do not have any limitations on the selling of their services to the local market, and the income derived from these sales should be covered by the income tax and dividend tax incentives.

Capital gains. Capital gains are subject to the Capital Gains Tax at a 15% rate that is levied on the sale of tangible or intangible assets. For the first sale of goods and rights acquired before 1 July 2019, taxpayers are allowed to apply a capital gains tax of 2.25% to the gross purchase price.

Capital losses should be deductible against gains subject to Capital Gains Tax if requirements under the Capital Gains Tax rules are met.

The gains are subject to corporate income tax at a general 30% rate if any of the following circumstances exist:

- The sale of the assets is considered to be part of the company's ordinary trade or business.
- The goods or rights are used to generate taxable income.
- The asset being transferred is a depreciable asset.

Capital Income Tax. For purposes of the Capital Income Tax, capital income is classified as "Movable Capital Income" or "Immovable Capital Income."

"Immovable Capital Income" includes income derived from real estate, such as leases, subleases and the creation or assignment of any right of use and enjoyment of immovable property.

"Movable Capital Income" includes, among others, the following types of income:

- Income derived from the transfer of funds to third parties, including repurchases of securities, such as interest derived from financing and loans
- Income derived from leases, subleases and the creation or assignment of any right of use and enjoyment of movable property, intangible assets and other rights such as intellectual property
- Dividends received and other income similar to dividends

As a general rule, income characterized as Immovable Capital Income is subject to a 15% tax rate, which is assessed on 85% of the gross income received by the taxpayer without the possibility of additional expense deductions.

For Movable Capital Income, the applicable tax rate is 15% assessed on the gross income received by the taxpayer, with no deductions allowed.

Alternatively, taxpayers that generate capital income and that have at least one employee engaged in this business activity may elect to characterize this type of income as ordinary taxable income and, accordingly such income is subject to corporate income tax that is assessed on the net taxable income. The corresponding election must be notified to tax authorities before the beginning of the fiscal year and remains mandatory for a minimum of five years.

Capital income is subject to corporate income tax at a general 30% rate if either of the following circumstances exist:

- The capital income is considered to be part of the company's ordinary trade or business
- The assets generating the capital income are part of the taxpayer's activities (that is they are used to generate ordinary income)

Administration. The statutory tax year runs from 1 January through 31 December. Companies must file annual corporate income tax returns and pay any tax due within 2 months and 15 days after the end of the tax year. Taxpayers that report under the statutory tax year have a filing deadline of 15 March. On request, tax authorities may authorize a different tax year in special circumstances.

The current year tax liability must be paid in quarterly installments, which are based on the preceding year's income tax paid or the average of the last three years' tax liability, whichever is higher. If a company did not file a return for the last three years, the installment payments are calculated based on the tax liability from the last year a return was filed. New companies must make quarterly payments based on their first-year projected income, which must be reported to the tax authorities on or before the last day of January. If no projected income is reported, the tax authorities may determine the quarterly tax payments based on an imputed income amount.

Companies defined by the tax authorities as National Large Taxpayers or Large Territorial Companies must file audited financial statements on request from the tax authorities. The audited financial statements must be submitted within three months after the request of the tax authorities. The period to respond may be extended by three months if approved by the tax authorities.

In addition, Resolution No. DGT-R-30-2014 requires National Large Taxpayers to update their relevant tax information using a web-based platform called AMPO within one month from the end of their fiscal year. Taxpayers that become classified as National Large Taxpayers must submit the tax information within two

months after being notified of their National Large Taxpayer status by the tax authorities. The relevant tax information to be provided includes, among other items, the following:

- Agencies
- Branches or commercial premises
- Mergers
- Royalty payments for the use of intangible assets
- Equity participation in other entities
- Participations in economic groups

Dividends. In general, dividends paid or credited by corporations to individuals or entities are subject to a 15% withholding tax. Dividend distributions paid to another entity domiciled in Costa Rica are exempt, provided that the recipient is an entity that carries out an economic activity and is subject to income tax or is the holding company of a financial conglomerate or group duly supervised in Costa Rica.

Dividend distributions by companies of their own shares are also exempt.

Domiciled companies include companies incorporated in Costa Rica and companies that have a permanent establishment in Costa Rica.

Interest withholding tax. Interest, commissions, financial expenses and lease payments for capital assets paid to non-domiciled individuals or legal entities are subject to a 15% withholding tax. Interest, commissions and financial expenses paid by entities regulated by the Superintendence of Financial Entities (Superintendencia General de Entidades Financieras, or SUGEF) to foreign entities that are also regulated and supervised in their jurisdictions are subject to a 5.5% withholding tax rate. An exemption applies to interest, commissions and financial expenses paid to multilateral development banks and other institutions of multilateral or bilateral development, as well to other nonprofit entities that are not subject to tax.

The Income Tax Law limits the deductibility of financial expenses from debts with nonbanking entities (for details, see *Limitations on the deductibility of financial expenses* in Section E).

Foreign tax relief. The current position of the tax authorities is that Costa Rican taxpayers cannot deduct foreign taxes paid abroad in calculating their taxable income.

C. Determination of trading income

General. Income tax is determined in accordance with International Accounting Standards (IAS), subject to adjustments required under the Costa Rican Income Tax Law and general resolutions issued by the tax authorities. Taxable income includes all income derived from Costa Rican sources, such as income from industrial, agricultural and trade activities in Costa Rica, income from services rendered in Costa Rica and income derived from real estate transactions, assets, capital, goods and rights invested or used in Costa Rica.

Imputed income. The tax authorities may assess imputed income in the cases described below.

Non-domiciled companies that do not file tax returns. Non-domiciled companies engaged in certain types of activities in Costa Rica through a permanent establishment that do not comply with requirements to report income or file income tax returns are subject to an imputed income assessment equal to a specified percentage of their Costa Rican gross income, unless they provide evidence of a lower amount of actual income. For example, documentation supporting an allocation of income between Costa Rica and other countries would prove that all income is not Costa Rican source. The amount of the imputed income assessment is subject to tax at the normal income tax rate. The following are some of the presumed amounts of taxable income:

- Transport and telecommunications: 15% of gross income
- Reinsurance: 10.5% of the net value of the reinsurance undertakings, guarantees and premiums of any type
- Media, cinema and international news: 30% of gross income

Airlines, maritime shipping, transportation and communication companies. Airlines, maritime shipping, transportation and communication companies may enter into an agreement with the tax authorities to compute Costa Rican taxable income using a special formula based on the company's worldwide and local revenues.

Loan and financing transactions. Unless the taxpayer provides evidence to the contrary, loan and financing transactions are deemed to derive a minimum amount of interest based on the highest active interest rate fixed by the Banco Central de Costa Rica (central bank) for lending and financial transactions or, if this rate is not available, on the average market rate being charged in the Costa Rican banking system. The tax authorities do not allow any exceptions to this rule unless the parties entered into a formal written loan or financing agreement.

Inventories. The Costa Rican Income Tax Regulations provide that acquisition cost must be used to record assets. The acquisition cost may be computed using several valuation methods, such as the first-in, first-out (FIFO) and weighted average cost methods. The tax authorities eliminated last-in, first-out (LIFO) as a valid inventory valuation method for tax purposes as of 3 February 2015.

Provisions. In general, provisions, including provisions for contingent liabilities such as doubtful accounts and severance pay, are not deductible expenses. However, actual payments of such liabilities are considered to be deductible expenses.

Tax depreciation. Depreciation may be computed using the straight-line or the sum-of-years' digits method. The tax authorities may allow a special accelerated depreciation method in certain cases. The tax authorities may authorize other methods based on the type of asset or business activity. The method chosen must be applied consistently. Depreciation is computed based on the useful life of the asset as specified in the Income Tax Regulations. The following are some of the straight-line rates.

Asset	Rate (%)
Buildings	2/4/6
Plant and machinery	7/10/15
Vehicles	10/15/34
Furniture and office equipment	10
Tools	10

Relief for losses. Taxpayers may carry forward net operating losses for three years.

Agricultural companies may carry forward net operating losses for five years.

Initial costs (pre-operational expenses) incurred by a local entity may be deducted for corporate income tax purposes within the first five fiscal years from the date the company becomes operational.

Groups of companies. Costa Rican law does not allow the filing of consolidated income tax returns or provide any other tax relief to consolidated groups of companies.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax (reduced rates may be applicable)	13%
Real estate transfer tax; the definition of "transfer" includes indirect transfers in addition to direct transfers of immovable property; indirect transfers are the transfer of control over the legal owner of immovable property	1.5%
Vehicle transfer tax	2.5%
Customs duties	
Agricultural products; average rate	12.5%
Industrial products; average rate	3.9%
Certain raw materials and machinery and equipment (Certain specified goods and merchandise are subject to higher rates of customs duty.)	0%
Real estate tax (assessed and collected by the municipalities)	0.25%
Payroll taxes; withheld by employers; paid by employee; rate depends on compensation level	10%/15%/20%/25%
Social security contributions	
Employer	26.5%
Employee	10.5%
Municipal taxes (varies by municipality)	Various
Solidarity Tax for the Strengthening of Housing Programs; (Solidarity Tax) contained in Law No. 8683; purpose of the tax is to finance public housing programs; tax applicable to residential property that is used habitually or occasionally or for recreational purposes, that the taxpayer owns or has the right to use	

Nature of tax	Rate
<p>and that is located in Costa Rica; taxpayers are subject to the tax if the value of the infrastructure (permanent structures, such as houses, swimming pools and parking lots) exceeds CRC133 million (approximately USD217,004.68); the value of the infrastructure must be updated every three years starting from 2016 (for example, 2016, 2019 and so forth) and is due on 15 January of the corresponding year in accordance with the parameters established by the tax authorities; if the taxpayer is subject to the tax (that is, meets value threshold for the infrastructure) the tax base is computed as the total value of the infrastructure (not just the excess of CRC133 million) plus the value of the land as of 1 January, based on a specific zoning model determined by tax authorities; hotel businesses may be subject to the tax depending on their operating model and the type of infrastructure; the tax is paid annually and is due on 15 January of every year (for example, for a fiscal year-end of 31 December 2021, the tax is due by 15 January 2021); Solidarity Tax is independent from the other real estate taxes and is not deductible for income tax purposes; the tax rates are progressive</p>	0.25% to 0.55%
<p>Annual Tax on Legal Entities; applies to all business entities and branches that are registered in the Mercantile Registry; amount of tax depends on whether the entity is registered as a taxpayer and on its gross income in its last corporate income tax return if so registered; tax rate is applied to a base salary; base salary is a monetary point of reference updated each year by the Ministry of Finance and is typically used in certain laws as a reference for tax computations (for example, tax penalties); in 2021, the base salary is CRC462,200 (approximately USD754.13); payable by 30 January of each year</p>	
<p>Entities not registered as taxpayers or inactive</p>	15%
<p>Entities with gross income of less than 120 base salaries</p>	25%
<p>Entities with gross income between 120 and 279 base salaries</p>	30%
<p>Entities with gross income equal to or in excess of 280 base salaries</p>	50%

E. Miscellaneous matters

Foreign-exchange controls. The currency in Costa Rica is the colón (CRC). As of 20 January 2021, the exchange rate of the colón against the US dollar was CRC612.89 = USD1.

No restrictions are imposed on foreign-trade operations or foreign-currency transactions.

Limitations on the deductibility of financial expenses. The Income Tax Law will limit the deductibility of financial expenses from debts with nonbanking entities.

The annual interest deduction cannot exceed a certain percentage (see next paragraph) of the company's earnings before interest, taxes, depreciation and amortization (EBITDA). Interest paid on loans with local financial institutions supervised by the SUGEF or foreign financial institutions supervised in their country are not subject to this limitation. The interest expense that exceeds this threshold will be considered to be non-deductible for income tax purposes and can be taken as a deductible expense in the following tax periods, provided that interest expenses in each year does not exceed the specified percentage of the company's EBITDA.

This limitation will apply from the 2021 fiscal year with a 30% percentage for the first two years. The percentage will then be adjusted downward by 2% each year until reaching 20%.

F. Tax treaties

Costa Rica has income tax treaties in effect with Germany, Mexico and Spain.

The following are the withholding tax rates under Costa Rica's tax treaties.

	Dividends %	Interest %	Royalties %
Germany	5/15 (a)	5 (b)	10
Mexico	5/12 (a)	10 (d)	10
Spain	5/12 (a)	5/10 (c)	10
Non-treaty jurisdictions (e)	15	15	25

- (a) The 5% rate applies if the beneficial owner of the dividends is a company that owns directly at least 20% of the capital of the entity paying the dividends.
- (b) Interest paid from Germany to the Costa Rican government is exempt from German taxes. Interest paid from Costa Rica under a loan guaranteed by Germany for exportation or foreign direct investment or paid to the German government, the Deutsche Bundesbank, the Kreditanstalt für Wiederaufbau or the Deutsche Investitions-und Entwicklungsgesellschaft is exempt from Costa Rican taxes. Interest can only be taxed in the contracting state of which the recipient is a resident if the interest is paid in connection with any of the following:
- The sale of commercial or scientific equipment on credit
 - The sale of goods by an enterprise to another enterprise on credit
 - A loan of any type made by a bank resident in one of the contracting states
- (c) The 5% rate applies if the term of the loan agreement under which the interest is derived is five years or longer.
- (d) Interest derived from Costa Rica and paid to a resident of Mexico is exempt from withholding tax if the recipient of the interest is the beneficial owner and if one of the following circumstances exists:
- The beneficial owner is the Mexican state, one of its political subdivisions or one of its local entities, or the Central Bank of Mexico.
 - The interest is paid by the Costa Rican state, one of its political subdivisions or one of its local entities, or the Central Bank of a Costa Rica.
 - The interest is derived from Costa Rica and is paid on a loan with at least a three-year term granted by the Banco Nacional de Comercio Exterior, S.N.C., Nacional Financiera, S.N.C., the Banco Nacional de Obras y Servicios Públicos, S.N.C. or by any other institution agreed upon by the competent authorities.
- (e) For further details, see Section A.

A. At a glance

Corporate Income Tax Rate (%)	25 (a)
Capital Gains Tax Rate (%)	25 (b)
Branch Tax Rate (%)	25 (a)
Withholding Tax (%)	
Dividends	2/10/15 (c)
Interest	18 (d)

Royalties from Patents, Know-how, etc.	20
Directors' Fees and Nondeductible Expenses	15
Payments for Services	20 (e)
Branch Remittance Tax	7.5 (f)
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) For details concerning the minimum tax, see Section B.
- (b) See Section B.
- (c) For details concerning these rates, see Section B.
- (d) The standard rate of interest withholding tax is 18%. Several exceptions to this rate exist. The withholding tax rate ranges from 1% to 16.5%, depending on the maturity of a deposit account. For a current account, the withholding tax rate is reduced to 16.5% for companies and 13.5% for individuals. The withholding tax rate on interest is reduced to 8.25% for companies and to 6.75% for individuals if the interest is paid on loans to holding companies from foreign financial institutions or on loans from shareholders of holding companies to finance the acquisition or subscription of securities.
- (e) This withholding tax applies to payments by resident companies for services rendered by nonresidents who do not maintain a professional office in Côte d'Ivoire. For premiums paid to nonresident reinsurance companies, the rate is 12.5%.
- (f) On one-half of the before-tax profit. See Section B.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are taxed on the territoriality principle. As a result, companies carrying on a trade or business outside Côte d'Ivoire are not taxed in Côte d'Ivoire on the related profits. Resident companies are those registered in Côte d'Ivoire, regardless of the nationality of the shareholders or where they are managed and controlled. Foreign companies with activities in Côte d'Ivoire are subject to corporate tax on local-source profits if they have a permanent establishment in Côte d'Ivoire.

Tax rates. The 2021 Finance Law introduced two new tax regimes and revised the thresholds for the three existing tax regimes. The following are the five tax regimes and their thresholds:

- Municipal tax regime: companies whose turnover, with all taxes included, is less than XOF5 million
- Entrepreneurial tax regime: companies whose turnover, with all taxes included, is at least XOF5 million but less than XOF50 million
- Microenterprise tax regime: companies whose turnover, with all taxes included, is at least XOF50 million but less than XOF200 million
- Simplified tax regime: companies whose turnover, with all taxes included, is at least XOF200 million but less than XOF500 million
- Normal tax regime: companies whose turnover, with all taxes included, is XOF500 million or more

The regular corporate income tax rate is 25%.

The minimum tax is 0.5% of turnover. For oil-producing, electricity and water-producing companies, the rate is reduced to 0.1%. The rate is reduced to 0.15% for banks and financial companies and for insurance companies. The minimum tax may not be less than XOF3 million or more than XOF35 million. New corporations are exempt from the minimum tax for their first fiscal year,

and mining companies are exempt from the corporate income tax and the minimum tax during the exploration phase.

The 2020 Finance Law suspended the payment of the minimum tax for all taxpayers until 31 December 2020.

The 2021 Finance Law did not renew this suspension of the minimum tax. As a result, the minimum tax is again due.

The 2021 Finance Law introduced a new condition for minimum tax payments. Consequently, the minimum tax is now due in one of the following cases:

- The amount of corporate income tax is lower than minimum tax.
- The cumulative amount of taxes and duties due for a fiscal year, excluding third-party taxes, is lower than the maximum amount of microenterprise tax determined on the basis of the turnover realized under the microenterprise tax regime. In this case, the minimum tax due by taxpayer is increased by the difference between the cumulative amount of taxes due for the fiscal year and the maximum amount of tax under the microenterprise tax regime.

According to the tax administration analysis of the 2022 Finance Law, the maximum amount of microenterprise tax is XOF8 million for companies under the simplified tax regime and XOF9.6 million for companies under the normal tax regime.

Profits realized in Côte d'Ivoire by branches of foreign companies are deemed to be distributed and therefore are subject to a branch withholding tax on one-half of the before-tax profit at a rate of 15% (effective rate of 7.5%).

Corporations may apply for various categories of priority status and corresponding tax exemptions. Priority status varies depending on the nature of the project and the level of investments. Corporate tax reductions and temporary tax exemptions are granted to new industrial businesses for investments in industrial buildings and building sites, land for development, and industrial and agricultural establishments.

Capital gains. Capital gains are taxed at the regular corporate rate. The tax, however, can be deferred if the proceeds are used to acquire new fixed assets in Côte d'Ivoire within three years or in the event of a merger (or other acquisition).

If the business is totally or partially transferred or discontinued, only one-half of the net capital gain is taxed if the event occurs less than five years after the startup or purchase of the business, and only one-third of the gain is taxed if the event occurs five years or more after the business is begun or purchased.

Capital gains derived by holding companies are exempt or are taxed at a rate of 12% if certain conditions are satisfied.

Administration. The financial year is from 1 January to 31 December. Corporate financial statements and corporate results must be filed by the following dates:

- Companies that should have their accounts certified: 30 June of the year following the financial year
- Other companies: 30 May of the year following the financial year

Companies must pay corporate income tax in three equal installments, which are due on 15 April, 15 June and 15 September of the year following the financial year.

The tax center with which taxpayers must file tax returns depends on the company's turnover. The following are the relevant rules:

- Taxpayers with annual turnover below XOF200 million must file with their local tax center.
- Taxpayers with turnover ranging from XOF200 million to XOF3 billion must file with the medium-sized enterprises center (CME).
- Taxpayers with turnover exceeding XOF3 billion must file with the large corporation tax center (DGE).

Companies must use a unified tax form to file their tax return and pay their taxes electronically. This tax return includes in one form all of the taxes to which the company is subject. The deadline to file the unified tax return for companies reporting to the CME or DGE depends on the company's industry. The following are the deadlines:

- Manufacturing, oil and mining companies: 10th day of each month
- Commercial companies: 15th day of each month
- Service companies: 20th day of each month

Late payments are subject to a penalty of 5% for the first month, plus 0.5% for each additional month or part of a month.

Late submissions of financial statements are subject to a penalty of XOF1 million plus XOF100,000 for each month or part of a month of the delay.

If the lateness of a submission exceeds three months, the penalty is XOF2 million plus XOF200,000 for each month or part of a month of the delay.

Late submissions of corporate results are subject to the following penalties:

- XOF3 million plus XOF300,000 for each month or part of a month of the delay, for companies reporting to the DGE
- XOF1 million plus XOF100,000 for each month or part of a month of the delay, for companies reporting to the CME
- XOF500,000 plus XOF50,000 for each additional month or part of a month of delay, for companies reporting to their local tax centers

Dividends. Dividends paid by listed companies out of profits taxed at the 25% corporate tax rate are subject to a 10% withholding tax. A 15% withholding tax is imposed on dividends paid by other companies out of profits taxed at the 25% corporate tax rate. A special withholding tax rate of 2% applies to certain types of bonds issued in Côte d'Ivoire.

A parent company may exclude up to 95% of dividends received from a 10%-owned subsidiary (regime of holding companies and subsidiaries). A listed company may exclude 90% of the dividends received, while an unlisted company may exclude 50%.

The amount of withholding tax due is increased by 25% if the beneficiary of the dividends is established in a noncooperative or low-tax jurisdiction.

Foreign tax relief. In general, foreign tax credits are not allowed; income subject to foreign tax that is not exempt from tax in Côte d'Ivoire under the territoriality principle is taxable, net of the foreign tax. However, a tax treaty may provide for a tax credit.

C. Determination of trading income

General. Taxable income is based on financial statements prepared according to the Accounting System of the Organization for African Business Law Harmonization. Business expenses are generally deductible unless specifically excluded by law. The following expenses are not deductible:

- Gifts (except those granted to certain associations engaged in social, sporting, scientific or cultural development)
- Most liberalities (payments that do not produce a compensatory benefit, such as excessive remuneration paid to a director)
- Subsidies
- Cash payments exceeding XOF250,000 (exception for salary expense)
- Corporate tax
- Penalties

Services fees and royalties paid by Ivorian companies to non-resident parent companies are deductible if the following conditions are satisfied:

- The payer proves that the payments are related to real operations and that the amount of the payments is normal.
- The amount of the payments does not exceed 5% of the turnover and 20% of the overhead of the payer.

If a nonresident is established in a noncooperative or low-tax jurisdiction, the deduction is capped at 50% of the gross amount paid, without prejudice to the double limit mentioned above in the second bullet in the preceding paragraph.

Payments to related resident companies are also subject to the same two conditions mentioned above.

Under certain tax treaties of Côte d'Ivoire, amounts paid to non-resident companies are deductible for tax purposes based on the same conditions as those applicable to payments to resident companies. Even if such treaties apply, the payer must satisfy the two conditions mentioned above in order to deduct the payments.

The deduction of services fees and royalties paid by resident companies to other related resident companies is subject to the second condition mentioned above (5% of the turnover and 20% of the overhead). As a result, the nondiscrimination clause provided for by certain tax treaties does not apply, and services fees and royalties paid by resident companies to related nonresident companies are deductible under the conditions mentioned above.

Inventories. Inventory is normally valued at the lower of cost or market value. Cost must be determined on a weighted average cost price method. A first-in, first-out (FIFO) basis is also generally acceptable.

Provisions. In determining accounting profit, companies must establish certain provisions, such as a provision for a risk of loss or for certain expenses. These provisions are normally deductible

for tax purposes if they provide for clearly specified losses or expenses that are probably going to occur and if they appear in the financial statements and in a specific statement in the tax return.

Capital allowances. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at the following rates.

Asset	Rate (%)
Buildings	5
Light construction	10
Loud machinery	10
Stationary machinery	20
Fixtures	10
Office and home chattels	10
Office equipment	20 to 25
Motor vehicles	33.33
Other specified vehicles and engines	20 to 25
Computers and software	20 to 50

Relief for tax losses. Losses may be carried forward five years. Losses attributable to depreciation may be carried forward indefinitely. Losses may not be carried back.

Groups of companies. The law does not contain any provision for the fiscal integration of related companies equivalent to a consolidated filing position. However, a parent-subsidiary tax regime exempts dividends and capital gains from tax under certain conditions.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT), on goods and services sold in Côte d'Ivoire	18
Turnover tax (tax on banking operations), on interest paid to and services rendered by banks and financial companies	10
Special tax on equipment; based on turnover; applicable to all companies	0.1
Business activity tax (<i>patente</i>), based on the turnover and the rental value of tangible assets	Various
Withholding tax, on amounts invoiced by importers, producers and sellers to persons subject to commercial or agriculture tax (entitles the buyer to a credit against withholding tax or VAT payable on its sales)	Various
Registration duty on transfers of real property	4
Registration duty of transfers of businesses	10
Special tax on subcontractors of petroleum companies; a global tax, including payroll taxes and withholding tax on dividends; imposed on taxable turnover	
For companies in phase of exploration	6
For companies in phase of exploitation	2.17

Nature of tax	Rate (%)
Payroll tax, paid by employers on salaries of	
Employees from Côte d'Ivoire	2.8
Expatriates	12
Social security contributions	
Retirement, on monthly salaries up to XOF2,700,000; paid by	
Employer	7.7
Employee	6.3
Family allowances, on monthly salaries up to XOF70,000; paid by employer	5.75
Industrial injuries, on monthly salaries up to XOF70,000; paid by employer	2 to 5

E. Miscellaneous matters

Foreign-exchange controls. Exchange control regulations apply to financial transfers outside the franc zone, which is a monetary zone including Comoros, France, Monaco, the member states of the West African Economic and Monetary Union (WAEMU) and the member states of the Economic Community of Central African States.

Transfer pricing. Taxpayers must file annually the following transfer-pricing documentation:

- An annual transfer pricing return reconciling cross-border intragroup transactions
- A Country-by-Country Report (CbCR), if, among other conditions, the aggregate annual turnover of the taxpayer is XOF491,967,750,000 or more

A failure to submit the annual transfer-pricing return or the submission of an incomplete statement results in the rejection of the deductibility of the sums paid for corporate income tax purposes. Under the 2021 Finance Law, this failure is also punishable by a flat rate fine of XOF3 million per omission or mistake together with a fine of XOF100,000 per month of delay.

The failure to submit a CbCR results in a fine of XOF5 million. The submission of an incomplete statement or a statement with mistakes is punishable by a flat fine of XOF2 million.

Thin-capitalization rules. Côte d'Ivoire has the following thin-capitalization rules regarding loans by shareholders and related parties to local entities:

- The sums of money made available by all shareholders should not exceed the amount of the share capital.
- The interest paid to the shareholders should not exceed 30% of the profit before corporate income tax and before deduction of such interest, and depreciation and provisions.
- The interest rate should not exceed the rate of the central bank advances, increased by 2 percentage points.
- The loan should be repaid within five years following the granting of the loan. In addition, the local entity should not go into liquidation during this five-year period.
- The share capital of the local entity should be entirely paid up.

Under the 2021 Finance Law, for a loan between two Ivorian companies, in addition to the conditions listed above, the interest

paid must also respect the double limit of 20% of overhead and 5% of turnover, excluding taxes.

F. Treaty withholding tax rates

Côte d'Ivoire has signed a multilateral tax treaty with the other members of the West African Economic Community (Communauté Economique de l'Afrique de l'Ouest, or CEAO), which are Burkina Faso, Mali, Mauritania, Niger and Senegal.

The country also signed a multilateral tax treaty in the framework of the Common African and Mauritian Organization (Organisation Commune Africaine et Mauricienne, or OCAM). This treaty was also signed by Benin, Burkina Faso, Cameroon, Central African Republic, Chad, Congo (Democratic Republic of), Congo (Republic of), Gabon, Madagascar, Mauritius, Niger, Rwanda, Senegal and Togo.

The two international organizations mentioned above have been dissolved.

Côte d'Ivoire has signed a treaty with the member states of the WAEMU. This tax treaty has applied for some tax items since 2009. It is wholly applicable, effective from 1 January 2010. The members of WAEMU are Benin, Burkina Faso, Côte d'Ivoire, Guinea-Bissau, Mali, Niger, Senegal and Togo.

	Dividends	Interest	Royalties
	%	%	%

United Kingdom	15	15	10
WAEMU countries	10	15	15
Non-treaty jurisdictions	2/10/15 (a)	18 (b)	20

(a) See Section B.

(b) See footnote (d) in Section A.

On 26 February 2016, Côte d'Ivoire signed a tax treaty with Turkey, but this treaty is not yet in force.

On 21 March 2019, Côte d'Ivoire signed a tax treaty with the United Arab Emirates, but this treaty is not yet in force.

- (a) See Section B.
- (b) These are prohibited list jurisdictions with which Croatia does not have a double tax treaty in place. The prohibited list jurisdictions are currently American Samoa, Anguilla, Dominica, Fiji, Guam, Palau, Panama, Samoa, Seychelles, Trinidad and Tobago, the United States Virgin Islands and Vanuatu.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are subject to tax on their worldwide income. A company is resident in Croatia if its legal seat or its place of management and supervision is located in Croatia. Branches of foreign companies are subject to tax only on their profits derived from Croatia. Investment funds without legal personalities established and operating in accordance with the law for investment funds are not corporate income taxpayers.

Tax rates. The standard rate of corporate income tax is 18%. A lower corporate income tax rate of 10% applies to taxpayers that realized revenue of less than HRK7,500,000 in the respective tax period.

Tax incentives. Tax exemptions and other tax reliefs are available in accordance with the Croatian Corporate Income Tax Act and special legislation regulating incentives. For example, the Investment Promotion Act provides incentives for investments in new business activities and new workplaces.

Capital gains and losses. Capital gains and losses from the sale of assets are considered regular taxable income and tax-deductible expenses, respectively. No separate capital gains tax applies; capital gains are subject to the regular corporate income tax rates of 18% or 10%. Specific rules apply to unrealized gains and losses on certain types of assets. Depending on the type of asset, such gains or losses may be not taxable or not tax deductible, and may be recognized for tax purposes in the period of the realization of the asset.

Administration. The regular tax year is the calendar year, but a company may apply for a different tax year.

Annual tax returns must be filed by the end of the fourth month following the tax year. However, in the case of the winding up of a company by applying shortened procedure, the tax period is aligned with such shortened procedure. The corporate income tax return submission deadline for bankruptcy is shortened to 30 days from the date of the opening of bankruptcy proceedings. The final corporate income tax return submission deadline for winding-up liquidation or other proceedings in accordance with special regulations is eight days from the date when the tax period ends.

Companies must make monthly advance payments of tax. In principle, each monthly advance payment is equal to $\frac{1}{12}$ of the tax due for the preceding year. The balance of tax due must be paid by the end of the fourth month following the tax year. If the total of the advance payments exceeds the tax due for the year, the company may claim a refund.

Dividends. Dividends paid to foreign shareholders are taxable at a rate of 10%.

Foreign tax relief. A foreign tax credit is available to resident companies for foreign tax paid on income earned directly or through permanent establishments abroad. The amount of the credit is the lower of the Croatian corporate tax payable on the foreign income and the foreign tax paid.

C. Determination of trading income

General. The corporate income tax base is determined in accordance with the accounting regulations (Croatian Financial Reporting Standards [CFRS]/International Financial Reporting Standards [IFRS]), adjusted for certain items that increase or decrease the tax base.

The following items decrease the tax base:

- Revenues from dividends and profit shares under certain conditions
- Unrealized profits from value adjustments of shares if they were previously taxed
- Revenues from collected written-off receivables that were taxed in previous periods
- Depreciation expenses carried forward from previous periods
- Tax incentives in accordance with special laws
- Expenses from previous tax periods that were previously taxed (that is, expenses that had been nondeductible)
- Government subsidies for the COVID-19 pandemic

The following items increase the tax base:

- Depreciation expenses exceeding the maximum allowable amounts and rates (excess may be carried forward).
- Penalty interest paid between related parties.
- Privileges and other benefits granted to individuals and legal persons to execute certain actions in favor of the company.
- Nondeductible interest on loans between related parties.
- The costs of forced collection of tax and other levies.
- Unrealized losses from value adjustments of shares, if these were included in the expenses.
- Unrealized losses from value adjustments of depreciable assets except in the case of extraordinary damages.
- Fifty percent of entertainment expenses resulting from a business relationship with a business partner, including related value-added tax (VAT). These expenses include the following:
 - Gifts, regardless of whether they include the mark of the company or product
 - The cost of holidays, sports, recreation and leisure
 - Rental of airplanes, automobiles, vacation homes and vessels
- Fines imposed by competent bodies.
- Fifty percent of expenses, including related VAT but not including insurance and interest costs, incurred with respect to owned or rented motor vehicles or other means of personal transportation (for example, personal car, vessel, helicopter and airplane) used by managerial, supervisory and other employees, if the personal use of the means of personal transportation is not taxed as a benefit in kind.
- Inventory shortages above the amount prescribed by the Croatian Chamber of Economy, if the shortages are not subject to personal income tax.

- Donations in cash or in kind exceeding 2% of the preceding year's revenue. The limitation does not apply to donations made in accordance with the competent ministry's decisions on special programs and actions undertaken outside the regular business activities of the beneficiary. The donations also include financing of health care expenses (surgery, purchases of medicines or orthopedic devices, and transport and accommodation costs with respect to health care institutions) for individuals who are not covered by primary, additional or private health insurance. The donations can also include donations of food producers or traders that donate food for social, humanitarian and other helpful purposes or that donate food to people hit by natural disasters. The food donations must be in line with special provisions of the Ministry of Agriculture.
- Expenses identified in the course of a tax audit, including VAT personal income tax, city tax and obligatory contributions incurred with respect to hidden profit payments, including payments of private costs of shareholders, company members and individuals and persons related to these individuals.
- Other expenses not incurred for the purpose of earning profit.

The expenses mentioned above, except privileges and other benefits granted to individuals and legal persons to execute certain actions in favor of the company and expenses identified in a tax audit, do not increase the tax base if they are subject to personal income tax.

Legislation that entered into force from 2017 introduced the possibility of determining the tax base based on the cash principle for taxpayers that realized revenue of less than HRK7,500,000 in the preceding tax period. The Corporate Income Tax Act provides detailed rules for determining such tax base. Corporate income taxpayers that are also VAT taxpayers may also determine the tax base based on the cash principle if they have, based on VAT rules, already chosen to pay VAT based on realized income.

Inventories. Inventories are valued in accordance with CFRS or International Accounting Standards (IAS)/IFRS. In general, inventories are valued at the lower of cost or net realizable value. Costs include all acquisition costs, conversion costs and other costs incurred in bringing inventories to their current location and condition. In general, the cost of inventories must be determined using the first-in, first-out (FIFO) or weighted average method.

Losses from value adjustments of inventories are recognized as tax-deductible expenses at the time of disposal of the inventories.

Specific rules deal with allowable limits of inventory shortages.

Provisions. The following provisions are deductible for tax purposes:

- Provisions for severance payments to be paid in the following year according to the prepared restructuring plan
- Provisions for costs of renewing natural resources
- Provisions for costs incurred during guarantee periods
- Provisions for costs related to court disputes that have already been initiated against the taxpayer (excluding interest)
- Provisions for the risk of potential loss in banks, up to the amount prescribed by the Croatian special regulations

- Provisions in insurance companies, up to the obligatory amount prescribed by the law governing the insurance
- Provisions for the unused vacation in accordance with accounting principles

Trade receivables. Value adjustments of trade receivables are deductible if the receivables are overdue for more than 60 days as of the end of the tax year and if they are not collected by the 15th day before the filing of the tax return. However, if a taxpayer does not take measures for debt collection (for example, sue the debtor) before the receivables are barred by the statute of limitations, the receivables treated as deductible for tax purposes in prior years must be included in taxable income. In addition, value adjustments are deductible for tax purposes in the following circumstances:

- The receivables do not exceed HRK5,000 (approximately EUR656) per debtor (corporate income taxpayers, subject to specific provisions in case of bankruptcy, arbitration and mediation) or HRK2,000 (approximately EUR262) per unrelated individual if the total receivables per individual do not exceed this amount on the last day of the tax period and if the receivable is written off by 31 December 2013.
- The receivables do not exceed HRK200 (approximately EUR26) per unrelated individuals or craftsmen (and/or individuals engaged in similar business activities) if the total receivables per individual do not exceed this amount on the last day of the tax period and do not derive such business activities.
- The company is suing the debtor or a foreclosure is being conducted.
- The receivables are reported in a bankruptcy proceeding of the debtor.
- The debt has been settled in the pre-bankruptcy or bankruptcy proceedings of the debtor.
- The taxpayer proves that costs of initiating certain collection procedures exceed receivables or the taxpayer proves it used the duty of care to initiate collection of the debt (which ultimately could not be collected).
- The debt is written off based on special provisions related to the consumer's bankruptcy.

The write-off of receivables confirmed in the settlement procedure (based on the Act on Compulsory Administration Procedure in Companies of Systemic Importance for the Republic of Croatia [Lex Agrokor]) should be treated as tax-deductible expense (applicable for 2018 and future corporate income tax returns).

Credit institutions may treat as tax deductible the write-off of receivables from unrelated individuals and legal entities that were previously impaired and recorded as a provision in accordance with the regulations of the Croatian National Bank. In that case, the credit institution should waive the right to collect the written-off amount of the receivable and should submit a written statement to the debtor and guarantor on the termination of their obligation in the amount of write-off. With respect to the debtor and guarantor, the amount of the written-off liability is not considered to be taxable income and has no impact on other prescribed thresholds. The credit institution should submit together with the corporate income tax return an overview of write-offs performed in line with these provisions, with an

indication of the total amount of write-offs and a breakdown by individual placement (individual loan receivable) and loan borrower.

Tax depreciation. Depreciation is calculated by using the straight-line method. The following are the maximum annual depreciation rates prescribed by the Corporate Income Tax Act.

Asset	Rate (%)
Buildings and ships over 1,000 gross registered tons	10
Primary herd and personal cars	40
Intangible assets, equipment, vehicles (except personal cars), and machinery	50
Computers, computer hardware and software, mobile telephones and computer network accessories	100
Other assets	20

The deduction for tax depreciation cannot exceed the expense for accounting depreciation. If maximum allowable tax depreciation exceeds accounting depreciation, the accounting depreciation prevails for tax purposes. If accounting depreciation exceeds maximum allowable tax depreciation, the excess may be deducted in future periods.

Depreciation expenses for personal cars and other vehicles used for personal transportation are deductible up to the amount calculated on the purchase cost of HRK400,000 (approximately EUR52,452) per vehicle. The limitation does not apply to vehicles used exclusively for rental or transportation activities.

Depreciation of assets that are not used in the performance of ordinary business activities is not deductible for tax purposes.

If the accounting records of a taxpayer include vessels, airplanes, apartments or resort houses and if the taxpayer uses these assets in its regular business activities, the depreciation of such assets may be claimed as deductible expenses for tax purposes if the following conditions are met:

- The taxpayer is registered for the activity of renting such assets.
- The revenue realized from the use of the vessels and airplanes is at least 7% of the purchased value of the vessels or airplanes.
- The revenue from the use of apartments and resort houses is at least 5% of the purchase value of the apartments or resort houses.

Relief for losses. Tax losses may be carried forward for five years, but they may not be carried back.

The legal successor may lose the right to a loss carryforward after a legal change (business combination) and/or change in ownership of the company of more than 50% if one of the following circumstances exists:

- The taxpayer did not perform its business activity for the two tax periods before the occurrence of the legal change and/or change in ownership.
- Within two tax periods after the occurrence of the legal change and/or change in ownership, the business activity of the taxpayer substantially changes.

Groups of companies. Croatia does not allow consolidated returns or provide any other tax relief for groups of companies. Each company within a group is taxed separately.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax	5/13/25
Real estate tax, on the value determined by the tax authorities	3
Social security contributions; paid by Employer	16.5
Employee	20
Personal income tax; the withholding liability lies with the employer	
Up to HRK30,000 per month	20
In excess of HRK30,000 per month	30
Municipal surcharge; varies among cities; the rate for Zagreb (the capital city) is 18%	0 to 18

E. Miscellaneous matters

Foreign-exchange controls. The Croatian currency is the kuna (HRK).

The Croatian National Bank is responsible for foreign-exchange regulations.

The Foreign Exchange Act generally imposes restrictions on payments abroad that do not have a legal basis. No restrictions are imposed on transfers of paid-in share capital, dividends, profits, interest, royalties, fees for know-how and similar payments.

Under the Foreign Exchange Act, Croatian resident companies may acquire foreign securities, provide long-term and short-term loans to nonresident companies, acquire real estate abroad and engage in certain other specified transactions. Such transactions are allowed if they are reported to the Croatian National Bank.

Natural persons may make direct investments abroad, acquire foreign securities, provide long-term loans to nonresidents, acquire real estate abroad and provide short-term loans to nonresidents who are related parties (family members).

Transfer pricing. Croatia has transfer-pricing rules that apply to transactions between Croatian residents and nonresidents. Under these rules, the tax authorities may adjust the taxable income of Croatian taxpayers derived from transactions with foreign related companies if they deem the prices and agreed conditions to be different than arm's-length prices and conditions. In such circumstances, taxable income is increased (or expenses decreased) by the difference between prices stated in the financial statements and arm's-length prices. These rules also apply to transactions between two Croatian residents if one of the related parties has special tax status (pays corporate income tax at reduced rates) or has a tax-loss carryforward.

A company may apply one of the following methods for establishing an arm's-length price:

- Comparable uncontrolled price method

- Resale price method
- Cost-plus method
- Profit-split method
- Transactional net margin method

Under the Croatian excessive interest rate rule, the deduction of interest on a loan received by a Croatian taxpayer from a related party is limited to a maximum deductible interest rate published by the Croatian Minister of Finance before the beginning of the relevant tax year (3.42% per year for 2020 and 3% per year for 2021).

The abovementioned interest rate is calculated as the average of the interest rates on the outstanding balances of loans that are granted for a period longer than one year to nonfinancial companies and that are published by the Croatian National Bank in the current calendar year.

Instead of the rate prescribed by the Minister of Finance, taxpayers can apply the abovementioned transfer pricing methods for establishing an arm's-length interest rate, subject to the condition that such method apply to all agreements.

Taxpayers can enter into an agreement in the area of transfer pricing and contractual relations between related companies with the Croatian tax authorities and tax authorities in other jurisdictions if applicable (resident jurisdictions of related companies or permanent establishments through which the business activities are carried out). Advance pricing agreements (APAs) enable parties to determine a set of criteria for determining transfer prices (for example, methods, adjustments and key assumptions) before beginning related-party transactions during a tax period.

Debt-to-equity ratios. Under thin-capitalization rules, interest on loans received from foreign shareholders owning 25% or more of the shares, capital or voting rights of the borrower, on loans guaranteed by such shareholders or on loans received from related parties, is not deductible if the loan balance exceeds four times the shareholders' share in the equity of the borrower.

Prepayments of dividends. If the dividends or profit shares are prepaid to an individual during a tax year and if the realized profit at the end of a tax year is insufficient to cover such prepayment, the prepayment is considered to be income subject to personal income tax. The taxpayer must maintain documentary evidence of dividend prepayments and submit it with the tax return.

Anti-Tax Avoidance Directive. The Anti-Tax Avoidance Directive contains rules regarding interest deductibility, controlled foreign companies (CFCs), hybrid mismatches and exit taxation.

Under the interest deductibility rule, to calculate the tax-deductible expense, the taxpayer may determine the exceeding borrowing costs incurred in the tax period to be up to 30% of earnings before interest, taxes, depreciation and amortization (EBITDA) or EUR3 million, whichever is higher. The exceeding borrowing costs are considered to be costs exceeding the taxable interest income or other economically equivalent taxable income. The amount of nondeductible exceeding costs is reduced for the amounts for which the tax base is increased under Article 8

(thin-capitalization rules) and Article 14 (interest on loans between related parties) of the Corporate Income Tax Act.

Under the CFC rule, a CFC of a taxpayer is an entity that exists in any organizational legal form or as a permanent establishment located in another country whose income is not liable to tax or is non-taxable in that country if both of the following conditions are met:

- The taxpayer alone or together with the related parties participates directly or indirectly with more than 50% of the voting rights, is the direct or indirect owner of more than 50% of the capital or realizes the right to receive more than 50% of the profit of the entity.
- The actual profit tax that the company or a permanent establishment paid abroad in another EU state is less than the difference between the income tax that would be charged to company or the permanent establishment in Croatia and the actual profit tax paid by the company or permanent establishment.

If the entity or the permanent establishment is considered a CFC, the Croatian taxpayer is required to include the following CFC income in its tax base:

- Interest or other financial asset income
- License fees or other income from intellectual property
- Dividends, shares in profits and revenues from the disposal of shares
- Financial leasing income
- Income from insurance, banking and other financial activities
- Income derived from goods and services purchased from related parties and sold to related parties, with little or no added economic value

Hybrid entities are entities that have a difference in legal definition and are not considered taxpayers in one tax jurisdiction, while the same entities are considered taxpayers in another tax jurisdiction. Payments between such entities may lead to recognition of double deduction or deduction without inclusion, leading to an erosion of the tax base. A hybrid mismatch arises between related parties, between the taxpayer and an affiliate, between the head office and a permanent establishment, between two or more permanent establishments of the same entity or under a structured arrangement.

Regarding exit taxation, the capital gain is taxed at the moment of the transfer of assets from headquarters to a permanent establishment or vice versa, transfer of residence or transfer of activities, whereby the legal taxation of those assets in Croatia ceases. However, the transfer of assets, including cash, between the parent company and the subsidiary is not taxed. Also, exit taxation does not apply if any of the following circumstances exist:

- The assets are temporarily transferred and are designated to be returned to the transferor's member state.
- The transfer is carried out to meet prudential capital requirements for liquidity management purposes.
- The transfer of the asset is related to financing of securities or an asset is given as a guarantee.

F. Tax treaties

Croatia has entered into double tax treaties on avoidance of double taxation with many jurisdictions (see the withholding rate table below).

Croatia has signed a tax treaty with Egypt, but this treaty is not yet effective.

Croatia has adopted the double tax treaties entered into by the former Yugoslavia with Finland, Norway and Sweden.

The withholding tax rates for payments by Croatian companies under Croatia's double tax treaties and under the former Yugoslavia's double tax treaties adopted by Croatia are listed in the table below.

Croatia became a member of the EU on 1 July 2013. As of that date, provisions of the Interest and Royalty Directive and Parent-Subsidiary Directive adopted by Croatian corporate income tax legislation became applicable to payments to recipients within the EU.

Non-treaty jurisdictions	12	15	15

- (a) The 0% rate applies if the recipient (beneficial owner) is an entity that directly or indirectly holds at least 25% of the payer. The 10% rate applies to other dividends.
- (b) The 0% rate applies if the recipient (beneficial owner) is an entity that directly holds at least 10% of the payer. The 15% rate applies to other dividends.
- (c) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer. The 15% rate applies to other dividends.
- (d) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly or indirectly at least 10% of the payer. The 15% rate applies to other dividends.
- (e) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer. The 10% rate applies to other dividends.
- (f) The 5% rate applies if the recipient (beneficial owner) is an entity that directly or indirectly controls at least 10% of the voting power of the payer, or holds directly at least 25% of the payer. The 15% rate applies to dividends paid by investment corporations that are resident in Canada but are owned by non-residents and in all other cases.
- (g) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 20% of the payer. The 15% rate applies to other dividends.
- (h) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer or if the recipient (beneficial owner) is a pension fund or similar institution that provides insurance services or pension benefits. The 10% rate applies to other dividends.
- (i) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 10% of the payer. The 15% rate applies to other dividends.

- (j) The 0% rate applies if the recipient (beneficial owner) is an entity that directly or indirectly holds at least 10% of the payer. The 15% rate applies to other dividends.
- (k) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 10% of the payer. The 15% rate applies to other dividends.
- (l) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer. The 10% rate applies to other dividends.
- (m) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 10% of the payer. The 10% rate applies to other dividends.
- (n) The 5% rate applies if the recipient (beneficial owner) is an entity that directly controls at least 10% of the voting power of the payer. The 10% rate applies to other dividends.
- (o) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer. The 10% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 10% of the payer and if the entity is a resident of Israel. The 15% rate applies to other dividends.
- (p) The 5% rate applies if the recipient (beneficial owner) is an entity that holds at least 25% of the payer and if this ownership is not achieved for the purposes of exploiting these provisions. The 10% rate applies to other dividends.
- (q) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 10% of the payer. The 15% rate applies to other dividends.
- (r) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 10% of the payer. The 10% rate applies to other dividends.
- (s) The 5% rate applies if the dividends are paid by a Croatian resident to a Maltese resident (beneficial owner). If dividends are paid by a Maltese resident to a Croatian resident (beneficial owner), the applicable rate is the rate used to tax the profits out of which the dividends are paid.
- (t) The 0% rate applies if the recipient is an entity that holds directly at least 25% of the payer. The 15% rate applies to other dividends.
- (u) The 5% rate applies if the recipient is an entity that directly holds at least 25% of the voting power of the payer. The 15% rate applies to other dividends.
- (v) This treaty applies to Montenegro and Serbia.
- (w) The 8% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer. The 10% rate applies to other dividends.
- (x) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer and its respective share in capital amounts to at least EUR150,000. The 10% rate applies to other dividends.
- (y) The 5% rate applies if the recipient (beneficial owner) is an entity that holds directly at least 25% of the payer and its respective share in capital amounts to at least USD100,000. The 10% rate applies to other dividends.
- (z) The 5% rate applies if the recipient (beneficial owner) is an entity that controls directly or indirectly at least 25% of the payer. The 15% rate applies if the dividends are paid out of income (including gains) derived directly or indirectly from immovable property by an investment vehicle that distributes most of this income annually and if this income is exempt from tax. The 10% rate applies to other dividends.
- (aa) The 0% rate applies if the recipient (beneficial owner) is an entity that is a resident of the other contracting state and that holds directly or indirectly at least 25% of the voting power of the payer throughout a 365-day period that includes the date on which entitlement to the dividends is determined. Dividends that are tax deductible for the payer in the country of its residence may be taxed in the country of its residence, but if the recipient-resident of the other contracting state is the beneficial owner of the dividend, the withholding tax rate may not be higher than 10%. The 5% rate applies to other dividends.

On 10 October 2010, the country Netherlands Antilles, which consisted of five island territories in the Caribbean Sea (Bonaire, Curaçao, Saba, Sint Eustatius and Sint Maarten), was dissolved. On dissolution of the Netherlands Antilles, the islands of Bonaire, Sint Eustatius and Saba (BES-Islands) became part of the Netherlands as extraordinary overseas municipalities. Curaçao and Sint Maarten have both become autonomous countries within the Kingdom of the Netherlands. The former Netherlands Antilles tax laws remain applicable to Curaçao, with the understanding that references in the laws to "the Netherlands Antilles" should now read "Curaçao." The following chapter provides information on taxation in Curaçao only. Chapters on BES-Islands and Sint Maarten appear in this guide.

A. At a glance

Corporate Income Tax Rate (%)	22
Capital Gains Tax Rate (%)	22
Branch Tax Rate (%)	22
Withholding Tax (%)	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	10*

* Losses incurred by certain companies during their first four years of business may be carried forward indefinitely. Losses incurred during the first six years by an entity that has the objective of engaging in business in the shipping or aviation industry may be carried forward indefinitely.

B. Taxes on corporate income and gains

Corporate income tax. Profit tax is levied on resident and non-resident entities. Resident entities are those incorporated under former Netherlands Antilles or current Curaçao laws, even if their management is located abroad, as well as entities incorporated under foreign law, but effectively managed in Curaçao.

For resident entities, corporate income tax is, in principle, levied on the aggregate amount of net profits earned from a domestic enterprise during the entity's accounting period. Income that is considered to be derived from foreign entrepreneurial activity is excluded from the taxable base. Nonresident entities are subject to tax on specific Curaçao income items, such as profits earned through a permanent establishment and income related to real estate property in Curaçao, including interest derived from a mortgage on such real estate property.

Tax rates. Resident and nonresident entities, including branches of foreign companies, are taxed at a standard rate of 22%. However, different rates may apply with respect to the innovation box, tax holiday, Curaçao Investment Companies (CICs) and the regime for designated activities.

Withholding taxes are not imposed on remittances of profits by branches to their foreign head offices.

Tax incentives. Reduced tax rates and other tax incentives (tax holidays) are available to new business enterprises that engage in certain activities, including tourism, land development, retail and wholesale.

The G20 and the Organisation for Economic Co-operation and Development (OECD) finalized work on the Base Erosion and Profit Shifting (BEPS) Project and published their report in October 2015. Based on a 15-point action plan issued in July 2013, the project has created uncertainty in the global tax landscape as many countries have begun to make BEPS-driven changes to their tax laws and administrative practices. Changes in legislation and policy both locally and internationally due to BEPS have impacted, among others, tax-exempt status and the E-zone facility, which are discussed below.

E-zone companies. Incentives are available under the E-zone legislation. These incentives replaced the incentives that were previously available under the free-zone legislation. The E-zone legislation offers tax incentives to trading companies that are located in a designated economic zone. In principle, the activities of these companies must be focused on the following limited activities:

- Delivery of goods stored, processed, altered, assembled or displayed
- Repair and/or maintenance of goods or machines in the E-zone from foreign companies
- Repair and/or maintenance of goods or machines abroad with goods stored in the E-zone
- Packing and storage services possible under the regime

No turnover tax or import duties are imposed on the above deliveries and services. Profits derived by E-zone companies from sales of goods to companies or individuals located in Curaçao may not exceed 25% of the total annual turnover. Until 2020, the profit tax rate for E-zone companies was 2% (substance requirements applied). However, as of 1 January 2020, the 2% profit tax rate for E-zone companies is abolished. There is a transitional arrangement for existing E-zone companies. For companies subject to the E-zone regime on 31 December 2019, the application of the wording of the National Ordinance on Economic Zones valid as of 31 December 2019 is guaranteed up to and including 31 December 2022. As of 1 January 2023, all E-zone companies will be subject to the regular profit tax rate regime. In principle, tax losses may be carried forward to offset taxable profits in the following 10 years.

Reduced profit tax rate for designated activities. Income from the following activities may be subject to the reduced profit tax rate of 3% (substance requirements apply):

- The building or improvement of aircraft and vessels as well as the maintenance and repair of aircraft and vessels with a length of at least 10 meters and machinery and other materials used onboard these vessels and aircraft
- Support services, such as administrative service, back-office services, and call or data centers, if these activities are rendered to an enterprise with a turnover of at least ANG50 million (USD28 million)

- Warehousing and ancillary logistic services performed for third parties
- Fund management and fund administration services in Curaçao provided to unaffiliated investment funds and the managers of such investment funds

Companies that conduct activities under the new reduced profit tax regime of 3% must have real presence (substance) in Curaçao, which includes the requirement that the core income-generating activities be performed in Curaçao.

Curaçao Investment Companies. As of 1 July 2018, CICs became subject to Curaçao profit tax. They were previously exempt from Curaçao profit tax. Private and public limited liability companies incorporated under former Netherlands Antilles or current Curaçao laws may qualify as CICs. CICs are only allowed to exclusively (100%) or almost exclusively (90% or more) engage in the extending of loans, investing in securities and deposits, and developing and exploiting of intellectual and industrial property rights and similar property or user rights. The exploitation of intellectual property rights can in principle only benefit from the CIC regime to the extent that it concerns “qualifying intellectual property” and to the extent that the intellectual property was developed by the taxpayer in Curaçao or on behalf and for the account of the taxpayer in Curaçao (nexus approach). To qualify as a CIC, a company must submit a written request to the Tax Inspector, and certain conditions must be satisfied. In addition, the company should have real presence (substance) in Curaçao. CICs are not eligible for benefits under the bilateral regulation for the avoidance of double taxation between the Netherlands and Curaçao, the Tax Regulation for the Kingdom of the Netherlands or any other double tax treaty of the former Netherlands Antilles or Curaçao. However, exchange-of-information provisions in the tax regulation, tax treaties and tax information exchange agreements apply to CICs. If a CIC loses its status, it is treated as a regularly taxed company and it receives a tax-free step-up.

Taxed private foundations and trusts. The 2011 tax reform of the Curaçao profit tax legislation introduced the option for private foundations and trusts to be subject to a reduced effective profit tax rate of 10%. In principle, the profit of Curaçao private foundations and trusts is exempt from profit tax, to the extent that the profit realized is not derived from a business enterprise. After the option is exercised, the reduced effective rate of 10% applies for a period of at least three full fiscal years. After this three-year period, the private foundation can request to discontinue being subject to the reduced effective rate of 10%.

Transparent companies. Curaçao public limited liability companies or private limited liability companies or similar companies with a capital divided in shares can opt for fiscal transparency for Curaçao profit tax and individual income tax purposes. To qualify as a transparent company, a written request must be filed and certain conditions must be satisfied. If fiscal transparency is elected, the company is treated for tax purposes as a partnership; that is, only the partners can be taxed in Curaçao on Curaçao sources of income. If a transparent company loses its transparent status, it is treated as a regularly taxed company that is subject to tax. In addition, as of January 2015, rules were introduced

regarding the valuation of assets and liabilities of a company that acquires or loses tax transparent status.

Ruling policy. Curaçao has an extensive advance tax ruling practice. These rulings include the following:

- Cost-plus (informal capital) rulings for intercompany activities
- Minimum gross margin rulings for finance activities
- Royalties and dividends (holding activities) rulings

These rulings are usually valid for a three-year period, with the option for extension every three years.

Other incentives. Curaçao also offers other incentives for specific activities, such as the international use of aircraft and ships and the insurance of risks outside Curaçao.

Capital gains. Under the current profit tax rules, in general, no distinction is made between the taxation of capital gains and the taxation of other income. All income is taxed at the applicable corporate tax rate (22%). Taxation of capital gains on qualifying share interests (participation exemption) is discussed in Section C.

Administration. The standard tax year is the calendar year. However, on request and under certain conditions, a company may use a different financial accounting year as its tax year.

Companies must file a provisional tax return within three months after the end of the financial year. In principle, this return must show a taxable profit that is at least equal to the taxable profit shown on the most recently filed final tax return. Any tax due must be paid at the time of filing of the provisional tax return. An extension of the filing and payment deadline for the provisional return is not possible. On request of the company, the Tax Inspector may consent to the reporting of a lower taxable profit than the taxable profit shown on the most recently filed final tax return.

The final tax return must be filed within six months after the end of the financial year. Any difference between the tax due based on the provisional return and the tax due based on the final return must be settled at the time of the filing of the final return. An extension for filing the final tax return on a later date can be obtained.

To ensure compliance with the rules described above, penalties may be imposed. The tax authorities may impose arbitrary assessments if the taxpayer fails to file a tax return. Additional assessments, including a penalty, may be imposed if insufficient tax is levied. A penalty of up to 100% of the additional tax due may be imposed. Depending on the degree of fault, this penalty may vary from 25% to 100%.

Taxpayers that do not meet the requirement of regular accounting or regular annual closing are considered to have derived all their income from a domestic enterprise and as a result are subject to profit tax at a rate of 22% on all of their income.

Dividends. Curaçao does not levy dividend withholding tax on dividend distributions.

Withholding taxes. Curaçao does not levy withholding taxes on dividends, interest or royalties.

C. Determination of taxable income

General. Taxable profit must be calculated in accordance with “sound business practices.”

Curaçao has a territorial profit tax regime. Income from foreign enterprises is excluded from the taxable base. To determine whether the income is generated through domestic or foreign enterprises, the income (except for financial or insurance companies) is allocated based on the relation between the local causal costs vs. the total causal costs of the company but excluding the costs of material.

Passive income, which is income not generated through an enterprise, is considered income from a domestic enterprise. This may include interest, rental income and portfolio dividend income. Royalty income is always considered passive income (however, under stringent conditions, such income may be subject to a profit tax rate of 0% in Curaçao). Foreign financing and insurance income are considered foreign income (excluded from the taxable base) to the extent that the activities of the company constitute an active business activity.

On 4 March 2021, a national decree was published. The content of the decree has retroactive effect to 1 January 2020 and contains further guidelines for determining the taxable base of a taxpayer under the territorial profit tax rules. The decree is mostly a codification of the explanatory notes to the new legislation and contains minor changes to it.

Taxpayers deriving income that is not generated from a domestic enterprise must have real presence in Curaçao. Their presence should also arise to the level of a permanent establishment if the activities had been conducted by a foreign enterprise. Failure to meet these substance requirements can result in penalties ranging from ANG50,000 to ANG500,000.

All expenses incurred with respect to conducting a domestic enterprise are, in principle, deductible. However, if expenses exceed normal arm’s-length charges and are incurred directly or indirectly for the benefit of shareholders or related companies, the excess is considered to be a nondeductible profit distribution (dividend). In addition, certain expenses, such as fines, penalties and expenses incurred with respect to crimes, are not deductible. The costs of representation, including receptions, festive meetings and entertainment, excursions, and study trips (including the related costs of travel and accommodation), are no longer deductible. Only 80% of expenses incurred on food, beverages and goodies (for example, tobacco) is deductible. Costs of donations, promotional gifts, courses, conferences, seminars and symposiums are 100% deductible. However, travel expenses related to these items are 80% deductible.

In principle, interest expenses of domestic enterprises are deductible for tax purposes if the interest rate is determined on an arm’s-length basis. However, certain restrictions apply to the deduction

of interest on loans connected to certain tax-driven transactions and intragroup reorganizations. Under thin-capitalization rules, the deductibility of interest accrued or paid directly or indirectly to an affiliated TEC may be restricted. As of 1 January 2015, the thin-capitalization rules were extended to loans received from nonresident TECs belonging to the same “concern” (“concern” is specifically defined in the tax law).

Participation exemption. In principle, a 100% participation exemption applies for all qualifying share interests held by Curaçao corporate taxpayers.

In general, a shareholding qualifies for the participation exemption if it represents at least 5% of the share capital or voting power in a company or if the amount paid for the shareholding amounts to at least USD500,000. In addition, any member of a cooperative association can apply for the participation exemption. Effective from 1 January 2015, the participation exemption was extended to participations in mutual funds that are considered to be special-purpose capital and to participations in nonresident mutual funds that are subject to profit tax in their country of residency.

For dividend income, additional requirements are imposed for a participation to be considered a qualifying participation. To apply the 100% exemption on dividends, either of the following conditions must be met:

- The qualifying participation is subject to a (nominal) profit tax rate of 10% (subject-to-tax clause).
- Dividends, interest or royalties received from sources other than the business of the participation do not account for 50% or more of the gross income of the participation (non-portfolio-investment clause).

These conditions may be met on a consolidated basis. If neither of the above conditions is met, a lower limited participation exemption applies to dividends. The limited participation exemption was amended as of 1 January 2015. Instead of calculating an exemption on the reported income, a formula is used to calculate the income to be reported. The income to be reported is calculated using the following formula:

$$\text{Income} \times \frac{10}{T}$$

For purposes of the above formula, “T” represents the tax rate applicable for the year in which the income is reported. Consequently, an effective tax rate of 10% applies to non-qualifying participations.

The subject-to-tax clause and the non-portfolio-investment clause do not apply to the 100% participation exemption on capital gains and income received from participations that exclusively or almost exclusively hold immovable property.

Expenses that are connected with the participation, including financing expenses, are deductible if the expenses are directly or indirectly related to income that is taxable in Curaçao.

Deemed dividends by bank-held CICs and passive foreign investment companies. As of 1 January 2020, passive investment

companies held by banks or other regulated credit institutions are considered to have distributed their annual profits to the extent of the bank's interest in the passive investment company. This deemed distribution is 50% for domestic passive investment companies and 100% for foreign passive investment companies.

Tax depreciation. In general, assets are depreciated using the straight-line method, with the residual value taken into consideration. The following are some of the applicable rates.

Asset	Rate (%)	Residual value (%)
Buildings	2 to 2.5	50
Office equipment	10 to 50	Nil
Motor vehicles	10 to 33	15
Plant and machinery	10	10

The rates listed above provide a general overview of the depreciation rates. The actual depreciation rate depends on the type of asset used by the company. The depreciation of buildings is limited. Buildings can be depreciated to 50% of the value of the building as stipulated in the assessment for the National Ordinance on Immovable Property Tax (*Landsverordening onroerende zaak-belasting*). For pre-owned buildings that have been depreciated by 1 January 2016 for less than three years, the limitation on the depreciation will become effective in the fourth year. For buildings that have already been depreciated to an amount that exceeds the aforementioned limit, no clawback occurs. In such case, the depreciated value is respected.

An investment allowance deduction of 10% is granted for acquisitions of fixed assets exceeding approximately USD2,800. The allowance is deducted from taxable income in the year of the investment. The investment allowance deduction is recaptured in the year of sale if the asset is sold within 6 years (15 years for buildings) after the date of the investment. For investments in the maintenance and restorations of monuments listed in the Curaçao Monuments Ordinance, the allowance is increased to a one-time investment deduction of 25%.

Groups of companies. On written request, Curaçao resident companies may form a fiscal unity (tax-consolidated group) for profit tax purposes. To qualify for a fiscal unity, the parent company must own at least 99% of the shares in the subsidiary. A fiscal unity may include, among others, a company incorporated under Dutch law that has its place of effective management in Curaçao. The whole group is taxed for profit tax purposes as if it were one company and, as a result, the subsidiaries in the fiscal unity are no longer individually subject to profit tax. The Tax Inspector must decide on the request within two months after the receipt of the request.

Advantages for profit tax purposes of fiscal unity treatment include the following:

- Losses of one subsidiary may be offset against profits of other members of the fiscal unity.
- Reorganizations, including movements of assets with hidden reserves from one company to another, have no direct tax consequences for profit tax purposes.
- Intercompany profits may be fully deferred.

The fiscal unity does not apply for turnover tax purposes.

Relief for losses. Losses in a financial year may be carried forward for 10 years. No carryback is available.

Losses incurred by certain companies during their first four years of business may be carried forward indefinitely. Losses incurred during the first six years by an entity that has the objective of engaging in business in the shipping or aviation industry may be carried forward indefinitely.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Turnover tax in Curaçao; a general consumption tax on goods delivered, imports, and services rendered by entrepreneurs (legal entities or individuals) in Curaçao and services rendered in Curaçao by foreign entrepreneurs; primary life goods and certain imports are exempt	
Standard rate	6
Insurance	7
Hotel accommodation	7
Specific goods and services listed as luxurious or unhealthy	9
Real estate transfer tax	4
Import duties	0 to 62

E. Miscellaneous matters

Foreign-exchange controls. The currency in Curaçao is the Antillean guilder (ANG).

For foreign investors that obtain a foreign-exchange license from the Central Bank of Curaçao and Sint Maarten, no restrictions are imposed on the movement of funds into and out of Curaçao and Sint Maarten. In general, the Central Bank automatically grants foreign-exchange licenses for remittances abroad. Residents are subject to several foreign-exchange regulations imposed by the Central Bank. However, residents may be granted nonresident status for foreign-exchange control purposes. Some reporting requirements exist for statistical purposes.

Transfer pricing. In general, intercompany charges should be determined on an arm's-length basis. Entities must keep transfer-pricing documentation on file that shows how the intercompany conditions were agreed upon and whether these conditions are at arm's length.

Companies with a consolidated group turnover exceeding ANG1.5 billion (approximately USD842,000) are subject to Country-by-Country Reporting legislation and are required to have Master File and Local File documentation in their administration.

F. Foreign tax relief and tax treaties

The relief for foreign-source tax is limited to the part of the foreign tax that is levied at source with respect to income derived from a domestic enterprise operated in Curaçao. Relief for

foreign-source tax is granted by means of a tax credit that is limited to the lower of the following amounts:

- The amount of tax that is levied at source during the respective financial year, increased by such amounts levied in the preceding 10 years if these amounts have not been used to reduce the Curaçao profit tax
- The profit tax liability based on the Profit Tax Ordinance 1940 if and to the extent that the income derived from the domestic enterprise in Curaçao and taxed at source, reduced by the deductible expenses attributable to this income, is the only income of the taxpayer

Provisions for double tax relief are contained in the tax treaty with Norway and in the Tax Regulation for the Kingdom of the Netherlands (consisting of Aruba, Curaçao, the Netherlands and Sint Maarten). The Tax Regulation for the Kingdom of the Netherlands applied between Curaçao and the Netherlands up to 31 December 2015. From 1 January 2016, the Tax Regulation for the Kingdom of the Netherlands applies only between Curaçao and Aruba and Sint Maarten until these jurisdictions negotiate and sign another agreement with Curaçao.

In June 2014, Curaçao and the Netherlands entered into a new bilateral regulation for the avoidance of double taxation. This tax arrangement, which essentially functions as a tax treaty, was approved by the Dutch parliament and was formally published on 9 October 2015. It took effect as of January 2016. The tax arrangement includes, among other measures, a 0% Dutch dividend withholding tax rate that applies under certain conditions. Curaçao does not impose withholding tax on payments from Curaçao to residents of other countries.

The former Netherlands Antilles has entered into tax information exchange agreements with Antigua and Barbuda, Australia, Bermuda, British Virgin Islands, Canada, Cayman Islands, Denmark, Faroe Islands, Finland, France, Germany, Greenland, Iceland, Italy, Mexico, New Zealand, St. Lucia, St. Vincent and the Grenadines, Spain, Sweden, the United Kingdom and the United States. As a result of the constitutional reform of the Kingdom of the Netherlands, the tax treaties entered into by the Netherlands Antilles became automatically applicable to the surviving countries, which are the legal successors of the Netherlands Antilles.

Curaçao has negotiated tax treaties with Jamaica and Malta, which have not yet been ratified by the Curaçao government. Curaçao is also negotiating several double tax treaties and additional tax information exchange agreements.

An intergovernmental agreement between Curaçao and the United States implementing the US Foreign Account Tax Compliance Act (FATCA) entered into force as of 3 August 2016. Financial institutions in Curaçao must file the required FATCA reporting through a portal set up by the Curaçao government.

Under the latest published OECD list, Curaçao qualifies as an approved-listed jurisdiction.

Curaçao signed the multilateral agreement on automatic exchange of information and will begin the exchange of information based on the Common Reporting Standard in 2017.

The Kingdom of the Netherlands has entered into many bilateral investment treaties that also apply to Curaçao.

Curaçao also signed the OECD Convention on Mutual Administrative Assistance in Tax Matters.

Carryforward	5

- (a) A Special Contribution to the Defence Fund (Defence Tax) at a rate of 17% is withheld from dividends paid (or deemed to be paid) to resident and domiciled individuals.
- (b) Cyprus introduced withholding tax on dividends, interest and royalties made to companies that are resident in jurisdictions included on the European Union (EU) list of non-cooperative jurisdictions on tax matters (Annex I) or are registered in a jurisdiction listed by the EU as non-cooperative for tax matters and not considered to be tax resident in another jurisdiction that is not included on the EU list. Such withholding taxes are applicable as of 31 December 2022. Also, see *Dividends* in Section B.
- (c) A Special Contribution to the Defence Fund (Defence Tax) at a rate of 30% is withheld from interest paid to resident companies and resident and domiciled individuals, if the interest is either not considered to arise in the ordinary course of the business of the recipient or is not closely connected to the ordinary course of business of the recipient.
- (d) Cyprus levies withholding tax on payments made to nonresident persons who do not carry on any business in Cyprus at a rate of 10% on technical assistance payments and on the gross amount of royalty payments that are connected with the economic utilization of intellectual property rights in Cyprus. A 5% rate applies to royalties paid with respect to films and television. A 5% withholding tax is also imposed on payments made to nonresident persons in consideration for services performed in Cyprus with respect to activities connected with the exploration or exploitation of the seabed or subsoil or their natural resources or with respect to activities relating to the installation and exploitation of pipelines and other installations on the subsoil, seabed or sea surface, if such payments are not connected with a permanent establishment in Cyprus. Withholding tax may be reduced or eliminated on the basis of the European Union (EU) Interest and Royalty Directive and/or on the basis of a double tax treaty.

B. Taxes on corporate income and gains

Corporate income tax. Companies resident in Cyprus are subject to income tax on their worldwide income. A company is resident in Cyprus if its control and management are exercised in Cyprus. Nonresident companies are taxed only on income derived from a permanent establishment in Cyprus and on rental income from property located in Cyprus.

As of 31 December 2022, a company incorporated or registered in Cyprus whose management and control is exercised outside Cyprus will be considered resident for tax purposes of Cyprus unless such company is a tax resident in another country.

Rate of corporate tax. The standard rate of corporate income tax is 12.5%.

Capital gains. A capital gains tax of 20% is levied on gains derived from the disposal of the following:

- Immovable property located in Cyprus
- Shares in companies whose assets include, among others, immovable property located in Cyprus
- Shares in companies that participate (either directly or indirectly) in a company or companies that own immovable property located in Cyprus and at least 50% of the market value of such shares is derived from the relevant property
- A sale agreement of immovable property located in Cyprus.

The disposal of shares of companies listed on a recognized stock exchange is exempt from capital gains tax. In addition, no capital gains tax is imposed if the transfer is made in the course of a qualifying company reorganization.

The gain subject to tax in Cyprus equals the disposal proceeds less the greater of the cost or market value on 1 January 1980, adjusted for inflation. Inflation is calculated using the official Retail Price Index. In the case of disposal of shares of companies that directly or indirectly hold property in Cyprus, the disposal proceeds subject to capital gains are restricted to the market value of the immovable property held directly or indirectly by the company whose shares are sold.

Gains from the disposal of immovable property that consists of land or land and buildings is exempt from capital gains tax if the property is acquired between 16 July 2015 and 31 December 2016 from an independent third party and not through an exchange of property or through a donation or gift.

Administration. The tax year in Cyprus is the same as the calendar year. Income tax is payable by 31 August following the end of the relevant tax year. However, an estimate of tax due is made by 31 July during the tax year and provisional tax is payable in two equal installments by 31 July and 31 December. The two provisional payments can be made by 31 August and 31 January without the imposition of interest or penalties.

Overdue tax is subject to interest (currently at the rate of 1.75% per year) on the basis of complete months. In addition, a flat 5% penalty is imposed on the tax due in the event of a failure to pay the tax by the due date. An additional penalty of 5% is imposed if the outstanding tax is not paid within two months after the due date.

Dividends. Dividends paid to nonresident persons are generally not subject to withholding tax. However, Cyprus introduced withholding tax on dividends paid to companies that are resident or are registered in a jurisdiction listed by the EU as non-cooperative for tax matters (Annex I of the EU list). Such withholding tax is applicable as of 31 December 2022. More specifically, dividends paid by a Cypriot tax resident company to

a company that is a resident in a jurisdiction that is included on the EU list, or to a company incorporated or registered in a jurisdiction included on the EU List and not considered to be tax resident in another jurisdiction that is not included on the EU List, will be subject to 17% withholding tax on the amount of the dividend paid.

The withholding tax applies if the company receiving the dividend is included on the EU list and if such company participates directly in the Cypriot company paying the dividend by more than 50% in voting rights, owns more than 50% of the share capital or is entitled to 50% or more of the profits of the Cypriot company. In addition, withholding tax shall apply if two or more associated enterprises that are included on the EU list participate directly in the Cypriot company paying the dividend and collectively have more than 50% in voting rights, own more than 50% of the share capital or are entitled to 50% or more of the profits of the Cypriot company. However, no withholding tax will be imposed on dividends paid with respect to securities listed on a recognized stock exchange.

A 17% Special Contribution to the Defence Fund (Defence Tax) is withheld from dividends paid to resident and domiciled individuals. This is a final tax. Also, see Section D.

A Cypriot tax resident company is deemed to have distributed as dividends 70% of its after-tax accounting profits (subject to certain adjustments) two years after the end of the relevant tax year (for example, the deemed distribution date for the 2020 tax year is 31 December 2022). The amount of the deemed dividend is reduced by any actual dividend distributions made up to the deemed distribution date relating to the year whose profits are subject to deemed distribution. The Special Contribution to the Defence Fund (Defence Tax) is withheld only on the proportion of profits that is attributable to shareholders considered to be residents of Cyprus (individuals and bodies of persons).

The deemed distribution rules do not apply to profits that are directly or indirectly attributable to shareholders that are non-residents of Cyprus and/or to individual shareholders that are Cypriot tax residents but do not have a domicile in Cyprus.

Interest. Interest paid to nonresident persons is generally not subject to withholding tax. However, as of 31 December 2022, withholding tax at a rate of 30% will be imposed on interest received by or credited to a company that is resident in a jurisdiction included on the EU list, or to a company that is incorporated or registered in a jurisdiction included on the EU list and is not resident in another jurisdiction that is not included on the EU list, if the interest is derived from sources within Cyprus. However, no withholding tax shall apply on any interest payments made by an individual. In addition, no withholding tax will be imposed on interest received by or credited to a non-Cypriot tax resident company with respect to securities listed on a recognized stock exchange.

Foreign tax relief. Foreign tax on profits and gains of Cypriot resident persons is credited against the tax payable in Cyprus on the same profits or gains (pooling of credits is generally not allowed). Such foreign tax relief cannot exceed the Cyprus tax

payable on the same profits or gains. Any unused foreign tax relief cannot be carried forward.

C. Determination of trading income

General. The determination of taxable income is based on accounts prepared in accordance with generally accepted accounting principles, subject to certain adjustments and provisions of the tax law. Expenses must be incurred wholly and exclusively for the generation of income and must be supported by relevant evidence.

Notional interest deduction on equity. As of 1 January 2015, Cyprus tax resident companies (as well as foreign companies having a permanent establishment in Cyprus) that carry on a business are entitled to claim a notional interest deduction (NID) on their equity capital. The NID is deducted from the taxable income of the entity for the relevant tax year (subject to any restrictions) for the period within the tax year during which the equity belongs to the entity and is used by that entity for the carrying on of its activities. The NID equals the “reference interest rate” multiplied by the “new capital” (the NID cannot be claimed on “old capital”).

The NID granted on new capital cannot exceed 80% of the taxable profit before allowing for NID. In the event of losses, the NID will not be available. Effectively, this means that NID cannot create or increase tax losses.

Taxpayers can elect not to claim NID or claim part of it for each tax year.

Inventories. Inventory is generally valued at the lower of cost or net realizable value. The cost must be determined under the first-in, first-out method and/or the weighted average cost formula. The last-in, first-out method is not acceptable.

Depreciation and amortization allowances

Plant and machinery. A straight-line allowance of 10% a year is given on capital expenditures for plant and machinery. For machinery and plant acquired during the period of 2012 through 2018, a deduction for wear and tear at 20% per year is allowed.

Industrial buildings. A straight-line allowance of 4% a year is available for industrial buildings. For industrial and hotel buildings acquired during the period of 2012 through 2018, a deduction for wear and tear at 7% is allowed.

Commercial buildings. A straight-line allowance of 3% a year is allowed for commercial buildings.

Office equipment. A straight-line allowance of 20% a year is allowed for computers. Other office equipment is depreciated under the straight-line method at an annual rate of 10%. For other office equipment acquired during the period of 2012 through 2018, a deduction for wear and tear at a rate of 20% per year is allowed.

Motor vehicles. In general, a straight-line allowance of 20% a year is allowed for motor vehicles (except for private saloon cars for which no tax depreciation is available).

Sales of depreciable assets. On the disposal of an asset, a so-called balancing statement must be prepared. If the sale proceeds are less than the remaining depreciable base, a further allowance (balancing deduction) equal to the amount of the difference is granted. If the sale proceeds exceed the depreciable base, the excess (up to the amount of allowances claimed) is included in taxable income (balancing addition). As of 1 January 2020, the obligation to prepare a balancing statement does not apply to intangible assets.

Taxation of intangible assets

New Intellectual Property Box regime. The provisions of the Intellectual Property (IP) Box regime have been aligned with the recommendations of the Organisation for Economic Co-operation and Development (OECD) Action 5 of the Base Erosion and Profit Shifting (BEPS) Plan on Countering Harmful Tax Practices More Effectively, Taking into Account Transparency and Substance.

The new IP Box regime is based on the OECD-recommended nexus approach. This approach limits application of the IP Box regime if research and development (R&D) is being outsourced to related parties. The approach links the benefits of the regime with the R&D expenses incurred by the taxpayer. Under the new IP Box regime, qualifying taxpayers can claim a tax deduction equal to 80% of qualifying profits resulting from the business use of the qualifying assets. A taxpayer may elect not to claim the deduction or only claim a part of it. The following is the calculation for qualifying profits:

$$\frac{\text{Qualifying expenditure} + \text{Uplift expenditure}}{\text{Overall expenditure}} \times \text{Overall IP income}$$

The cost of the acquisition or development of intangible assets of a capital nature is amortized in a reasonable manner over its useful economic life, which is determined based on accounting standards, with a maximum period of 20 years. Taxpayers may claim all or part of the amortization for tax purposes. Any unused amortization can be carried forward and used in future tax years.

Old IP Box regime. The grandfathering provisions of the old IP Box regime expired on 30 June 2021.

Relief for losses. Effective from 1 January 2012, losses can be carried forward to the following five years. Loss carrybacks are not allowed.

Group loss relief. Group loss relief for losses incurred in the income year is allowed between resident group companies that meet certain conditions.

Effective from 1 January 2015, the group loss relief provisions were extended to cases in which the surrendering company is registered in and is a tax resident of another EU member state, provided that it has exhausted all possibilities available for using the losses in its respective country of tax residency or in the country where its intermediary holding company has its seat. In such circumstances, the tax losses are calculated based on the provisions of the Cypriot tax laws.

Cyprus does not have any tax consolidation rules, and companies are required to submit a stand-alone income tax return.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT), on any supply of goods or services, other than an exempt supply, made in Cyprus by a taxable person (taxable if annual supplies exceed EUR15,600) in the course of business	0/5/9/19
Payroll taxes	
Social insurance contribution, levied on each employee's gross salary, up to EUR4,840 a month; payable by both employer and employee	8.3
Employer's contribution to the National Health System; contributions are capped to yearly emoluments of EUR180,000	2.9
Employee's contribution to the National Health System; contributions are capped to yearly emoluments of EUR180,000	2.65
Special Cohesion Fund, levied on gross salary; payable by employer	2
Human Resource Development Authority and Redundancy Fund, levied on gross salary, up to EUR4,840 a month; paid by employer	1.7
Leave Fund, levied on gross salary, up to EUR4,840 a month; paid by employer in lieu of holiday pay for employees working 5 days per week and who are entitled to 20 days annual leave (employers may obtain exemption from contributions to this fund)	8
Special Contribution to the Defence Fund (Defence Tax)	
On rents received (after allowing for a 25% deduction; the deduction is only available to individuals)	3
On interest received (except for interest earned in the ordinary course of business)	30
On dividends received (or deemed to be received) by resident and domiciled individuals	17

E. Miscellaneous matters

Foreign-exchange controls. Cyprus does not impose foreign-exchange controls.

