

Worldwide R&D Incentives Reference Guide

2023

Preface

Jurisdictions still rely on R&D incentives for growth

As countries devised plans to reinvigorate their economies in the wake of COVID-19, many renewed, expanded or refocused research and development (R&D) incentive programs. These programs have long been popular with governments as they vie to attract and sustain economic activity in their jurisdiction. However, they also offer governments the opportunity to align growth with other policy goals, such as environmental sustainability, digital transformation or social equality.

The facts at your fingertips

The Worldwide R&D Incentives Reference Guide offers taxpayers the information necessary to identify and leverage opportunities to benefit from available incentives, which are especially relevant if they are contemplating new or expanded investments in R&D, innovation and sustainability.

The content of our guide remains structured in a straightforward manner, consistent with prior years, and chapter by chapter we summarize the key incentives in 46 jurisdictions.

Most chapters begin with contact information for key EY R&D incentive professionals, before laying out a short overview of that country's approach to incentivizing R&D, innovation and/or sustainability-related activity and providing a checklist showing which types of incentives are available. Where an incentive is most commonly referred to in local language, we have provided a translation.

In some instances, our professionals note which incentive some clients say is most beneficial to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

For each incentive, we list the following information:

- ▶ A description of the benefits delivered
- ▶ Guidelines around incentive applications
- ▶ Eligibility requirements
- ▶ Intellectual property and jurisdictional requirements
- ▶ Role of governmental bodies in administering the incentive
- ▶ Administrative requirements
- ▶ Any statutory references

The *Worldwide R&D Incentives Reference Guide* is published alongside three companion guides on broad-based taxes: the *Worldwide Corporate Tax Guide*; the *Worldwide Personal Tax and Immigration Guide*; and the *Worldwide VAT, GST and Sales Tax Guide*. In recent years, those three guides have been joined by additional tax guides on more specialized topics, including the *Worldwide Estate and Inheritance Tax Guide*, the *Worldwide Transfer Pricing Reference Guide*, and the *Worldwide Capital and Fixed Assets Guide*.

Each guide represents thousands of hours of tax research. The entire suite is available without charge online, along with timely Global Tax Alerts and other insightful publications on ey.com or in our EY Global Tax Guides app for iOS devices.

You can also keep up with the latest updates to all guides at ey.com/globaltaxguides, while ey.com/taxalerts provides access to daily EY Global Tax Alerts from around the world.

Argentina

This chapter is based on information as of February 2023.

The main development regarding the R&D regimes was the enactment of Law 27,570, which amends the promotional regime for the knowledge-based economy that had been suspended since January 2020.

EY contact:

Gustavo Scravaglieri
gustavo.scravaglieri@ar.ey.com

1. Overview

Tax policy in Argentina in relation to research and development incentives is not very extensive.

The main incentives are those found in the promotional regime for the knowledge-based economy, the biotechnology promotional regime, the R&D regime and the training courses regime. In general, they provide for tax reductions, value-added tax (VAT) reimbursements,

accelerated depreciation for income tax purposes, and certain exemptions and tax credits. Though most of the regimes have existed for several years, their use is not fully leveraged by taxpayers. Furthermore, some regimes are subject to a cap established by the national government, according to its annual budget as well as other related regulations.

Promotional regime for the knowledge-based economy

Description of benefits

In June 2019, Argentina enacted Law 27,506 establishing a promotional regime for the knowledge-based economy. The promotional regime was expected to be in force from January 2020 through December 2029. This regime was later suspended by the government with the intention of introducing changes regarding the benefits and requirements. In October 2020, the Legislative Power enacted Law 27,570, through which this promotional regime was reintroduced with certain amendments. Decree 1034/2020, issued in December 2020, provides for additional aspects for the implementation of the tax promotional system. This current regime is expected to be in force until 31 December 2029.

The objective is to promote knowledge-based and digital activities that result in the manufacturing of goods, the provision of services or the improvement of processes. The following activities are included in the promotional regime: software development and related activities (e.g., cloud computing, software as a service, help desk services exported to foreign markets), audiovisual productions, biotechnology, geologic services, professional services qualifying as exports, nanotechnology, satellite and aerospace industries, artificial intelligence, robotics, internet of things (i.e., extension of internet connectivity to physical devices), medicine and agriculture-related investigations, and experimental developments.

Under the amended regime, professional services qualifying as exports include legal, accounting, management, public relations, audit, tax and legal advisory, translation and interpretation services, human resources, advertising, design, engineering and architectural services.

Eligible companies will receive the following benefits:

- ▶ A 60% reduction in the income tax liability for micro and small enterprises, a 40% reduction for medium-sized enterprises and a 20% reduction for big enterprises, applicable on the income originated in the promoted activities (which, considering the general rate of 30%, would result in effective income tax rates of 12%, 18% and 24%, respectively)
- ▶ Stability for the taxpayer's tax liability derived from the regime's provisions
- ▶ A tax credit bond that equals 70% of the amount payable as Social Security contributions on employees working in the promoted activities (80% if those employees are women, postgraduates, disabled and other specific groups) and:
 - ▶ Applies to up to 3,745 employees (and to new hires for promoted activities that increase the total headcount)
 - ▶ Is not transferable
 - ▶ May be used to offset federal taxes, except income tax (only exporters of services or goods originated in the promoted activities will be allowed to offset income tax with this bond)
 - ▶ Expires within 24 months of its issuance

Additionally, the income derived from the tax credit bond will not be subject to income tax. The total amount of the bonds issued will be subject to a certain quota per year established by the government.

Eligible companies also may be able to deduct the foreign income taxes imposed on Argentine-sourced income (the previous regime allowed eligible companies to credit those taxes against local income taxes on Argentine-sourced income). Exporters of the promoted activities also will be exempt from value-added tax withholdings and reverse withholdings.

Finally, Decree 1034 establishes that exports of services from companies participating in this regime will not be subject to export duties.

Guidelines around incentive applications

The incentives are applicable for current and future investments.

The knowledge-based economy promotional regime created the National Registry of Beneficiaries of the Regime for the Promotion of the Knowledge-based Economy (the registry). Companies that comply with all of the regime's requirements must be registered with the registry to receive the benefits.

R&D promotional regime

Description of benefits

Law No. 23,877 provides for the granting of tax credits on investments in R&D. The regime is subject to an annual cap, is competition-based and tends to be small. The benefited entities would be granted a tax credit certificate of 10% or approximately USD25,000 (whichever is lower) of R&D payments to be utilized against national taxes.

The regime provides benefits such as the granting of tax credits, subsidies and other promotional benefits for (i) business plan development projects carried out from R&D work performed by the company; (ii) projects for training of human resources in new production and management technologies; and (iii) the development of R&D projects, technology transfer or technical assistance.

Guidelines around incentive applications

The incentives are applicable for current and future investments. The National Agency for Scientific and Technological Promotion holds an annual public submissions process under which it details projects that are eligible for tax credits. The applicant's submission must provide information on the project, budget, innovation activities and the company applying.

Biotechnology promotional regime

Description of benefits

Law No. 26,270 established the biotechnology promotional regime, which grants early VAT reimbursement, accelerated depreciation and certain tax exemptions. A tax credit of 50% is available on the social security contributions payable to the payroll assigned to employees of the R&D project, and a tax credit of 50% is available on expenses related to R&D services provided by national scientific institutions.

Guidelines around incentive applications

The incentives are applicable for current and future investments. Those entities whose activities qualify as development and production of "modern biotechnology" (e.g., biology, biochemistry, microbiology and bioinformatics) must submit an application to the relevant authorities. The characteristics of each project should be analyzed on a case-by-case basis.

Training courses regime

Description of benefits

Law No. 22,317 provides for the granting of tax credits on investments in training courses. The regime is subject to an annual cap, is competition-based and tends to be small. The tax credit certificate obtained by the companies may be used to cancel national taxes. Tax credits amount to 0.8% of qualifying expenses (salaries) related to training courses.

The promotional regime allows companies to obtain refunds over the investment they make in the training of their human resources, either in open activities (taught in public or private institutions) or closed activities (courses according to the activity of the company).

Professional training courses can be taught either by (i) individuals or legal entities that usually provide such training or (ii) employees of the company who are suitable to carry out the training. Suitable persons are those who can prove experience in the work role of the training planned.