Transfer pricing. The arm's-length principle is codified in the Cyprus tax law with language similar to that of Article 9 of the OECD Model Tax Convention. Consequently, all transactions entered into with related and/or connected parties must be concluded on an arm's-length basis; otherwise, the tax authorities have the statutory right to make adjustments to taxable income. Therefore, the arm's-length price must be applied on transactions between related parties in their commercial or financial relations. However, Cyprus does not have specific rules regarding transfer pricing or transfer-pricing documentation requirements (apart from loans financed out of debt as detailed below).

On 30 June 2017, the Cyprus Tax Department issued a circular establishing transfer-pricing documentation requirements and rules for Cypriot enterprises engaged in intragroup financing transactions with affiliated and connected parties (granting of loans to related parties that are financed by debt). The circular provides general guidance on the application of the arm's-length principle according to the OECD Transfer Pricing Guidelines. A transfer-pricing comparability analysis should be prepared by relevant taxpayers to determine their functional profile and to document whether the agreed remuneration (the net interest margin) complies with the arm's-length principle. In addition, certain simplification measures apply to companies whose functional profile is similar to regulated financing and treasury enterprises and to entities engaged in pure intermediary activities.

Broader transfer-pricing legislation is expected to be introduced during 2022 to align the local practice with the OECD Transfer Pricing Guidelines. The broader legislation will capture the entire range of intercompany transactions and is expected to introduce a requirement to prepare both a Local and Master File (based on the recommendation of BEPS Action 13). In addition, corporate taxpayers will be expected to submit a Summary Information Table within nine months from the corresponding year-end, providing core information regarding the type and volume of related-party transactions as well as information with respect to the counterparties.

EU Anti-Tax Avoidance Directive. The Cypriot tax laws have been amended to incorporate the relevant provisions of the EU Anti-Tax Avoidance Directive (ATAD). The amendments made in 2019 and 2020 are summarized below. The Cypriot tax authorities have not yet issued any guidance or interpretative circular with respect to any of the ATAD-related provisions; however, it is expected that guidance will be issued during 2022 with respect to the interest limitation and CFC rules.

General anti-abuse rule. The amendments include a broadly worded general anti-abuse rule in line with the wording used in the ATAD.

Interest limitation rules. The interest limitation rules restrict the tax deductibility of exceeding borrowing costs (as defined) to 30% of the tax-adjusted earnings before interest, taxes, depreciation and amortization (EBITDA). The most important aspects of the interest limitation rules are the following:

- The interest limitation rules apply at a Cypriot group level (75% criterion).
- A de minimis exception applies for exceeding borrowing costs up to EUR3 million.
- An exemption applies to stand-alone entities and to financial institutions.
- Grandfathering rules apply to loans concluded before 17 June 2016.
- Long-term public infrastructure loans are excluded.
- Equity-escape clause measures are provided.
- Carryforward measures for unused interest capacity and for exceeding borrowing costs whose deductibility is restricted are provided.

Controlled foreign corporations. Controlled foreign corporation (CFC) rules are applicable in Cyprus as of 1 January 2019. If certain conditions are met, a Cypriot controlling taxpayer must include in its tax base the non-distributed income of a CFC company to the extent such profits arise from non-genuine arrangements that have been put in place for the essential purpose of obtaining a tax advantage under the Cypriot Income Tax Law. An arrangement or series thereof is regarded as non-genuine to the extent that the significant people functions that have contributed to the generation of the income of the CFC are substantially performed by the Cypriot controlling company and/or other Cypriot persons associated with the Cypriot controlling company.

Exit taxation rules. As of 1 January 2020, a company that is tax resident in Cyprus or a non-Cypriot tax resident company that has a permanent establishment in Cyprus is subject to tax at an amount equal to the market value of the transferred assets at the time of exit, less their value for tax purposes, in any of the following cases:

- A Cypriot tax resident company transfers asset(s) from its head office in Cyprus to its permanent establishment in another EU member state or in a third country in so far as Cyprus no longer has the right to tax the transferred assets due to the transfer.
- A non-Cypriot tax resident company with a permanent establishment in Cyprus transfers assets from its permanent establishment in Cyprus to its head office or another permanent establishment in another EU member state or in a third country in so far as Cyprus no longer has the right to tax the transferred assets due to the transfer.
- A Cypriot tax resident company transfers its tax residence from Cyprus to another EU member state or to a third country, except for those assets that remain effectively connected with a permanent establishment in Cyprus and for which Cyprus maintains its right to tax.
- A non-Cypriot tax resident company with a permanent establishment in Cyprus transfers the business carried on by its permanent establishment from Cyprus to another EU member state or to a third country in so far as Cyprus no longer has the right to tax the transferred assets due to the transfer.

Anti-hybrid rules. Rules against hybrid mismatches are applicable as of 1 January 2020 (with the exception of rules against reverse hybrids, which are effective as of 1 January 2022). The aim of the rules is to ensure that deductions or credits are only taken in one jurisdiction and that there are no situations involving deductions of payments in one country without taxation of the corresponding income in the other country concerned. The rules are typically limited to mismatches as a result of hybridity and do not affect the allocation of taxing rights under a tax treaty. The following are the rules:

- Hybrid financial instrument mismatches: Situations in which the qualification of a financial instrument or the payment made under it differs between two jurisdictions (for example, the instrument is considered to be debt in the payer jurisdiction and as equity in the payee jurisdiction).
- Hybrid entity mismatches: Situations in which an entity is qualified as opaque under the laws of one jurisdiction (that is,

a taxable entity under the laws of that jurisdiction) and qualified as transparent by another jurisdiction (for example, the partners of the entity are taxable on their profit shares under the laws of that other jurisdiction).

- **Hybrid transfers:** Situations in which the laws of two jurisdictions differ on whether the transferor or the transferee of a financial instrument has the ownership of the payments on the underlying asset.
- **Hybrid permanent establishment mismatches:** Situations in which the business activities in a jurisdiction are treated as being carried on through a permanent establishment by one jurisdiction while those activities are not treated as being carried on through a permanent establishment in the other jurisdiction.
- **Imported mismatches:** Situations in which the effect of a hybrid mismatch between parties in third countries is shifted into the jurisdiction of an EU member state through the use of a non-hybrid instrument thereby undermining the effectiveness of the rules that neutralize hybrid mismatches. This includes a deductible payment in an EU member state under a non-hybrid instrument that is used to fund expenditure involving a hybrid mismatch.
- **Tax residency mismatches:** Situations in which a taxpayer is resident for tax purposes in two or more jurisdictions.

Mergers and demergers. Exemptions are available for profits or gains arising as part of a qualifying company reorganization. However, the law includes general anti-abuse provisions that aim to ensure that the exemptions are available to bona fide company reorganizations. The exemptions also extend to stamp duty and land transfer fees.

F. Treaty withholding tax rates

As noted in Section A, Cyprus does not impose outbound withholding taxes on dividend and interest payments made to non-Cypriot tax resident persons with the exception of certain payments made to companies that are registered in a jurisdiction included on the EU list of non-cooperative jurisdictions on tax matters (Annex I) and not considered to be tax resident in another jurisdiction that is not included on the EU list. Also, see *Dividends* and *Interest* in Section B.

- (a) The rate is 10% for dividends paid to a company holding directly at least 25% of the capital of the payer. The rate is 5% if the recipient of the dividends has invested at least EUR200,000 in the share capital of the payer.
- (b) The rate is 0% for interest paid to the government of the other contracting state and other state-owned and governmental authorities. Specific treaty analysis should be made in each case.
- (c) The rate is 0% for royalties paid for literary, artistic or scientific works, as well as for film and television royalties.
- (d) The lower rate applies to dividends paid to a company holding directly or indirectly at least 25% of the capital of the payer (indirectly applies only to the Belgium treaty).
- (e) The rate is 0% for interest paid to the government of the other contracting state and for interest paid on bank loans or with respect to credit sales of industrial, commercial or scientific equipment or merchandise.
- (f) The rate is 10% for dividends paid to a company holding directly at least 10% of the share capital of the payer.
- (g) In general, the rate is 5% for film and cinematographic rights.
- (h) The rate is 5% for dividends paid to a company holding directly at least 25% of the share capital of the payer.
- (i) The rate is 0% for interest paid to a government, bank or financial institution.
- (j) The 0% rate applies if the beneficial owner is a company (other than a partnership) holding at least 10% of the capital of the company paying the dividends. The 5% rate applies in all other cases.
- (k) The rate is reduced to 5% if the beneficial owner of the dividends is any of the following:
- An insurance company
 - A pension fund
 - A company whose shares are listed on a recognized stock exchange if it holds at least 15% of the payer's share capital for at least 365 days and if it has at least 85% of its voting shares publicly traded
 - One of the contracting states
 - One of the contracting states' central banks
- (l) The 5% rate applies if the beneficial owner is a company (other than a partnership) holding at least 10% of the voting power of the capital of the company paying the dividends. The 15% rate applies in all other cases.
- (m) The 5% rate applies if the recipient of the dividends is a direct beneficial owner of at least 10% of the capital of the company paying the dividends. The 15% rate applies to other dividends.
- (n) The rate is 10% for royalties paid for literary, artistic or scientific works, or for films or television. The rate is 15% for payments for the use of industrial, commercial or scientific equipment.
- (o) The 0% rate applies to interest paid to the government. The rate is 7% for interest paid to banks and financial institutions.
- (p) The 0% rate applies to interest paid to the government. The 10% rate applies to interest paid to banks. The 15% rate applies in other cases.
- (q) The rate is 5% for royalties paid for literary, artistic or scientific works, or for film or television. The rate is 10% for payments for the use of industrial, commercial or scientific equipment.
- (r) The rate is 0% for royalties paid for literary, dramatic, musical or artistic works.
- (s) The 15% rate is the general withholding tax rate. However, the 0% rate applies, among other conditions, if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends and if such holding has been maintained for an uninterrupted period of at least 12 months.
- (t) A 5% rate applies to royalties paid with respect to films and television. A 10% rate applies to other royalties if the asset for which the royalties are paid is used in Cyprus.
- (u) A 5% rate applies if the beneficial owner of the dividends has invested in the capital of the payer company less than the equivalent of EUR150,000 at the time of the investment.
- (v) The 0% rate applies if the interest is paid to the government, a local authority or a central bank.

- (w) The 5% rate applies if the dividend recipient holds at least 20% of the capital of the dividend paying company or has invested at least EUR100,000 in such company. The 10% rate applies in all other cases.
- (x) The 5% rate applies to royalties paid with respect to copyrights of scientific works, patents, trademarks, secret formulas or processes, or information concerning industrial or commercial experience. The 10% rate applies to other royalties, particularly for literary works, music works, films and software.
- (y) The 0% rate applies if the beneficial owner is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends and if such holding is maintained for an uninterrupted period of at least one year. The 5% rate applies in all other cases.
- (z) The treaty between Cyprus and the USSR is still honored by Cyprus.
- (aa) The treaty between Cyprus and the Socialist Republic of Yugoslavia still applies.
- (bb) The treaty between Cyprus and Czechoslovakia still applies.
- (cc) The 0% rate applies if the beneficial owner of the dividends is a company that holds at least 10% of the capital of the company paying the dividends for a continuous period of at least 24 months.
- (dd) The withholding tax rate on dividends is 5% if the beneficial owner of the dividend is a company (other than a partnership) that holds at least 10% of the dividend paying company. In all other cases, the rate is 10%.
- (ee) The 0% rate applies if the recipient of the income is a qualifying pension fund, the government of the other state or a company that holds directly at least 10% of the capital of the company paying the dividends for an uninterrupted period of at least one year. In all other cases, the rate is 15%.
- (ff) The 5% rate applies if the beneficial owner is a company (other than a partnership) that holds directly at least 25% of the capital of the company paying the dividends. The 10% applies in all other cases.
- (gg) The 0% rate applies if the interest is paid to ministries, other governmental institutions, municipalities, the central bank and other banks wholly owned by the other contracting state.
- (hh) The 0% rate applies to the following:
- Interest paid to the other contracting state, a political subdivision or a local authority of that state, the national bank of that state, or any institution the capital of which is wholly owned by that state or the political subdivisions or local authorities of that state
 - Interest on deposits (not represented by bearer instruments) with a banking enterprise
- (ii) The 0% rate applies to interest arising in a contracting state and paid to or guaranteed by the government of the other contracting state or a statutory body thereof, or to the national bank of that other state.
- (jj) The 5% rate applies to the gross amount of the dividends if the beneficial owner is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends. The 10% rate applies to the gross amount of dividends in all other cases.
- (kk) The 0% rate applies to the gross amount of the dividends if the beneficial owner is a company (other than a partnership). The 10% rate applies to the gross amount of the dividends in all other cases.
- (ll) The rate is 0% for the gross amount of interest paid by a company that is a resident of a contracting state to a company (other than a partnership) that is a resident of the other contracting state and is the beneficial owner of the interest. The 10% rate applies to the gross amount of the interest in all other cases.
- (mm) The rate is 0% for the gross amount of the royalties paid by a company that is a resident of a contracting state to a company (other than a partnership) that is a resident of the other contracting state and is the beneficial owner of the royalties. The 5% rate applies to the gross amount of the royalties in all other cases.
- (nn) If dividends are paid by a company that is a resident of Cyprus to a resident of Malta that is the beneficial owner of the dividends, the Cyprus tax may not exceed 15% of the gross amount of the dividends. If the dividends are paid by a company resident of Malta to a resident of Cyprus that is the beneficial owner of the dividends, the Maltese tax shall not exceed the tax chargeable on the profits out of which the dividends are paid.
- (oo) The 0% rate applies to the gross amount of the dividends if the beneficial owner is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends. The 15% rate applies to the gross amount of the dividends in all other cases.
- (pp) The 15% rate applies to the gross amount of the dividends. The 5% rate applies if certain conditions are met.

- (qq) The 0% rate on dividends applies if the beneficial owner is a company (other than a partnership) that holds, directly or indirectly, at least 25% of the capital of the company paying the dividends. The 5% rate applies in all other cases.
- (rr) The 5% rate applies to royalties paid for the use of, or the right to use, industrial, commercial or scientific equipment. The 8% rate applies in all other cases.
- (ss) The rate is 5% for dividends paid to a company holding directly at least 20% of the share capital of the payer for at least 365 days. The 10% rate applies in all other cases.
- (tt) The rate is 5% for dividends paid to a company holding directly at least 10% of the share capital of the payer. The 15% rate applies in all other cases.
- (uu) The standard withholding tax rate is 15%. A 5% withholding tax rate applies if the beneficial owner of the interest is a company whose shares are listed on a registered stock exchange, provided that no less than 15% of the voting shares of that company are in free float and that these voting shares hold directly at least 15% of the capital of the company paying the interest throughout a 365-day period. A 0% withholding tax rate applies to, among others, the following categories (provided that the beneficial ownership test is met):
- Interest paid to insurance undertakings or pension funds
 - Interest paid to banks
 - Interest on government bonds, corporate bonds and Eurobonds listed on a registered stock exchange
- (vv) Cyprus and the United Kingdom entered into a new treaty during 2018. Under the new treaty, the 0% rate applies to dividends paid by a company that is a resident of a contracting state to the beneficial owner who is a resident of the other contracting state. The 15% rate applies to dividends paid out of income (including gains) derived directly or indirectly from immovable property by an investment vehicle that distributes most of this income annually and whose income from such immovable property is exempt from tax.

A. At a glance

Corporate Income Tax Rate (%)	19 (a)
Capital Gains Tax Rate (%)	0/19 (b)
Branch Tax Rate (%)	19
Withholding Tax (%)	
Dividends	0/15/35 (c)(d)(e)
Interest	0/15/35 (c)(e)(f)(g)
Royalties	0/15/35 (c)(e)(g)(h)
Rental Income from Leases	5/15/35 (c)(e)(g)(i)
Net Operating Losses (Years)	
Carryback	2
Carryforward	5

- (a) Basic investment funds (see Section B) are subject to tax at a rate of 5%. A 0% rate applies to pension funds.
- (b) Capital gains derived by Czech or European Union (EU)/European Economic Area (EEA) parent companies (as defined in the Czech tax law) on transfers of shares in their subsidiaries are exempt from tax if certain conditions are satisfied (see Section B).

- (c) The rates may be reduced by applicable tax treaties.
- (d) Dividends are subject to a final withholding tax at a rate of 15%. Under the principles of the EU Parent-Subsidiary Directive (No. 2011/96/EU), dividends paid by Czech companies to parent companies (as defined in the directive and Czech law) located in EU/European Free Trade Association (EFTA) countries are exempt from withholding tax if the parent company maintains a holding of at least 10% of the distributing company for an uninterrupted period of at least one year (further conditions apply). Dividend distributions between two Czech companies or between foreign subsidiaries and their Czech parents are exempt from tax under similar conditions. The tax exemption does not apply if any of the following circumstances exist (further conditions may apply):
 - The parent company or the subsidiary is exempt from corporate income tax or similar tax applicable in its jurisdiction.
 - The parent or subsidiary may opt for an exemption (or a similar relief) from corporate income tax or similar tax applicable in its jurisdiction.
 - The parent or subsidiary is subject to zero corporate income tax or similar tax applicable in its jurisdiction.
 - The subsidiary treats the dividend payments as tax deductible.
- (e) The 35% withholding tax generally applies to Czech-source income arising to Czech tax nonresidents from countries outside the EU/EEA that have not entered into a double tax treaty with the Czech Republic or a bilateral or multilateral tax information exchange agreement that is binding on both the Czech Republic and the respective foreign country. The 35% withholding tax rate also applies if the Czech income payer is unable to prove the tax residency status of the respective beneficial income owner. If applicable, the 35% rate affects all types of income subject to withholding tax (for example, dividends, interest, royalties or rental income). It does not affect rental income from financial leases if the 5% withholding tax rate applies (see footnote [i]).
- (f) Interest payments to nonresidents are generally subject to withholding tax at a rate of 15% (special rules apply to some bonds). Under the principles of the EU Directive 2003/49/EC, interest paid by Czech companies to related companies (as defined in the directive) located in EU/EFTA countries is exempt from withholding tax if certain additional conditions are met.
- (g) For certain types of income, EU/EEA tax residents may choose to include the income in their tax return and have it taxed at the standard corporate income tax rate after deduction of associated expenses (while claiming a credit for the withholding tax paid against tax liability stated in the tax return) or they may choose to treat the withholding tax as a final tax on the income.
- (h) This withholding tax applies to nonresidents. Under the principles of EU Directive 2003/49/EC, royalties paid by Czech companies to companies located in EU/EFTA countries are exempt from tax if certain additional conditions are met.
- (i) A 5% withholding tax is imposed on gross rent if the lease contract stipulates that the lessee takes over the ownership of the leased asset (tangible asset only) for a purchase price or for free at the end of the lease term or if the lease contract stipulates such a right or option for the lessee (further conditions may apply). Other rental payments are subject to a 15% withholding tax. Some rental payments may be considered royalties for Czech tax purposes.

B. Taxes on corporate income and gains

Corporate income tax. Resident enterprises are subject to tax on their worldwide income. An enterprise is considered to be a resident enterprise if it is incorporated in the Czech Republic or if its management is located there. Nonresident enterprises are subject to income tax on their Czech-source income only.

Rates of corporate tax. The standard corporate income tax rate for Czech enterprises and branches of foreign enterprises is 19%. Basic investment funds are subject to a preferential tax rate of 5%. Under the Czech Income Taxes Act, the following are considered basic investment funds:

- An investment fund whose shares are accepted for trading on a European regulated market if it satisfies both of the following conditions:
 - No corporate income taxpayer (other than the state, the central bank or specified international institutions) owns shares representing 10% or more of the share capital of the

investment fund. Shares owned by related parties are considered shares owned by a single taxpayer for purposes of this condition.

- The investment fund does not have a trade license based on the Czech Act on Trades.
- Mutual fund
- Investment funds and subfunds of a joint stock company with variable registered capital if it invests (in line with its prospectus) more than 90% of its assets in prescribed instruments (for example, certain securities, money market instruments, financial derivatives, receivables and loans)
- A foreign investment fund comparable to funds as described in the above three bullets if it satisfies all of the following conditions:
 - Its home country is an EU/EEA member state.
 - It can prove that it is administered or managed based on an authorization comparable to the authorization issued by the Czech National Bank and its administrator or manager is subject to supervision comparable to the Czech National Bank's supervision.
 - It has statutes or a document comparable to a prospectus based on which it can be determined whether the fund is comparable to a fund described in the above three bullets.
 - It can prove that according to the laws of its home country none of its income is attributable to other persons (meaning it is not tax transparent).

A preferential corporate income tax rate of 0% applies to pension funds.

No differences exist between the taxation of 100% Czech-owned enterprises and those with foreign investment.

Investment incentives. Investment incentives are available to investors launching or expanding the following:

- Manufacturing
- Technology centers
- Business support services centers, including shared-services, software-development, high-technology repair and data centers

Several amendments were made to the Investment Incentives Act and related regulation. Among others, new levels of public support for the 2022–27 period were introduced. The investment incentives must be approved by the Czech government. Except for specific subsidized regions or for manufacturing projects related to products with strategic importance for protection of life and health of citizens, only projects with high added value are supported. The criteria for value-added testing includes, among others, the level of employees' wages, the percentage of employees working on research and development (R&D) or the percentage of university-educated employees (see *Manufacturing industry* below).

Manufacturing industry. The following are general qualification conditions for the incentives for the manufacturing industry:

- In regions with 20% aid (15% from 2025, see below), only investments in new economic activity (that is, no longer expansion projects) will be eligible for new support for large enterprises. Investment in tangible and intangible assets to set up a new establishment or to extend the range of activities of an

establishment will be considered a new economic activity, provided the new activity is not the same as or similar to that previously carried out in the establishment. The same or similar activity will be assessed according to the four-digit classification of economic activities code (CZ-NACE codes; “CZ-NACE” is an abbreviation used for classification of economic activities [for the French term “nomenclature statistique des activités économiques dans la Communauté européenne”]).

- An investment at least CZK80 million must be in long-term tangible and intangible assets. The CZK80 million requirement may be reduced to CZK40 million in selected regions.
- The investment must be in a manufacturing sector, and at least 50% of the total investment must be invested in qualifying production machinery. Machinery must be acquired at an arm’s-length price. It must have been produced no more than two years before the acquisition and must not have been previously subject to tax depreciation.
- Qualifying intangible assets must be acquired from unrelated third parties for arm’s-length prices.
- The investment must be realized in the Czech Republic outside Prague with higher value added. To satisfy this requirement, for investment in manufacturing, the support recipient must have executed employment agreements for salaries amounting to at least the average wage in the given region with 80% of the employees who are working in the place in which the investment is being made, and one of the following conditions must also be met:
 - At least 10% of employees must be university-educated and a contract for R&D cooperation must have been executed with a research organization or university.
 - At least 2% of employees must be working in R&D.
 - The acquisition of machinery and equipment used in R&D on top of eligible costs should represent at least 10% of the total eligible costs (machinery and equipment used in R&D cannot be included in eligible costs).

Technology centers. The following are general qualification conditions for the incentives for technology centers:

- The investor must invest at least CZK10 million in long-term tangible and intangible assets.
- At least 50% of the total investment must be invested in qualifying machinery. Machinery must be acquired at an arm’s-length price, must be produced no more than two years before the acquisition and must not have been previously subject to tax depreciation.
- At least 20 new jobs must be created.

Business support services centers. The following are general qualification conditions for the incentives for business support services centers:

- Services provided by centers should cover the territory of at least three countries (including the Czech Republic).
- For data centers and software-development centers, at least 20 new jobs must be created.
- For high-tech repair centers, at least 50 new jobs must be created.
- For shared services centers, at least 70 new jobs must be created.

Eligibility criteria for granting incentives to small and medium-sized enterprises are reduced.

The following are selected general conditions:

- The above qualification conditions must be met within three years of the issuance of the decision to grant the investment incentives.
- The project cannot be started prior to the submission of the investment incentives application with CzechInvest (a Czech governmental agency that processes the investment incentives applications).
- The investment must be environmentally friendly.
- The investment must be maintained for the duration of the incentive's utilization period (10 years) and for at least 5 years from completing the investment project or creation of the first job (if the eligible expenses are wages, see *Eligible expenses* below).
- The investor cannot relocate the same or similar activity in the EEA in the two years preceding the application, or cannot, at the time of the application, have concrete plans to relocate such an activity within a period of up to two years after the completion of the investment project.
- The recipient of the investment incentives (that is, a new Czech subsidiary) should not be established sooner than six months prior to submitting the application to CzechInvest. The company should be the sole shareholder of a new Czech subsidiary (applicable for some investments).

Investment incentives can be obtained in the following forms:

- Corporate income tax relief for 10 years
- Job-creation grants
- Grants for training and retraining employees
- Cash grants on capital expenditures for strategic investments
- Real estate tax exemption

The total value of the incentives can range from 20% (15% from 2025) to 40% of total eligible costs (see *Eligible expenses*) for large enterprises (depending on the region). No incentives are provided in Prague. The cap is increased by 10% for mid-sized enterprises and 20% for small enterprises. The cap applies to the total of tax relief, job-creation grants, cash grants on capital expenditures and real estate tax exemption. Training and retraining grants are provided on top of this cap.

Corporate income tax relief and cash grants on capital expenditures are offered throughout the entire Czech Republic with the exception of Prague. Job-creation grants and training and retraining grants are only offered in regions with high unemployment. Job-creation grants are also available in special industrial zones. Real estate tax exemption is only offered in special industrial zones.

Eligible expenses. The eligible expenses include the following (only one of the categories needs to be selected at the discretion of the investment incentives recipient):

- Value of tangible assets (machinery, building and land) and value of intangible assets, provided that machinery represents at least 50% of the total tangible and intangible assets' value. The assets should be acquired within five years of the issuance of the decision to grant the investment incentives.

- Value of wages incurred over a 24-month period following the month when a job was created and filled. The new job qualifies if it is created in the period from the day of the filing of the investment incentives application to the end of the third year after the issuance of the decision to grant the investment incentives. The value of the monthly wage per one employee for the purposes of cap calculation is limited to three times the average wage in the Czech Republic. Additional conditions with respect to the employees hired for the job apply.

Cash grants for strategic investment. Investors in the manufacturing industry can be provided with a cash grant for acquisition of tangible and intangible assets of up to 20% of the qualifying costs (no more than CZK1.5 billion). Except for manufacturing projects related to products with strategic importance for protection of life and health of citizens or for projects in the high-tech manufacturing industry, the following conditions need to be met (in addition to the above general conditions):

- A minimum required investment of CZK2 billion, of which at least CZK1 billion represents new machinery, must be made.
- At least 250 new jobs must be created.

In addition, R&D centers and high-tech repair centers can be provided with a cash grant of up to 20% of the qualifying costs (no more than CZK500 million), provided that the following conditions are met (in addition to the above general conditions):

- For R&D centers, a minimum required investment of CZK200 million, of which at least CZK100 million represents new machinery, must be made. In addition, at least 70 new jobs must be created.
- For high-tech repair centers, a minimum required investment of CZK200 million, of which at least CZK100 million represents new machinery, must be made. In addition, at least 100 new jobs must be created.

Special conditions. In addition to the general conditions listed above, investors claiming the income tax relief must satisfy certain special conditions, including, among others, the following:

- They must reduce their tax base by claiming maximum tax depreciation, deducting all available tax-effective bad debt provisions and using all available tax losses carried forward, in accordance with the tax law.
- They must be the first user of tangible assets (excluding real estate) that are acquired for the purposes of the investment in the Czech Republic.
- They may not cease to exist, terminate their activities or declare bankruptcy.
- They may not increase their tax base through related-party transactions that are not at arm's length.

Mergers are allowed to some extent; tax relief claimed before the merger is not lost, but investors are not able to claim tax relief in subsequent tax periods.

Specific conditions apply to job-creation, retraining and training grants and to grants on capital expenditures for strategic investments.

The incentives are provided based on the Investment Incentives Act and related EU directive. All investment incentives are subject to Czech government approval.

Capital gains. In the Czech Republic, realized and unrealized capital gains are recognized.

Capital gains realized by a Czech or another EU/EEA parent company (also, see below) on the transfer of shares in a subsidiary established in the Czech Republic or another EU/EEA country are exempt from tax if the parent company maintains a holding of at least 10% of the subsidiary for an uninterrupted period of at least one year (further conditions apply).

Capital gains realized by a Czech or EU/EEA parent company on the transfer of shares in a subsidiary in a contracting country (that is, a third country that has entered into a tax treaty with the Czech Republic) are also exempt from tax if the following conditions are satisfied:

- The subsidiary has a legal form comparable to Czech legal forms listed in the Czech tax law.
- The parent company has held an ownership interest of at least 10% in the subsidiary for at least one year (this condition may be fulfilled subsequent to the date of the transfer).
- The subsidiary is liable to a tax similar to corporate income tax at a rate of at least 12% in the tax period in which the parent company accounts for the respective capital gain and in the preceding tax period.

The exemption for capital gains does not apply if any of the following circumstances exists:

- The subsidiary entered liquidation proceedings.
- The shares in the subsidiary were acquired through the acquisition of a going concern.
- The parent company or the subsidiary is exempt from corporate income tax or similar tax applicable in its jurisdiction.
- The parent company or the subsidiary may opt for an exemption (or a similar relief) from corporate income tax or similar tax applicable in its jurisdiction.
- The parent company or the subsidiary is subject to zero corporate income tax or similar tax applicable in its jurisdiction.

Other realized capital gains are included with other taxable income and taxed at the regular corporate income tax rate. Capital losses on certain assets may be deducted from ordinary income, while capital losses on other assets (including capital losses on assets that qualify for exemption) are not deductible, even from other capital gains.

Unrealized capital gains and losses, which result from revaluation to fair value, are taxable or deductible only with respect to certain assets. Unrealized gains on shares that qualify for exemption are not taxable and unrealized losses on such assets are nondeductible for tax purposes.

Capital gains realized by nonresidents on the following are considered Czech-source income and are consequently generally taxable:

- Sales of rights registered in the Czech Republic or investment instruments to Czech taxpayers or Czech permanent establishments
- Sales of shares (securities or share interests) in Czech companies, regardless of the tax residence of the purchaser

However, capital gains realized by EU/EEA parent companies on sales of shares may be exempt from tax (see above).

Administration. Companies may select a calendar year or a fiscal year as its tax year. If a company uses a tax year other than the calendar year, it must file a notification with the tax authorities.

Tax returns must be filed within three months after the end of the tax year. If a company does not file the tax return by the standard three-month deadline, the deadline is automatically extended to the following:

- To four months after the end of the tax year if the tax return is filed electronically
- To six months after the end of the tax year if the tax return is filed by an appointed advisor (tax advisor or attorney-at-law)

Companies that are subject to a statutory audit are automatically granted a three-month (to six months after the end of the tax year) extension. In addition, on application of the company, an extension of three months to file a tax return may be granted at the discretion of the tax authorities.

A company with tax liability of more than CZK150,000 for the preceding year must make quarterly advance payments of tax, each equal to 25% of the preceding year's tax liability. The payments must be made by the 15th day of the third, sixth, ninth and twelfth month of their tax year. Any balance of tax due must be paid by the due date for filing the tax return.

If a company's liability for the preceding year exceeded CZK30,000, but did not exceed CZK150,000, installments that are each equal to 40% of the tax liability for the preceding year must be paid by the 15th day of the sixth and twelfth months of their tax year. If the preceding year's tax liability was CZK30,000 or less, only a single payment is required on filing the annual return.

Late payments and late filings incur penalty charges at a rate established by law. Overpayments are generally refunded within 30 days of the taxpayer's application.

Dividends. Dividends are subject to a final withholding tax at a rate of 15%. The tax rate is increased to 35%, effective from 2013, for dividends paid to Czech tax nonresidents from countries outside the EU/EEA that have not entered into a double tax treaty with the Czech Republic or a bilateral or multilateral tax information exchange agreement that is binding on both the Czech Republic and the respective foreign country.

Under the principles of the EU Parent-Subsidiary Directive (No. 90/435/EEC), dividends paid by Czech companies to parent companies (as defined in the Czech tax law) that are located in EU/EFTA countries (also, see below) are exempt from withholding tax if the parent company maintains a holding of at least 10% of the distributing company for an uninterrupted period of at least one year (further conditions apply). The condition described in the preceding sentence may be fulfilled after the date of distribution of the dividend. Dividend distributions between two Czech companies and between foreign subsidiaries and their Czech parents are exempt from tax under similar conditions.

In addition, dividends distributed by subsidiaries in a contracting country are also exempt from taxation under rules similar to those applicable to capital gains (see *Capital gains*).

The tax exemption for dividends does not apply if any of the following circumstances exists (further conditions may apply):

- The parent company or the subsidiary is exempt from corporate income tax or similar tax applicable in its jurisdiction.
- The parent or subsidiary may opt for an exemption (or a similar relief) from corporate income tax or similar tax applicable in its jurisdiction.
- The parent or subsidiary is subject to zero corporate income tax or similar tax applicable in its jurisdiction.
- The subsidiary has an option to treat the dividend payments as tax deductible in its jurisdiction.

Foreign tax relief. Foreign tax relief (through credit or exemption) is available only under tax treaties. If foreign tax relief is not available under a treaty, the income tax paid abroad may be deducted as an expense in the following year if it is imposed on income included in taxable income in the Czech Republic.

C. Determination of trading income

General. Taxable income is calculated according to Czech accounting regulations, with adjustments for tax purposes.

All expenses incurred to generate, assure and maintain taxable income that relate to the given period are generally deductible, subject to the limits specified in the corporate income tax and related laws, if documented by the taxpayer. The following are some of the expenses that may be deducted:

- Depreciation of tangible and intangible assets (see *Depreciation*).
- Cost of insurance if related to taxable income (except for insurance paid on behalf of an executive or member of the board of directors for damage caused by the performance of his or her functions).
- Membership contributions paid to selected chambers and associations under certain conditions.
- Damages resulting from natural disasters. The amount of the damage must be documented by evidence submitted by an expert from an insurance company. Damages caused by unknown perpetrators can be tax deductible if confirmed by the police.
- Real estate tax paid in accordance with the Czech law, road tax and selected other taxes and fees (subject to exceptions), if related to activities that generate taxable income.
- Specified expenses related to the provision of proper working, social and health care conditions of the employees.
- Payments on leases, including financial leases, under certain conditions.
- Travel expenses related to work in the Czech Republic and abroad.
- Donations valued at CZK2,000 or more for various social and charitable purposes. In general, the maximum amount of this deduction is 10% of the tax base (with exception for tax periods ended during the period from 1 March 2020 to 28 February 2022 when the maximum amount of this deduction is 30% of the tax base).

- Expenses incurred on free-of-charge in-kind supplies provided for certain social and charitable purposes as a result of the COVID-19 pandemic from 1 March 2020 to 31 December 2020.

The following are some of the expenses that are not deductible for tax purposes:

- Refreshment and entertainment expenses
- Damages (unless the specific conditions mentioned above are met)
- Expenses paid by the taxpayer on behalf of another payer (for example, instead of related parties)
- Penalties and late payment interest levied by tax authorities and other government institutions
- Non-monetary benefits provided to employees (for example, cultural events, sports, education and medical aids)
- Creation of provisions and reserves (unless specific conditions are met)

In general, taxpayers must increase their tax base by the amount of any overdue liability accounted for in their books that represented a tax-deductible expense and that remains unsettled for 30 months (for liabilities due in 2015 or later) or 36 months (for liabilities due prior to 2015).

Inventory. Inventory is valued at acquisition or production cost. Costs include all costs necessary to convert the inventory to its current condition and to transport it to its current location. No deduction is allowed for inventory provisions or for other decreases in inventory value. Under certain circumstances, the liquidation of inventory may be deductible for tax purposes.

Provisions. Provisions are not deductible unless a special tax law permits their creation for tax purposes.

Tax relief is provided with respect to overdue trading debts (as defined in the law). A special regime applies to unpaid receivables that were due before 31 December 1994.

Rules applicable as of 1 January 2014. Taxpayers may generally create the following tax-deductible provisions for debts that are overdue and not lapsed (with certain limitations):

- 50% of the unpaid book value of the debt if more than 18 months have elapsed since the agreed due date
- 100% of the unpaid book value of the debt if more than 30 months have elapsed since the agreed due date

For overdue debts exceeding CZK200,000 that were acquired from the previous creditor, deduction of the above provisions is allowed only if a court or arbitration proceeding was initiated and the taxpayer (creditor) participates in the proceeding.

Rules applicable until 31 December 2013 (for receivables with a due date before 2014). For overdue debts not exceeding CZK200,000 that were due after 31 December 1994, if between 6 and 12 months had elapsed since the agreed due date for the debt, 20% of the book value of the debt was deductible (grandfathering rules apply). This deduction was allowed regardless of whether court or arbitration proceedings had commenced against the debtor. If the debt was more than

12 months overdue, a court or arbitration proceedings needed to be commenced by the creditor against the debtor to claim a larger tax deduction for the debt. The deduction was calculated by applying the following specified percentages to the book value of the debt.

Months elapsed since agreed due date		Deductible percentage of book value
Exceeding	Not exceeding	%
12	18	33
18	24	50
24	30	66
30	36	80
36	—	100

For debts exceeding CZK200,000 that were overdue more than six months, the rules described above applied if the creditor had commenced court or arbitration proceedings against the debtor.

The above deductions (under the rules applicable until 31 December 2013 and the rules applicable after that date) must be recorded in the accounting books. The deductions may not be claimed for debts from related parties and other specified debts.

A 100% provision can be created for receivables up to CZK30,000, subject to certain conditions. A 100% provision for overdue receivables may also be created if insolvency proceedings have been initiated with respect to the debtor's property and if the creditor makes a timely claim for such receivables against the debtor in the respective court. This deduction may not be claimed for debts from related parties.

Reserves. Taxpayers may create tax-deductible reserves for the repair of tangible assets included in Categories 2 through 6 for tax depreciation purposes (see *Depreciation*). The reserves must be created for a minimum of two tax periods and for the maximum number of tax periods specified for each asset category.

Reserves for repairs of tangible assets may be created tax-effectively only if cash equal to the amount of the reserve created is deposited in a specific bank account. This measure applies to reserves that are created after 2008.

Depreciation. The corporate income tax law includes specific provisions concerning the depreciation of tangible and intangible assets. Depreciable tangible assets are divided into six categories, each of which specifies a period (a specified number of years) over which all assets in the category are depreciated.

The following are the six categories of depreciation, the time periods for depreciation of assets in each category and representative assets included in each category.

Category	Asset	Years
1	Office machines and some light machinery	3
2	Passenger cars, buses, airplanes, tractors, lorries, furniture and specified production machinery	5
3	Heavy machinery	10

Category	Asset	Years
4	Wooden buildings, pipelines, buildings for the production of energy, and buildings and halls built near mines	20
5	Buildings	30
6	Specified buildings	50*

* This category includes hotels, stores and office buildings.

Assets other than buildings that cannot be classified in any of the above categories are considered to be in Category 2. Category 5 covers buildings that are not covered by Categories 4 or 6.

Taxpayers may elect to depreciate assets using the straight-line or the accelerated method. The method chosen, however, does not affect the period of depreciation. Under the accelerated method, depreciation for the first year is calculated by dividing the cost of the asset by the applicable coefficient (see table below). For subsequent years, accelerated depreciation is calculated by multiplying the residual tax value of the asset by two and then dividing by the applicable coefficient, which is reduced by the number of years for which the asset has already been depreciated.

The following are the depreciation rates and coefficients for the six categories under the straight-line and accelerated methods.

Category	Straight-line rate	Accelerated-depreciation coefficient
1	20% for first year and 40% for subsequent years	3 for first year and 4 for subsequent years
2	11% for first year and 22.25% for subsequent years	5 for first year and 6 for subsequent years
3	5.5% for first year and 10.5% for subsequent years	10 for first year and 11 for subsequent years
4	2.15% for first year and 5.15% for subsequent years	20 for first year and 21 for subsequent years
5	1.4% for first year and 3.4% for subsequent years	30 for first year and 31 for subsequent years
6	1.02% for first year and 2.02% for subsequent years	50 for first year and 51 for subsequent years

Taxpayers may elect to use lower than the maximum straight-line depreciation rates. Additional rules apply to assets that were technically improved.

An initial accelerated depreciation charge (additional 10% to 20% of input price; in general, the input price is the acquisition cost, including related costs) is granted in the year of acquisition for certain tangible assets if other conditions are met.

Effective from 2010, the component depreciation of assets method may be used for accounting purposes. For tax purposes, the accounting result is adjusted as if this method was not used.

Specified tangible assets used in solar energy production are depreciated proportionally for a period of 240 months.

Effective from 1 January 2021, the threshold for classification in the category of separate tangible assets and their technical improvement is increased from CZK40,000 to CZK80,000. It is also possible to apply this new threshold to assets acquired and technical appreciation completed in 2020.

Extraordinary depreciation of assets in the first and second depreciation groups put into use between 1 January 2020 and 31 December 2021 may be used. Assets classified in the first depreciation group can be fully depreciated over 12 months, and assets in the second depreciation group can be fully depreciated over 24 months (depreciation up to 60% of input price is applied during the first 12 months and the rest during the remaining 12 months). Only the first person depreciating the given asset can apply the extraordinary depreciation.

Historically, depreciable intangible assets were divided into two categories — intangible assets that may be used for a definite time period and those that may be used for an indefinite time period. Intangible assets that may be used for a definite period are depreciated proportionally during such period. If the period for use is indefinite, the intangible asset is depreciated proportionally over the following periods (also see next paragraph).

Category	Period (months)
Audiovisual works	18
Software	36
Foundation expenses	60
Other intangible assets	72

Under an amendment, effective from 1 July 2017, the above periods are set as minimum depreciation periods. According to transitory provisions, this modification applies to intangible assets of which depreciation was commenced after the effective date of the amendment (that is, 1 July 2017).

Effective from 1 January 2021, the tax depreciation of intangible assets is abolished. The expenses related to the acquisition of intangible assets can be amortized in the same way for tax purposes as for accounting purposes. It is also possible to apply this new approach to assets acquired in 2020.

Research and development costs. In principle, qualifying costs for certain eligible R&D projects are deductible twice (first as tax-deductible expenses, then as a specific tax base decreasing item). Since 2014, the R&D deduction has been increased to 110% of incremental eligible costs incurred in the tax period. Purchased services do not qualify for the second deduction (except for the services provided by a public university or other research institutions specified by relevant legislation). Further detailed conditions are provided for the deduction.

Relief for losses. Losses may be carried forward for five years. The carryforward may be lost if a “substantive change” in persons participating in the equity or control of the taxpayer occurs and if the same activity test is not met. A “substantive change” is considered to be one of the following:

- A change in more than 25% equity ownership
- A change resulting in a shareholder receiving decisive influence

The same activity test is met if 80% of the revenues generated in the period in which the substantive change occurs and in the following tax-loss utilization periods is from the same activities that were performed in the period in which the tax loss was generated.

Effective from 1 July 2020, a tax loss may be deducted from the tax base in the two tax periods immediately preceding the tax period (or the period for which a tax return is filed) for which the tax loss is assessed. In the tax periods preceding the period for which the tax loss is assessed, a tax loss may only be deducted from the tax base up to a total amount not exceeding CZK30 million.

Groups of companies. Czech income tax law does not provide for consolidated tax returns or other types of group relief.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax (VAT), levied on all taxable supplies (goods and services), acquisitions of goods from other EU member states and imports of goods; certain supplies are exempt	
Standard rate; applicable to most goods and services	21%
Reduced rate applicable to specified goods and services (for example, food products and cultural services)	15%
Reduced rate applicable to certain goods, such as books, pharmaceuticals and baby food	10%
Social security and health insurance contributions; the social security contributions are paid only up to the maximum assessment base	
Health insurance	
Employer	9%
Employee	4.5%
(No maximum assessment base applies.)	
Old-age pension	
Employer	21.5%
Employee	6.5%
(The expected maximum assessment base is CZK1,867,728 as of 1 January 2022.)	
Sickness	
Employer	2.1%
Employee	0%
(The expected maximum assessment base is CZK1,867,728 as of 1 January 2022.)	

Nature of tax	Rate
Unemployment	
Employer	1.2%
Employee	0%
(The expected maximum assessment base is CZK1,867,728 as of 1 January 2022.)	
Excise tax, imposed on entities that produce or import certain goods, including hydrocarbon fuels and lubricants, alcohol and spirits, beer, wine and tobacco products; tax based on the quantity of goods expressed in specific units; tax may be levied only once on a particular good	Various
Road tax, imposed on entities that use vehicles; based on engine capacity and number of axles	Various
Environmental tax; imposed on electricity, natural gas and solid fuel when delivered to final consumers; tax is based on the quantity of goods expressed in specific units; tax is administered and paid by the distributor which charges it to the final customer as a price increase	Various
Electronic tax stamps for the use of highways	
Small vehicles (up to 3.5 tons; annual stamp)	CZK1,500
Large vehicles	Electronic road tolls

E. Miscellaneous matters

Foreign-exchange controls. The only legal tender valid in the Czech Republic is the Czech crown (CZK). Other currencies may be used for domestic transactions, but the use of the Czech crown is prevalent.

The Czech crown is fully convertible. Several financial transactions, such as direct investments or acceptance of credit from abroad, are subject to a reporting requirement.

Anti-avoidance legislation. In applying the tax law, the tax authorities may consider the substance of a transaction if the form of the transaction conceals the actual facts. In addition, the Czech courts have developed the abuse-of-law concept. The concept is similar to the one developed by the European Court of Justice (for example, *Halifax* [No. C-255/02]).

A minimalistic version of the general anti-avoidance rule (inspired by the Anti-Tax Avoidance Directive [ATAD]) is included in the Tax Administration Law as of 1 April 2019. The provision applies to all taxes, and its wording (together with the explanatory report) indicates continuity of the current approach to the abuse of law concept.

Transfer pricing. If prices in a transaction involving related parties vary from the current market prices and if the difference cannot be justified, the market prices are used for tax purposes. Related parties include companies related through capital (that is, the same legal or natural persons directly or indirectly manage, control or own more than 25%) and companies related in a different

manner. In addition, related parties are persons who establish a business relationship for the principal purpose of decreasing taxable income or increasing a tax loss.

Binding rulings. Taxpayers may apply to the tax authorities for advance pricing agreements and for binding opinions on transfer prices, the determination of the tax base of a tax nonresident from activities carried on by a permanent establishment, technical improvements of long-term assets, the allocation of expenses to taxable and nontaxable income, expenses incurred on R&D projects, expenses incurred on buildings that are also used for private purposes, and the application of VAT rates.

Financing expenses. The tax deductibility of financing expenses (interest and associated expenses) with respect to related-party loans (including back-to-back loans) is limited by a debt-equity ratio of 4:1 (6:1 for banks and insurance companies). Financing expenses with respect to profit-participating loans are nondeductible for tax purposes. Also, limitations are imposed on the deductibility of financing expenses related to shareholdings.

Based on the transposition of the ATAD, effective from 1 April 2019, the deductibility limit for exceeding borrowing costs is the higher of 30% tax earnings before interest, tax, depreciation and amortization (EBITDA) or CZK80 million. The rule does not apply to “standalone” taxpayers and to listed financial enterprises. Borrowing costs subject to this rule are defined broadly in line with ATAD. Disallowed exceeding borrowing costs may be carried forward and claimed in future tax periods (however, transfer to previous tax periods and transfer of unused capacity to future tax periods will not be allowed). The interest deductibility limitation rule will apply together with the thin-capitalization rule and other limitations on financing expenses.

Controlled foreign company rules. Controlled foreign company (CFC) rules were implemented through the ATAD transposition and are effective from April 2019. The CFC rules provide for taxation of certain types of passive income of a CFC (or permanent establishment if exempt pursuant to a double tax treaty) in the hands of a Czech controlling company in proportion to the share capital held in the CFC if the following conditions are met:

- The CFC entity does not carry out substantive economic activity.
- The foreign tax of the CFC entity is lower than 50% of the tax that would be paid as a Czech resident under Czech rules.
- The Czech controlling company directly or indirectly (itself or with associated companies) has a greater than 50% share of the voting rights, capital or profits.

Stricter CFC rules apply to entities from jurisdictions on the EU list of noncooperative jurisdictions.

Exit taxation. Exit taxation rules (that is, taxation of the transfer of assets with no change in ownership from the Czech Republic to another jurisdiction if the Czech Republic loses the right to tax the transferred asset) were implemented through the ATAD transposition and apply to tax periods beginning on or after 1 January 2020. The main parameters of the rules are broadly in line with those in the ATAD.

Anti-hybrid rules. Anti-hybrid rules were also implemented through the ATAD transposition and apply to tax periods beginning on or after 1 January 2020. Situations of double deduction, deduction without inclusion of income and imported hybrid mismatch are addressed by the anti-hybrid rules.

Foreign investment. Similar rules apply to both Czech investors and foreign investors.

Exchange of information. Various recent changes have occurred in the area of exchange of information, such as amendments made to the EU directive on administrative cooperation in the field of taxation, including Country-by-Country Reporting (CbCR) and the Mandatory Disclosure Regime (legislation implementing the EU Directive on Administrative Cooperation 6 [DAC 6] is generally in line with EU DAC 6), the conclusion of the Multilateral Competent Authority Agreement and the conclusion of similar agreements with “tax haven” countries.

F. Treaty withholding tax rates

The Czech Republic honors bilateral tax treaties of Czechoslovakia. It has also entered into tax treaties with many other jurisdictions. The Czech Republic is a signatory of the Multilateral Convention to Implement Tax Treaty Related Measures to Prevent Base Erosion and Profit Shifting (Multilateral Instrument, or MLI). The Czech Republic has so far implemented only “the minimum standard”; that is, the preamble, the rule to prevent treaty abuse (the principal purpose test) and modifications concerning the effective resolution of disputes by mutual agreement. The MLI entered into force for the Czech Republic on 1 September 2020, and the entry into effect in relation to a particular covered treaty is generally derived (with some delay) from its ratification by both MLI signatories.

The following table lists the withholding tax rates under the bilateral treaties currently honored by the Czech Republic.

	Dividends %	Interest %	Royalties %
Albania	5/15 (b)	0/5 (g)	10
Armenia	10	0/5/10 (g)	5/10 (a)

- (a) The lower rate applies to royalties paid for copyrights. The higher rate applies to royalties paid for patents, trademarks, designs or models, plans, secret formulas or processes, or industrial, commercial or scientific equipment or information.
- (b) The lower rate applies if the receiving company (other than a partnership) owns at least 25% of the capital of the payer. Under the Belgium treaty, dividends paid to partnerships may also qualify for the lower rate. Under the United Kingdom treaty, the lower rate applies if the receiving company controls at least 25% of shares with voting rights of the payer. Under the Japan treaty, the lower rate applies if the receiving company holds at least 25% of shares with voting rights of the payer for at least six months preceding the payment of dividend. Under the Colombia treaty, the 25% rate applies to dividends paid by a Colombian resident that are derived from profits that were not under the law subject to Colombian tax, and the 15% rate applies to dividends not subject to the 5% or 25% rates.
- (c) The lower rate applies if the receiving company (other than a partnership) owns at least 10% of the capital of the payer. Under the Canada and Nigeria treaties, the lower rate applies if the receiving company controls at least 10% of the voting rights of the payer (except for dividends paid by a Canadian investment corporation). Under the United States treaty, the lower rate applies if the receiving company owns at least 10% of the shares with voting rights of the payer (exceptions applies to dividends paid by investments companies and real estate investment trusts located in the United States). Under the Norway treaty, the 0% rate also applies to dividends paid to the government or specified institutions. Under the Cyprus, Liechtenstein, Luxembourg and Switzerland treaties, the 0% rate applies if at least 10% of share capital of the payer is held by an entity (other than a partnership) for at least one year. Under the Denmark treaty, the 0% rate applies if the recipient of the dividends is a pension fund. Under the Switzerland treaty, the 0% rate also applies if the recipient of the dividends is a central bank or a pension fund.
- (d) Interest on mutual deposits with banks in the interbank market is exempt from tax for recipients from non-treaty countries (subject to reciprocal treatment). For all Czech tax nonresidents (that is, recipients from treaty and non-treaty countries), interest on bonds issued by Czech taxpayers or the Czech Republic outside the Czech Republic is exempt from tax. The 15% rate applies to other interest but see also footnote (x).
- (e) The lower rate applies if the receiving company (other than a partnership) owns at least 20% of the capital of the payer. Under the Australia treaty, the

lower rate applies to dividends paid from the Czech Republic to Australia if the receiving company owns at least 20% of the capital of the payer and to dividends paid from Australia to the Czech Republic if special requirements are met.

- (f) The 5% rate applies if the receiving company (other than a partnership) owns more than 15% of the capital of the payer.
- (g) The 0% rate applies to interest paid to (or by) the government (or specified institutions), subject to further conditions. Under the Albania treaty, the 0% rate also applies to interest paid to an agency, including banks and financial institutions, wholly owned by the contracting state. Under the Georgia treaty, the 0% rate also applies to interest on loans and credits guaranteed by governments or related to sales of industrial equipment that are financed by loans. Under the Armenia and Azerbaijan treaties, the 5% rate applies to interest on bank loans. Under the Ethiopia treaty, the 0% rate also applies to, among other items, interest paid to institutions owned or controlled by the government whose sole purpose is the promotion of export or foreign investment. Under the Thailand treaty, the 10% rate applies to interest paid to financial institutions or insurance companies; otherwise, the rate of the source country applies. Under the Pakistan and Syria treaties, the 0% rate also applies to interest paid to the central bank or any financial institution wholly owned by the government and to interest on loans and credits guaranteed by the government or specified institutions. Under the China Mainland treaty, the 0% rate also applies if the interest paid to selected government agencies or the central bank or if the receivable is financed, guaranteed or pledged by the government, the central bank or a selected government agency. Under the Barbados, Colombia, Iran, Tajikistan and Uzbekistan treaties, the 0% rate also applies to interest from the sale on credit of merchandise or equipment or from a loan or credit granted by a bank or guaranteed by the government (or specified institutions). Under the Belarus treaty, the 0% rate also applies to interest on bank loans. Under the Poland treaty, the 0% rate also applies to interest from a loan or credit granted by a bank or guaranteed by the government (or specified institutions). Under the Belgium treaty, the 0% rate applies to interest from suspended payments for goods and services, loans guaranteed by public institutions aimed to support the export and bank loans and deposits (except in the form of securities). Under the Brazil treaty, interest from securities, bonds and promissory notes issued by the government (or specified institutions) is subject to tax in the state of residence of the issuer. Under the Bulgaria and Panama treaties, the 0% rate also applies to interest from suspended payments for equipment or goods or from certain loans guaranteed by public institutions. Under the Canada treaty, the 0% rate also applies to, among other items, interest paid to institutions established to manage and pay out benefits from pension, retirement or employee schemes (other limitations apply). Under the Botswana, Ghana, Korea (South) and Kyrgyzstan treaties and the Taiwan bill, the 0% rate also applies to interest paid in connection with the sale on credit of any merchandise or equipment or in connection with a loan or credit provided, guaranteed or insured by the government (or specified institutions). Under the Bangladesh, Kazakhstan and Turkmenistan treaties, the 0% rate also applies to interest from loans guaranteed by the government (or specified institutions). Under the Malaysia treaty, the 0% rate also applies to interest from approved loans if the beneficial owner of the interest is a Czech tax resident.
- (h) The 5% rate applies to royalties for copyrights. The 10% rate applies to royalties for patents, trademarks, designs or models, plans, secret formulas and processes. The 15% rate applies to other royalties.
- (i) The 10% rate applies to loans and credits granted by a bank for a period of at least 10 years in connection with the following:
- Sales of industrial equipment or studies
 - Installation or furnishing of industrial or scientific units
 - Public works
- (j) The 10% rate applies if the receiving company owns at least 25% of the payer for at least two years preceding the payment of the dividend.
- (k) The 0% rate applies to a dividend paid to the government of a contracting state (or a government institution) or to a company that is at least 25% owned by the government of the contracting state.
- (l) The 0% rate applies to a dividend paid by a tax resident of Malaysia to a Czech tax resident who is the beneficial owner of the dividends.
- (m) The 0% rate applies to royalties paid for copyrights. The 1% rate applies to royalties paid for finance leases of equipment. The 5% rate applies to royalties paid for operating leases of equipment and for the use of, or right to use, software. The 10% rate applies to other royalties.

- (n) The lower rate applies to royalties for copyrights, with the exception of royalties for cinematographic films and films or tapes for television broadcasting. The higher rate applies to other royalties.
- (o) The lower rate applies to dividends paid by a tax resident of Sri Lanka to a Czech tax resident (except with respect to investments made after the effective date of the treaty).
- (p) The treaty provides for a rate of 10%, but a protocol to the treaty provides for a rate of 5% until Swiss domestic law imposes a withholding tax on royalties.
- (q) In addition to treaty protection, royalties paid by Czech companies or permanent establishments of companies from EU member states to related-party companies located in other EU/EEA member states or Switzerland is exempt from tax if the conditions stated in provisions implementing EU Directive 2003/49/EC, as amended, are satisfied and if an advance ruling is issued by the Czech tax authority. If a Czech withholding tax applies to outbound royalties, EU/EEA tax residents may choose to include the income in their tax return and have it taxed at the standard corporate income tax rate after deduction of associated expenses (while claiming a credit for the withholding tax paid against tax liability stated in the tax return), or to treat the withholding tax as a final tax on the income.
- (r) The 10% rate applies to royalties paid for patents, trademarks and industrial, commercial, or scientific equipment or information. The 15% rate applies to royalties paid for films.
- (s) In addition to treaty protection, dividends paid by Czech companies to parent companies (as defined in the EU Parent-Subsidiary Directive 2011/96/EU) that are located in other EU member states, or in Iceland, Liechtenstein, Norway or Switzerland, are exempt from withholding tax if the parent company maintains a holding of at least 10% of the distributing company for an uninterrupted period of at least one year (this condition may be met subsequently). Further conditions apply.
- (t) In addition to treaty protection, interest from qualified instruments paid by Czech companies or permanent establishments of companies from EU member states to related-party companies (as defined in EU Directive 2003/49/EC) located in other EU/EEA member states or Switzerland is exempt from withholding tax if the conditions stated in the provisions implementing EU Directive 2003/49/EC, as amended, in the Czech tax law are satisfied and if an advance ruling is issued by the Czech tax authority. In addition, if Czech withholding tax applies to outbound interest, EU/EEA tax residents may choose to include the income in their tax return and have it taxed at the standard corporate income tax rate after deduction of associated expenses (while claiming a credit for the withholding tax paid against tax liability stated in the tax return), or to treat the withholding tax as a final tax on the income.
- (u) The 0% rate applies to royalties paid for copyrights. The 5% rate applies to payments for industrial, commercial or scientific equipment. The 10% rate applies to royalties paid for patents, trademarks, designs or models, plans, secret patterns or production procedures and software, as well as for information relating to experience acquired in the areas of industry, commerce or science.
- (v) The 25% rate applies to royalties paid for trademarks. The 15% rate applies to other royalties.
- (w) The 5% rate applies to royalties paid for industrial, commercial or scientific equipment.
- (x) A 35% tax rate applies to payments to tax residents in countries with which the Czech Republic has not entered into a double tax treaty or a treaty on exchange of information in tax matters. For further details, see footnote (e) in Section A.
- (y) The 5% rate applies to business profits after taxation transferred by a permanent establishment in one contracting state to its head office in the other contracting state.
- (z) The 4% rate applies to interest paid to banks, insurance companies and other specified lending and financial institutions. If Chile agrees to a lower rate or an exemption with an Organisation for Economic Co-operation and Development member state, this lower rate or exemption would also apply to the treaty between Chile and the Czech Republic.
- (aa) The 0% rate applies to copyright royalties paid from the Czech Republic to Belgium. The 5% rate applies to royalties paid for use of industrial, commercial or scientific equipment.
- (bb) A special bill aimed at preventing double taxation with respect to Taiwan entered into effect on 1 January 2021.

A. At a glance

Corporate Income Tax Rate (%)	22
Capital Gains Tax Rate (%)	22
Branch Tax Rate (%)	22
Withholding Tax (%)	
Dividends	0/22 (a)
Interest	0/22 (b)
Royalties from Patents, Know-how, etc.	0/22 (c)
Branch Remittance Tax	0 (d)
Net Operating Losses (Years)	
Carryback	0
Carryforward	Unlimited

- (a) The general withholding tax rate is 22%, and the recipient can apply for a refund depending on the final tax rate. A withholding tax of 0% normally applies to dividends paid to group companies. See Section B.
- (b) The 22% rate applies to payments between related parties. The rate may be eliminated if certain conditions are met under the European Union (EU) Interest-Royalty Directive or a double tax treaty entered into by Denmark. See Section B.
- (c) The rate is 0% for royalties paid for copyrights of literary, artistic or scientific works, including cinematographic films, and for the use of, or the right to use, industrial, commercial or scientific equipment. In addition, the rate may be reduced or eliminated if certain conditions are met under the EU Interest-Royalty Directive or a double tax treaty entered into by Denmark.
- (d) A Danish branch office or a tax-transparent entity may be re-characterized as a Danish tax-resident company if the entity is controlled by owners resident in one or more foreign countries, the Faroe Islands, or Greenland and if either of the following circumstances exists:
- The entity is treated as a separate legal entity for tax purposes in the country or countries of the controlling owner(s).
 - The country or countries of the controlling owner(s) are located outside the EU and have not entered into a double tax treaty with Denmark under which withholding tax on dividends paid to companies is reduced or renounced.

B. Taxes on corporate income and gains

Corporate income tax. A resident company is a company incorporated in Denmark. In addition, a company incorporated in a foreign country is considered a resident of Denmark if its day-to-day management is in Denmark.

All tax-resident companies that are part of the same group must be included in a Danish mandatory joint taxation arrangement, regardless of whether these companies are subject to full or limited tax liability in Denmark. This mandatory joint taxation comprises all Danish affiliated companies as well as permanent establishments and real estate located in Denmark (for details, see Section C).

The income of resident companies that is generated in a foreign permanent establishment or real estate located outside Denmark is not included in the statement of the taxable income in Denmark, unless Denmark is granted the right to tax such income under an applicable double tax treaty or other international agreement, or the income is subject to controlled foreign company (CFC) taxation (see Section E).

Branches of foreign companies located in Denmark are taxed only on trading income and on chargeable capital gains derived from the disposal of trading assets that are located in Denmark and related to a Danish permanent establishment.

Rate of corporate tax. For the 2022 income year, resident and nonresident companies are taxed at a rate of 22%.

Capital gains. Capital gains are taxed as other income at a rate of 22%.

Capital gains derived from a disposal of shares in a group company (group shares), shares in a subsidiary (subsidiary shares) and own shares (shares issued by the company) are exempt from tax regardless of the ownership period, while losses incurred on such shares are not deductible.

The following are considered group shares:

- Shares in a company that is subject to mandatory joint taxation under Danish rules together with the shareholder of the company
- Shares in a company that is eligible for inclusion in an international joint taxation arrangement under Danish rules (see Section C)

Shares are considered subsidiary shares if all of the following conditions are met:

- The shares are in a company in which the shareholder directly owns at least 10% of the share capital.
- The company is in a legal form that is similar to a Danish limited liability company.
- The company is subject to corporate tax in its home country (without exemption).
- The company is located in a country that has an agreement with Denmark on exchange of information.

Certain anti-avoidance rules apply if shareholders that do not each meet the requirements of holding group shares or subsidiary shares set up an intermediate holding company that by itself is able to meet the requirements.

In certain cases, capital gains may be reclassified as dividends. The reclassification of capital gains to dividends applies under specific circumstances only.

In general, capital gains derived from a disposal of shares that are not own shares, group shares or subsidiary shares (known as portfolio shares) are taxable at the statutory corporate income tax rate of 22%, while losses are deductible, regardless of the ownership period. However, capital gains derived from the disposal of portfolio shares do not trigger taxation if all of the following conditions are satisfied:

- The shares relate to a Danish limited liability company or a similar foreign company.
- The shares are not publicly listed.
- A maximum of 85% of the book value of the portfolio company is placed in publicly listed shares.
- The company disposing of the portfolio shares does not buy new portfolio shares in the same company within six months after the disposal.

The current rules regarding taxation of portfolio shares are based on the mark-to-market method, under which gains and losses are computed on the basis of the market value of the shares at the beginning and end of the income year. It is possible to opt for taxation based on the realization method with respect to unlisted portfolio shares only. Listed portfolio shares must be taxed according to the mark-to-market method. Special rules apply to the carryforward of unused losses on portfolio shares.

Gains on the sale of goodwill and intellectual property rights are subject to tax.

Recaptured depreciation (see Section C) is taxed as ordinary income at a rate of 22%.

Administration. In general, the income year for companies is the calendar year. Companies may select a staggered income year, which is an income year other than the calendar year. They may change their income year if justified by special circumstances.

In general, tax returns for companies must be filed within six months after the end of the companies' income year. For companies with income years ending from 1 February to 31 March, tax returns must be filed by 1 August. Companies pay corporate tax on a current-year basis on 20 March and the remainder on 20 November. It is also possible to make a third current payment before 1 February of the following year. The final tax (calculated tax less paid current taxes) must be paid in November of the following year.

Dividends paid. In general, dividends paid are subject to withholding tax at a rate of 22%. However, withholding tax is normally not imposed on dividends paid to group companies if the Danish shares qualify as either group shares or subsidiary shares (see *Capital gains*) and if the withholding tax must be reduced or eliminated under the EU Parent-Subsidiary Directive or a double tax treaty. For a company owning Danish shares that are group shares rather than subsidiary shares, it is required that the withholding tax would have been reduced or eliminated under the EU Parent-Subsidiary Directive or a double tax treaty if the shares

had been subsidiary shares. In both cases, the recipient of the dividends must be the beneficial owner of the dividends and, accordingly, is entitled to benefits under the EU Parent-Subsidiary Directive or a double tax treaty.

The final tax rate for nonresident companies is generally 22%, with a rate of 15% for certain portfolio shares. The applicability of the 15% tax rate is described under *Capital gains* (conditions for deriving tax-exempt capital gains on portfolio shares). The 15% rate applies for corporations resident in jurisdictions with which Denmark has entered into a treaty on double taxation or exchange of information (if the shareholding meets the requirements described under *Capital gains*). A claim for a refund for the difference between the withholding tax of 22% and the final tax rate may be filed with the Danish tax authorities.

Withholding tax on dividends from a Danish subsidiary to a foreign company applies in the case of a redistribution of dividends if the Danish company itself has received dividends from a more-than-10%-owned company in another foreign country and if the Danish company cannot be regarded as the beneficial owner of the dividends received. Correspondingly, it applies if the Danish company has received dividends from abroad through one or more other Danish companies. Such dividends are generally subject to withholding tax at a rate of 22%, unless all of the following conditions are met:

- The rate is reduced under a double tax treaty with Denmark or the recipient is covered by the EU Parent-Subsidiary Directive.
- The recipient is considered the beneficial owner of the dividends.
- The general anti-avoidance rule does not apply.

Interest paid. In general, interest paid to foreign group companies is subject to withholding tax at a rate of 22%. The withholding tax is eliminated if any of the following requirements are satisfied:

- The interest is not subject to tax or it is subject to tax at a reduced rate under the provisions of a double tax treaty. For example, if withholding tax on interest is reduced to 10% under a double tax treaty, the withholding tax is eliminated completely.
- The interest is not subject to tax in accordance with the EU Interest/Royalty Directive. Under the directive, interest is not subject to tax if all of the following conditions are satisfied:
 - The debtor company and the creditor company fall within the definition of a company under Article 3 in the EU Interest/Royalty Directive (2003/49/EC).
 - The companies have been associated (as stated in the directive) for at least a 12-month period.
 - The recipient is beneficial owner of the interest received.
- The interest accrues to a foreign company's permanent establishment in Denmark.
- The interest accrues to a foreign company, and a Danish parent company, indirectly or directly, is able to exercise control over such foreign company (for example, by holding more than 50% of the voting rights). Control must be fulfilled for a period of 12 months during which the interest is paid.
- The interest is paid to a recipient that is controlled by a foreign parent company resident in a country that has entered into a double tax treaty with Denmark and has CFC rules and if, under

these foreign CFC rules, the recipient could be subject to CFC taxation.

- The recipient company can prove that the foreign taxation of the interest income amounts to at least $\frac{3}{4}$ of the Danish corporate income tax and that it will not in turn pay the interest to another foreign company that is subject to corporate income tax amounting to less than $\frac{3}{4}$ of the Danish corporate income tax.

The withholding tax and exceptions also apply to non-interest-bearing loans that must be repaid with a premium by the Danish debtor company.

C. Determination of trading income

General. Taxable income is based on profits reported in the annual accounts, which are prepared in accordance with generally accepted accounting principles. For tax purposes, several adjustments are made, primarily concerning depreciation and write-offs of inventory.

Expenses incurred to acquire, ensure and maintain income are deductible on an accrual basis. Certain expenses, such as certain gifts, income taxes and formation expenses, are not deductible. Only 25% of business entertainment expenses is deductible for tax purposes. Expenses incurred on advisor fees are not deductible if they are incurred with respect to investments in shares that have the purposes of a full or partial acquisition of one or more companies and of the exercise of control over or participation in the management of these companies.

Inventories. Inventory may be valued at historical cost or at the cost on the balance sheet at the end of the income year. Inventory may also be valued at the production price if the goods are produced in-house. Indirect costs, such as freight, duties and certain other items, may be included.

Dividends received. Dividends received with respect to shares that qualify as group shares or subsidiary shares (see *Capital gains*) are exempt from tax to the extent that no tax deduction is claimed for the distribution by the entity making the distribution.

Dividends received by a Danish permanent establishment may be exempt from tax if the permanent establishment is owned by a foreign company that is tax resident in the EU, European Economic Area (EEA) or in a country that has entered into a double tax treaty with Denmark.

Dividends received on a company's own shares are exempt from tax.

Seventy percent of the dividends that are not covered by the above tax exemption, such as dividends from portfolio shares, must be included in the taxable income of the dividend receiving company and taxed at the normal corporate income tax rate of 22%. A tax credit is normally available to the dividend receiving company for foreign withholding taxes withheld by the dividend distributing company.

Depreciation

Immediate deductions. For the 2022 income year, new acquisitions not exceeding DKK30,000 (2022 amount) or with a lifetime

not exceeding three years are 100% deductible in the year of purchase. Computer software, operating equipment and ships for research and development (R&D), except operating equipment and ships used for exploration of raw materials, are also 100% deductible in the year of purchase.

Asset classes. Certain depreciable assets must be allocated among four asset classes:

- Operating equipment (including production facilities, machinery, office equipment, hardware and certain software that may not be written off immediately) may be depreciated at an annual rate of up to 25%, using the declining-balance method.
- Certain ships (weighing more than 20 tons and leased out without a crew) may be depreciated at an annual rate up to 12%, using the declining-balance method.
- Certain operating equipment with a long economic life (certain ships transporting goods or passengers, aircraft, rolling railway material, drilling rigs and facilities for producing heat and electricity) may be depreciated at an annual rate of up to 15%, using the declining-balance method. Facilities for producing heat and electricity with a capacity of less than 1 MW and wind-turbine generators (regardless of the capacity) may be depreciated at an annual rate of up to 15%, using the declining-balance method.
- Infrastructural facilities (facilities used for purposes, such as transporting, storing and distributing electricity, water, heat, oil, gas and wastewater and facilities with respect to radio, telecommunications and data transmissions) may be depreciated at an annual rate of up to 7%, using the declining-balance method.

It is important to distinguish between building installations and infrastructural facilities.

Buildings. Buildings used for commercial and industrial purposes may be depreciated at an annual rate of up to 4%, using the straight-line method based on the purchase price, excluding the value of the land. Office buildings, financial institutions, hotels, hospitals and certain other buildings may not be depreciated. However, office blocks or office premises adjacent to buildings used for commercial purposes may be depreciated if the office blocks are used together with the depreciable buildings.

Others. Acquired goodwill, patent rights and trademarks may be amortized over seven years. Costs incurred in connection with the improvement of rented premises and properties (not used for habitation or other commercial or non-industrial purposes) on leased land may be depreciated at an annual rate of up to 20%. If the tenancy is entered into for a fixed number of years, the annual depreciation rate cannot exceed a rate that results in equal amounts of depreciation over the fixed number of years.

Recapture. The amount of depreciation claimed on an asset may be recaptured on the disposal of the asset. Recaptured depreciation is subject to tax at a rate of 22%. For assets depreciated under the declining-balance method, however, the consideration received is deducted from the collective declining-balance account, and, consequently, the recapture is indirect.

Advance depreciation. Advance depreciation is available on ships. A total of 30% (with a maximum of 15% in any single year) of

the expenditure exceeding DKK1,644,600 (2022 amount) may be written off in the years preceding the year of delivery or completion. The relief is given if a binding contract has been concluded for construction or purchase of a ship. If a partnership enters into the contract, each partner must meet the DKK1,644,600 (2022 amount) requirement. If a ship is intended for lease, advance depreciation is not allowed in the year of acquisition, unless permission is obtained from the local tax authorities. This rule does not apply to the ships included in the new asset classes (see *Depreciation*).

“Super deduction” for R&D costs. A “super deduction” is also available on costs concerning R&D. As a result of the COVID-19 pandemic, the deduction rate is increased in 2020, 2021 and 2022, meaning that costs connected to R&D can be deducted at a rate of 130% in 2020, 130% in 2021, 108% in 2023 through 2025 and 110% from 2026 and onward. Furthermore, it is expected that the 130% rate will also apply for 2023 and beyond (a proposal on this matter has been published). The “super deduction” is conditioned on the costs being connected to the taxpayer’s business. The deduction can be made either at once in the income year in which the costs are incurred, or over the course of five years, including the income year in which the costs are incurred.

Relief for trading losses. Trading losses and interest expenses may be set off against other income and chargeable gains. Losses incurred may be set off in full against the portion of the year’s taxable income not exceeding an amount of DKK8,872,500 (2022 amount). Losses exceeding DKK8,872,500 (2022 amount) may be set off against 60% of the taxable income for the year. As a result, a company may not reduce its taxable income to less than 40% of the taxable income exceeding DKK8,872,500 (2022 amount).

Losses, including prior-year losses, that cannot be set off against the taxable income for the year may be carried forward infinitely.

Losses may not be offset against interest and other capital income, net of interest paid, if more than 50% of the shares in the company changed ownership since the beginning of the year in which the loss was incurred. In addition, tax losses are forfeited by companies that are not engaged in an activity at the date of change of ownership.

Groups of companies. Joint taxation of Danish affiliated companies, Danish permanent establishments of foreign affiliated companies and real properties of foreign affiliated companies that are located in Denmark is compulsory. The jointly taxed income equals the sum of the net income of the jointly taxed companies, permanent establishments and real properties. An affiliation generally exists if a common shareholder (Danish or foreign) is able to control the company (for example, by holding more than 50% of the voting rights).

Joint taxation with foreign companies is voluntary. If a Danish company elects to be jointly taxed with a foreign company, all foreign affiliated companies must be included in the Danish joint taxation arrangement. These include all subsidiaries, permanent

establishments and real estate owned by the Danish company. If the Danish company is owned by a foreign group, the ultimate foreign parent company and all foreign companies affiliated with the ultimate foreign parent company are also included.

A company is considered to be an affiliated company if a controlling interest exists.

A 10-year period of commitment applies if a Danish company elects to be jointly taxed with its foreign affiliated companies.

Deduction of final losses in foreign subsidiaries. Regardless of having chosen not to apply an international joint taxation scheme, a Danish parent company can deduct losses in foreign subsidiaries, permanent establishments or real estate if all of the following conditions are fulfilled:

- The parent company has not chosen international joint taxation.
- The subsidiary or the permanent establishment is resident in the EU/EEA, in the Faroe Islands or in Greenland (this condition does not apply to real estate).
- The subsidiary is directly owned by the parent company, or indirectly owned by intermediary companies, that are all resident in the same country as the subsidiary.
- The losses are final.
- A loss in a subsidiary would have been deductible if international joint taxation had been chosen.
- A loss in a permanent establishment or real estate is deductible according to the general rules of the tax code.
- The determination of the loss is conducted in accordance with Danish rules.

The possibility has been introduced with effect from the 2019 income year, and tax guidance has been issued by the tax authorities concerning the possibility of reopening of the tax returns for the 2009-2018 income years and correcting them in accordance with the new rules.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax (VAT)	25%
Labor market supplementary pension scheme (ATP); approximate annual employer contribution for each full-time employee	DKK2,272
Payroll tax (Loensumsafgift)	
Banks, insurance companies and other financial businesses; levied on total payroll	15%
Other VAT-exempt businesses, including some public bodies; levied on total payroll plus taxable profits, adjusted to exclude financial income and expenses	4.12%
Lotteries and information activities performed by tourist offices, other organizations and some public bodies; levied on total payroll	6.37%
Publishers or importers of newspapers; levied on the value of newspapers sold	3.54%

E. Miscellaneous matters

Foreign-exchange controls. Denmark does not impose foreign-exchange controls.

Debt-to-equity rules. Under thin-capitalization rules, interest paid by a Danish company or branch to a foreign group company is not deductible to the extent that the Danish company's debt-to-equity ratio exceeds 4:1 at the end of the debtor's income year and that the amount of controlled debt exceeds DKK10 million. Limited deductibility applies only to interest expenses relating to the part of the controlled debt that needs to be converted to equity to satisfy the debt-to-equity ratio of 4:1 (that is, a minimum of 20% equity). The thin-capitalization rules also apply to third-party debt if the third party has received guarantees and similar assistance from a group company of the borrower.

The Danish thin-capitalization rules are supplemented through an "interest ceiling rule" and an Earnings Before Interest, Taxes, Depreciation and Amortization (EBITDA) rule. These rules apply to controlled and non-controlled debt. Only companies with net financial expenses exceeding DKK21,300,000 and DKK22,313,400, respectively (2022 amounts), are subject to these supplementary rules. For jointly taxed companies, the thresholds apply to all of these companies together.

Under the "interest ceiling rule," a company may only deduct net financial expenses corresponding to 2% (2022 rate) of the taxable value of certain qualified assets. Deductions for any excess net financial expenses are lost, except for capital losses, which may be carried forward for three years.

Under the EBITDA rule, a company may reduce its taxable income through the deduction of financial expenses by no more than 30%. Net financial expenses exceeding this limit are non-deductible but, in contrast to the interest ceiling rule, the excess expenses can be carried forward without any time limitation (if not restricted again by the EBITDA rule). The calculation must be made after taking into account a possible restriction under the interest ceiling rule.

Under the interest ceiling rule, a safe harbor of net financial expenses up to DKK21,300,000 (2022 amount) exists. Under the EBITDA rule, a safe harbor of net financial expenses up to DKK22,313,400 (2022 amount) exists. These expenses are always deductible, subject to restriction under the thin-capitalization rules.

If a company establishes that it could obtain third-party financing on similar terms, it may be allowed to deduct the interest that would normally be disallowed under the ordinary thin-capitalization rules described above. No arm's-length principle can be applied to help the company escape the interest ceiling rule or the EBITDA rule.

Danish tax law does not recharacterize disallowed interest or impose withholding tax on it.

Anti-avoidance legislation. A general anti-avoidance rule has been implemented in the Danish domestic tax law. It is contained in Section 3 of the Danish Tax Assessment Act.

The anti-avoidance rule seeks to restrict the benefits of applicable tax law, including EU directives or a double tax treaty, claimed by a taxpayer who participates in an arrangement, or a series of arrangements, that has the primary purpose (or has as one of its primary purposes) to achieve a tax benefit that is contrary to the contents or purpose of the applicable tax law, EU directive or double tax treaty in question.

The global anti-avoidance rule is introduced in accordance with Article 6 of the EU Anti-Tax Avoidance Directive (ATAD) and applies to resident and nonresident companies.

In addition, certain recharacterization rules exist, such as a rule that recharacterizes debt as equity if the debt is treated as an equity instrument according to the tax rules in the country of the creditor.

Although a Danish company or taxable legal entity may change its domicile to another country, this would normally be considered a liquidation with the same tax effect as a taxable sale. The company can transfer its activities abroad, but, to prevent tax avoidance, such a transfer is considered a taxable disposal of the activities.

Controlled foreign companies. Danish CFC-taxation involves a Danish parent company being taxed on income generated in a foreign subsidiary or branch. If the CFC-rules apply, the Danish parent is taxed in Denmark on a proportional part (equal to the ownership interest) of the subsidiary's income.

The following are generally the two main criteria for Danish CFC-taxation to apply:

- More than one third of the income in the subsidiary is CFC-income.
- The parent company alone or jointly with other group companies directly or indirectly owns more than 50% of the share capital, controls more than 50% of the votes or is entitled to more than 50% of the subsidiary's profits.

The rules apply to financial companies only if more than one third of the CFC-income in the subsidiary derives from transactions with the parent or associated persons.

A parent company can elect to include only the CFC-income as opposed to the total income of the subsidiary. Such election is binding for five years and applies to all subsidiaries.

CFC-income is generally financial income, royalties, gains on intellectual property and "other income from intellectual property" (including embedded royalties). Goodwill is not considered intellectual property for CFC-purposes.

According to a substance test, CFC-taxation does not apply to "other income from intellectual property" if the subsidiary conducts "significant economic activity related the intellectual property, and this activity is supported by personnel, assets and premises." CFC-taxation also does not apply to other income from intellectual property that is a product of R&D-activities carried out by the subsidiary or group-related companies located in the same jurisdiction as the subsidiary.

Anti-hybrid mismatch rules. Denmark has several anti-hybrid mismatch rules.

The rules are found in Section 2C and Sections 8C-8E of the Danish Corporate Tax Act.

Under Section 2C of the Danish Corporate Tax Act, branches of entities that are required to register in Denmark may be treated as separate entities for Danish tax purposes if certain conditions are met. This treatment may apply if the parent of the branch is located in a non-EU/non-treaty country or if the Danish branch is considered a separate entity for tax purposes in the parent's country. Certain exceptions exist, and case-by-case evaluation is suggested.

Under Section 8C of the Danish Corporate Tax Act, the definitions used in Sections 8D and 8E are listed. A total of 17 new definitions are set forth following a rule change entering into force on 1 January 2020. For example, definitions are provided for "mismatch result," "double tax deduction" and "hybrid mismatch."

Under Section 8D of the Danish Corporate Tax Act, if a hybrid mismatch leads to a double tax deduction for the same expense, the expense is, as a main rule, not deductible in Denmark. Additionally, an expense is not deductible if a hybrid mismatch leads to the payment being deductible in Denmark while not being taxable in the receiving party's jurisdiction. A company is not allowed to deduct payments to the extent that such payments directly or indirectly finance deductible expenses and if the payments result in a hybrid mismatch through a transaction or a series of transactions between associated entities or if the payments are part of a structured arrangement. Section 8D also provides that a company must include income that would otherwise be attributed to a disregarded permanent establishment, to the extent that a hybrid mismatch concerns income from a disregarded permanent establishment.

Under Section 8E of the Danish Corporate Tax Act, a company that from a tax perspective is also residing in another jurisdiction is not allowed to deduct payments, expenses and losses, which are deductible in both jurisdictions, to the extent that the other jurisdiction allows for such items to be set off against income that is not double included income. However, such payments, expenses and losses can be deducted from income that is not double included income if the other jurisdiction is an EU country and if the company is regarded as residing in Denmark under a double tax treaty, to the extent that the other jurisdiction denies the deduction of the payments, expenses and losses. Also, a jointly taxed company that is participating in a joint taxation or another form of tax-loss carryforward in another jurisdiction is not allowed to deduct payments, expenses or losses, to the extent that the other jurisdiction allows for such items to be set off against income that is not double included income. Payments, expenses and losses that are deductible in both jurisdictions and for which deduction is not denied under the provision described in the preceding sentence can only be deducted from double included income.

Transfer pricing. Transactions between affiliated entities must be determined on an arm's-length basis. In addition, Danish companies and Danish permanent establishments must report summary information about transactions with affiliated companies as part of the company's annual tax return.

Danish tax law requires entities to prepare and maintain written transfer-pricing documentation for transactions that are not considered insignificant. Enterprises can be fined if they have not prepared any transfer-pricing documentation or if the documentation prepared is considered to be insufficient as a result of gross negligence or deliberate omission. The documentation can be prepared in Danish, English, Norwegian or Swedish and must be prepared no later than the deadline to file the summary information about transactions with affiliated companies, which is an integrated part of the company's annual tax return. The transfer-pricing documentation must be submitted to the tax authorities within 60 days on request.

From 2021 and onward, it is mandatory for companies to which the documentation obligation applies to submit its transfer-pricing documentation within 60 days after the deadline for submitting its tax returns. If a company does not comply with this requirement, it is risking considerable fines and discretionary changes to its taxable income.

The fine for failure to prepare satisfactory transfer-pricing documentation consists of a basic amount of DKK250,000 per year per entity for up to five years plus 10% of the income increase required by the tax authorities. The basic amount may be reduced to DKK125,000 if adequate transfer-pricing documentation is filed subsequently.

Fines may be imposed for every single income year for which satisfactory transfer-pricing documentation is not filed.

In addition, companies may be fined if they disclose incorrect or misleading information for purposes of the tax authorities' assessment of whether the company is subject to the documentation duty.

The documentation requirements for small and medium-sized enterprises apply only to transactions with affiliated entities in non-treaty countries that are not members of the EU/EEA. To qualify as small and medium-sized enterprises, enterprises must satisfy the following conditions:

- They must have less than 250 employees.
- They must have an annual balance sheet total of less than DKK125 million or annual revenues of less than DKK250 million.

The above amounts are calculated on a consolidated basis (that is, all group companies must be taken into account).

Transactions between Danish affiliated entities are exempt from the documentation requirement unless one involved entity is subject to a special tax regime in Denmark.

Country-by-Country reporting. Entities belonging to a multinational group with a consolidated revenue above DKK5.6 billion

(EUR750 million) are subject to Country-by-Country (CbC) Reporting and notification obligations. Denmark generally follows the Organisation for Economic Co-operation and Development guidelines on CbC reporting.

The notification must be submitted by the Danish company or permanent establishment no later than 12 months after the last day of the reporting period (the entity's income year) to which the report relates. If there is more than one Danish entity in the group and these entities are subject to joint taxation in Denmark, the notification can be made by the appointed administrative entity of the Danish joint taxation group on behalf of all entities.

A surrogate or local filing of the CbC Report is required if there is no active agreement on automatic exchange of the report between Denmark and the country where the ultimate parent entity or another surrogate parent entity filing the report is tax resident.

F. Treaty withholding tax rates

Under Danish domestic law, no withholding tax is imposed on dividends paid to companies if both of the following requirements are satisfied:

- The shares are group shares or subsidiary shares (see Section B).
- A tax treaty between Denmark and the jurisdiction of residence of the recipient of the dividend provides that Denmark must eliminate or reduce the withholding tax on dividends, or the recipient is resident in an EU member state and falls within the definition of a company under Article 2 of the EU Parent-Subsidiary Directive (90/435/EEC) and the directive provides that Denmark must eliminate or reduce the withholding tax on dividends.

As a result, the reduced treaty rates on dividends in the table below might be eliminated under Danish domestic law.

Non-treaty jurisdictions	22	22	22

- (a) In general, all interest payments to foreign group companies are subject to a final withholding tax of 22%. Several exceptions exist (see Section B). As a result of these exceptions, in general, withholding tax is imposed only on interest payments made to group companies that would qualify as CFCs for Danish tax purposes or if the recipient is not considered to be the beneficial owner, according to the domestic interpretation. Effective from the 2006 income year, withholding tax on interest paid to individuals was abolished.
- (b) Under Danish domestic law, the rate is 0% for royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films, and for the use of, or the right to use, industrial, commercial or scientific equipment. Under a tax treaty, the general withholding tax rate for royalties of 22% can be reduced to 0%. Royalties paid to a company resident in another EU country are not subject to withholding tax if the provisions of the EU Interest/Royalty Directive are met and if the recipient is considered to be the beneficial owner according to the domestic interpretation.
- (c) The rate is 15% if the recipient is not a company owning at least 25% of the capital.
- (d) The rate is 15% if the recipient is not a company owning at least 10% of the capital.
- (e) The withholding tax rate is 0% if all of the following conditions are satisfied:
- The recipient directly owns at least 25% of the share capital of the payer for a period of 12 consecutive months that includes the date of the distribution of the dividend.
 - The dividend is not taxed in Greenland.
 - The recipient does not deduct the portion of a dividend distributed by it that is attributable to the Danish subsidiary.
- If the above conditions are not met, the withholding tax rate is generally 22%. However, the rate is 15% for dividends on unlisted portfolio shares (shares held by a person owning less than 10% of the company's shares).
- (f) The withholding tax rate is 0% if the recipient owns at least 50% of the share capital in the dividend distributing company and has invested more than EUR2 million in the dividend paying company. The withholding tax rate is 5% if the recipient owns at least 10% of the share capital in the dividend paying company and has invested more than EUR100,000 in the dividend paying company. The withholding tax rate is 10% in all other cases.
- (g) The rate is 22% for payments for the use of, or the right to use, trademarks.
- (h) Denmark honors the USSR treaty with respect to the former USSR republics. Armenia, Azerbaijan, Kazakhstan, Kyrgyzstan, Moldova, Tajikistan, Turkmenistan and Uzbekistan have declared that they do not consider themselves obligated by the USSR treaty. Denmark has entered into tax treaties with Estonia, Georgia, Latvia, Lithuania, the Russian Federation and Ukraine.
- (i) Denmark honors the Czechoslovakia treaty with respect to the Slovak Republic.
- (j) The rate is 15% if the recipient is not a company owning at least 20% of the capital of the payer and has invested at least EUR1 million in the capital of the payer.
- (k) The rate is 5% if the recipient is a company that owns at least 70% of the capital of the payer or has invested at least USD12 million in the capital of the payer. The rate is 10% if the recipient is a company owning at least 25%, but less than 70%, of the capital of the payer. For other dividends, the rate is 15%.
- (l) The rate is 10% if the recipient is not a company owning at least 25% of the capital of the payer.
- (m) The treaty does not cover Hong Kong.
- (n) The withholding tax rate for dividends is 0% if the recipient owns at least 10% of the share capital in the payer of the dividends for a continuous period of at least 12 months. If this condition is not met, the dividend withholding tax rate is 15%.
- (o) The rate is 20% if the recipient is not a company owning at least 25% of the capital of the payer.
- (p) The rate is 25% if the recipient is not a company owning at least 25% of the capital of the payer.
- (q) The rate is 30% if the recipient is not a company owning at least 25% of the voting power during the period of six months immediately preceding the date of payment.

- (r) The withholding tax rate for dividends is 0% if the recipient owns at least 10% of the share capital in the payer of the dividends for a continuous period of at least 12 months. If this condition is not met, the dividend withholding tax rate is 10%.
- (s) The rate is 5% if the recipient of the dividends is a company owning at least 25% of the capital of the payer.
- (t) The withholding tax rate for dividends is 0% if the recipient owns at least 10% of the share capital in the payer of the dividends for a continuous period of at least six months. If this condition is not met, the dividend withholding tax rate is 15%.
- (u) The rate applies if the recipient owns at least 25% of the share capital in the payer of the dividends for a continuous period of at least 12 months. If this condition is not met, the rate is 15%.
- (v) The rate applies if the recipient owns at least 25% of the share capital in the payer of the dividends for a continuous period of at least 12 months. If this condition is not met, the rate is 10%.
- (w) The rate is 15% if the recipient is not a company owning at least 25% of the voting power of the payer.
- (x) The rate is 20% if the recipient is not a company owning at least 25% of the voting power of the payer.
- (y) The rate is 15% if the recipient is not a company owning at least 10% of the shares of the payer. The 0% and 5% rates depend on applicable limitation-of-benefit tests.
- (z) The rate is 10% if the interest arising in a contracting state is determined by reference to receipts, sales, income, profits or other cash flow of the debtor or a related person; to any change in the value of any property of the debtor or a related person; to any dividend, partnership distribution or similar payment made by the debtor or a related person; or to any other interest similar to such interest arising in a contracting state, and if the beneficial owner of the interest is a resident of the other contracting state.

In addition to the double tax treaties listed in the table above, Denmark has entered into double tax treaties on savings, double tax treaties on international air and sea traffic, agreements on exchange of information in tax cases and agreements on promoting the economic relationship. The following are the jurisdictions with which Denmark has entered into such agreements:

- Double tax treaties on savings: Anguilla; Aruba; British Virgin Islands; Cayman Islands; Curaçao; Sint Maarten; Bonaire, Sint Eustatius and Saba (formerly part of the Netherlands Antilles); Guernsey; Isle of Man; Jersey; Montserrat; and Turks and Caicos Islands
- Double tax treaties on international air and sea traffic: Bermuda, British Virgin Islands, Cayman Islands, Guernsey, Hong Kong, Isle of Man, Jersey, Jordan, Kuwait and Lebanon
- Agreements on exchange of information: Andorra; Anguilla; Antigua and Barbuda; Aruba; Bahamas; Barbados; Belize; Bermuda; Botswana; Brunei Darussalam; Cayman Islands; Cook Islands; Costa Rica; Curaçao; Sint Maarten; Bonaire, Sint Eustatius and Saba (formerly part of the Netherlands Antilles); Czech Republic; Dominica; Gibraltar; Grenada; Guernsey; Isle of Man; Jamaica; Jersey; Liberia; Liechtenstein; Macau; Marshall Islands; Mauritius; Monaco; Montserrat; Netherlands; Niue; Panama; Qatar; St. Kitts and Nevis; St. Lucia; St. Vincent and the Grenadines; Samoa; San Marino; Seychelles; Turks and Caicos Islands; United Arab Emirates; Uruguay and Vanuatu
- Agreements on promoting the economic relationship: Aruba; Curaçao; Sint Maarten; and Bonaire, Sint Eustatius and Saba (formerly part of the Netherlands Antilles)

Agreements on exchange of information with respect to taxes have been proposed with Belgium, Greenland, Guatemala and Kuwait.

A. At a glance

Corporate Income Tax Rate (%)	27
Capital Gains Tax Rate (%)	27
Branch Tax Rate (%)	27 (a)
Withholding Tax (%)	
Dividends	10 (b)
Interest	10 (c)
Royalties	27 (d)
Other Dominican-source Income	27 (e)
Branch Remittance Tax	10
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) The Dominican Tax Regulations do not contemplate an exclusive or additional income tax for branches. Therefore, the standard corporate income tax rate applies.
- (b) This is a final withholding tax applicable to payments to both residents and nonresidents.
- (c) This is a final withholding tax applicable to payments to resident individuals and to nonresident individuals, companies and unincorporated business entities.
- (d) This withholding tax applies to royalty payments made to nonresident persons.
- (e) This withholding tax applies to payments to nonresident or non-domiciled entities or individuals. According to the local legislation, the following types of income, among others, are considered Dominican source income:
- Income from capital, assets or rights situated, placed or used economically in the Dominican Republic
 - Income derived from commercial, industrial, farming, mining and similar activities carried out in the Dominican Republic
 - Income from personal labor, the exercise of a profession or a job
 - Income from the exploitation of all types of industrial property or know-how
 - Income from technical assistance services, provided from abroad or within the Dominican Republic
 - Income from rental or leasing activities

B. Taxes on corporate income and gains

Corporate income tax. Resident corporations are subject to tax on their Dominican-source income and on their foreign-source income derived from investments and financial gains, such as dividends and interest from bonds acquired abroad.

A company is resident in the Dominican Republic if it is incorporated in the Dominican Republic.

A foreign company is considered domiciled in the Dominican Republic if it has its principal business or its effective management located in the Dominican Republic. Nonresidents operating through a permanent establishment are subject to income tax as companies incorporated in the Dominican Republic.

Corporate income tax rates. The corporate income tax rate is 27%.

Full exemptions or certain income tax credits usually apply to companies established in designated Free-Trade Zones (FTZs) or to companies to companies benefiting from other special incentive laws, including, among others, the Frontier Development Law (Law 12-21), the Tourism Development Law (Law 158-01, as amended by Law 195-13) and the Film Law (Law 108-10).

Asset tax. The annual asset tax is assessed at a rate of 1% on the assets registered in the taxpayer's accounting books.

The tax base is the net carrying value of the taxpayer's assets at the end of the fiscal year as indicated in the balance sheet, not adjusted by inflation and after applying depreciation, amortization and reserves for bad debt expenses. Investments in shares of another company, real estate used for agricultural exploitation and advance tax payments are excluded from the tax base. Corporate income tax is creditable against the asset tax. The asset tax is calculated in the annual income tax return.

For financial institutions, electricity companies, stockbrokers, pension fund administrators, investment fund administrators and securitization companies, the tax base for the asset tax is the total value of fixed assets (net of depreciation) according to the balance sheet at the end of the tax period.

Entities that benefit from corporate income tax exemptions based on special laws or public contracts approved by Congress are exempt from the asset tax.

Capital gains. Gains derived from direct and indirect transfers of assets or rights located or economically exploited in the Dominican Republic are taxable and subject to the capital gains tax rate of 27%. Under the Dominican Republic Tax Code, capital gains may arise from the transfer of shares, land or other capital assets possessed by taxpayers, regardless of whether the gains are connected to the taxpayers' businesses. The following assets are not considered capital assets:

- Commercial inventories or assets possessed principally for sale to clients in the ordinary course of business
- Depreciable assets
- Accounts or promissory notes acquired in the ordinary course of business for services rendered or derived from the sale of inventory assets or assets sold in the ordinary course of business

The capital gain tax base equals the difference between the transfer price of the assets and the cost of acquisition or production (adjusted for inflation).

Administration. In general, the tax year is the calendar year. However, companies may adopt a fiscal year ending on 31 March, 30 June or 30 September. The income tax return must be filed within 120 days after the end of the fiscal year.

All companies must make monthly income tax prepayments. For taxpayers that had an effective tax rate (ETR) in the preceding tax year that was lower or equal to 1.5%, each prepayment equals the amount resulting from applying the 1.5% rate to the gross income reported in the preceding fiscal year. Taxpayers with an ETR higher than 1.5% must make monthly prepayments corresponding to 1/12 of the income tax paid in the preceding fiscal year. The ETR is determined by dividing the income tax paid in the preceding fiscal year by the gross income of the same period.

Taxpayers can request up to a two-month income tax return filing extension.

Indemnity interest at a rate of 1.10% is charged monthly on outstanding balances of taxes due. In addition, a penalty of a 10% surcharge applies for the first month, and a 4% surcharge applies for each month or fraction of a month thereafter.

Noncompliance by the taxpayer with tax obligations may be subject to a penalty of 5 to 30 minimum wages.

In addition, a penalty equal to 0.25% of the income declared in the preceding fiscal year may be applied.

Dividends. Dividends (and all other types of distributions of earnings) are subject to a final withholding tax of 10%. Under the Dominican Tax Code and its regulations, a dividend is defined as any distributions of profits or reserves made by any type of corporation or entity to a shareholder, partner or participant. The following are included in the concept of dividends:

- Accounts receivable or similar arrangements that a corporation or entity has with its shareholders, members or participants, if they were not generated by a commercial transaction and if no principal or interest payments have been made in a period of more than 90 calendar days.
- Share capital reductions, if capitalized reserves and/or retained earnings exist, until these reserves and earnings accounts are exhausted. This does not apply to capital returns derived from the liquidation of the entity, whereby the first amounts distributed are deemed to be capital returns rather than the distribution of retained earnings.

In the case of an in-kind dividend distribution paid in stock, tax is not incurred at the time of distribution. The value of the shares received is determined by taking the acquisition value of all the new and old titles that the taxpayer owns after the distribution and allocating the amount actually paid among the number of titles that correspond.

Foreign tax relief. Foreign income tax paid on income derived from investments and financial gains abroad may be claimed as a credit against the income tax payable in the Dominican Republic. However, such credit is limited to the portion of Dominican Republic tax allocable to the foreign-source income subject to tax abroad.

C. Determination of trading income

General. Tax is imposed on taxable profits, which correspond to the accounting profits adjusted in accordance with the income tax law.

Expenses incurred to generate taxable income and preserve the source of such income are deductible on an accrual basis if properly documented. However, certain expenses are not deductible, including the following:

- Expenses not properly documented
- Unauthorized bad debt provisions
- Prior period tax adjustments
- Personal expenses
- Profits to be capitalized

In addition, the Dominican Tax Code contains interest deduction rules, which are described below.

Under Dominican Republic law, the deduction of interest depends on certain general and specific conditions.

The following are the general conditions for the deduction of interest:

- The interest should be related to the acquisition, maintenance and/or operation of taxable income-producing assets.
- Corporate entities should recognize interest expenses according to the accrual method of accounting.
- Expenses and costs, such as interest payments, must be supported by corresponding documentation (loan agreement and invoices).
- The loan and interest rates agreed between the parties must comply with the arm's-length principle.
- The 10% withholding tax applicable to the gross amount of such payments has been applied and paid to the Dominican Republic tax authorities.

In addition, if the payment exceeds DOP50,000 (approximately USD900), the payment must have been made through any of the means available in the financial industry (for example, wire transfers and checks).

Dominican Republic law provides the following specific limitations for the deduction of interest:

- A special anti-avoidance rule, which limits the interest deductible based on the effective tax rate of the interest recipient
- A thin-capitalization limitation, which limits the amount deductible to three times the ratio of the average of equity to the average of debt that generated such interest in a given year

Special industries. Rules applicable to special industries are outlined below.

Nonresident insurance companies. Nonresident insurance companies are taxed on a deemed income equal to 10% of their gross income (premiums) derived from insurance services rendered to resident or domiciled companies or individuals.

Transportation. Income derived from transportation services rendered by nonresident transportation companies from the Dominican Republic to other countries is deemed to equal 10% of the gross income derived from such services.

Others. Film distribution companies are taxed in the Dominican Republic based on a deemed income equal to 15% of their gross income derived from the distribution of foreign films. In addition, foreign communications companies are taxed on a deemed income equal to 15% of their gross income.

Inventories. In general, last-in, first-out (LIFO) is the approved method for valuing inventory. However, taxpayers may use other methods if previously approved by the tax authorities.

Provisions. In general, provisions are not deductible for income tax purposes. However, the Tax Code and income tax regulations provide for limited exceptions to this rule, including a provision for uncollectible accounts receivable. This provision is allowable as a deductible expense if it is calculated based on 4% of the accounts receivable balance at the close of the fiscal year and if the amount is authorized by the Tax Administration.

Provisions for gratifications, bonuses and other similar compensation items are deductible for income tax purposes if the amounts in the provisions are paid by the filing date of the income tax return.

Tax depreciation and amortization allowances. Depreciation is calculated using a variation of the declining-balance method. Intangibles, such as patents, models, drawings and copyrights, may be amortized using the straight-line method if they have a definite useful life.

Salvage value is not taken into account in calculating depreciation. The following are the generally applicable depreciation rates provided by law.

Asset	Rate (%)
Buildings	5
Light vehicles and office equipment, including computers	25
Other assets	15

Relief for losses. Losses generated by companies in the ordinary course of a trade or business may be carried forward for a five-year period. In each fiscal year, 20% of the total loss can be used to offset taxable income. However, in the fourth and fifth years, only 80% and 70%, respectively, of the total taxable income may be offset by the 20% loss carry forward. Losses derived from reorganizations are not deductible for income tax purposes. Net operating losses may not be carried back.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax; standard rate	18
Social security contributions	
Mandatory health contributions; imposed on salary up to a maximum amount of 10 legal minimum wages	
Employer	7.09
Employee	3.04
Mandatory pension contributions; imposed on salary up to a maximum amount of 20 legal minimum wages	
Employer	7.10
Employee	2.87
Government Training Institution (INFOTEP) contribution on the payroll amount; payable monthly by the employer	1
Labor risk contributions; payable by employer on salary up to a maximum amount of 4 legal minimum wages; rate varies according to the risk level of the company's activity	1.10 to 1.30
Workers' compensation insurance	Various
Telecom Tax; imposed on the consumption of telecom services by legal entities and individuals in the Dominican Republic; tax rate applied to gross payment	10
Tax on financial transactions; imposed on the value of checks and wire transfer transactions and on payments made to third parties (the tax applies even if the wire transfer is made to an account in the same bank)	0.0015

E. Miscellaneous matters

Foreign-exchange controls. The Central Bank of the Dominican Republic (Banco Central de la República Dominicana) has liberalized foreign-exchange controls. Only individuals and companies generating foreign currency from exports, services rendered and other specified activities are required to exchange foreign currency with the Central Bank through commercial banks. The Central Bank is not required to furnish foreign currency to satisfy demands for foreign payments. Individuals and companies may buy foreign currency from, or sell it to, commercial banks.

As of 25 January 2022, the exchange rate was USD1 = DOP57.92.

Transfer pricing. Transfer-pricing regulations apply to entities that perform transactions with the following:

- Nonresident "related parties"
- Resident "related parties"
- Individuals or entities domiciled or located in states with preferential tax regimes or low or no taxation (tax havens)

Under the transfer-pricing regulations, “related parties” include, among others, the following situations:

- One of the parties participates in the direct or indirect management, control or equity of the other.
- The same individuals or entities participate directly or indirectly in the management, control or equity of the parties.
- One of the parties transfers more than 50% of its production to the other, and at least one of them is resident or domiciled in the Dominican Republic.

Under the transfer-pricing regulations, the prices established in controlled transactions must comply with the arm’s-length principle, which means that the prices established among related parties should be agreed as if they were carried among independent parties, in comparable transactions and under the same or similar circumstances.

Taxpayers subject to the transfer-pricing regulations must comply with the following requirements:

- They must file a Transfer Pricing Tax Return. This return must be filed with the tax authorities within 180 days after the end of the fiscal year.
- They must conduct a transfer-pricing study in order to justify the prices used in intercompany transactions.

However, if taxpayers only carry on controlled transactions locally or if their controlled transactions do not exceed DOP13,229,946, they are not required to conduct a transfer-pricing study.

The Dominican tax authorities have the power to challenge the prices agreed between the related parties and adjust them, if the prices agreed result in lower taxation in the Dominican Republic or a deferral in the tax payment.

F. Treaty withholding tax rates

The following are the maximum withholding tax rates under the Dominican Republic’s double tax treaties.

	Dividends	Interest	Royalties
	%	%	%
Canada	18 (a)	18	18
Spain	10 (b)	10	10
Non-treaty jurisdictions	10	10	27

(a) Under the tax treaty with Canada, if the Dominican Republic enters into a treaty with another country in which the applicable income tax withholding rate for dividends is lower than the rate provided in the treaty with Canada that same tax treatment automatically applies to the treaty with Canada.

(b) Dividends paid to Spanish entities that hold 75% or more of the distributing entity’s capital are subject to a 0% tax.

Because of the frequent changes to the tax law in Ecuador in recent years, readers should obtain updated information before engaging in transactions.

A. At a glance

Corporate Income Tax Rate (%)	25 (a)
Capital Gains Tax Rate (%)	0 to 10 (b)
Branch Tax Rate (%)	25 (a)
Withholding Tax (%) (c)	
Dividends	10/14 (d)
Interest	25 (e)
Royalties	25
Technical Assistance	25
Services	25
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	5 (f)

- (a) Companies that reinvest their profits in Ecuador and use them to acquire assets for productive activities in Ecuador are entitled to a reduction of 10 percentage points in the corporate income tax rate on the reinvested amount (that is, the reinvested profits are taxed at 15%) if the company increases its capital stock and such increase is registered with the Commercial Register by 31 December of the fiscal year.
- (b) Capital gains tax on sales of tangible assets is not imposed in Ecuador. Gains derived from direct or indirect transfers of shares of Ecuadorian entities are subject to flat-rate income tax.
- (c) These withholding taxes are imposed on remittances abroad to non-domiciled companies and nonresident individuals. The withholding tax rates may be reduced under tax treaties. For further details concerning withholding taxes, see Section B.
- (d) For details, see Section B.
- (e) A 25% withholding tax is imposed on payments of interest to non-domiciled companies and nonresident individuals unless the interest is paid on loans granted by financial institutions, nonfinancial specialized entities registered with the Superintendence of Banks or multilateral institutions (Andean Corporation for Promotion, International Monetary Fund or World Bank). Thin-capitalization rules apply to the deductibility of interest paid to related parties (see Section E).
- (f) See Section C.

B. Taxes on corporate income and gains

Corporate income tax. Corporate income tax is levied on companies domiciled in Ecuador and on foreign companies. Companies domiciled in Ecuador include those incorporated in Ecuador and companies incorporated in foreign countries that have been approved as branches by the Superintendence of Companies after a legal proceeding. Companies incorporated in Ecuador are subject to tax on their worldwide income. Foreign companies are subject to tax on income derived from activities within Ecuador and from goods and assets located within Ecuador.

Rate of corporate tax. The standard rate of corporate income tax is 25%.

The corporate income tax rate is increased to 28% if either of the following conditions is met:

- The local entity has not reported the corporate structure (until the last individual ultimate beneficial owner) or partially reported it.
- An entity domiciled in a tax haven, low-tax jurisdiction or in a preferential-regime jurisdiction is in the corporate structure of the local taxpayer and its beneficial owner is an individual resident in Ecuador.

The 28% rate is applied to the tax base in proportion to the ownership affected by one of the events listed above. If this ownership is equal to or exceeds 50% of the local entity corporate capital, the 28% rate applies to the entire tax base.

Exporting, manufacturing or receptive tourism companies that reinvest their profits in Ecuador and use them to acquire assets for productive activities in Ecuador are entitled to a reduction of 10 percentage points in the corporate income tax rate on the reinvested amount (that is, the reinvested profits are taxed at 15%) if they retain the reinvested profits until 31 December of the tax year following the tax year in which the profits are earned.

Capital gains. Capital gains tax on sales of tangible assets is not imposed in Ecuador.

Gains derived from direct or indirect transfers of shares (and other capital representative rights) of Ecuadorian entities are subject to tax at a flat rate of 10%.

Indirect transfers are taxable if both of the following conditions are met:

- At any time during the tax year in which the transfer is performed, the real value of the shares of the Ecuadorian entity or permanent establishment represents directly or indirectly 20% or more of the real value of the nonresident company's shares.
- In the same fiscal year or 12 months before the transaction, the transfer of shares of the nonresident company by the same seller directly or indirectly corresponds to an aggregate amount exceeding 300 basic fractions of income tax for individuals (USD3,393,000 for the 2022 fiscal year). This amount is increased to 1,000 basic fractions of income tax for individuals (USD11,310,000 for the 2022 fiscal year) if the transaction does not exceed the 10% of the total share capital.

Under the above rule, the Ecuadorian entity whose shares were negotiated or transferred is considered the substitute for the taxpayer and, consequently, is responsible for the income tax payment.

This tax does not apply in the case of corporate restructures, mergers or spin-offs, provided that the beneficial owners of the shares do not change before and after the procedure.

Losses on transfers of shares between related parties are not deductible.

Administration. The fiscal year runs from 1 January to 31 December. No other closing dates are permitted, regardless of the date a business begins operations. Returns must be filed between 10 April and 28 April.

Companies have the option to make an advance payment equal to 50% of income tax from the preceding year, subtracting the withholdings made with respect to the taxpayer in that preceding year.

As a result, if no tax is payable for a fiscal year or the tax payable is lower than the advance payment, it is possible to file a refund petition for the income tax overpaid.

The penalty for late filing is 3% of the income tax due for each month or fraction of a month of the delay, up to a maximum of 100% of the tax due. Interest at the maximum legal rate, which floats, is levied on all increases in tax assessments from the date the tax was originally due to the date of payment.

Withholding taxes. A 25% withholding tax is generally imposed on the following payments abroad:

- Interest, royalties and payments for technical assistance to non-domiciled companies and nonresident individuals
- Payments to nonresident individuals for services rendered
- Payments to non-domiciled companies for professional services rendered abroad or occasional services rendered in Ecuador

Income tax withholding at a rate of 25% applies to all reimbursements of expenses abroad.

Income tax withholding at a rate of 35% applies to cross-border payments made to recipients in tax havens, low-taxation jurisdictions or preferential tax regimes.

Penalties are imposed for failures to comply with the withholding requirements. Withholding agents who deliberately fail to provide taxpayers, totally or partially, with tax withholding receipts are subject to imprisonment and fines.

Dividends. Dividends distributed to nonresidents after the payment of income tax are subject to an effective income tax or withholding tax of 10% (tax base of 40% taxed at a 25% rate). The effective rate is increased to 14% (tax base of 40% taxed at a 35% rate) if the local entity does not fulfill its obligation to report the corporate structure up to the final beneficiary. The rate may be reduced in accordance with an applicable treaty. If the effective beneficiary is an individual resident in Ecuador, a withholding tax is imposed at rates up to 25% according to a progressive table issued by the tax authorities.

For anticipated dividend distributions (before the annual income tax return), withholding tax at a rate equal to the corporate income tax rate is applied. This is a self-assessment methodology and the income tax paid is considered to be a tax credit for the local entity in its annual income tax return.

Foreign tax relief. Foreign income received by companies domiciled in Ecuador is taxable, and the amount of the withholding tax may be used as a tax credit up to the rate applicable in Ecuador depending on the type of income.

C. Determination of trading income

General. Taxable income is based on accounting profits after the corresponding tax reconciliation adjustments.

In computing taxable income, a company can deduct expenses incurred in producing income, including production and distribution costs, interest charges, royalty payments and depreciation. Also, employee profit-sharing distributions (15% of gross profit) can be deducted before computing taxes. Special provisions govern the computation of taxable income from the export of petroleum, air and maritime transportation, the banana sector and other agro-livestock activities that are subject to the single tax regime.

Expenses incurred abroad are generally deductible if corresponding taxes are withheld and if the payment constitutes taxable income for the recipient. The following cross-border payments are deductible subject to specified limitations:

- Payments for imports, including interest and financing fees, as provided in import licenses
- Export fees of up to 2% of the export value
- Interest paid to related parties that are subject to the thin-capitalization rules (see Section E)

- Payments under financial leases
- Indirect costs allocation (up to 5% of the total of the tax base and these costs)

Nondeductible expenses include the following:

- Interest paid on foreign loans, to the extent the interest rate exceeds the limit established by the Central Bank Board, and interest on foreign loans not registered at the Ecuadorian Central Bank
- Interest payments to related parties that exceed 20% of the earnings before interest, taxes, depreciation and amortization (EBITDA) of the local entity
- Losses on sales of assets between related parties
- Accounting provisions for the payment of eviction and employer retirement pensions
- Leasing payments with respect to leasebacks or trade with related parties

Inventories. Inventory is generally stated at cost (calculated using the average, first-in, first-out [FIFO] or actual methods). Inventory write-offs must be documented through a sworn statement that the inventory was destroyed or donated.

Tax depreciation and amortization. Depreciation and amortization expenses are deductible for income tax purposes. The tax law provides the following maximum straight-line depreciation rates applicable for tax purposes.

Asset	Rate (%)
Commercial and industrial buildings, aircraft and ships	5
Office equipment	10
Motor vehicles and trucks	20
Plant and machinery	10
Computers	33

For tax purposes, as a general rule, expenditures to acquire property and other assets that produce revenue must be amortized over at least 5 years, using a straight-line depreciation rate of 20%. Intangibles must be amortized over either the term of the relevant contract or a 20-year period.

The tax authorities may approve other methods and annual rates for depreciation and amortization.

Research and development expenses are generally written off over five years.

Relief for losses. Net operating losses may be carried forward and offset against profits in the following five years, provided that the amount offset does not exceed 25% of the year's profits. Loss carrybacks are not permitted.

Groups of companies. For tax purposes, no measures exist for filing consolidated returns and relieving losses within a group.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT); imposed on sales and commercial transactions, imports, rendering of services (including imported “digital services”) and intellectual property rights; principal products that are exempt are food products in their natural state, drugs and veterinary products, as well as additional products as a result of the COVID-19 pandemic; for VAT purposes, digital services are those provided and/or contracted through the internet or any adaptation or application of protocols, platforms or technology used by the internet or other networks, through which similar services are provided that, by their nature, are automated and require minimal human intervention, regardless of the device used for downloading, viewing or use; for digital services relating to the delivery and shipping of tangible movable goods, the tax is calculated on the commission paid in addition to the value of the goods; the payment of VAT generated on digital services supply is assumed by the Ecuadorian resident importer of the services	12
Outflow tax (OT); imposed on all cross-border payments or money transactions abroad, with or without the intervention of financial institutions, and monies deposited abroad through bank transfers, OT also applies to any form of termination of obligations and checks or wire transfers; tax is withheld at source; foreign banks operating in Ecuador must pay the tax monthly; the tax law provides that OT applies to payments made from foreign bank accounts of Ecuadorian entities if OT was not levied on the cash when it was initially transferred to the foreign bank account and to exports of goods and services if the cash does not enter Ecuador within six months after the goods arrive at their destination or the services begin to be rendered; OT paid on imports of raw materials, supplies and capital goods may be used as a tax credit for income tax purposes for the following five years if such goods are used in production processes and listed in a resolution issued by the Internal Revenue Service (IRS) of Ecuador	5
Temporary contribution; imposed on the net equity reported in the 2020 income tax return of all companies with more than USD5 million in assets; the contribution should be paid during 2022 and 2023; rate applied to all of he assets of the company	0.8

E. Miscellaneous matters

Foreign-exchange controls. All transactions in Ecuador must be conducted in US dollars.

Debt-to-equity rules. A thin-capitalization rule applies in Ecuador. Any interest paid on loans from related parties in excess of 20% of income before mandatory employee profit sharing, interest, depreciation and amortization is not deductible. For banks, insurance companies and other financial institutions of the popular- and solidarity-based economy (small financial entities that are not controlled by the Superintendence of Banks, but the Superintendence of the Popular and Solidarity Economy), the thin-capitalization rule applicable on loans from related parties is a 3:1 debt-to-equity ratio.

Free-trade zone. The signatories of the Andean Community or the former Andean Pact (Bolivia, Colombia, Ecuador and Peru) have entered into a free-trade agreement. However, Peru signed the agreement with some restrictions. Under the agreement, merchandise and goods manufactured in one of the signatory countries may enter the other signatory countries free of customs duties. All items imported from other countries are subject to a common external customs duty.

Transfer pricing. In general, transfer-pricing rules in Ecuador follow Organisation for Economic Co-operation and Development (OECD) rules, because they require fulfillment of the arm's-length standard. Nevertheless, the technical preferences of the IRS are quite specific and may imply significant differences when measuring compliance with the rules. Special rules apply to oil, bananas and metallic commodities.

In addition to traditional ownership-control criteria to determine relationships between parties, since 2008, the law considers companies related if they are domiciled in foreign jurisdictions listed as tax havens by the Ecuadorian IRS (87 jurisdictions) or if they are paying anywhere else a corporate income tax deemed as "low" by the IRS (as of 2020, the threshold is 15%).

Transfer-pricing information must be documented by all companies having transactions with related parties, including domestic ones. Companies must file their documentation with the IRS if certain conditions are met, as described below.

Income taxpayers that have carried out transactions with related parties during a fiscal year in an amount exceeding USD3 million must submit the Transfer Pricing Annex to the IRS.

Income taxpayers that have carried out transactions with related parties during a fiscal year in an amount that exceeds USD15 million must submit the Transfer Pricing Annex and the Transfer Pricing Comprehensive Report to the IRS.

Income taxpayers that do not meet the minimum amounts mentioned above must submit the Transfer Pricing Annex or the Transfer Pricing Comprehensive Report at the request of the IRS.

Transactions that are added up for purposes of the threshold include most balance-sheet movements.

Certain transactions (most of them are domestic if certain conditions are met) are not added up for purposes of the threshold and are not part of the compulsory Annex or Report, but their documentation may be requested at any time by the IRS.

The deadline to file the Transfer Pricing Annex and the Transfer Pricing Comprehensive Report is two months after the deadline for the filing of the corporate income tax return, which includes certain declarations on the total amounts of relevant related parties' transactions.

Taxpayers involved in transactions with related parties are exempt from the application of the transfer-pricing regime if they satisfy all of the following conditions:

- Their corporate income tax is higher than 3% of taxable income.
- They do not conduct business with residents in tax havens or lower-tax jurisdictions.
- They do not have contracts with government institutions for the exploration or exploitation of nonrenewable resources.

Transactions covered by an Advanced Pricing Ruling (APR) of the IRS do not need to be reported. APRs may be requested at any time and for any transaction, but they are commonly used to eliminate deductibility restrictions that the Ecuadorian tax law imposes on related-party transactions regarding administrative and technical services, royalties, consultancy, technical assistance and similar items.

F. Treaty withholding tax rates

Under an agreement with Bolivia, Colombia and Peru (the Andean Pact), income earned in those jurisdictions is generally not taxed in Ecuador to avoid double taxation. The withholding tax rates under Ecuador's bilateral treaties are shown in the following table.

	Dividends (a)	Interest	Royalties
	%	%	%
Belarus	5/10	10	10
Belgium	15	10	10
Brazil	0	15	15 (c)
Canada	5/15	15	10/15
Chile	5/15	4/15	10/15
China Mainland	0/5	0/10	0/10
France	15	10/15	15
Germany	15	15	15
Italy	15	0/10	5
Japan	5	0/10	10
Korea (South)	5/10	0/12	5/12
Mexico	0	0	25
Qatar	5/10	10	10
Romania	15	10	10
Russian Federation	5/10	10	10/15
Singapore	0/5	0/10	10
Spain	15	10/15	15
Switzerland	15	10	10
Uruguay	10/15	15	10/15
Non-treaty jurisdictions	10/14 (a)	25 (b)	25

- (a) Only 40% of distributed dividends (if paid from profits taxed at the corporate level) is taxable under Ecuadorian domestic law.
- (b) A 25% withholding tax is imposed on the payment of interest abroad unless the interest is paid on loans granted by financial institutions, specialized non-financial entities qualified by the control authorities in Ecuador or multilateral institutions.
- (c) Trademark royalties are taxed at a rate of 25%.

A. At a glance

Corporate Income Tax Rate (%)	22.5 (a)
Capital Gains Tax Rate (%)	
Sales of Securities	10/22.5 (a)(b)
Sales of Other Assets	22.5 (a)
Branch Tax Rate (%)	22.5 (a)
Withholding Tax (%)	
Dividends	10 (c)
Interest	20 (c)
Royalties from Patents, Know-how, etc.	20 (c)
Services	20 (c)
Branch Remittance Tax	10 (d)
Net Operating Losses (Years)	
Carryback	0 (e)
Carryforward	5

- (a) The standard corporate income tax rate is 22.5%. Exceptions to the 22.5% rate exist (see Section B).
- (b) For details regarding the 10% rate, see Section B.
- (c) This is the standard rate. The rate may be reduced to 5% under domestic law for dividends. It also may be reduced under a tax treaty. Exemptions may apply in certain circumstances. The tax is a final tax imposed on gross payments. Also, see Section B.
- (d) A branch remittance tax of 10% is payable within 60 days after the financial year-end.
- (e) Only losses incurred in long-term projects may be carried back to offset profits from the same project for an unlimited number of years.

B. Taxes on corporate income

Corporate income tax. Egyptian corporations are subject to corporate profits tax on their profits derived from Egypt, as well as on profits derived from abroad, unless the foreign activities are performed through a permanent establishment located abroad. Foreign companies performing activities through a permanent establishment in Egypt are subject to tax only on their profits derived from Egypt.

Rates of corporate income tax. The standard rate of corporate income tax is 22.5%.

Exceptions to the 22.5% rate exist. Oil prospecting and production companies are subject to tax on their profits at a rate of 40.55%. The Suez Canal Company, the Egyptian General Petroleum Company and the Central Bank of Egypt are subject to tax on their profits at a rate of 40%.

Capital gains

From the sale of securities by residents. The following rates apply to capital gains derived from the sale of securities by residents:

- A 10% rate applies to capital gains on securities listed on the Egyptian Stock Exchange that are sourced in Egypt and realized by individuals and corporations (suspended for listed securities until the end of December 2021; gains realized from 2022 are taxable).
- The standard corporate tax rate of 22.5% applies to capital gains on unlisted securities that are sourced in Egypt and realized by corporations, capital gains on securities realized abroad and capital gains on shares.

From the sale of securities by nonresidents. The following rates apply to capital gains derived from the sale of securities by nonresidents:

- Capital gains realized from the disposal of unlisted shares by nonresident corporations are subject to a 22.5% tax.
- Capital gains realized from the disposal of unlisted shares by nonresident individuals are subject to the tax brackets in Article 8 of Tax Law No. 91 of 2005, ranging from 0% to 25%.
- Capital gains realized from the disposal of listed shares or from the disposal of Treasury bills by nonresident individuals and corporations are exempt from tax.

From the sale of other assets. Tax on capital gains on other assets is calculated at the ordinary corporate profits tax rates in the same manner as ordinary business profits and is not calculated separately. Trading and capital losses derived from sales of other assets are deductible against taxable capital gains.

Administration. Companies must file their annual tax returns, together with all supporting schedules and the original financial statements, before 1 May of each year, or four months after the end of the financial year. The tax return must be signed (electronically) by the taxpayer. Taxpayers can file a request for an extension of the due date for filing the tax return if the estimated amount of tax is paid at the time of the request. A request for an extension must be filed at least 15 days before the due date. An extension of up to 60 days may be granted. An amended tax return can be filed during the year following the due date set for submitting the annual return, unless the taxpayer has evaded tax or received an inspection notification. If the amended return reflects lower tax due than the original return, the Egyptian Tax Authority (ETA) should review the amended return and approve the refund within six months from the date of application.

Any tax due must be paid when the tax return is filed.

A late penalty is imposed at a rate of 2% plus the credit and discount rate set by the Central Bank of Egypt in January of each year.

A penalty of EGP3,000 up to EGP50,000 is applicable on non-compliance with the deadline for submitting the annual corporate income tax return for a period not exceeding 60 days from the due date for the tax return.

A penalty from EGP50,000 up to EGP2 million is imposed if an annual corporate income tax return is filed more than 60 days after the filing due date. If the noncompliance occurs for three annual corporate income tax returns, the taxpayer may also be subject to imprisonment for a period between six months and three years.

The law has set up appeals committees at two levels — the Internal Committee and the Appeal Committee. The Appeal Committee's decision is final and binding on the taxpayer and the tax department, unless a case is appealed to the court within 30 days of receiving the decision, which is usually in the form of an assessment. There is a new level that enables taxpayers to settle their tax disputes by filing a settlement request to the ETA concerned for the disputed items, provided that the file is still under discussion and not yet held for the issuance of a decision by the Appeal Committee.

Dividends. Dividends paid by corporations or partnerships, including companies established under the special economic zone system, to resident juridical persons, nonresident persons, or nonresident juridical persons that have a permanent establishment in Egypt are subject to tax on dividends.

Tax on dividends is imposed at a standard rate of 10% without any deductions or exemptions. However, this rate can be reduced to 5% if the shares are listed.

Under the law, foreign branches' profits in Egypt are considered distributed profits within 60 days after the financial year-end. As a result, a branch must pay the dividend tax on its annual profits within 60 days after the financial year-end.

The tax law grants exemptions for investment funds.

Dividends in the form of free stocks are not subject to tax on dividends.

Withholding tax. In general, payments for all services performed by nonresident companies for Egyptian companies in or outside Egypt are subject to withholding tax at a rate of 20%. However, this withholding tax does not apply to payments related to the following activities:

- Transportation
- Shipping
- Insurance
- Training
- Participation in conferences and exhibitions
- Registration in foreign stock markets
- Direct advertising campaigns
- Hotel accommodation
- Services related to religious activities

Foreign tax relief. Foreign tax paid by resident entities outside Egypt can be deducted if supporting documents are available.

Treaties entered into between Egypt and other countries provide a credit for taxes paid abroad on income subject to corporate income tax in Egypt.

C. Determination of taxable income

General. Corporate income tax is based on taxable profits computed in accordance with generally accepted accounting principles, modified for tax purposes by certain statutory provisions primarily concerning depreciation, provisions, inventory valuation, intercompany transactions and expenses. Interest on bonds listed on the Egyptian stock exchange is exempt from tax if certain conditions are satisfied.

Taxable profits are based on actual revenues and costs. Consequently, unrealized revenues and costs are not included in the tax base.

Startup and formation expenses may be deducted in the first year.

The deductibility of a branch's share of head office overhead expenses is limited to 10% of the taxable net profit. The expenses charged within the limits of this percentage may not include any royalties, interest, commissions or direct remuneration, and a

certificate from the head office's auditor, duly endorsed and authenticated, must be submitted. Head-office expenses are fully deductible if they are directly incurred by the branch and are necessary for the performance of the branch's activity in Egypt. Such expenses must be supported by original documents and approved by the head office auditors.

Interest paid on loans and overdrafts with respect to a company's activities is deductible after offsetting interest income. Interest paid to individuals who are not subject to tax or exempt from tax is not deductible. Deductible interest is limited to the interest computed at a rate equal to twice the discount rate determined by the Central Bank of Egypt.

Inventories. Inventory is normally valued for tax purposes at the lower of cost or market value. Cost is defined as purchase price plus direct and indirect production costs. Inventory reserves are not permissible deductions for tax purposes. For accounting purposes, companies may elect to use any acceptable method of inventory valuation, such as first-in, first-out (FIFO) or average cost. The method should be applied consistently, and if the method is changed, the reasons for such change should be stated.

Provisions. Provisions are not deductible except for the following:

- Provision for up to 80% of loans made by banks, which is required by the Central Bank of Egypt
- Insurance companies' provision determined under Law No. 10 of 1981

Bad debts are deductible if the company provides a report from an external auditor certifying the following:

- The company is maintaining regular accounting records.
- The debt is related to the company's activity.
- The debt appears in the company's records.
- The company has taken the necessary action to collect the debt.

Depreciation and amortization allowances. Depreciation is deductible for tax purposes and may be calculated using either the straight-line or declining-balance method. The following are the depreciation rates.

Type of asset	Method of depreciation	Rate (%)
Buildings, ships and aircraft	Straight-line	5
Intangible assets	Straight-line	10
Computers	Declining-balance	50
Heavy machinery and equipment	Declining-balance	25
Small machinery and equipment	Declining-balance	25
Vehicles	Declining-balance	25
Furniture	Declining-balance	25
Other tangible assets	Declining-balance	25

The law allows a taxpayer to claim a deduction of 30% of the costs of new or used equipment and machines as accelerated depreciation if the assets are used for production purposes. This deduction applies only in the first tax period in which the equipment and machines are used.

Relief for losses. Tax losses may be carried forward for five years. Losses incurred in long-term projects may be carried back for an unlimited number of years to offset profits from the same project.

Losses incurred outside Egypt cannot be offset against taxable profits in Egypt.

If capital losses exceed capital gains realized from disposals of securities and shares in a tax year, the excess can be carried forward for three years.

Groups of companies. Associated or related companies in a group are taxed separately for corporate income tax purposes. Egyptian law does not contain a concept of group assessment under which group losses may be offset against profits within a group of companies.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax	Various
Customs duties	
General, ad valorem	Various
On value of machinery needed for investments by companies	5
Stamp duties on bills, promissory notes and letters of guarantee as well as most types of documents, contracts, checks and receipts (Treasury bonds and bills are exempt)	Various
Social insurance	
On monthly gross salary with a maximum of EGP9,400 and a minimum of EGP1,400; paid by	
Employer	18.75
Employee	11
On contract labor force	18.25

E. Miscellaneous matters

Foreign-exchange controls. Egypt has a free-market exchange system. Exchange rates are determined by supply and demand, without interference from the central bank or the Ministry of the Economy.

Debt-to-equity rules. Under the new tax law, the maximum debt-to-equity ratio is 4:1. If the debt exceeds such ratio, the excess interest may not be claimed as a deductible expense.

Transfer pricing. Egyptian tax law contains specific tax provisions relating to transfer pricing, which are based on the arm's-length principle. Under these measures, the tax authorities may adjust the income of an enterprise if its taxable income in Egypt is reduced as a result of contractual provisions that differ from those that would be agreed upon by unrelated parties.

However, according to Egyptian tax law, it is possible to enter into arrangements in advance with the Tax Department regarding a transfer-pricing policy through an advance pricing agreement (APA). An APA ensures that transfer prices will not be challenged

after the tax return is submitted and, accordingly, eliminates exposure to penalties and interest on the late payment of taxes resulting from adjustments of transfer prices.

The ETA in association with the Organisation for Economic Co-operation and Development (OECD), issued transfer-pricing guidelines in 2010. These guidelines advise taxpayers on the application of the arm's-length principle in pricing their intragroup transactions and outline the documentation that taxpayers should maintain as evidence to demonstrate their compliance with the arm's-length principle.

On 22 May 2018, the Egyptian government issued Ministerial Decree No. 221 of 2018, which amended the Income Tax Law Executive Regulations to align Egypt's rules more closely with the international consensus on transfer pricing reflected in the OECD transfer-pricing guidelines.

On 23 October 2018, the ETA issued a revised version of the 2010 transfer-pricing guidelines on its website. The new guidelines consist of the following two parts:

- Principles and Implementation
- Advance Pricing Agreements

The guidelines introduce a three-tiered transfer-pricing documentation approach and introduce the following significant new compliance obligations in Egypt:

- **Local file:** A taxpayer engaged in transactions with related parties is expected to prepare local transfer-pricing documentation and submit it to the ETA within two months following the filing of the 2018 corporate tax return.
- **Country-by-Country Report (CbCR):** An Egyptian parent company of a multinational group with consolidated group revenue of at least EGP3 billion (EUR148 million) must file a CbCR in Egypt. The submission deadline is 12 months from the end of the reporting fiscal year.
- **Master file:** The master file must be prepared at the ultimate parent level of the group and must be made available to the ETA based on the parent entity's tax return filing date in its home jurisdiction.

The APA program is designed to enable taxpayers and the ETA to agree on the proper treatment of the transfer pricing of potential controlled transaction(s) in which the taxpayer will engage for a specific period (typically more than one year) under certain terms and conditions. The APA program is intended to provide a cooperative process to resolve potential transfer-pricing disputes in advance.

The new guidelines provide the APA framework and other details regarding the APA program in Egypt.

On 19 October 2020, the Law No. 206 of 2020 was published in the Official Gazette. The law stipulates specific transfer-pricing penalties for noncompliance, thereby completing the transfer-pricing legislative framework. The penalty imposed by the Unified Tax Procedures Law is 1% of the total value of the related-party transactions that are not declared in the taxpayer's corporate income tax return. In addition, the law introduced a filing threshold for master and local files. Under the law, a

taxpayer must prepare and submit the master file and the local file if its aggregate related-party transactions exceed EGP8 million for the year.

However, Law No. 211 of 2020, which was published on 3 December 2020, amended some provisions of Law No. 206, introducing stricter penalties for noncompliance relating to transfer-pricing documentation. The following are the penalties:

- Failure to declare the accurate value of related-party transactions (Table 508) for corporate income tax returns due to be filed on or after 20 October 2020: 1% of the total value of the taxpayer's undeclared related-party transactions (local and cross-border transactions) during the fiscal year
- Failure to submit a master file or local file on time: 3% of the total value of the taxpayer's related-party transactions (local and cross-border transactions) during the fiscal year
- Failure to submit a CbCR (if the taxpayer is the ultimate parent entity of a multinational group) or notification (if the taxpayer is the constituent entity) on time: 2% of the total value of the taxpayer's related-party transactions (local and cross-border transactions) during the fiscal year

F. Treaty withholding tax rates

The table below sets forth maximum withholding rates provided in Egypt's double tax treaties for dividends, interest and royalties.

To benefit from the tax rates provided by double tax treaties with respect to dividends, interest and royalties, within six months after the date of receipt of the payment, a nonresident entity or its legal representative must submit to the tax authorities an application to apply the tax rate stated in the treaty and request a refund of the difference between the domestic rate and the treaty rate. The application must be submitted on the form designed for this purpose together with required documents.

Egypt signed up to be a member of the Base Erosion and Profit Shifting (BEPS) Inclusive Framework from 2016.

In addition, in 2017, Egypt signed the Multilateral Convention to Implement Tax Treaty Related Measures to Prevent BEPS (MLI). The MLI needs to be ratified by both treaty jurisdictions. The effective date of implementing the changes in relation to withholding tax rates under the updated conventions is 1 January 2021.

The following is the treaty withholding tax rate table.

	Dividends (a) (%)	Interest (%)	Royalties (%)
Albania	5/10	10	10
Algeria	5/10	5	10
Austria	5/10	15	0
Bahrain	5/10	10	10

Mauritius	5/10	10	12
Morocco	5/10	20	10
Netherlands	0 (f)	12	12
Norway			
From Norway	15	0	15 (or the domestic rate applied by Norway, whichever is lower)
From Egypt	5/10	20	15
Pakistan	5/10	15	15
Palestinian Authority	5/10	15	15
Poland	5/10	12	12
Romania	5/10	15	15
Russian Federation	5/10	15	15
Saudi Arabia	5/10	10	10

	Dividends (a) (%)	Interest (%)	Royalties (%)
Serbia and Montenegro	5/15 (g)	15	15
Singapore	5/10	15	15
South Africa	5/10	12	15
Spain	5/9	10	12
Sudan	5/10	10	10
Sweden	5	15	14
Switzerland	0	15	12.5
Syria	5/10	15	20
Tunisia	5/10	10	15
Turkey	5/10	10	10
Ukraine	5/10	12	12
United Arab Emirates	5/10 (h)	10	10
United Kingdom	5/10	15	15
United States	5/10	15	15
Yemen	According to agreed tax treatment between the two parties	10	10
Yugoslavia (b)	5/10	15	15
Non-treaty jurisdictions	5/10	20	20

(a) The rates depend on various conditions.

(b) The treaty with Yugoslavia applies to the republics that formerly comprised Yugoslavia.

(c) The 15% rate applies if the beneficial owner holds at least 25% of shares throughout a 365-day period that includes the day of the dividend payment. This is in accordance with the MLI because both Belgium and Egypt have approved the amendment. The 20% rate applies in all other cases.

(d) The 5% rate applies if the beneficial owner holds at least 20% of shares throughout a 365-day period that includes the day of the dividend payment. The 10% rate applies in all other cases.

(e) The 5% rate applies if the beneficial owner holds at least 25% of shares throughout a 365-day period that includes the day of the dividend payment. The 10% rate applies in all other cases.

(f) The 0% rate applies if the beneficial owner holds at least 25% of shares throughout a 365-day period that includes the day of the dividend payment. For other dividends, the domestic withholding tax rates should apply.

(g) The 5% rate applies if the beneficial owner holds at least 25% of shares throughout a 365-day period that includes the day of the dividend payment. The 15% rate applies in all other cases.

(h) The 5% rate applies if the beneficial owner holds at least 10% of shares throughout a 365-day period that includes the day of the dividend payment. The 10% rate applies in all other cases.

Egypt has signed double tax treaties with Armenia, Bangladesh, Kazakhstan, Mongolia, Oman, Senegal, Seychelles, the Slovak Republic, Sri Lanka, Tanzania, Thailand, Uganda and Vietnam, but these treaties have not yet been ratified. Tax treaty negotiations are under way with Congo (Democratic Republic of), Korea (North) and North Macedonia.

Net Operating Losses (Years)	
Carryback	0
Carryforward	0 (k)

- (a) For further details regarding the corporate income tax, see Section B.
- (b) For details, see Section B.
- (c) The withholding tax applies to interest received by individuals and companies on bank deposits. Interest paid between domiciled companies is not subject to withholding tax.
- (d) Withholding tax at a reduced 10% rate applies if the recipient of the interest is a financial institution supervised in its country of origin and registered with the Central Reserve Bank of El Salvador. If an interest payment is made to a non-domiciled entity that is not registered with the Central Reserve Bank of El Salvador and not domiciled in a tax-haven jurisdiction, a 20% withholding tax applies. If an interest payment is made to a non-domiciled entity that is not registered with the Central Reserve Bank of El Salvador and domiciled in a tax-haven jurisdiction, a 25% withholding tax applies. Amounts paid or credited to non-domiciled legal entities or individuals who are resident, domiciled or incorporated in tax-haven jurisdictions (or paid through legal entities resident, domiciled or incorporated in such jurisdictions) are subject to a 25% withholding tax. Exceptions apply to the following types of payments:

- Payments for acquisitions or transfers of tangible assets
 - Payments to taxpayers in tax-haven jurisdictions located in Central America that have signed cooperation agreements with Salvadoran tax and customs authorities
 - Payments to taxpayers in tax-haven jurisdictions that have signed with El Salvador information exchange agreements or double tax treaties
 - Payments under circumstances in which reduced withholding tax rates apply
- If the recipient does not file an annual income tax return, the withholding tax is presumed to be a payment in full of the income tax on the interest income.
- (e) The withholding tax is imposed on payments to foreign companies and individuals for services rendered or used in El Salvador, as well as on payments for the transfer of intangible assets. If the recipient does not file an annual income tax return, the withholding tax is presumed to be a final tax. Amounts paid or credited to non-domiciled legal entities or individuals who are resident, domiciled or incorporated in tax-haven jurisdictions (or paid through legal entities resident, domiciled or incorporated in such jurisdictions) are subject to a 25% withholding tax. Exceptions apply to the following types of payments:
- Payments for acquisitions or transfers of tangible assets
 - Payments to taxpayers in tax-haven jurisdictions located in Central America that have signed cooperation agreements with Salvadoran tax and customs authorities
 - Payments to taxpayers in tax-haven jurisdictions that have signed with El Salvador information exchange agreements or double tax treaties
 - Payments under circumstances in which reduced withholding tax rates apply
- The 20% rate applies to royalties from know-how and technical services paid to non-domiciled entities that are not domiciled in tax-haven jurisdictions.
- (f) The withholding tax is imposed on payments to non-domiciled persons or entities for transfers of intangible assets or for the use, or grant of use, of rights over tangible and intangible assets related to cinematographic movies, video tapes, phonographic discs, radio serials, television serials, serials and strips reproduced by any means, video and track records, and television programs transmitted by cable, satellite or other similar media. If the recipient does not file an annual income tax return, the withholding tax is presumed to be a final tax.
- (g) The withholding tax is imposed on payments to foreign companies and individuals for international transportation services. If the recipient does not file an annual income tax return, the withholding tax is presumed to be a final tax.
- (h) The withholding tax is imposed on payments to non-domiciled insurance and reinsurance companies and reinsurance brokers, authorized by the Superintendent of the Financial System. If the recipient does not file an annual income tax return, the withholding tax is presumed to be a final tax.
- (i) A withholding tax rate of 3% applies to income derived from capital invested in securities, or transactions in securities, shares and other investments in the Salvadoran securities market (primary or secondary).
- (j) A withholding tax rate of 5% applies to amounts paid or credited in capital or equity reductions, in the portion corresponding to capitalization or reinvestment of profits. For this purpose, the amounts paid or credited by the decrease of equity or capital corresponds to previously capitalized amounts.
- (k) Capital losses can be carried forward to offset capital gains for a period of five years, provided that the losses have been reported in previously filed tax returns.

B. Taxes on corporate income and gains

Corporate income tax. Resident corporations are subject to tax on Salvadoran-source income and on certain types of foreign investment income. Nonresident corporations are subject to tax on Salvadoran-source income only. As a result, resident and nonresident taxpayers are subject to income tax on income derived from the following:

- Movable and immovable property in El Salvador
- Activities carried out in El Salvador
- Services rendered by domiciled and non-domiciled entities that are used in El Salvador

Taxable foreign investment income derived by resident corporations includes income, capital gains, profits, or interest derived

from securities, financial instruments, and derivative contracts if any of the following conditions are met:

- The issuing entity is a national entity or domiciled in El Salvador.
- The capital is invested or employed in El Salvador.
- The risk assumed is placed or located in El Salvador.

Foreign investment income earned by a legal entity that is domiciled in El Salvador or that is considered a domiciled establishment or branch for Salvadoran tax purposes is taxable.

Income derived from interest, premiums and other earnings from deposits abroad paid by non-domiciled financial institutions to domiciled legal entities must always be declared to the Salvadoran tax authorities even if they have been subject to income tax or other similar taxes abroad. Taxes paid abroad can be credited according to the rules provided by Salvadoran law.

Corporate income tax rate. The standard rate of income tax is 30% for Salvadoran companies, foreign companies with a permanent establishment in El Salvador and non-domiciled companies. However, companies that have sales equal to or less than USD150,000 are subject to a 25% income tax rate.

Capital gains. Capital gains derived from the sale of movable and immovable property are subject to income tax at a rate of 10%. However, if the asset is sold within 12 months after acquisition, the capital gain is subject to tax at a rate of 25% or 30% of net income.

Companies may carry forward capital losses for a five-year period to offset future capital gains only.

The capital gain or loss on a transaction is computed by deducting from the sales price the following:

- Cost of the asset, which equals the purchase price less allowable depreciation claimed under the income tax law
- Improvements made to the asset
- All selling expenses necessary to complete the transaction

Administration. The statutory tax year runs from 1 January through 31 December. Companies must file annual income tax returns and pay any tax due within four months after the end of the tax year.

Companies with total assets of SVC10 million (approximately USD1,142,857) or more, or with gross income of more than 4,817 minimum wages (USD1,758,205), must file an annual tax certification of their tax obligations. This certificate is issued by an external certified public accountant (CPA) who is authorized by the CPA Surveillance Council.

Dividends. Domiciled entities in El Salvador that pay to, or register profits for, domiciled or non-domiciled entities or individuals must withhold income tax at a 5% rate. This serves as a definite income tax payment. Payment or registration of profits can be made in various forms, including, among others, payments in cash or securities and in-kind payments, regardless of whether they are considered dividends, quotas, excess payments, legal reserves, profits or earnings.

The above obligation also applies to representatives of parent companies, affiliates, branches, agencies and other permanent

establishments that pay or credit profits to domiciled entities or individuals abroad.

Notwithstanding the above, if payments are made to an entity or individual domiciled or resident in a tax-haven jurisdiction, a 25% withholding tax rate applies.

Withholding tax on loans. Legal entities or entities without legal capacity domiciled in El Salvador that remit cash or in-kind assets as loans or advance remittances or engage in other types of loan operations must withhold tax at a rate of 5% of such amounts if the amounts are remitted to any of the following:

- Partners, shareholders, associates, beneficiaries, and other related parties according to Section 25 of the Income Tax Law (for example, spouses and relatives in the fourth degree of consanguinity or second degree of kinship)
- Entities or individuals domiciled or resident in a tax-haven jurisdiction
- Parent companies or branches domiciled abroad

Certain exceptions apply, such as to loans with a market value interest rate or a one-year term and to supervised financial institutions.

Foreign tax relief. In general, relief is granted in El Salvador for foreign taxes paid with respect to certain types of investment income earned abroad. Also, see Section F.

C. Determination of trading income

General. Taxable income is computed in accordance with adopted Financial Information Standards in El Salvador (International Financial Reporting Standards), subject to adjustments required by the Salvadoran income tax law. The Salvadoran income tax law requires the use of the accrual method of accounting.

Taxable income includes all income derived from the following:

- Assets located in El Salvador
- Activities or transactions carried out in El Salvador
- Capital invested in El Salvador
- Services rendered in El Salvador and services rendered outside El Salvador that are used in El Salvador
- Certain types of investment income (see Section B)

In general, all costs and expenses necessary to produce and preserve taxable income are deductible for income tax purposes, provided all legal deductibility requirements are met.

Imputed income. The Salvadoran income tax law does not contain rates and formulas for calculating imputed income. However, the tax authorities may determine taxable income based on certain information, including the following:

- Investments made during the tax year
- Equity fluctuations
- Transactions and profits recorded in previous tax years
- Purchases and sales
- Value of imported goods

- Value of inventories
- Purchases not recorded
- Performance of similar businesses
- General expenses

Inventories. Salvadoran income tax regulations provide that inventories may be valued at acquisition cost. The cost may be calculated using certain methods, such as first-in, first-out (FIFO), last purchase cost and average cost, as well as special methods established for agricultural products and cattle. The income tax law provides that inventories can be valued by other methods if authorization from the tax authorities is obtained before the method is implemented.

Provisions. Provisions for contingent liabilities, such as severance payments and labor costs, are not deductible expenses. However, payments of such liabilities are deductible expenses. Amounts for doubtful accounts may be deducted if certain legal requirements are satisfied.

Tax depreciation and amortization

Depreciation. The acquisition cost of products with a useful life of 12 months or less may be fully deducted from taxable income in the year of acquisition. Property with a useful life of more than 12 months may be depreciated using the following straight-line rates.

Asset	Rate (%)
Buildings	5
Machinery	20
Vehicles	25
Other movable property	50

Only a portion of the acquisition cost of used machinery and movable property may be deducted for tax purposes. The deductible percentages, which are based on the asset's life, are shown in the following table.

Asset's useful life Years	Deductible percentage (%)
1 but less than 2	80
2 but less than 3	60
3 but less than 4	40
4 or more	20

The useful life of a used asset is determined when the asset is purchased. The depreciable portion of the acquisition cost is calculated according to the normal depreciation rules.

Tax amortization. The acquisition cost or development cost of software programs used to produce and preserve taxable income may be amortized at an annual rate of up to 25% of the cost of development or acquisition. The deductible percentages applicable to used machinery (see above) also apply to used software programs.

Relief for losses. Net operating losses may not be carried forward or back to offset taxable income.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax; transfers of incorporeal assets or of fixed assets that have been used for four years or more are not subject to transfer taxes	13
Real property transfer tax; tax imposed on value of real property with respect to the amount that exceeds SVC250,000 (approximately USD28,571)	3
Customs duties	Various
Social contributions; paid by employer	
Prevention system (this system provides pensions and certain other benefits); on salaries up to SVC56,875 (USD6,500)	7.75
Social security; on salaries up to SVC8,750 (USD1,000)	
Maternity, sickness and professional risks	7.5
Professional training	1

E. Foreign-exchange controls

The currencies in El Salvador are the colon (SVC) and the US dollar. Since 2001, all transactions and operations in El Salvador can be carried out and denominated in colons or US dollars. The permanent exchange rate in El Salvador is SVC8.75 = USD1.

No restrictions are imposed on foreign-trade operations or foreign-currency transactions.

F. Tax treaties

El Salvador's only tax treaty in force is with Spain. The treaty is based on the Organisation for Economic Co-operation and Development model, with some minor differences.

In Spain, the treaty applies to income tax on individuals, income tax on corporations, income tax for nonresidents, net worth tax, and local income tax and net worth tax. In El Salvador, the treaty applies to income tax.

For dividends, interest and royalties paid by companies domiciled in one signatory country to residents of the other signatory country, the treaty provides for maximum tax rates in the source country of 12% for dividends and 10% for interest and royalties. If certain conditions are met, the tax rate for dividends may be reduced to 0%. The treaty also provides for a maximum rate of 10% in the source country for services, unless the individual or company that accounts for the income has a permanent establishment in the country in which the services are rendered.

The tax law in Estonia has been frequently amended, and further changes are likely to be introduced. Because of these frequent changes, readers should obtain updated information before engaging in transactions.

A. At a glance

Corporate Tax Rate (%)	0/14/20 (a)
Capital Gains Tax Rate (%)	0/14/20 (b)
Branch Tax Rate (%)	14/20 (a)
Withholding Tax (%) (d)	
Dividends	0/7 (c)
Interest	0/20 (d)
Royalties	0/10/20 (e)

Rental Payments	20 (f)
Services	0/10/20 (g)
Salaries and Wages	20

- (a) Resident companies and permanent establishments of nonresident companies are not subject to tax on their income. They are subject only to tax at a rate of 20% on the gross amount of distributed profits and certain payments made. The tax rate is applied to the net taxable amount divided by a specified percentage. A lower income tax rate of 14% is applied to regular dividends. For further details, see Section B.
- (b) Resident companies and permanent establishments of nonresident companies are not subject to tax on their capital gains received. They are subject only to tax at a rate of 14% or 20% on the gross amount of distributed profits. Nonresident companies without a permanent establishment in Estonia are subject to tax at a rate of 20% on their capital gains derived from Estonian sources. For further details, see Section B.
- (c) Withholding tax is not imposed on dividends paid to companies. Dividends are subject to 20% (or 14% in certain cases) corporate income tax at the level of the resident distributing companies only. Withholding tax at a rate of 7% is imposed on certain profit distributions to individuals. For further details, see Section B.
- (d) Interest payments are generally exempt from withholding tax. Withholding tax at a rate of 20% is imposed on interest paid to resident individuals (including payments made by contractual investment funds on the account of the funds). Interest paid to nonresidents as a result of ownership of contractual investment funds is subject to a 20% withholding tax if more than 50% of the assets owned (directly or indirectly) by the fund during a two-year period preceding the date of the interest payment is real estate located in Estonia and if the interest recipient has at least 10% ownership in the contractual investment fund at the moment of receiving the interest. Withholding tax is not imposed on interest paid from the profits of contractual investment funds if the profits have already been taxed.
- (e) Withholding tax at a rate of 10% is imposed on payments to nonresident individuals and companies. Royalties paid to companies resident in other EU countries or Switzerland are not subject to withholding tax if the provisions of the EU Interest-Royalty Directive are satisfied. A 20% withholding tax is imposed on payments to resident individuals.
- (f) Withholding tax at a rate of 20% is imposed on payments to resident individuals and nonresidents.
- (g) The 20% rate applies to payments to nonresidents from low-tax jurisdictions (a low-tax jurisdiction is a jurisdiction that does not impose a tax on profits or distributions or a jurisdiction in which such tax would be less than $\frac{1}{3}$ of the Estonian tax payable by resident individuals on a similar amount of business income). The 10% rate applies to payments to other nonresidents for services rendered in Estonia. A 0% rate may apply under double tax treaties.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies (except for limited partnership funds) and permanent establishments of nonresidents are not generally subject to tax on their income (see below an exception in the case of exceeding borrowing costs and controlled foreign company [CFC] income). They are subject to tax on the following payments made to resident legal entities, nonresident companies, resident individuals and nonresident individuals:

- Dividends
- Fringe benefits
- Gifts
- Donations
- Business entertainment expenses
- Distributions of profits
- Payments not related to the business of the payer

Income tax is charged annually on exceeding borrowing costs of resident companies and permanent establishments of

nonresidents (except for financial institutions) to the extent they exceed losses if such costs amount to at least EUR3 million and if they exceed 30% of the company's earnings before interest, tax, depreciation and amortization (EBITDA).

Income tax is charged annually on resident companies and permanent establishments of nonresidents' income from controlled foreign companies (CFCs) if the income was derived from fictitious transactions of which the main purpose was to obtain a tax advantage using assets and taking risks related to controlling company key employees. The rule does not apply to resident companies if the CFC financial year profit does not exceed EUR750,000 and other business income does not exceed EUR75,000.

The exceeding borrowing cost and taxable CFC income must be reported by the 10th day of the 9th month following the financial year. The tax is payable by the same deadline.

Resident companies are companies registered (effectively the same as incorporated) in Estonia. European public limited liability companies and European Cooperative Societies that have their registered office in Estonia are deemed to be Estonian tax residents. Nonresident companies without a permanent establishment in Estonia are subject to tax on their business income derived from Estonia.

Tax rates. Resident companies are subject to tax on the payments described in *Corporate income tax* at a rate of 20% of the gross amount of the payments. To calculate the corporate income tax for 2019, the tax rate is applied to the net taxable amount divided by 0.8.

Beginning with 2019, a lower income tax rate of 14% is applied to regular profit distributions. A regular profit distribution is the amount of the company's last three years' average dividend that is subject to tax in Estonia. The 20% tax rate is applied to the dividend amount exceeding the regular profit distribution. The dividend paid in 2018 is the first amount to be included in the three-year average calculation.

To calculate the corporate income tax on a regular dividend, the tax rate of 14% is applied to the net taxable amount divided by 0.86.

A 20% rate applies to income derived by nonresident companies without a permanent establishment in Estonia.

Tax incentive for shipping. On 16 December 2019, the European Commission approved the Estonian Tonnage Tax scheme under the European Union (EU) state-aid rules. The Tonnage Tax scheme is effective from 1 July 2020 and is available for resident shipping companies engaged in the international carriage of goods or passengers, and listed ancillary activities carried out with the eligible vessels.

Activities by tugboats and dredgers outside ports and Estonian territorial waters are eligible for the Tonnage Tax regime under certain conditions. Ship managers may also benefit from the Tonnage Tax scheme with respect to income derived from ship management activities.

Capital gains. Capital gains derived by resident companies and permanent establishments of nonresident companies are exempt from tax until they are distributed.

Nonresident companies without a permanent establishment in Estonia are taxed at a rate of 20% on their capital gains derived from Estonian sources.

Capital gains derived from sales of shares and securities by non-residents are exempt from tax. However, if the shares of a company, contractual investment fund or other pool of assets are sold by a nonresident with at least a 10% holding and if at the time of the sale or at any other time during the two preceding years, real estate and buildings directly or indirectly accounted for 50% or more of the assets of the company, capital gains derived from the sale of the shares are taxable.

If a resident company is deleted from the Estonian commercial register without liquidation and its economic activities are ended, the holding of a nonresident in the company is taxed as a capital gain, which is equal to the market value of the holding less the acquisition cost. The taxation is postponed if economic activities are continued through another resident company or a permanent establishment remains in Estonia.

Administration. The tax period is a calendar month. Tax returns must be filed and income tax must be paid by the 10th day of the following month.

Advance rulings. Taxable persons may apply for advance rulings from the tax authorities. Advance rulings may relate only to actual planned transactions, as opposed to theoretical questions. The advance ruling is binding on the tax authorities and recommended for the taxable person. The taxable person must inform the tax authorities of the execution of the transaction described in the advance ruling. A time limit for the binding nature of the ruling is set based on the taxpayer's evaluation of the time needed for the execution of the transaction.

The processing of the advance ruling may be suspended if a similar transaction is simultaneously being reviewed in challenge proceedings (administrative proceedings involving a dispute between the taxpayer and the tax authorities) or court proceedings and if the expected decision in such proceedings is crucial for the determination of the tax consequences. Advance rulings may not be issued with respect to the determination of transfer prices (determination of value of transactions between related parties).

For the advance ruling to be binding, the taxpayer must present detailed and accurate information before the beginning of the relevant transactions. If the tax laws are amended after the advance ruling has been issued but before the transaction is carried out, the advance ruling is no longer binding. The deadline for issuing an advance ruling is 60 calendar days beginning with the date of acceptance of the application. By a motivated decision (a decision that includes arguments supporting the decision) in writing, the deadline may be extended for an additional 30 calendar days. A state fee is payable for the processing of the advance-ruling application.

A summary of the ruling, except for information protected by the tax secrecy clause (the tax authorities are bound to maintain the confidentiality of information concerning a taxpayer that was acquired in the course of their activities; certain exceptions apply), is published on the tax authorities' web page. The taxable person may prohibit the disclosure of specific information.

Reporting of intragroup loans. Resident companies and the permanent establishments of nonresidents (except public limited funds and credit institutions) are required to report the following information on loans granted to other group companies:

- Amount of the loan
- Increase in principal balance
- Extension of term or change of other material terms

The reporting must be done on a quarterly basis.

Dividends. Withholding tax is not generally imposed on dividends paid. A 7% withholding tax is imposed on dividends paid to individuals if the corporate income tax of 14% has been paid by an Estonian company on the share of profits out of which the dividends are paid. Payers of dividends must pay corporate income tax at a rate of 20% or 14% on the gross amount of dividends paid. This income tax is treated as a payment of income tax by the distributing company and not as tax withheld from the recipient of the dividends.

Dividends received are not included in taxable income (see *Foreign tax relief*).

The following payments are also taxable as dividends at the level of the company:

- Decrease of share capital (if the decrease exceeds paid-in equity capital)
- Redemption of shares and the payment of liquidation proceeds in an amount that exceeds the monetary and non-monetary payments made into the equity capital

Interest. Interest payments are generally exempt from withholding tax. Withholding tax at a rate of 20% is imposed on interest paid to resident individuals (including payments made by contractual investment funds on the account of the funds). Interest paid to nonresidents as a result of ownership of contractual investment funds is subject to a 20% withholding tax if more than 50% of the assets owned (directly or indirectly) by the fund during a two-year period preceding the date of the interest payment is real estate located in Estonia and if the interest recipient has at least 10% ownership in the contractual investment fund at the moment of receiving the interest. Withholding tax is not imposed on interest paid from the profits of contractual investment funds if the profits have already been taxed.

Foreign tax relief. Dividends distributed by an Estonian company and a permanent establishment of a foreign company that had received dividends from a foreign company (except from a company located in a low-tax jurisdiction) are exempt from income tax if the following conditions are satisfied:

- The dividends are received from a taxable company resident in the European Economic Area (EEA) or Switzerland, or foreign

tax has been paid on or withheld from the profits out of which the dividends were paid.

- The Estonian company receiving the dividends owns at least 10% of the shares or votes of the foreign company when the dividends were received.
- The transaction or a chain of transactions is actual (a transaction or a chain of transactions is not actual if its primary purpose or one of its primary purposes is to obtain a tax advantage), and the distributing subsidiary cannot deduct the distributed profits. The tax exemption applies to the extent that a transaction or a chain of transactions is carried out for business purposes, the economic content of which is necessary and appropriate for the business activities in question.

The following profits are also exempt from tax:

- Profits allocated to a permanent establishment of an Estonian company in an EEA country or Switzerland
- Profits allocated to a permanent establishment of an Estonian company in another foreign country if foreign tax has been paid on the profits

Profits received from a permanent establishment by an Estonian resident company remain exempt if a transaction or a chain of transactions is actual (a transaction or a chain of transactions is not actual if its primary purpose or one of its primary purposes is to obtain a tax advantage).

Any foreign tax paid or withheld can be credited by an Estonian company against income tax payable on dividend distribution.

C. Determination of trading income

Because resident companies and permanent establishments of nonresident companies registered with the Estonian authorities are not subject to tax on their income, they do not need to determine their trading income for tax purposes.

Profits of Estonian contractual investment funds from immovable property are taxed immediately when profits are earned.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on goods and services, excluding exports	9/20
Social security tax	33
Mandatory funded pension contributions	2
Land tax	0.1 to 2.5
Unemployment insurance contributions (2022 rates); paid by	
Employer	0.8
Employee	1.6

Other significant taxes include excise duty, stamp duties, heavy vehicles tax, charges on the use of Estonian natural resources and pollution charges.

E. Miscellaneous matters

Foreign-exchange controls. The official currency in Estonia is the euro (EUR).

Enterprises registered in Estonia may maintain bank accounts abroad without any restrictions.

Debt-to-equity rules. In certain cases, exceeding borrowing costs of resident companies and permanent establishments of nonresidents are subject to corporate income tax. See *Corporate income tax* in Section B.

Anti-avoidance legislation. Under the Taxation Act, if it is evident from the content of a transaction or act that the transaction or act is performed for the purposes of tax evasion, the actual economic substance of the transaction applies for tax purposes. If a fictitious transaction is entered into in order to conceal another transaction, the provisions of the concealed transaction apply for tax purposes. Also, see *Foreign tax relief* in Section B.

Under the general anti-avoidance rule contained in the Income Tax Act, a transaction (or chain of transactions) is not considered for income tax purposes if the main purpose or one of the main purposes of the transaction is obtaining a tax advantage that is contrary to the purpose of the tax law or an international agreement and that is fictitious. A transaction (or chain of transactions) is considered to be fictitious if it is not done for actual vital or business purposes that reflect the economic substance of the transaction.