Guidelines around incentive applications

The incentives are applicable to current and future investments. Eligible entities must file their applications within a certain date range each year. The project to be presented must contain one of the following lines of action: professional training; strengthening of the infrastructure and/or certification of the quality of management of professional training institutions; training for work; certification of labor competencies; certification of quality management systems of processes and products. The exact deadline is announced each year. Applications must be filed with the INET (*Instituto Nacional de Educación Tecnológica*), the entity in charge of approvals and rejections.

3. Eligibility requirements

Promotional regime for the knowledge-based economy

Law No. 27,570 establishes that to participate in the regime, resident companies must (i) derive at least 70% of their revenues in the previous year from the promoted activities, (ii) enroll in a registry, and (iii) comply with at least two of the following requirements (except for exporters of services, which must comply with requirements 1 and 2 below):

1. Obtain a certification of continuous improvement on products, services or processes, according to recognized quality standards

2. Invest a minimum percentage per year of total salaries in training for their workforce (1% in the case of micro enterprises, 2% in small and medium-sized enterprises or 5% for big enterprises) or invest a minimum percentage per year of total sales in R&D (1% in the case of micro enterprises, 2% in small and medium-sized enterprises or 3% for big enterprises)
3. Derive a minimum percentage of their total revenues from the export of goods or services originated in the promoted activities (4% in the case of micro enterprises, 10% for small and medium-sized enterprises or 13% for big enterprises)

R&D promotional regime

Qualifying expenses are those investments channeled through structures approved by the application authorities, such as collaboration associations. To be eligible, a project must entail investigation and development (i.e., it must deepen the knowledge of a certain scientific area or comprise the modernization of technologies in Argentina).

Biotechnology promotional regime

Eligible biotechnological projects will consist of (i) R&D based on the application of biotechnology or (ii) application or execution of modern biotechnology for the production of goods or services or for the improvement of processes. Such projects must be approved by the application authorities.

For the purposes of the law, “modern biotechnology” consists of any technological application that is based on scientific principles and knowledge in the fields of biology, biochemistry, microbiology, molecular biology and genetic engineering, among others, and uses live organisms or their parts to obtain goods and services, or to improve “substantially” productive processes and/or products. “Substantially” is understood as producing innovation with industrial application, economic or social impact, cost reductions, an increase in productivity, or other similar effects accepted by the authorities. The law includes tax benefits and other provisions regulating eligibility requirements.

Training courses regime

Training activities must be duly approved by the application authority from the educational field. Once the project has been approved and fully executed, a report on its expenditure must be made. Afterward, the Tax Credit Certificate will be issued for tax deductions before the Argentinian Tax Authorities (AFIP). The certificate is transferable only once.

4. IP and jurisdictional requirements

There are no specific jurisdictional requirements related to intellectual property (IP).

5. Technology or innovation zones

A Buenos Aires Technology District exists in the southern part of the City of Buenos Aires. The Technology District has been designed to help technology companies and universities form a center for innovation for software development and the provision of IT services. Companies established in such a district can benefit from exemptions applicable to some local taxes of the City of Buenos Aires, including turnover tax and stamp tax.

Other provinces, such as the Province of Buenos Aires, the Province of Cordoba or the Province of Santa Fe, have also established similar rules aiming to promote the development of technology and software activities within their jurisdiction.

6. Role of governmental bodies in administering incentives

Promotional regime for the knowledge-based economy

The Enforcement Authority shall be the Secretariat of Industry, Knowledge-based Economy and Foreign Trade Management of the Ministry of Productive Development.

R&D promotional regime

Once it has been determined that an application complies with the needed requirements, the National Agency for Scientific and Technological Promotion will consider the project eligible and issue the corresponding certificate of tax credit.

Biotechnology promotional regime

Once an entity applies for the benefits of the biotechnology promotional regime, the authorities will decide whether a project is eligible. If the application is accepted, the project will be subscribed to the Ministry of Production (*Registro Nacional para la Promoción de la Biotecnología Moderna*), and the authorities will issue the corresponding certificate.

Training courses regime

The INET administers evaluations and subsequent approvals and rejections of projects.