Exit tax. From 2020, an exit charge at the rate of 20% is imposed on the unrealized capital gains created in Estonia arising from transferring assets to a foreign permanent establishment or moving the tax residency of the company out of Estonia. The exit tax base is calculated as the difference between the fair-market value and the book value of the respective assets. The following assets are excluded from exit tax:

- Assets in regard to the financing of securities
- Collateral assets
- Assets moved to meet prudential requirements or manage liquidity
- Assets that are reverted to Estonia within 12 months

Hybrid mismatches. The rules against hybrid mismatches are effective from 1 January 2020. The rules cover double non-taxation caused by differences in the characterization of financial instruments, payments and entities for tax purposes in different jurisdictions, or the allocation of payments between the head office and permanent establishments. To eliminate double non-taxation or deduction without inclusion into taxable income, income tax is imposed on the relevant payment or cost, or exemption is denied for income that has been deducted or exempted in another jurisdiction.

Transfer pricing. Under a transfer-pricing measure in the income tax law, pricing between resident and nonresident associated companies should be at arm's length. The tax authorities may

adjust to an arm's-length amount the profit of a company engaging in transactions with nonresident associated persons. Persons are considered associated if they have a common economic interest or if one person has a prevalent influence over another person. The transfer-pricing measure also covers transactions between nonresident legal entities and their permanent establishments in Estonia. Transfer-pricing documentation is required for the following entities:

- Entities with more than 250 employees (together with related parties)
- Entities operating in certain industries
- Entities that had turnover, including the turnover of related parties, of at least EUR50 million in the preceding financial year
- Entities that had consolidated net assets of at least EUR43 million in the preceding financial year
- Parties to a transaction if one of the parties is a resident of a low-tax jurisdiction

Country-by-Country Reporting. Estonia has implemented legislation requiring the parent undertakings of multinational enterprises (MNEs) with a consolidated turnover of at least EUR750 million to submit to the tax authorities' annual groupwide reports for each entity and jurisdiction in which the MNE group operates (Country-by-Country Reporting). The report is due on 31 December of the year following the end of the financial year. Notification about the MNE group and the reporting entity is required to be submitted within six months after the end of a financial year.

Interest on tax arrears. The tax authorities suspended the calculation of default interest on tax arrears for the COVID-19-related emergency period with retroactive effect from 1 March 2020 until the end of the emergency period on 17 May 2020. After the emergency period, the default interest rate was lowered from the usual 0.06% per day to 0.03% per day until 31 December 2021. From 1 January 2022, the interest rate is calculated again at 0.06% per day.

Mandatory Disclosure Regime. The Council of the European Union has revised Council Directive 2011/16/EU on administrative cooperation in the field of taxation, resulting in a Mandatory Disclosure Regime (MDR) that came into effect on 25 June 2018. Automatic exchange of information on cross-border schemes imposes an obligation on tax advisors and taxpayers to inform the tax authorities of cross-border tax planning schemes. The MDR applies to all types of direct taxes.

The Estonian Tax and Customs Board had to be informed for the first time on 28 February 2021 of the schemes, which started to be implemented between 25 June 2018 and 30 June 2020. Schemes started from 1 July 2020 to 31 December 2020 had to be notified within 30 days of 1 January 2021. For marketable arrangements, the first reporting date was 30 April 2021.

The disclosure must include details of relevant taxpayers, their associated parties (as defined) and the cross-border arrangement in question. The criteria for cross-border arrangements is stipulated in the Minister of Finance Regulation No. 1 passed on 17 January 2020.

Reportable schemes with the main benefit, or one of the main benefits, of obtaining a tax advantage are the same as provided by the EU Directive on Administrative Cooperation (DAC) 6 and include the following:

- Confidentiality clause
- Success fee
- Standardized documentation or structure
- Acquired loss-making company and losses used outside the business of the acquired company
- Income converted into capital and categories of revenue with a more beneficial tax treatment
- Round tripping of funds using conduits and entities without substance
- Deductible cross-border payments to associated enterprises subject (when received) to a zero or almost zero tax rate, a full tax exemption or a preferential tax regime

Reportable schemes with the main benefit, or one of the main benefits, of not obtaining a tax advantage include the following:

- Payment to an associated stateless enterprise or associated enterprise in a prohibited list jurisdiction
- Same asset subject to depreciation in more than one jurisdiction
- Multiple claims of relief for double taxation
- Transfer of assets with a material difference in the price used for tax purposes
- EU legislation or any equivalent agreements on the automatic exchange of financial account information circumvented
- Nontransparent legal or beneficial ownership chains used
- Unilateral transfer pricing safe harbor rules used
- Transfer of rights to hard-to-value intangibles
- Restructuring resulting in significant profit shifts (50%) following the transfer of functions, risks or assets between associated enterprises

Income tax liability of hybrid entity. Starting in 2022, in certain situations, Estonia will tax trust fund income. In general, a trust fund is considered transparent for Estonian tax purposes, meaning that the trust fund income is considered to be shareholder income respective to the proportion of the shareholders' ownership in the trust fund and taxed on shareholder level.

Because there are other jurisdictions that consider a trust fund as a taxable person, there may be cases where trust fund income is not taxed in the other country nor in Estonia. To avoid double non-taxation resulting from hybrid mismatches, an amendment to the Estonian Income Tax Act was adopted, stipulating that a trust or its manager shall pay income tax on the income that would have been attributed to a shareholder of the trust in proportion to the shareholder's share in the trust if the shareholder of the trust meets the following conditions:

- The shareholder is a nonresident-affiliated undertaking that directly or indirectly owns at least 50% of the shares in a trust.
- The shareholder is located in a jurisdiction that treats the trust as an income taxpayer, and this income is not taxed as according to Estonian legislation (as nonresident income taxable in Estonia) or the legislation of another jurisdiction.

F. Treaty withholding tax rates

The rates reflect the lower of the treaty rate and the rate under Estonian domestic law.

	Dividends (a)(g)	Interest (b)	Royalties (c)

Vietnam	0	0	7.5/10 (h)
Non-treaty jurisdictions	0	0	10/20 (f)

- (a) Dividends paid to corporations are not subject to withholding tax under Estonian domestic law.
- (b) Interest is not subject to withholding tax under Estonian domestic law except for interest paid in certain circumstances to nonresidents as a result of ownership in foreign contractual investment funds (see Section B).
- (c) Royalties paid to a company resident in another EU country or Switzerland are not subject to withholding tax if the provisions of the EU Interest-Royalty Directive are satisfied.
- (d) The lower rate applies to royalties paid for the use of industrial, commercial or scientific equipment.
- (e) The lower rate applies to royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films, but excluding software payments.
- (f) The 20% rate applies to rental payments to nonresidents. The 10% rate applies to royalties, including royalties paid for the use of industrial, commercial or scientific equipment.
- (g) Withholding tax at a rate of 7% is imposed on certain profit distribution to individuals (for further details, see Section B). This withholding tax rate is reduced to 5% (Bulgaria, Israel and North Macedonia) and to 0% (Bahrain, Cyprus, Georgia, Isle of Man, Jersey, Mexico and the United Arab Emirates).
- (h) The lower rate applies to royalties paid for technical services; that is, for managerial, technical or consultancy services, including the provision of services by technical or other personnel.

- (a) For purposes of the withholding taxes, nonresident companies are companies that are neither registered nor incorporated in Eswatini.
- (b) This withholding tax applies to dividends paid to nonresidents. See Section B.
- (c) This withholding tax is imposed on the payment after deduction of direct costs of materials used in construction operations.
- (d) This tax is imposed on the deemed repatriated income of the branch of a nonresident company. However, for the branch of a company registered in Botswana, Lesotho, Mozambique, Namibia or South Africa, the rate of the tax is reduced to 12.5%.

B. Taxes on corporate income and gains

Corporate income tax. Domestic and foreign companies are taxed on all income received or accrued from a source in Eswatini or deemed to be from a source in Eswatini.

Rate of corporate tax. The corporate tax rate is 27.5%.

Administration. The tax year runs from 1 July to 30 June. Corporate taxpayers may obtain permission to pay tax on a different fiscal year-end. Tax returns are due within 30 days after the notice given by the Commissioner of Taxes. Taxpayers unable to submit returns within 30 days must apply for an extension and submit an estimate of their income for the year.

Companies must pay provisional tax based on their estimated annual tax liability in two installments during their financial year. The installments must be paid by the end of the sixth month of the financial year and by the end of the financial year. A third (“topping-up”) payment of any balance of tax due must be made within six months after the end of the financial year.

Dividends. Dividends paid to resident companies are exempt from tax. A 15% withholding tax is imposed on dividends paid to nonresidents, including companies. The rate is reduced to 12.5% if the dividend is paid to a company incorporated or registered in the Southern African Customs Union (SACU; the SACU consists of Botswana, Eswatini, Lesotho, Namibia and South Africa), provided the company is not a subsidiary or branch of a company incorporated or registered outside the SACU.

Foreign tax relief. No specific provisions for foreign tax relief exists, except under double tax agreements.

C. Determination of trading income

General. Income tax is levied on all taxable income received by or accrued to any person from a source within Eswatini or deemed to be within Eswatini. Taxable income includes all income other than capital gains and losses and exempt income.

Expenses, other than those of a capital nature, incurred in Eswatini for the production of income may be deducted from income. Expenses incurred outside Eswatini in the production of income are deductible at the discretion of the Commissioner of Taxes.

Expenses specifically allowed include interest on business-related loans, repairs and maintenance, and bad and doubtful debts. In general, expenses that are not wholly or necessarily incurred in the production of income are not deductible.

Inventories. In general, inventories are valued using the last-in, first-out (LIFO), first-in, first-out (FIFO) or weighted average methods.

Provisions. Provisions are not normally allowed as deductions in computing taxable income.

Depreciation. An annual depreciation allowance, calculated using a declining-balance method, is available for most capital expenditures. An annual depreciation allowance is also available for industrial buildings and hotels. The straight-line method may be used if prior permission is obtained from the Commissioner of Taxes.

An initial allowance of 50% is granted for investments in plant and machinery used in manufacturing, industrial buildings and hotels.

Relief for trading losses. Trading losses are deductible in the year sustained and may be carried forward without limitation. Losses may not be carried back.

D. Value-added tax

Value-added tax (VAT) is charged on the supply of goods and services in Eswatini as well as on the importation of goods and services. The VAT rates are the standard rate of 15% and a 0% rate.

E. Foreign-exchange controls

Foreign-exchange controls are not imposed within the Common Monetary Area, which includes Eswatini, Lesotho, Namibia and South Africa. Transactions outside this area are regulated by the Central Bank of Eswatini in cooperation with authorized dealers. Residents outside the Common Monetary Area may open non-resident accounts.

Foreign-exchange controls are imposed on imports as well as on the repatriation of capital, profits, interest, royalties, fees and income of expatriate personnel. These transactions require prior approval from the Central Bank of Eswatini, but approval is generally granted.

F. Treaty withholding tax rates

	Dividends	Interest	Royalties	Management fees
	%	%	%	%
Botswana	10/15 (a)	10	10	10
Lesotho	10 (d)	10	10	10
Mauritius	7.5	5	7.5	0
Seychelles	7.5/10 (c)	7.5	10	10
South Africa	10/15 (a)	10	10	10
Taiwan	10	10	10	10
United Kingdom	15	0	0	0
Non-treaty jurisdictions	15 (b)	10	15	15

(a) The 10% rate applies if the shareholder holds at least 25% of the capital. The 15% rate applies in all other cases.

(b) See Section B.

(c) The 7.5% rate applies if the shareholder holds at least 25% of the capital. The 10% rate applies in all other cases.

(d) The 10% rate applies if the shareholder holds at least 25% of the capital. A 12.5% rate applies in all other cases.

Corporate Income Tax Rate (%)	20
Capital Gains Tax Rate (%)	10
Branch Tax Rate (%)	20
Withholding Tax (%)	
Dividends	0 (a)
Interest	10
Royalties from Patents, Know-how, etc.	15
Net Operating Losses (Years)	
Carryback	0
Carryforward	8 (b)

(a) Effective from 1 August 2017, all dividends distributed are exempt from income tax.

(b) See Section C.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are subject to income tax on worldwide assessable income. Nonresident companies carrying on business through a branch pay tax only on Fiji-source income. A resident company is a company incorporated in Fiji. A company not incorporated in Fiji is considered a resident company if it carries on business in Fiji and has either its central management or control in Fiji or its voting power controlled by shareholders who are residents of Fiji.

Tax rates. In general, resident companies and branches of nonresident companies are subject to tax at a rate of 20%. Companies that are listed on the South Pacific Stock Exchange and have a resident shareholding of at least 40% are subject to tax at a rate of 10%. Foreign companies that establish their headquarters in Fiji or relocate their headquarters to Fiji are subject to tax at a rate of 17%.

Tax holidays are available to various enterprises and for various activities, including qualifying hotel projects, companies granted

a tax-free regions license, qualifying information communications technology operators, approved activities in commercial agricultural farming and agro-processing, approved activities with respect to processing agricultural commodities into biofuels, approved activities in renewable energy projects and power cogeneration, medical services, residential housing development and audiovisual activities.

Capital gains. The rate of the capital gains tax (CGT) is 10%. Effective from 1 January 2016, the CGT is administered through the Income Tax Act 2015. Before that date, CGT was administered through the Capital Gains Tax Decree 2011. Before 1 August 2020, CGT applied only to non-depreciable capital assets, while gains on depreciable capital assets were subject to income tax at a rate of 20%.

Administration. The Fiji tax year is the calendar year. However, for most companies, an alternative fiscal year is normally allowed. Tax for any fiscal year is payable in three installments according to the following schedule:

- 33.3% of the preceding year's tax liability by the end of the sixth month
- Another 33.3% of the preceding year's liability by the end of the ninth month
- Another 33.4% of the preceding year's liability on or before the balance date

Companies are required to file tax returns within three months after the fiscal year-end, but extensions of an additional two, four or six months are granted to tax agents, depending on the level of taxable income.

Dividends. Effective from 1 August 2017, all dividends distributed are exempt from income tax.

Foreign tax relief. Income derived by Fiji residents from treaty countries is subject to Fiji income tax, but credit is given for taxes paid, up to the amount of Fiji tax applicable on the same income.

Income derived from non-treaty countries is exempt to the extent that it was subject to income tax in such countries.

C. Determination of trading income

General. Income is defined as the aggregate of all sources of income, including annual net profit from a trade, commercial, financial or other business.

Expenses are deductible to the extent incurred in producing taxable income. Expenditures of a personal or capital nature are generally not deductible. Deductions are allowable for certain expenditures incurred in the agricultural and mining industries. Experimentation and research and development expenses incurred in projects connected with the taxpayer's business are deductible.

Inventories. Fiji does not have any specific measures for stock valuation for the purposes of year-end income determination. Valuations are generally made at cost or market value on a first-in, first-out (FIFO) or actual basis. The tax authorities have discretion to make adjustments if inventories are sold or otherwise disposed of at below market value.

Provisions. Provisions are not deductible until payments are made or, in the case of doubtful trading debts, until the debts are considered totally irrecoverable and have been written off.

Tax depreciation. The following are some of the annual depreciation rates prescribed by law for 2016 and future years.

Asset	Rate	
	Straight line (%)	Diminishing value (%)
Commercial and industrial buildings	1.25 to 7	–
Office equipment	12.5	20
Heavy commercial motor vehicles	25	40
Passenger motor vehicles	20	30
Plant and machinery	12.5	20

Tax depreciation is subject to recapture on the sale of an asset, to the extent the sales proceeds exceed the tax value after depreciation. The amount recaptured may be set off against the cost of a replacement asset; otherwise, it is taxed as ordinary income in the year of sale. In addition, a capital gain on the sale of a capital asset is subject to CGT.

Relief for losses. Tax losses incurred in 2019 and future years may be carried forward for eight years.

Prior to 2019, tax losses may be carried forward for four years. Losses incurred as a result of claiming the standard allowance are available for carryforward for a period of eight years. The standard allowance is one of the hotel incentives. It allows a hotel owner a 25% deduction with respect to capital expenditure on construction, renovation or refurbishment of a hotel.

Losses are not available for carryforward if the taxpayer's business in the year in which relief is claimed is substantially different from its business in the year in which the loss was incurred.

Groups of companies. No group relief measures exist.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax; imposed on virtually all goods and services and residential rent, if annual gross turnover exceeds FJD100,000; financial services (except insurance services) and gambling are exempt (the 15% rate is effective from 1 April 2022)	9/15
Environmental levy; imposed on prescribed services subject to the service turnover tax (the 0% rate is effective from 1 April 2022; the prior rate was 6%)	0
Fringe benefit tax	20
Social security contributions to the national provident fund, paid by	
Employer	5
Employee (maximum rate)	6

E. Miscellaneous matters

Foreign-exchange controls. Most remittances abroad require approval from the Reserve Bank of Fiji. Depending on the level of the country's foreign-exchange reserve, further restrictions may be imposed on the nature, timing and amount of remittances that can be made.

Debt-to-equity ratios. An entity may have offshore borrowings up to FJD5 million per year without the prior approval of the Reserve Bank of Fiji. Foreign-owned companies may borrow locally any amount if a total debt-to-equity ratio of 3:1 is maintained. The total debt consists of local and offshore borrowings. Equity includes paid-up capital, shareholders' non-interest-bearing loans, retained earnings and subordinated interest-bearing loans.

Anti-avoidance legislation. Contracts, agreements or arrangements entered into that have the effect of altering the incidence of any tax may be rendered void by the tax authorities. Effective from 1 August 2020, the Income Tax Act allows for a restructuring provided that the parties are associates directly or through an interposed person.

Corporate Income Tax Rate (%)	20
Capital Gains Tax Rate (%)	20 (a)
Branch Tax Rate (%)	20

Withholding Tax (%) (b)	
Dividends	0/15/20/30/35 (c)(d)
Interest	0/20/30 (c)(e)
Royalties	0/20/30 (c)(f)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	10 (g)

(a) See Section B.

(b) The withholding taxes generally apply only to payments to nonresidents. The rates may be reduced by tax treaties.

(c) The 20% withholding tax rate applies if the nonresident recipient qualifies as a corporation for Finnish tax purposes. The 30% withholding tax rate applies if the nonresident recipient does not qualify as a corporation for Finnish tax purposes. The 35% withholding tax rate applies to a dividend distributed on nominee-registered shares of a Finnish publicly listed company if the recipient is not identified prior to the payment or if the dividend beneficiary has not agreed to disclose its information to the Finnish tax authorities.

(d) No withholding tax is imposed on dividends paid to a parent company resident in another European Union (EU) country if the recipient of the dividends satisfies the following conditions:

- It holds directly at least 10% of the capital of the payer.
- The recipient of the dividend is a company qualifying under Article 2 of the EU Parent-Subsidiary Directive.

Companies resident in EU or European Economic Area (EEA) member states are generally eligible for the tax exemption for dividends under the same conditions as comparable Finnish companies if the Finnish withholding taxes cannot be credited in the company's state of residence and if sufficient exchange of information may take place between Finland and the state of residence of the recipient. Dividends paid to a company resident in an EU/EEA member state are subject to withholding tax at a rate of 15% if the shares constitute investment assets of the recipient company and the recipient owns less than 10% of the Finnish company.

(e) Interest paid to nonresidents is generally exempt from tax unless the loan may be deemed comparable to an equity investment. In general, interest paid to resident individuals is subject to a final withholding tax of 30% if it is paid on bonds, debentures and bank deposits.

(f) No withholding tax is imposed on royalties paid to nonresidents if all of the following conditions are satisfied:

- The beneficial owner of the royalties is a company resident in another EU country or a permanent establishment located in another EU country of a company resident in an EU country.
- The recipient is subject to income tax in its home country.
- The company paying the royalties, or the company whose permanent establishment is deemed to be the payer, is an associated company of the company receiving the royalties, or of the company whose permanent establishment is deemed to be the recipient.

A company is an associated company of another company if any of the following apply:

- The first company has a direct minimum holding of 25% in the capital of the second company.
- The second company has a direct minimum holding of 25% in the capital of the first company.
- A third company has a direct minimum holding of 25% in both the capital of the first company and the capital of the second company.

Royalties paid to resident individuals are normally subject to salary withholding.

(g) See Section C.

B. Taxes on corporate income and gains

Corporate income tax. Companies resident in Finland are taxed on their worldwide income. Nonresident companies are taxed only on their Finnish-source income. Resident companies are generally those incorporated in Finland.

Tax residency based on effective place of management. Effective for tax assessments for the 2021 fiscal year and onward, a

corporation established or registered abroad is subject to unlimited tax liability in Finland if the company's place of effective management is in Finland. The place of effective management is the place where the corporation's board of directors or other decision-making body makes the highest-level decisions concerning daily management of the corporation. Also, other circumstances related to the organization and business of the corporation are taken into account when determining the location of the place of effective management.

Rate of corporate income tax. The corporate income tax rate is 20%.

Capital gains. Gains derived by companies from the disposal of business assets are treated as ordinary business income. Gains derived from the disposal of machinery and equipment are deducted from the remaining book value of similar assets, which are pooled for tax purposes, reducing the depreciable basis of the remaining asset pool. Gains derived from the disposal of buildings are calculated separately for each building by deducting the remaining acquisition cost from the sales price.

Gains derived by corporate entities, other than companies engaged in private equity investment activities, from the sale of shares are exempt from tax if all of the following conditions are satisfied:

- The shares are part of the seller's fixed assets.
- The seller has owned at least 10% of the shares in the company, including the shares sold, for an uninterrupted period of at least one year.
- The shares sold are shares in either a Finnish company, a company as defined in Article 2 of the EU Parent-Subsidiary Directive or a company resident in a country with which Finland has entered into a tax treaty that applies to dividends distributed by the company whose shares are sold.
- The shares are not shares in a real estate company or a company de facto engaged in the holding or administering of real estate.

Even if the above conditions are satisfied, a sale of shares under certain circumstances may result in the generation of taxable income. If the acquisition cost of the shares has at any time been depreciated on the grounds that the fair market value of the shares has declined or if a reserve has been deducted, this part of the consideration received (that is, the deducted depreciation or reserve) is taxable income. The same principle applies if the shares have at any time been the subject of a transaction between related companies and if this transaction resulted in a tax-deductible loss. Under these circumstances, the consideration received for the shares is taxable up to the amount of the earlier tax-deductible loss.

A loss incurred on the sale of shares is not tax-deductible if a gain on the sale of such shares would have been exempt from tax. If the abovementioned requirements of tax exemption are not fulfilled, a loss from sale of shares that are part of seller's fixed assets is deductible from profit resulting from the sale of such shares during the five years following the loss-making year.

The participation exemption rules concerning capital gains, which are described above, do not apply to shares owned by private

equity investors. For private equity investors, capital gains derived from the sale of shares are taxable income and capital losses incurred on shares are tax-deductible.

Administration. Companies must file the corporate income tax return within four months after the end of their accounting period. Tax return filing must be completed electronically. Nonresident companies carrying out business activities in Finland without triggering a permanent establishment should also file a tax return with a report on its activities carried out in Finland.

Corporate income tax is prepaid in installments during the accounting period, and additional advance taxes may be applied for and paid without accruing interest during the first month following the end of the financial year. After the tax return is filed and processed by the tax authorities, a final settlement or refund is made. The tax assessment is completed within 10 months after the end of the accounting period.

In general, the tax authorities may carry out tax audits within five years from the end of the assessment year. For assessments concluded in 2017 or later, the statute of limitations is generally reduced to three years. However, the statute is six years in certain specific situations (for example, transfer-pricing matters or intra-group financing or restructuring). Under extraordinary circumstances, these time limits may be extended by a year. A company's 2016 fiscal year is open for adjustment until the end of December 2022. However, the 2019 fiscal year is only open for adjustment until the end of December 2022 unless a specific statute of limitations applies.

As a result of an audit, a penalty of up to 30% of the adjusted amount of taxable income may be imposed on a corporation for tax assessment of the 2017 fiscal year and earlier years. For the tax assessment of the 2018 fiscal year and future years, a tax penalty of up to 10% of the adjusted amount of taxable income may be imposed on a corporation and, in certain special cases, the penalty may be up to 50% of the amount of adjusted tax. A penalty charge can be added even though the adjustment does not result in additional income taxes (a change in the taxable income amount is sufficient). Also, interest is charged on the additional tax (but not on the penalties) at a specified rate (7% for 2021 and 2022). Neither the penalty nor the interest is deductible when calculating taxable income.

Dividends. A dividend received by a Finnish corporate entity from a company resident in Finland or from a "company," as defined in Article 2 of the EU Parent-Subsidiary Directive, is usually exempt from tax. The exemption also applies to dividends received from any other company resident in another EU/EEA country if the company paying the dividends is liable to pay income tax of at least 10%. If a Finnish corporate entity receives a dividend from a company resident in a non-EU/EEA country, the dividend is usually fully (100%) taxable.

The dividend is also fully taxable if the company paying the dividend can deduct the dividend in its tax calculation.

By exception, a dividend received by an unlisted Finnish corporate entity from a listed company is fully (100%) taxable,

unless the listed company is resident in Finland or in an EU/EEA country and the recipient owns at least 10% of the shares in the distributing company.

Distribution of funds from invested unrestricted equity capital. The return of invested unrestricted equity to shareholders in listed companies is taxed as dividend income. The return of the invested unrestricted equity from an unlisted company may be treated as a repayment of capital if the recipient can show that the recipient has made an investment to the company and that the invested capital is returned within 10 years from the time the investment was made.

Foreign tax relief. If no tax treaty is in force, domestic law provides relief for foreign tax paid. The credit is granted if the recipient Finnish corporation pays corporate income tax on qualifying foreign-source income in the same year. If the Finnish company does not have any corporate income tax liability that year, no credit is granted. Foreign tax credits may be carried forward five years under certain conditions. Foreign tax credits may not be carried back.

Under tax treaties, foreign tax is most frequently relieved by a tax credit. With certain countries, tax sparing may also be granted.

C. Determination of trading income

General. Taxable income is closely tied to the income in the statutory accounts. Most of the deductions must be booked in the statutory accounts to be valid for tax purposes. As stated in the tax law, the definitions of both income and expenses are general and broad.

In general, expenses are deductible if they are incurred for the purpose of acquiring or maintaining taxable income. Fifty percent of entertainment expenses is deductible for tax purposes. Expenses incurred to obtain tax-free income, as well as income taxes and penalties, are not deductible.

Inventories. Inventories are valued at the lowest of cost, replacement cost or market value on a first-in, first-out (FIFO) basis. Companies may allocate fixed manufacturing overhead to the cost of inventory for accounting and tax purposes if certain conditions are met. Obsolete inventories should be provided for or discarded.

Provisions. In general, the possibility of establishing provisions or reserves for tax purposes is relatively limited. Deductions of warranty reserves and provisions for doubtful debts are limited to the amount of actual expected costs. These provisions are only available for certain types of taxpayers under certain conditions.

Tax depreciation. The Business Tax Act provides detailed rules for the depreciation of different types of assets. The depreciable base is the acquisition cost, which includes related levies, taxes and installation costs. The depreciation expense for tax purposes is not permitted to exceed the cumulative depreciation expense reported in the annual financial statements in the current year or in previous years. Plant machinery, equipment and buildings are generally depreciated by using the declining-balance method.

Machinery and equipment are combined into a pool for depreciation purposes. Companies may vary the annual depreciation in this pool from 0% to 25%. All machinery and equipment with a life of more than three years are classified as depreciable assets. The depreciable basis is decreased by proceeds from sales of assets in the pool. If the sales price exceeds the depreciable basis, the excess is added to taxable income. If it can be proven that the remaining balance of all machinery and equipment is higher than the fair market value as a result of injury, damage or a similar circumstance, additional depreciation may be claimed for the balance of the machinery under specific conditions.

Equipment with a short life (up to three years), such as tools, is usually expensed. Equipment with an acquisition price of less than EUR850 (EUR1,200 from the 2021 fiscal year) may also be expensed, with a maximum deduction of EUR2,500 per year (EUR3,600 from the 2021 fiscal year).

The maximum depreciation rates for buildings vary from 4% to 20%. The depreciation percentage depends on the use of the building. The depreciation rate for factories, warehouses, shops and similar buildings is 7%.

Intangible assets, such as patents and goodwill, are depreciated using the straight-line method over 10 years, unless the taxpayer demonstrates that the asset's useful life is less than 10 years.

The rules concerning the depreciation of machinery and equipment and similar movable fixed assets for the 2020 to 2023 tax years were temporarily amended. Under the new rules, during the 2020 to 2023 tax years, a taxpayer carrying out business activities may annually book for tax purposes depreciation up to 50% on machinery and equipment instead of the general 25%. The assets should be used in the taxpayer's business and should be included in the taxpayer's pool of movable fixed assets for tax purposes. In addition, it is required that the machinery or equipment be taken into use on 1 January 2020 at the earliest and that the acquired machinery or equipment must be new; that is, it cannot be used.

Additional research and development deduction. New rules concerning an additional tax deduction for expenses related to research and development (R&D) entered into force on 1 January 2021 and apply for the 2021 through 2025 fiscal years. The applicability of the rules was extended at the end of 2021 so that the rules now apply for the 2021 through 2027 fiscal years. A taxpayer may apply the additional deduction for R&D activities related to its business. The deduction is based on subcontracting invoices from a research organization operating in the EEA that meets certain requirements. The amount of the additional deduction is 50% of approved R&D expenses invoiced by the research organization. Effective for the tax assessment for the 2022 fiscal year and onward, the amount of the additional deduction is 150% of approved R&D expenses invoiced by the research organization. The maximum amount of the additional deduction is EUR500,000 per fiscal year, and the deduction is not granted if the deductible amount is less than EUR5,000 per fiscal year. The deduction is available also for a Finnish permanent establishment of a nonresident taxpayer.

Relief for losses. Losses may be carried forward for 10 years. However, a direct or indirect change in the ownership of the company involving more than 50% of the shares results in the forfeiture of the right to set off losses against profits in future years. An indirect change occurs if more than 50% of the shares in the parent company owning at least 20% of the shares of the loss-making company are transferred and accordingly all of the shares owned by the parent company in the loss-making company are deemed to have changed ownership. An application may be made to the tax office for a special permit for reinstating the right to use the tax losses. The tax office has extensive discretion as to whether to grant the permit.

Losses may not be carried back.

Groups of companies. Corporations are taxed individually in Finland. No consolidated tax returns are applicable. A kind of group taxation is, however, introduced by allowing group contributions for limited liability companies. Group contributions are tax-deductible for the payer and included in the income of the recipient. By transfers of these contributions, income can be effectively allocated among group companies in Finland. To qualify, both companies must be resident in Finland, and at least 90% ownership, direct or indirect, must exist from the beginning of the tax year. Both companies must carry out business activities and be taxed under the Business Tax Act. Also, they must have the same accounting period. The taxpayer cannot create a tax loss by making group contributions.

If the local tax authorities allow tax losses to be deducted regardless of a change in ownership, these losses may generally not be covered by group contributions. However, on application, the local tax authorities may allow such tax losses to be covered by group contributions only in special circumstances.

If a corporate entity or a group of corporate entities owns at least 10% of the share capital of another company, the losses of any receivables from the other company (other than sales receivables) are not tax-deductible. With the exception of the group contributions described above, the same rule applies to all other financial assistance granted to the other company without compensation that is intended to improve the other company's financial situation.

EEA group deduction. New rules concerning group deductions in certain cross-border situations entered into force on 1 January 2021 and are applicable from the 2021 fiscal year. Under the rules, a limited liability company or a cooperative that is subject to unlimited tax liability in Finland can deduct as a group deduction a final loss of a subsidiary located in the EEA if certain preconditions are met. These preconditions include, among others, at least 90% ownership between the parent and the subsidiary. Deducting the losses of the subsidiary requires that the losses of the subsidiary be final, as defined more specifically in the relevant provisions, with the term deriving from the case law of the European Court of Justice.

The group deduction can be deducted by the parent from its taxable business income in the fiscal year in which the subsidiary's liquidation or other similar procedure has been completed. The deductible group deduction may not exceed the parent company's

taxable business income; that is, deducting the group deduction may not lead to a loss for the parent. The amount of the deduction may be subject to adjustment in certain situations.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on the sale, rental, importation or repair of goods, and on services unless specifically exempt; exempt services include financial services and insurance services	24
Transfer tax on the purchase of real estate located in Finland; calculated as a percentage of the purchase price	4
Transfer tax on the purchase of shares relating to real estate; calculated as a percentage of the purchase price or other consideration	2
Transfer tax on the purchase of shares in Finnish companies; calculated as percentage of the purchase price or other consideration	1.6
Social security taxes, paid by the employer as a percentage of salaries	
Health insurance premium (2022 rate)	1.34
Employment pension premium; average rate (2022)	17.4
Unemployment insurance premium, on total salaries paid by the employer (for 2022)	
Up to EUR2,197,500	0.5
Amount in excess of EUR2,197,500	2.05
Accident insurance (average rate for 2022)	0.7
Group life insurance (average rate for 2022)	0.06

E. Miscellaneous matters

Foreign-exchange controls. No restrictions are imposed on the repatriation of earnings, interest and royalties abroad.

Transfer pricing. Related-party transactions are accepted if they are carried out at arm's length. Corporate income can be adjusted if the transactions are not as they would have been between independent parties.

Under Finnish transfer-pricing rules, group companies must prepare transfer-pricing documentation if specific circumstances exist. The aim of the documentation is to prove the arm's-length nature of the prices used in cross-border intercompany transactions. On request of the tax authorities, the transfer-pricing documentation for a specified fiscal year must be submitted within 60 days, but not earlier than 6 months after the end of the financial year. Additional clarifications concerning the documentation must be submitted within 90 days of a request by the tax authorities.

A tax penalty of up to EUR25,000 can be imposed for a failure to comply with the transfer-pricing documentation requirements, even if the pricing of the transactions was at arm's length. The adjustment of taxable income may also result in a separate tax penalty of up to 30% of the adjusted amount of income

for tax assessment of the 2017 fiscal year and earlier years. From the tax assessment of the 2018 fiscal year and future years, a tax penalty of up to 10% of the adjusted amount of taxable income may be imposed on a corporation and, in certain special cases, the penalty may be up to 50% of the amount of adjusted tax. The adjusted amount of tax also incurs penalty interest.

Country-by-Country Reporting obligations are also implemented under Finnish domestic law, with an annual obligation to file a notification regarding the reporting group entity with the Finnish tax authorities.

The Finnish transfer-pricing adjustment provision has been amended, and the new formulation of the provision applies to tax assessments for the 2022 fiscal year and onward. The amended provision contains new separate rules that allow the delineating and disregarding of related-party transactions, which expands the scope of the earlier transfer-pricing adjustment provision.

Debt-to-equity rules. Direct investments are generally made with a combination of equity and foreign or domestic loans. Finland does not have any specific thin-capitalization legislation. The law does not provide a specific debt-to-equity ratio, and a very limited amount of case law exists. Interest determined on an arm's-length basis on a loan obtained for business purposes is normally fully deductible. In the case of insufficient business reasons for the loan, the deductibility of the interest might be challenged through application of the general anti-avoidance provision.

Restrictions on the tax deductibility of interest expenses entered into force on January 2013 and were applied for the first time with respect to taxation for the 2014 tax year. As a result of the implementation of the EU's Anti-Tax Avoidance Directive (ATAD), the interest deduction limitation rules have been amended. The amended rules are applied for the first time in the 2019 tax assessment. The restrictions do not apply if the taxpayer establishes that the ratio of its book equity to total assets in the financial statements is equal to or higher than the corresponding ratio in the consolidated financial statements of its ultimate parent company. Starting from the tax assessment for the 2022 fiscal year, when making the above equity to total assets comparison, debt on the consolidated group financial statements that has been granted by related parties, as defined under the Finnish provisions, is considered to be equity in the consolidated group financial statements for the purposes of the comparison of the ratios.

Under the above provisions, interest expenses are fully deductible against interest income. Any interest expenses exceeding interest income (that is, net interest expenses) may be fully deducted if the total amount of net interest expenses does not exceed EUR500,000 during the fiscal year.

If the EUR500,000 threshold is exceeded, net interest expenses may be deducted only to the extent that they do not exceed 25% of the taxable business profit (calculated under Section 3 of the Finnish Business Income Tax Act) after adding back the following:

- Interest expenses
- Tax depreciation

- Group contributions received (group contributions paid are subtracted)

Non-related-party net interest expenses are deductible up to EUR3 million, and they are deducted primarily as a part of the 25% tax earnings before interest, tax, depreciation and amortization (EBITDA) quota.

The rules described in the preceding paragraph do not apply to non-related-party interest expenses from loans (for example, bank loans) obtained before 17 June 2016. The exception does not apply to later changes of the loans that would affect the amount of the loan or the loan period.

In general, the rules do not apply to financial institutions and to insurance and pension companies. Based on the so-called infrastructure exception, the new rules also do not apply to social housing projects that have received interest subsidies.

The nondeductible amount of interest expenses may be deducted during subsequent years within the respective limitations for each tax year.

Controlled foreign companies. Under Finland's controlled foreign company (CFC) legislation, a Finnish shareholder is subject to tax on its respective direct or indirect share of the CFC's income. In connection with the implementation of the EU ATAD, the Finnish CFC rules are amended with the new rules entering into force as of 1 January 2019 and applied for the first time in the 2019 tax assessment.

A foreign permanent establishment (PE) of a foreign corporation is categorized as a CFC under the same conditions as subsidiaries if the foreign PE is located in a different state than the foreign corporation and if the income of the foreign PE is not taxed in the residence state of the foreign corporation. To determine whether a company is a CFC, the steps described below must be followed:

It first must be determined whether the company is controlled by a Finnish resident either alone or with related parties (resident or nonresident). If not, the CFC rules do not apply. Under the rules applicable from the 2019 tax assessment, a company is controlled by Finnish residents if residents of Finland for tax purposes own directly or indirectly more than 25% of the share capital or the voting shares of the company or if one or more Finnish tax residents are entitled to at least 25% of the profits or the return on capital of the company.

In addition, the foreign company's effective tax rate in its country of residence should be less than three-fifths of the Finnish corporate income tax rate (that is, less than 12%).

If both of the above conditions are fulfilled, the foreign company is considered as a CFC for Finnish tax purposes unless an exemption, as described below, applies.

Under the rules applicable from the 2019 tax assessment, a foreign company is not considered a CFC if it is genuinely established in the jurisdiction of its tax residence and if it carries out genuine economic activities in that jurisdiction. The description of genuine economic activities remains largely in line with the description

earlier applicable to EEA resident entities. However, in addition to the conditions related to the genuine establishment in terms of personnel, premises and assets, companies tax resident in a jurisdiction outside the EEA fall within the scope of the exemption only if the following conditions are fulfilled:

- The company's income mostly arises from industrial production activities, other comparable production or service activities, shipping activities, or sales or marketing activities directly serving these activities, and the activities are carried out in the jurisdiction of the company's tax residence, or the company's income mostly arises from payments made by an entity that is part of the same group, that is tax resident in the same jurisdiction and that carries out the abovementioned activities in that jurisdiction.
- There is sufficient basis for exchange of information between Finland and the jurisdiction of residence and the exchange of information with the jurisdiction is fulfilled.
- At the end of the tax year in question and at the end of the previous tax year, the jurisdiction of residence is not included in the list of noncooperative jurisdictions issued by the Council of the European Union.

The rules in force before 1 January 2019, including the exemptions therein, are still applicable for the tax assessment of the 2018 tax year and earlier years.

Anti-avoidance legislation. Under a general anti-avoidance provision in the law, the tax authorities may look through certain transactions and apply substance over form in assessing taxes. The general anti-avoidance provision may also be applied if insufficient business reasons for a transaction are presented.

Anti-hybrid mismatch rules. Finland enacted anti-hybrid mismatch rules in connection with the implementation of the EU ATAD. The new rules restrict deductibility of payments or require inclusion of income in taxable income in certain situations in which payments have been made between associated enterprises if the payments lead to a hybrid mismatch outcome (deduction/non-inclusion or double deduction). The Finnish anti-hybrid mismatch rules are largely aligned with the rules proposed in the ATAD. The rules came into force on 1 January 2020 and are applicable for the first time in the tax assessment for the 2020 tax year.

New ATAD-based rules concerning reverse hybrid situations are applicable for the first time to the tax assessment for the 2022 tax year.

Mandatory disclosure regime. Finland has enacted mandatory disclosure rules in connection with the implementation of the EU Mandatory Disclosure Regime (MDR). The rules entered into force on 1 January 2020. The Finnish MDR rules are closely aligned with the EU MDR rules. Noncompliance with the reporting obligations may lead to the imposition of a tax penalty.

F. Treaty withholding tax rates

The rates in the table below reflect the current double tax treaty rates. As a result of domestic legislation, lower rates may apply.

Certain other exceptions may also apply. Please consult your local tax specialist for more information.

	Dividends (aa) %	Interest (w) %	Royalties (cc) %

- (a) The lower rate applies if the recipient is a corporation owning at least 20% of the payer.
- (b) The lower rate applies if the recipient is a corporation owning at least 25% of the payer.
- (c) The rate is 0% for royalties received for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films or tapes for television or radio broadcasting.
- (d) The lower rate applies if the recipient is a corporation owning at least 15% of the payer.
- (e) Copyright royalties for the production or reproduction of any literary, dramatic, musical or artistic work (other than motion picture films) are exempt from tax.
- (f) The lower rate applies if the recipient is a company owning at least 10% of the voting power of the payer.
- (g) The rate is 10% for royalties for copyrights of literary, artistic or scientific works, including films and tapes; otherwise, the rate is 15%.
- (h) The 5% rate applies if the recipient is a corporation owning at least 25% and more than EUR200,000 of the capital of the payer.
- (i) Interest on certain loans is exempt from withholding.
- (j) The rate is 0% for royalties received for the use of or the right to use any copyright of literary, artistic or scientific work, excluding cinematographic films or films and tapes for television or radio broadcasting.
- (k) The 10% rate applies if the recipient has owned at least 25% of the voting rights of the payer for at least six months before the end of the payer's fiscal year. The 15% rate applies to other dividends.
- (l) The lower rate applies to royalties paid for the use of computer software and for equipment leasing.
- (m) The rate is 15% for royalties paid by an enterprise registered with and engaged in preferred areas of activities, for royalties for cinematographic films or tapes for television or broadcasting, and for royalties for the use of, or the right to use, any copyright of literary, artistic or scientific work.
- (n) The 0% rate applies if the recipient is a corporation owning at least 5% of the payer.

- (o) The 20% rate applies if the recipient of the dividends is a corporation that owns at least 25% of the payer. The 15% rate applies to dividends paid by industrial enterprises to recipients described in the preceding sentence. Otherwise, the domestic rates of 20% or 30% apply.
- (p) The lower rate applies if the recipient is a financial institution.
- (q) A lower tax rate applies in certain cases. Please consult the tax treaty.
- (r) The 0% rate applies if the receiving company owns at least 80% of the voting power of the paying company for at least 12 months and qualifies under certain provisions of the limitation-on-benefits article of the treaty.
- (s) The 5% rate applies if, at the time the dividend is payable, the recipient of the dividends owns at least 30% of the share capital of the payer and has invested in the payer foreign capital in excess of USD100,000. The 12% rate applies to other dividends.
- (t) The 0% rate applies to royalties paid for copyrights of literary, artistic or scientific works. The 5% rate applies to royalties paid for the use of cinematographic films and tapes and films for television or radio broadcasting. The 15% rate applies to royalties paid for the use of, or the right to use, patents, trademarks, designs or models, plans, secret formulas or processes, or industrial, commercial or scientific equipment, or for information concerning industrial, commercial or scientific experience.
- (u) The 0% rate applies if the recipient of the dividends owns at least 10% of the voting rights of the payer. The 15% rate applies to other dividends.
- (v) Finland is honoring the Yugoslavia treaty with respect to Bosnia and Herzegovina, Croatia, Kosovo, Montenegro and Serbia.
- (w) Under Finnish domestic law, interest paid to nonresidents is generally exempt from tax.
- (x) The most-favored-nation clause has led to the application of 0% withholding tax on royalties under the tax treaty.
- (y) The 0% rate applies if, at the time the dividend is payable, the recipient of the dividends owns at least 50% of the share capital of the payer and has invested in the payer foreign capital of EUR2 million or more. The 5% rate applies if the recipient of the dividends owns at least 10% of the share capital of the payer and has invested in the payer foreign capital in excess of EUR100,000. The 10% rate applies to other dividends.
- (z) The rate is 10% for royalties received for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films or tapes for television or radio broadcasting. For other royalties, the rate is 5%.
- (aa) No withholding tax is imposed on dividends paid to a parent company resident in another EU country if the recipient of the dividends satisfies the following conditions:
- It holds directly at least 10% of the capital of the payer.
 - The recipient of the dividend is a company in a form mentioned in the EU Parent-Subsidiary Directive.
- Companies resident in EU or EEA states are generally eligible for the tax exemption for dividends under the same conditions as comparable Finnish companies if the Finnish withholding taxes cannot be credited in the company's state of residence.
- (bb) The 5% rate applies if the recipient is a corporation owning at least 70% of the share capital of the payer. The 10% rate applies if the recipient is a corporation owning at least 25%, but less than 70%, of the share capital of the payer. The 15% rate applies to other dividends.
- (cc) No withholding tax is imposed on royalties paid to nonresidents if all of the following conditions are satisfied:
- The beneficial owner of the royalties is a company resident in another EU country or a permanent establishment located in another EU country of a company resident in an EU country.
 - The recipient is subject to income tax in its home country.
 - The company paying the royalties, or the company whose permanent establishment is deemed to be the payer, is an associated company of the company receiving the royalties, or of the company whose permanent establishment is deemed to be the recipient.
- A company is an associated company of another company if any of the following apply:
- The first company has a direct minimum holding of 25% in the capital of the second company.
 - The second company has a direct minimum holding of 25% in the capital of the first company.
 - A third company has a direct minimum holding of 25% in both the capital of the first company and the capital of the second company.

- (dd) The 0% rate applies to royalties for software programs, patents, models or drawings. The 5% rate applies to other industrial royalties. The 10% rate applies to royalties for literary, artistic or scientific works, including cinematographic films or tapes for television or radio broadcasting.
- (ee) The lower rate applies if the recipient is a corporation owning at least 10% of the payer.
- (ff) A lower rate applies in certain circumstances. Please consult the tax treaty.
- (gg) The 3% rate applies to royalties paid to a news agency. The 5% rate applies to artistic royalties. The 10% rate applies to industrial royalties. The 15% rate applies to other royalties.
- (hh) The 0% rate applies to royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films or tapes for television or radio broadcasting. The 1% rate applies to amounts paid under financial leases of equipment. The 5% rate applies to amounts paid under operating leases of equipment and computer software. The 10% rate applies to other royalties.
- (ii) The 12% rate applies if the recipient of the dividends is a corporation owning at least 25% of the payer. The 15% rate applies if the recipient of the dividends is a corporation owning less than 25% of the payer. The 20% rate applies to other dividends.
- (jj) The 0% rate applies in certain circumstances. Please consult the tax treaty.
- (kk) The 0% rate applies to royalties paid for the use of, or right to use, computer software, patents, designs, models or plans. The 5% rate applies to royalties paid for the use of, or the right to use, secret formulas or processes, or for information concerning industrial, commercial or scientific experience (know-how). The 10% rate applies to royalties for the use of, or right to use, trademarks and copyrights of literary, artistic or scientific works, including cinematographic films, and films or tapes for television or radio broadcasting.
- (ll) The 5% rate applies if the recipient is a corporation owning at least 10% of the payer's voting rights. The 0% rate applies if the Australian company has held at least 80% of the Finnish company's voting power for at least 12 months and meets certain other conditions.
- (mm) The lower rate applies to, among other interest payments, interest paid by public bodies.
- (nn) The lower rate applies to, among other interest payments, interest on current accounts and on advance payments between banks.
- (oo) The 5% rate applies to royalties paid for the use of, or the right to use, industrial, commercial or scientific equipment, or software. The 10% rate applies to royalties paid for the following:
 - The use of, or the right to use, copyrights of literary, artistic or scientific works, including cinematographic films, and films or tapes for television or radio broadcasting
 - The use of, or the right to use, patents, trademarks, designs or models, plans, secret formulas or processes
 - Information concerning industrial, commercial or scientific experience
- (pp) Copyright royalties are exempt from withholding tax. The 1% rate applies to royalties paid for finance leases of equipment. The 5% rate applies to royalties paid for operating leases of equipment, or for the use of, or the right to use, cinematographic films, films and tapes for television or radio broadcasting, or computer software. The 10% rate applies to royalties paid for the use of, or the right to use, patents, trademarks, designs, plans, formulas or processes, or for information concerning industrial, commercial or scientific experience.
- (qq) A tax treaty is in force between Finland and Brazil. However, the tax-sparing articles of the treaty applied only for the first 10 years since the signing of the treaty. This period ended on 25 December 2007.
- (rr) The lower rate applies if the Italian company holds directly more than 50% of the capital in the Finnish company.
- (ss) The beneficial owner of royalties paid for the use of, or the right to use, industrial, commercial or scientific equipment may elect to be taxed, in the contracting state in which such royalties arise, as if the equipment were effectively connected with a permanent establishment in that state. In such case, the provisions of Article 7 (Business income) of the treaty apply to the income and deductions attributable to such equipment.
- (tt) The 0% rate applies if the interest is paid to the state or a local authority thereof, to the national bank, or to an institution of which the capital is wholly owned by the government.
- (uu) The lower rate applies to loans granted by banks.
- (vv) The 0% rate applies if the interest is paid to the state or national bank. The 5% rate applies to interest on loans to certain public entities promoting

export. The 10% rate applies to loans granted by banks. The 15% rate applies in all other cases.

- (ww) The 15% rate applies if the recipient is a company owning at least 10% of the voting power of the payer. Otherwise, the domestic rates of 20% or 30% apply.
- (xx) The 5% rate applies if the interest is paid with respect to indebtedness arising on the sale on credit by the recipient enterprise of any merchandise or industrial, commercial or scientific equipment to an enterprise of the other contracting state, except when the sale or indebtedness is between related persons; in certain circumstances, a 0% rate applies.
- (yy) The tax treaty between Finland and Sri Lanka has been revised, and the revised tax treaty is applicable from 1 January 2019.
- (zz) The new tax treaty with Finland and Spain entered into force on 30 July 2018 and is applicable from 1 January 2019.
- (aaa) The 0% rate applies if the beneficial owner of the interest is the government of the contracting state, a local authority, the central bank, or other agency or instrumentality controlled by the government or if the loan or credit is guaranteed by one of the aforementioned bodies.
- (bbb) The lower rate applies if a company (other than a partnership or a German real estate investment trust company) holds directly at least 10% of the capital of the company paying the dividends.
- (ccc) The new tax treaty between Finland and the Hong Kong Special Administrative Region (SAR) is applicable from 1 January 2019.
- (ddd) The most-favored-nation clause has led to the application of 0% withholding tax on royalties under the tax treaty.

A. At a glance

Corporate Income Tax Rate (%)	25 (a)
Capital Gains Tax Rate (%)	0/15/19/25 (a)(b)
Branch Tax Rate (%)	25
Withholding Tax (%)	
Dividends	25/75 (c)(d)(e)
Interest	0/75 (c)(f)(g)
Royalties from Patents, Know-how, etc.	25/75 (c)(f)(g)
Branch Remittance Tax	25 (h)
Net Operating Losses (Years)	
Carryback	1 (i)
Carryforward	Unlimited (j)

- (a) For resident companies, surtaxes are imposed on the corporate income tax and capital gains tax. For details, see Section B.
- (b) For details concerning these rates, see Section B.
- (c) These are the withholding tax rates under French domestic law. Tax treaties may reduce or eliminate the withholding taxes.
- (d) Under the European Union (EU) Parent-Subsidiary Directive and Article 119 ter of the French Tax Code, dividends distributed by a French subsidiary to an EU parent company are exempt from withholding tax, if, among other conditions, the recipient holds or commits to hold at least 5% of the subsidiary's shares for at least two years. For details, see Section B.
- (e) The withholding tax rate is 75% for distributed profits paid into uncooperative states.
- (f) No withholding tax is imposed on interest and royalties paid between associated companies of different EU member states if certain conditions are met. For details, see Section B.
- (g) The withholding tax rate is 75% for interest on qualifying borrowings and royalties paid into uncooperative states.
- (h) Branch remittance tax may be reduced or eliminated by double tax treaties. It is not imposed on French branches of companies that are resident in EU member states and are subject to tax in their home countries.
- (i) Losses carried back may not exceed EUR1 million.
- (j) The amount of losses used in a given year may not exceed EUR1 million plus 50% of the taxable profit exceeding this limit for such year.

B. Taxes on corporate income and gains

Corporate tax. The taxation of French companies is based on a territorial principle. As a result, French companies carrying on a trade or business outside France are generally not taxed in France on the related profits and cannot take into account the related losses. However, under the French controlled foreign company (CFC) rules contained in Article 209 B of the French Tax Code, income earned by a French enterprise through a foreign enterprise may be taxed in France if such income is subject to an effective tax rate that is 40% lower than the French effective tax rate on similar income (for further details, see Section E). French companies are companies registered in France, regardless of the nationality of the shareholders and companies that have their place of effective management in France. Foreign companies carrying on an activity in France are subject to French corporate tax on their French-source profits.

Profits derived in France by branches of nonresident companies are deemed to be distributed, normally resulting in the imposition of a branch withholding tax of 25% on after-tax income. This tax is not imposed on the profits of French branches of companies that are resident in EU member states and that are subject to corporate income tax in their home countries. It may be reduced or eliminated by tax treaties. Although branch withholding tax normally applies to undistributed profits, such profits may be

exempted from the tax if an application is filed with the tax authorities and if certain requirements are met.

Rates of corporate tax. For financial years beginning on or after 1 January 2022, companies are subject to a 25% corporate tax rate.

A social security surtax of 3.3% is assessed on the corporate income tax amount. This surtax is imposed on the portion of corporate tax due exceeding EUR763,000 before offsetting the tax credits granted under tax treaties (see *Foreign tax relief*). The 3.3% surtax does not apply to companies whose annual turnover is lower than EUR7,630,000 if at least 75% of the company is owned by individuals or by companies that themselves satisfy these conditions.

Members of consolidated groups must take into account the global turnover of the group to determine whether they reach the EUR7,630,000 threshold mentioned above.

A reduced corporate tax rate of 15% applies to the first EUR38,120 of the profits of small and medium-sized enterprises if certain conditions are met, including the following:

- The turnover of the company is less than EUR10 million.
- At least 75% of the company is owned by individuals or by companies that themselves satisfy this condition and the above condition.

Capital gains. Capital gains derived from the sale of fixed assets by French companies are subject to corporate income tax at the standard rate.

Capital gains derived from the sale of qualifying participations that have been held for at least two years before their sale are exempt from tax. The following are qualifying participations:

- *Titres de participation* (specific class of shares for accounting purposes that enables the shareholder to have a controlling interest)
- Participations eligible for the dividend participation exemption regime if the shareholder holds at least 5% voting rights

However, the corporate income tax applies to 12% of the gross capital gains realized on qualifying participations. As a result, the effective tax rate on such gains is 3% (based on a 25% standard corporate tax rate). Capital losses incurred with respect to such qualifying participations may no longer be offset against capital gains.

This participation exemption regime does not apply to capital gains derived from the sale of qualifying participations in a company established in an uncooperative country (as defined in Article 238-0 A of the French Tax Code; see Section E), unless it is demonstrated that the foreign company's activities are real and do not aim to localize revenues in an uncooperative country.

Under certain conditions, the sale of units in venture mutual funds (FCPRs, FPCIs and SLPs) and venture capital investment companies (SCRs) may benefit from the long-term regime if the units have been held for at least a five-year period. Under this regime, the capital gains are fully exempt up to the part of the

funds or investment companies' assets represented by participation shares and subject to a 15% tax rate for the exceeding portion.

Long-term capital losses can be offset against any kind of long-term capital gains.

The exemption or reduced rate also applies to various distributions made by the FCPRs and SCRs after a two-year-holding period. Capital gains derived from sales of participating interests in companies that are predominantly real estate companies are subject to tax at the standard rate. For sales of participating interests in listed real estate companies that have been held for at least two years before their sale, the rate is reduced to 19%.

Long-term capital gains derived from the first sale of participating interests in companies whose assets' value is mainly composed of television broadcasting rights are subject to tax at a rate of 25%.

Capital gains and income derived from patents and patentable rights. A reduced tax rate of 10% applies on an election performed on an asset-by-asset basis (or, under certain conditions, on a group-of-assets basis), to the net income derived from the licensing of qualifying patents or software, and after deduction of the research and development (R&D) expenses incurred during the financial year (a recapture of R&D expenses incurred since the financial year for which the election was made applies the first time the net income is calculated). If negative, the result is carried forward and deducted from income derived in subsequent years from the licensing of the qualifying patent or software. If positive, a ratio, which cannot be greater than 100%, is applied to determine the net income subject to the 10% rate. This ratio compares the following:

- 130% of the R&D expenses incurred for the creation, or the development of the qualifying patent, either by the claiming taxpayer or by unrelated parties
- The total R&D expenses incurred for the creation, the development, or the acquisition of the qualifying patent

For the calculation of the ratio, the R&D expenses include expenses incurred prior to the election, eventually limited to those incurred during financial years beginning on or after 1 January 2019 (specific recapture rules apply for the financial years beginning in 2019 and 2020). A safe harbor provision allows election of a replacement ratio, subject to an agreement with the tax authorities.

The same tax treatment could apply, also on the basis of an election, to the net income derived from the sublicensing of qualifying patents, and to the net gains derived from the transfer to unrelated parties of qualifying patents, provided that the latter was not acquired less than two years before. Qualifying patents include copyright-protected software but do not include patentable rights (except for small and medium-sized companies under certain circumstances).

For French tax consolidated groups, this election is available at the group level. The net income and ratio are determined at the group level.

Administration. In general, companies must file a tax return before the second business day after 1 May for financial years closing on 31 December or within three months following the end of their financial year in other cases.

Corporate income tax is prepaid in four installments. Companies that have their financial year ending on 31 December must pay the installments on 15 March, 15 June, 15 September and 15 December. The balance of corporate tax is due by 15 May for financial years closing on 31 December or by the 15th day of the 4th month following the end of the financial year in other cases. The rules governing the payment of corporate income tax also apply to the payment of the 3.3% surtax.

Companies must file their corporate income tax and VAT returns electronically. If a company does not comply with this requirement, a 0.2% penalty is imposed.

In general, late payment is subject to a 5% penalty, and late filing is subject to a 10% penalty. If additional tax is payable as a result of a reassessment of tax, interest is charged at 0.2% per month (2.4% per year). Many exceptions and specific rules apply to interest and penalties.

Dividends. Dividends paid by French companies no longer carry a tax credit (*avoir fiscal*). However, under the parent-subsidiary regime, dividends received by French companies or French branches of nonresident companies are exempt from corporate income tax, except for a 5% service charge computed on the gross dividend income (net dividend income and foreign tax credits) and added back to the recipient's taxable income. The rate of this service charge is reduced to 1% in the following cases:

- The distribution is performed within a French tax consolidated group.
- The dividend is distributed to a French tax consolidated company by a company that is a resident for tax purposes in the EU or European Economic Area (EEA) (provided that the EEA country has entered into a treaty with France that includes a mutual assistance provision) and the latter company could be part of the French tax consolidated group if it were subject to corporate income tax in France.
- The dividend is distributed to a French company that is not part of a French tax consolidated group by a company that is resident for tax purposes in the EU or the EEA (provided that the EEA country has entered into a treaty with France that includes a mutual assistance provision) if both of the following conditions are satisfied:
 - Both companies could be part of the same French tax consolidated group if the distributing company was subject to corporate income tax in France.
 - The fact that the French beneficiary company is not tax consolidated does not result from the mere absence of an option for the French tax consolidation regime while that option was technically possible.

The parent-subsidiary regime does not apply to the following:

- Profit distributions that are deductible from the distributing company's taxable income

- Dividends distributed within an arrangement or a series of arrangements, which have been put into place for the main purpose, or one of the main purposes, of obtaining a tax advantage contrary to the object or purpose of the participation exemption regime, are not genuine having regard to all relevant facts and circumstances (that is, not put into place for valid commercial reasons that reflect economic reality)
- Dividends received from a subsidiary established in an uncooperative country (as defined in Article 238-0 A of the French Tax Code; see Section E), unless the parent company demonstrates that the subsidiary's activities are real and do not aim to localize revenues in an uncooperative country

The parent-subsidiary regime applies if the recipient holds at least 5% of the share capital of the distributing company for at least two years.

Dividends that cannot benefit from the parent-subsidiary regime are exempt from corporation income tax up to 99% of the amount of the dividend in the following cases:

- The distribution is performed within a French tax consolidated group (the exemption does not apply the first financial year in which the distributing company is part of the group).
- The dividend is distributed to a French tax consolidated company by a company that is a resident for tax purposes in the EU or EEA (provided that the EEA country has entered into a treaty with France that includes a mutual assistance provision) and the latter company could have been part of the French tax consolidated group if it were subject to corporate income tax in France (the exemption does not apply the first financial year during which this condition is fulfilled).
- The dividend is distributed to a French company that is not part of a French tax consolidated group by a company that is resident for tax purposes in the EU or EEA (provided that the EEA country has entered into a tax treaty with France that includes a mutual assistance provision) if both of the following conditions are satisfied:
 - Both companies could be part of the same French tax consolidated group if the distributing company was subject to corporate income tax in France.
 - The fact that the French beneficiary company is not tax consolidated does not result from the mere absence of an option for the French tax consolidation regime while that option was technically possible.

In general, a 25% withholding tax is imposed on dividends paid to nonresident entities (12.8% for nonresident individuals). The withholding tax rate is increased to 75% for distributed profits paid into uncooperative states (see Section E), unless it is demonstrated that these distributions do not aim to localize revenues in an uncooperative state.

This tax may be reduced or eliminated by tax treaties. In addition, under the EU Parent-Subsidiary Directive, dividends distributed by French subsidiaries to EU parent companies are exempt from withholding tax, if, among other conditions, the recipient holds 10% or more of the shares of the subsidiary for at least two years (the 10% threshold is lowered to 5% if the effective beneficiary

cannot credit the French withholding tax in its country of residence).

Furthermore, a nonresident entity receiving dividends subject to withholding tax may benefit from a deferral of this withholding tax if, among other conditions, the entity is in a tax-loss position.

In addition, for payments made after 1 January 2022 and under specific conditions, beneficiaries that are not able to offset the French withholding tax against their local corporate income tax liability may claim a refund of the portion exceeding the taxation that would have been due in France on the income, taking into account the corresponding expenses directly incurred to generate or retain the revenue that would have been tax deductible if the beneficiary had been located in France.

The withholding tax no longer applies to profits derived from stock, interests or assimilated shares distributed to collective investment vehicles (CIVs) created under foreign law and located in an EU member state or in a state that has signed a treaty with France that includes an administrative assistance provision aimed at combating tax fraud. However, to benefit from the withholding tax exemption, foreign CIVs must meet the same definition as French CIVs, and the content and actual implementation of the administrative assistance provisions must effectively allow the French tax authorities to obtain from the foreign tax authorities the information needed to verify this condition. A 15% withholding tax applies to distributions of income exempt from corporate income tax that are made by French real estate investment trusts (so-called SIICs and SPPICAVs) to French or foreign CIVs.

Withholding taxes on interest and royalties. Under French domestic law, withholding tax is no longer imposed on interest paid to nonresidents. However, a 75% domestic withholding tax is imposed on interest on qualifying borrowings paid into uncooperative states (see Section E), unless it is demonstrated that the corresponding operations do not aim to localize revenues in the uncooperative states.

A 25% withholding tax is imposed on royalties and certain fees paid to nonresidents.

However, as a result of the implementation of EU Directive 2003/49/EC, withholding tax on interest and qualifying royalties paid between “associated companies” subject to corporate income tax of different EU member states was abolished. A company is an “associated company” of a second company if any of the following conditions is satisfied:

- The first company has maintained a direct minimum holding of 25% in the capital of the second company for at least two years at the time of the payment or commits itself to maintain such holding for a two-year period.
- The second company has maintained a direct minimum holding of 25% in the capital of the first company for at least two years or commits itself to maintain the holding for the two-year period.
- A third company has maintained a direct minimum holding of 25% in the capital of both the first and second companies for at least two years or commits itself to maintain such holding for a two-year period.

In these three situations, if the company chooses to undertake to keep the shares for at least two years, it must appoint a tax representative in France who would retrospectively pay the withholding tax if the shares are sold before the end of the two-year period.

Domestic withholding tax on royalties may be reduced or eliminated by tax treaties.

Furthermore, a nonresident entity receiving royalties and certain fees subject to withholding tax may benefit from a deferral of this withholding tax if the entity is in a tax-loss position and the entity is located in an EU member state, or in another state that is part of the EEA agreement and is not uncooperative (see Section E) and that has concluded with France an agreement with an administrative assistance clause for the prevention of fraud and tax evasion, as well as an agreement with a mutual assistance clause for tax collection that has a similar scope as the EU directive.

In addition, for payments made after 1 January 2022 and under specific conditions, the withholding tax on royalties and fees for the provision of certain services is computed based on the gross amount of the sums paid, minus a 10% allowance. Under some conditions, beneficiaries that are not able to offset the French withholding tax against their local corporate income tax liability may claim a refund of the portion exceeding the taxation that would have been due in France on the income, taking into account the corresponding expenses directly incurred to generate or retain the revenue that would have been tax deductible if the beneficiary had been located in France.

Foreign tax relief. In general, income subject to foreign tax and not exempt from French tax under the territoriality principle is taxable. However, most tax treaties provide for a tax credit that generally corresponds to withholding taxes on passive income. Loss-making companies cannot use the tax credit, and they are not allowed to deduct the underlying foreign tax (the withholding tax levied on foreign-source income, which gives right to a tax credit under the double tax treaty).

C. Determination of trading income

General. The assessment is based on financial statements prepared according to French generally accepted accounting principles, subject to certain adjustments.

Deductibility of interest. In general, interest payments are fully deductible. However, certain restrictions are imposed.

Interest accrued by a French entity with respect to loans from its direct shareholders may be deducted from the borrower's taxable income only if the following two conditions are satisfied:

- The share capital of the borrower is fully paid-up.
- The interest rate does not exceed the average interest rate on loans with an initial duration of more than two years granted by banks to French companies.

Effective for financial years beginning on or after 1 January 2020, the deduction of interest and financial expenses may be limited by two main rules.

First, related-party interest is tax-deductible only if it meets an arm's-length test. Under this test, the interest rate is capped at the higher of the following two rates:

- The average annual interest rate on loans granted by financial institutions that carry a floating rate and have a minimum term of two years
- The interest rate at which the company could have borrowed from any unrelated financial institution, such as a bank, in similar circumstances (that is, the market rate)

The portion of interest that exceeds the higher of the above two thresholds is not tax-deductible and must be added back to the company's taxable income for the relevant financial year (this portion is also considered to be distributed income).

Second, the net financial expenses incurred during a financial year (that is, the financial expenses reduced by financial income) are deductible from the taxable income of a company only to the extent that they do not exceed the higher of the two following thresholds:

- EUR3 million
- 30% of the adjusted taxable income of the company

For purposes of the above rule, financial expenses (or income), as defined, include, but are not limited to, any amounts that are accrued in remuneration for monies put at the disposal of the company (or by the company to another party). They include, but are not limited to, the following:

- Payments under profit participating loans
- Imputed interest on instruments such as convertible bonds
- Amounts under alternative financing arrangements
- Notional interest amounts under derivative instruments or hedging arrangements related to an entity's borrowings
- Certain foreign-exchange gains and losses on borrowings and instruments connected with the raising of finance
- Guarantee fees for financing arrangements, arrangement fees and similar costs related to the borrowing of funds

The adjusted taxable income corresponds to the taxable income before the offset of tax losses and without taking into consideration net financial expenses and, to some extent, depreciation, provisions, and capital gains and losses. Seventy-five percent of the net financial expenses exceeding the threshold is tax deductible, provided that either of the following circumstances exist:

- The equity-to-asset ratio of the company at least equals, or is not lower by more than two percentage points, the equity-to-asset ratio of the consolidated group to which it belongs.
- The company is a stand-alone company (it does not belong to a consolidated group, has no permanent establishment outside of France and is not related to any other company such as set out by Articles 2-4 of the EU Anti-Tax Avoidance Directive).

Financial expenses that are excluded from the deductible expenses of a given fiscal year can be carried forward indefinitely (subject to the abovementioned limitations). If, for a given financial year, a company does not fully utilize its deduction capacity (that is, the amount of net financial expenses is lower than the thresholds mentioned above), the unused portion of deduction

capacity, which equals the positive difference between the applicable thresholds and the net financial expenses, can be carried forward to the five following financial years. However, this deduction capacity carryforward cannot be used to deduct non-deductible interest expenses that have been carried forward. The carryforward of nondeductible expenses and the carryforward of unused deduction capacity are ruled out if the company benefited from the additional 75% deduction for stand-alone companies.

If the company exceeds a specific 1.5:1 debt-to-equity ratio (for this ratio, the debt is the amount of debt with related entities) and cannot demonstrate that its debt-to-equity ratio is not higher by more than two percentage points than the debt-to-equity ratio of the consolidated group to which it belongs, restrictive rules apply. A portion of the net financial expenses, determined by application of the following ratio to the net financial expenses, is subject to the regular threshold (EUR3 million or 30% of the adjusted taxable income of the company):

$$\frac{\text{Average amount of indebtedness to unrelated parties} + (1.5 \times \text{equity})}{\text{Average amount of indebtedness}}$$

The remaining portion of the net financial expenses is tax deductible only within the limit of the higher of the two following strengthened thresholds:

- EUR1 million
- 10% of the abovementioned adjusted taxable income

In case of thin-capitalization, the safe-harbor rule that allows for the additional deduction of 75% of the net financial expenses exceeding the threshold does not apply. The portion of net financial expenses that could not be deducted by application of the strengthened threshold can only benefit from the carryforward up to one-third of its amount, and the exceeding portion of the deduction capacity cannot be carried forward.

For a tax-consolidated group, the limitation rule based on a portion of the adjusted taxable income applies at the level of the group.

Inventories. Inventory is normally valued at the lower of cost or market value. Cost must be determined under a weighted average cost price method. A first-in, first-out (FIFO) basis is also generally acceptable, but a last-in, first-out (LIFO) basis is not permitted.

Reserves. In determining accounting profit, companies must book certain reserves, such as reserves for a decrease in the value of assets, risk of loss or expenses. These reserves are normally deductible for tax purposes. In addition, the law provides for the deduction of special reserves.

Capital allowances. In general, assets are depreciated using the straight-line method. However, new qualifying industrial assets are generally depreciated using the declining-balance method.

Depreciable assets composed of various parts with different characteristics must be depreciated on a separate basis (these assets

must be split into a principal component or structure on the one hand and into additional components on the other hand). The depreciable amount of each asset must be spread out over its likely useful life for the company, which corresponds to the time period during which the company may expect to derive a profit from it. The depreciation method applied to each asset (straight-line method or accelerated method) must also be consistent with the pace at which the company expects to derive a profit from the asset.

Periodic assessment of the residual value of each component must be conducted to establish a (non-tax deductible) provision for impairment if needed.

For tax purposes, the depreciation of assets that have not been split into components and the depreciation of the asset's principal structure that has been split into components can be spread out over the useful life commonly accepted in business practices. This rule does not apply to buildings acquired by real estate investment companies. The following are some of the acceptable straight-line rates.

Asset	Rate (%)
Commercial buildings	2 to 5
Industrial buildings	5
Office equipment	10 to 20
Motor vehicles	20 to 25
Plant and machinery	5 to 10*

* These are the general rates. Alternatively, new plant and machinery may be depreciated using the declining-balance method at rates generally ranging from 12.5% to 50%.

Certain specified assets may be depreciated using accelerated depreciation methods. Land and works of art are not depreciable. Intangible assets are depreciable if the company can anticipate that the profits derived from the assets will end at a fixed date. In general, goodwill is not depreciable.

The amortization of goodwill is nondeductible for tax purposes. However, as a temporary measure, companies may deduct for tax purposes the amortization made in accordance with French generally accepted accounting principles (GAAP) for goodwill acquired between 1 January 2022 and 31 December 2025.

Relief for tax losses. Losses may be carried forward indefinitely. However, the amount of losses used in a given year may not exceed EUR1 million plus 50% of the taxable profit above that amount for such financial year.

In addition, enterprises subject to corporate tax may carry back losses against undistributed profits from the prior financial year. The carryback results in a credit equal to the loss multiplied by the current corporate tax rate, but losses carried back may not exceed EUR1 million. The credit may be used to reduce corporate income tax payable during the following five years with the balance being refunded at the end of the fifth year.

A significant change in the company's activity, particularly an addition or a termination of a business that infers a decrease of

50% or more of either the revenue or the average headcount and fixed assets, may jeopardize the loss carryover and carryback.

Groups of companies. Related companies subject to corporate tax may elect to form a tax-consolidated group. Under the tax-consolidation regime, the parent company files a consolidated return, thereby allowing the offset of losses of one group entity against the profits of related companies. The parent company then pays tax based on the net taxable income of companies included in the consolidated group, after certain adjustments for intra-group provisions are made; in particular, intragroup provisions for bad and doubtful debts are neutralized.

If a company is acquired from a shareholder controlling the group and becomes a member of the tax-consolidated group, the amendment Charasse provides that an amount of the financing expenses of the group must be added back to the consolidated income within a nine-year period starting with the purchasing year. This amount is calculated as follows:

$$\text{Group financing expenses} \times \frac{\text{Acquisition price of the shares}}{\text{Average amount of the group's debt}}$$

The group may include the French subsidiaries in which the parent has a direct or indirect shareholding of at least 95% and for which the parent company has elected tax consolidation.

A French company or permanent establishment is allowed to form a French tax consolidated group with other French companies or permanent establishments if all are owned at 95% or more by a foreign parent company or permanent establishment is allowed that is subject to a tax equivalent to French corporate income tax in another EU country or EEA country (“horizontal tax consolidation”). The 95% ownership test can be met directly, or indirectly, through intermediate companies or permanent establishments that are all subject to tax in an EU/EEA country or through other French consolidated companies.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax	2.1/5.5/10/20
Territorial Economic Contribution; capped to a certain amount of the value added by the company; maximum rate	2
Social security contributions, on gross salary (approximate percentages); paid by	
Employer	40 to 45
Employee	20 to 23
General social security tax (<i>contribution sociale généralisée</i> , or CSG) on active income	9.2
General social security tax on patrimonial and financial income (for example, income from real estate and securities)	9.2
Social debt repayment tax (<i>contribution remboursement de la dette sociale</i> , or CRDS), on all income	0.5

Nature of tax	Rate (%)
Special social security tax (<i>prélèvement de solidarité</i>)	7.5
Registration duty	
On sales of shares in stock companies (including <i>sociétés anonymes, sociétés par actions simplifiées</i> and <i>sociétés en commandites par actions</i>); intragroup transfers are exempt	0.1
On sales of shares of private limited liability companies (<i>sociétés à responsabilité limitée</i> , or SARLs) and interests in general partnerships (<i>sociétés en nom collectif</i> , or SNCs); intragroup transfers are exempt	3
On sales of goodwill	3 to 5
On sales of professional premises, housing, businesses and shares of companies whose assets primarily consist of real estate	5 to 6

E. Miscellaneous matters

Foreign-exchange controls. As a general rule, standard foreign investments are free for the most part. However, some foreign investments must be declared for statistics purposes. In addition, foreign investments are subject to a prior authorization procedure of the French Minister of the Economy when they concern strategic sectors or sectors deemed sensitive for the defense of national interests. French rules in this area have been strengthened several times in recent years; the scope of application of the control mechanism was extended and sanctions applicable in the event of a breach were reinforced.

Payments to residents of tax havens or to uncooperative states or territories. Under Article 238 A of the French Tax Code, interest, royalties and other remuneration paid to a recipient established in a tax haven or on a bank account located in a tax haven are deemed to be fictitious and not at arm's length. As a result, to deduct the amount paid, the French entity must prove that the operation is effective (that it effectively compensates executed services) and is at arm's length. For purposes of the above rules, a privileged tax regime is a regime under which the effective tax paid is 40% lower than the tax that would be paid in France in similar situations.

If these payments are made to a recipient established in an uncooperative country or on a bank account located in an uncooperative country, the French entity must also prove that the operation's principal aim is not to locate the payment in that country. The list of the uncooperative countries is regularly published by the French tax authorities.

Anti-hybrid rules. For financial years beginning on or after 1 January 2020, the anti-hybrid rules transposed from the EU Anti-Tax Avoidance Directive apply. The rules target deduction/non-inclusion or double deduction mismatches resulting from hybrid entities or instruments, dual-resident companies or companies with permanent establishments. The rules also cover imported mismatches (the French corporate taxpayer is not directly a party to a targeted mismatch, but a deductible payment is compensated within a wider arrangement with a payment that is part

of a mismatch) and structured arrangements (the benefit of a mismatch is embedded within an arrangement concluded by the French corporate taxpayer, even with a non-associated party).

In deduction/non-inclusion cases, the deduction is disallowed to the payer that is tax resident in France or, for a payee resident in France, the income is taxed if the deduction is not neutralized in the payer jurisdiction. In double deduction cases, the deduction is disallowed if the investor (anyone other than the payer who benefits from the deduction) is tax resident in France or, for a payer tax resident in France, the deduction is disallowed if the deduction is not disallowed in the investor jurisdiction. Specific rules apply for other types of mismatches.

Transfer pricing. French entities controlled by, or controlling, entities established outside France are taxable in France on any profits transferred directly or indirectly to the entity located abroad through an increase or decrease in purchase or sale prices or by any other means.

In the context of a tax audit, certain companies (companies with total net sales before taxes or total gross assets equal to or greater than EUR400 million, subsidiaries owned at more than 50% by such a company, parent companies that hold more than 50% of such a company and members of a French tax consolidated group that includes at least one company that meets these criteria) must provide their transfer-pricing documentation on the tax inspector's request or within 30 days (Article L 13AA of the French Tax Procedure Code). The transfer-pricing documentation includes the list of information recommended by the Organisation for Economic Co-operation and Development (OECD) for the Master File (Annex I to the new Chapter V of the OECD's Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations) and the Local File (Annex II to the aforementioned Chapter V). If the company fails to provide the documentation in due time, a penalty of up to either 5% of the transfer-pricing reassessment or 0.5% of the volume of the transactions carried out with related enterprises is applied, with a minimum of EUR10,000 per financial year under audit.

In addition, certain companies (a company with total net sales before taxes or total gross assets equal to or greater than EUR50 million, a subsidiary owned at more than 50% by such a company, a parent company that holds more than 50% of such a company and members of a French tax consolidated group that includes at least one company that meets these criteria) are required to file a "light" transfer-pricing statement within six months after the filing deadline of the tax return (Article 223 quinquies B of the French Tax Code). The transfer-pricing statement includes the following:

- General information about the group (main activities, companies related to the reporting entity, intangible assets held by the group and used by the reporting entity, and general description of the transfer-pricing policy applied by the group)
- Specific information for intragroup transactions
- Disclosure of change in the activity of the entity or in the transfer-pricing method being applied

Although the penalty for a not filing this transfer-pricing statement is minimal (that is, EUR150), taxpayers failing to file the report are likely to be scrutinized by the French tax authorities.

Country-by-Country Reporting. In accordance with the OECD final report on Transfer Pricing Documentation and Country-by-Country Reporting (CbCR) Action 13 and EU Directive 2011/16/EU regarding mandatory automatic exchange of information in the field of taxation, certain companies that are members of a multinational group with a consolidated turnover of at least EUR750 million are subject to a CbCR obligation (Article 223 quinquies C of the French Tax Code). The report must be filed within 12 months after the closing date of the financial year. Noncompliant companies may be subject to a penalty of up to EUR100,000.

Controlled foreign companies. Under Section 209 B of the French Tax Code, if French companies subject to corporate income tax in France have a foreign branch or if they hold, directly or indirectly, an interest (shareholding, voting rights or share in the profits) of at least 50% in any type of structure benefiting from a privileged tax regime in its home country (the shareholding threshold is reduced to 5% in certain situations), the profits of this foreign entity or enterprise are subject to corporate income tax in France. If the foreign profits have been realized by a legal entity, they are taxed as a deemed distribution in the hands of the French company. If the profits have been realized by an enterprise (an establishment or a branch), these profits are taxed as profits of the French company if the tax treaty between France and the relevant foreign state allows the application of Section 209 B of the French Tax Code.

For the purpose of the above rules, a privileged tax regime is a regime under which the effective tax paid is 40% lower than the tax that would be paid in France in similar situations (such a foreign company is known as a controlled foreign company [CFC]). Tax paid by a CFC in its home country may be credited against French corporate income tax.

CFC rules do not apply to profits derived from entities established in an EU member state unless the French tax authorities establish that the use of the foreign entity is an artificial scheme that is driven solely by French tax avoidance purposes.

Similarly, the CFC rules do not apply if the profits of the foreign entity are derived from an activity effectively performed in the country of establishment. The concerned company must demonstrate that the establishment of the subsidiary in a tax-favorable jurisdiction has mainly a non-tax purpose and effect by proving that the subsidiary mainly carries out an actual industrial or commercial activity.

Debt-to-equity rules. For a discussion on the restrictions imposed on the deductibility of interest payments, see Section C.

Headquarters and logistics centers. The French tax authorities issue rulings that grant special tax treatment to headquarters companies and logistics centers companies. These companies are subject to corporate income tax at the normal rate on a tax base corresponding generally to 6% to 10% of annual operating

expenses, depending on the company's size, functions assumed and risks borne. In addition, certain employee allowances are exempt from income tax.

Reorganizations. On election by the companies involved, mergers, spin-offs, split-offs and dissolutions without liquidation may qualify for a special rollover regime.

Tax credits for research and development. To encourage investments in R&D, the tax credit for R&D expenditure equals 30% of qualifying expenses related to R&D operations up to EUR100 million, and 5% for such expenses above EUR100 million.

A new tax credit has been designed to promote cooperation between private corporations and public research bodies and is based on R&D expenses incurred as part of research cooperation agreements concluded between 1 January 2022 and 31 December 2025. The tax credit for cooperative research amounts to 40% (or 50% for small and medium-sized enterprises) of the eligible expenses up to EUR6 million per year (the expenses cannot simultaneously be used for the computation of the classic R&D tax credit).

Tax audits. All companies must maintain their accounting records in an electronic form when French tax authorities carry out a tax audit.

F. Treaty withholding tax rates

- (a) Dividends paid by French companies to parent companies located in other EU member states are exempt from withholding tax if the parent company makes a commitment to hold at least 10% of the distributing company for an uninterrupted period of at least two years (the 10% threshold is lowered to 5% if the effective beneficiary cannot credit the French withholding tax in its country of residence).

- (b) Withholding tax rates of 5%/15% (dividends), 0%/10% (interest) and 0%/10% (royalties) apply with respect to Quebec.
- (c) France has agreed with Turkmenistan to apply the France-USSR tax treaty. France applies the France-USSR tax treaty to Belarus, Kyrgyzstan and Moldova.
- (d) The tax treaty between France and China Mainland does not apply to Hong Kong.
- (e) As a result of the implementation of EU Directive 2003/49/EC, withholding tax on interest and royalties paid between associated companies of different EU states is abolished if certain conditions are met (see Section B).
- (f) France is honoring the France-Yugoslavia treaty with respect to Bosnia and Herzegovina, Montenegro and Serbia.
- (g) The French domestic law applies. As a result, the rate is 0% under normal circumstances. The rates listed for interest in the table are the treaty rates.
- (h) The general rates under the treaty are reduced in practice according to a “most-favored-nation” clause. The rates indicated are those resulting from the application of the “most-favored-nation” clause.
- (i) The 75% rate applies only to payments made into uncooperative countries (see Section E).
- (j) The domestic rate applies.
- (k) The dash signifies the domestic rate.
- (l) A tax treaty signed on 25 June 2015 between France and Colombia entered into force on 1 January 2022. The tax treaty applies to withholding taxes on revenues paid on or after 1 January 2023.

Branch Remittance Tax	0

- (a) Resident companies and permanent establishments of nonresident companies are not subject to tax on their income. They are subject only to tax at a rate of 15% on distributed profits and certain payments made. The tax rate is applied to the taxable object divided by a specified percentage (for further details, see Section B).
- (b) Resident companies and permanent establishments of nonresident companies are not subject to tax on their capital gains received. They are subject only to tax at a rate of 15% on distributed profits. Nonresident companies without a permanent establishment in Georgia are subject to tax at a rate of 15% on their capital gains derived from Georgian sources. For further details, see Section B.
- (c) These withholding taxes apply to payments to foreign companies.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies and permanent establishments of nonresident companies are not subject to tax on their

generated but not yet distributed profits. They are subject only to tax on the following taxable objects:

- Distributed profits
- Expenses incurred and other payments not related to economic activity
- Free-of-charge supplies of goods or services and transfers of funds
- Representative expenses exceeding statutory limits prescribed by the Tax Code of Georgia (TCG)

Distributed profits. Distributed profit consists of cash or non-cash dividends distributed by a legal entity to its partners or shareholders.

Activities that are not considered distributions of profits include, among others, the following:

- Distributions of dividends among Georgian legal entities
- Distributions of dividends received from foreign enterprises (other than companies registered in low-tax jurisdictions)
- Further distribution of dividends received by corporations, companies, firms and similar entities established under the legislation of a foreign country, regardless of whether they have legal entity status (other than permanent establishments of foreign enterprises), that have transferred their place of management to Georgia

Repatriations of profits attributable to permanent establishments of nonresident entities are treated as distributions of profits. Profit attributable to a permanent establishment is a profit that the permanent establishment would have made if it were a distinct and separate enterprise engaged in the same or similar activities under the same or similar conditions.

Distributions of profits include the following:

- Transactions conducted with related resident entities that are not subject to tax on distributions of profit if the contractual price of such transactions differs from the market price
- International controlled transactions that are not at arm's length
- Transactions conducted with persons that are exempt from corporate income tax or personal income tax under the TCG if the contractual price of such transactions differs from the market price

Incurred expenses and other payments not related to economic activity. The TCG contains a list of expenses or payments that are subject to corporate income tax. Such expenses include, among others, expenses that are not documentarily proven or that were not incurred for the purpose of deriving profit, income or compensation. In addition, certain payments to persons registered in low-tax jurisdictions are taxable.

Free-of-charge supplies of goods and services and transfers of funds. Supplies that are not aimed at gaining profit, income or compensation are considered to be free of charge. In addition, a shortage of inventory or fixed assets is considered a free-of-charge supply and is subject to corporate income tax.

Free-of-charge supplies of goods or services are exempt from tax under the following circumstances:

- The supply was taxed at the source of payment.
- The supply represents a donation to a charitable organization and does not exceed 10% of the net profit for the preceding calendar year.
- The recipient of the goods, services or funds is a state authority, municipal body or legal entity of public law.
- The recipient of the goods, services or funds is a resident enterprise or a nonresident enterprise conducting business in Georgia through a permanent establishment that is subject to tax on distributed profits as mentioned above.

Representative expenses. Representative expenses exceeding 1% of revenues or expenses for the preceding calendar year are taxable.

Commercial banks, credit unions, insurance companies, microfinance organizations and pawnshops will be taxed on the four taxable objects mentioned above, effective from 1 January 2023. Until then, the tax base of these entities is determined as the difference between the gross taxable income and the amount of deductions stipulated under the TCG.

Foreign legal entities without a permanent establishment in Georgia are subject to withholding tax on their Georgian-source income at a rate of 4%, 5%, 10% or 15% (see Section A).

The object of corporate income taxation of a nonresident enterprise earning income from the sale of property in Georgia that is not related to the activity of its permanent establishment in Georgia is the difference between the gross income earned from a Georgian source during a calendar year and the amount of the deductions with respect to the earning of the income.

The object of corporate income taxation of a nonresident enterprise earning remuneration for the lease or rental of property from a person who is not a tax withholding agent is the difference between the gross income earned from a Georgian source during the calendar year and the amount of the deductions with respect to the earning of the income.

Tax rate. The regular corporate income tax rate is 15%. To calculate corporate income tax, the tax rate is applied to the taxable objects described above divided by 0.85.

Special types of enterprises. The Georgian tax law provides for beneficial tax treatment for enterprises operating in Georgia with the following statuses:

- International Company
- Special Trade Company
- Free Industrial Zone Company
- Virtual Zone Person
- Tourist Enterprise
- Agricultural Cooperative
- Investment Fund

The Georgian Tax Authorities (GTA) grant the above statuses according to the rules defined by the Minister of Finance of Georgia or the Government of Georgia. The statuses are described below.

International Company. An International Company is a Georgian enterprise engaged in information technologies or maritime operations that performs certain activities defined by the decree of the Government of Georgia and earns income only from those activities. An International Company pays corporate income tax at a 5% rate.

Special Trade Company. An entity conducting its activities in an authorized warehouse may be granted Special Trade Company status for corporate income tax exemption purposes. A Special Trade Company may supply and re-export foreign goods from a customs warehouse, as well as purchase foreign goods from an entity without such status for further supply or re-export. A Special Trade Company may also derive income (including Georgian-source income) from other allowable activities if such income does not exceed the sum of GEL1 million and 5% of the customs value of foreign goods brought into Georgia. In addition, a Special Trade Company may derive income exempted from corporate income tax and from the sale of fixed assets used in economic activities for more than two years. A Special Trade Company is prohibited from importing or purchasing Georgian goods for further supply, rendering of services in Georgia to a Georgian entity, individual entrepreneur and/or to a permanent establishment of a foreign enterprise and operating a customs warehouse. The status of Special Trade Company is canceled for a calendar year if an authorized representative of such company submits an application to the GTA at least five business days before the beginning of the relevant calendar year. A Special Trade Company is exempt from corporate income tax on distributed profits received from allowable activities except for income received from the sale of fixed assets.

Free Industrial Zone Company. Free Industrial Zone Company status for tax purposes may be granted to a company operating in a Free Industrial Zone. Free Industrial Zone Companies primarily engage in the manufacturing and export of goods outside Georgia from a Free Industrial Zone. The status of Free Industrial Zone Company is subject to cancellation if the company engages in activities prohibited by the law. Free Industrial Zone Companies are exempt from corporate income tax on distributed proceeds from activities allowed within a Free Industrial Zone.

Virtual Zone Person. Virtual Zone Person status for tax purposes may be granted to a company engaged in information technology activities. Virtual Zone Persons are exempt from corporate income tax on distributions of profits derived from the supply of self-produced information technology outside Georgia.

Tourist Enterprise. Tourist Enterprise status for tax purposes may be granted to a company that builds a hotel for the purpose of the sale and leaseback of the assets, or part of the assets, of the hotel and uses the building in hotel operations. Distribution of profit

derived from the rendering of hotel services and the incurrence of expenses in the course of such activity by tourist enterprises are exempt from corporate income tax until 1 January 2026.

Agricultural Cooperative. Agricultural Cooperative status for tax purposes may be granted to a company in accordance with the Law of Georgia on “Agricultural Cooperative.” Agricultural Cooperatives are exempt from corporate income tax on distributed profits derived from the initial supply of agricultural products produced in Georgia before industrial processing of the products (that is, a change of commodity code occurs) until 1 January 2023.

Investment Fund. An Investment Fund is an enterprise established in the form of a joint investment fund or investment company in accordance with the Law of Georgia on Investment Funds.

Profits distributed, expenses incurred and other payments not related to economic activity, free-of-charge supplies of goods or services or transfers of funds and representative expenses exceeding set statutory limits by the joint investment fund within the framework of the activities defined by the Law of Georgia on Investment Funds are not subject to corporate income tax.

Expenses incurred and other payments not related to economic activity, free-of-charge supplies of goods or services or transfers of funds and representative expenses exceeding set statutory limits by an investment company within the framework of the activities defined by the Law of Georgia on Investment Funds are not subject to corporate income tax.

If the recipient of a dividend is a nonresident or a natural person and if the investment company invests only in bank deposits and/or financial instruments, except in the case of distributions of profits received from resident enterprises, distributions of profits by an investment company are taxed at 5%; otherwise, the rate is 15%; that is, the 15% rate applies when the investment company distributes the profit to a nonresident or a natural person, unless the investment company invests only in bank deposits and/or financial instruments.

Distributions of profits by an investment company to a nonresident or a natural person are exempt from corporate income tax if the profits meet any of the following conditions:

- They are not paid out of Georgian-source income.
- They are paid out of income of a resident legal person from the supply of equity securities issued through a public offering in Georgia and admitted for trading on an organized market recognized by the National Bank of Georgia.
- They are paid out of income derived by a resident legal person from the sale of loan securities issued through a public offering in Georgia and admitted for trading on an organized market recognized by the National Bank of Georgia.
- They are paid out of surplus derived from the sale of loan securities issued by the government of Georgia or international financial institutions or are paid out of income received as interest from these securities or deposits placed in commercial banks.

Capital gains. No separate capital gains tax is imposed in Georgia. Capital gains derived by resident companies and permanent establishments of nonresident companies are not subject to corporate income tax until they are distributed.

Capital gains from the supply of treasury bonds are exempt from taxation.

In addition, the following types of capital gains derived by non-residents without a permanent establishment in Georgia are exempt from taxation:

- Gains from the supply of bonds issued through a public offering by a resident entity in Georgia and admitted for trading on the organized market recognized by the National Bank of Georgia (NBG)
- Gains from the supply of equity securities issued through a public offering by a resident entity in Georgia and admitted for trading on the organized market recognized by the NBG

Administration. The reporting period for the entities subject to corporate income tax on distribution of profit is a calendar month. Such entities must submit a corporate income tax return and pay the respective tax by the 15th of the month following the reporting month.

The reporting period for commercial banks, credit unions, insurance companies, microfinance organizations and pawnshops is a calendar year. Such entities must file an annual corporate income tax return and make a balancing payment of corporate income tax by 1 April of the year following the reporting year.

Interest is charged on late tax payments at a rate of 0.05% of the tax due for each day of delay. If the submission of a tax return is delayed for up to two months, the penalty is 5% of the tax payable based on this tax return. If submission of a tax return is delayed for more than two months, the penalty is 10% of the tax payable based on this tax return. A penalty is also imposed for the understatement of tax liability. If understated tax does not exceed 5% of the reported tax, a penalty equaling 10% of the understated amount is imposed. The same penalty applies if the understatement results from a change of a tax point by the tax authorities. If the understated tax amounts to 5% to 20% of the reported tax, a penalty equaling 25% of the understated amount applies. In any other case, a penalty equaling 50% of the understated amount is imposed. No penalty is imposed if a taxpayer voluntarily files an adjusted tax return before an order on the tax offense or on the conducting of a tax inspection is issued.

Dividends. A dividend withholding tax is imposed on dividends paid by Georgian enterprises to individuals, not-for-profit companies and foreign legal entities. However, dividends paid to Georgian legal entities are not subject to withholding tax. The current dividend withholding tax rate is 5%.

The following types of dividends are not subject to withholding tax:

- Dividends paid by International Companies
- Dividends paid by Free Industrial Zone Companies

- Dividends paid by Agricultural Cooperatives to their members until 1 January 2023
- Dividends paid by an Investment Fund to a natural person or nonresident enterprise

Interest. An interest withholding tax is imposed on interest payments made by permanent establishments of nonresidents or residents or on their behalf to individuals, organizations or nonresidents without a permanent establishment in Georgia.

The current interest withholding tax rate is 5%.

The following types of interest payments are not subject to withholding tax:

- Interest paid by financial institutions licensed according to the Georgian law
- Interest paid by Free Industrial Zone Companies
- Interest paid on bonds issued by Georgian entities and listed on recognized foreign stock exchanges

Foreign tax relief. Foreign income tax paid on income generated from foreign sources may be credited against Georgian tax imposed on the same income, limited to the amount of such Georgian tax (that is, up to the amount of corporate income tax that would have been payable on such income in Georgia). To credit foreign tax paid abroad, payment evidence should be provided to the GTA.

C. Determination of taxable income

General. Until 1 January 2023, the tax base of commercial banks, credit unions, insurance companies, microfinance organizations and pawnshops equals the difference between the gross taxable income and the amount of deductions stipulated under the TCG. Consequently, the rules provided below in this section apply only to these entities. These entities will be taxed in accordance with the new system (that is, on distribution of profit), effective from 1 January 2023.

Taxable income of entities mentioned above is computed on the basis of International Financial Reporting Standards, modified by certain tax adjustments. It includes the following:

- Trading income
- Capital gains
- Income from financial activities
- Assets received free of charge
- Works and services
- Other items of income

Income received in foreign currency is converted into Georgian lari (GEL) at the daily exchange rate determined by the NBG for the date of receipt of the income.

Commercial banks, credit unions, insurance companies, microfinance organizations and pawnshops may deduct from gross income all documented expenses contributing to the generation of such income. However, certain expenses are nondeductible or partially deductible for tax purposes.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT); imposed on goods and services supplied in Georgia and on imported goods; reverse-charge VAT is imposed on works and services carried out in Georgia by nonresident entities	18
Property tax; on the average annual net book value of fixed assets	1
Property tax for leasing companies on leased assets	0.6

Georgia also imposes import and excise taxes.

E. Miscellaneous matters

Foreign-exchange controls. The Georgian currency is the lari (GEL). The lari is a non-convertible currency outside Georgia. Enterprises may buy or sell foreign currencies through authorized banks or foreign-exchange offices in Georgia.

Georgia does not impose restrictive currency-control regulations. Enterprises may open bank accounts abroad without any restriction if they declare such accounts (other than deposit accounts) with the GTA within five working days after opening such accounts. In general, all transactions performed in Georgia must be conducted in lari. Transactions with nonresident entities can be conducted in other currencies.

Transfer pricing. Under the transfer-pricing (TP) rules set by the TCG, the arm's-length principle applies to transactions carried out by taxpayers with related parties. The TP rules generally apply to cross-border transactions between related parties. These rules may also apply to transactions between a Georgian resident entity and an unrelated foreign entity that is a resident of a low-tax jurisdiction and transactions between a Georgian company and its permanent establishment.

The generally accepted transfer-pricing methods include the following:

- Comparable uncontrolled price method
- Resale price method
- Cost-plus method
- Net profit margin method
- Profit split method

The Minister of Finance of Georgia is authorized to provide detailed descriptions of TP methods, their application rules and other procedural rules.

In 2013, the Minister of Finance of Georgia enforced the Instruction "On Pricing International Controlled Transactions," which is in accordance with the TCG provisions. The Instruction covers the following items:

- Scope of transactions subject to Georgian transfer-pricing rules
- Acceptable transfer-pricing methods
- Comparability criteria
- Information sources

- Arm's-length range
- Procedure for advance pricing agreements
- Transfer-pricing documentation requirements
- Other procedural issues

It also outlines required actions for companies doing business in Georgia.

Thin capitalization. The thin-capitalization rules were abolished, effective from 1 January 2017.

F. Treaty withholding tax rates

Georgia has entered into tax treaties with 57 jurisdictions. The table below lists the withholding tax rates under these treaties. In general, if the withholding tax rate provided in a treaty exceeds the rate provided by the TCG, the latter rate applies.

	Dividends %	Interest %	Royalties %
Armenia	5/10 (a)	10	5

- (a) The 5% rate applies if the actual recipient of the dividends is a company (other than a partnership) that holds directly at least a 25% share in the capital of the payer of the dividends. The 10% rate applies in all other cases.
- (b) The 0% rate applies if the beneficial owner of the dividends is a company that holds directly or indirectly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than EUR2 million (or the equivalent amount in Georgian lari). The 5% rate applies if the beneficial owner is a company that holds directly or indirectly at least 10% of the capital of the payer of the dividends and that has invested in the payer more than EUR100,000 (or the equivalent amount in Georgian lari). The 10% rate applies in all other cases.
- (c) The 5% rate applies if the beneficial owner of the dividends is a company that holds at least 25% of the capital of the payer of the dividends. The 15% rate applies in all other cases.
- (d) The 0% rate applies if the recipient is the beneficial owner of interest on a commercial debt-claim, including a debt-claim represented by commercial paper, resulting from deferred payments for goods, merchandise or services supplied by an enterprise or if the recipient is the beneficial owner of interest on a loan of any nature that is not represented by a bearer instrument and that is granted by a banking enterprise. The 10% rate applies in all other cases.
- (e) The 5% rate applies if the beneficial owner of the royalties is a company. The 10% rate applies in all other cases.
- (f) The 5% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 25% of the capital of the payer of the dividends. The 10% rate applies in all other cases.
- (g) The 0% rate applies if the recipient is the beneficial owner of interest on credit sales of industrial, commercial or scientific equipment. The 8% rate applies in all other cases.
- (h) The 0% rate applies if the recipient is the beneficial owner of royalties paid for the use of, or the right to use, copyrights of literary, artistic or scientific works, except for computer software and including cinematographic films, and films or tapes for television or radio broadcasting. The 5% rate applies if the recipient is the beneficial owner of royalties paid for the use of, or the right to use, industrial, commercial or scientific equipment. The 10% rate applies if the recipient is the beneficial owner of royalties paid for the use of, or the right to use, patents, trademarks, designs or models, planes, secret formulas or processes, computer software or information concerning industrial, commercial or scientific experience.
- (i) The 0% rate applies if either of the following circumstances exists:
- The actual recipient of the dividends is a company that holds directly or indirectly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than EUR2 million (or the equivalent amount in Danish krone or Georgian lari).

- The beneficial owner of the dividends is the other contracting state or the central bank of that other state, any national agency or any other agency (including a financial institution) owned or controlled by the government of the other contracting state.

The 5% rate applies if the actual recipient is a company that holds directly or indirectly at least 10% of the capital of the payer of the dividends and that has invested in the payer more than EUR100,000 (or the equivalent amount in Danish krone or Georgian lari). The 10% rate applies in all other cases.

- (j) The 0% rate applies if the actual recipient of the dividends is a company (other than a partnership) that holds directly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than EUR2 million (or the equivalent amount in Georgian lari). The 5% rate applies if the actual recipient is a company (other than a partnership) that holds directly at least 10% of the capital of the payer of the dividends and that has invested in the payer more than EUR100,000 (or the equivalent amount in Georgian lari). The 10% rate applies in all other cases.
- (k) The 0% rate applies if the actual recipient of the dividends is a company that holds directly or indirectly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than EUR3 million (or the equivalent amount in Georgian lari). The 5% rate applies if the actual recipient is a company that holds directly or indirectly at least 10% of the capital of the payer of the dividends and that has invested in the payer more than EUR100,000 (or the equivalent amount in Georgian lari). The 10% rate applies in all other cases.
- (l) The 0% rate applies if the actual recipient of the dividends is a company (other than a partnership) that holds directly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than EUR3 million (or the equivalent amount in any currency). The 5% rate applies if the actual recipient is a company (other than a partnership) that holds directly at least 10% of the capital of the payer of the dividends and that has invested in the payer more than EUR100,000 (or the equivalent amount in any currency). The 10% rate applies in all other cases.
- (m) The 5% rate applies if the beneficial owner of the royalties is a resident of the other contracting state and receives royalties for the use of, or the right to use, industrial, commercial or scientific equipment. The 8% rate applies in all other cases.
- (n) The 5% rate applies if the beneficial owner is a company (other than a partnership) that holds directly at least 25% of the capital of the company paying the dividends. The 10% rate applies in all other cases.
- (o) The 5% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 25% of the capital of the payer of the dividends and that has invested in the payer at least EUR75,000. The 15% rate applies in all other cases.
- (p) The 0% rate applies if the actual recipient of the dividends is a company that holds directly or indirectly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than EUR2 million (or the equivalent amount in Georgian lari). The 5% rate applies if the actual recipient is a company that holds directly or indirectly at least 10% of the capital of the payer of the dividends and that has invested in the payer more than EUR100,000 (or the equivalent amount in Georgian lari). The 10% rate applies in all other cases.
- (q) The 0% rate applies if the beneficial owner of the dividends is a company that holds directly or indirectly at least 50% of the capital of the payer of the dividends and that has invested in the payer more than USD2 million (or the equivalent amount in euros or Georgian lari). The 5% rate applies if the recipient is a company that holds at least 10% of the capital of the payer of the dividends. The 15% rate applies in all other cases.
- (r) The 0% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends. The 10% rate applies in all other cases.
- (s) In general, the 0% rate applies if the beneficial owner of the dividends is a resident of the other contracting state. However, if the beneficial owner of the dividends is a pension scheme and if dividends are paid out of income derived directly or indirectly from immovable property within the meaning of Article 6 of the treaty by an investment vehicle that distributes most of this income annually and whose income from such immovable property is exempt from tax, the 15% rate applies.
- (t) The 5% rate applies if the actual recipient of the dividends is a company (other than a partnership) that holds directly at least 25% of the capital of the payer of the dividends. The 15% rate applies in all other cases.

-
- (u) The 0% rate applies if the beneficial owner of the dividends is a company (other than a partnership that is not liable to tax) that has held directly at least 25% of the capital of the company paying the dividends for an uninterrupted period of at least 12 months before the decision to distribute the dividends. The 5% rate applies in all other cases.
- (v) The 5% rate applies if the beneficial owner of the dividends is a company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends. The 10% rate applies in all other cases.
- (w) The 0% rate applies if the beneficial owner of the dividends is any of the following:
- A company (other than a partnership) that holds directly at least 10% of the capital of the company paying the dividends
 - The other contracting state or the central bank of the other contracting state
 - A pension fund or other similar institution providing pension schemes in which individuals may participate to secure retirement benefits if such pension fund or other similar institution is established and recognized for tax purposes in accordance with the laws of the other state
- The 5% rate applies in all other cases.
- (x) The 0% rate applies if the beneficial owner of the dividends is a company that has invested in the payer more than USD3 million (or the equivalent amount in Georgian lari). The 5% rate applies in all other cases.
- (y) The 0% rate applies to pension funds and recipients of interest on corporate bonds traded on a stock exchange in the other state and issued by a company that is a resident of that state. The 5% rate applies in all other cases.
- (z) The 5% rate applies if the beneficial owner of the dividends is a resident of the other contracting state. The 10% rate applies if dividends are deductible in computing the taxable income of the company paying the dividends.
- (aa) The 0% rate applies if the beneficial owner of the dividends is a company (or partnership) that holds at least 10% of the capital or the voting power of the company paying the dividends. The 10% rate applies in all other cases.

A. At a glance

Corporate Income Tax Rate (%)	15 (a)
Trade Tax Rate (Average Rate) (%)	14
Capital Gains Tax Rate (%)	15 (a)(b)
Branch Tax Rate (%)	15 (a)
Withholding Tax (%)	
Dividends	25 (a)(c)(d)(e)
Interest	0/25 (f)(g)
Royalties from Patents, Know-how, etc.	15 (a)(b)(g)(h)(i)
Remuneration to Members of a Supervisory Board	30 (i)
Payments for Construction Work	15 (a)(c)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	2 (j)
Carryforward	Unlimited (k)

- (a) A 5.5% solidarity surcharge is imposed (see Section B).
- (b) See *Capital gains and losses* in Section B for the taxation of capital gains derived from sales of shares.
- (c) On application, these rates may be reduced by tax treaties.
- (d) This withholding tax applies to dividends paid to residents and nonresidents. For dividends paid to nonresident corporate entities, this rate may be reduced to 15% if the nonresident dividend recipient qualifies as an eligible recipient under the German anti-treaty shopping rules.
- (e) These rates may be reduced under the European Union (EU) Parent-Subsidiary Directive. Under the EU Parent-Subsidiary Directive, on application, a withholding tax rate of 0% applies to dividends distributed by a German subsidiary to an EU parent company if the recipient has owned 10% or more of the share capital of the subsidiary for a continuous period of 12 months at the time the dividend distribution takes place and if the German anti-treaty shopping rules do not apply.
- (f) A 25% interest withholding tax is imposed on, among others, the following types of interest:
- Interest paid by financial institutions
 - Interest from over-the-counter business
 - Interest from certain types of profit-participating and convertible debt instruments
- Interest secured by domestic real estate is subject to tax for nonresidents, but not subject to withholding tax (self-declaration). The interest withholding tax is not imposed on classic (“plain vanilla”) loans. Nonresidents may apply for a refund of the withholding tax if a treaty exemption applies. If a nonresident is required to file an income tax return in Germany, the withholding tax is credited against the assessed corporate income tax or refunded.
- (g) These rates may be reduced by tax treaties or under the EU Interest-Royalty Directive. Under the EU Interest-Royalty Directive, on application, German withholding tax is not imposed on interest and royalties paid by a German

resident company to an associated company located in another EU member state. To qualify as associated companies, a minimum 25% shareholding or a common parent is required, among other requirements.

- (h) The withholding tax rate on royalties from patents, know-how and similar items is 15% for payments to nonresident corporations if such items are registered in Germany or used in a German business.
- (i) This withholding tax applies to payments to nonresidents only.
- (j) The loss carryback, which is optional, is available for corporate income tax purposes, but not for trade income tax purposes. In the wake of the COVID-19 pandemic crisis, the maximum carryback has been increased temporarily from EUR1 million to EUR10 million for the 2020 to 2023 tax years. From 2024 onward, the maximum carryback of EUR1 million will apply. A two-year loss carryback is available as from 2022.
- (k) The carryforward applies for both corporate income tax and trade tax purposes. The maximum loss carryforward that may be used for corporate and trade tax purposes is restricted to EUR1 million for each tax year plus 60% of annual taxable income exceeding EUR1 million (so-called minimum taxation). The carryforward is subject to the change-of-ownership rule (see Section C).

B. Taxes on corporate income and gains

Corporate income tax. Corporations, such as stock corporations (Aktiengesellschaft, or AG) and limited liability companies (Gesellschaft mit beschränkter Haftung, or GmbH), that have their corporate seat or place of management in Germany (resident corporations) are subject to corporate income tax (Körperschaftsteuer) on worldwide income, unless otherwise provided in tax treaties.

A nonresident corporation, whose corporate seat and place of management are located outside Germany, is subject to corporate income tax only on income derived from German sources. Income from German sources includes, among other items, business income from operations in the country through a branch, office or other permanent establishment, including a permanent representative, and income derived from the leasing and disposal of real estate located in Germany (including capital gains from the sale of real estate holding companies) as well as rights registered in a German public register.

Rates of corporate income tax. Corporate income tax is imposed at a rate of 15% on taxable income, regardless of whether the income is distributed or retained.

A 5.5% solidarity surcharge is imposed on corporate income tax, resulting in an effective tax rate of 15.825%. Prepayments of corporate income tax and withholding tax payments are also subject to this surcharge.

Trade tax. Municipalities impose a trade tax on income. However, for purposes of this tax, taxable income is subject to certain adjustments. The major adjustments include a 25% add-back of interest expenses with respect to debt, a 6.25% add-back of license payments, a 5% add-back of lease payments for movable assets and a 12.5% add-back of lease payments for immovable assets. The trade tax add-backs apply to the extent that the total amount of add-backs exceeds EUR200,000 for the 2020 and future tax years (EUR100,000 for tax years prior to 2020). The effective average trade tax rate amounts to approximately 14%. Taking into account the various municipality multipliers, the combined average tax rate for corporations (including corporate income tax, solidarity surcharge and trade tax) ranges from approximately 23% to 33%.

If a company operates in several municipalities, the tax base is allocated according to the payroll paid at each site. Certain enterprises, such as specified banks and real estate companies, receive privileged treatment under the trade tax law.

Withholding tax on construction work. Taxpayers and entities that are corporate bodies under public law (for example, cities and municipalities) must withhold a tax of 15% from payments made for construction work provided in Germany. The tax must be withheld even if the work provider does not have a tax presence in the form of a permanent establishment or permanent representative in Germany unless the work provider obtains a “certificate of non-taxation” from the competent tax office. Construction work providers may obtain a refund of the withholding tax if they can prove that no German tax liability against which the withholding tax could be applied exists.

Capital gains and losses. Capital gains of corporations, except those derived from sales of shares, are treated as ordinary income. However, rollover relief is granted if gains derived from disposals of real estate are reinvested in real estate within the following four years and if certain other conditions are met. The period for possible reinvestments has been extended temporarily for reinvestment periods that regularly expired after 29 February 2020 and prior to 1 January 2023.

Capital gains derived by corporations from sales of shares in corporations are generally exempt from corporate income tax and trade tax. Five percent of the capital gain is deemed to be a non-deductible expense. As a result, the exemption is effectively limited to 95% of the capital gain. Based on case law, the 5% deemed expense add-back should not apply to nonresident corporate sellers, even if the nonresident seller cannot claim treaty protection. The 95% tax exemption for capital gains received by a corporate shareholder is not granted to banks, financial services institutions and financial enterprises that purchase shares with the intention of realizing short-term profits for their own account or to certain insurance companies.

However, to the extent that write-downs of the shares have previously been deducted for tax purposes, capital gains from sales of shares are not exempt.

Capital gains derived from the disposal of tainted shares are, in principle, effectively 95% exempt from tax. Tainted shares may result from corporate reorganizations (for example, contributions of qualifying businesses or partnership interests into corporations in return for shares or share swaps) that are carried out at tax book values or below fair market values. The subsequent disposal of the tainted shares results in a (full or partial) retroactive taxation of the original reorganization that gave rise to the share taint. In general, after a seven-year holding period, the shares lose their taint.

In general, capital losses are deductible. However, capital losses are not deductible if a gain resulting from the underlying transaction would have been exempt from tax. Consequently, capital losses from sales of shares or write-downs on shares are generally not deductible. In addition, capital losses and write-downs on loans to related parties may not be deductible.

However, losses from exchange-rate fluctuations in connection with shareholder loans are deductible in 2022 and future tax years.

Administration. The tax year is the calendar year. If a company adopts an accounting period that deviates from the calendar year, tax is assessed for the taxable income in the accounting period ending within the calendar year. The adoption of a tax year other than the calendar year requires the consent of the tax office.

Annual tax returns must, in general, be filed by 31 July of the year following the tax year. However, an extended deadline until the last day of February of the second year following the tax year applies if a tax professional prepares the return. The deadline for filing the tax returns for the 2019 to 2022 tax years has been extended due to the COVID-19 pandemic crisis.

Payments made with respect to the estimated corporate income tax liability, usually determined at one-quarter of the liability for the previous year, are due on 10 March, 10 June, 10 September and 10 December. Prepayments of trade tax are due on 15 February, 15 May, 15 August and 15 November. Final payments are due one month after the tax assessment notice issued by the tax authorities is received by the taxpayer.

Additional tax payments and tax refunds are generally subject to interest of 0.5% per month. Interest begins to accrue 15 months after the end of the calendar year for which the tax is assessed. The interest rate of 0.5% per month was declared by the Federal Constitutional Court to be incompatible with the Constitutional Law. For interest periods from 2019 onward, a new interest rate of likely 0.15% per month will apply. The interest is not deductible for corporate income and trade tax purposes if the tax itself is not deductible. Late payment penalties are charged at 1% a month if the unpaid balance is not settled within one month from the date of the assessment notice issued by the tax office. A penalty of 0.25% and up to EUR25,000 can be assessed if the tax return is not filed by the due date, including extensions granted.

Dividends. Dividends received by German corporations and branches of nonresident corporations from their German and foreign corporate subsidiaries are exempt from tax. However, a minimum shareholding requirement of 10% applies for this participation exemption for corporate income tax purposes. In addition to this domestic rule, an applicable tax treaty may provide for an exemption for foreign dividends. The tax exemption for dividends is granted only if the dividend payment is not tax-deductible as a business expense at the level of the distributing entity (linking rule).

Five percent of the tax-exempt dividend income is treated as a nondeductible expense, while the expenses actually incurred are deductible. Consequently, only 95% of the dividends received by a corporation is effectively exempt from tax. The 95% tax exemption for dividends received by a corporate shareholder is not granted for portfolio dividends (less than 10% shareholding) or to banks, financial services institutions and financial enterprises that purchase shares with the intention of realizing short-term profits for their own account or to certain insurance companies.

The participation exemption applies for trade tax purposes if the dividends are received from corporations in which the parent holds at least 15% as of 1 January of the calendar year in which the dividend distribution takes place.

Foreign tax relief. Under German domestic tax law, income from foreign sources is usually taxable, with a credit for the foreign income taxes paid, up to the amount of German tax payable on the foreign-source income, subject to per-country limitations. The foreign tax relief does not apply for foreign tax-exempt income. Excess foreign tax credit cannot be carried back or carried forward. Instead of a foreign tax credit, a deduction may be claimed for foreign income tax. This may be beneficial in loss years and in certain other instances. In general, German tax treaties provide for an exemption from German taxation of income from foreign real estate and foreign permanent establishments (activity requirements generally apply).

C. Determination of trading income

General. Taxable income of corporations is based on the annual financial statements prepared under German generally accepted accounting principles (GAAP), subject to numerous adjustments for tax purposes. After the annual financial statements have been filed with the tax authorities, they may be changed only to the extent necessary to comply with GAAP and the tax laws.

Acquired goodwill must be capitalized for tax purposes and may be amortized over 15 years. Intangibles acquired individually must also be capitalized for tax purposes and may be amortized over their useful lives. A company's own research and development and startup and formation expenses may not be capitalized for tax purposes. They must be currently expensed.

Inventories. Inventory is basically valued at acquisition cost or production cost, unless a lower value (that is, the lower of reproduction or repurchase cost and market value) is indicated. Under certain conditions, the last-in, first-out (LIFO) method can be used to value inventory assets if the assets are of a similar type.

Provisions. In general, provisions established under German GAAP are accepted for tax purposes. However, in past years, the scope of tax-deductible provisions has been severely limited by certain rules, including, among others, the following:

- Liabilities or accruals of obligations whose fulfillment is contingent on future revenue or profit may be recorded only when the condition occurs.
- Provisions for foreseeable losses from open contracts may not be recorded.
- Future benefits arising in connection with the fulfillment of an obligation must be offset against costs resulting from the obligation.
- Non-monetary obligations may be accrued using the direct cost and the necessary indirect cost.
- Provisions for obligations resulting from the operation of a business must be built up in equal increments over the period of operation.
- Provisions for pension obligations must be calculated on an actuarial basis using an interest rate of 6% and built up over the period of employment.

If built-in losses contained in the above provisions or liabilities materialize on their transfer at fair market value, the resulting losses may generally only be deducted for tax purposes over a period of 15 years.

Non-interest-bearing debt must be discounted at an annual rate of 5.5% if the remaining term exceeds 12 months.

Depreciation. For movable fixed assets purchased or produced after 31 December 2007, tax depreciation must generally be calculated using the straight-line method. However, for movable assets purchased or manufactured after 31 December 2019 and before 1 January 2023, the declining-balance method can be applied by depreciating a fixed percentage of the residual tax book value (not exceeding 25%) per year and capped at 2.5 times of the depreciation percentage that would apply using the straight-line method. Furthermore, according to a circular of the Federal Ministry of Finance, the useful life of certain digital assets (hardware, software and peripherals) is set at one year, leading to immediate write-offs. The measure is applicable for fiscal years ending after 31 December 2020. It may be applied to digital assets acquired before that date if not fully depreciated. Movable assets with acquisition costs that do not exceed EUR800 can be fully depreciated in the year of acquisition, regardless of their useful lives. Useful lives of fixed assets are published by the Federal Ministry of Finance, based primarily on tax audit experience; deviation from published useful life is possible, but requires justification by the taxpayer. Tax depreciation rates for buildings are provided by law. Schedules for assets specific to certain industries are also available. The following are some of the straight-line rates under the general list.

Asset	Rate (%)
Office equipment	7.7 to 20
Motor vehicles	8 to 16.6
Plant and machinery	4 to 20
Airplanes	5 to 8
Personal computers or notebooks and related equipment	33.3 to 100
Nonresidential buildings (offices, retail and factories)	
Constructed before 1 January 1925	2.5
Constructed after 31 December 1924 and application for the construction permit filed before 1 April 1985	2
Application for the construction permit filed after 31 March 1985	3*

* The rate is 4% if the application for the construction permit was filed or the purchase agreement was dated before 1 January 2001.

Extraordinary depreciation. A tax deduction for the extraordinary write-down of an asset because of an extraordinary impairment in value is allowed only if the value is permanently impaired. This rule is particularly relevant for assets that are not subject to ordinary depreciation, such as land or shares (however, write-downs of shares are not tax effective; see Section B). For assets that have extraordinarily been written down, the write-down must be reversed as soon as and to the extent that the asset has increased in value.

Disallowed items. After income for tax purposes has been determined, certain adjustments need to be made to calculate taxable income. Major adjustments include the following nondeductible expenses:

- Income taxes (corporate income tax, solidarity surcharge and trade tax) and any interest expense paid with respect to these taxes
- Interest expenses (see *General interest expense limitation*)
- Penalties
- Fifty percent of supervisory board fees
- Thirty percent of business meal expenses
- Gifts to non-employees exceeding EUR35 per person per year and input value-added tax (VAT) regarding such expenses
- Expenses incurred in direct connection with tax-exempt income items (see the discussion of dividends in Section B)

In addition, as a result of the exemption for capital gains derived from sales of shares (see Section B), losses from sales of shares, write-downs of shares or, under certain circumstances, write-downs on loans to related parties are not deductible for tax purposes and must be added back to the tax base.

Anti-hybrid rules. The German anti-hybrid rules primarily focus on the counteraction of hybrid mismatches that lead to either of the following:

- Deductible expenses in Germany
- Income that is not taxable in Germany while the corresponding expenses are deductible in a foreign country

The rules that target expenses in Germany are applicable to expenses incurred after 31 December 2019. The rules that target income that is not taxable in Germany are applicable to income received after 31 December 2021.

Under the anti-hybrid rules, the deductibility of expenses recognized in the Germany income tax base that are either subject to a harmful deduction/non-inclusion mismatch or a double deduction can be partially or fully denied.

Deduction/non-inclusion mismatches are scenarios in which any of the following occurs:

- Income corresponding to German expenses incurred for the use of or in connection with the transfer of capital assets (mostly interest payments) is not taxed or low taxed at the level of the recipient due to a tax qualification or attribution of the capital assets.
- Income corresponding to German expenses is not taxed at the level of the recipient due to the tax treatment of the taxpayer that deviates from German law (hybrid entity) or a deviating assessment of assumed dealings, and no sufficient dual-included income can be documented.
- Income corresponding to German expenses is not taxed at the level of the recipient due to a deviating tax allocation of income.

Double-deduction scenarios are scenarios in which German expenses are also recognized in any other state for income tax purposes and no sufficient dual-included income can be documented.

The anti-hybrid rules also apply to German expenses for which there is no direct hybrid mismatch but where the income corresponding to the German expenses is offset with expenses subject to a hybrid mismatch abroad (imported mismatches at the level of the direct or indirect recipient). For imported mismatches, it is not required that there be an economic link between the income corresponding to the German expenses and the imported hybrid expenses.

General interest expense limitation. The interest expense limitation rule applies to all loans (that is, group and third-party loans) and to businesses resident in Germany, companies residing abroad but maintaining a permanent establishment in Germany, and partnerships with a German branch.

Under the interest expense limitation rule, the deduction of interest expense exceeding interest income (net interest expense) is limited to 30% of taxable earnings before (net) interest, tax, depreciation and amortization (EBITDA). Tax-exempt income and partnership income should not be considered in the calculation of the taxable EBITDA.

The limitation rule does not apply if one of the following exemption rules applies:

- Exemption threshold. The annual net interest expense is less than EUR3 million.
- Group clause. The company is not a member of a consolidated group (a group of companies that can be consolidated, for example, under International Financial Reporting Standards [IFRS]). The group clause does not apply if both of the following circumstances exist:
 - A shareholder who, directly or indirectly, holds more than 25% in the corporation or a related party of such shareholder grants a loan to the company.
 - The interest exceeds 10% of the company's net interest expense.
- Escape clause. The equity ratio of the German subgroup is at least as high as the equity ratio of the worldwide group (within a 2% margin). A "group" is defined as a group of entities that could be consolidated, for example, under IFRS, regardless of whether a consolidation has been actually carried out. The equity ratio is calculated on the basis of the IFRS/US GAAP/EU local country GAAP consolidated balance sheet of the ultimate parent. The same accounting standard is applied to a German group but subject to several complex technical adjustments, such as a deduction for unconsolidated subsidiaries. The access to the escape clause is limited in the case of certain loans from nonconsolidated shareholders (related party debt exception).

Unused EBITDA can be carried forward over a five-year period. However, the carryforward does not apply if one of the above-mentioned exemptions from the interest expense limitation rule applies or if a positive net interest balance exists. The EBITDA carryforward is forfeited in the course of reorganizations but not under the loss-trafficking rules (see *Tax losses*).

Nondeductible interest expense can be carried forward indefinitely but is subject to the loss-trafficking rules (see *Tax losses*). A deduction is possible in the following years in accordance with the

interest expense limitation rules. The nondeductibility is final in the case of a transfer, merger, termination or liquidation of the business or in the case of a permanent excess of limitation amounts (that is, net interest expense is permanently higher than 30% of the taxable EBITDA and the exemption clauses are not fulfilled; as a result, the deduction of all of the interest expense is permanently not achievable).

The interest expense limitation rules may be incompatible with German constitutional law according to the German Federal Tax Court, which has referred the case to the German Constitutional Court.

Constructive distributions of income. Adjustments to taxable income as a result of a violation of arm's-length principles can be deemed to be constructive distributions of income (see the discussion of transfer pricing in Section E).

Royalty deduction limitation rule. Royalty payments are generally deductible. However, royalties paid to a related person or its affiliates are not fully deductible if the income of the recipient is either not taxed or is subject to a low tax rate due to the application of a preferential regime. The royalty income is considered to be taxed at a low rate if the elective tax rate is below 25%. Furthermore, the low taxation must be caused by a preferential regime that does not comply with the nexus approach of the Organisation for Economic Co-operation and Development (OECD), according to the Action 5 Final Report of the OECD's Base Erosion and Profit Shifting Project. If the limitation on the deductibility of royalty payments applies, the nondeductible part of the royalty payment is determined by the following ratio:

$$\frac{(25\% - \text{income tax burden as a \%})}{25\%}$$

Tax losses. Tax losses may be carried forward without time limitation. Under the restrictions of the so-called minimum taxation, only 60% of annual taxable profits in excess of EUR1 million can be offset by loss carryforwards. As a result, 40% of the portion of profit exceeding EUR1 million is subject to tax.

This tax loss carryforward rule applies for both corporate income tax purposes and trade tax purposes. For corporate income tax (not trade tax) purposes, an optional loss carryback is permitted for two years (as of 2022) up to a maximum amount of EUR10 million for the 2020 to 2023 tax years. From 2024 onward, the usual maximum amount of loss carryback of EUR1 million will apply.

Under the German loss-trafficking rule, tax loss carryforwards are forfeited if, within a five-year period, more than 50% of the shares (votes or value) of a loss-making entity is directly or indirectly transferred to a single new shareholder or a group of shareholders. To prevent abuse of the rule, the rule includes a measure under which investors with common interests and acting together are deemed to be one acquirer for the purposes of the rule.

The following exceptions apply to the loss-trafficking rule:

- **Group restructuring exception.** A transfer of shares is not considered to be harmful if it occurs within a “100% controlled group.” A group is considered to be a “100% controlled group” if, after a direct or indirect transfer, the same person owns directly or indirectly 100% of the transferor and transferee, or if the acquirer is holding all of the shares in the seller of the shares or the seller is holding all of the shares in the acquirer of the shares.
- **Built-in gain exception.** For harmful share transfers, a loss carryforward is not forfeited up to the amount of the loss company’s built-in gains to the extent that these built-in gains are taxable in Germany. Consequently, built-in gains allocable to subsidiaries are not taken into account; see the discussion of capital gains and losses in Section B.
- **Certain cases of business revitalization.**

The carryforward of losses is also allowed in certain limited shareholder change situations if strict business continuation requirements are met.

Loss carryforwards are also forfeited in the course of a merger, change of legal form or liquidation of the loss-making company.

The Federal Constitutional Court has not yet decided if the loss-trafficking tax rule would be unconstitutional under German tax law in case of a change of shareholding of more than 50%; this question is pending.

Groups of companies. German tax law provides for a tax consolidation of a German group of companies (*Organschaft*), which allows losses of group companies to be offset against profits of other group companies. Only German resident companies in which the parent company has held directly or indirectly the majority of the voting rights since the beginning of the fiscal year of the subsidiary may be included (this requirement is known as financial integration). A tax consolidation may cover corporate income tax, trade tax and (with different requirements) VAT. To make the *Organschaft* effective for corporate income tax and trade tax purposes, the parent company and the German subsidiaries must enter into a profit-and-loss absorption agreement (*Gewinnabführungsvertrag*) for a minimum period of five years. A tax group between sister companies is not possible (only vertical; a horizontal tax group is not allowed). Partnerships do not qualify as subsidiaries in a corporate income tax or trade tax *Organschaft*, but they may under certain circumstances be a VAT group subsidiary.

An *Organschaft* subsidiary must have its place of management in Germany and its legal seat in Germany or an EU/European Economic Area member state.

A domestic or foreign corporation, individual or partnership may become the head of an *Organschaft* if, in addition to the above requirements, the following requirements are met:

- The company has an active trade or business (generally assumed for corporations).
- The investments in the subsidiaries are assets of a German branch.

- The branch profits (including the income of the subsidiaries) are subject to German taxation for both domestic direct tax and tax treaty purposes.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
(Annual) Real Estate/Property tax; on assessed standard value of real property; rate varies by municipality	0.28 to 3.48
Real estate transfer tax (RETT), on sales and transfers of real property, including buildings, and on certain transactions that are deemed to be equivalent to transfers of real property, such as the assignment of at least 90% of the shares of a German or foreign company that holds the title to domestic real property (however, a group exception may apply); levied on the purchase price of the real property or, in certain situations (such as when at least 90% of the shares of a real estate-owning company are transferred), on the assessed property value	
Rate for real estate located in Bavaria and Saxony	3.5
Rate for real estate located in Hamburg	4.5
Rate for real estate located in Baden-Württemberg, Bremen, Lower Saxony, Rhineland-Palatinate and Saxony-Anhalt	5
Rate for real estate located in Berlin, Hesse and Mecklenburg-West Pomerania	6
Rate for real estate located in Brandenburg, North Rhine-Westphalia, Saarland, Schleswig-Holstein and Thuringia	6.5
Value-added tax (VAT or Umsatzsteuer); on application, foreign enterprises may receive refunds of German VAT paid if they are neither established nor registered for VAT purposes in Germany; this application must be filed by non-EU enterprises by 30 June and by EU enterprises by 30 September, in the year following the year in which the invoice was received by the claimant	
Standard rate	19
Reduced rate	7
(In the wake of the COVID-19 pandemic crisis, the VAT rates have been temporarily reduced. For the period from 1 July 2020 to 31 December 2020, the standard rate was reduced to 16% and the reduced rate was reduced to 5%. For restaurant and catering services as well as deliveries (except for drinks), a reduced VAT rate of 7% applies from 1 January 2021 to 31 December 2022.)	

E. Miscellaneous matters

Foreign losses. In principle, losses incurred by foreign permanent establishments are not deductible if a German tax treaty provides that a permanent establishment's income is taxable only in the country where it is located. However, these losses may be taken

into account if they are incurred in non-treaty countries or if a tax treaty provides for the credit method, subject to the condition that the foreign branch is engaged in a specified active trade.

Foreign-exchange controls. No controls are imposed on the transfer of money in and out of Germany. However, specific reporting requirements for certain transactions must be met.

Debt-to-equity rules. The interest expense limitation rule (see Section C) replaced the former thin-capitalization rules. Consequently, no statutory debt-to-equity ratio currently applies.

Anti-avoidance legislation. Several tax laws contain anti-avoidance legislation. The Corporate Income Tax Act deals with constructive dividends by corporations, both in Germany and abroad. The Foreign Investment Tax Act deals mainly with transactions between all kinds of related or affiliated taxpayers, such as individuals, partnerships and corporations, and is restricted to cross-border transactions. It contains extensive provisions on controlled foreign company (CFC) and passive foreign investment company income and was extensively adjusted as of 1 January 2022 in the course of the implementation of the EU Anti-Tax Avoidance Directive rules into German law. The General Tax Code contains a general anti-abuse rule stating that a tax liability cannot be effectively avoided by an abuse of legal forms and methods if obtaining a tax advantage is the only reason for such an arrangement.

The Income Tax Act provides anti-abuse rules that are aimed at preventing the unjustified reduction of German withholding taxes under a tax treaty, under the EU Parent-Subsidiary Directive or under the EU Interest-Royalty Directive (treaty or directive shopping).

Germany's newer tax treaties include "switch-over" clauses as well as "subject-to-tax" clauses. Domestic treaty-overriding rules, which are aimed at preventing double non-taxation or double deductions, also exist.

Transfer pricing. German tax law contains a set of rules that allow the adjustment of transfer prices. These rules include general measures on constructive dividend payments and constructive contributions and a specific adjustment provision in the Foreign Tax Act. All of the measures mentioned in the preceding sentence are based on the arm's-length principle. The Foreign Tax Act also contains the OECD Approach. As a result, permanent establishments and partnerships are treated as separate entities, similar to corporations.

The selection of the transfer-pricing method now follows the OECD Transfer Pricing Guidelines 2017 and determines that the most appropriate method for the underlying case should be applied if comparable transactions can be determined (there is no hierarchy as to which method has to be used with priority). In addition, the code contains express language with respect to the determination of the arm's-length character of a transfer price if no comparables can be found (hypothetical arm's-length method). The code also has a set of rules directed at securing the German tax revenue. These rules deal with the determination of transfer prices in the event of a transfer of business functions

abroad. Furthermore, the Foreign Tax Act now provides the so-called Development, Enhancement, Maintenance, Protection and Exploitation (DEMPE) concept in line with the OECD Transfer Pricing Guidelines 2017 and includes a definition of what constitutes an intangible. With the DEMPE concept, the entity performing the DEMPE functions, assuming risks and providing these assets has to be entitled to the intangible-related return.

Specific documentation rules apply for transfer-pricing purposes. On request of a tax auditor, the taxpayer is required to submit the transfer-pricing documentation within 60 days (in the case of extraordinary business transactions, within 30 days). Non-compliance with these rules may result in a penalty (if imposed) of at least EUR100 per day of delay up to a maximum of EUR1 million. If no documentation is provided or if the documentation is unusable or insufficient, a surcharge of 5% to 10% of the income adjustment is applied with a minimum surcharge of EUR5,000.

A Country-by-Country Reporting (CbCR) requirement applies to German taxpayers if they belong to a group with consolidated revenues of at least EUR750 million in the preceding fiscal year. The providing of a master file in addition to a local file on request is required if the German taxpayer's revenue was at least EUR100 million in the preceding fiscal year.

German taxpayers can apply for an advance pricing agreement (APA) not only in the context of transfer pricing, but also for all cross-border transactions, if the other state agrees to such a procedure and if the fee assessment has become final and the fee has been paid. The fee for transfer-pricing cases amounts to EUR30,000 for processing a new APA request and EUR15,000 for an APA renewal. The fee for non-transfer-pricing cases is reduced to 25% of the fee for transfer-pricing cases, and special fees apply under certain conditions.

Real estate investment trusts. Effective from 1 January 2007, Germany introduced the real estate investment trust (REIT), which is a tax-exempt entity. In general, a REIT is a listed German stock corporation (AG) that satisfies certain conditions, including, but not limited to, the following:

- It has a free float (volume of shares traded on the stock exchange) at the time of listing of at least 25%.
- Its real estate assets account for at least 75% of its gross assets.
- Rental income from real estate accounts for at least 75% of its total income.
- Ninety percent of its income is distributed to its shareholders.

German investment tax law. As of 2018, the German legislature introduced a renewed tax system for fund vehicles and their investors, which completely replaced the former transparent fund tax system. The German investment tax law provides for the following tax regimes:

- Regular “investment funds” are partially subject to taxation at the fund level.
- “Special-investment funds” must meet additional criteria and are taxed semi-transparent with certain options and exemptions.
- Fund vehicles in the legal form of a partnership and other investment vehicles that do not meet the criteria of “investment funds” within the meaning of the German investment tax act are

subject to the general rules of (corporate or individual) income taxation depending on the legal form and status.

According to the renewed German investment tax system, (German and foreign) investment funds, as well as special-investment funds, are no longer fully exempt from tax at the fund level. The transparency principle is being replaced by a partial taxation of the following types of domestic income at the fund level:

- Dividend payments from German-based corporations are subject to a flat tax regime of 15% on the gross dividends received by the fund. The tax exemption under Section 8b of the German Corporate Income Tax Act does not apply.
- Net income from letting and the sale of German real estate is subject to tax at a rate of 15% plus the solidarity surcharge (15.825% in total).
- Other German-source income, which would be subject to German taxation if received by a foreign investor (for example, income from renewable energy investments or commercial partnership investments in Germany), is subject to tax at a rate of 15% plus the solidarity surcharge (15.825% in total).

All other income is not subject to German corporate income tax (for example, interest income, profits deriving from forward contracts or foreign dividends, as well as foreign real estate proceeds). In general, investment funds are subject to German trade tax. However, an exemption from German trade tax applies if the business purpose is limited to the investment and management of funds for the joint account of the unitholders and no active entrepreneurial management of the assets is performed. Special-investment funds are generally exempt from trade tax.

Special-investment funds can opt for a transparent taxation for certain German domestic income. If the option is exercised, the income is subject to tax at the investor level and not subject to tax at the level of the special-investment fund. Certain rules and limitations apply.

In general, a German investor is subject to tax on its investment fund income (that is, distributions, profits from the sale of units in the investment fund, as well as to the so-called flat tax on a deemed profit, if no distributions are made). The applicable tax rate depends on the individual situation of the investor (for example, corporate vehicle or individual vehicle). Special tax regimes (partial tax exemptions) might apply depending on the respective asset allocation of the fund as well as on the individual situation of the investor (that is, a tax exemption of 15% to 80% is applicable). Half of the respective partial exemption for corporate income tax and individual income tax purposes is granted for trade tax purposes. In general, foreign investors are not subject to tax in Germany on any of their investment fund income.

Income derived from special-investment funds (distributed income, deemed distributed income and profits from the sale or redemption of shares) is subject to regular corporate income tax, individual income tax (if fund units are allocated to business assets) and trade tax at the investor level, depending on the individual tax situation. In general, the participation exemption for

German individual income tax and German corporate income tax purposes applies if the respective conditions are met.

Mutual assistance. Germany exchanges tax-relevant information with various countries based on tax treaties, other bilateral agreements (for example, the Intergovernmental Agreement between Germany and the United States with respect to the US Foreign Account Tax Compliance Act [FATCA]), EU directives (such as the EU Directive on Administrative Cooperation) and multilateral agreements (such as the OECD's Multilateral Competent Authority Agreement for the Common Reporting Standard [CRS]).

Automatic exchange of financial account information. Under the FATCA Intergovernmental Agreement of 31 May 2013 and the FATCA Implementation Decree of 23 July 2014, German financial institutions must report certain financial account information regarding US reportable accounts on an annual basis to the German Federal Central Tax Office (Bundeszentralamt für Steuern), which automatically exchanges this information with the US Internal Revenue Service. In addition, effective from 1 January 2016, Germany implemented the CRS. German financial institutions are required to identify reportable accounts, which are the accounts held by the following:

- An individual or certain entities resident in a CRS zone country
- “Passive nonfinancial entities” (as defined) with one or more controlling persons resident in a CRS zone country

These accounts must then be reported annually by 31 July for the preceding reporting period to the German Federal Central Tax Office, which passes this information on to the competent tax authorities where the reportable person is tax resident.

Under both exchange-of-information regimes, the term “financial institution” is defined rather broadly and does not only include banks, financial services companies, investment funds and insurance companies, but also certain holding companies, treasury centers, captive finance companies, other investment entities, pension entities and certain other entities.

Automatic exchange of advance cross-border rulings and advance pricing agreements. Germany takes part in the automatic exchange of advance cross-border rulings and advance pricing arrangements between EU member states as provided under the EU Directive on Administrative Cooperation. The information exchange occurs within three months after the end of the calendar half-year in which the advance cross-border rulings were granted.

Mandatory disclosure rule. Following EU Directive 2018/822, Germany has implemented Mandatory Disclosure Rules (DAC 6). Reportable cross-border tax arrangements between 25 June 2018 and 30 June 2020 had to be disclosed to the German tax authorities by 30 August 2020, with a 30-day reporting timeframe for new arrangements applicable since then. Germany did not elect for the COVID-19 induced option to defer the initial reporting. The legislation largely follows the EU directive. In particular, the 15 hallmarks provided by the directive have been implemented in German law. However, Germany uses a unique and complex two-level system if an intermediary is (partly) exempted by legal professional privilege. A circular provides

detailed guidance regarding the interpretation of the legislation. Reports can be made via an online portal, by uploading XML files or through an electronic interface, and need to be in the German language. An advance registration at the Federal Tax Office is required.

F. Treaty withholding tax rates

The table below is for illustrative purposes only. In general, full German withholding tax must be withheld by the payer unless a certificate of (partial) treaty exemption has been obtained by the foreign income recipient, which requires a specific application procedure. In the absence of such certificate, the income recipient can claim a (partial) tax refund from the German Federal Tax Office based on the applicable tax treaty.

- (1) For treaty purposes, income from interest on participating loans, profit-sharing bonds and income from (typical) silent partnerships is considered in a majority of tax treaties to be dividends. Otherwise, this income falls within the interest article. Furthermore, most tax treaties provide an unrestricted taxation right for the source state if the payment is treated as tax-deductible. According to domestic law, interest on participating loans, profit-sharing bonds and income from (typical) silent partnerships is taxed at 25% plus solidarity surcharge (reduced on application to 15% if the recipient is a corporation and if the German anti-treaty shopping rules do not apply). Under German tax law, income from a silent partnership is regarded as a dividend if the silent partnership is characterized as a typical silent partnership. Profits from an atypical silent partnership are considered as business profits. Income from participation rights (Genussrechte) is treated as a dividend if the holder participates in profits and liquidation results. Otherwise, the income from participation rights is considered to be interest.
- (2) According to the EU Parent-Subsidiary Directive, dividends distributed by a German subsidiary to a qualifying EU parent company are exempt from withholding tax if the recipient owns 10% or more of the subsidiary.
- (3) German interest withholding tax is imposed only on interest paid by financial institutions, on interest from over-the-counter transactions and on interest payments on convertible and profit-sharing bonds and participating loans. In addition, interest on loans secured by fixed property located in Germany is subject to a limited German tax liability; tax on such interest is not imposed by withholding tax (self-declaration). If not otherwise noted, the treaty withholding tax rate also reduces the German statutory tax rate for interest on loans secured by fixed property located in Germany.
- (4) As a result of the implementation of EU Directive 2003/49/EC, withholding tax on interest and royalties paid between associated companies of different EU states is abolished if certain conditions are met.
- (5) These rates should only apply to royalties paid by German licensees. Foreign-to-foreign royalties should generally be fully exempt from German tax under the "other income" article in the respective tax treaty. However, the withholding tax rate on foreign-to-foreign royalties from patents, know-how and similar items is 15% if such items are registered in Germany.
 - (a) The treaty with China Mainland does not apply to the Hong Kong and Macau Special Administrative Regions (SARs).
 - (b) The rate applies if the income is subject to tax in the other state.
 - (c) The agreement between Germany and former Czechoslovakia applies.
 - (d) Under certain treaties, interest is exempt from withholding tax if it is paid to a contracting state's government, the central bank or certain public banks or finance institutions or if it relates to a loan that is guaranteed by public credit insurance.
 - (e) The United States treaty provides for a 0% rate if the participation is at least 80% for a period of 12 months and if the conditions of the Limitation-of-Benefit test under Article 28 are fulfilled.
 - (f) Interest payments to banks or on loans granted by banks may be subject to a 10% withholding tax rate (5% in the Mexico treaty; 2.5% in the Tunisia treaty).
 - (g) A 15% rate applies to dividends that are paid out of income or gains derived from immovable property by an investment vehicle.
 - (h) This is an agreement between the German Institute in Taipei and the Taipei Representative Office in Germany.
 - (i) If Syria enters into an agreement with any other EU country that provides for a lower rate than 12%, Syria will apply this lower rate on royalties paid to residents of Germany.
 - (j) The agreement between Germany and former Yugoslavia applies.

Germany has initialed and/or signed new tax treaties with Argentina, Belgium, Bulgaria, Croatia, Ecuador, Egypt, Iran, Israel, Korea (South), Latvia, Lithuania, Mauritius, Mexico, the Netherlands, Norway, Oman, Poland, Portugal, the Russian

Federation, South Africa, Sri Lanka, Sweden, Switzerland, and Trinidad and Tobago. At the time of writing, the domestic legal procedures for the entry into force of those treaties had not yet been concluded.

Germany is negotiating or renegotiating tax treaties with Angola, Bangladesh, Benin, Botswana, Burkina Faso, Canada, Chile, China Mainland, Colombia, Costa Rica, the Czech Republic, Ethiopia, Greece, the Hong Kong SAR, Iceland, India, Jersey, Jordan, Kosovo, Kuwait, Kyrgyzstan, Lebanon, Liberia, Malta, Namibia, New Zealand, Nigeria, Oman, Qatar, Romania, Rwanda, San Marino, Senegal, Serbia, the Slovak Republic, Slovenia, Tunisia and Ukraine.

- (b) Applicable to payments to residents and nonresidents.
- (c) This is a final tax for both residents and nonresidents without a permanent establishment in Ghana.
- (d) This is a final tax for nonresidents without a permanent establishment in Ghana only.
- (e) Losses incurred on completion of long-term contracts may be carried back to prior tax years.
- (f) Enterprises that operate in government priority sectors (petroleum operations, minerals and mining operations, energy and power, manufacturing, farming, agro-processing, tourism, and information and communication technology businesses) are allowed to carry forward their losses for a period of five years. All other enterprises are allowed to carry forward their losses for a period of three years. In addition, losses incurred by venture capital financing companies on the disposal of shares invested in venture capital subsidiary companies under the Venture Capital Trust Fund Act, 2004 (Act 680) and losses incurred by qualifying venture capital financing companies on shares in any venture may be carried forward for five years after the disposal of the shares.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are subject to tax on their business or investment income for the year, regardless of whether the source of the income still exists. A company is resident in Ghana if it is incorporated under the laws of Ghana or if its management and control are exercised in Ghana at any time during the year. Permanent establishments of nonresident companies in Ghana are also subject to tax on their worldwide income.

Rates of corporate income tax. The standard corporate income tax rate is 25%. However, various other tax rates apply to income derived from specified business activities.

Income derived from non-traditional exports is taxed at a rate of 8%. Income derived by banks from loans granted to farming enterprises is subject to tax at a rate of 20%. The rate of tax applicable to income derived by financial institutions from loans to leasing companies is 20%.

Rural or community banks are subject to tax at a rate of 1% for a period of 10 years beginning with their first year of operations.

The corporate income tax rate applicable to companies principally engaged in the hotel industry is 22%.

For petroleum extracting companies, the tax rate is 35%. The rate is consistent with the rate provided in the publicly disclosed

petroleum agreements that have been signed with the government of Ghana. After a company has recovered all outlays from an oil field plus a specified rate of return after deduction of tax, royalties and an inflation adjustment, the government may negotiate for an additional share of the crude oil profits.

Mining companies are subject to corporate income tax at a rate of 35%. A holder of a mining lease, restricted mining lease or small-scale mining license must pay a royalty with respect to minerals obtained from its mining operations in Ghana. The royalty must be paid at the prescribed rate and in the prescribed manner.

Tax incentives. Ghana offers tax exemptions and tax reductions to companies engaged in specified industrial activities.

Income derived by companies from the business of constructing affordable low-cost residential premises for lease or sale is subject to tax at a rate of 1% for a period of five tax years (years of assessment). The tax-incentive period begins with the tax year in which the company begins its operations. If the company's accounting year differs from the calendar year, the beginning of the tax-incentive period is the tax year in which the accounting period of the first year of operations begins.

Rural banks are subject to tax at a rate of 1% for their first 10 years of operation.

The income of a venture capital financing company is subject to tax at a rate of 1% for five years if the company satisfies the eligibility requirements for funding under the Venture Capital Trust Fund Act. The tax-incentive period begins with the tax year in which the company satisfies the eligibility requirements.

Cocoa farmers are exempt from tax on income derived from cocoa. Cattle ranchers are subject to tax at a rate of 1% for the first 10 tax years. Income derived from tree crops, such as coffee, oil palm, shea nut, rubber and coconut, is subject to tax at a rate of 1% for 10 years following the first harvest. For a company's first five years of operations, income derived from livestock (other than cattle), fishing and cash crops, such as maize, rice, pineapple, cassava and yam, is subject to tax at a rate of 1%.

Income of a company from an agro-processing business conducted wholly in Ghana is subject to tax at a rate of 1% for a period of five tax years. The period begins with the tax year in which the company begins commercial production. If the company's accounting year differs from the calendar year, the beginning of the period is the tax year in which the accounting period of the first year of production begins.

Income of a company that commercially produces cocoa byproducts wholly in Ghana from substandard cocoa beans, cocoa husks and other cocoa waste as the principal raw materials is subject to tax at a rate of 1% for a period of five tax years. The tax-incentive period begins with the tax year in which the company begins commercial production. If the company's accounting year differs from the calendar year, the beginning of the period is the tax year in which the accounting period of the first year of production begins.

The income of a company whose principal activity is the processing of waste, including recycling of plastic and polythene

material for agricultural or commercial purposes, is subject to tax at a rate of 1% for a period of seven tax years. This period begins with the tax year in which the company begins its operations. If the company's accounting year differs from the calendar year, the beginning of the tax-exemption period is the tax year in which the accounting period of the first year of operations begins.

Nonresident companies engaged in air and sea transportation are exempt from tax if the Commissioner-General of the Ghana Revenue Authority (GRA) is satisfied that the same types of companies resident in Ghana are granted an equivalent exemption by the nonresident company's country of residence.

Manufacturing enterprises, other than those operating in free zones or engaged in the export of non-traditional goods, located in regional capitals other than Accra are entitled to a 25% income tax rebate, while manufacturing enterprises located outside regional capitals other than Tema are entitled to a 50% income tax rebate.

Capital gains. A company that derives a gain from the realization of a capital asset is required to include the gain in its business income unless the asset is held or used for investment purposes. In such case, the gain is included in determining the company's investment income.

To calculate a gain from the realization of a capital asset, the cost basis of the asset is deducted from the proceeds received on the disposal of the asset. The cost basis of a chargeable asset is the sum of the following:

- Cost of the asset including incidental costs
- Expenditure incurred to alter or improve the asset
- Expenditure relating or incidental to the disposal of the asset

Administration. The Ghana Revenue Authority (GRA) is responsible for the administration and collection of all taxes.

The tax year is the calendar year. If a company's accounting year differs from the calendar year, its basis period for a tax year is the accounting year ending within the tax year.

Companies must file their tax returns within four months after the end of their accounting year.

Assessed tax must be paid on the date specified in the notice of assessment from the Commissioner-General of the GRA. In general, companies whose accounting year differs from the tax year must make quarterly payments at the end of the third, sixth, ninth and twelfth months of their accounting year.

Companies that fail to pay income tax by the due date are liable to pay interest at 125% of the statutory rate on the amount of tax that remains unpaid, in addition to the tax payable. The interest is compounded monthly.

To make tax collection more efficient, taxpayers are segmented into various Tax Service Centers, which are deployed across the country to deliver seamless tax services, with a focus on small and medium taxpayers.

There is also a Large Taxpayer Office (LTO), which is a department under the Domestic Tax Revenue Division of the GRA. The

LTO operates as a specialized office which focuses exclusively on tax administration of large taxpayers identified by the GRA. Large taxpayers are classified as companies and/or individuals involved in economic activities which yield or, per their sizes, are estimated to yield annual turnovers of GHS5 million and above. The category also comprises specialist industries regardless of their turnover. These include upstream and midstream petroleum companies, banking institutions, insurance companies, mining companies except quarries, and members of groups of companies of which at least one member qualifies as a large taxpayer.

Dividends. An 8% withholding tax is imposed on dividends paid to resident shareholders and nonresident shareholders unless exempt. This is a final tax.

Foreign tax relief. Foreign tax paid on foreign income is allowed as a credit against tax payable with respect to the foreign income received in Ghana. The amount of tax chargeable with respect to the income is reduced by the amount of the credit.

C. Determination of trading income

General. Chargeable income is based on the income reported in entities' financial statements, subject to certain adjustments.

To be deductible, expenses must be wholly, exclusively and necessarily incurred in the production of income by the company during the financial year. Expenses that may be deducted include the following:

- Interest (subject to thin-capitalization rules; see Section E)
- Rent
- Repair of plant, premises, machinery and fixtures (see *Repairs*)
- Bad debts (see *Provisions*)
- Research and development expenditure
- Financial costs (see *Financial costs*)

Repairs. Expenditure on repairs and improvements to a depreciable asset are deductible expenses, regardless of whether they are of a capital nature. However, the amount deductible is limited to 5% of the written-down value of the pool to which the depreciable asset belongs. The excess expenditure is added to the written-down value of such pool.

Financial costs. Financial costs other than interest incurred by an entity are deducted in calculating the income of the entity from an investment or business. However, the deduction is limited to the sum of the following:

- Financial gains to be included in calculating the income of the entity from the business or investment
- Fifty percent of the chargeable income of the entity for the year from the business or investment, calculated without including financial gains derived by the entity or deducting financial costs incurred by the entity

Any outstanding financial costs can be carried forward for up to five tax years.

The timing of the inclusions and exclusions of financial gains and costs is determined in accordance with generally accepted accounting principles (GAAP).

Inventories. In determining the chargeable income of a person from a business, the cost of inventory used in generating the income is deducted. The deductible amount is determined by adding to the value of the opening stock the expenses incurred by the person that is included in the cost of trading stock and deducting the value of the closing stock from the amount.

Provisions. Bad debts incurred in businesses other than banks are deductible if the company proves to the satisfaction of the Commissioner-General of the GRA that the debts have become bad, and that it has taken all reasonable steps to ensure payment, but to no avail.

Bad debts incurred in banking business are deductible if both of the following conditions are satisfied:

- The bank proves to the satisfaction of the Commissioner-General of the GRA that the debt is bad and the debt claim constitutes the advance of a principal sum in a case in which the cost of the debt claim is reduced by an equal amount.
- The bad debt write-off has been sanctioned by the Board of Directors of the bank and the prior written approval of the Bank of Ghana has been obtained.

The effective date of deduction of an approved bad debt write-off is the date of approval by the Bank of Ghana on or before the due date for submission of the annual return for the relevant tax year.

Under the Tax Act, provisions for bad and doubtful debts are not allowed for tax purposes.

All amounts recovered with respect to bad debts that were deducted must be included in income for the accounting year of the recovery.

Research and development expenditure. Expenses with respect to research and development are deductible if the expenses are wholly, exclusively and necessarily incurred in generating the income of the business, regardless of whether the expense is of a capital nature.

Capital allowances (tax depreciation). Capital allowances are granted on depreciable assets. Depreciable assets are classified into five main classes. Assets in Classes 1, 2, and 3 are placed in separate pools, and capital allowances granted with respect to the pool. Capital allowances for Classes 4 and 5 assets are granted on individual assets of the same class. To claim capital allowances, a company must satisfy the following conditions:

- It used the asset in the production of the income.
- It incurred cost in purchasing the asset.

Capital allowances granted for a particular tax year are deemed to be deductions in arriving at the chargeable income or loss of the company.

The following table presents the various classes of assets and details for calculating their capital allowances (capital allowances granted with respect to assets used in mining and petroleum operations are not included in the table).

Class	Assets	Rate %	Formula for calculating capital allowances
1	Computers and data handling equipment, together with peripheral devices	40	$(A \times B \times C) \div 365$ (a)
2	Automobiles; buses and minibuses; goods vehicles; construction and earth-moving equipment, heavy general purpose or specialized trucks; trailers and trailer-mounted containers; plant and machinery used in manufacturing; and costs of a capital nature with respect to long-term crop planting costs	30	$(A \times B \times C) \div 365$ (a)
3	Railroad cars, locomotives and equipment; vessels, barges, tugs, and similar water transportation equipment; aircraft; specialized public utility plant, equipment, and machinery; office furniture, fixtures and equipment; and any depreciable asset not included in another class	20	$(A \times B \times C) \div 365$ (a)
4	Buildings, structures and similar works of a permanent nature	10	$(A \times B \times C) \div 365$ (b)(c)
5	Intangible assets	– (d)	$[(A \div D) \times C] \div 365$ (c)(e)

- (a) A is the written-down value of the pool at the end of a basis period, B is the depreciation rate applicable to the pool, and C is the number of days in the period.
- (b) A is the cost base of the asset, B is the depreciation rate, and C is the number of days in the basis period.
- (c) The total amount of capital allowances granted for a Class 4 or 5 asset may not exceed the cost basis of the asset.
- (d) The rate is determined by formula.
- (e) A is the cost base of the asset, C is the number of days in the basis period, and D is the useful life of the asset in whole years calculated at the time the asset is acquired.

Mining and petroleum. A different method applies for granting capital allowances for mining and petroleum companies or contractors. For mining and petroleum operations, assets are pooled on a year-by-year basis, and assets acquired each year represent a separate pool. Capital allowances are calculated on straight-line basis at a rate of 20% on each separate pool.

Relief for losses. Enterprises engaged in government priority sectors are permitted to carry forward losses for a period of five years. However, enterprises operating in any other sector of the economy are allowed to carry forward losses for a period of three years.

Losses incurred on completion of long-term contracts may be carried back to prior tax years.

Groups of companies. Each company within a group must file a separate tax return. Offsetting of losses against profits among members of the group is not allowed.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT); imposed on all supplies of goods and services made in, or goods imported into, Ghana, except for exempt items; services imported for the person's own consumption are subject to a reverse VAT charge	12.5
National Health Insurance Levy (NHIL); imposed on all supplies of goods and services made in or imported into Ghana, except for supplies that are specifically exempt; services imported for the person's own consumption are subject to a reverse NHIL charge	2.5
VAT Flat Rate Scheme; retailers of goods who make taxable supplies of not less than GHS200,000 and not more than GHS500,000 at the end of any period of 12 months must charge VAT on their supplies at a flat rate; input VAT incurred by persons under the scheme cannot be claimed	3
Ghana Education Trust Fund levy (GETFund levy); imposed on all supplies of goods and services made in or imported into Ghana, except for supplies that are specifically exempt; services imported for the person's own consumption are subject to a reverse GETFund levy charge	2.5
COVID-19 Health Recovery Levy; imposed on all supplies of goods and services made in or imported into Ghana, except for supplies that are specifically exempt; services imported for the person's own consumption are subject to a reverse COVID-19 levy charge	1

E. Miscellaneous matters

Foreign-exchange controls. The currency in Ghana is the Ghana cedi (GHS).

The Foreign Exchange Act, 2006 (Act 723) governs foreign-exchange controls in Ghana. However, the Bank of Ghana exercises much discretion in administering the act.

Anti-avoidance legislation. A company must obtain a tax-clearance certificate to engage in certain transactions, including the purchase of goods in commercial quantities from producers, distributors, manufacturers or importers. The Commissioner-General of the GRA has the power to disregard or re-characterize fictitious arrangements and schemes entered into or carried out for the purposes of avoiding tax. The income tax law contains the following three specific anti-avoidance measures:

- Income splitting (see Section C)
- Transfer pricing (see *Transfer pricing*)
- Thin capitalization (exempt-debt to exempt-equity ratio; see *Debt-to-equity ratio*)

Transfer pricing. Ghana has passed new Transfer Pricing Regulations, 2020 (L.I. 2412), which repeals the old regulations (L.I. 2188). The regulations follow the Organisation for Economic Co-operation and Development (OECD) Transfer Pricing Guidelines. The regulations allow the use of the transfer-pricing methods outlined in the OECD guidelines and the use of an alternative method if the methods stated are not appropriate for determining the arm's-length price for the transaction. On the filing of a return, the Commissioner-General can use an alternative transfer-pricing method if the Commissioner-General takes the view that the method used does not result in the arm's-length price for a transaction.

The regulations also require entities that enter into related-party transactions to prepare contemporaneous documentation to support their returns. Entities must also submit transfer-pricing returns as part of their annual income tax returns within four months after the end of the accounting year. A copy of the documentation must be filed with the tax authorities within four months after the end of the accounting year.

The regulations further require the filing of a Country-by-Country (CbC) report not later than 12 months after the last day of the reporting tax year of the group. This requirement applies to multinational enterprises with annual consolidated group revenues of GHS2.9 billion (approximately USD49,403,748) or above in the tax year immediately preceding the reporting tax year. Safe harbor rules have also been introduced for some routine transactions not exceeding USD200,000.

Debt-to-equity ratio. If an “exempt-controlled resident entity,” other than a financial institution, has an “exempt debt” to “exempt equity” ratio in excess of 3:1, no deduction is allowed for interest paid or a foreign-exchange loss incurred on the portion of the debt that exceeds the 3:1 ratio. Broadly, an “exempt-controlled resident entity” is a resident entity of which at least 50% of its underlying ownership or control is held by an “exempt person,” which is a nonresident person or a resident person meeting certain criteria. The law also provides detailed definitions of “exempt debt” and “exempt equity.”

F. Treaty withholding tax rates

The following are the maximum withholding rates under Ghana's double tax treaties for dividends, interest, royalties, and management and technology transfer fees.

	Dividends	Interest	Royalties and management and technology transfer fees
	%	%	%
Belgium	5	10	15
Czech Republic	5	5	8
France	8	10	15
Denmark	5	8	8
Germany	8	10	15
Italy	5	10	10
Mauritius	7	7	8/10 (a)
Morocco	5/10 (b)	10	10
Netherlands	8	10	15
Singapore	7	7	7/10 (c)
South Africa	8	10	15
Switzerland	5	10	8
United Kingdom	8	10	15
Non-treaty jurisdictions	8	8	15/20 (d)

(a) The 8% rate applies to royalties. The 10% rate applies to technical services.

(b) The 5% rate applies if the beneficial owner is a company. The 10% rate applies if the beneficial owner is a partnership and in all other cases.

(c) The 7% rate applies to royalties. The 10% rate applies to technical services.

(d) The 15% rate applies to royalties. The 20% rate applies to management and technical service fees.

A. At a glance

Corporate Income Tax Rate (%)	12.5 (a)(b)
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	12.5 (a)(b)
Withholding Tax (%)	
Dividends	0
Interest	0
Royalties	0
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	Unlimited (c)

- (a) A 12.5% tax rate applies to taxable profits from 1 August 2021 onward. A rate of 10% applies to profits prior to that date.
- (b) A tax rate of 20% applies to utility, energy and fuel supply companies and companies abusing a dominant market position.
- (c) In general, the carryforward is unlimited. However, if both a change in ownership and a major change in the nature or conduct of a trade carried on by the company occurs within a three-year period, losses incurred in any financial period beginning before the change in ownership cannot be offset against losses incurred subsequent to the change in ownership.

B. Taxes on corporate income and gains

Corporate income tax. Companies are taxed on profits “accrued in or derived from” Gibraltar. “Accrued in or derived from” is defined by reference to the location of the activities that generate the profits. If a company’s income results from an underlying activity that requires a license and regulation under any law of Gibraltar, the income is deemed to accrue in and derive from Gibraltar, except for income from activities carried on outside Gibraltar by a branch or permanent establishment.

The above rule applies regardless of whether a company is registered in Gibraltar or whether it is ordinarily resident in Gibraltar. A company is ordinarily resident in Gibraltar if central management and control is exercised in Gibraltar or is exercised outside Gibraltar by persons who are ordinarily resident in Gibraltar.

Rates of corporate tax. All companies are chargeable on taxable profits at a rate of 12.5% (this rate applies to profits from 1 August 2021 onward; profits prior to that date were taxed at a rate of 10%). An exception applies to utility, energy and fuel supply companies and companies deemed to be abusing a

dominant market position, which are subject to tax at a rate of 20%.

Tax incentives for companies. The following tax incentives apply in accounting periods ending between 1 July 2021 and 30 June 2023, in addition to any deduction that may otherwise be given for such expenditure:

- An additional allowance is given for 50% of the fixed salary cost of new employees.
- An additional allowance is given for 50% of marketing costs, subject to agreement by the Income Tax Office that it is validly incurred in marketing for purposes of the business. The government is currently considering whether any limitations are to applied to this allowance.
- An additional 60% deduction is given for qualifying training costs. For accounting periods prior to 1 July 2021, the additional deduction is 50%.
- A deduction is available of up to GIP6,000 over two years for the cost of any solar or wind energy installations. From 1 July 2021 onward, a deduction is given of 10% to 100% (previously 5% to 55%) of the cost of improvements to the energy performance certificate (EPC) rating of a property. The percentage applied depends on the EPC rating achieved. Businesses may claim a deduction for expenditure on works carried out to improve access for people with disabilities to their premises, up to a maximum of GIP15,000, subject to conditions. This applies to such expenditures between 1 July 2019 and 30 June 2022.

Capital gains. Capital gains are not taxed in Gibraltar. Capital losses are not deductible.

Administration. All companies that are registered in Gibraltar or that have income assessable to tax in Gibraltar are required to file a return. Returns, accounts and computations must be filed within nine months after the end of the month in which the financial period ends.

All companies incorporated in Gibraltar that declare a dividend in a financial period are required to file a dividend return within nine months after the end of the month in which that financial period ends. Companies that are listed on a recognized stock exchange are exempt from this requirement.

Companies must make payments on account of their corporation tax by 28 February and 30 September each year. Each payment is made toward the tax liability for the financial period in which the payment on account is due. The amount of payment on account due is based on the tax payable for the last relevant financial period. An application can be made for a reduced or zero payment if basing the payment on a prior year would result in an excessive payment. The final payment with respect to a financial period is due within nine months after the end of the month in which that financial period ends.

Companies not complying with filing and payment deadlines are subject to penalties and surcharges.

A self-assessment system requires companies to assess correctly their tax liabilities, with any underpayment of tax being subject to surcharges.

Companies may request advance tax rulings. In October 2018, a process for requesting and issuing rulings was set out in legislation.

Dividends. Dividends paid by Gibraltar companies are not subject to withholding tax. Tax credits are attached to dividends paid by companies incorporated in Gibraltar. This tax credit equals the tax paid by the company on the profits out of which the dividend is paid. Restrictions may apply to how such tax credits may be utilized.

Dividend income is not taxable in the following circumstances:

- The dividend is received by a company from another company.
- The dividend is received by a person who is not ordinarily resident in Gibraltar.
- The dividend is received from a company that has its shares listed on a recognized stock exchange.
- The dividend represents the distribution of profits or gains on which no tax has been charged in accordance with the provisions of the Income Tax Act 2010 (the act contains rules governing the allocation of dividends to specific profits or gains).

The above exceptions may be subject to the anti-avoidance provisions that are part of the European Union (EU) Parent-Subsidiary Directive. Although Gibraltar has now left the EU, together with the United Kingdom, this Directive as it applied on 31 December 2020 remains reflected in Gibraltar's legislation.

Interest. Withholding tax is not imposed on the payment of interest. Interest income is not taxable, except for the following:

- Interest on loans or advances by one company to another company if the interest from an individual company is GIP100,000 or more per year. Under an anti-avoidance measure, interest received or receivable from different companies is considered to be from the same company for the purposes of the GIP100,000 threshold if those companies are "connected persons." For this purpose, interest is deemed to be accrued and derived in Gibraltar if the company in receipt of the interest is a Gibraltar-registered company.
- Interest income of a company that lends to, or takes deposits from, the general public or engages in similar activities.

Royalties. Royalty income received or receivable by a company is taxable. Such income is deemed to be accrued and derived in Gibraltar if the company receiving the royalties is a Gibraltar-registered company.

Non-trading rental income from movable property. Non-trading rental income from movable property is taxable, effective from 22 November 2018. Such income is deemed to accrue in and derive from Gibraltar if the recipient is a Gibraltar-registered company.

Foreign tax relief. Unilateral tax relief is granted with respect to tax paid or payable in another jurisdiction on income from that jurisdiction, subject to conditions. This is restricted to the tax that would otherwise have been payable in Gibraltar on that income.

C. Determination of trading income

General. Taxable profits are determined based on financial statements prepared in accordance with Gibraltar generally accepted accounting practice (GAAP), or UK GAAP or International Financial Reporting Standards, subject to certain adjustments and provisions.

In general, expenses must be incurred wholly and exclusively for the purposes of the trade, business, profession or vocation. However, specific reliefs and prohibitions exist for certain expenses.

Certain expenses are either not deductible or are subject to restrictions, including the following:

- Interest paid or payable to a person not resident in Gibraltar is not deductible to the extent that the interest is charged at a rate greater than a reasonable commercial rate.
- Depreciation and amortization of assets are not deductible (instead capital allowances are given; see *Tax depreciation [capital allowances]*).
- Contributions to a provident, pension or other fund for the benefit of employees are not deductible if the fund has not been approved by the Commissioner of Income Tax.
- The cost of entertaining existing and potential clients and persons introducing business, are deductible, but detailed rules restrict deductibility.
- For a branch or a company with a branch, the deduction for certain head office expenses or certain expenses incurred by a branch for the common purpose of the company is restricted to 5% of gross income of the branch.
- “General” expenses are apportioned between chargeable and non-chargeable income on a pro rata basis. The part of such expenses attributable to non-chargeable income is not deductible.

Tax depreciation (capital allowances). For periods ending between 1 July 2021 and 30 June 2023, the following applies:

- Up to GIP60,000 of purchases, or if higher, 50% of expenditure, in the period on plant and machinery is fully deductible in that period. Plant and machinery include, among other items, fixtures, fittings, equipment and commercial motor vehicles. In addition, up to GIP100,000 of purchases, or if higher, 50% of expenditure, in the period on information technology is fully deductible in that period.
- All such assets are pooled for tax purposes. The pool is increased with respect to any additions in excess of initial allowances given and reduced by the proceeds of any disposals in the period. The allowance for the year is then calculated at 25% of the value of the pool. The pool value is then reduced by that allowance, and the remaining balance is carried forward to the next period. For companies taxed at 20% (see Rates of corporate tax in Section B), the annual allowance is given at 30% instead of 20%.
- A deduction is given with respect to wear and tear on property of 1% of the acquisition cost (excluding the underlying cost of

the land). There is also a deduction available amounting to 4% of the cost of industrial buildings.

For periods ending prior to 1 July 2021, the following applies:

- The first GIP30,000 of plant and machinery acquired in a financial period is fully deductible in that period. In addition, the first GIP50,000 of qualifying capital expenditure on information technology investment in a financial period is also fully deductible.
- All such assets are pooled for tax purposes. The pool is increased with respect to any additions in excess of initial allowances given and reduced by the proceeds of any disposals in the period. The allowance for the year is then calculated at 15% of the value of the pool. The pool value is then reduced by that allowance, and the remaining balance is carried forward to the next period. For companies taxed at 20% (see *Rates of corporate tax* in Section B), the annual allowance is given at 20% instead of 15%.
- A deduction is available amounting to 4% of the cost of industrial buildings.

Groups of companies. Gibraltar law does not provide for tax consolidation. It does not have any provision for group relief (that is, the use of tax losses of one group company by another group company).

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Stamp duty	
On the issuance or increase of authorized share capital, or on the issuance of loan capital; fixed amount per transaction	GIP10
On the purchase of real estate in Gibraltar by a company	
Purchase price not exceeding GIP200,000	0%
Purchase price between GIP200,001 and GIP350,000	2% on first GIP250,000, and 5.5% on balance
Purchase price of over GIP350,000	3% on first GIP350,000, and 3.5% on balance
Social insurance contributions, on employees' wages and salaries; payable on weekly wages by	
Employer	20% (subject to minimum of GIP28 per employee per week and maximum of GIP50 per employee per week)
Employee (under 60)	10% (subject to minimum of GIP12.10 per week and maximum of GIP36.30 per week)

E. Miscellaneous matters

Foreign-exchange controls. Restrictions are not imposed on foreign exchange or on inward or outward investments. The transfer of profits and dividends, loan principal and interest, royalties and fees is unlimited, subject to company law.

Anti-avoidance legislation. Gibraltar tax law contains several anti-avoidance provisions.

General. The Commissioner of Income Tax may disregard part or all of arrangements that are deemed to be artificial and/or fictitious and whose purpose is to reduce or eliminate tax payable. “Artificial or fictitious” includes not being consistent with the international standard of the arm’s-length principle as defined by the Organisation for Economic Co-operation and Development (OECD) in its Transfer Pricing Guidelines for Multinational Enterprises and Tax Administrations.

Any “notifiable arrangement” or “notifiable proposal” must be disclosed to the Commissioner of Income Tax. Detailed procedures exist for seeking clearance in advance of proposals. A timetable is provided for the Commissioner to request further information, to notify the applicant that anti-avoidance provisions will or will not apply, or to notify the applicant that the Commissioner requires a further 21 days to make a decision.

Expenses in favor of connected parties. In certain circumstances, the deduction for expenses incurred in favor of a connected party or parties may be restricted to the lower of 5% of turnover or 75% of profit before taking into account the expenses in question.

Debt-to-equity ratios. Thin-capitalization rules apply to interest paid by a company in the following circumstances:

- The interest is paid to a connected party that is not a company.
- The loan is secured by assets belonging to a connected party that is not a company.

In the above circumstances, if the loan is not considered to be on arm’s-length terms and if the loan capital to equity ratio is greater than 5:1, interest paid by the company may be treated as a dividend instead of a deductible expense.

Interest paid to a connected party in excess of the amount that would have been charged on an arm’s-length basis may be deemed to be a dividend instead of a deductible expense.

Interest may be disallowed as a deductible expense if both of the following circumstances exist:

- The loan is secured by a cash deposit made with the lender (or party connected to the lender) or secured by certain investments.
- The income from the cash deposit or investment is not assessable to tax.

EU Anti-Tax Avoidance Directive. Gibraltar has implemented the EU Anti-Tax Avoidance Directive (ATAD). Although Gibraltar has now left the EU, this Directive as it applied on 31 December 2020 remains in Gibraltar’s legislation. Measures include those described below.

Interest deduction limitation. The deduction for interest expense available to companies within a group is limited to the greater of the following:

- 30% of the taxpayer's earnings before interest, tax, depreciation or amortization (EBITDA)
- EUR3 million for the entire group

Interest costs not deductible in a tax year may be carried forward indefinitely to future tax years. Unused interest capacity may be carried forward for up to five years.

The above does not apply to single entities and financial undertakings.

Controlled foreign company rule. For the purposes of the ATAD rules, a controlled foreign company (CFC) is an entity or permanent establishment not resident in Gibraltar that meets the following requirements:

- It is controlled by the taxpayer.
- Its profits are not taxable in Gibraltar.
- It pays tax of less than 50% of the tax that would be payable in Gibraltar were the entity taxable in Gibraltar.

The undistributed profits of the CFC arising from non-genuine arrangements put in place for a tax advantage are included as income of the taxpayer. The above does not apply to a CFC if it has accounting profits of no more than EUR750,000 and non-trading income of no more than EUR75,000 or if its accounting profits amount to no more than 10% of its operating costs for the financial period.

Hybrid mismatch rule. This rule applies if, as a result of differences in the legal characterization of a financial instrument or entity between two jurisdictions, either of the following circumstances exists:

- A deduction in both jurisdictions for the same expense, payment or loss
- A deduction in one jurisdiction without the inclusion of the corresponding income in the other jurisdiction

In the former case, the deduction is allowed only if Gibraltar is the source of the payment. In the latter case, a deduction is not available.

Gibraltar also applies the rules based on the Council Directive (EU) 2017/952 (ATAD 2) provisions with respect to hybrid permanent establishment mismatches, hybrid transfers, imported mismatches and dual-resident mismatches. The legislation does not include the ATAD 2 provisions on reverse hybrid entities, because ATAD 2 did not require these provisions to be implemented until 1 January 2021, by which time the Brexit transition had ended. The legislation does not go beyond the ATAD 2's mandatory "minimum standards" to neutralize hybrid mismatches. Gibraltar opted in for all possible exceptions provided for by the ATAD 2.

Exit taxes. The provisions in ATAD relating to exit taxes were implemented in Gibraltar in January 2020. The exit tax applies to any of the following circumstances:

- An entity transfers assets from its head office to its permanent establishment outside Gibraltar, and Gibraltar, as the EU

member state of the head office, no longer has the right to tax the transferred assets as a result of the transfer.

- An entity transfers assets from its permanent establishment in Gibraltar to its head office or another permanent establishment outside Gibraltar, and Gibraltar, as the EU member state of the permanent establishment, no longer has the right to tax the transferred assets as a result of the transfer.
- A taxpayer transfers its tax residence from Gibraltar to another jurisdiction, except for those assets which remain effectively connected with a permanent establishment in Gibraltar.
- A taxpayer transfers the business carried on by its permanent establishment from Gibraltar to outside Gibraltar, and Gibraltar, as the EU member state of the permanent establishment, no longer has the right to tax the transferred assets as a result of the transfer. A transfer of business is defined as being where the entity ceases to have a taxable presence in Gibraltar and acquires a taxable presence in another jurisdiction, without becoming tax resident in that other jurisdiction.

A transfer of assets is defined as a situation in which Gibraltar loses the right to tax the transferred assets, while the assets remain under the ownership of the same taxpayer.

Tax is imposed at the applicable corporate rate on the difference between the market value of the transferred assets less their value for tax purposes.

The legislation applies to accounting periods commencing on or after 1 January 2020.

Mandatory Disclosure Regime. Gibraltar implemented EU Directive 2018/822 (DAC6), which requires the reporting by intermediaries and, in some cases, taxpayers of cross-border arrangements that meet certain defined hallmarks. However, subsequent to the ending of the Brexit transition period, Gibraltar followed the lead of the United Kingdom and, effective from 1 January 2021, applies the legislation reflecting DAC6 to only the two hallmarks in DAC6 that correspond to the OECD Mandatory Disclosure Model. Those hallmarks, D1 and D2, refer to arrangements that have the effect of undermining the automatic exchange of financial information or that involve a non-transparent legal or beneficial ownership chain.

However, Gibraltar has applied DAC6 with respect to any cross-border arrangements involving Spain (this arises from the international agreement signed between the United Kingdom and Spain described in Section F).

F. Tax treaties

In October 2019, a tax treaty was signed between Gibraltar and the United Kingdom. It entered into force on 24 March 2020. The treaty took effect in the United Kingdom from 1 May 2020 for taxes withheld at source and from 1 April 2020 for corporation tax. It took effect in Gibraltar from 1 May 2020 for taxes withheld at source and from 1 July 2020 for corporation tax.

The United Kingdom and Spain signed an international agreement with respect to Gibraltar tax matters in 2019. The agreement was ratified by both countries in March 2021. The provisions relating to companies generally apply to the first tax year commencing

after the date of ratification. The agreement contains rules that determine residency of companies, including provisions that would make a Gibraltar legal entity Spanish resident if any of the following applies:

- The majority of the assets, whether directly or indirectly owned, is located in Spain.
- The majority of income derives from sources in Spain.
- The majority of natural persons in charge of effective management is tax resident in Spain.
- The majority of ownership or control is held directly or indirectly by persons resident in Spain.

Despite Brexit, Gibraltar's legislation still contains provisions that implement the EU Parent Subsidiary Directive and the EU Directive on Interest and Royalties. Notwithstanding those provisions, Gibraltar does not impose withholding tax on dividends, interest or royalties.

At the time of writing, changes to the tax law were expected. Because of these expected changes, readers should obtain updated information before engaging in transactions.

A. At a glance

Corporate Income Tax Rate (%)	22 (a)
Capital Gains Tax Rate (%)	22 (b)
Branch Tax Rate (%)	22
Withholding Tax (%)	
Dividends	5 (c)
Interest	
Bank Interest	15 (d)(e)
Interest on Treasury Bills and Corporate Bonds	15 (d)(e)
Repos and Reverse Repos	15 (d)(e)
Other Interest	
Paid to Greek Legal Entities	15
Paid to Foreign Legal Entities	15 (e)(f)
Royalties from Patents, Know-how and similar payments	20 (e)(f)
Technical Service Fees, Management Service Fees, Consulting Service Fees and Fees for Similar Services	0/20 (g)
Net Operating Losses (Years)	
Carryback	0
Carryforward	5

- (a) Law 4799/18.5.2021 provides the following:
- The income tax rate for legal persons and legal entities is reduced to 22% (from 24%) for the 2021 tax year and onward.
 - The corporate income tax rate remains at 29% for credit institutions (banks) for the tax years that the provisions of deferred taxation apply (Article 27A of the Greek Income Tax Code [GITC]).

- (b) For details regarding the taxation of capital gains derived by legal persons or legal entities, see Section B.
- (c) The 5% withholding tax rate applies to dividends and interim dividends distributed by a Greek corporation (*anonymos eteria*, or AE; in certain countries, a corporation is referred to as a *société anonyme*, or SA) and profits distributed by a Greek limited liability company (*eteria periorismenis efthinis*, or EPE). This 5% withholding tax is subject to rates applicable under double tax treaties or under the European Union (EU) Parent-Subsidiary Directive (amended by Directive 2011/96/EC).
- (d) This 15% withholding tax is subject to rates applicable under double tax treaties or under the EU Interest-Royalties Directive.
- (e) This is a final tax if the beneficiary is a legal person (for example, a company) or legal entity that satisfies both of the following conditions:
- It does not have its tax residency in Greece.
 - It does not maintain a permanent establishment for corporate income tax purposes in Greece.
- In addition, non-Greek tax resident companies with no permanent establishment in Greece are exempt from tax on interest arising from listed corporate bonds (applicable for interest payments made on or after 1 January 2020).
- (f) This 20% withholding tax is subject to rates applicable under double tax treaties or under the EU Interest-Royalties Directive. No tax is withheld on payments of royalties made to legal persons or legal entities that have their tax residence in Greece or that have a Greek permanent establishment in Greece.
- (g) No tax is withheld if the recipient has its tax residency in Greece or another EU/European Economic Area (EEA) country; otherwise, a 20% withholding tax applies.

B. Taxes on corporate income and gains

Corporate income tax. Greek companies are taxed on their worldwide income. Foreign business enterprises are taxed only on income derived from a permanent establishment in Greece or on profits generated in Greece. An AE, SA or EPE is Greek if its corporate seat or place of effective management is located in Greece.

A legal person or entity is considered to be a Greek tax resident in the following cases:

- It is incorporated or established under Greek law.
- It has its registered office in Greece.
- Its place of effective management is in Greece at any time during the tax year.

The “place of effective management” concept should be reviewed on an ad hoc basis in the context of the factual background of each case. For this purpose, indicative criteria are listed, such as the following:

- The place where the day-to-day management of the company takes place
- The place where strategic business decisions are made
- The place where the annual general meeting of shareholders or partners or the board of directors takes place
- The place where the accounting books of the company are held
- The residence of the members of the board of directors

In addition, the Greek tax administration may examine additional factors, such as the residence of the majority of the shareholders or partners.

Rate of corporate income tax. The standard corporate income tax rate is currently 22% (see footnote [a] in Section A for further details).

Law 4799/18.5.2021 provides the following:

- The income tax rate for legal persons and legal entities is reduced to 22% (from 24%) for the 2021 tax year and onward.
- The corporate income tax rate remains at 29% for credit institutions (banks) for the tax years that the provisions of deferred taxation apply (Article 27A of the GITC).

Capital gains. Capital gains earned by legal entities are treated as business income and are subject to corporate income tax at the standard rate if they derive from the following:

- Disposals of fixed assets
- Transfers of businesses as going concerns
- Disposals of real estate property that do not constitute a business activity per se
- Transfers of securities (such as listed shares, unlisted shares, interests in partnerships, treasury bills, Greek state bonds and derivatives)

As of 1 July 2020, companies are exempt from capital gains tax arising from the disposal of a participation held in a legal entity, provided that they hold at least a 10% participation for a period of 24 months and that the conditions of Directive 2011/96/EU (Parent-Subsidiary Directive) are met. This income is not subject to tax on distribution or capitalization, while any related expenses are not deductible; by way of exception, corresponding losses may be tax deductible as of 1 January 2020, on the condition that they have been booked up to 31 December 2019 (tax deductibility of such losses is permitted only to the extent that such losses are realized up to 31 December 2022).

Sales of listed shares are also subject to a 0.2% transaction duty.

Administration. The fiscal year coincides with the calendar year. Legal persons or entities keeping double-entry books may set their tax year to end on 30 June or on any other date coinciding with the tax year-end of their foreign shareholder. An option for a tax year exceeding 12 months is not available. Greek SAs or AEs, Greek EPEs and branches of foreign companies must file an annual corporate income tax return by the end of the sixth month following the end of their fiscal year.

In general, on filing their annual corporate income tax return, legal entities must make an advance payment against the next year's income tax liability. Law 4799/18.5.2021 provides the following:

- The rate of income tax prepayment for legal persons and legal entities is reduced to 80% (from 100%), and this reduced rate applies on the prepayment assessed with the income tax return for the 2021 tax year and onward.
- Exceptionally, income tax prepayment for Greek banking institutions and branches of foreign banks operating in Greece remains at 100% for the 2020 tax year and onward.

The final payment of tax is calculated by subtracting the advance payment made in the preceding year and other prepayments of tax (including taxes withheld at source) and foreign taxes paid on foreign-source income from the amount of tax due. The foreign tax credit cannot exceed the amount of Greek tax otherwise payable on the foreign-source income.

A description of the penalties is provided below; if more than one penalty applies to the same tax offense, only the provision providing for the largest penalty applies.

A failure to file a corporate income tax return or to file in time a corporate income tax return results in the imposition of an administrative penalty ranging from EUR100 (if no tax is due) to EUR500 (if tax is due).

A failure to pay corporate income tax as a result of filing an inaccurate corporate income tax return results in the imposition of the following penalties:

- If the filing of an inaccurate corporate income tax return results in a difference of corporate income tax of 5% to 20%, the penalty equals 10% of the amount of the difference between the tax assessed on the basis of the tax return and the corrective tax assessment.
- If the filing of inaccurate corporate income tax return results in a difference of corporate income tax exceeding 20% but not exceeding 50%, the penalty equals 25% of the amount of the difference.
- If the filing of inaccurate corporate income tax return results in a difference of corporate income tax exceeding 50%, the penalty equals 50% of the amount of the difference.

A failure to file a corporate income tax return when corporate income tax would be due results in the imposition of a penalty equal to 50% of the amount of corporate income tax avoided.

In addition to the above, interest in arrears for the late payment of corporate tax is assessed; the current rate is 0.73% per month.

A failure to file a withholding tax return, the filing of an inaccurate withholding tax return or the failure to pay withholding taxes on time results in the imposition of a penalty equal to 50% of the amount of the unpaid tax.

Dividends. A 5% withholding tax is imposed on dividends and interim dividends distributed to Greek or foreign beneficiaries by Greek SAs and profits distributed by Greek EPEs, unless an applicable double tax treaty provides otherwise (see Section F) or unless tax relief is available under the EU Parent-Subsidiary Directive (90/435/EEC), as amended by Directive 2011/96/EC). For details regarding the rules in this directive, please see below. This tax represents the final tax liability of the recipient with respect to the dividends received if the recipient is a legal entity that does not have tax residency in Greece and does not maintain a permanent establishment in Greece.

A Greek subsidiary is not required to withhold the 5% withholding tax from dividends and interim dividends distributed to their EU parent companies if all of the following conditions are satisfied:

- The EU parent company holds a minimum 10% participation in the Greek subsidiary.
- The EU parent company holds the above participation in the Greek subsidiary for at least two consecutive years.

- The recipient EU parent company satisfies all of the following additional conditions:
 - It has one of the legal types listed in Annex I of EU Directive 2011/96/EC.
 - It is tax resident in one of the EU member states (and is not considered tax resident in any non-EU country).
 - It is subject to one of the taxes listed in Annex I of Section B of EU Directive 2011/96/EC, with no option for a tax exemption.

If a Greek tax resident legal person distributes dividends to its parent company and if the parent company has not completed the two-year holding period for a 10% participation but meets the rest of the exemption requirements (see above), the distribution can be exempt from withholding tax, provided that the local Greek tax resident legal person deposits a bank guarantee in an amount based on a specific calculation. This amount is almost equal to the amount of the dividend withholding tax due.

Foreign tax credit. Foreign-source income is usually taxable with a credit for foreign income taxes paid, up to the amount of Greek tax corresponding to the foreign-source income. The credit cannot exceed the amount of Greek tax payable on the same amount.

C. Determination of trading income

General. Taxable income for all legal entities consists of annual gross income, less allowable deductions. In principle, expenses may be deducted only from gross income for the fiscal year in which they are incurred.

In general, all ordinary business expenses and specific items mentioned in the tax law may be deducted for tax purposes (with the exception of certain expenses that the law explicitly indicates are not deductible for tax purposes) only if the following conditions are satisfied:

- They are made in the interest of the business or in the ordinary course of its business transactions.
- They reflect an actual transaction that has a value not considered lower or higher than the actual value, based on indirect audit methods (cross-checks).
- They are recorded in the accounting books for the period in which they are incurred and are supported by proper documentation.

The Income Tax Code also includes a list of nondeductible expenses.

Special rules were introduced in 2020 with respect to a super deduction of research and development (R&D) expenses and advertising expenses, as well as of expenses related to the introduction and use of zero-emission or low-emission vehicles.

R&D expenses. Under Law 4714/29.7.2020, R&D expenses increased by 100% are deducted at the time of their realization from legal entities' gross income. The new provisions introduce an alternative procedure for the review and certification of such expenses by the General Secretariat for Research and Technology

through an audit report by a certified auditor or audit firm. The increased deduction of R&D expenses applies as of 1 September 2020, while the alternative review and certification process of such expenses may apply also to R&D expenses that have already been submitted to the General Secretariat for Research and Technology by 29 July 2020.

Advertising expenses of 2020, 2021 and 2022. Under Laws 4728/29.9.2020 and 4876/23.12.2021, advertisement expenses realized in the 2020, 2021 and 2022 fiscal years enjoy a super deduction equal to the following, provided that certain conditions are met:

- 100% for the 2020 fiscal year
- 60% for the 2021 fiscal year
- 30% for the 2022 fiscal year

Expenses related to zero-emission or low-emission vehicles. Recent amendments introduced by Laws 4646/12.12.2019 and 4710/23.7.2020 provide for the possibility of increased deduction of several expenses related to zero-emission or low-emission vehicles. These increased deductions include, among others, the following:

- For the leasing of a zero-emission company car, with a maximum retail price before taxes up to EUR40,000, the company is entitled to deduct the relevant cost from its gross revenue at the time of its realization, increased by 50% and by 25% for any additional amount. For low-emission cars (that is, up to 50 g CO₂/km), the increased discount percentages amount to 30%, and to 15% for any additional amount.
- For the cost of purchase, installation and operation of publicly accessible charging points for vehicles of zero or low emissions (that is, up to 50 g CO₂/km), undertakings may deduct the respective costs from their gross revenue at the time of realization, increased by 50% etc.

Inventories. Inventory and semi-finished products must be evaluated according to current accounting principles. The tax law does not determine any official method for stock valuation. However, beginning with the tax year in which a valuation method is first used by a company for valuation of its inventory and semifinished products, the company must use the method for a minimum of four years.

Provisions. Bad debt provisions and write-offs are deductible for corporate income tax purposes at a rate defined on a case-by-case basis, based the amount of the uncollected debt and the time period during which the debt remains uncollected.

For uncollected debts that do not exceed EUR1,000 and that are overdue for a period of more than 12 months, the taxpayer may establish a provision equal to 100% of the debt.

For uncollected debts that exceed EUR1,000 and that are overdue, the taxpayer may establish a provision equal to the following:

- 50% of the debt if it is overdue from 12 to 18 months
- 75% of the debt if it is overdue from 18 to 24 months
- 100% of the debt if this is overdue for more than 24 months

Effective from 1 January 2020, regardless of the time that the debt was created, the following rules apply:

- Bad debts up to EUR300 per debtor (VAT included) can be written off, without the creditor being obliged to conduct all the proper legal actions to safeguard their collection, under the conditions set out by law. Bad debts written off cannot exceed 5% of the total amount of the receivables of the business per tax year.
- Bad debts written off in the context of a mutual agreement or judicial settlement can also be written off under conditions for tax purposes, without the creditor being obliged to conduct all the proper legal actions to safeguard their collection.

Restrictions are imposed on the formation of bad debt provisions for a shareholder or partner holding at least a 10% participation in a business and for business' subsidiaries with a minimum 10% participation. Special rules are also provided for the deduction of bad debt provisions by banks, leasing and factoring companies.

Depreciation. Depreciation is performed by applying a specific depreciation rate to the acquisition or construction cost for a business asset. The depreciation of each fixed asset begins the month following the month in which the asset is first used or put into service by the taxpayer. The following table provides the annual depreciation rates.

Categories of assets	Depreciation rate (%)
Buildings, installations, facilities industrial installations, non-building facilities, warehouses and special loading and unloading vehicles	4
Construction and installation of charging points for zero-emission or low-emission vehicles	100
Plots of land used for mining purposes and quarries, except those used for ancillary mining activities	5
Public means of transportation, including airplanes, trains and ships, (other than those with zero or low emissions)	5
Machinery and equipment (except for personal computers [PCs] and software)	10
Means of private transportation of individuals (other than those with zero emissions or low emissions)	16
Means of private transportation of individuals with zero emissions	50
Means of private transportation of individuals with low emissions	25
Means of transportation of goods (other than those with zero or low emissions)	12
Means of transportation of goods with zero emissions	50
Means of transportation of goods with low emissions	25
Means of public transportation of individuals with zero emissions	50
Means of public transportation of individuals with low emissions	25

Categories of assets	Depreciation rate (%)
Intangible assets and royalties and expenses of multiannual depreciation	10
PCs and software	20
Equipment used for scientific and technological research	40
Other fixed assets	10

An option exists for one-off depreciation of fixed assets valued up to EUR1,500 in the year in which the assets are acquired and placed in service. Newly established companies are eligible to claim depreciation for all of their fixed assets at a 0% rate for their first three years.

Under Law 4710/23.7.2020 enterprises may deduct from their gross revenue the depreciation cost of a zero-emission company car with a maximum retail price before taxes up to EUR40,000 increased by 50% (and by 25% for any excess amount). The corresponding percentages for low-emission cars (that is, up to 50 g CO₂/km) are 30% and 15%, respectively.

Relief for losses. Tax losses may be carried forward to offset business profits in the following five consecutive tax years from the tax year in which they are incurred. The right to carry forward tax losses ceases to apply if both of the following events occur:

- More than 33% of the direct or indirect shareholding participation or voting rights in a legal person or entity changes in a tax year.
- In the same and/or in the subsequent tax year. the business activity of the legal person or entity changes in excess of 50% in terms of its turnover, in relation to the tax year immediately preceding the tax year of the change described in the bullet above.

Offsetting of losses incurred abroad against business profits derived domestically is not allowed, with the exception of income arising in other EU or EEA member states that is not exempted based on an applicable double tax treaty. Losses may not be carried back.

Groups of companies. Each company forming part of a group must file a separate return. The law does not provide for consolidated tax returns or other group relief.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT)	
Standard rate	24
Reduced rate	13
	(special reduced rate of 6%)
Stamp duty on private loan agreements	2.4/3.6
Capital duty	1.1
Annual real estate tax; imposed on the value of real estate owned by legal entities; the rate depends on the zone of the real estate, its surface, year built, whether the property faces a national road and other factors	Various

Nature of tax	Rate (%)
Special property tax; imposed on the “objective” value of real estate property; the tax does not apply if the company has listed shares or if it discloses its corporate structure and the ultimate individual shareholders or partners are revealed	15
Real estate transfer tax; imposed on taxable value	3

E. Miscellaneous matters

Transfer pricing. Greek tax law includes a transfer-pricing clause (Articles 21 and 22 of the Code of Fiscal Procedure) that is aligned with international standards. In addition, the transfer-pricing legislation requires that an enterprise maintain documentation files.

Effective from 1 January 2014, a new definition of “associated/affiliate enterprises” is introduced. The new law defines the term “associated person,” which extends to legal entities, individuals and any other body of persons. The term encompasses two persons if any of the following circumstances exists:

- One of them holds directly or indirectly shares, parts or quotas in the other of at least 33%, estimated on the basis of total value or number, or equivalent profit participation rights or voting rights.
- Another third person participates directly or indirectly in the other two in any of the aforementioned ways.
- Between them, direct or indirect management dependence or control exists or the possibility exists for one person to exercise decisive influence over the other or for a third person to do so in both of them.

Effective from 1 January 2014, the concept of advance pricing arrangements (APAs) is introduced in Greek transfer-pricing legislation. Law 4714/29.7.2020 introduced for the first time in Greece the possibility of retroactive effect of bilateral or multilateral APAs on certain conditions.

Debt-to-equity rules. No deduction is allowed for interest expenses (with the exception of interest on banking loans and corporate bond loans) incurred on loans granted by third parties to the extent that the interest rate exceeds the interest that would be payable if the applicable interest rate were equal to the interest rate for loans connected with revolving accounts to noncredit or nonfinancial enterprises, as published by the Bank of Greece.

Interest expenses are not recognized as tax-deductible expenses, to the extent that the excess interest expenses (interest expense less any interest income) exceed 30% of the taxable profits before interest, taxes, depreciation and amortization (tax EBITDA). The tax EBITDA is determined based on the financial statements prepared in accordance with Greek accounting rules following the addition of the tax adjustments provided by the GITC.

By exception, Law 4916/2022 (FEK A' 65/28.03.2022) has introduced a possibility for full tax deduction or tax deduction exceeding the percentage introduced by the law (30%) with regard to the excessive borrowing cost for taxable persons that belong to a consolidated group. According to this law, such

taxable persons are allowed to deduct the excessive borrowing cost in either of the following amounts:

- In full, provided that the taxable persons can prove that the percentage of the share capital in relation to their total assets is equal or higher (or lower by no more than 2%) when compared to the respective percentage of the consolidated group and provided that all assets and liabilities are valued based on the same method as in the consolidated financial statements
- In an amount higher than the amount they would be eligible to deduct based on the general interest limitation rule. This higher amount of tax is calculated in the following two stages:
 - At the first stage, the group percentage should be determined by dividing the excessive borrowing cost of the consolidated group toward third parties with the EBITDA of the group.
 - At the second stage, the group percentage is multiplied with the EBITDA of the taxpayer.

Further clarifications from the side of the tax administration are expected.

For the purposes of applying the above, “exceeding borrowing costs” is defined as the difference between the taxpayer’s taxable interest revenues and other economically equivalent taxable revenues and the deductible borrowing costs of such taxpayer, while the term “borrowing costs” includes interest expenses on all forms of debt as well as expenses incurred in connection with the raising of finance. EBITDA is the sum of taxable income, tax-adjusted amounts for exceeding borrowing costs, as well as tax-adjusted amounts for depreciation and amortization. Tax-exempt income is not taken into account for such calculation.

However, such interest expenses, are recognized as fully tax deductible, provided that the amount of excess interest expenses recorded in the accounting books does not exceed EUR3 million per year. Further, the law recognizes the ability to carry forward without any time limitation exceeding borrowing costs that cannot be deducted in the current tax year.

Nonetheless, the above thin-capitalization rules [maximum threshold up to which exceeding borrowing costs are deducted] do not apply to the following:

- Exceeding borrowing costs incurred on loans used to fund a long-term public infrastructure project, in cases in which the project operator, borrowing costs, assets and income are all in the EU
- Special Purpose Vehicles to the extent that the interest expenditure is connected to the carrying out of public project(s) or public service(s) by means of a concession agreement ratified by the Greek parliament with a law, or by means of a Public-Private Partnership signed on or before 31 December 2014
- Credit or financial institutions

Controlled foreign corporations. Controlled foreign corporation (CFC) rules have been effective in Greece from 1 January 2014 and have been recently updated after the local implementation of the EU Anti-Tax Avoidance Directive (ATAD) through the enactment of Law 4607/2019. These rules are designed to deal with tax avoidance of Greek companies through the shifting of

revenues to subsidiaries in low-tax jurisdictions. Basically, these rules provide for the inclusion in the taxable income of the Greek companies' undistributed passive income (for example, interest, dividends and royalties) of foreign subsidiaries under the conditions stipulated in the law. The CFC provisions do not apply to CFCs established in the EEA, as long as such entities perform substantial economic activity, supported by employees, equipment, assets and premises, as evidenced by relevant facts and circumstances.

Mergers and acquisitions. Company law regulates mergers and acquisitions in Greece. However, significant tax exemptions and relief for company restructurings may be available.

Transfers of operations. The tax law regulates the tax treatment of a group business restructuring that results in a transfer of operations (exit taxation). In the case of a local or cross-border intra-group restructuring qualifying as a transfer of functions, assets, risks and business opportunities (profit potential), the transfer of these items is considered a "transfer package" for the purposes of the law. If, within the context of such restructuring, a transfer of an intangible asset takes place (among other transfers), such transfer must be made for consideration according to the arm's-length principle, taking into account the total value of the underlying assets and the transfer package (relevant functions and risks transferred). If the taxpayer can prove that no significant intangible assets have been transferred and that arm's-length consideration has been paid with respect to the specific transfer that took place, the transfer-package provisions do not apply.

General anti-avoidance rule. Fiscal Procedure Code Law 4174/2013 introduced a general anti-avoidance rule that has been updated after the local implementation of the EU ATAD through the enactment of Law 4607/2019. The new provisions introduced the term "principal purpose" of an arrangement (principal purpose test) as a determining factor for whether such an arrangement is considered genuine and, consequently, considered by the tax authorities. If an arrangement is considered to be non-genuine, the relevant tax liability is calculated based on the provisions that would have been applicable if such arrangement were not in place. For the purposes of tax determination, the tax administration ignores an arrangement or a series of arrangements put into place if the main purpose, or one of the main purposes, is the obtaining of a tax advantage that defeats the objective or purpose of the applicable tax law. For the purposes of determining whether such arrangements are genuine, not all relevant data and circumstances of each case are considered, while the extent as to which the arrangement in question is being implemented for valid commercial reasons that reflect the economic reality is used as a criterion for this determination. In this context, the tax administration examines whether each arrangement falls within certain circumstances (for example, the arrangement is applied in a manner that is not consistent with usual business conduct or it leads to a significant tax advantage that does not reflect the business risk assumed by the taxpayer). The abovementioned provisions of Law 4607/2019 are applicable to income received and

expenses incurred during tax years commencing beginning on or after 1 January 2019.

Exit taxation and hybrid mismatches. Law 4714/29.7.2020 implemented into Greek tax legislation the provisions of Directive 2016/1164/EU, as amended by Directive 2017/952/EU, regarding exit taxation and hybrid mismatches.

Exit taxation. Under the newly introduced rules, once a taxpayer (Greek tax resident legal person/entity or a Greek permanent establishment) transfers assets, the business carried on by its permanent establishment or its tax residence out of Greece, Greece taxes the capital gain created in Greece (even if that gain has not yet been realized at the time of the exit). At the time of the exit, the taxpayer is subject to Greek corporate income tax.

Hybrid mismatches Under the newly introduced rules, hybrid mismatches arise from differences in the legal characterization of payments or entities among two different jurisdictions. A hybrid mismatch arises between associated persons (for example, associated entities, taxpayer and associated entity, and head office and permanent establishment) or under a structured arrangement. Mismatches are dealt with by primary and secondary correction rules, as the case may be (for example, correction rules for double deduction, for deduction without inclusion, for imported mismatches, for mismatches involving permanent establishments, for hybrid transfers and for tax residence mismatches). The new provisions apply as of 1 January 2020.

Law 89/1967 regime. Enterprises licensed to operate under the Law 89/1967 regime may enter into a favorable APA with the tax authorities. A license may be granted to enterprises under this regime if certain conditions are met. The principal condition is that the company must be exclusively engaged in the provision of specific services to foreign associated companies, the foreign head office or foreign branches. The Ministry of Economy and Finance grants the license after reviewing and approving the applicant's transfer-pricing study (based on the cost-plus method).

F. Treaty withholding tax rates

Under most double tax treaties, the rates in the table below apply to the extent that the amount of interest or royalties is at arm's length. The domestic withholding tax rates apply to any excess amounts. In addition, certain recent double tax treaties include an anti-abuse clause.

Greece has implemented EU Directive 2003/49/EC. Under this directive, withholding tax on interest and royalties paid between associated companies of different EU member states was abolished, effective from 1 July 2013.

The following table provides treaty withholding tax rates for dividends, interest and royalties.

	Dividends	Interest	Royalties
	%	%	%
Albania	5	5	5
Armenia	5	10	5
Austria	0/5 (m)(n)	0/8 (o)	0/7 (o)

Ukraine	5 (m)	10	10
United Arab Emirates	0/5 (r)	0/5 (r)	5
United Kingdom	0/5 (n)	0	0
United States	5	0 (b)	0 (d)
Uzbekistan	5	10	8
Non-treaty jurisdictions (c)	5	15	20

- (a) The rate is 5% for royalties paid for the use of industrial, commercial or scientific equipment (7% under the Romania and South Africa treaties).
- (b) The 0% rate applies if the recipient does not control directly or indirectly more than 50% of the voting power in the payer. However, the 0% rate does not apply to interest paid to US recipients to the extent that the interest is paid at an annual rate exceeding 9%.
- (c) For details, see Section A.
- (d) The 0% rate does not apply to cinematographic film royalties paid to US residents.
- (e) The rate is 5% for film royalties.
- (f) The rate is 8% if the recipient is a bank or similar entity.
- (g) The rate is 0% for copyright royalties for literary, artistic or scientific works, including films.
- (h) The rate is 5% for royalties for literary, artistic or scientific works, including films.
- (i) Greece honors the Czechoslovakia treaty with respect to the Czech and Slovak Republics.
- (j) Under the South Africa treaty, the rate is 0% for interest paid to the South Africa Reserve Bank. Under the Italy treaty, the rate is 0% for interest payments made by the Greek government, interest payments made to the Italian government and interest payments relating to government loans.
- (k) The 10% rate applies to copyright royalties for literary, artistic or scientific works.
- (l) The rate is 5% if the recipient is a bank. Under the China Mainland, Mexico and Turkey treaties, the rate is 0% if the recipient is a government bank.
- (m) According to the provisions of the relevant tax treaty, the 5% rate applies if the recipient of the dividends is a company that owns more than 25% of the payer corporation. In any case, effective from 1 January 2020, dividend distributions made by Greek companies are subject to a 5% dividend withholding tax rate even for non-treaty jurisdictions.
- (n) The 0% rate applies if the conditions of the EU Parent-Subsidiary Directive are met (for Switzerland, the 0% rate applies if the conditions of the European Community (EC)-Switzerland agreement providing for measures equivalent to those in Directive 2003/48/EC are met).
- (o) The 0% rate applies if the terms of the EU Interest-Royalties Directive are met; for Switzerland, the 0% rate applies if the conditions of the EU-Switzerland agreement providing for measures equivalent to those in Directive 2003/48/EC are met.
- (p) The 0% rate for dividends and interest payments applies if the recipient is the government of Kuwait or a state division or subdivision, the Central Bank of Kuwait or other government organizations or government funds.
- (q) The 0% rate on interest payments applies if the recipient is the government of Qatar.
- (r) The 0% withholding tax rate for dividends and interest payments applies if the recipient is the government of the United Arab Emirates (UAE) or its political subdivisions, the Central Bank of the UAE or certain UAE investment authorities.
- (s) On 11 May 2022, a new tax treaty was signed between Greece and France (which will replace the one concluded in 1963). It is expected that both countries will transpose this treaty into their domestic law and will enact it in the next few months.
- (t) On 14 March 2022, the Singapore-Greece income tax treaty and the protocol entered into force. The provisions of the treaty and protocol will become effective mostly on 1 January 2023.
- (u) The withholding tax rate for interest is 0% if the beneficial owner is a bank or if it is paid to the government of Greece or Singapore.
- (v) Sweden has unilaterally terminated its tax treaty with Greece; for income tax purposes, such termination is effective for income derived as of 1 January 2022.

A. At a glance

Corporate Income Tax Rate (%)	21
Capital Gains Tax Rate (%)	21
Branch Tax Rate (%)	21
Withholding Tax (%) (a)	
Dividends	30 (b)
Interest	30 (b)(c)
Royalties from Patents, Know-how, etc.	30 (b)
Branch Profits Tax	30 (d)
Net Operating Losses (Years) (e)	
Carryback	0
Carryforward	Unlimited

- (a) The withholding tax rates may be reduced under tax treaties (see Section E).
 (b) Imposed on payments to nonresidents.
 (c) Interest on certain portfolio debt obligations issued after 18 July 1984 and bank deposit interest not effectively connected to a trade or business in Guam are exempt from withholding.
 (d) The branch profits tax is imposed on the earnings of a foreign corporation attributable to its branch, reduced by earnings reinvested in the branch and increased by withdrawals of previously reinvested earnings.
 (e) This is applicable to losses generated after 2017. A net operating loss is generally limited to 80% of taxable income. Special rules apply to certain types of losses and entities.

B. Taxes on corporate income and gains

The system of corporate income taxation in force in Guam, a territory of the United States, is a mirror image of the US income tax system. The applicable law is the US Internal Revenue Code, with “Guam” substituted for all references to the “United States.” Therefore, for a description of the income taxation of corporations resident or doing business in Guam, refer to the sections on

the United States and substitute “Guam” for each reference to the “United States.”

Income taxes are paid to the government of Guam, which administers its tax system.

Under an agreement between the United States and Guam, Guam had the authority to separate its system of taxation from the US Internal Revenue Code, effective 1 January 1991. Because a comprehensive Guam Tax Code has not yet been developed, this date has been extended, and the mirror system of taxation continues to apply to Guam until a new code goes into effect.

The government of Guam, through the Guam Economic Development Authority, is authorized by law to allow tax rebates to qualified investors. Qualifying Certificates (QCs) for tax incentives are granted based on the investment commitment as well as on the potential for creating new employment and expanding the base of the island’s industry. These incentives are aimed primarily at manufacturers, insurance companies, trusts, commercial fishing companies, corporate headquarters, specialized medical facilities, high-technology companies, agricultural enterprises and tourism-development companies. In general, the tax rebates can amount to up to 75% of income tax paid for up to 20 years. Certain insurance companies may qualify for a 100% income tax rebate.

C. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Gross receipts tax, on sales of tangible personal property and services, excluding wholesale activities	5%
Use tax, on goods imported into and consumed in Guam (businesses are subject to either gross receipts tax or use tax, not both)	4%
Hotel occupancy tax	11%
Real property tax; imposed on appraised value	
Land	0.0972%
Improvements	0.3888%
Additional levy on improvements with a value of USD1,000,000 or more	0.3888%
Liquid fuel taxes, imposed per gallon	
Aviation	8 cents
Diesel	14 cents
Other	15 cents
Alcoholic beverage excise tax	
Malted fermented beverages	7 cents per 12 fluid ounces
Distilled beverages	USD18 per gallon
Vinous beverages	USD4.95 per gallon
Tobacco excise tax	
Cigarettes	USD20 per 100 cigarettes
Cigars	53 to 66 cents per cigar
Other tobacco products	USD53 per pound
Documents tax, on conveyances and on mortgages of real property	0.25%

Nature of tax	Rate
Social security contributions (including 1.45% Medicare tax); imposed on Wages up to USD147,000 (for 2022); paid by	
Employer	6.2%
Employee	6.2%
All covered wages (for 2022; Medicare tax); paid by	
Employer	1.45%
Employee	1.45%
(Effective from 1 January 2013, an additional Medicare tax of 0.9% applies to wages, tips, other compensation and self-employment income in excess of USD200,000 for taxpayers who file as single or head of household. For married taxpayers filing jointly and surviving spouses, the additional 0.9% Medicare tax applies to the couple's combined wages in excess of USD250,000. The additional tax applies only to the amount owed by the employee; the employer does not pay the additional tax. Employers withhold tax only on wages in excess of USD200,000.)	
Miscellaneous license fees	Various

D. Miscellaneous matters

Foreign-exchange controls. Guam does not impose foreign-exchange controls.

Debt-to-equity rules. The US debt-to-equity rules apply in Guam.

Transfer pricing. The US transfer-pricing rules apply in Guam.

E. Tax treaties

The Guam Foreign Investment Equity Act was signed into law on 24 August 2002 and amends the Organic Act of Guam with respect to the application of the Guam territorial income tax laws. The Guam Foreign Investment Equity Act provides that the tax rate under Sections 871, 881, 884, 1441, 1442, 1443, 1445 and 1446 of the US Internal Revenue Code of 1986, on any item of income from sources in Guam is the same as the rate that would apply with respect to such item were Guam treated as part of the United States for purposes of the treaty obligations of the United States. However, this provision does not apply to determine the tax rate on any item of income received from a Guam payer, if for any tax year, the tax on the Guam payer was rebated under Guam law (see Section B for a discussion of the QC rebates).

- (a) For details regarding the Regime on Profits from Business Activities and the Optional Simplified Regime on Revenue from Business Activities, see Section B.
- (b) Subsidiaries and branches are subject to the same tax treatment (that is, as independent taxpayers separate from their parents and headquarters).
- (c) See Section B for further information.
- (d) The withholding taxes, other than the dividend withholding tax, apply to nonresidents without a permanent establishment in Guatemala. For information regarding dividends, see *Dividends* in Section B.
- (e) For details regarding the withholding tax on interest, see Section B.

B. Taxes on corporate income and gains

Corporate income tax. The Income Tax Law (ITL) provides that income derived from activities rendered or services used in Guatemala is considered Guatemalan-source income and must be classified and taxed under one of the following categories:

- Income from business activities
- Income from employment
- Income from capital

Corporate income tax rates. Income from business activities is income derived from ordinary or occasional trade or business. Companies that generate income from business activities may choose to be taxed under one of the following tax regimes:

- Regime on Profits from Business Activities, which applies on a net income basis (authorized expenses are deductible)
- Optional Simplified Regime on Revenue from Business Activities, which applies on a gross receipts basis (no deductions are allowed)

Under the Regime on Profits from Business Activities, companies may deduct expenses incurred to generate taxable income or to preserve the source of such income, except in specific circumstances in which the law imposes limits on deductibility. The taxable income is subject to tax at a rate of 25%. In addition, a 1% Solidarity Tax applies (see Section D).

Alternatively, companies may elect to be taxed under the Optional Simplified Regime on Revenue from Business Activities. Under this regime, companies are subject to income tax on their “taxable income,” which is understood to be the difference between gross income and exempt income. The first GTQ30,000 (approximately USD3,897) of taxable income is subject to tax at a rate of 5%, and the exceeding amount is subject to tax at a rate of 7%. No deductions are allowed. Taxpayers that choose to operate through this scheme are subject to final withholding tax.

Companies operating under the Drawback Regime, the Free Trade Zone Regime or the Santo Tomas de Castilla Free-Trade and Industrial Zone (La Zona Libre de Industria y Comercio de Santo Tomás de Castilla, or ZOLIC) Regime benefit from a 100% income tax exemption for income earned from export activities. However, on 31 March 2016, the Emerging Law for the Preservation of Employment (Decree No. 19-2016) entered into force. The purpose of the law is to limit access to benefits for taxpayers under the Drawback Regime and the Free Trade Zone Regime.

Income from capital and capital gains. Income from capital (other from dividends; see *Dividends*) and capital gains generated in Guatemala are taxed at a rate of 10%, regardless of the regime elected by the taxpayer. The following types of income are classified as income from capital and are subject to tax in Guatemala:

- Royalties (if not part of the taxpayer’s ordinary trade and business)
- Income from leasing and subleasing (if not part of the taxpayer’s ordinary trade or business)
- Interest and other types of returns derived from investments that are received by residents or nonresidents with permanent establishment in Guatemala (if not part of the taxpayer’s ordinary trade or business)

Under the ITL, the following gains are subject to capital gains tax in Guatemala:

- Gains derived from the transfer of shares issued by resident entities
- Gains derived from the transfer of shares issued by foreign entities that own immovable or movable property located in Guatemala
- Gains derived from the transfer of movable or immovable assets, lottery tickets, raffle tickets or similar items or from the incorporation of assets located in Guatemala into the taxpayer's property

Administration. The statutory tax year runs from 1 January through 31 December.

Companies operating under the Regime on Profits from Business Activities must file an annual income tax return and make any payment due within three months after the end of the tax year. Companies operating under the Optional Simplified Regime on Revenue from Business Activities must file an annual information tax return within three months after the end of the tax year. Interest and penalty charges are imposed for late payments of taxes.

Under the Regime on Profits from Business Activities, companies must make quarterly advance income tax payments, which are credited against the final income tax liability. In addition, taxpayers that are qualified as Special Taxpayers must file the annual income tax return together with financial statements audited by a certified public accountant or an independent audit firm.

Companies operating under the Optional Simplified Regime on Revenue from Business Activities settle their tax through final withholding payments made by the payer. They must file a monthly tax return in which they separately determine the total amounts of gross income, exempt income, income subject to withholding tax and income subject to direct payment (companies may be required to make direct payments of tax if they are transacting with persons not required by law to make withholdings or if they have been previously authorized by the tax authorities). The tax return must be filed within the first 10 business days of the month following the month in which the tax was generated.

Dividends. Dividends are taxed under the category of "Income from Capital." A 5% withholding tax is imposed on all dividend distributions made, regardless of the beneficiary's country of residence.

Interest. In general, a 10% final withholding tax is imposed on interest paid to nonresidents. However, withholding tax is not imposed on the following types of interest payments:

- Interest payments made by local banks to banks and financial institutions domiciled abroad (that is, entities licensed and regulated in their country of origin)
- Interest payments made by local taxpayers to multilateral institutions abroad
- Interest payments made by local taxpayers to banks and financial institutions domiciled abroad that are authorized to operate in the country by the Guatemalan Law on Banks and Financial Groups

Foreign tax relief. Guatemala does not grant relief for foreign taxes paid.

C. Determination of trading income

General. Under the Regime on Profits from Business Activities, expenses incurred to generate taxable income, including local taxes, other than income tax and value-added tax (VAT) when such taxes are not considered to be a cost, are deductible. The tax authorities are empowered to deny deductions if they determine that any of the following circumstances exist:

- The expenses are not considered necessary to produce taxable income.
- The expenses correspond to a different fiscal year.
- The expenses are not supported by the appropriate documentation.
- The taxpayer did not withhold the corresponding tax, when applicable.

The expenses must be registered in the taxpayer's accounting records.

Documents issued abroad that support the deduction of expenses may be subject to a 3% stamp tax.

The deductibility of expenses is also conditioned on the reporting and payment of withholding taxes and on the satisfaction of specific documentation requirements, which apply in certain circumstances. This documentation includes, among others, the following items:

- Valid invoices authorized for local operations
- Invoices or receipts issued abroad
- Notary Public deeds
- Payrolls reported to the social security authorities
- Customs returns for the importation of goods including the tax receipts

In general, payments on transactions valued over GTQ30,000 (approximately USD3,897) must be made through a banking or financial institution, and the corresponding balance statement is required as part of the supporting documentation needed to consider the payment deductible. Operations not made through the banking system must be documented through a Notary Public deed.

For these purposes, the law provides that a single transaction may be considered to include the following:

- All payments made to a single source or provider during a calendar month
- An operation of GTQ30,000 (approximately USD3,897) or above that involves partial or split payments to the same provider or person

In both of the above cases, taxpayers should use the payment or documentation methods listed above. Otherwise, the expense may not be deductible for income tax purposes and may not be considered a tax credit for VAT purposes. This requirement is known in Spanish as "Bancarización."

The deduction for royalties, payments for financial or technical advice and professional service fees for services rendered from

abroad to local taxpayers is limited to 5% of the taxpayer's gross income.

Interest is deductible for income tax purposes if all of the following conditions are satisfied:

- The loan proceeds that give rise to such interest must be used to generate taxable income.
- Payments must be documented and correspond to the same fiscal year.
- The taxpayer must comply with the obligation to withhold the corresponding tax, if applicable.
- The deductible amount may not exceed the value calculated by multiplying the interest rate set by the Guatemalan Monetary Board by a total of three times the "average net asset" amount reported by the taxpayer in the annual tax return. "Average net asset" is defined as the sum of the total net worth of the previous year and the total net worth of the current year (values declared in the annual income tax returns), divided by two.
- Loans issued abroad must be obtained from banks or financial institutions that are registered and monitored by the state entity in charge of bank supervision in the country of origin. They must also be authorized for financial intermediation in the country in which the loan is granted.
- The interest rate on foreign-currency loans may not exceed the maximum simple annual rate set by the Monetary Board, minus the value of the quetzal exchange rate variation in relation to the currency in which the loan is expressed, during the period corresponding to the annual income tax return.

Deductibility of expenses on airline operations. In January 2020, Decree 2-2020 of the Guatemalan Congress took effect. It allows airlines engaged in international transport services to deduct the costs and expenses generated outside of Guatemala that are necessary to provide these services in the country.

Taxpayers established abroad that carry out international air transportation activities both ways between Guatemala and other countries, and whose operations are performed by branches, agencies or other permanent establishments in the country must apply the general deductibility rules of the income tax law and also deduct a proportion of the overall costs and expenses reported by the parent company in accordance with a specific formula that should be automatically calculated by the electronic system provided by the tax authorities when preparing the electronic tax return for corporate income tax purposes.

The Decree mentioned above indicates that the airline should support the information for the calculation of the proportional deductible expense with the audited financial statements of the parent entity, which must be prepared in accordance with international accounting rules, duly *apostilled* and translated into Spanish. The Decree also provides that taxpayers (branches, agencies or permanent establishments) that are unable to provide this documentation may apply the presumption that the taxable base is 15% of their gross income and, accordingly, such taxable base should be subject to the 25% income tax rate.

Inventories. Inventories are valued at cost. The acquisition cost may be computed using various valuation methods provided in the

income tax law. No deviation from these methods is allowed unless previously authorized by the tax authorities.

Cattle may be priced at cost or sales price.

No provisions for deterioration or obsolescence are allowed. The destruction of inventory is considered a deductible expense if it is certified by an inspector from the tax authorities or by a Notary Public.

Provisions. Provisions for bad debts of up to 3% of credit-sales balances are deductible (excluding bad debts guaranteed by pledge or mortgage). Reserves for severance compensation of up to 8.33% of payroll costs are also deductible.

Tax depreciation. Straight-line depreciation is allowed, subject to the following annual maximum rates.

Asset	Rate (%)
Buildings and leasehold improvements	5
Plantations	15
Furniture, fixtures, ships and railroads	20
Machinery and equipment, vehicles and containers	20
Computer equipment	33.33
Tools, porcelain, glassware and certain animals	25
Other items that are not specified	10

Goodwill can be amortized over a minimum period of 10 years. Other intangible assets related to intellectual property rights may be amortized over a minimum period of five years.

Oil and other natural resources are subject to depletion in accordance with the level of production and the remaining reserves.

Relief for losses. Under the Regime on Profits from Business Activities and the Optional Simplified Regime on Revenue from Business Activities, net operating losses cannot offset taxable income in prior or future years.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate
Value-added tax	12%
Levies on petroleum distribution; rate varies by type of fuel	USD0.16 to USD0.61 per gallon
Land tax; imposed annually on value of land; maximum rate, applicable to value in excess of GTQ70,000 (approximately USD9,093)	0.9%
Revaluation tax; imposed on the increase in value resulting from a revaluation of immovable property and other fixed assets by an authorized third-party adjuster	10%
Import duties	0% to 20%
Social security tax; imposed on wages; paid by	
Employer	12.67%
Employee	4.83%

Nature of tax	Rate
Solidarity Tax (ISO); imposed on legal entities subject to the Regime on Profits from Business Activities; tax rate applied to the higher of 1/4 of net assets or 1/4 of gross income; newly organized entities are not subject to ISO during their first four quarters of operations; entities that have a gross margin of lower than 4% of its gross income or incur losses for two consecutive years are not subject to the tax	1%

E. Miscellaneous matters

Foreign-exchange controls. The currency in Guatemala is the quetzal (GTQ). As of 31 December 2021, the average exchange rate was approximately GTQ7.71912 = USD1.

Guatemala does not impose foreign-exchange controls. The exchange system is regulated through the banks.

Debt-to-equity rules. Guatemala does not impose any debt-to-equity requirements.

Anti-avoidance legislation. The tax law contains general measures to prevent tax fraud and similar conduct.

Transfer pricing. Effective from 1 January 2013, official transfer-pricing rules apply to transactions with related parties resident abroad. However, Decree 19-2013 of the Guatemalan Congress suspended the application of the transfer-pricing rules as of 23 December 2013. These rules re-entered into force as of 1 January 2015. The Income Tax Law provides the following two formal obligations:

- Annex to the Annual Income Tax Return on related parties must be filed no later than 31 March of each fiscal year.
- Annual preparation of the Transfer Pricing Study is needed when formally required by the tax authorities.

Online Electronic Invoice regime. On 20 March 2018, the Board of Directors of the tax authorities issued Agreement 13-2018, which entered into force on 23 May 2018. This agreement contains the new Online Electronic Invoice regime, which provides rules regarding the issuance, transmission, certification and storage by electronic means of invoices, credit and debit notes, receipts, and other documents authorized by the tax authorities.

On 3 April 2019, the Guatemalan Congress approved Decree 4-2019, which entered into force on 30 October 2018. The Decree introduced amendments to the Value Added Tax Law related to the Online Electronic Invoice regime. Under the amendments, taxpayers operating under such regime are required to keep an electronic accounting system for recording operations and supporting documentation with respect to the taxpayer's ordinary trade or business.

Monthly bank reconciliation. In the last quarter of 2021, the tax authorities gave notice to taxpayers of a new tax requirement model. Under this model, as of 2022, the information requests

for tax audits will include the submission of monthly bank reconciliation as determined in such model. Such reconciliation will allow the tax authorities to obtain the following information at the income and expense level:

- Accounts receivable and payable with domestic and foreign clients and suppliers
- Accounts receivable and payable with shareholders
- Accounts receivable with employees
- Advance payments made by and to customers and suppliers
- Interest earned and paid
- Transfer of funds (incoming and outgoing) between bank accounts

F. Tax treaties

Guatemala signed a double tax treaty with Mexico in March 2015, which is not yet in effect. The treaty will enter into effect after both countries complete their respective legislative approval processes.

A. At a glance

Corporate Income Tax Rate (%)	0 (a)
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	0 (a)
Withholding Tax (%)	
Dividends	0 (b)
Interest	0
Royalties	0
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0 (c)
Carryforward	Unlimited

- (a) This is the standard corporate income tax rate. For details regarding other rates, see Section B.
- (b) Dividend withholding tax is not imposed on dividends paid to foreign shareholders. See Section B. Dividends paid to Guernsey resident individual shareholders may be subject to withholding tax.
- (c) A carryback for up to two years is available for terminal losses if trade is permanently discontinued.

B. Taxes on corporate income and gains

Corporate income tax. A Guernsey resident company is subject to income tax on its worldwide income. A company not resident in Guernsey is subject to Guernsey income tax on its Guernsey-source income (other than disregarded company income, such as bank interest), unless a double tax treaty applies. A company is resident in Guernsey if its ultimate shareholder control is in Guernsey (tracing through any intermediary structures) or if it is incorporated in Guernsey. Control for Guernsey tax purposes is determined by reference to beneficial ownership rather than central management and control. However, effective from 1 January 2019, Guernsey's corporate residence definition is amended to introduce the concept of management and control, such that a

company is also treated as resident if it is centrally managed and controlled in Guernsey. In addition, effective from 1 January 2019, a company is not treated as resident in Guernsey if it is tax resident in another jurisdiction, if it is managed and controlled in that other jurisdiction and if that other jurisdiction has a highest rate of company tax of at least 10% or has a tiebreaker clause in a double tax agreement or other international agreement. Anti-avoidance provisions apply.

Rates of corporate income tax. The standard rate of corporate income tax is 0%.

A 10% rate applies to profits derived from the following:

- Banking business
- Insurance management
- Insurance intermediaries
- Domestic insurance business
- Regulated fiduciary business
- Fund administration business
- Custody services provided by banks
- Regulated investment management services provided to individual clients
- Operation of an investment exchange
- Regulatory compliance business
- Operation of an aircraft registry

A 20% rate applies to profits from the following:

- Guernsey property
- Regulated utility business
- Retail business carried on in Guernsey that has a taxable profit of more than GBP500,000 in a year
- Importation or supply of hydrocarbon oil or gas
- Cultivation or use of the cannabis plant
- Business of the prescribed production or prescribed use of controlled drugs

Exempt companies. An exempt company regime is available for certain collective-investment schemes. An exempt company is treated as nonresident in Guernsey for tax purposes. It is taxable in Guernsey only on Guernsey-source income, excluding bank interest. Collective-investment schemes (typically unit trusts, investment trusts or bodies involving other forms of public participation) form a substantial sector of the finance industry in Guernsey. Other companies associated with such schemes may also qualify for exemption. Companies pay a fixed annual fee of GBP1,200 to register for exempt status, regardless of their income.

Capital gains. Capital gains are not taxable in Guernsey.

Economic substance. Economic substance requirements have been introduced and are effective for accounting periods beginning on or after 1 January 2019. The requirements apply to Guernsey tax resident companies, regardless of their country of incorporation. Companies with gross income from carrying on any of the following types of business are required to meet the economic substance test:

- Banking
- Insurance
- Fund management

- Finance and leasing
- Headquarters
- Shipping
- Holding company
- Intellectual property holding
- Distribution and service center

The economic substance test looks at whether a company is directed and managed in Guernsey (note that this is a specific test that is different from management and control) and whether the company is undertaking its core income-generating activities in Guernsey, supported by adequate expenditure, employees and premises in Guernsey.

Penalties for failing to meet the economic substance test range from financial penalties of up to GBP100,000 to strike off (dissolution of company) and exchange of information.

The economic substance rules have been extended to partnerships; the rules are effective for new partnerships established from 1 July 2021, and for accounting periods beginning on or after 1 January 2022 for partnerships already in existence as at 30 June 2021. The rules apply to “resident partnerships” with gross income from the types of business noted above. The substance test for partnerships is essentially the same as the test for companies, but some exemptions apply.

Administration. The Guernsey tax year corresponds to the calendar year. Tax payments on account are normally due in two equal installments on 30 June and 31 December of the tax year, with a balancing payment or repayment due after filing and assessment. From 2023, payments on account will be quarterly rather than in two installments.

An annual tax return is generally required for all Guernsey resident companies and some foreign companies with Guernsey-source income. The annual tax return must be filed electronically by 30 November of the following year. Automatic late filing penalties may be imposed. The filing deadline for 2019 tax returns was extended by three months to 28 February 2021.

If taxable distributions or loans to Guernsey resident individuals are made during the year, a final Distribution Reporter tax return is required to be filed by 15 January following the tax year. Taxes on such events must be withheld at source and paid quarterly by the 15th of the month following the relevant quarter.

Companies must file annual validation forms with the Guernsey Registry, and pay the relevant filing fee. Fees are based on the type and activity of the company and range from GBP100 to GBP1,000.

Resident partnerships will be required to register with the Guernsey Revenue Service and file an annual tax return, even where the substance rules are not applicable. For most partnerships, registration is required by 14 July 2023, and a 2022 tax return will be required. However, in some situations (for partnerships established after 30 June 2021 with an accounting period ending on or before 31 December 2021), registration may be required by 14 July 2022, with a 2021 tax return filing requirement. Despite the tax return filing requirement, a partnership remains transparent for Guernsey tax purposes.

Dividends. No tax is withheld from dividends paid to foreign shareholders of Guernsey companies.

If dividends are paid to Guernsey resident individual shareholders, the company may be required to withhold tax of up to 20% of the distribution. The amount of tax withheld may be reduced if the company has already suffered tax on the profits distributed. Companies maintain tax pools to track undistributed income (income that has not suffered tax at 20% or more) and tax already suffered. Distributions are required to be matched against undistributed income first. If the company has an ultimate beneficial member who is Guernsey resident, withholding may also apply in some situations, even if the dividend is not received by the Guernsey resident.

Companies may also be required to withhold tax at a rate of 20% if a loan is advanced to a Guernsey resident beneficial member, but some exemptions apply.

Foreign tax relief. Guernsey grants specific double taxation relief for income from its treaty countries and grants unilateral relief for income from non-treaty countries up to an effective maximum rate of 15%.

C. Determination of trading income

General. The assessment is based on accounting profits, subject to certain adjustments. To be deductible against revenue, expenses must be incurred wholly and exclusively for the purposes of the trade and must not be capital in nature.

Nonresident companies are exempt from tax on disregarded company income, including Guernsey-source bank interest.

Tax depreciation. Depreciation is not an allowable deduction, but annual allowances are available on the cost of certain plant and machinery. Annual allowances are generally calculated at a rate of 20% on a reducing-balance or straight-line basis (subject to specific variations).

Groups of companies. Under Guernsey law, a trading loss incurred by a member of a 90%-owned group of companies may be offset against profits earned in the same tax year by another member of the group. All members of the group must be incorporated and resident in Guernsey or have a fixed place of business in Guernsey. Restrictions apply if members of the group are taxed at different rates.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Social security contributions; payable on the salaries and wages of employees resident in Guernsey; paid by (2022 rates)	
Employer (maximum contribution of GBP878.84 per month)	6.7
Employee (maximum contribution of GBP891.96 per month)	6.8

Nature of tax	Rate (%)
Tax on real property; based on the unit value of the property located in Guernsey; rates vary according to the type of property	Various
Document duty on sales of Guernsey property; based on the value of the transaction (Legislation extending the duty to include the sale of shares in corporate vehicles holding Guernsey real property has been introduced.)	2.25 to 5.50

E. Miscellaneous matters

Anti-avoidance legislation. Guernsey's tax law includes a general anti-avoidance rule. The Director of the Revenue Service has broad powers to adjust a taxpayer's tax liability and assess income tax that, in the Director's opinion, has been deliberately avoided by a transaction entered into by the taxpayer.

Exchange controls. Guernsey does not impose any foreign-exchange controls.

Debt-to-equity ratios. Guernsey does not prescribe any debt-to-equity ratios, but the general anti-avoidance rule can be applied in some situations.

Types of companies. The Guernsey company law allows the incorporation of companies limited by shares, guarantee or shares and guarantee. A company limited by shares and guarantee may have both shareholders and guarantee members.

Protected cell companies. Protected cell companies (PCCs) consist of several cells and core capital. Each cell is liable only to its own creditors. A creditor of a particular cell has recourse to the assets of that cell and the core capital only. PCCs may be used for captive insurance companies, collective-investment schemes or other approved enterprises.

Incorporated cell companies. Incorporated cell companies are similar to PCCs in terms of their cellular nature. However, each cell is regarded as an incorporated entity in its own right and, consequently, is subject to tax as a separate entity.

Migration of companies. Guernsey law allows an overseas company to migrate into Guernsey and be registered as a Guernsey company. In addition, a Guernsey company may be removed from the Companies Register with the intention of becoming incorporated in another jurisdiction. In both cases, the law of the other jurisdiction must provide for the migration, the company must be solvent and certain other conditions must be met.

Country-by-Country Reporting. Guernsey has committed to adopt the minimum standards required under the Base Erosion and Profit Shifting (BEPS) program of the Organisation for Economic Co-operation and Development (OECD). Under Action 13, certain reporting obligations are required with respect to Country-by-Country Reporting (CbCR). Ultimate Parent Entities and Surrogate Parent Entities have notification and filing requirements in Guernsey. Constituent Entities also have notification requirements, which form part of a company's annual income tax return filing.

Mandatory Disclosure Rules. Guernsey has committed to introduce Mandatory Disclosure Rules for Common Reporting Standard Avoidance Arrangements and Opaque Offshore Structures (MDR). The MDR legislation is in place (it is based on the OECD version of the MDR) but is not yet in force. The regime is expected to enter into force in late 2022 or in 2023.

F. Tax treaties

Guernsey has entered into comprehensive tax treaties with the following jurisdictions.

Cyprus	Liechtenstein	Qatar
Estonia	Luxembourg	Seychelles
Hong Kong SAR	Malta	Singapore
Isle of Man	Mauritius	United Kingdom
Jersey	Monaco	

Guernsey has completed negotiations for comprehensive double tax treaties with Bahrain, Gibraltar and the United Arab Emirates, and arrangements to sign the agreements are being discussed. The tax treaty negotiations with Lebanon were deferred due to the COVID-19 pandemic and are expected to commence in 2022. Discussions on a possible double tax treaty with Argentina are at an early stage.

Guernsey also has partial (limited) treaties with the following jurisdictions.

Australia	Greenland	New Zealand
Denmark	Iceland	Norway
Faroe Islands	Ireland	Poland
Finland	Japan	Sweden

In addition, Guernsey has signed tax information exchange agreements with 61 jurisdictions.

- (a) The minimum tax is 3% of turnover unless exempt (see Section B).
 (b) The tax may be deferred if proceeds are reinvested (see Section B).
 (c) This tax applies to payments to nonresidents.
 (d) This tax applies to payments by residents to nonresidents for services, including professional services, performed in Guinea.
 (e) This tax applies only to rent paid to individuals.
 (f) This tax applies to banks only.

- (g) This tax applies to insurance companies only.
- (h) This tax applies to lottery tickets sold by gambling companies.
- (i) See Section B.

B. Taxes on corporate income and gains

Corporate income tax. Guinean companies are taxed on the territoriality principle. As a result, Guinean companies carrying on a trade or business outside Guinea are not taxed in Guinea on the related profits. Foreign companies with activities in Guinea are subject to Guinean corporate tax on Guinean-source profits only.

Tax rates. Under the 2018 Finance Law, the regular corporate income tax rate was reduced to 25%. Since the issuance of the amended Mining Code in April 2013, the rate for the mining sector is 30% (applicable to mining companies only; not applicable to subcontractors). For telecommunication companies, banks, insurance companies and companies importing, storing, storing and distributing petroleum products, the corporate income tax rate is 35%.

Under the new general tax code, which entered into force on 1 January 2022, the annual minimum tax payable is reduced to 0.5% of annual turnover. However, for companies registered with the Big Companies Services from the National Tax Direction, the annual minimum tax payable cannot be less than GNF100 million or higher than GNF500 million. For other companies, it cannot be less than GNF10 million or higher than GNF40 million.

Profits realized in Guinea by branches of foreign companies are deemed to be distributed and therefore are subject to a branch withholding tax of 15% on after-tax income.

Corporations may apply for various categories of priority status and corresponding tax exemptions. The priority status varies, depending on the nature of the project and the level of investment.

Capital gains. Capital gains are taxed at the regular corporate rate. The tax, however, may be deferred if the proceeds are used to acquire new fixed assets in Guinea in the following three financial years.

Capital gains on transfers of shares are taxed at a rate of 15%.

Administration. The fiscal year is from 1 January to 31 December. Tax returns must be filed by 30 April of the year following the fiscal year.

Companies must pay the relevant annual minimum tax before 15 January of the year following the fiscal year. Two advance payments of corporate tax, each equal to 33 $\frac{1}{3}$ % of the corporate tax for the previous year, are due on 15 June and 15 September of the fiscal year. Any balance due must be paid by 30 April of the following year.

Dividends. Dividends are subject to a 15% withholding tax, which may be credited by the recipient against corporate income tax.

Foreign tax relief. Foreign tax credits are not allowed. Income subject to foreign tax that is not exempt from Guinean tax under the territoriality principle is taxable net of the foreign tax.

C. Determination of trading income

General. Taxable income is based on financial statements prepared according to generally accepted accounting principles and the rules contained in the Organization for the Harmonization of Business Law in Africa (Organisation pour l'Harmonisation en Afrique du Droit des Affaires, or OHADA) Uniform Act on Accounting Law (SYSCOHADA).

Business expenses are generally deductible unless specifically excluded by law. The following expenses are not deductible:

- Head office overhead in excess of 10% of turnover derived by a Guinean branch.
- Interest paid on loans from shareholders to the extent the rate exceeds the current rate of the Central Bank and all of the interest on shareholder loans if the capital of the company is not fully paid. Interest is deductible only up to 15% of the company's "retirement profit" in the same fiscal year. The 2019 Finance Law has given an indication as to how to determine the "retirement profit."
- Corporate income tax and withholding tax on real estate.
- Certain specific charges.

Inventories. Inventory is normally valued at the lower of cost or market value.

Provisions. In determining accounting profit, companies must establish certain provisions, such as a provision for a risk of loss or for certain expenses. These provisions are normally deductible for tax purposes if they provide for clearly specified losses or expenses that are probably going to occur and if they appear in the financial statements and in a specific statement in the tax return.

Capital allowances. Land and intangible assets, such as goodwill, are not depreciable for tax purposes. Other fixed assets may be depreciated using the straight-line method at maximum rates specified by the tax law.

Relief for tax losses. Losses may be carried forward for three years. Under the new tax code, losses incurred during a financial year are considered as an expense for the following financial year and deducted from the profit made within the limit of an amount equal to 70% of the taxable income. The portion that has not been deducted during this financial year (if this is the case) can be carried forward indefinitely to other financial years. Losses may not be carried back.

Groups of companies. Fiscal integration of Guinean companies equivalent to a consolidated filing position is not available.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on sales of goods and services and on imports	18
Standard rate	
Business activity tax (<i>patente</i>), calculated based on the nature of the business activity and the rental value of the place of business	Various

Nature of tax	Rate (%)
Registration duties, on transfers of real property or businesses	2 to 15
Payroll taxes; paid by employers on salaries	6
Training tax; paid by employers on salaries	1.5/2
Social security contributions, on an employee's annual gross salary, up to GNF2,500,000	
Employer	18
Employee	5

E. Foreign-exchange controls

Exchange-control regulations exist in Guinea for foreign financial transactions.

F. Tax treaties

Guinea has entered into double tax treaties with France, Morocco, Tunisia and the United Arab Emirates.

Corporation Tax	Unlimited (e)
Capital Gains Tax	24

- (a) The 25% rate applies to noncommercial companies. Commercial companies are taxed at a rate of 40% of income, or 2% of turnover, whichever is lower, subject to the approval of the Commissioner-General of the Guyana Revenue Authority (GRA). Telephone companies are taxed at a rate of 45%. See Section B.
- (b) See Section B.
- (c) These withholding taxes apply to payments to companies and individuals not engaged in trade or business in Guyana.
- (d) This tax applies to deemed remittances of profits to the overseas head office.
- (e) See Section C.

B. Taxes on corporate income and gains

Corporate income tax. Companies resident in Guyana are subject to tax on their worldwide income from all sources. Relief with respect to taxation suffered on foreign-source income in an

overseas jurisdiction may be available under a double tax treaty. Nonresident companies engaged in business in Guyana are subject to tax on income directly or indirectly accruing in or derived from Guyana.

Rates of tax. Noncommercial companies or companies engaged in noncommercial activities are taxed at a rate of 25%. Any company that does not fall within the definition of a commercial company is regarded as a noncommercial company, including manufacturers and service companies.

Commercial companies or companies engaged in commercial activities are taxed at a rate of 40% of chargeable income. A commercial company is a company with at least 75% of its gross income derived from trading in goods not manufactured by it. Commercial companies include commission agencies, banks and insurance companies carrying on insurance business other than long-term insurance business.

If 40% of chargeable income is less than 2% of turnover, the commercial company is required to pay up-front corporation tax at a rate of 2% of turnover (minimum tax). If the GRA is satisfied with the company's calculation of chargeable income, the GRA allows the company's tax liability to be limited to 40% of chargeable income, and any excess minimum tax paid may be carried forward and offset against future corporation tax liabilities with certain restrictions.

Telephone companies are subject to corporation tax in Guyana at a rate of 45%.

An advance corporation tax at a rate of 10% must be deducted by the payer from gross payments made to a nonresident company with respect to goods and services if the nonresident company is engaged in a trade or business in Guyana. The advance corporation tax is creditable against the nonresident company's ultimate corporation tax liability.

Capital gains. Capital gains tax is payable at a rate of 20% on the net chargeable gain of a person accruing or arising in Guyana or elsewhere, regardless of whether it is received in Guyana, on the change of ownership of property, subject to certain exceptions. In general, if capital allowances were taken with respect to an asset being disposed, the capital gain is the amount by which the value of the consideration received exceeds the cost of or acquisition value of the asset, less any capital allowances taken with respect to the property. In certain sectors, a disposal may give rise to a balancing adjustment, which may be subject to corporation tax and may affect the amount of applicable capital gains tax.

Capital losses may be carried forward for 24 years.

If an exemption from property tax is granted, a concomitant exemption is granted for capital gains tax with limited exceptions.

Short-term capital gains from the disposal of assets within 12 months of their acquisition and from the disposal of assets 25 or more years after their acquisition are exempt from capital gains tax. However, short-term capital gains are subject to corporation tax.

Administration. The tax year is the calendar year. Tax is calculated on the profits for the accounting period that ends during the tax year. For each quarter, a company is required to pay a corporation tax or minimum tax installment, whichever is lesser. The quarterly payments must be made by 15 March, 15 June, 15 September and 15 December in each tax year. Quarterly payments of corporation tax are determined based on the taxable income for the preceding accounting period. Minimum tax installments are based on the actual gross sales or receipts of the company for the relevant quarter. The minimum tax calculation excludes income or receipts that are exempt for corporation tax purposes, such as dividends received from Guyana resident companies.

Annual tax returns must be filed by 30 April in the year following the tax year, and any balance of tax due is payable at that time. In general, audited financial statements must be filed with the annual tax returns. The Commissioner-General may allow a company to file its tax returns with draft financial statements. However, the audited accounts must be filed on or before 31 December of the year in which the returns are due to be recognized as being filed on a timely basis.

Failure to file a tax return attracts a penalty of 10% of the amount of tax assessed, while failure to file a nil tax return or a tax return that discloses a loss attracts a penalty of GYD50,000. If the balance of tax due is not paid by the 30 April deadline, a penalty is payable equal to 2% of the unpaid tax for each month, or part thereof, that tax remains outstanding. Interest is also payable at a rate of 18% per year.

Dividends. Dividends received from nonresident companies are subject to tax. Dividends received by resident companies from other resident companies are exempt from tax.

Dividends paid to nonresident companies and nonresident individuals are generally subject to a withholding tax of 20%.

Double tax relief. Bilateral agreements have been entered into between the Government of Guyana and the governments of certain other countries to provide relief from double taxation (see Section F). Relief from double taxation is achieved by one of the following two methods:

- Exemption or a reduced rate on certain classes of income in one of the two countries concerned.
- Credit if the income is fully or partially taxed in the two countries. The tax in the country in which the income arises is allowed as a credit against the tax on the same income in the country where the recipient is resident. The credit is the lower of the Guyana tax or the foreign tax on the same income.

C. Determination of taxable income

General. The assessment is based on financial statements prepared according to international accounting standards, subject to certain adjustments.

To be deductible, expenses must be incurred wholly and exclusively in the production of income. Deductions for head-office expenses paid by a Guyana branch to a nonresident head office or to a nonresident associate or subsidiary company, or by a Guyana

resident company to a nonresident parent or associate company, may not exceed 1% of the sales or gross income of the payer.

Inventories. Inventory may be valued at cost or market value, whichever is lower. A method of stock valuation, once properly adopted, is binding until permission to change is obtained from the GRA.

Bad debts. Trading debts that have become bad and that are proven to be so to the satisfaction of the GRA may be deducted in determining taxable income. In addition, doubtful debts are deductible to the extent that they have become bad during the year. If these debts are subsequently collected, they are considered to be income subject to tax in the year of recovery.

Tax depreciation (capital allowances). Depreciation is calculated on the depreciated value of fixed assets at the beginning of each accounting year.

Capital expenditure incurred on plant, machinery or equipment or any building housing machinery owned by the taxpayer or incurred with respect to machinery and equipment that the taxpayer has the full burden of wear and tear qualify for capital allowances under the declining-balance method or straight-line method. However, if the latter method is used, a maximum of 90% of the cost of the asset may be depreciated.

The following are the applicable rates for assets acquired on or after 1 January 1992.

Asset	Rate (%)
Aircraft	33.3
Boats	10
Buildings (housing machinery)	5 (on cost)
Buildings used for providing services and warehousing	2 (on cost)
Furniture and fittings	10
Motor vehicles	20
Office equipment	
Electronic	50
Other	15
Plant and machinery	20

For new equipment for industries harnessing alternate energy through wind, solar, water and biomass technologies, capital expenses are written off within two years.

Separate capital allowances are available with respect to the petroleum and mining sectors. Capital allowances may be claimed on petroleum capital expenditure in the petroleum sector at a rate of 20% per year on a straight-line basis. In addition, in the diamond and gold mining sector, capital allowances may be claimed on exploration and development expenditure at a rate of 20% per year on a straight-line basis. Other sectors are also granted specific initial and annual allowances.

Relief for tax losses. Losses carried forward can be written off to the extent of half the taxable income for the tax year. The unrelied balance can be carried forward indefinitely. No loss carryback is allowed.

In the petroleum sector, corporation tax losses may be written off to the full extent of the taxable income for the tax year. Similarly, the restriction on the ability to set off the full extent of losses against taxable income does not apply to commercial companies liable to pay minimum tax.

Groups of companies. No provisions for group relief exist.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax (VAT); applies to most products supplied and services rendered in Guyana; imports of goods are also subject to VAT; certain imports of services are also subject to VAT under the VAT reverse-charge mechanism; companies and other businesses are required to register for VAT if their turnover exceeds a stipulated threshold as specified in the Value-Added Tax Act (currently GYD15,000,000 [approximately USD75,000] a year)	
Standard rate	14
Certain items, including specified exports	0
Property tax; payable on the net property of a company in excess of GYD40 million; the tax is payable on the amount by which the aggregate value of all movable and immovable property of a person exceeds the aggregate value of all debts owed	
On the first GYD40 million of net property	Nil
For every dollar of the next GYD20 million of net property	0.50
For every dollar of the remainder of net property	0.75
Premium tax; payable on insurance premiums (other than for long-term insurance) paid to a foreign company	
A foreign company that has not established a place of business in Guyana	10
A foreign company that has established a place of business in Guyana	6

E. Miscellaneous matters

Foreign-exchange controls. The Guyana currency is the Guyana dollar (GYD).

Guyana has a floating exchange-rate regime. Profits may be repatriated without the approval of the Central Bank of Guyana. However, certain restrictions are imposed with respect to the settlement of local transactions in foreign currency and the borrowing of funds in a foreign currency. Permission is also required to establish a foreign-currency account.

Debt-to-equity rules. In general, no thin-capitalization rules are imposed in Guyana. However, if a local company pays or accrues interest on securities issued to a nonresident company and if the local company is a subsidiary of the nonresident company or a fellow subsidiary with respect to the nonresident company, the

interest is treated as a distribution and may not be claimed as a deduction against the income of the local company.

F. Treaty withholding tax rates

The following table lists the withholding tax rates under Guyana's tax treaties. If the treaty rates are higher than the rates prescribed in the domestic law, the lower domestic rates apply.

	Dividends	Interest	Royalties
	%	%	%
Canada	15	25	10
Caribbean Community and Common Market (a)			
Antigua and Barbuda	0	15	15
Barbados	0	15	15
Belize	0	15	15
Dominica	0	15	15
Grenada	0	15	15
Jamaica	0	15	15
St. Kitts and Nevis	0	15	15
St. Lucia	0	15	15
St. Vincent and the Grenadines	0	15	15
Trinidad and Tobago	0	15	15
United Kingdom	10/15 (b)	15	10
Non-treaty jurisdictions	20	20	20

(a) The listed countries have ratified the Caribbean Community and Common Market (CARICOM) double tax treaty.

(b) The lower rate applies if the recipient and beneficial owner of the dividends is a company that owns 10% or more of the voting power of the distributing company.

Carryforward	3 (d)

- (a) An alternate minimum income tax and asset tax are also imposed (see Section B). A Social Contribution Tax is imposed at a rate of 5% on companies with net income exceeding HNL1 million. Domiciled entities that have reported operating losses in two consecutive or alternate tax periods that are still open for examination are also subject to advance income tax (AIT) payments that are computed at a rate of 1% of gross income equal to or greater than HNL100 million. The AIT may be credited against the annual corporate income tax, asset tax or the Social Contribution Tax. Branches of foreign companies dedicated to air, land and maritime transport pay the corporate income tax rate of 25% on an amount of net taxable income equal to 3% of their Honduran-source gross income.
- (b) Withholding taxes are imposed on payments to nonresident companies and individuals.
- (c) This withholding tax applies to payments for films and video tapes for movies, television, video clubs and cable television.
- (d) Only companies engaged in agriculture, manufacturing, mining and tourism may carry forward net operating losses.

B. Taxes on corporate income and gains

Corporate income tax. Honduran-resident companies (that is, those incorporated in Honduras) are no longer taxed on their worldwide income. Effective from 1 January 2017, only their Honduran-source income is subject to Honduran tax. Nonresident companies are subject to income tax only on income derived from Honduran sources.

Corporate income tax rates. Companies are subject to corporate income tax at a rate of 25% on their net income.

A Social Contribution Tax of 5% applies to companies with net income exceeding HNL1 million.

A 1% income tax installment applies to taxpayers that meet the following conditions:

- During open tax periods, they have reported operating losses in two consecutive or alternate tax periods.
- In the prior tax period, they derived gross income equal to or greater than HNL100 million.

The installment equals 1% of the gross income reported.

The income tax installment is a tax credit that may be applied against income tax, asset tax or the Social Contribution Tax on the filing of the year-end tax return.

The following taxpayers are not subject to the income tax installment:

- Individuals or entities in the preoperative phase, up to a maximum of five years.
- Companies and individuals that incur losses resulting from an act of God or force majeure. This loss needs to be certified by an audit firm registered with the respective accounting association, notwithstanding a subsequent examination by the tax authorities.
- Companies engaged in agriculture, manufacturing, mining and tourism and individuals authorized by the tax authorities to carry forward losses in accordance to Section 20 of the Honduran Income Tax Law (HN ITL).
- Companies and individuals that calculated and paid tax in the prior tax period and are subject to income tax installments in accordance to Section 34 of the HN ITL.

- Companies and individuals that prove through a tax audit report, carried out by an audit firm registered with the respective accounting association, that the tax loss is real, subject to verification from the tax authorities.
- Companies and individuals established under Section 7 of the HN ITL and tax-exempt by law or Special Legislative Decrees.

Companies operating under the following special regimes are exempt from income tax, sales tax, customs duties and certain municipal taxes:

- Free Trade Zone (Zonas Libres, or ZOLI)
- Temporary Import Regime (Régimen de Importación Temporal, or RIT)
- Free Tourist Zone (Zona Libre Turística, or ZOLITUR)
- Call Centers

Alternative minimum income tax. An alternative minimum income tax (AMT) applies to resident individuals and corporations.

For 2020 and future years, the AMT applies to annual gross income greater than HNL1 billion at a rate of 1% (0.5% for taxpayers in special sectors).

The minimum income tax rate is reduced to 0.75% of gross income for individuals or legal entities producing or selling the following products or services:

- Cement production and distribution
- Public utility services provided by state-owned companies
- Products and medicines for human use (at the importation and production levels)
- Bakery-related products
- Production, distribution or marketing of steel products for construction purposes, excluding the sale of scrap metal or the activity of the mining industry
- Production, marketing or export of coffee

Asset tax. An asset tax is assessed based on net assets (as defined in the law) reported in the company's balance sheet. Specific rules apply to compute the tax for financial institutions, insurance companies and holding companies. The asset tax rate is 1%. Income tax may be credited against asset tax. If the income tax equals or exceeds the asset tax for the tax year, no asset tax is due. If the income tax is less than the asset tax, the difference is payable as asset tax. In such circumstances, the asset tax represents a minimum tax for the year.

Financial transaction tax. A financial transaction tax applies to local and foreign currency operations carried on in either national or foreign currency within the institutions of the national banking system, including the following:

- National Bank for Agricultural Development (Banco Nacional de Desarrollo Agrícola, or BANADESA)
- Financial entities
- Representation offices that are supervised by the National Commission on Banking and Insurance (Comisión Nacional de Bancos y Seguros, or CNBS)

The financial transaction tax applies to the following transactions:

- Debits (withdrawals) from at-sight deposits and checking accounts, carried out by the institutions referred to in the preceding paragraph (the financial institutions).
- Debits (withdrawals) of deposits from saving accounts, carried out by the financial institutions.
- Loan operations granted by the financial institutions that need to be absorbed by the lender. The contribution under the financial transaction tax applies only to disbursements and not to payments received by the financial institution. The CNBS must ensure that this special contribution is not transferred to the borrower.
- Issuance of cashier's checks, certified checks, traveler's checks and other similar existing financial instruments by financial institutions, or financial instruments to be created in the future, if they are issued without using the accounts mentioned in the first two bullets above.
- Payments or transfers in favor of third parties of money recovered or collected in the name of such parties that are carried out by the financial institutions without using the accounts mentioned in the first two bullets above.
- Transfers or money remittances abroad or locally, carried out through the financial institutions, without using the accounts mentioned in the first two bullets above.
- Credit card annual membership renewals, for the principal cardholder only.

The following are the amounts of the contributions required under the financial transaction tax for the first, second, fourth, fifth and sixth categories of transactions listed above:

- First, second, fifth and sixth categories listed above: HNL2 per thousand or fraction of a thousand
- Fourth category: HNL1.50 per thousand or fraction of a thousand

The contributions for the transactions in the seventh (last) category above are provided in the following table.

Credit line		Contribution HNL
Exceeding HNL	Not exceeding HNL	
40,000	50,000	500
50,000	100,000	600
100,000	200,000	700
200,000	500,000	800
500,000	1,000,000	900
1,000,000	—	1,000

The law does not establish the contribution for the third category.

Capital gains. Capital gains are subject to tax at a rate of 10%.

A gain generated from any type of transfer of assets or rights by a person whose ordinary trade does not involve commercializing such assets or rights is considered a capital gain.

However, if the asset being transferred is part of the ordinary course of business of the transferor (for example, the transferor ordinarily or habitually engages in the trade or business of selling shares), the gains are categorized as ordinary income subject to corporate income tax at a rate of 25%.

Capital losses are deductible only if derived from the sale of depreciable assets or from the sale of non-depreciable assets sold in the ordinary course of a trade or business.

The capital gain must be reported and the corresponding tax paid for each transaction within 10 working days following the date on which the payment is received by the seller. An annual return must also be filed by 30 April of each year.

For the transfer of immovable property or rights and securities carried out with a nonresident, the buyer must withhold 4% of the transfer value. The capital gains tax is deemed to constitute a credit to such tax for the seller. The tax withheld must be reported in a filing and paid by the buyer within 10 calendar days following the date of the transaction.

Administration. The regular statutory tax year runs from 1 January through 31 December. However, taxpayers may elect a different tax year by requesting an authorization from the tax authorities. Companies with a regular statutory tax year must file an annual income tax return and pay any corresponding tax due within 120 days after the end of the tax year. For companies with a different tax year, the filing and payment deadline is 90 days after the end of their tax year. Mandatory advance tax payments are payable each quarter based on the income tax liability for the preceding tax year.

Dividends. A 10% withholding tax is imposed on dividends.

Foreign tax relief. Honduras does not grant any relief for foreign taxes paid.

C. Determination of taxable income

General. Net taxable income is computed in accordance with generally accepted accounting and commercial principles, subject to certain adjustments required by the Honduran income tax law.

Inventories. Inventories are valued using the first-in, first-out (FIFO), last-in, first-out (LIFO) or weighted average cost methods.

Provisions. Provisions for contingent liabilities, such as severance pay, are not deductible for tax purposes. However, payments of such liabilities are deductible expenses.

Tax depreciation. Depreciation may be computed using the straight-line method. Companies may obtain authorization from the tax authorities to use other depreciation methods. However, after a company selects a depreciation method, the method must be applied consistently thereafter. The following are the applicable straight-line method rates for some common assets.

Asset	Rate (%)
Buildings	2.5 to 10
Plant and machinery	10
Vehicles	10 to 33
Furniture and office equipment	10
Tools	25

Relief for losses. Companies engaged in agriculture, manufacturing, mining and tourism may carry forward net operating losses for three years. However, certain restrictions apply. Net operating losses may not be carried back.

Groups of companies. Honduran law does not allow the filing of consolidated income tax returns or provide any other tax relief to consolidated groups of companies.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Sales tax	
General rate	15
Special Tax Rate for alcoholic beverages, cigarettes and business class tickets for air travel	18
Customs duties	1 to 20
Payroll taxes; paid by employers; average rate	8.5
Municipal taxes	
Property tax; imposed on companies owning real estate	Various
Industry trade and service municipal tax; imposed monthly on income derived from the operations of companies; rates vary according to the annual production volume, income or sales	
Up to HNL500,000	0.030
From HNL500,000 to HNL10,000,000	0.040
From HNL10,000,000 to HNL20,000,000	0.030
From HNL20,000,000 to HNL30,000,000	0.020
Over HNL30,000,000	0.015

E. Foreign-exchange controls

The Honduran currency is the lempira (HNL). As of 25 January 2022, the exchange rate for the lempira is HNL24.64 = USD1.

No restrictions are imposed on foreign-trade operations or foreign currency transactions.

F. Tax treaties

Honduras has not entered into any income tax treaties with other countries.

This chapter relates to the tax jurisdiction of the Hong Kong Special Administrative Region (SAR) of China.

A. At a glance

Corporate Income Tax Rate (%)	16.5 (a)
Capital Gains Tax Rate (%)	0
Branch Tax Rate (%)	16.5 (a)
Withholding Tax (%)	
Dividends	0
Interest	0

Royalties from Patents, Know-how, etc.	
Paid to Corporations	4.95/16.5 (b)
Paid to Individuals	4.5/15 (b)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforwards	Unlimited

- (a) See Section B for the two-tier profits tax rates regime.
- (b) If the nonresident corporation is eligible for the two-tier profits tax rates regime referred to in Section B, the withholding tax rate is 2.475% (for the first HKD2 million of its royalty income) and 4.95% (for the remainder of its royalty income). However, if a recipient of payments is an associate of the payer and if the intellectual property rights were previously owned by a Hong Kong taxpayer, a withholding tax rate of 16.5% applies (subject to the application of the two-tier profits tax rates regime referred to in Section B). If the nonresident is an individual eligible for the two-tier profits tax rates regime referred to in Section B, the withholding tax rate is 2.25% (for the first HKD2 million of his or her royalty income) and 4.5% (for the remainder of his or her royalty income). However, if a recipient of payments is an associate of the payer and if the intellectual property rights were previously owned by a Hong Kong taxpayer, a withholding tax rate of 15% applies (subject to the application of the two-tier profits tax rates regime referred to in Section B).

B. Taxes on corporate income and gains

Profits tax. Companies carrying on a trade, profession or business in Hong Kong are subject to profits tax on profits arising in or derived from Hong Kong. However, certain royalties received from a Hong Kong payer by a foreign entity that does not otherwise carry on a trade, profession or business in Hong Kong are liable to a withholding tax in Hong Kong (see Section A).

The basis of taxation in Hong Kong is territorial. The determination of the source of profits or income can be extremely complicated and often involves uncertainty. It requires case-by-case consideration. To obtain certainty concerning this and other tax issues, taxpayers may apply to the Inland Revenue for advance rulings on the tax implications of a transaction, subject to payment of certain fees and compliance with other procedures.

Rates of profits tax. The normal profits tax rates applicable to corporations and non-corporate entities are 16.5% and 15%, respectively. If a taxpayer is eligible for the two-tier profits tax rates regime, profits tax rates for the first HKD2 million of profits are reduced by 50% to 8.25% or 7.5%. The remainder of the profits continue to be taxed at the normal profits tax rates of 16.5% or 15%.

However, each group of “connected entities” can only elect one entity in the group to benefit from the two-tier regime for a given fiscal year. In general, two entities are regarded as “connected entities” if one entity has control over the other or both are under the control of a third entity. “Control” generally refers to one entity holding directly or indirectly more than 50% of the issued share capital, voting rights, capital or profits of another entity.

Tax incentives. The following tax incentives and enhanced deductions are available in Hong Kong:

- Interest income and trading profits derived by corporations from qualifying debt instruments (QDIs) issued prior to 1 April 2018 with a maturity period of less than seven years are taxed at a rate of 8.25% (50% of the normal profits tax rate), while

interest income and trading profits derived from those QDIs with a maturity period of seven years or longer are exempt from tax. Interest income and trading profits derived from QDIs issued on or after 1 April 2018 of any duration are exempt from tax.

- Income derived from the business of reinsurance by professional reinsurers that have made an irrevocable election is taxed at a rate of 8.25%.
- Income derived from the business of insurance by authorized captive insurers that have made an irrevocable election is taxed at a rate of 8.25%.
- Profits derived by authorized and certain bona fide widely held mutual funds, collective-investment schemes and unit trusts are exempt from tax.
- Profits derived from qualifying corporate treasury activities by qualifying corporate treasury centers that have made an irrevocable election are taxed at a rate of 8.25%.
- Profits of qualifying aircraft lessors and qualifying aircraft leasing managers that have made an irrevocable election are taxed at the concessionary tax rate of 8.25%. In addition, instead of tax depreciation allowances, the deemed taxable amount with respect to income derived from the leasing of aircraft to an aircraft operator by a qualifying aircraft lessor equals 20% of the tax base of the lessor concerned (that is, their gross rentals less deductible expenses, but excluding tax depreciation allowances).
- Profits derived from a qualifying ship leasing activity, regarding both an operating lease and a finance lease, including a sale and leaseback arrangement, derived by a qualifying ship lessor that has made an irrevocable election, are taxed at 0%. The tax base of such a ship owner-cum-lessor (a taxpayer that is both an owner and lessor of the ship) is 20% of its gross rentals, less deductible expenses, excluding book depreciation charges or tax depreciation allowances pertaining to a ship.
- Profits derived from a qualifying ship leasing management activity by a qualifying ship leasing manager that has made an irrevocable election and received from a non-associated qualifying ship lessor are taxed at the concessionary tax rate of 8.25%. The tax rate is reduced to 0% if the qualifying ship lessor is an associated corporation.
- Profits derived from general insurance, other than profits from certain local demand-driven insurance business, and general reinsurance business, by a specified insurer that has made an irrevocable election are taxed at a rate of 8.25%. In addition, profits of a licensed insurance broker that has made an irrevocable election and relate to a contract of insurance effected by a professional reinsurer or a specified insurer in the course of the insurer carrying on a business that is eligible for the concessionary tax rate are taxed at a rate of 8.25%.
- Eligible carried interest received by, or accrued to, a qualifying person from the provision of investment management services in Hong Kong to a qualifying payer is, subject to certain conditions, taxed at 0%. Such conditions include the eligible carried interest arising from profits earned from in-scope transactions of the qualifying payer and the qualifying payer meeting the substantial activities requirements in Hong Kong.

Qualifying research and development (R&D) expenditure incurred on or after 1 April 2018 is eligible for enhanced tax deductions; the first HKD2 million is eligible for a 300% deduction and the remainder, not subject to any cap, is deductible at 200%. R&D expenditure that does not qualify for the enhanced deductions is eligible for the normal 100% tax deduction subject to fulfillment of the specified conditions.

Tax exemptions for all funds operating in Hong Kong. Subject to certain specified conditions, an entity that meets the definition of a “fund” as being a collective-investment scheme, regardless of its size, type and place of residence, is eligible for a tax exemption for its profits generated from transactions in qualifying assets and transactions incidental to such transactions.

Related anti-avoidance measures provide that, under certain circumstances, a resident investor in an exempt fund is deemed to derive a portion of the exempt income of the fund and is subject to tax in Hong Kong on such income, regardless of whether the fund makes an actual distribution.

Tax exemption for nonresident funds. Nonresident persons, not qualifying as a “fund,” as defined, and not eligible for the above tax exemption, are nonetheless exempt from tax in Hong Kong if their activities in Hong Kong are restricted to certain specified transactions and to transactions incidental to such transactions.

An entity is regarded as a nonresident if its place of central management and control is located outside Hong Kong. Specified transactions are broadly defined to cover most types of transactions typically carried out by investment funds, such as transactions involving securities (for unlisted securities, the exemption is subject to certain specified conditions), future and currency contracts, commodities and the making of deposits other than by money-lending businesses.

Anti-avoidance measures provide that under certain circumstances, a resident investor in an exempt nonresident fund is deemed to derive a portion of the exempt income of the fund and is subject to tax in Hong Kong on such income, regardless of whether the fund makes an actual distribution.

Capital gains. Capital gains are not taxed, and capital losses are not deductible for profits tax purposes.

Administration. A fiscal year runs from 1 April to 31 March. If an accounting period does not coincide with a fiscal year, the profit for the accounting period is deemed to be the profit for the fiscal year in which the period ends. Special rules govern commencements and cessations of businesses and deal with accounting periods of shorter or longer duration than 12 months.

Companies generally make two payments of profits tax during a fiscal year. The first payment consists of 75% of the provisional tax for the current year plus 100% of the final payment for the preceding year. The second payment equals 25% of the provisional tax for the current year. The timing of payments is determined by assessment notices rather than by set dates, generally during November to April of the fiscal year.

Dividends. Hong Kong does not impose withholding tax on dividends paid to domestic or foreign shareholders. In addition, dividends received from foreign companies are not taxable in Hong Kong.

Foreign tax relief. In certain circumstances, a deduction is allowed for foreign taxes paid. A foreign tax credit is available under the full comprehensive double tax treaties entered into between Hong Kong and other jurisdictions. However, the amount of the credit may not exceed the amount of tax payable under the Hong Kong tax laws with respect to the relevant item of income. For details concerning Hong Kong's double tax treaties, see Section E.

C. Determination of assessable profits

General. The assessment is based on accounts prepared on generally accepted accounting principles, subject to certain statutory tax adjustments.

In general, interest income earned on deposits with financial institutions is exempt from profits tax. However, this exemption does not apply if the recipient of the interest is a financial institution or if the deposits are used as security for borrowings and the interest expense with respect to the borrowings is claimed as a tax deduction.

Expenses must be incurred in the production of chargeable profits. Certain specified expenses are not allowed, including domestic and private expenses, capital expenditures, the cost of improvements, sums recoverable under insurance and tax payments. The deductibility of interest is subject to restrictions (see Section D).

Inventories. Stock is normally valued at the lower of cost and net realizable value. Cost must be determined using the first-in, first-out (FIFO) method or an average cost, standard cost or adjusted selling price basis. The last-in, first-out (LIFO) method is not acceptable. However, this may not apply to shares and securities held for trading purposes.

Capital allowances

Industrial buildings. An initial allowance of 20% is granted on new industrial buildings in the year in which the expenditure is incurred, and annual depreciation allowances are 4% of qualifying capital expenditure beginning in the year the building is first put into use. No initial allowance is granted on the purchase of used buildings, but annual depreciation allowances may be available. Subject to certain exceptions, buildings used for the purposes of a qualifying trade are industrial buildings.

Commercial buildings. An annual allowance (4% of qualifying capital expenditure each year) is available on commercial buildings. Buildings that do not qualify as industrial buildings are commercial buildings. Refurbishment costs for premises, other than those used as domestic dwellings, may be deducted in equal amounts over a five-year period.

Prescribed plant and machinery. Subject to satisfying certain conditions, companies may immediately write off 100% of expenditure on manufacturing plant and machinery and on computer software and hardware.

Environmental protection facilities. Subject to satisfying certain conditions, capital expenditure incurred on eligible environmental protection installation forming part of a building or structure, environmental protection machinery and environmentally friendly vehicles qualifies for a 100% write-off in the year in which the expenditure is incurred.

Other plant and machinery, and office equipment. An initial allowance of 60% is granted for non-manufacturing plant and machinery, and office equipment in the year of purchase. An annual allowance of 10%, 20% or 30% under the declining-balance method is available on the balance of the expenditure beginning in the year the asset is first used in the business. Consequently, the total allowances (initial and annual) in the first year can be 64%, 68% or 72%.

Motor vehicles. An initial allowance of 60% is granted for motor vehicles in the year of purchase. An annual allowance of 30% under the pooling system (declining-balance method) is allowed on the balance of the expenditure beginning in the year the asset is first used in the business.

Intellectual property rights. Subject to certain anti-avoidance provisions, capital expenditure incurred on the purchase of patents, industrial know-how, registered trademarks, copyrights, registered designs, rights in layout design (topography) of integrated circuits, plant varieties and performances qualifies for tax amortization over a time period ranging from one to five years.

Recapture. Depreciation allowances are generally subject to recapture if the proceeds from the sale of a depreciable asset exceed its tax-depreciated value. The recapture rule also applies to prescribed plant and machinery (manufacturing plant and machinery and computer hardware and software) and environmental protection installation and machinery, and environmentally friendly vehicles that were previously written off in full. Consequently, in the year of disposal, the sales proceeds from the abovementioned assets generally are included in chargeable profits, up to the original costs of the assets. Allowances for commercial and industrial buildings may be recaptured, up to their original costs. Assets depreciable under the pooling system (declining-balance method) are allocated to one of three pools according to their depreciation rates, which are 10%, 20% or 30%. Proceeds from the sale of an asset in a pool (up to the cost of the asset) are deducted from the pool balance. If a negative balance results within the pool, a balancing charge is added to taxable profits.

Relief for business losses. Losses incurred in a year can be carried forward indefinitely and set off against the profits of the company in subsequent years. No carryback is possible. Certain rules prevent trafficking in loss companies. In addition, specific rules govern the offset of normal business losses against concessionary trading receipts (that is, those taxed at concessionary rates instead of the full normal rates) and vice versa.

Groups of companies. Consolidated filing is not permitted. Hong Kong does not provide group relief for tax losses.

D. Miscellaneous matters

Mergers and reorganizations. When considering an acquisition in Hong Kong, a company must first decide whether to acquire the shares or the assets of the target company. Unlike some other jurisdictions, the Hong Kong tax code does not allow a step-up in tax basis of the underlying assets if shares are acquired. The target company retains the same tax basis for its assets, regardless of the price paid for the shares.

Effective from 3 March 2014, the new Companies Ordinance (Cap 622) introduced measures to facilitate an amalgamation of two or more wholly owned companies within a group without the need to seek approval from the court. A new law was enacted in June 2021 to set out the specific tax treatment applicable to a qualifying amalgamation (that is, an amalgamation undertaken pursuant to the Companies Ordinance). Under the new law, on election by the taxpayer, the transfer of assets from an amalgamating company to the amalgamated company (that is, the surviving entity) is generally treated as being made at book value and, therefore, tax neutral. The amalgamated company is entitled to continue to claim tax deductions or allowances with respect to the unrelieved tax costs of the assets transferred or succeeded from the amalgamating company. In addition, the new law also specifies the restrictive conditions under which pre-amalgamation tax losses sustained by the amalgamating and amalgamated companies can be utilized post-amalgamation.

Anti-avoidance legislation. Transactions that are artificial, fictitious or predominantly tax-driven may be disregarded under general anti-avoidance tax measures. In addition, specific measures deny the carryforward of tax losses if the dominant reason for a change in shareholding of a corporation is the intention to use the tax losses. Other specific anti-avoidance measures include those designed to counteract certain leverage and cross-border leasing, non-arm's-length transactions between a Hong Kong resident company and its foreign affiliates and the use of personal service companies to disguise employer-employee relationships.

Transfer pricing. Under the specific transfer-pricing legislation (TP law), transactions between connected persons (including those between different parts of the same enterprise located in different jurisdictions) are required to be priced and conducted on an arm's-length basis. Certain specified domestic transactions that do not result in any actual tax difference or meet the non-business loan condition are specifically exempt from the TP law, provided that certain prescribed conditions are met.

The transfer-pricing guidelines of the Organisation for Economic Co-operation and Development (OECD) provide guidance on how the TP law should be interpreted.

TP documentation requirements. The TP law also adopts the three-tier documentation approach as recommended by the OECD for related-party transactions, which is comprised of the following:

- Local File
- Master File
- Country-by-Country (CbC) Reporting

A Hong Kong entity of a group is required to prepare and retain the entity's Local File and a Master File of its group with respect to an accounting period unless either of the following circumstances exists:

- Any two of the following conditions are satisfied:
 - The total amount of the entity's revenue for the accounting period does not exceed HKD400 million.
 - The total value of the entity's assets at the end of the accounting period does not exceed HKD300 million.
 - The average number of the entity's employees during the accounting period does not exceed 100.
- All the following conditions are satisfied with respect to the following categories of transactions between connected persons (excluding specified domestic transactions) undertaken by the entity in an accounting period:
 - The total amount of transfers of properties (excluding financial assets and intangibles) does not exceed HKD220 million.
 - The total amount of transactions with respect to financial assets does not exceed HKD110 million.
 - The total amount of transfers of intangibles does not exceed HKD110 million.
 - The total amount of other transactions does not exceed HKD44 million.

If all of the conditions stated in the second bullet above are not satisfied, the entity is required to prepare a Local File with respect to the particular category or categories of transactions that exceeded the threshold(s) specified above. In addition, the entity is not exempt from preparing the Master File.

Unless exempted, effective from the accounting period beginning on or after 1 April 2018, the Master File and Local File must be prepared within nine months after the end of the relevant accounting period. Although the Master File and Local File are not required to be submitted together with the annual tax return, they must be produced for examination on request and retained for a period of not less than seven years after the end of the accounting period.

Country-by-Country Reporting. The CbC Report filing threshold is set in accordance with the OECD recommendation; that is, consolidated turnover exceeding EUR750 million (HKD6.8 billion) in the preceding year.

The primary obligation for CbC Report filing falls on the Ultimate Parent Entities (UPEs) of multinational groups that are resident in Hong Kong. A CbC Report must be prepared for each accounting period beginning on or after 1 January 2018. The information to be included in the CbC Report is in line with the OECD's requirements. A Hong Kong enterprise that is a constituent entity of a CbC Reporting group must file a notification with the IRD within three months after the end of the accounting period to which its UPE's CbC Report relates. This notification must contain sufficient information for Hong Kong to obtain the CbC Report directly from the jurisdiction in which the Hong Kong taxpayer's UPE or Surrogate Parent Entity has filed the CbC Report under the automatic exchange of information mechanisms for the exchange of CbC

Reports. The deadline for filing a CbC Report is 12 months after the end of the relevant accounting period or the date specified in the assessor's notice, whichever is earlier.

Foreign-exchange controls. Hong Kong does not impose foreign-exchange controls.

Islamic bonds. A special legislative framework provides comparable tax treatment in terms of stamp duty, profits tax and property tax for some common types of Islamic bonds (sukuk), vis-à-vis conventional bonds. However, no special tax incentives are conferred on Islamic bonds.

Interest expense. In an attempt to combat avoidance, restrictions are placed on the deductibility of interest expense. In general, subject to certain specific anti-avoidance rules, interest on monies borrowed is deductible for tax purposes if it is incurred in the production of chargeable profits in Hong Kong and if one of the following additional conditions is satisfied:

- The recipient is taxable in Hong Kong on the interest.
- The interest is paid to a recognized financial institution in Hong Kong or overseas.
- The interest is paid with respect to debt instruments that are listed or marketed in Hong Kong or in a recognized overseas market.
- The interest is paid with respect to money that is borrowed from an unrelated person and that is wholly used to finance capital expenditures on plant and machinery qualifying for capital allowances or the purchase of trading stock.
- The interest is paid by a corporation in the ordinary course of its intragroup financing business to its overseas associated corporations, and such overseas corporations are subject to tax overseas with respect to the interest received at a rate of not less than the applicable reference rate (that is, 16.5% or 8.25% as the case may be).

Subject to certain provisions, distributions made with respect to the following are treated as interest expenses and are tax-deductible:

- Regulatory capital securities (covering Additional Tier 1 instruments and Tier 2 instruments) issued by financial institutions in compliance with the relevant banking capital adequacy requirements
- Loss-absorbing capacity (LAC) instruments, other than common equity, issued by financial institutions and their relevant group companies to meet the relevant minimum LAC requirements

Reversion of sovereignty to China. Since 1 July 1997, Hong Kong has been a Special Administrative Region (SAR) of China under Article 31 of the constitution of China. However, as an SAR, Hong Kong has a tax system that is based on common law and distinct from the system used in Mainland China.

In addition, on its own, Hong Kong, using the name "Hong Kong, China," may maintain and develop relations, and may conclude and implement agreements, with foreign states and regions and relevant international organizations in such fields as economics,

trade, finance, shipping, communications, tourism, culture and sports.

E. Tax treaties

Both the Hong Kong and Mainland China tax authorities take the view that Mainland China's tax treaties with other jurisdictions do not cover Hong Kong.

For the avoidance of double taxation on shipping income, Hong Kong has entered into agreements with Denmark, Germany, Norway, Singapore, Sri Lanka and the United States. These agreements generally provide for tax exemption in one territory for profits and capital gains derived by an enterprise of the other territory in the first-mentioned territory with respect to the operation of ships in international traffic. However, under the agreement between Hong Kong and Sri Lanka, 50% of the profits derived from the operation of ships in international traffic may be taxed in the source jurisdiction. Furthermore, in October 2020, the United States announced the termination of the shipping income agreement with Hong Kong with effect from 1 January 2021. Apart from the above agreements, reciprocal exemption provisions with the tax authorities of Chile, Korea (South) and New Zealand have also been confirmed.

Hong Kong has signed double tax agreements relating to airline profits with several jurisdictions, including Bangladesh, Croatia, Denmark, Estonia, Ethiopia, Fiji, Finland, Germany, Iceland, Israel, Jordan, Kenya, Laos, the Macau SAR, Maldives, Mauritius, Norway, Seychelles, Singapore, Sri Lanka and Sweden. Under these agreements, international transport income of Hong Kong airlines is exempt from tax in these signatory jurisdictions. However, international transport income of Hong Kong airlines that is exempt from tax overseas under these agreements or under relevant full comprehensive double tax treaties is taxed in Hong Kong.

Hong Kong has also entered into full comprehensive double tax treaties modeled on the conventional tax treaty adopted by the OECD, with the jurisdictions listed in the table below. The table shows the withholding tax rates for dividends, interest and royalties paid from Hong Kong to residents of the treaty jurisdictions. The rates shown in the table are the lower of the treaty rates and the applicable rates under Hong Kong domestic law.

- (a) The withholding rates in Hong Kong applicable to individuals and corporations are 4.5% and 4.95%, respectively (subject to the application of the two-tier profits tax rates regime referred to in Section B above). These rates are lower than those specified in the relevant tax treaties, and consequently, the Hong Kong domestic rates apply.
- (b) The 0% rate applies if the beneficial owner of the royalties is a company (other than a partnership). In all other cases, the 3% rate applies.
- (c) The 3% rate applies to payments for the use of, or the right to use, aircraft. The 4.95% rate applies in all other cases.

Branch Tax Rate (%)	9 (a)(b)
Withholding Tax (%)	
Dividends	
Paid to Companies	0
Paid to Individuals	15
Interest	
Paid to Companies	0
Paid to Individuals	15 (c)
Royalties	0
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	5 (d)

- (a) The 9% rate applies to tax years beginning on or after 1 January 2017. All taxpayers must pay tax on the alternative minimum tax base if this base exceeds taxable income calculated under the general rules (for further details, see Section B).
- (b) Permanent establishments of foreign companies are subject to special rules for the computation of the tax base (see Section B).
- (c) See Section B.
- (d) Losses incurred before the 2015 tax year can be carried forward until 2030. Losses incurred in the 2015 tax year or subsequent years can be carried forward for five years.

B. Taxes on corporate income and gains

Corporate income tax. Companies incorporated in Hungary are subject to corporate tax on their worldwide profits. A company not incorporated in Hungary that has its place of effective management in Hungary is regarded as a Hungarian resident for corporate tax purposes and, accordingly, is subject to corporate tax on its worldwide profits. If a double tax treaty applies, the provisions of the treaty may affect residence. Foreign companies carrying out taxable activities in Hungary through a permanent establishment are subject to corporate tax on their net profits derived from Hungarian sources.

Rates of corporate income tax. The tax rate for tax years beginning on or after 1 January 2017 is 9%.

The same rate applies to the taxable income of permanent establishments of nonresident companies. In general, the various permanent establishments of a nonresident company are taxed as a single entity. However, the taxable income of permanent establishments that are registered as distinct branches with the Court of Registration must be calculated separately, and losses incurred by one branch may not offset the profits of another. Such registrations are an option for foreign taxpayers in some cases and mandatory in other cases, depending on the country of incorporation of the foreign entity, its planned activities and other circumstances.

Alternative minimum tax. The alternative minimum tax (AMT) is calculated by applying the general rate of 9% to the AMT tax base. In general, the AMT tax base is 2% of total revenues, excluding any revenue attributable to foreign permanent establishments. The AMT tax base must be increased by an amount equal to 50% of additional loans contracted by the company from its shareholders or members during the tax year.

If a company's AMT is higher than the corporate income tax otherwise calculated or the pretax profit, the taxpayer may choose to pay either of the following:

- AMT.
- Corporate income tax otherwise payable. In this case, the company must fill out a one-page form that provides information regarding certain types of expenses and, in principle, is more likely to be selected for a tax audit.

Tax incentives

Reduced rate on certain types of income. Companies may reduce their corporate tax base by 50% of royalty income, which includes, in certain cases, income from the disposal of intangible property. In effect, only half of the royalty income is taxable. In light of the recent developments regarding the Base Erosion and Profit Shifting (BEPS) Project of the Organisation for Economic Co-operation and Development (OECD), the definition of royalties eligible for these incentives was narrowed, and the conditions for applying these allowances were tightened as of 1 July 2016.

The total reduction mentioned above may not exceed 50% of the pretax profit of the company. The deduction may be claimed on the tax return. Unlike the development tax allowance (see *Development tax allowance*), no special reporting or preapproval obligations are imposed.

Research and development double deduction. In addition to being recognized expenses for corporate income tax purposes, the direct costs of basic research, applied research and research and development (R&D) incurred within the scope of a company's activities reduces the corporate income tax base. As a result, a double deduction is allowed for these expenses for corporate income tax purposes. It is not required that the research itself take place in Hungary, and the double deduction may include R&D purchased from related or unrelated foreign enterprises and, in some cases, from Hungarian enterprises.

R&D triple deduction. Certain R&D activities conducted in cooperation with the Hungarian Academy of Arts and Sciences and its

research institutions, public research centers or private research centers directly or indirectly owned by the state can result in a deduction of three times the R&D cost. However, this deduction is capped at HUF50 million.

Development tax allowance. Companies may benefit from a development tax allowance (tax credit), conforming with European Community (EC) law, for up to 12 tax years if they satisfy all of the following conditions:

- They make an investment of at least HUF3 billion or an investment of HUF1 billion in an underdeveloped region.
- During the four tax years following the tax year in which the tax credit is first applied, the average statistical headcount of the taxpayer does not fall below the average headcount equivalent to the arithmetical mean of the three tax years preceding the start of the investment.
- The investment comprises one of the following:
 - The acquisition of a new asset
 - The enlargement of existing assets
 - The fundamental modification of the final product or the previous production method as a result of the investment

Large companies are eligible for development tax allowances with respect to asset investments of at least HUF6 billion or job-creating investments of at least HUF3 billion, aimed at product diversification or new procedural innovations in certain Central Hungarian municipalities. The application of the tax allowance is subject to a government resolution based on the authorization of the European Commission.

Taxpayers may claim a development tax allowance with respect to investments of at least HUF100 million in free entrepreneurial zones.

Small and medium-sized enterprises may become eligible for development tax allowances with respect to investments implemented in any region in the amount of at least HUF50 million (small-sized enterprises) and HUF100 million (medium-sized enterprises).

A development tax allowance can also be claimed for investments of at least HUF100 million in the fields of food product hygiene, environmental protection, basic or applied research or film production, if certain other requirements are met. Investments of any amount in any field that result in a certain level of job creation may also qualify for a tax allowance.

In general, companies must submit a notification regarding the allowance to the Ministry of Finance before the start date of the investment and self-assess the tax allowance. However, companies must obtain permission from the Ministry of Finance if their investment-related costs and expenses exceed EUR100 million. Taxpayers must report the completion date of their investments within 90 days after the date on which the investment becomes operational.

The tax allowance may reduce the company's corporate income tax liability by up to 80%, resulting in an effective tax rate of 1.8% (instead of 9%). Depending on the location of the project, the

allowance may cover between 20% and 50% of the eligible investment costs. In general, the allowance may be used within a 12-year period after the investment is put into operation, but it must be used by the 16th year after the declaration for the allowance was filed. In general, the 12-year period begins in the year following the year in which the investment is put into operation. However, the investor may request that the 12-year period begin in the year in which the investment is put into operation.

Tax allowance for investments and renovations made for energy efficiency purposes. If taxpayers make investments or renovations to reduce their final energy consumption, they can utilize a tax allowance up to 45% of the eligible extra costs, depending on the region in which the investment is made (up to a maximum of the present HUF value of EUR15 million), directly relating to or attributable to the assets serving exclusively the purposes of the investment contributing to the achievement of a higher level of energy efficiency. The tax allowance may be increased by 20% if the investment is made by a small enterprise and by 10% if the investment is made by a medium-sized enterprise. The tax allowance can be applied in the tax year following the year in which the investment was put into operation, and in the following five tax years. To be able to apply the tax allowance, the taxpayer must hold a certificate issued by the relevant authority proving that the investment qualifies as an investment for energy-efficiency purposes. Qualifying assets must be operated for at least five years. The tax allowance for investments serving energy-efficiency purposes and the development tax credit cannot both be applied to the same investment.

Tax allowance for investments in registered startup companies. Taxpayers that invest in startup companies may decrease their pretax profit by three times the acquisition value of the participation (including the increase in the acquisition value as a result of a capital increase after acquisition) in the tax year the participation is obtained and in the following three years, in equal amounts. The pretax profit can be decreased by a maximum of HUF20 million in each tax year, per startup company. If, as a result of a capital increase in the startup, the acquisition value increases in the period in which the allowance can be applied, the tax base can be decreased with respect to the increase, provided that the participation acquired in the startup company previously entitled the taxpayer to apply a tax-base allowance. However, this does not extend the length of the initial application period.

Tax-base allowances to promote labor mobility. Under the tax-base allowances to promote labor mobility, the pretax profit can be decreased by the following:

- The amount recorded as the acquisition value or the increment of the acquisition value of workers' hostels in the tax year in which the investment or renovation is finished
- The amount recorded as the rental fees for properties used as workers' hostels, or incurred with respect to the maintenance and operation of workers' hostels in the current tax year
- The amount of the net asset value or the increase in the net asset value of the property with a long-lasting structure built to provide housing for the taxpayer's employees in the tax year in which the investment or the development is completed

Film tax credit. Tax relief is provided to Hungarian companies sponsoring film production carried out in Hungary. The contributions are effectively refunded by the state because the sponsors can deduct the contributions from the corporate income tax payable, but the amount deducted may not exceed 30% of eligible expenses of the film production. In addition, these contributions, up to the above limit, are also deductible for corporate income tax purposes. The tax relief may be carried forward for a period of eight years. It is available only if the sponsor does not receive any rights with respect to the sponsored film.

To qualify for tax incentives, films are subject to a comprehensive cultural test, which grants points for various aspects of the production, including the members of the crew, the actors and the theme of the film being European. In general, only films receiving more than a certain number of points qualify.

To use the film tax credit, the taxpayer must pay 6.75% supplementary support to the beneficiary in the tax year in which the basic support is provided. The supplementary support is not deductible for corporate income tax purposes.

Sports tax credit. Tax relief is provided to Hungarian companies supporting sports organizations in the following popular team sports:

- Football (that is, soccer)
- Handball
- Basketball
- Water polo
- Ice hockey
- Volleyball

Under the sports tax credit scheme, national sports associations, professional sports organizations, amateur sports organizations, nonprofit foundations and civil sports organizations may be supported. Donations granted to these sports organizations are fully creditable against the corporate tax liability of the donor, capped at 70% of the donor's total corporate tax liability, if the taxpayer does not have government liabilities in arrears. Unused tax credits may be carried forward for a period of eight years. In addition, amounts donated are also deductible for corporate income tax purposes. Supplementary sport development aid must be paid by the donors within the framework of sponsorship or aid contracts equal to at least 6.75% of the amount indicated in the support certificate. This expense is not deductible for corporate income tax purposes. The supplementary development aid must be transferred to the respective national sport associations or the respective sports organizations or foundations.

New film and sports tax credit. Film productions and sports organizations may be supported by Hungarian corporate taxpayers in a new manner, as an alternative to the "old" model that will also remain in existence. Under the new rules, the taxpayer may designate a portion of its tax liability as support for a selected, qualifying organization. On receiving the tax payment from the taxpayer, the tax authority remits the designated amount to the beneficiary. Taxpayers can designate up to 80% of their monthly or quarterly tax advance payments and year-end tax payments. The total amount of the support is capped at the same amounts as under the "old" rules. As a benefit, the tax authority credits 7.5%

of the amounts designated from advance tax payments and 2.5% of the amounts designated from the year-end tax payment to the taxpayer's tax account.

Capital gains. With the exception of capital gains on "reported shares," "reported intangibles" and certain other intellectual property (see below), capital gains derived by Hungarian companies are included in taxable income and taxed at the standard corporate income tax rate.

Capital gains derived by nonresident companies from disposals of Hungarian shares (except for shares in Hungarian real estate companies, see below) are not subject to tax, unless the shares are held through a permanent establishment of the seller in Hungary.

Reported shares. If a taxpayer has held registered shares of an entity for at least one year and reported the acquisition of the shares or an increase in the shareholding within 75 days after the date of the acquisition to the Hungarian tax authorities, the shares are "reported shares." If a shareholding has already been reported to the tax authorities, further reporting is necessary only if the proportion of the shareholding increases.

Capital gains (including foreign-exchange gains) derived from the sale of the reported shares or from the contribution of the reported shares in kind to the capital of another company are exempt from corporate income tax. Capital losses (including foreign-exchange losses) incurred on such investments are not deductible for tax purposes.

Reported intangibles. Similar to the rules of reported shares, the acquisition and creation of royalty-generating intangible assets (intellectual property and pecuniary rights) by Hungarian taxpayers can be reported to the Hungarian tax authorities within 60 days after the date of acquisition or creation. If the reported intangible asset is sold or disposed of after a holding period of at least one year, the gain on the sale is non-taxable. However, any losses related to such reported intangible asset (that is, impairment) are not deductible for corporate income tax purposes.

If an unreported intangible asset is sold, the gain on the sale is exempt from tax if this gain is used to purchase further royalty-generating intangibles within five years. A taxpayer may not enjoy the benefits arising from the reporting of a repurchased intangible if this asset was previously sold as an unreported intangible that benefited from this capital gains tax exemption.

Hungarian real estate holding companies. Gains derived by a nonresident from the alienation of shares in a Hungarian real estate holding company are taxed at a rate of 9%, unless a tax treaty exempts such gains from taxation. A Hungarian company is deemed to be a Hungarian real estate holding company if either of the following circumstances exists:

- More than 75% of its book value is derived from real property located in Hungary.
- More than 75% of the total book value of the group, comprised of the company and its related companies that are engaged in business in Hungary (whether as resident entities or through permanent establishments), is derived from real property located in Hungary.

The capital gains are not taxable if the Hungarian company is listed on a recognized stock exchange.

Administration. In general, the calendar year is the tax year. However, companies may choose a different tax year if such year best fits their business cycle or is required to meet the management information needs of the parent company. Companies selecting a tax year other than the calendar year must notify the tax authorities within 15 days after making the decision on the selection.

Companies must file their corporate income tax returns by the last day of the fifth month following the end of the tax year. If their annual tax liability is greater than the total advance tax payments paid during the year, they are required to pay the balance on filing the return.

Extensions to file tax returns may not be obtained in advance of the due date. However, a company may obtain an extension after the due date if it files, with the completed late return, a letter requesting an extension to the date the return is filed. At their discretion, the tax authorities may accept the late return as being filed on time if the letter explains the reasons for the delay and establishes that the tax return is being filed within 15 days after the reason for the delay expires, and if the company pays any balance of tax due shown on the return.

If an extension for filing is granted, no late filing or payment penalties are imposed, and no interest is charged on the late payment. If an extension for filing is not granted, a penalty of up to HUF500,000 can be imposed. In addition, interest is charged on the late payment of tax at a rate equal to the National Bank of Hungary prime interest rate plus 5 percentage points (on 31 December 2021, the prime interest rate was 2.4%; accordingly, the daily interest on the late payment would be 7.4/365%). Interest is charged beginning on the date the payment is due, and it may be charged for up to three years.

In their corporate income tax returns, taxpayers also declare the tax advances that they will pay for the 12-month period beginning in the second month after the filing deadline. The total of these advances equals the amount of tax payable for the year covered in the corporate income tax return. For calendar-year taxpayers, which have a filing deadline of 31 May, advances are payable over a 12-month period beginning in July of the year following the year covered in the corporate income tax return and ending in June of the subsequent year. For companies with a corporate income tax liability exceeding HUF5 million in the preceding year, advance payments are divided into 12 equal monthly installments. Other companies make quarterly advance payments.

Dividends

Dividends paid by Hungarian companies. Withholding tax is not imposed on dividends paid to foreign companies.

Withholding tax at a rate of 15% is imposed on dividends paid directly to resident and nonresident individuals. Tax treaties may

override Hungarian domestic law with respect to the withholding tax on dividends.

Dividends received by Hungarian companies. In general, dividends received by Hungarian companies are exempt from corporate income tax. The only exception applies to dividends paid by controlled foreign corporations (CFCs; see Section E).

Interest, royalties and service fees

Interest, royalties and service fees paid by Hungarian companies. Withholding tax is not imposed on interest, royalties and service fees or any other payments made to local or foreign companies.

Hungary imposes a withholding tax at a rate of 15% on interest paid directly to individuals.

Interest and royalties received by Hungarian companies. A tax incentive may apply to royalties received by Hungarian companies (see *Tax incentives*). Interest received by a Hungarian company is taxable according to the general rules.

Exit taxation. Effective from 1 January 2020, capital withdrawals can be taxed based on market value if a taxpayer takes any of the following actions:

- Relocates its tax residency by moving its place of management from Hungary to another country
- Relocates assets from its registered office in Hungary to a permanent establishment outside Hungary
- Relocates assets from its permanent establishment in Hungary to its registered office or permanent establishment outside Hungary
- Transfers the business activity performed in Hungary to a foreign country

If capital is withdrawn, the tax base increases by the market value of the relocated assets or activities prevailing at the time of the withdrawal less their tax book value at the time of withdrawal.

Taxpayers subject to the exit tax can choose to pay the tax in five equal installments, as indicated in their tax return for the last tax year, provided that their place of management has moved to another European Union (EU) member state or certain European Economic Area (EEA) countries.

Foreign tax credit. Foreign taxes paid on foreign-source income may be credited against Hungarian tax. Foreign dividend withholding tax may be credited for Hungarian tax purposes if the dividend or the undistributed profit is subject to tax in Hungary.

C. Determination of trading income

General. Taxable income is based on financial statements prepared in accordance with Hungarian accounting standards. These standards are set forth in the law on accounting, which is largely modeled on EU directives.

Effective from 1 January 2017, the following companies can elect to use International Financial Reporting Standards (IFRS) for purposes of preparing their stand-alone Hungarian financial statements:

- Entities subject to compulsory statutory audit

- Companies whose direct or indirect parent prepares a consolidated report under IFRS
- Insurance companies
- Banks and other entities subject to similar prudential rules
- Entities providing financial services under the supervision of the Hungarian National Bank
- Hungarian branches of non-Hungarian entities

Effective from 1 January 2017, the use of IFRS is mandatory in the following circumstances:

- The entity's stock is listed on any of the stock exchanges in the EEA, excluding banks and other entities subject to similar prudential rules and insurance companies).
- It is mandatory under Regulation 1606/2002 of the European Parliament and of the EU Council.

The application of IFRS is mandatory for banks and other entities subject to similar prudential rules (regardless of whether their stock is listed on any of the stock exchanges in the EEA) and insurance companies with securities listed on any of the stock exchanges in the EEA from the tax year beginning in 2018.

Taxable income is determined by adjusting the pretax profit shown in the annual financial statements by items described in the Act on Corporate Income Tax. If IFRS are applied, the starting point for the determination of the corporate income tax base is the IFRS result, but different adjustments apply. The purpose of making adjustments to the IFRS result is to arrive at a tax base that is largely similar to the tax base of companies reporting under Hungarian accounting standards.

Some items are not subject to tax as income, such as dividends received (but see the controlled foreign corporation rules in Section E).

Some items, such as transfers without consideration, are not deductible for tax purposes.

Tax depreciation. In general, depreciation is deductible in accordance with the Annexes to the Act on Corporate Income Tax. Lower rates may be used if they are at least equal to the amount of the depreciation used for accounting purposes. The annexes specify, among others, the following straight-line tax depreciation rates.

Asset	Rate (%)
Buildings used in hotel or catering businesses	3
Commercial and industrial buildings	2 to 6
Leased buildings	5
Motor vehicles	20
Plant and machinery	
General rate	14.5
Automation equipment, equipment for environmental protection, medical equipment and other specified items	33
Computers	50
Intellectual property and film production equipment	50

Relief for losses. Pre-2015 losses can be applied in any tax year until 2030. Losses incurred in 2015 and subsequent years may be

carried forward for five years only. The losses can be applied against only 50% of the tax base for a particular year. Certain special rules apply to losses incurred before 2009.

Change-of-control restrictions have been introduced with respect to the availability of previously incurred tax losses after corporate transformations, mergers and acquisitions.

Groups of companies. Effective from 1 January 2019, taxpayers can opt for group taxation for corporate income tax purposes. Corporate income tax groups can be formed by at least two taxpayers that are resident in Hungary (a Hungarian branch of a non-Hungarian resident entity can also participate in a corporate income tax group). As a precondition, groups must consist of related companies based on voting rights equivalent to at least 75%. In addition, the companies in the group must satisfy the following conditions:

- They must have the same tax year.
- They must prepare their financial statements under the same accounting standards.

A taxpayer can be a member of only one group at the same time.

The formation of a corporate income tax group is subject to the filing of an application. The start date for the group or for becoming a member of an existing group is the first day of the tax year following the year of the application. In the case of taxpayers that start their activity during a given tax year, membership may be considered to exist from the day on which their corporate income tax liability would otherwise begin.

Corporate income tax groups must settle their tax liabilities and exercise their rights as taxpayers through their appointed representatives under the group's tax identification number. The group representative must keep appropriate records that allow the group to support its tax audits and keep all of the data needed by the group for the payment of its corporate income tax liability and the exercise of its rights.

In general, transfer-pricing rules and adjustments should not be applied to transactions between corporate income tax group members after the formation of the group.

Unless another regulation specifically states otherwise, the potential exemption or relief from the rules on related-party transactions does not apply to taxes other than corporate income tax. For example, the local business tax or value-added tax (VAT) treatment of related-party transactions remains unchanged even if a corporate income tax group is formed.

Group members' negative tax bases can offset up to 50% of the positive tax bases of other corporate income tax group members in calculating the corporate income tax base of the group. Pre-grouping tax losses of a group member can only offset the same group member's corporate income tax base (up to 50%). Tax losses generated after the creation of the group can offset up to 50% of the corporate income tax base of the group.

The general corporate income tax rate of 9% also applies to corporate income tax groups.

D. Other significant taxes

The following table summarizes other significant taxes and provides the 2020 rates for these taxes.

Nature of tax	Rate (%)
Value-added (sales) tax, on goods, services and imports	
Standard rate	27
Preferential rates	5/18
Bank tax; imposed on various entities in the financial market; the tax base and tax rate varies by financial activity	Various
Levy on energy suppliers ("Robin Hood tax")	31
Social security contributions, on gross salaries; in general, expatriates do not participate; paid by	
Employer	13
Employee	18.5
(As of 1 July 2020, the social security contribution replaced the previously applicable 10% pension fund contribution and the 8.5% health care contribution by merging them into a single tax liability that remains at 18.5%.)	
Excise duty, on various goods, including gasoline, alcohol, tobacco, beer, wine and champagne	Various
Local business tax; imposed on turnover or gross margin	2
(A decision of the European Court of Justice held that this tax was compatible with EU law.)	

E. Miscellaneous matters

Foreign-exchange controls. The Hungarian currency is the forint (HUF). Hungary does not impose any foreign-exchange controls; the forint is freely convertible.

Companies doing business in Hungary must open a bank account at a Hungarian bank to make payments to and from the Hungarian authorities. They may also open accounts elsewhere to engage in other transactions.

Payments in Hungarian or foreign currency may be freely made to parties outside Hungary.

Transfer pricing. For contracts between related companies, the tax base of the companies must be adjusted by the difference between the market price and the contract price if the application of the market price would have resulted in higher income for the companies.

Taxpayers may also reduce the tax base in certain circumstances if, as a result of not applying market prices, their income is higher than it would have been if market prices had been applied. Effective from 2018, the tax base reduction can be only applied on the declaration of the related party stating that it will take (or has taken) into account the same amount when calculating its corporate income tax (or other equivalent tax) base. The tax base

reduction does not apply if the transaction involves companies deemed to be CFCs (see *Controlled foreign corporations*).

The market price must be determined by one of the following methods:

- Comparable uncontrolled price method
- Resale price method
- Cost-plus method
- Transactional net margin method
- Profit split method
- Any other appropriate method

These methods reflect the July 2010 update of the OECD guidelines. A decree issued by the Ministry of Finance describes the requirements for the documentation of related-party transactions. Transfer-pricing documentation must be prepared for all related-party agreements that are in effect, regardless of the date on which the agreement was concluded.

The transfer-pricing rules also apply to in-kind capital contributions (including on foundation) and the withdrawal of assets in kind (in the case of capital reduction and possibly in the case of winding-up) by the majority shareholder. The transfer-pricing rules also apply to in-kind dividend payments. Advance pricing agreements (APAs) are available.

Hungary has ratified and is applying the Arbitration Convention.

Controlled foreign corporations. As of 1 January 2019, the definition of CFCs in the Act on Corporate Income Tax and Dividend Tax is changed in accordance with the EU Council Directive that sets out the rules against tax-avoidance practices closely relating to the operation of the internal market. A CFC is defined as a nonresident company (branch) that meets one of the following conditions:

- At least 50% of the registered capital or the voting rights in the nonresident company is directly or indirectly owned by a Hungarian resident private individual or company, provided that the foreign company has to pay less than half of the amount of corporate income tax that would be payable if the tax and the tax base were calculated on the basis of the Hungarian tax rules. The 50% threshold must be evaluated on a consolidated basis. Consequently, the ratio of participation and voting rights held by all Hungarian and non-Hungarian related parties must be considered on an aggregate basis.
- A Hungarian resident individual or company has the right to receive at least 50% of the after-tax profit of the foreign company, provided that the foreign company has to pay less than half of the amount of corporate income tax that would be payable if the tax and the tax base were calculated on the basis of the Hungarian tax rules. The 50% threshold must be evaluated on a consolidated basis. Consequently, the rights to receive part of the after-tax profit held by all Hungarian and non-Hungarian related parties should be considered on an aggregate basis.
- A foreign branch of a Hungarian resident company is a CFC if the foreign branch has to pay less than half of the amount of corporate income tax that would be payable if the tax and tax base of the branch were calculated on the basis of the Hungarian tax rules.

On establishing a nonresident company's CFC status, it must be considered, among other criteria, whether the nonresident company (branch) carried out any legal transactions that were not genuine. A legal transaction, or a series of such transactions, qualifies as non-genuine if it is performed with the primary purpose of gaining a tax advantage and if the significant personnel functions relating to the assets of and the risks assumed by the nonresident company (branch) are carried out by a Hungarian resident company.

The following are exceptions to the above definition:

- If the pretax profit of a nonresident company (branch) does not exceed HUF243,952,500, if its profit from non-commercial activities does not exceed HUF24,395,250 or if its pretax profit does not exceed 10% of the operating costs accounted for the relevant tax year, the nonresident company (branch) does not qualify as a CFC.
- A foreign permanent establishment that operates in a country outside the EU or the EEA with which Hungary has a treaty with a provision to exempt the income of foreign permanent establishments from corporate income tax liability in Hungary does not qualify as a CFC if it qualifies as a permanent establishment under the treaty.

As of 1 January 2021, these exceptions may not be applied, and the foreign entity should qualify as a CFC if it is established in a fiscally non-cooperative state defined in the relevant decree of the Ministry of Finance.

Taxpayers must increase their corporate income tax base in relation to CFCs in accordance with the following rules:

- In the tax year in which the CFC's tax year has its last day, the taxpayer's corporate income tax base is increased by the amount of the positive after-tax profit, less the approved (distributed) dividend realized from non-genuine legal transactions as stated on the last day of the CFC's tax year, to the extent that the taxpayer performs significant personnel functions relating to the income generated from the non-genuine legal transaction.
- The amount recognized as an increase to the pretax profit, relating to the undistributed income of the CFC, must be calculated in line with the arm's-length principle.

Dividends received from CFCs do not qualify for the participation exemption regime and, accordingly, are treated as taxable income to the Hungarian shareholders (except for dividends that were already taxed as undistributed after-tax profits in previous years). Nevertheless, the corporate income tax paid abroad can be credited against the Hungarian corporate income tax liability. As a result, the overall non-Hungarian and Hungarian tax burden is capped at the 9% Hungarian corporate income tax rate. Capital losses on investments in CFCs are not deductible for tax purposes.

Hybrid instruments and special provisions related to tax avoidance. In a hybrid mismatch arrangement, the provisions based on which costs and expenditures can be taken into account and the pre-tax profit can be decreased cannot be applied if a different legal characterization of the same facts give rise to tax avoidance and if such facts occur with respect to a related party or it can be

proved that the difference affects or affected the consideration in the underlying agreement.

Reverse hybrid rules. As of 1 January 2022, a hybrid entity is considered a resident taxpayer in Hungary if a nonresident organization (an individual or an individual together with affiliated companies) meets one of the following conditions:

- It controls more than 50% of the voting rights in it directly or indirectly.
- It controls more than 50% of the subscribed capital directly or indirectly.
- It is entitled to more than 50% of after-tax profit.

An additional condition is that a person referred to in the above bullets fall under the regulations of a fiscal jurisdiction that considers the hybrid entity as taxable in that jurisdiction. These entities assess their Hungarian corporate tax liability, excluding the amount that is subject to liability under the tax laws of the other fiscal jurisdiction for corporate tax or any other form of tax that is considered equivalent to corporate tax to the extent it can be proven by a tax return filed in that other country.

Debt-to-equity rules. To comply with the Council Directive (EU) 2016/1164, named the EU Anti-Tax Avoidance Directive (ATAD), as of 1 January 2019, a new rule to restrict interest deductions replaces the thin-capitalization rules.

Under this new rule, the amount of the net financing costs exceeding either 30% of the earnings before interest, tax, depreciation and amortization (EBITDA) or the nominal threshold of HUF939,810,000 (EUR2,600,000), whichever is higher, increases the pretax profit.

The unused part of previous tax years' interest deduction capacity reduces the amount of the increase described in the preceding paragraph, but this reduction cannot exceed the amount of the increase.

If in previous tax years, the tax base was increased based on this provision, in the year in question, the tax base can be decreased by up to the same amount, to the extent of the current year's interest deduction capacity. The law does not specifically restrict the length of time that the previous years' tax base increasing item can be applied to reduce the tax base.

The deduction restriction is broader than in the previous thin-capitalization rule, to the extent that any costs and expenditures equivalent to interest in economic terms, as well as costs and expenditures accounted for in connection with raising funds, are also subject to restrictions, in addition to interest expenditures. The deduction of foreign-exchange losses, borrowing fees and related legal costs as well as the deduction of the costs of any potential hedging transactions can also be restricted. The law provides that the above financing costs can be reduced by interest income and other taxable income that is equivalent to interest income when determining the net financing costs. This amount should be compared to the limit provided by law when calculating the increasing item.

Like the previous rules, the measure for the increase in the tax base does not have to be applied by financial institutions, investment enterprises, alternative investment funds, the management companies of undertakings for collective investment in transferable securities or by taxpayers qualifying as insurance and reinsurance companies. However, there is no similar exception from applying the increasing item with respect to borrowings from the above list.

For financing agreements concluded before 17 June 2016, the new rule will be applied for the first time with respect to amended contract amounts or amended terms, from the day following the date on which the amendment for the increased contract amount or the extension of maturity enters into force. Otherwise, the previous thin-capitalization rule continues to apply to these contracts. However, taxpayers may also opt to apply the new interest deduction restriction rule.

In the case of corporate income tax groups, the members first must aggregate the net financing costs and EBITDA for the tax year. Taking this amount and the HUF939,810,000 limit into account, which collectively applies to the members with the net financing costs, they determine the amount of the nondeductible interest at the group level. This determined amount must be taken into account in the individual tax base of each member in proportion to the EBITDA in the tax year, and each member must take into account the amount assigned and thereby increase its individual tax base.

Foreign investment. No restrictions are imposed on the percentage of ownership that foreigners may acquire in Hungarian companies. Some restrictions exist with respect to the ownership of farmland.

Mandatory reporting of tax planning arrangements. The purpose of Council Directive 2011/16/EU (DAC6) is to identify and prescribe the reporting of cross-border tax planning arrangements that meet certain hallmarks. Data must be reported to the tax authority on the developers of these arrangements as well as on the persons that take part in these arrangements. There is a separate definition for potentially relevant cross-border arrangements, which are composed of two major groups; one includes marketable arrangements in general, and the other comprises tailored arrangements.

Data reporting may be required in connection with taxes falling within the scope of the Act on Tax Procedures, except for VAT, excise duty and contributions.

The provisions for data reporting entered into force on 1 July 2020 in Hungary. However, the reporting obligation will apply to the cross-border arrangements that fall within the scope of the data reporting obligation, and the first steps of their implementation took place between 25 June 2018 and 1 July 2020. The data in relation to these arrangements can be reported by 28 February 2021. For arrangements implemented after 1 July 2020, there will be a 30-day time frame to complete the data

reporting obligation; however, the first reporting deadline is 31 January 2021, regardless of such time frame.

For a failure to meet the deadline, the tax authority may impose a default penalty, up to HUF500,000 for the first time, which then may go up to as much as HUF5 million.

F. Treaty withholding tax rates

Hungary does not impose withholding taxes on payments to foreign entities. However, it does impose withholding tax on the payment of dividends and interest to foreign individuals (for details, see Section B).

Hungary has tax treaties in effect with the following jurisdictions.

Albania	Iran	Portugal
Armenia	Iraq	Qatar
Australia	Ireland	Romania
Austria	Israel	Russian
Azerbaijan	Italy	Federation
Bahrain	Japan	San Marino
Belarus	Kazakhstan	Saudi Arabia
Belgium	Korea (South)	Serbia (b)
Bosnia and Herzegovina (a)	Kosovo	Singapore
Brazil	Kuwait	Slovak Republic
Bulgaria	Kyrgyzstan	Slovenia
Canada	Latvia	South Africa
China Mainland	Liechtenstein	Spain
Croatia	Lithuania	Sweden
Cyprus	Luxembourg	Switzerland
Czech Republic	Malaysia	Taiwan
Denmark	Malta	Thailand
Egypt	Mexico	Tunisia
Estonia	Moldova	Turkey
Finland	Mongolia	Turkmenistan
France	Montenegro (b)	Ukraine
Georgia	Morocco	United Arab Emirates
Germany	Netherlands	United Kingdom
Greece	North Macedonia	United States (c)
Hong Kong	Norway	Uruguay
Iceland	Oman	Uzbekistan
India	Pakistan	Vietnam
Indonesia	Philippines	
	Poland	

- (a) The 1985 treaty between Hungary and the former Socialist Federal Republic of Yugoslavia is applied with respect to Bosnia and Herzegovina.
- (b) The 2001 treaty between Hungary and the former Federal Republic of Yugoslavia is applied with respect to Serbia. In practice, Hungary and Montenegro also apply this treaty, but no formal announcement has been made to confirm this practice.
- (c) This treaty was renegotiated in 2010, but the new treaty is not yet in force.

Hungary is negotiating double tax treaties with Algeria, Andorra, Argentina, Chile, Colombia, Ethiopia, Panama and Sri Lanka.

On 7 June 2017, Hungary signed with more than 65 other countries the Multilateral Convention to Implement Tax Treaty

Related Measures to Prevent BEPS (MLI). The MLI ensures that rules designed to prevent cross-border tax evasion will be incorporated into bilateral tax treaties. It will also enable hundreds of tax treaties to be updated with OECD BEPS measures without the need for drawn-out bilateral negotiations. The Hungarian government has opted out from all provisions of the MLI that allow an opt-out.

A. At a glance

Corporate Income Tax Rate (%)	20 (a)
Capital Gains Tax Rate (%)	20 (b)
Branch Tax Rate (%)	20 (a)
Withholding Tax (%)	
Dividends	
Residents	20/22 (c)
Nonresidents	20 (d)
Interest	
Residents	22 (e)
Nonresidents	12 (f)
Royalties from Patents, Know-how, etc.	20 (g)
Payments under Leases and Rent	20 (g)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	10

- (a) A 37.6% rate applies to partnerships.
- (b) Capital gains are taxed as ordinary income. Capital gains may be offset by extraordinary depreciation (for details, see Section B).
- (c) Dividends received by domestic companies are considered ordinary income and taxed at 20%. However, dividends received from domestic companies are fully deductible. Dividends received from foreign companies are also fully deductible, provided that the foreign companies are taxed in a similar manner to Icelandic companies. Dividends received by partnerships are taxed at 22%, and no deduction is allowed.
- (d) Interest income and income from listed stocks (that is, dividends and capital gains), up to ISK300,000 a year, are exempt from income tax for nonresident individuals. A 20% withholding tax is imposed on dividends paid to nonresident entities. A 22% withholding tax is imposed on dividends paid to nonresident individuals. Nonresidents can obtain a refund of the withholding tax or apply for an exemption from the withholding tax based on an applicable double tax treaty. If no double tax treaty applies, nonresidents must suffer the withholding. However, residents of European Union (EU), European Economic Area (EEA) or European Free Trade Association (EFTA) states or the Faroe Islands are eligible for a full deduction for dividends received from domestic companies in the same manner as domestic entities. Companies may

claim this deduction by filing a tax return. They are reimbursed accordingly for withheld taxes after the general assessment in the following year.

- (e) A 22% withholding tax is imposed on interest paid to resident individuals and resident companies, but the actual tax on resident companies is 20% when the assessment takes place.
- (f) Interest income and income from listed stocks (that is, dividends and capital gains), up to ISK300,000 a year, are exempt from income tax for nonresident individuals. A 12% withholding tax is imposed on interest paid to nonresident entities and nonresident individuals unless, on application, the Director of Internal Revenue grants an exemption from withholding tax based on an applicable double tax treaty. Alternatively, the withholding tax may either be refunded or not withheld. Interest on bonds issued in the name of financial undertakings or energy companies is not subject to withholding tax. The bonds must be registered at a central securities depository established in an Organisation for Economic Co-operation and Development (OECD), EEA or EFTA state or the Faroe Islands. Interest paid by Seðlabanki Íslands (the Icelandic central bank) in its own name or on behalf of the Icelandic treasury is also not subject to withholding tax.
- (g) Royalties, payments under leases and rent payments that are paid to nonresident companies, partnerships and individuals are subject to withholding tax at a rate of 22%. A 20% rate applies to resident companies. A 37.6% rate applies to resident partnerships. These payments are not subject to withholding when paid to residents.

B. Taxes on corporate income and gains

Corporate income tax. Resident companies are taxed on their worldwide income. Resident corporations are those incorporated, registered, domiciled or effectively managed in Iceland. Nonresident companies are taxed only on their income earned in Iceland.

Rate of corporate tax. The rate of corporate income tax is 20%. The rate for taxable partnerships is 37.6%.

Capital gains. Capital gains result from profits derived from sales of assets. These gains are included in ordinary income and taxed at the normal income tax rates.

Capital gains may be offset by extraordinary depreciation on other fixed assets or on fixed assets acquired within two years of the sale. If the fixed assets are not acquired within two years of the sale, the gain is included in income, and a 10% penalty is imposed.

Profits from stock sales. Profits derived by domestic companies from stock sales are considered ordinary income. However, profits derived from stock sales in domestic companies are fully deductible. Profits derived by domestic companies from stock sales in foreign companies are also fully deductible, provided that the foreign companies are taxed in a similar manner to Icelandic companies and that their tax ratio is not lower than the general tax ratio in any member state of the OECD, any member state of the EEA, any founding state of the EFTA or the Faroe Islands.

Administration. The tax year is generally the calendar year.

The final due date for legal entities to submit their income tax return is 31 May. Monthly advance tax payments are due on the first day of each month except for January and October. Each advance payment equals 8.5% of the previous year's tax. The tax due is determined when the annual assessment is issued. Companies generally must pay the unpaid balance in two equal monthly payments in November and December. Companies can apply for a reduction of the advance payments, but they must apply for the reduction before 31 May.

Advance rulings. Both resident and nonresident companies may request advance rulings on most corporate income tax consequences of future transactions. Rulings are issued only on matters of substantial importance and if all criteria are met. They are only binding for the tax authority if there is no change in the circumstances as they were presented.

Dividends. Dividends earned by domestic companies are considered ordinary income. Dividends are not subject to withholding tax when paid to domestic companies. Dividends received from domestic companies are fully deductible from dividend income in the annual assessment process and, as a result, effectively no taxable income is declared.

Dividends received from foreign companies are also fully deductible, provided that the foreign companies are taxed in a similar manner to Icelandic companies and that their tax ratio is not lower than the general tax ratio in any member state of the OECD, any member state of the EEA, any founding state of the EFTA or the Faroe Islands.

Dividends paid to domestic partnerships are subject to 22% withholding tax, and no deduction is allowed.

Withholding tax is imposed on dividends paid to nonresidents. The rate is 20% for companies and 22% for individuals. Tax treaties may reduce or eliminate the dividend withholding tax. Nonresidents from EU, EEA or EFTA states or the Faroe Islands are eligible for a full deduction from dividends received from domestic companies in the same manner as domestic entities. Companies may claim this deduction by filing a tax return. They are accordingly reimbursed for withheld taxes in the general assessment in the following year.

No withholding tax is imposed on distributions by taxable partnerships.

Foreign tax relief. Relief for double taxation may be obtained unilaterally under Icelandic domestic law or under a tax treaty. Unilateral relief may be granted through a tax credit against Icelandic income tax at the discretion of the Director of Internal Revenue for income tax paid in other jurisdictions. Request for relief under a tax treaty must be made in advance.

C. Determination of trading income

General. The computation of taxable income is based on net income in the financial statements prepared according to generally accepted accounting principles. For tax purposes, several adjustments are made, primarily concerning depreciation and write-offs of inventory.

In general, expenses incurred to generate and maintain business income are deductible.

Inventories. Inventories are valued at the lower of cost or market value. Cost must be determined using the first-in, first-out (FIFO) method. Five percent of the value of inventory at the end of the year is deductible.

Tax depreciation. Depreciation must be calculated using either the declining-balance method or the straight-line method. The straight-line method applies to buildings, expendable natural resources and the right of ownership of valuable intellectual properties, including copyright, publishing rights, patent rights and brand rights. The declining-balance method applies to ships, aircraft, vehicles and machinery. Fixed assets cannot be depreciated below 10% of cost. The following are some of the applicable depreciation rates.

Assets	Rate (%)
Buildings	
Office and retail	1 to 3
Industrial plants	3 to 6
Piers and greenhouses	6 to 8
Drilling holes and transmission lines	7.5 to 10
Ships, aircraft, cars carrying fewer than nine persons (except taxis)	10 to 20
Automobiles and other transport vehicles	20 to 35
Industrial machinery and equipment	10 to 30
Office equipment	20 to 35
Machinery and equipment for building and construction	20 to 35
Other movable property	20 to 35

The amortization period for goodwill ranges from 5 to 10 years. The amortization period for copyrights, patents, trademarks, designs, models, know-how or similar rights ranges from five to seven years.

Relief for losses. Losses may be carried forward for 10 years. Losses may not be carried back.

Groups of companies. Resident companies may use group consolidation if one company owns at least 90% of the shares in another company or if at least 90% of the shares in a company are owned by companies that are members of the same tax-consolidated group. Group consolidation is for a minimum of five years. Resident companies that are part of a foreign group may use group consolidation if the foreign group is a resident of EU, EEA or EFTA states or the Faroe Islands. A domestic parent company that has a subsidiary in EU, EEA or EFTA states or the Faroe Islands may use accumulated losses from the time they requested limited joint taxation until the year the subsidiary is dissolved and the loss is verifiably unused.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Value-added tax, on most goods sold in Iceland and most services rendered in Iceland	
Higher rate	24
Lower rate for hotels, books and publications, food products, heating of houses and road tolls	11

Nature of tax	Rate (%)
Social security contributions, paid by the employer on gross payroll	6.35
Commodity tax; on certain goods, including vehicles and fuel	Various

E. Foreign-exchange controls

Iceland abolished the foreign-exchange controls in 2017.

Nonresidents may directly invest in most industries in Iceland, but they must notify Seðlabanki Íslands (the central bank) of such investments. The fishing industry is the principal industry in which investments by nonresidents are limited. Nonresidents may not own a majority in such companies.

F. Treaty withholding tax rates

A Qualifying companies.

B Individuals and other companies.

- (a) Unless indicated otherwise, the rate applies to corporate shareholders with ownership of at least 10%.
- (b) The lower rate applies to copyrights (except for films and similar items), computer software, patents and know-how concerning industrial, commercial or scientific experience (but not including any such information provided in connection with a rental or franchise agreement). The higher rate applies to other royalties.
- (c) The rate applies to corporate shareholders with ownership of at least 25%.
- (d) These are the rates under the Nordic Convention.
- (e) The lower rate applies to royalties paid for the use of industrial, commercial or scientific equipment.
- (f) A 12% withholding tax is imposed on interest paid to nonresident entities and nonresident individuals unless, on application, the Director of Internal Revenue grants an exemption from withholding tax. Alternatively, the withholding tax may be refunded.
- (g) Royalties paid to nonresidents are subject to withholding tax at a rate of 22%. The net royalties (gross royalties less expenses) are normally included in ordinary income and taxed at the general corporate income tax rate unless a tax treaty provides a reduced rate.
- (h) The lower rate applies to royalties paid for the use of, or the right to use, computer software or patents or for information concerning industrial, commercial or scientific experiences if they are paid to a resident of the other contracting state that is the beneficial owner of the royalties.
- (i) The higher rate applies to the following:
- Any information concerning industrial, commercial or scientific experience provided in connection with a rental or franchise agreement
 - A trademark associated with an agreement referred to in the first bullet
 - The copyright of a motion picture film or work on film or videotape or other means of reproduction for use in connection with television
- (j) The rate applies if the Russian company owns directly at least 25% of the capital in the Icelandic company and the foreign capital invested exceeds USD100,000.
- (k) Royalties for the use of, or the right to use, patents, trademarks, designs or models, plans, secret formulas or processes may also be taxed in the country of origin. However, the taxation of such royalties may not exceed 5%. For other royalties, as defined in the treaty, the rate is 0%.
- (l) The higher rate applies to royalties for the use of, or the right to use, patents, trademarks, designs or models, plans, secret formulas or processes.
- (m) The 0% rate applies to corporate shareholders with ownership of at least 25%. The 5% rate applies if following circumstances exist:
- The company that is the beneficial owner has for a period of six months owned at least 10% of the company's capital, in cases in which the paying company is a resident of Iceland.
 - The company that is the beneficial owner has for a period of six months owned at least 10% of the voting power of the company, in cases in which the paying company is a resident of Japan.

Tax information and exchange agreements are in force with Andorra, Anguilla, Antigua and Barbuda, Aruba, Bahamas, Bahrain, Belize, Bermuda, Botswana, British Virgin Islands, Brunei Darussalam, Cayman Islands, Cook Islands, Dominican Republic, Gibraltar, Grenada, Guernsey, the Hong Kong Special Administrative Region (SAR), Isle of Man, Jersey, Liberia, Liechtenstein, the Macau SAR, Marshall Islands, Mauritius,

Monaco, Montserrat, Netherlands Antilles (applicable to the successor jurisdictions of Netherlands Antilles), Niue, Panama, St. Lucia, Samoa, San Marino, Seychelles, Turks and Caicos Islands, and Uruguay.

A. At a glance

Domestic Company Income

Tax Rate (%)	15/22/25/30 (a)(b)
Capital Gains Tax Rate (%)	20 (a)(c)
Branch Tax Rate (%)	40 (a)(d)
Withholding Tax (%)	
Dividends	
Paid to Domestic Companies	10 (e)
Paid to Foreign Companies	20 (a)(f)(g)(h)(i)
Interest	
Paid to Domestic Companies	10 (e)(f)
Paid to Foreign Companies	4/5/20 (a)(f)(g)(h)
Royalties from Patents, Know-how, etc.	10 (a)(f)(h)(i)
Technical Services Fees	10 (a)(f)(h)(i)
Branch Remittance Tax	0
Net Operating Losses (Years)	
Carryback	0
Carryforward	8 (j)

(a) The rates are subject to an additional levy consisting of a surcharge and a cess. They are increased by the following surcharges on such taxes:

- Domestic companies with net income exceeding INR100 million: 12%
- Foreign companies with net income exceeding INR100 million: 5%
- Domestic companies with net income exceeding INR10 million: 7%
- Foreign companies with net income exceeding INR10 million: 2%
- Domestic companies opting for a reduced income tax rate of 15% or 22% (see footnote [b] below): 10%

No surcharge is payable if the net income does not exceed INR10 million except in the case of domestic companies opting for a reduced tax rate of 15% or 22%. The tax payable (inclusive of the surcharge, as applicable) is further increased by a cess levied at 4% of the tax payable. The withholding tax rates are increased by a surcharge for payments exceeding INR10 million made to foreign companies and a cess (see above).

(b) In the following scenarios, reduced income tax rates are applicable for the 2020-21 fiscal year:

- A 25% rate applies to companies that had total turnover or gross receipts not exceeding INR4 billion in the 2019-20 fiscal year.
- Domestic companies set up and registered after 1 March 2016 and engaged in the manufacturing or production of articles or things and research with respect to such articles or things can opt for a concessional tax rate of 25%, subject to the fulfillment of specified conditions.
- A domestic company can opt for a concessional tax rate of 22% subject to the fulfillment of specified conditions.
- A domestic company set up and registered on or after 1 October 2019 that commences the manufacturing or production of an article or thing or the generation of electricity on or before 31 March 2023 can opt for a concessional tax rate of 15% subject to the fulfillment of specified conditions. Also, see *Relief for losses* in Section C.

(c) There are exceptions to this basic rate, see *Capital gains* in Section B for a detailed discussion on the different type of rates applicable on capital gains.

(d) For exceptions to this basic rate, see Section B.

(e) The withholding tax rate is reduced by 25% for the period from 14 May 2020 to 31 March 2021.

- (f) A Permanent Account Number (PAN) is a unique identity number assigned to a taxpayer in India on registration with the India tax authorities. If an income recipient fails to furnish its PAN, tax must be withheld at the higher of the rate specified in the relevant provision of the Income Tax Act and 20%.
- (g) This rate applies to interest on monies borrowed, or debts incurred, in foreign currency. Withholding tax rate of 4% (plus a surcharge of 2% or 5%, as applicable, and a 4% cess) applies in cases in which interest is payable to nonresidents with respect to long-term bonds or rupee-denominated bonds (RDBs) listed on recognized stock exchange located in any International Financial Services Centre (IFSC). Withholding tax at a rate of 5% (plus a surcharge of 2% or 5%, as applicable, and a 4% cess) is imposed on interest payments to nonresidents (including foreign companies) with respect to the following:
- Infrastructure debt funds.
 - Borrowings made by Indian companies in foreign currency by way of loans between 1 July 2012 and 1 July 2023, infrastructure bonds issued between 1 July 2012 and 1 October 2014 or long-term bonds issued between 1 October 2014 and 1 July 2023, subject to prescribed conditions (for long-term bonds, the lower withholding rate would not be affected if the recipient does not furnish a PAN; see footnote [f] above).
 - RDBs of Indian companies or government securities issued to foreign institutional investors or qualified foreign investors, with respect to interest payable between 1 June 2013 and 1 July 2023.
 - Monies borrowed by Indian companies from a source outside India through the issuance of RDBs other than those listed on a stock exchange located in any IFSC, under a loan agreement at any time on or after 1 July 2012 but before 1 July 2023. However, interest payable by Indian companies or business trusts with respect to monies borrowed from a source outside India by way of RDBs from 17 September 2018 to 31 March 2019 is exempt from tax in the hands of the nonresident recipients of such interest.
- Further, a rate of 20% (plus the surcharge of 2% or 5%, as applicable, and the 4% cess) applies with respect to interest payable by Indian concerns or the government to foreign companies on monies borrowed or debts incurred in foreign currency. Interest that is effectively connected to a permanent establishment or fixed place of a nonresident recipient in India is taxed at a rate of 40% (plus the surcharge of 2% or 5%, as applicable, and the 4% cess).
- (h) If a recipient of income is located in a Notified Jurisdictional Area (NJA), tax must be withheld at the higher of the rate specified in the relevant provision of the Income Tax Act and 30% (for further details, see Section E).
- (i) The 10% rate (plus the 2% or 5% surcharge, as applicable, and the 4% cess) applies to royalties and technical services fees paid to foreign companies by Indian enterprises. However, depending on the applicable tax treaty, if the royalties or technical services fees paid under the agreement are effectively connected to a permanent establishment or fixed place of the nonresident recipient in India, the payments are taxed on a net income basis at a rate of 40% (plus the 2% or 5% surcharge, as applicable, and the 4% cess).
- (j) Unabsorbed depreciation may be carried forward indefinitely to offset taxable profits in subsequent years.

B. Taxes on corporate income and gains

Corporate income tax. A domestic company is defined for tax purposes as a company incorporated in India. The definition also includes a company incorporated outside India (foreign company) if the company has made certain arrangements for declaration and payment of a dividend in India. The tax rates in India are specified with reference to a domestic company. As a result, it is possible for a foreign company to be taxed at rates applicable to a domestic company if it has made the necessary arrangements for the declaration and payment of a dividend in India.

A company resident in India is subject to tax on its worldwide income, unless the income is specifically exempt. A company not resident in India is subject to Indian tax on Indian-source income and on income received in India. Depending on the circumstances, certain income may be deemed to be Indian-source income. Companies incorporated in India are resident in India for tax

purposes, as are companies incorporated outside India, if their place of effective management in that year is in India. As a result, if the place of effective management of a foreign company is in India, it is subject to tax in India on its worldwide income. If such a foreign company also qualifies as a domestic company (see above), the tax rates applicable to a domestic company apply. The government has issued guidelines for the determination of the place of effective management of a foreign company.

Rates of corporate tax. Domestic companies are subject to tax at a basic rate of 30% (25% for domestic companies that had gross turnover not exceeding INR4 billion in the 2019-20 fiscal year). New companies set up and registered on or after 1 March 2016 that are engaged in the manufacturing or production of articles or things and research with respect to such articles or things can opt for a concessional tax rate of 25%, subject to the fulfillment of specified conditions. From the 2019-20 fiscal year, all domestic companies can opt for a concessional tax rate of 22% subject to the fulfillment of specified conditions. A domestic company set up and registered on or after 1 October 2019 that commences the manufacturing or production of an article or thing or the generation of electricity on or before 31 March 2023 can opt for a concessional tax rate of 15%, subject to the fulfillment of specified conditions. In addition, a 7%, 10% or 12% surcharge (for details regarding the surcharge, see footnote [a] in Section A) and a 4% cess are imposed on the income tax of such companies. Long-term capital gains are taxed at special rates (see *Capital gains*).

For foreign companies, the net income is taxed at 40% plus the 2% or 5% surcharge, as applicable, and the 4% cess. A rate of 10% plus the 2% or 5% surcharge and the 4% cess or the treaty rate, whichever is more beneficial (see Section F for treaty withholding tax rates), applies to royalties and technical services fees paid to foreign companies if the royalty or technical services fees agreement is approved by the central government or if it is in accordance with the Industrial Policy. A rate of 20% or the treaty rate, whichever is more beneficial (see Section F for treaty withholding tax rates), plus the 2% or 5% surcharge and the 4% cess applies to dividends paid to foreign companies. A rate of 20% (plus the 2% or 5% surcharge and the 4% cess) applies to gross interest from foreign-currency loans or from units of a mutual fund. A lower rate of 5% (plus the 2% or 5% surcharge and the 4% cess) applies to gross interest from foreign-currency borrowings raised by Indian companies or business trusts by way of loans between 1 July 2012 and 30 June 2023, long-term infrastructure bonds issued between 1 July 2012 and 1 October 2014 or long-term bonds issued between 1 October 2014 and 30 June 2023, subject to prescribed conditions. A lower rate of 5% (plus the 2% or 5% surcharge and the 4% cess) also applies to interest payable between 1 June 2013 and 1 July 2023 on RDBs issued by Indian companies and government securities, subject to prescribed conditions. Effective from the 2020-21 fiscal year, a lower rate of 4% (plus the 2% or 5% surcharge and the 4% cess) applies to gross interest from foreign-currency borrowings raised by Indian companies or business trusts by way of long-term bonds or RDBs that are listed on a recognized stock exchange located in any IFSC and that are issued between 1 April 2020 and 1 July 2023. A lower rate of 5% (plus the 2% or

5% surcharge and the 4% cess) applies to interest received from units of business trusts in India (see Section E).

If a nonresident with a permanent establishment or fixed place of business in India enters into a royalty or technical services fees agreement or earns dividend income and if the royalties or fees paid under the agreement or dividend income are effectively connected to such permanent establishment or fixed place, depending on the applicable tax treaty, the payments are taxed on a net income basis at a rate of 40% plus the 2% or 5% surcharge and the 4% cess.

Income from carbon credits. Effective from the 1 April 2018, income from transfer of carbon credits is taxed at a rate of 10% (plus applicable surcharge and cess) on a gross basis without allowing any expenditure or allowance against such income.

Income from crude oil. The income tax law provides for a tax exemption to foreign companies earning income from the storage of oil in a facility in India and from the sale of crude oil to any person resident in India, under an agreement entered into or approved by the central government. This exemption extends to income accruing or arising to a foreign company from the sale of leftover stock of crude oil from a facility in India after the expiration of agreement or the arrangement with the central government.

Tax incentives. Subject to prescribed conditions, the following tax exemptions and deductions are available to companies with respect to business carried on in India:

- A 10-year tax holiday equal to 100% of the taxable profits is available to undertakings or enterprises engaged in the following:
 - Developing or operating and maintaining or developing, operating and maintaining infrastructure facilities (roads, toll roads, bridges, rail systems, highway projects, including housing or other activities that are integral parts of the highway projects, water supply projects, water treatment systems, irrigation projects, sanitation and sewerage systems, solid waste management systems, ports, airports, inland waterways, inland ports or navigational channels in the sea), if development or operation and maintenance of the infrastructure facility begins before 1 April 2017
 - Generation or generation and distribution of power if the company begins to generate power at any time during the period of 1 April 1993 through 31 March 2017
 - Starting transmission or distribution by laying a network of new transmission or distribution lines at any time during the period of 1 April 1999 through 31 March 2017
 - Undertaking substantial renovation and modernization (at least 50% increase in book value of plant and machinery) of an existing network of transmission or distribution lines during the period of 1 April 2004 through 31 March 2017
 - Development of a Special Economic Zone (SEZ) notified (through an official publication by the government of India) for the period beginning on 1 April 1997 and ending on 31 March 2006

The company may choose any 10 consecutive years within the first 15 years (10 out of 20 years in certain circumstances) for the period of the tax holiday. Such tax holiday is not available to an

undertaking or enterprise that is transferred in an amalgamation or demerger.

- A 10-year tax holiday equal to 100% of taxable profits for the first 5 years and 30% of taxable profits for the next 5 years from the business of processing, preserving and packaging of fruits or vegetables or from the integrated business of handling, storing and transporting food grains. A similar tax holiday is available with respect to profits from the business of processing, preserving and packaging of meat and meat products, poultry or marine or dairy products.
- Deduction allowed equal to 100% of the profits derived from the business of developing and building a housing project if approval from the competent authority is obtained during the period of 1 June 2016 through 31 March 2021, subject to fulfillment of other conditions. The size of the plot and residential unit must be within specified limits to qualify for the tax holiday. Similar benefit to be notified by the government will be extended to a rental housing project.
- A 3-year tax holiday out of 10 years with respect to profits derived from an eligible startup business that involves innovation, development or improvement of products or processes or services or a scalable business model with a high potential of employment generation or wealth creation, for domestic companies or limited liability partnerships incorporated between 1 April 2016 and 1 April 2022 with a turnover limit of INR1 billion in the fiscal year of claiming the deduction, subject to other conditions.
- A 15-year tax holiday with respect to profits derived from export activities by units that begin to manufacture or produce articles or things or provide services in SEZs. For the first 5 years of the tax holiday, a tax deduction equal to 100% of the profits derived from the export of articles, things or services provided is available. For the following 5 years, a tax deduction equal to 50% of the profits is available. For the next 5 years, the availability of the deduction is contingent on the allocation of the profits to a specified reserve and the use of such amounts in the prescribed manner. The deduction is capped at 50% of the profits allocated to the reserve.
- A 10-year tax deduction equal to 100% of profits derived from an undertaking that begins the manufacturing or production of specified goods or carries on specified business in northeastern states before 1 April 2017. This deduction is also available if an undertaking manufacturing the specified goods undertakes a substantial expansion that involves an increase in investment in plant and machinery by at least 25% of the book value of plant and machinery (computed before depreciation).
- A 5-year tax holiday equal to 100% of the profits from the business of collecting and processing or treating of biodegradable waste for either of the following purposes:
 - Generating power or producing biofertilizers, biopesticides or other biological agents
 - Producing biogas or making pellets or briquettes for fuel or organic manure
- A tax holiday equal to 100% of the profits has been introduced, effective from the 2018-19 fiscal year for agricultural produce companies with turnover up to INR1 billion. If they are engaged in the purchase, supply, marketing and processing of

agricultural produce from their members, the benefit can be obtained for a period of six years beginning with the 2018-19 fiscal year.

- To encourage employment generation, a 30% deduction is provided for three years for the emoluments paid to new employees (employed for 240 days). This period is reduced to 150 days for apparel manufacturers. Effective from the 2018-19 fiscal year, the benefit extends to companies engaged in the manufacturing of leather and footwear. In addition, if the minimum period of employment is not met in the first year, the deduction is still allowed if the criteria is met in the succeeding year.
- Accelerated deduction of capital expenditure (other than expenditure on the acquisition of land, goodwill or financial instruments) incurred, wholly and exclusively for certain specified businesses in the year of the incurrence of such expense. Expense incurred before the commencement of business is allowed as a deduction on the commencement of the specified business. The following are the specified businesses:
 - Setting up and operating a cold chain facility
 - Setting up and operating a warehousing facility for storage of agricultural produce
 - Laying and operating a cross-country natural gas or crude or petroleum oil pipeline network for distribution, including storage facilities that are an integral part of such network
 - Building and operating in India a new hotel with a two-star or above category, as classified by the central government
 - Building and operating in India a new hospital with at least 100 beds for patients
 - Developing and building a housing project under a scheme for slum redevelopment or rehabilitation framed by the government
 - Developing and building a housing project under a scheme for affordable housing framed by the central or state government in accordance with the prescribed guidelines
 - Producing fertilizers in a new plant or newly installed capacity in an existing plant
 - Setting up and operating an inland container depot or a container freight station notified or approved under the Customs Act
 - Setting up and operating a warehousing facility for storage of sugar
 - Beekeeping and production of honey and beeswax
 - Laying and operating a slurry pipeline for the transportation of iron ore
 - Setting up and operating a semiconductor wafer fabrication manufacturing unit notified by the Central Board of Direct Taxes (CBDT; the administrative authority for direct taxes) in accordance with prescribed guidelines
 - Developing or maintaining and operating or developing, maintaining and operating a new infrastructure facility

Minimum alternative tax. The minimum alternative tax (MAT) applies to a company if the tax payable by the company on its total income, as computed under the Income Tax Act, is less than 15% of its book profit, effective from the 2019-20 fiscal year. It is levied at a rate of 15% of book profit, plus applicable surcharge and cess (the surcharge, as applicable, is imposed at a rate of 7%

or 12% for domestic companies and 2% or 5% for foreign companies, and the cess is imposed at a rate of 4%), effective from the 2019-20 fiscal year. The concessional rate of 9% (plus surcharge and cess) applies in the case of a unit located in an IFSC that derives its income solely in convertible foreign exchange. MAT is levied on companies only and does not apply to firms or other persons, which are separately subject to an alternative minimum tax of 18.5% (plus applicable surcharge and cess). MAT does not apply to a foreign company in the following cases:

- In the case of a foreign company that is resident of a jurisdiction with which India has entered into a treaty, if such foreign company does not have a permanent establishment in India under the terms of the relevant treaty
- In the case of a foreign company that is resident of a country with which India has not entered into a treaty, if such foreign company does not have a place of business in India under the corporate tax laws of India

For domestic companies opting for the concessional tax rate of 15% or 22% (see footnote [b] in Section A), the MAT provisions do not apply.

In computing book profit for MAT purposes, certain positive and negative adjustments must be made to the net profit shown in the books of account per the applicable accounting standards.

The net profit as per the profit-and-loss account is increased by the following key items:

- Amount of income tax (including dividend distribution tax, any interest charged under the Income Tax Act, surcharge and cess) paid or payable and the provision for such tax
- Amount carried to any reserves
- Amount allocated to provisions for liabilities other than ascertained liabilities
- Amount allocated to provision for losses of subsidiary companies
- Amount of dividend paid or proposed
- Amount of expenditure related to exempt income
- Amount of depreciation
- Amount of deferred tax and the provision for such tax, if debited to the profit-and-loss account
- Amounts set aside as a provision for diminution in the value of any asset
- Amount in revaluation reserve relating to a revalued asset on retirement of the asset
- Expenditure related to a share of the income of an association of persons that is not taxable
- Expenditure of a foreign company related to capital gains on specified securities, interest, dividends, royalties or fees for technical services, in certain specified circumstances
- Notional loss on the transfer of shares of a special-purpose vehicle to a business trust in exchange for units allotted by the trust, notional loss resulting from any change in the carrying amounts of such units or loss on the transfer of such units
- Expenditure related to royalty income with respect to patents covered by the Patent Box Regime (see Section E)
- Gain on the transfer of shares of a special-purpose vehicle to a business trust in exchange for units

The net profit is decreased by the following key items:

- Amount withdrawn from any reserves or provisions if such amount is credited in the profit-and-loss account
- Amount of losses carried forward (excluding depreciation) or unabsorbed depreciation, whichever is less, according to the books of account in the case of all companies (except as referred to below)
- The aggregate amount of unabsorbed depreciation and losses brought forward in the case of a company against which an application is admitted under the Insolvency and Bankruptcy Code, 2016
- The aggregate amount of unabsorbed depreciation and losses brought forward in case of a specified distressed company, and its direct or indirect subsidiary
- Profits of “sick” industrial companies, which are companies that have accumulated losses equal to or exceeding their net worth at the end of a financial year and are declared to be sick by the Board for Industrial and Financial Reconstruction
- Income that is exempt from tax
- Amount of depreciation debited to the profit-and-loss account excluding depreciation on account of revaluation of assets
- Amount of deferred tax, if any such amount is credited to the profit-and-loss account
- Amount withdrawn from revaluation reserve and credited to the profit-and-loss account, to the extent that it does not exceed depreciation of the revalued assets
- Share in the income of an association of persons that is not taxable
- Capital gains on certain specified securities, interest, royalties, fees for technical services or dividend income of a foreign company in specified circumstances
- Notional gain on the transfer of shares of a special-purpose vehicle to a business trust in exchange for units allotted by the trust, notional gain resulting from any change in the carrying amount of such units or gain on the transfer of such units
- Royalty income with respect to patents covered by Patent Box Regime (see Section E)
- Loss on the transfer of shares of a special-purpose vehicle to a business trust in exchange for units

MAT paid by companies can be carried forward and set off against income tax payable in subsequent years under the normal provisions of the Income Tax Act for a period of 15 years. The maximum amount that can be set off against regular income tax is equal to the difference between the tax payable on the total income as computed under the Income Tax Act and the tax that would have been payable under the MAT provisions for that year.

MAT does not apply to income from life insurance businesses.

In addition, it has been clarified with retrospective effect from the 2000-2001 fiscal year that MAT also does not apply to foreign companies whose total income is comprised solely of profits and gains from the operation of ships and aircrafts, exploration and extraction of mineral oils, and civil construction in certain turnkey power projects, which are subject to presumptive basis of taxation under the Income Tax Act.

A report in a prescribed form that certifies the amount of book profits must be obtained from a chartered accountant.

Capital gains

General. The Income Tax Act prescribes special tax rates for the taxation of capital gains. Gains derived from “transfers” of “capital assets” are subject to tax as capital gains and are deemed to be income in the year of the transfer.

“Transfer” and “capital asset” are broadly defined in the Income Tax Act. In addition, shares or interests in foreign entities are deemed to be capital assets located in India if they derive, directly or indirectly, their value substantially from assets located in India. Gains derived from the transfer of such deemed capital assets are deemed to be income in the year of transfer. This provision does not apply to investments held by nonresidents in Foreign Institutional Investors (FIIs) in certain circumstances.

The tax rate at which capital gains are taxable in India depends on whether the capital asset transferred is a short-term capital asset or a long-term capital asset. A short-term capital asset is defined as a capital asset that is held for less than 36 months immediately before the date of its transfer. However, if the capital asset is an equity or preference share in a company or a security (for example, a debenture, bond, government security or derivative) listed on a recognized stock exchange in India, a unit of an equity-oriented mutual fund or a specified zero-coupon bond, a 12-month period replaces the 36-month period. In addition, in the case of shares of a company (other than shares listed on recognized stock exchange in India) and immovable property (land or building or both), a 24-month period replaces the 36-month period. A capital asset that is not a short-term capital asset is a long-term capital asset.

Capital gains on specified transactions on which securities transaction tax has been paid on acquisition as well as on sale. Effective from the 2018-19 fiscal year, long-term capital gains in excess of INR100,000 derived from the transfer of equity shares on which securities transaction tax (STT) has been paid on acquisition as well as on sale of equity shares are chargeable to tax at a rate of 10%. These gains were previously exempt from tax.

Effective from the 2018-19 fiscal year, long-term capital gains in excess of INR100,000 derived from the transfer of units of an equity-oriented fund or units of a business trust on a recognized stock exchange in India on which STT has been paid at the time of such transfer is chargeable to tax at a rate of 10%. The exemption from tax on long-term capital gains on such transfer of listed securities is withdrawn, effective from the 2018-19 fiscal year.

Short-term capital gains derived from the transfer of equity shares in a company, units of an equity-oriented fund or units of a business trust on a recognized stock exchange in India are taxable at a reduced rate of 15% plus the surcharge, as applicable, and the cess, if STT has been paid on the transaction.

The tax regime described above applies to all types of taxpayers, including FIIs.

Sales of unlisted equity shares that are included in an initial public offer are also subject to STT and are eligible for the aforementioned

reduced rates with respect to long-term or short-term capital gains.

Capital gains on transactions on which STT has not been paid. For sales of shares and units of mutual funds that have not been subject to STT and for capital gains derived from the transfer of a capital asset that is not a specified security, the following are the capital gains tax rates (excluding the applicable surcharge and cess).

Type of taxpayer	Short-term capital gains rate (%) (a)	Long-term capital gains rate (%) (a)
Domestic companies	25/30 (b)	20 (c)
FIIIs	30	10
Nonresidents other than FIIIs	40	20 (c)(d)

- (a) The above rates are subject to a surcharge and cess. The surcharge is levied at a rate of 7% for domestic companies and at a rate of 2% for foreign companies if the net income of the company exceeds INR10 million. The surcharge rate is increased to 12% for domestic companies and 5% for foreign companies if net income exceeds INR100 million. The rate of the cess is 4%.
- (b) See footnote (b) of Section A.
- (c) A concessional rate of 10% (plus surcharge and cess) applies in certain cases, such as the transfer of listed securities, listed units of mutual funds or zero-coupon bonds, subject to certain conditions.
- (d) Gains derived from the transfer of unlisted securities are taxable at a rate of 10%, without the benefit of protection from foreign currency fluctuation and indexation for inflation on the computation of such gains (see discussion below).

Computational provisions. For assets that were acquired on or before 1 April 2001, the market value on that date may be substituted for actual cost in calculating gains. However, for land and buildings, such market value shall not exceed the stamp duty value as of such date. The acquisition cost is indexed for inflation. However, no inflation adjustment is allowed for bonds and debentures. For the purpose of calculating capital gains, the acquisition cost of bonus shares is deemed to be zero. Nonresident companies compute capital gains on shares and debentures in the currency used to purchase such assets, and consequently they are protected from taxation on fluctuations in the value of the Indian rupee. As a result, the benefit of indexation is not available to nonresident companies with respect to the computation of capital gains on shares. If the consideration is not ascertainable or determinable for a transfer, the fair market value of the asset transferred is deemed to be the full value of consideration.

Specific rules apply for the computation of long-term capital gains on the transfer of specified listed securities (equity shares of a company, units of an equity-oriented fund or units of a business trust) on which STT has been paid, as discussed above in *Capital gains on specified transactions on which securities transaction tax has been paid on acquisition as well as on sale.*

If unlisted shares are transferred at a value that is less than fair market value, as prescribed, such fair market value is treated as notional consideration for the transfer of unlisted shares.

Slump sales, demergers and amalgamations. Special rules apply to “slump sales,” “demergers” and “amalgamations” (for a description of amalgamations, see Section C).

A “slump sale” is the transfer of an undertaking for a lump-sum consideration without assigning values to the individual assets and liabilities. Effective from the 2020-21 fiscal year, the definition of the term “slump sale” has been widened to include slump “exchange,” which is the transfer of an undertaking in exchange for non-monetary consideration. The profits derived from such sale or exchange are taxed as long-term capital gains if the transferred undertaking has been held for more than 36 months.

Capital gains on a slump sale equal the difference between fair market value of the undertaking and the net worth of the undertaking. For purposes of computing capital gains, the net worth of the undertaking equals the difference between the value of the total assets (the sum of the tax-depreciated value of assets that are depreciable for income tax purposes and the book value of other assets other than self-generated goodwill) of the undertaking or division and the book value of liabilities of such undertaking or division. The fair market value of the undertaking is calculated as per the prescribed method.

With respect to companies, a “demerger” is the transfer of an undertaking by one company (demerged company) to another company (resulting company) pursuant to a scheme of arrangement under Sections 230 to 232 of the Companies Act, 2013, provided that certain conditions are satisfied. Subject to certain conditions, the transfer of capital assets in a demerger is not considered to be a transfer subject to capital gains tax if the resulting company is an Indian company.

In a demerger, the shareholders of the demerged company are issued shares in the resulting company in proportion to their existing shareholdings in the demerged company based on a pre-determined share-issue ratio. This issuance of shares by the resulting company to the shareholders of the demerged company is exempt from capital gains tax.

In the case of a demerger of a foreign company, the provisions of Sections 230 to 232 of the Companies Act, 2013 do not apply. In such case, a transfer of shares in an Indian company, or shares in a foreign company that derives its value substantially from assets located in India, by the demerged foreign company to the resulting foreign company is exempt from capital gains tax if the following conditions are satisfied:

- Shareholders holding at least 75% in value of the shares in the demerged foreign company continue to remain shareholders of the resulting foreign company.
- Such transfer does not attract capital gains tax in the country of incorporation of the demerged foreign company.

Like demergers, if certain conditions are satisfied, transfers of capital assets in amalgamations are not considered to be transfers subject to capital gains tax, provided the amalgamated company is an Indian company.

In an amalgamation, shareholders of the amalgamating company are usually issued shares in the amalgamated company in exchange for their existing shareholding in the amalgamating company based on a predetermined share-exchange ratio. Such exchange

of shares is exempt from capital gains tax if the following conditions are satisfied:

- The transfer is made in consideration of the allotment of shares in the amalgamated company (unless the shareholder itself is the amalgamated company).
- The amalgamated company is an Indian company.

A transfer of shares in an Indian company or shares in a foreign company that derives its value substantially from assets located in India, in an amalgamation of two foreign companies, is exempt from capital gains tax if the following conditions are satisfied:

- At least 25% of the shareholders of the amalgamating foreign company continue to remain shareholders of the amalgamated foreign company.
- Such transfer does not attract capital gains tax in the country of incorporation of the amalgamating foreign companies.

No capital gains tax applies for the conversion of preference shares to equity. Furthermore, the transfer of rupee-denominated bonds of an Indian company issued outside India from one non-resident to another nonresident does not result in capital gains tax in India.

Gains from conversion of stock-in-trade into a capital asset is taxable as business income in the year of conversion. Business income is computed with reference to the fair market value of the stock-in-trade as of the date of conversion. Consequently, the fair market value is regarded as the cost of acquisition of the converted capital asset. The holding period of such capital asset is calculated from the date of conversion.

Depreciable assets. To compute capital gains on sales of assets on which depreciation has been allowed, the declining-balance value of the classes of assets as of the beginning of the previous year (including additions during the year) of which the assets form a part is reduced by the sales proceeds of the assets. If the sales proceeds exceed the declining-balance value, the excess is treated as short-term capital gain. Otherwise, no capital gain results from sales of such assets even if the sales proceeds for a particular asset are greater than the cost of the asset.

Non-depreciable assets. For non-depreciable assets, such as land, gains are computed in accordance with the rules described below.

If the asset is held for 36 months or more, the capital gain is considered to be a long-term capital gain, which equals the sale consideration less the aggregate of indexed cost of acquisition, indexed cost of improvement and cost of transfer. The gain on an asset held for less than 36 months is considered a short-term capital gain, which equals the sale consideration less the aggregate of acquisition cost, cost of improvement and cost of transfer. For listed shares, listed securities, equity-oriented units of mutual funds and zero-coupon bonds, a 12-month period replaces the 36-month period. Further, in the cases of shares of a company (other than shares listed on recognized stock exchange in India) and land and buildings or both, a 24-month period replaces the 36-month period.

The transfer of a capital asset by a parent company to its wholly owned Indian subsidiary or the transfer of a capital asset by a

wholly owned subsidiary to its Indian parent company is exempt from capital gains tax, subject to the fulfillment of certain conditions.

Administration. The Indian fiscal year runs from 1 April to 31 March. Generally, all companies must file tax returns by 31 October or 30 November (for companies undertaking international transactions, see Transfer pricing in Section E). However, for the 2020-21 fiscal year, the due date for filing the corporate tax return is extended to 15 March 2022. Further, all companies had been required to file an audit report together with the return or by the due date for the filing of the return. However, effective from 2019-20 fiscal year, the due date for filing the audit report is changed to one month prior to due date for the filing of the tax return.

Further, foreign companies had been exempted from filing the tax return in India if its total income taxable under the domestic law consisted only of income that was in the nature of interest, royalties or fees for technical services (see Section A) and if on such income appropriate taxes are withheld without claiming treaty benefit. Effective from 2020-21 fiscal year, this benefit is also extended to foreign companies whose total income consists of only dividends, interest, royalties and fees for technical services.

Tax is payable in advance on 15 June, 15 September, 15 December and 15 March. Any balance of tax due must be paid on or before the date of filing the return. The carryforward of losses for a fiscal year is not allowed if a return is filed late.

A nonresident with a liaison office in India is required to submit a statement in the prescribed form within 60 days after the end of the fiscal year.

Income computation and disclosure standards. The government of India has notified 10 income computation and disclosure standards (ICDS), which are effective for the 2016-17 fiscal year and future years. The ICDS provides a set of rules for computing taxable income under the headings, “profits and gains of business or profession” and “income from other sources” of the Income Tax Act. This applies to all taxpayers following the mercantile system of accounting.

The Income Tax Act provides the following in relation to the application of ICDS with retrospective effect from the 2016-17 fiscal year:

- Mark-to-market losses or expected losses are allowed as deductions from business income to the extent permissible under the ICDS.
- Foreign-exchange fluctuation gains or losses with respect to specified foreign-currency transactions are computed in accordance with the ICDS.
- Profits arising from construction contracts and service contracts are computed using the percentage-of-completion method in accordance with ICDS.
- Inventory valuation rules are in accordance with the ICDS.
- Interest on compensation or enhanced compensation is deemed to be income in the year in which it is received.

- Export incentives or claims for price escalation are taxable in the year in which reasonable certainty of its realization is achieved.
- Subsidies or grants received from the government are taxed on receipt if they were not taxed in an earlier tax year.

ICDS do not affect the maintenance of books of accounts.

Withholding taxes. Payments to resident companies are subject to the following withholding taxes:

Type of payment	Rate (%) (a) (b)
Dividends	10
Interest	10 (c)
Commissions from sales of lottery tickets	5
Other specified commissions	5
Payments to contractors	2
Rent	2/10 (d)
Income from lotteries and horse races	30
Professional and technical service fees	2/10 (e)
Royalties	10
Payments of compensation to residents for the compulsory acquisition of certain immovable property	10
Payment of consideration for transfer of immovable property	1 (f)
Withdrawal of cash from banks, cooperative societies and post offices	2/5 (g)
Specified personal payments made by individuals and Hindu Undivided Families (HUFs)	5 (h)
Payments by e-commerce operator to e-commerce Participant	1
Any income in respect of mutual funds units	10 (i)
Payment for purchase of goods	0.1 (j)

- (a) If an income recipient fails to furnish its PAN, tax must be withheld at the higher of the rate specified in the relevant provision of the Income Tax Act and 20% (5% for purchase of goods).
- (b) Effective from 1 July 2021, higher withholding is to be made for persons who have not filed tax returns for two preceding years immediately preceding the fiscal year in which withholding is required to be made, subject to other conditions.
- (c) See footnote (g) in Section A.
- (d) The withholding tax rate for rental payments is 10%. For equipment rental, the rate is 2%.
- (e) The withholding tax rate is 2% for fees for technical services and for 10% for fees for professional services.
- (f) Effective from 1 September 2019, the definition of “immovable property” includes payments made for all rights and facilities that are incidental to the transfer of the immovable property, made either under the same agreement or under a different agreement.
- (g) A 2% withholding tax is levied if the cash withdrawn is in excess of INR2 million and a 5% withholding tax is levied if the cash withdrawn is in excess of INR10 million.
- (h) Effective from 1 September 2019, a 5% withholding tax is levied on personal payments made by individuals and HUFs to any residents carrying out any work under a contract (including supply of labor), payments made toward professional services or commission or brokerage, in excess of INR5 million.
- (i) The withholding tax does not apply if the aggregate payment during the year does not exceed INR5,000 or if the income is in the nature of capital gains.
- (j) Effective from 1 July 2021, a 0.1% withholding tax is levied on the purchase of goods for a value exceeding INR5 million in the fiscal year, subject to specified conditions.

Payments to nonresident companies are subject to the following withholding taxes.

Type of payment	Rate (%) (a)(b)(c)
Dividends	20
Interest on foreign-currency loans	4/5/20 (d)
Royalties and technical services fees	10 (e)
Rent	40
Income from lotteries and horse races	30
Long-term capital gains other than exempt gains	20 (f)
Other income	40

- (a) The 2% or 5% surcharge (applicable to payments made to foreign companies exceeding INR10 million or INR100 million, respectively) and the 4% cess are imposed on the above withholding taxes.
- (b) If the income recipient fails to furnish a PAN to the payer, tax must be withheld at the higher of the following rates:
- Rate specified in the relevant provision of the Income Tax Act
 - Tax treaty rate
 - 20%
- (c) If the recipient of income is located in an NJA, tax must be withheld at the higher of the rate specified in the relevant provision of the Income Tax Act and 30% (see Section E).
- (d) See footnote (g) in Section A.
- (e) See footnote (i) in Section A.
- (f) A reduced rate of 10% applies in the case of long-term capital gains without the benefit of protection from foreign currency fluctuation and indexation for inflation on the computation of such gains. (See *Capital gains*.)

Tax Collection at Source. Tax Collection at Source (TCS) is a mechanism under which the payee collects an extra amount (in the nature of income tax) from the payer in addition to the amount payable toward the sale of goods or services. The payee deposits such tax with the government and issues a TCS certificate to the payer pursuant to which the payer gets credit for such TCS.

TCS applies only to certain specific transactions such as the sale of alcoholic liquor, tendu leaves, scrap or a motor vehicle with a value exceeding INR1 million as well as to the grant of license and interest with respect to a parking lot, toll plaza, mine or quarry for the purpose of business. The payee needs to collect tax from the payer at certain specific rates provided under the law.

Further, effective from 1 October 2020, TCS is also applicable to the following persons at certain specified rates:

- Authorized dealers when they receive an amount of more than INR700,000 in a tax year for remittance of money outside India
- Sellers of an overseas tour program package (as defined) on the amount of the package sold
- Sellers who receive consideration for the sale of any goods if the value or aggregate of such value is INR5 million in a tax year (other than the export of goods or sale of any of the goods mentioned above)

Dividends. Dividends paid by domestic companies are now taxed in the hands of the recipients. Therefore, the prior requirement for domestic companies to pay a dividend distribution tax (DDT) at an effective rate of 20.56% (basic rate of 15% on the gross amount of dividend payable plus the 12% surcharge and the 4% cess) on dividends declared, distributed or paid by them has been

eliminated. Effective from the 2020-2021 fiscal year, mutual funds are not required to pay any additional tax on the distribution of dividend income to their unit holders. Consequently, dividend income received by unit holders from mutual fund is taxed in the hands of the unit holder at applicable rates.

Gross dividends received by a domestic company from a specified foreign company (in which it has a shareholding of 26% or more) are taxable at a concessional rate of 15% (plus applicable surcharge and cess).

Dividends received by a domestic company from another domestic company, foreign company or a business trust can be set off against subsequent dividends paid by the domestic company to its shareholders but not exceeding the amount of such dividends paid, subject to conditions.

Effective from the 2017-18 fiscal year, for the purpose of the computation of the deemed dividend in the hands of an amalgamated (or resulting) company, the accumulated profits or loss is increased by the accumulated profits of the amalgamating company as of the date of amalgamation (regardless of whether it is capitalized).

Buyback tax. The buyback of unlisted shares by an Indian company is subject to buyback tax at a rate of 20% plus surcharge of 12% and cess of 4%, resulting in effective tax rate of 23.29%. The tax is computed on the difference between the price at which shares are bought back and the consideration received by the company for issuance of shares. The amounts received are exempt in the hands of the shareholders. Effective from 5 July 2019, the buyback of listed shares by an Indian company is subject to buyback tax. However, the buyback of listed shares that is publicly announced on or before 5 July 2019 is exempt from buyback tax.

Foreign tax relief. Foreign tax relief for the avoidance of double taxation is governed by tax treaties with several countries. If no such agreements exist, resident companies may claim a foreign tax credit for the foreign tax paid under domestic law provisions. The amount of the credit is the lower of the Indian tax payable on the income that is taxed twice and the foreign tax paid as per the applicable tax treaty. Treaty benefits and relief are available only if a nonresident taxpayer obtains a tax-residency certificate indicating that it is resident in a jurisdiction outside India. This certificate must be issued by the government of that jurisdiction. In addition to obtaining the certificate, taxpayers must maintain certain prescribed documents and information. The Indian government has issued rules for the administration and computation of the tax credit in India. The rules also include provisions for compliance and reporting that must be undertaken to claim the tax credit in India.

C. Determination of trading income

General. Business-related expenses are deductible; capital expenditures (other than on scientific research in certain cases) and personal expenses may not be deducted.

Certain expenses on which taxes are required to be withheld are not allowable as deductions until the required taxes have been withheld and paid to the government. In the case of amounts paid to residents, such disallowance is limited to 30% of the expenses; in the case of amounts paid to nonresidents, the entire amount is disallowed. Such disallowance is relaxed if the payee (resident or nonresident) of the income (on which taxes are not withheld) offers such income to tax in India by filing an income tax return and files a certificate from an accountant. The deductibility of head-office expenses for nonresident companies is limited.

Expenses that are paid to a person in cash (that is, otherwise than through a banking channel or a prescribed electronic mode) are disallowed if they exceed the value of INR10,000 in a day.

Income derived from operations with respect to mineral oil, and certain other income derived by nonresidents (for example, from shipping business, operation of aircraft and turnkey power projects) are taxed on a deemed-profit basis. Under an optional tonnage tax scheme, shipping profits derived by Indian shipping companies are taxed on a deemed basis.

Inventories. In determining trading income, inventories may, at the taxpayer's option, be valued either at cost or the lower of cost or replacement value. The last-in, first-out (LIFO) method is not accepted. Refer also to ICDS for the valuation of inventories for the computation of income of certain taxpayers.

Provisions. Provisions for taxes (other than income tax, dividend distribution tax and wealth tax, which are not deductible expenses), duties, bonuses, leave salary, payments to Indian railways for use of railway assets and interest on loans from financial institutions, nonbanking financial companies (NBFCs) and scheduled banks are not deductible on an accrual basis unless payments are made before the due date of filing of the income tax return. If such payments are not made before the due date of filing of the income tax return, a deduction is allowed only in the year of actual payment. General provisions for doubtful trading debts are not deductible until the bad debt is written off in the accounts, but some relief is available for banks and financial institutions with respect to nonperforming assets. Interest payable on loans, borrowings or advances that is converted into loans, borrowings or advances may not be claimed as a deduction for tax purposes.

Depreciation allowances. Depreciation is calculated using the declining-balance method and is allowed on classes of assets. Depreciation rates vary according to the class of assets. The following are the general rates.

Asset	Rate (%)
Plant and machinery	15 (a)
Motor buses, motor lorries and motor taxis used in a rental business	30/45 (b)
Motor cars other than those used in the business of running them on hire	15/30 (b)
Buildings	10
Furniture and fittings	10

- (a) Subject to the fulfillment of prescribed conditions, accelerated depreciation equal to 20% of the actual cost is allowed in the first year with respect to plant and machinery (other than ships or aircraft) acquired or installed after 31 March 2005. Accelerated depreciation is allowed at the rate of 35% to an undertaking or manufacturing enterprise set up in notified areas (in the states of Andhra Pradesh, Bihar, Telangana or West Bengal) on or after 1 April 2015 but before 1 April 2020. Additions to plant and machinery that are used for less than 180 days in the year in which they are acquired and placed in service qualify for accelerated depreciation in that year at one-half of the above rates. The balance of accelerated depreciation is allowed in the subsequent year.
- (b) Effective for the 2019-20 fiscal year, an enhanced rate of depreciation of 30% and 45% is available on motor vehicles acquired and put to use on or after 23 August 2019 but before 1 April 2020.

Depreciation is also allowed on intangibles, such as know-how, patents, copyrights, trademarks, licenses, franchises or other similar commercial rights. These items are depreciated using the declining-balance method at a rate of 25%. Acquisition of a participating interest in an oil and gas block is considered an intangible asset (being a commercial right akin to a license), eligible for depreciation as stated above. Effective from the 2020-21 fiscal year, depreciation is not allowed on goodwill.

Special rates apply to certain assets, such as 40% for computers and computer software, energy-saving devices, and air or water pollution-control equipment (effective from the 2017-18 fiscal year). Previously, the depreciation rates were 60%, 80% and 100%. Additions to assets that are used for less than 180 days in the year in which they are acquired and placed in service qualify for depreciation in that year at one-half of the normal rates. On the sale or scrapping of an asset within a class of assets, the declining-balance value of the class of assets is reduced by the sales proceeds (for details concerning the capital gains taxation of such a sale, see Section B).

Companies engaged in power generation or power generation and distribution may elect to use the straight-line method of depreciation at specified rates.

If payment for the acquisition of asset is made in cash and it exceeds INR10,000 in aggregate in a day, such payment is not considered in determining the actual cost of asset and depreciation on the asset is not available, effective from the 2017-18 fiscal year.

Investment allowances. An additional deduction of 15% of the cost of new plant and machinery (other than ships, aircraft, computers, computer software and vehicles) is allowed to companies engaged in the business of manufacturing or production of articles or things that acquire and install new plant and machinery between 1 April 2014 and 31 March 2017 if their aggregate expenditure on such new plant and machinery exceeds INR250 million.

An additional deduction of 15% is available to an undertaking set up between 1 April 2015 and 31 March 2020 that is engaged in the business of manufacturing or production of articles or things in notified backward areas in the states of Andhra Pradesh, Bihar, Telangana or West Bengal and that acquires and installs new plant and machinery (other than ships, aircraft, computers, computer software and vehicles) between 1 April 2015 and 31 March 2020.

Relief for losses. Business losses, excluding losses resulting from unabsorbed depreciation of business assets (see below), may be carried forward to be set off against taxable income derived from business in the following eight years, provided the income tax return for the year of loss is filed on time.

For closely held corporations, a 51% continuity of ownership test must also be satisfied. Effective from 1 April 2019, startup companies may also need to satisfy a 51% ownership test to carry forward losses. Startup companies are defined in the income tax law as those in which the public does not hold a substantial interest. If startup companies fail to satisfy the ownership test of 51%, they may still be eligible to carry forward and set off losses of the first seven years beginning from the year of incorporation as long as the shareholders who held shares carrying voting power in the year of the loss continue to hold those shares in the setoff year. Effective from the 2017-18 fiscal year, the restriction does not apply to companies in which change in the shareholding takes place pursuant to an approved resolution process under the Insolvency and Bankruptcy Code, 2016. Effective from 1 April 2019, the restriction does not apply to a specified distressed company, subsidiary of such company and the subsidiary of such subsidiary in which a change in the shareholding takes place pursuant to a resolution plan approved by the government or if new directors are appointed or nominated by the National Company Law Tribunal in place of the suspended board of directors of company or an application has been moved by the government for the prevention of oppression and mismanagement.

Unabsorbed depreciation may be carried forward indefinitely to be set off against taxable income of subsequent years.

Domestic companies opting for a reduced tax rate of 15% or 22% (see footnote [b] in Section A) are not eligible to set off certain specified brought forward losses that are attributable to a claim in previous years of certain specified deductions.

Losses under the heading “Capital Gains” (that is, resulting from transfers of capital assets) may not be set off against other income, but may be carried forward for eight years to be set off against capital gains. Long-term capital losses may be set off against long-term capital gains only.

Losses from house property are eligible for setoff from other types of income to the extent of INR200,000 only in the first year of loss, for losses incurred on all types of properties including self-occupied, let out or deemed to be let-out properties. The balance of the unabsorbed loss can be carried forward for eight years and set off only from income from house property.

Amalgamations and demergers. Special rules apply to “amalgamations” and “demergers” (for a description of a “demerger,” see Section B). With respect to companies, an “amalgamation” is the merger of one or more companies with another company or the merger of two or more companies to form one company (the company or companies that merge are referred to as the “amalgamating company or companies” and the company with which they merge, or which is formed as a result of the merger, is known as the “amalgamated company”) that meet certain specified conditions.

An amalgamated company may claim the benefit of the carryforward of business losses and unabsorbed depreciation of the amalgamating companies if the following conditions are satisfied:

- Shareholders holding at least 75% of the shares of the amalgamating company become shareholders of the amalgamated company.
- The amalgamating company owns an industrial undertaking, a ship or a hotel.
- The amalgamating company has been engaged in business for at least three years and incurred the accumulated business loss or unabsorbed depreciation during such period.
- As of the date of amalgamation, the amalgamating company has continuously held at least 75% of the book value of the fixed assets that it held two years before the date of the amalgamation.
- At least 75% of the book value of fixed assets acquired from the amalgamating company is held continuously by the amalgamated company for a period of five years.
- The amalgamated company continues the business of the amalgamating company for at least five years from the date of amalgamation.
- Additional specified conditions apply to ensure that the amalgamation is for genuine business purposes.

In the event of non-compliance with any of the above conditions, any business losses carried forward and unabsorbed depreciation that has been set off by the amalgamated company against its taxable income is treated as income for the year in which the failure to fulfill any of the above conditions occurs.

Groups of companies. The income tax law does not provide for the consolidation of income or common assessment of groups of companies. Each company, including a wholly owned subsidiary, is assessed separately.

D. Other significant taxes

The following table summarizes other significant taxes.

Nature of tax	Rate (%)
Equalisation Levy on specified services; deducted from payments made to nonresidents that do not have a permanent establishment in India for the rendering of specified services to residents of India or nonresidents having a permanent establishment in India; specified services include online advertisements and provision of digital advertising space or any other facilities or services for the purpose of online advertisements	6
Equalisation Levy on e-commerce transactions; effective from 2020-21 fiscal year, nonresident e-commerce operators are taxable on consideration received for providing or facilitating “e-commerce supply or services” to certain specified persons	2

Nature of tax	Rate (%)
Securities Transaction Tax (STT); payable on transactions in equity shares, derivatives, units of an equity-oriented mutual funds and units of business trusts on a recognized stock exchange; the tax is imposed on the value of the transaction and varies according to the type of transaction	
Delivery-based transactions in equity shares or in units of equity-oriented funds	
Buyer	
Shares	0.1
Units	Nil
Seller	
Shares	0.1
Units	0.001
Sale of units of equity-oriented funds to mutual funds; tax paid by seller	0.001
Non-delivery-based transactions in equity shares or in units of an equity-oriented fund; tax paid by seller	0.025
Sale of derivatives	
Sale of option (seller); rate applied to option premium	0.017
Sale of option when option is exercised (buyer); rate applied to settlement price	0.125
Sale of futures (seller)	0.01
Sale of unlisted equity shares under offer for sale to public (seller)	0.2
Sale of units of a business trust (delivery-based)	
Tax paid by buyer	0.1
Tax paid by seller	0.1
Sale of units of a business trust (non-delivery-based); tax paid by seller	0.025
Commodities transaction tax	
Sale of commodities derivatives; tax paid by seller	0.01
Sale of an option on commodity derivative	
Tax paid by buyer	0.0001
Tax paid by seller	0.05
Goods and Services Tax (GST); on the supply of goods and services; levied by the central government or state government	Various
Customs duty and GST; on goods imported into India; levied by the central government	Various
Stamp duties; levied by each state on specified documents and transactions, including property transfers	Various
Social security contributions; paid by the employer for medical insurance plans for certain categories of employees and for minimum retirement benefit plans	Various

E. Miscellaneous matters

Foreign-exchange controls. All cross-border transactions with non-residents are subject to foreign-exchange controls contained in the Foreign Exchange Management Act. The rupee is fully convertible for trade and current account purposes. Except for certain specified restrictions, foreign currency may be freely purchased for trade and current account purposes. In general, such purchases must be made at the market rate. Capital account transactions are not permitted unless they are specifically allowed and the prescribed conditions are satisfied. Cross-border transactions that are specifically allowed include the following:

- All remittances abroad that require prior approval arrangements, such as joint venture and technical collaboration agreements.
- The remittance of interest, dividends, service fees and royalties.
- Repatriation of capital is also freely permitted for investment approved on a repatriable basis. However, for sales of Indian assets, the terms of sale require the approval of the exchange-control authorities, and certain other conditions must be satisfied.

On 7 November 2017, the Reserve Bank of India released guidelines on the simplification and consolidation of foreign-investment regulations applicable in India.

Effective from 7 January 2020, financial institutions or branches of financial institutions set up in an IFSC are permitted to conduct business in Indian rupees. Further, such institutions are allowed to trade in rupee derivatives (with settlement in foreign currency) in IFSCs in a phased manner starting with Exchange Traded Currency Derivatives followed by Over the Counter Derivatives at a later stage. In general, an Exchange Traded Currency Derivative is understood to be a standardized foreign exchange derivative contract traded on a recognized stock exchange to buy or sell one currency against another on a specified future date, at a price specified on the date of contract. An Over-the-Counter Derivative is a derivative other than those that are traded on exchanges and includes those traded on electronic trading platforms.

Transfer pricing. The Income Tax Act includes detailed transfer-pricing regulations. Although the guidelines are broadly in line with the principles set out by the Organisation for Economic Co-operation and Development (OECD), key differences exist.

Under these regulations, income and expenses, including interest payments, with respect to international transactions between two or more associated enterprises (including permanent establishments) must be determined using arm's-length prices. The transfer-pricing regulations also apply to, among other transactions, cost-sharing arrangements, certain capital-financing transactions, business restructurings or reorganizations and dealings in intangibles.

The transfer-pricing regulations contain definitions of various terms, including "associated enterprise," "arm's-length price," "enterprise," "international transaction" and "permanent establishment." It specifies methods for determining the arm's-length price. The following are the specified methods:

- Comparable uncontrolled price method
- Resale price method

- Cost-plus method
- Profit split method
- Transactional net margin method
- Any other method that takes into account the price that has been charged or paid or would have been charged or paid, in the same or a similar uncontrolled transaction, with or between non-associated enterprises, under similar circumstances, considering all the relevant facts

The CBDT has issued regulations for applying these methods to determine arm's-length prices. In addition, the CBDT has issued safe-harbor rules indicating the circumstances in which tax officers accept transfer prices or income declared by taxpayers. The safe harbor rules for determining transfer prices apply for five years beginning with the 2012-13 fiscal year.

On 7 June 2017, the government announced revised safe-harbor rules with an objective to reduce transfer-pricing litigation for eligible taxpayers. The new rules extend the applicability to an additional category of international transaction (low-value-adding intra-group services) and they also revise the applicable prices or margins that would be accepted as arm's length. The safe-harbor provisions were previously extended to the 2018-19 fiscal year with certain modifications in thresholds for eligible international transactions. The safe-harbor provisions have now been further extended to the 2019-20 fiscal year without any modification. For the 2016-17 fiscal year and the two years immediately following 2016-17 fiscal year, a taxpayer can opt for safe harbors under the old rules or the amended rules, whichever are more beneficial. From the 2019-20 fiscal year, the taxpayer is required to follow the amended safe harbor rules regarding revised applicable prices or margins that would be accepted as arm's length.

Also, effective from the 2019-20 fiscal year, the CBDT is enabled to notify a safe harbor or enter into advance pricing agreements for profit attribution to a permanent establishment or business connection (see *Attribution of income to business connection*).

The transfer-pricing regulations require each person entering into an international transaction to maintain prescribed documents and information regarding a transaction. Each person entering into an international transaction must arrange for an accountant to prepare a report and furnish it to the Tax Officer by the due date for filing the corporate tax return, which is 30 November in such circumstances. For the 2020-21 fiscal year, the due date for furnishing the transfer pricing report is extended to 15 February 2022 and the due date for filing the corporate tax return is extended to 15 March 2022.

A tax officer may make an adjustment with respect to an international transaction, if the officer determines that certain conditions exist, including any of the following:

- The price is not at arm's length.
- The prescribed documents and information have not been maintained.
- The information or data on the basis of which the price was determined is not reliable.
- Information or documents requested by the Tax Officer have not been furnished.

Stringent penalties (up to 2% of the transaction value) are imposed for noncompliance with the procedural requirements and for understatement of profits.

Measures allowing Advance Pricing Agreements (APAs) are effective from July 2012. Under these measures, the tax administration may enter into an APA with any person undertaking an international transaction. APAs are binding on the taxpayer and the tax authorities (provided no change in law and facts) and are valid for a maximum period of five consecutive years. The APA scheme provides for a “rollback” mechanism, which is subject to prescribed conditions and procedures. Under the “rollback” mechanism, an APA covering a future period may also be applied to international transactions entered into by a taxpayer during the periods (not exceeding four years) preceding the first year for which the APA is applicable.

Transfer-pricing measures apply to certain transactions involving profit-linked tax-holiday units.

Secondary adjustments. The Income Tax Act provides for a secondary-adjustment regime to ensure that profit allocation between associated enterprises is consistent with the primary transfer-pricing adjustment. Under the secondary-adjustment regime if, as a result of the primary adjustment to the transfer price, the total income or reduction of loss of taxpayer is increased and the excess money or part thereof that is available to any associated enterprise is not repatriated to India within a prescribed time, such excess money is deemed to be an advance made by the taxpayer to such associated enterprise, resulting in notional taxation of interest on such advance, effective from the 2017-18 fiscal year. Effective from 1 September 2019, a taxpayer has an option to pay an additional income tax of 18% (plus a surcharge of 12%) if the excess money computed under the secondary adjustment regime cannot be repatriated within the prescribed time limit. The additional tax paid is considered to be a final tax and is not available for further credit or deduction to the taxpayer.

The provision does not apply if the primary adjustment is less than INR10 million or if it is made for the 2015-16 fiscal year or earlier years. Any primary adjustment determined by an APA signed on or before 31 March 2017 is grandfathered, and it does not trigger secondary adjustments.

Country-by-Country Reporting, Master File and Local File. The Income Tax Act provides a specific regime with respect to Country-by-Country Reporting (CbCR), the Master File and the Local File in line with OECD’s final report on Base Erosion Profit Shifting (BEPS) Action 13. The reporting provisions apply from the 2016-17 fiscal year if consolidated revenue of an international group in the prior year exceeds the prescribed limit. The parent entity of the international group must file the CbCR if such parent entity is a resident of India. In other cases, every constituent entity of such group that is a resident of India must file the CbCR. It has also been clarified that an Indian constituent entity (with a nonresident parent) is now required to file the CbCR in India even if the parent entity has no obligation to file such report in its home jurisdiction. The government has recently issued rules for the implementation of the above requirements

that contain a few administrative changes and clarifications. The rules prescribe a monetary threshold, based on cumulative conditions of consolidated revenue and the value of international transactions, for maintenance of the Master File. The Master File compliance must be done by the constituent entity even if the entity is not required to maintain transfer-pricing documentation in relation to its international transactions.

The due date for the filing of the Master File in the first year (that is, the 2016-17 fiscal year) is extended to 31 March 2018. For subsequent years, the Master File needs to be filed on or before the due date for filing of the income tax return in India. Effective from the 2016-17 fiscal year, the time allowed for filing the CbCR is 12 months from the end of reporting accounting year for the parent entity. In addition, the due date for filing the CbCR by an overseas alternate reporting entity (ARE) is the due date specified by the country or territory of which the ARE is a resident. For a constituent resident entity that is required to furnish CbCR details in certain circumstances, the due date will be prescribed.

Debt-to-equity rules. India does not currently impose mandatory capitalization rules. However, banks and financial corporations must comply with capital adequacy norms. In addition, foreign-exchange regulations prescribe that the debt-to-equity ratio should not exceed 4:1 in the case of borrowings beyond a certain limit from certain nonresident lenders.

Limitation on interest deduction. In line with the recommendations of OECD's BEPS Action 4, the Income Tax Act provides a specific provision to limit interest deduction exceeding INR10 million. A deduction claimed by an Indian company or a permanent establishment of a foreign company in India with respect to interest expenditure regarding any debt issued by a nonresident that is an associated enterprise of the taxpayer is subject to disallowance. Disallowance is restricted to the lower of total interest paid or payable in excess of 30% of earnings before interest, taxes, depreciation and amortization (EBIDTA) or interest paid or payable to the associated enterprise. Interest disallowed can be carried forward to the following eight fiscal years to be set off against taxable income of any business or profession in a subsequent year. A deduction in a subsequent year is also subject to the limitation of 30% of EBITDA. Such limitation does not apply to the banking and insurance sector. Further, effective from 2020-21 fiscal year, such interest limitation rules do not apply if interest is paid with respect to debt issued by a nonresident lender engaged in the business of banking through a permanent establishment in India.

General Anti-avoidance Rules. The Income Tax Act includes General Anti-avoidance Rules (GAAR), which took effect on 1 April 2017. The GAAR are broad rules that are designed to deal with aggressive tax planning. Wide discretion is provided to the tax authorities to invalidate an arrangement, including the disregarding of the application of tax treaties, if an arrangement is treated as an "impermissible avoidance arrangement." The central government has issued clarifications for the implementation of the GAAR.

Notified Jurisdictional Area. The Income Tax Act contains a “tool box” to deal with transactions with entities located in noncooperative countries or jurisdictions that do not exchange information with India. The government of India is empowered to notify such jurisdiction as a Notified Jurisdiction Area (NJA). The government discourages transactions by taxpayers in India with persons located in an NJA by providing onerous tax consequences with respect to such transactions. The consequences include applicability of transfer-pricing regulations, additional disclosure and compliance requirements, disallowance of deductions in some circumstances and higher withholding tax rates on transactions with a person located in an NJA. Previously Cyprus was notified as an NJA, effective from 1 November 2013. Such notification was withdrawn with retrospective effect, under an amendment to the India-Cyprus double tax treaty. No other jurisdiction is notified as an NJA.

Business trusts. The Income Tax Act contains a specific taxation regime for the taxability of income from business trusts (real estate investment trusts and infrastructure investment trusts). This is a new category of investment vehicles for acquiring control or interests in Indian special-purpose vehicles for investments in the real estate or infrastructure sector. Units of business trusts can be listed on recognized stock exchange and can be subscribed by residents and nonresident investors (including foreign companies). Effective from 2020-21 fiscal year, Securities and Exchange Board of India (SEBI)-registered business trusts are not required to be listed on a recognized stock exchange. Business trusts can also avail themselves of external commercial borrowings from nonresident investors (including foreign companies). Business trusts are granted pass-through status for purposes of taxation. Distributions of dividend income from business trusts are exempt in the hands of investors. Effective from 2020-21 fiscal year, distributions of dividends by business trusts received from special-purpose vehicles are taxable in the hands of investors. For further details, see footnote (g) in Section A and *Rates of corporate tax* and *Capital gains* in Section B.

Patent Box Regime. The Income Tax Act contains the Patent Box regime, which is a specific taxation regime for the taxability of royalty income earned by a patentee resident in India with respect to a patent developed and registered in India. Such royalty income is taxable at the rate of 10% on the gross amount without any allowance or deduction for any expenditure. For these purposes, royalty income includes consideration for any of the following:

- Transfer of all or any rights with respect to a patent
- Imparting of any information concerning the working of, or the use of, a patent
- The use of any patent
- Rendering of any services in connection with any of these activities

Foreign portfolio investors. The Income Tax Act provides a safe-harbor regime for onshore management of offshore funds, thereby neutralizing the impact of the constitution of business connection, permanent establishment or tax residence for offshore funds in India. Under this regime, on the fulfillment of certain conditions, these funds can qualify as an eligible investment funds (EIFs) or eligible fund managers. Effective from

2019-20 fiscal year, some of these conditions are relaxed. The following are examples of the relaxation of the conditions:

- For the purpose of computing aggregate participation or investment in the fund, directly or indirectly, by an Indian resident, the contribution of the eligible fund manager during the first three years up to INR250 million is to be excluded.
- The monthly average of the corpus of the fund of INR1 billion shall need to be fulfilled within 12 months (as opposed to the former time period of 6 months) from the last day of the month of its establishment or incorporation.

Investment funds set up by a Category I or Category II foreign portfolio investor (FPI) registered with the SEBI are not required to satisfy the investor diversification conditions to qualify as an EIF. Benefits under the safe-harbor regime are available only if the investment fund is established in a jurisdiction on a specified list.

Further, the provisions of indirect transfers are not applicable to nonresident investors holding an asset in the following categories:

- Category I and Category II FPIs up to the date of repeal of the SEBI FPI Regulations, 2014.
- Category I FPIs under the SEBI (FPI) Regulations, 2019.

Also, effective from 2020-21 fiscal year, Sovereign Wealth Funds are eligible for 100% tax exemption on dividends, interest and capital gains income arising from specified investments that are made in India between 1 April 2020 and 31 March 2024 and are held for at least three years, subject to other conditions.

Discouraging cash transactions. The income tax law prohibits receipt in cash of an amount exceeding INR200,000 on or after 1 April 2017, in a day, with respect to a single transaction spread over many days or with respect to an event.

Effective 1 February 2020, a person carrying on business is required to provide a facility for accepting payments through certain specified electronic modes of payment in addition to the existing electronic modes provided by such person. Failure to comply with such requirement will result in a penalty.

Effective from 2019-20 fiscal year, the threshold turnover limit for tax audit for business is increased from INR10 million to INR50 million if the aggregate of all amounts received, including the amount for sales, turnover or gross receipts and the aggregate of all payments made, including the amount incurred for business expenses, in cash during the previous year is less than or equal to 5% of such amount received or paid. Effective from the 2020-21 fiscal year, the threshold limit has been further increased from INR50 million to INR100 million if the aggregate of all receipts and payments in cash during the fiscal year is less than or equal to 5% of the said amounts.

Significant economic presence. From the 2018-19 fiscal year, the Income Tax Act introduced the concept of significant economic presence (SEP). This concept expands the scope of a “business connection” in India that results in the taxation of business income of nonresidents in India. SEP is a new nexus test primarily targeted to tax business models in the digital economy and is based on the options elucidated in the OECD’s BEPS Report on

Action 1. In view of the ongoing discussions at the OECD level for a global consensus solution to tax the digital economy, the applicability of SEP provisions is deferred to the 2021-22 fiscal year. The SEP concept is in addition to the Equalisation Levy in India (see Section D).

According to the Income Tax Act, SEP is defined to mean the following:

- Any transaction with respect to any goods, services or property carried out by a nonresident in India, including the providing of a download of data or software in India, if the aggregate of payments arising from such transaction or transactions during the tax year exceed INR20 million
- Systematic and continuous soliciting of its business activities or engaging in interaction with 300,000 users in India

Any income attributable to SEP is taxable in India.

Attribution of income to business connection. Foreign companies having business connection in India are taxable under domestic law only on such part of the income that is reasonably attributable to “operations carried out in India. Effective from 2020-21 fiscal year, income attributable to operations in India includes income from the following:

- An advertisement that targets a customer who resides in India or a customer who accesses the advertisement through an internet protocol (IP) address located in India
- The sale of data collected from a person who resides in India or from a person who uses an IP address located in India
- The sale of goods or services using data collected from a person who resides in India or from a person who uses an IP address located in India

Gift taxation. The Income Tax Act levies tax on any taxpayer who is in receipt of money in excess of INR50,000 or immovable property or any property other than immovable property that has a value in excess of INR50,000, without consideration or for an inadequate consideration. Effective from 2020-21 fiscal year, immovable property is considered to be acquired for an inadequate consideration if the difference between the specified value of the property and the consideration paid exceeds 10% of the consideration. Specific valuation rules apply to determine the taxable income in the hands of the recipient. Also, effective from the 2018-19 fiscal year, the gift taxation does not apply to the transfer of a capital asset by a holding company to its wholly owned Indian subsidiary (or vice versa) if the transferee company (recipient) is an Indian company.

Multilateral Instrument. India is a signatory to the Multilateral Instrument (MLI) and submitted its ratified copy to the OECD on 25 June 2019. Beginning with the 2020-21 fiscal year, MLI has become effective for the certain Indian tax treaties, such as those with the following jurisdictions:

Australia	Japan	Serbia
Austria	Jersey	Singapore
Belgium	Lithuania	Slovak
Curaçao	Luxembourg	Republic
Finland	Malta	Slovenia
France	Monaco	Sweden

Georgia	Netherlands	United Arab
Guernsey	New Zealand	Emirates
Ireland	Poland	United
Isle of Man	Russian Federation	Kingdom
Israel		

Consequently, the impact of MLI provisions, such as the preamble, principle purpose test and extended permanent establishment rules, will need to be considered while availing of a treaty benefit.

F. Treaty withholding tax rates

Under the Income Tax Act, Indian companies were required to pay DDT (see *Dividends* in Section B) at an effective tax rate of nearly 20.36% (base rate of 15% on gross amount plus a surcharge of 12% and an education cess of 4%) on dividends declared, distributed or paid by them and such dividends were then exempt from tax in the hands of the recipients. However, effective from 2020-21 fiscal year, DDT is abolished and the dividend income is now taxable in hands of shareholders

Tax rates specified under the Income Tax Act are increased by a surcharge and cess. See footnote (a), (c) and (m) below for tax rates under the Income Tax Act on outbound payments of interest, royalties and dividends, respectively. In general, if the relevant treaty specifies the same or lower rate for withholding, these treaty rates, which are more beneficial for the nonresident recipient, may be applied. In addition, these tax rates need not be increased by the surcharge and cess. To claim treaty benefits, the nonresident recipient must obtain a Tax Residency Certificate indicating that it is a resident of that jurisdiction or specified territory. This certificate is issued by the government of such jurisdiction or territory. The nonresident recipient is also required to provide certain information and documents to substantiate its eligibility to claim treaty benefits.

The following table presents the treaty rates on outbound payments of dividends, interest and royalties to jurisdictions that have entered into tax treaties with India.

	Dividends (l)(m)	Interest (a)(b)	Approved royalties (c)(d)
	%	%	%

Vietnam	10	10	10
Zambia	15	10	10
Non-treaty jurisdictions	20	20 (a)	10 (c)

- (a) A 20% rate applies if the relevant tax treaty provides for unlimited taxation rights for the source jurisdiction on interest income. Under the Income Tax Act, the 20% rate applies with respect to interest on monies borrowed or debts incurred in foreign currency by an Indian concern or the government. If the recipient is a foreign company, this rate is increased by a surcharge of 2% (when the aggregate income exceeds INR10 million) or 5% (when the aggregate income exceeds INR100 million) and is further increased by an education cess of 4% (on income tax and surcharge). A special reduced rate of 5% applies under certain specified circumstances. In other cases, depending on whether the recipient is a corporate entity, a tax rate of 30% or 40% applies. These tax rates are increased the applicable surcharge and cess. Also, see footnote (g) in Section A.
- (b) A reduced rate of 0% to 10% generally applies under a tax treaty if interest payments are made to local authorities, political subdivisions, the government, banks, financial institutions or similar organizations. A reduced rate may also apply if the lender holds a certain threshold of capital in the borrower. The text of the relevant tax treaty needs to be examined.
- (c) Under the Income Tax Act, a 10% rate applies if the relevant tax treaty provides for unlimited rights for the source jurisdiction to tax royalties (the rate is increased by the surcharge and cess) and if the payment is made by the government of India or an Indian concern. In other cases, as mentioned in footnote (a) above, a tax rate of 30% or 40% applies. These rates are increased by the applicable surcharge and cess.
- (d) The rate provided under the relevant tax treaty applies to royalties not effectively connected with a permanent establishment in India. Also, in some of India's tax treaties, such as with Australia, Canada, Spain, the United Kingdom and the United States, a separate rate of 10% is specified for equipment royalties. Similarly, under India's tax treaty with Bulgaria, a 15% rate applies to copyright royalties other than cinematographic films or films and tapes used for radio or television broadcasting. In addition, many of India's tax treaties also provide for withholding tax rates for technical services fees. In most cases, the rates applicable to royalties also apply to the technical

services fees. The text of the relevant tax treaty needs to be examined to determine the relevant scope and rate. Effective from the 2017-18 fiscal year, no withholding tax is imposed on payments made by National Technical Research Organization in India.

- (e) A more restrictive scope of the definition of dividends, interest or royalties and/or a reduced rate may be available under the most-favored-nation clause in the relevant tax treaty.
- (f) A reduced rate of 10% applies in the event of notifications issued by the government of India that give effect to the most-favored-nation clauses in these tax treaties.
- (g) This treaty applies to the Slovak Republic.
- (h) An increased rate of 25% applies to trademark royalties.
- (i) A protocol amending the tax treaty with Mauritius was signed on 10 May 2016 and is effective in India from 1 April 2017. The protocol provides for a withholding tax rate of 7.5% on interest and 15% on royalties.
- (j) A revised tax treaty with Kenya entered into force on 30 August 2017. The revised treaty is effective in India from 1 April 2018. The rates under the revised treaty are reflected in the table.
- (k) In the first five years in which this treaty is in effect, a 15% rate applies to royalties if the payer is the government of the contracting state, a political subdivision or a public sector company and a 20% rate applies for other payers. For subsequent years, a 15% rate applies in all cases.
- (l) The rate provided under the relevant tax treaty applies to dividends not effectively connected with a permanent establishment or fixed base in India. A reduced rate of 5% to 15% may also apply if the beneficial owner of dividends holds a certain threshold of share capital or voting stock in the company paying the dividends. The text of the relevant tax treaty needs to be examined.
- (m) A 20% rate applies if the relevant tax treaty provides for unlimited taxation rights for the source jurisdiction on dividend income. Under the Income Tax Act, a 20% rate applies with respect to dividends paid to foreign companies. If the recipient is a foreign company, this rate is increased by a surcharge of 2% (if the aggregate income exceeds INR10 million) or 5% (if the aggregate income exceeds INR100 million) and is further increased by an education cess of 4% (on income tax and the surcharge).

Other Services	2 (e)

Payments to Nonresidents	10/20 (g)
Branch Profits Tax	20 (h)
Net Operating Losses (Years)	
Carryback	0
Carryforward	5 to 10 (i)

- (a) This rate also applies to Indonesian permanent establishments of foreign companies. See Section B.
- (b) See Section B for details concerning the taxation of capital gains.
- (c) In general, a final withholding tax at a rate of 20% is imposed on payments to nonresidents. Tax treaties may reduce the tax rate. Dividends paid to resident companies are exempt from tax. Dividends paid to resident individuals are exempt from tax if such dividends are invested in Indonesia for a certain time period. If the exemption does not apply, a 10% final withholding tax applies to dividends paid to tax-resident individuals. A 15% withholding tax is imposed on interest paid by nonfinancial institutions to residents. Interest paid by banks on bank deposits to residents is subject to a final withholding tax of 20%. Interest on bonds paid to residents and nonresidents is subject to a 10% withholding tax.
- (d) This is a final withholding tax imposed on gross rent from land or buildings.
- (e) This tax is considered a prepayment of income tax. It is imposed on the gross amount paid to residents. An increase of 100% of the normal withholding tax rate is imposed on taxpayers subject to this withholding tax that do not possess a Tax Identification Number.
- (f) This tax is considered a final tax. The applicable tax rate depends on the type of service provided and the “qualification” of the construction companies. The “qualification” is issued by the authorities with respect to the business scale of a construction company (that is, small, medium or large).
- (g) This is a final tax imposed on the gross amount paid to nonresidents. The withholding tax rate on certain types of income may be reduced under double tax treaties.
- (h) This is a final tax imposed on the net after-tax profits of a permanent establishment. The rate may be reduced under double tax treaties. The tax applies regardless of whether the income is remitted. An exemption may apply if the profits are reinvested in Indonesia.
- (i) Losses incurred by taxpayers engaged in certain businesses or incurred in certain areas may be carried forward for up to 10 years (see Section B).

B. Taxes on corporate income and gains

Corporate income tax. Companies incorporated or domiciled in Indonesia are subject to income tax on worldwide income. Foreign tax may be claimed as a tax credit subject to a limitation rule (see *Foreign tax relief*). Branches of foreign companies are taxed only on those profits derived from activities carried on in Indonesia. However, income accruing from Indonesia to a foreign company having a permanent establishment in Indonesia is taxed as income of the permanent establishment if the business generating the income is of a similar nature to the business of the permanent establishment. This is known as the “force of attraction” principle.

Deemed permanent establishment or Electronic Transaction Tax. Laws have been passed but not yet implemented to the effect that an offshore seller, offshore service provider or offshore e-commerce organizer meeting the significant economic presence criteria can be treated as a permanent establishment and subject to income tax.

Significant economic presence will be defined in further regulations with reference to the following:

- Consolidated business group turnover of a certain amount
- Sales in Indonesia of a certain amount
- Active users of digital media in Indonesia of a certain number

If income tax cannot be imposed as a result of the application of a tax treaty, the offshore seller, offshore service provider or

offshore e-commerce organizer meeting the significant economic presence criteria will be subject to the Electronic Transaction Tax. This tax will be imposed on the sale of goods or services from outside Indonesia through e-commerce to the buyer or the user in Indonesia if the sale is conducted by an offshore taxpayer, whether directly or via an offshore e-commerce organizer. These laws await implementing regulations before they can enter into effect. Indonesia may pursue an approach consistent with Base Erosion and Profit Shifting (BEPS) 2.0 rather than implementing these laws.

Rates of corporate tax. Corporate tax is imposed at a flat rate of 22%. This rate applies to Indonesian companies and foreign companies operating in Indonesia through a permanent establishment. The tax rate is reduced by three percentage points for listed companies that have at least 40% of their paid-up capital traded on the stock exchange. Small and medium-scale domestic companies (that is, companies having gross turnover of up to IDR50 billion) are entitled to a 50% reduction of the tax rate. The reduced rate applies to taxable income corresponding to gross turnover of up to IDR4.8 billion.

A previously announced reduction of the corporate tax rate to 20% has been canceled.

Branch profit tax. The net after-tax profits of a permanent establishment are subject to branch profit tax at a rate of 20%. This rate may be reduced under a double tax treaty. Branch profit tax applies regardless of whether the income is remitted to the head office. An exemption may apply if the profits are reinvested in Indonesia.

Tax incentives

Tax Allowance Incentive. Tax incentives under the Tax Allowance Incentive are granted to certain qualifying resident companies investing in certain types of businesses or regions. The Tax Allowance Incentive consists of the following:

- Accelerated depreciation and amortization.
- Extended period of 10 years for the carryforward of a tax loss (normally 5 years), subject to certain conditions.
- Reduced tax rate of 10% (or lower rate under a double tax treaty) for dividends paid to nonresidents.
- Investment allowance in the form of reduction of net income by 30% of the amount invested in land and buildings, and plant and equipment. This allowance is claimed at a rate of 5% each year over a six-year period.

To qualify for the above tax incentives, the investment must be a new investment or an investment for the purpose of expanding a current business. Under a government regulation, 166 categories of business sectors and 17 other categories of industries in certain areas may qualify for the tax incentives. The designated areas and provinces are generally outside Jakarta. They are primarily the provinces located in Kalimantan and Sumatera.

Certain restrictions apply to the use and transfer of fixed assets that benefit from the incentives. These restrictions apply for the first six years of commercial production or for the prescribed useful life of the assets for tax purposes. The incentives are revoked

with a penalty if these rules are violated. Implementation of the government regulation is evaluated within two years from the date on which the approval is granted. A monitoring team is established for this purpose.

Tax Holiday Incentive. Certain taxpayers engaged in a “pioneer industry” may seek a tax incentive commonly known as the Tax Holiday Incentive, which was introduced in 2011 and lastly renewed in September 2020. The Tax Holiday Incentive offers 50% and 100% corporate tax exemptions for 5 to 20 years, depending on the amount of new capital investment. An additional period of corporate income tax reduction for two fiscal years is also offered after the expiration of the tax holiday in the following cases:

- 25% reduction of the corporate income tax payable if the new capital investment is at least IDR100 billion but less than IDR500 billion
- 50% reduction of the corporate income tax payable if the new capital investment is at least IDR500 billion

To qualify for the Tax Holiday Incentive, taxpayers must fulfill the following criteria:

- They must be Indonesian legal entities.
- They must be engaged in a “pioneer industry.”
- The capital investment must be new and not yet issued with an approval or rejection on an application to reduce the corporate income tax of the company.
- They must have a new capital investment plan with a minimum value of IDR100 billion.
- They must satisfy the thin-capitalization ratio required by the Minister of Finance for income tax purposes.
- They must commit to start realizing their capital investment plan within a year after the approval to obtain the Tax Holiday Incentive is issued.

Currently, the following sectors qualify as pioneer industries:

- Integrated upstream base metal industry (steel and non-steel), with or without its derivatives
- Integrated purification and/or refinery of oil and gas industry, with or without its derivatives
- Integrated petrochemical industry that is oil-, natural gas- or coal-based, with or without its derivatives
- Integrated basic organic chemical industry sourced from agriculture, plantation or forestry, with or without its derivatives
- Integrated basic inorganic chemical industry, with or without its derivatives
- Integrated pharmaceutical raw material industry, with or without its derivatives
- Manufacturing industry of irradiation equipment, electro-medical or electrotherapy
- Manufacturing industry of electronical or telematic equipment’s main components such as semiconductors’ wafers, backlights for liquid crystal displays, electrical drivers or displays
- Manufacturing industry of engines and main components for engines
- Manufacturing industry of robotic components that support the engine manufacturing industry

- Manufacturing industry of main components for power plant machineries
- Manufacturing industry of automotive and automotive main components
- Manufacturing industry of main components for ships
- Manufacturing industry of main components for trains
- Manufacturing industry of main components for aircraft and supporting activities for the aerospace industry
- Manufacturing industry with products based from agriculture, plantation or forestry that produce pulp, with or without its derivatives
- Economic infrastructure
- Digital economy that covers activities such as data processing, hosting and other related activities

The tax holiday regulations now stipulate a “scoring guideline” on what can be categorized as a “pioneer industry” despite not being one of the specifically listed categories. Therefore, companies interested in making new investments have better guidance as to whether a proposed investment can be categorized as a pioneer industry. A taxpayer engaged in an industry that is not listed as a pioneer industry as stated above may now apply for the Tax Holiday Incentive if the taxpayer meets the other criteria to obtain the Tax Holiday Incentive and reaches a score of at least 80 on the pioneer industry criteria.

Taxpayers that have received tax incentives for investments in certain types of businesses or regions are not eligible for the Tax Holiday Incentive.

The Tax Holiday Incentive application is processed through the Online Single Submission (OSS) system. The completed application to obtain the Tax Holiday Incentive is submitted by OSS to the Minister of Finance as a recommendation to obtain the Tax Holiday Incentive, and OSS will notify the taxpayer that the taxpayer’s application is in process. The decision to grant the Tax Holiday Incentive to the company is issued by the Chairman of the Investment Coordinating Board on behalf of the Minister of Finance within five business days after it receives the complete proposal. The Tax Holiday Incentive can be given by the Minister of Finance with respect to a proposal that is submitted within four years after 8 October 2020.