7. Administrative requirements

Application to each regime has its own requirements. Description of the corresponding projects and presentation business plans may be required. Certifications may be required in certain cases (e.g., knowledge-based economy promotional regime). In addition, obtaining tax credits and using them to cancel tax obligations requires compliance with certain steps set out by the tax authorities.

8. Statutory reference

- Promotional regime for knowledge-based economy (Law No. 27,570 – 2020)
- R&D promotional regime (Law No. 23,877 – 1990)
- Biotechnology promotional regime (Law No. 26,270 – 2007)
- Training courses regime (Law No. 22,317 – 1980)

Australia

This chapter is based on information as of February 2023.

In Australia, the rates of the R&D Tax Incentive for years of income commencing 1 July 2021 have changed. For companies that have aggregated turnover of less than AUD20 million, the R&D tax offset is a company's corporate tax rate plus an 18.5% premium. The nonrefundable tax offset rate for companies with aggregated turnover of greater than AUD20 million will be determined based on an R&D intensity test equal to a company's corporate tax rate plus a premium ranging from 8.5% up to 16.5% for high R&D intensity companies. From 1 July 2021, the cap on claiming R&D expenditure will increase from AUD100 million to AUD150 million.

EY contact:

Jamie Munday
jamie.munday@au.ey.com

1. Overview

The government introduced R&D incentives programs to encourage Australian industries to undertake R&D activities, putting in place an overall environment that supports the increased commercialization of new process and product technologies developed by eligible companies. The current R&D Tax Incentive regime has been in operation since 2011, superseding the previous R&D Tax Concession regime introduced in 1986.

For years of income ending 30 June 2021 and 31 December 2021, a 43.5% refundable tax offset remains available to eligible R&D entities with aggregated turnover of less than AUD20 million per year. A nonrefundable 38.5% tax offset is available for all other eligible R&D entities. Foreign-owned R&D may qualify for the 38.5% or 43.5% tax offset depending on the company's global aggregated turnover.

For years of income commencing 1 July 2021 and later, the rates of the refundable and nonrefundable tax offset change. All large claimants (global aggregated turnover greater than AUD20 million per year) accessing the nonrefundable R&D tax offset will receive a R&D premium between 8.5% and 16.5% above the corporate tax rate, and all claimants under the refundable R&D tax offset (global aggregated turnover less than AUD20 million per year) will receive a benefit of 18.5% above the corporate tax rate. Under the changes, most companies accessing the R&D tax incentive will keep the same benefit, or get higher levels of benefit, compared to the current law. The cap for eligible R&D expenditure will increase from AUD100 million to AUD150 million per year, with no cap on the amount of refundable R&D tax offset.

2. Incentives available

Name of incentive	R&D tax incentive
Type of incentive	<ul style="list-style-type: none"> ▶ A refundable or nonrefundable tax offset applied to tax payable/loss

R&D tax incentive

Description of benefits

For years of income ending 30 June 2021 and 31 December 2021

- ▶ A 43.5% refundable tax offset is available for eligible R&D entities with aggregated turnover of less than AUD20 million per year. Aggregated turnover includes the ordinary income of all entities connected with (i.e., 40% or greater control) or affiliated with the R&D entity.
- ▶ A nonrefundable 38.5% tax offset is available for all other eligible R&D entities.

- ▶ Foreign-owned R&D can qualify for the 38.5% or 43.5% tax offset depending on its aggregated turnover.
- ▶ An R&D entity (defined as the head of a tax consolidated group or a stand-alone company) cannot claim the 43.5% refundable tax offset or the 38.5% nonrefundable tax offset in respect of R&D expenditures over AUD100 million. This cap applies annually to an R&D entity's R&D expenditure. R&D expenditures over AUD100 million can be claimed as a tax offset against the corporate tax rate (currently 30%).
- ▶ Unused tax credits may be carried forward indefinitely as long as the continuity of ownership or same business tests in respect of losses can be satisfied.

For years of income commencing from 1 July 2021

The changes to the rates are summarized in the tables below, including a comparison to the current R&D Tax Incentive rates:

Businesses – turnover below AUD20 million (refundable tax offset)

Turnover	New R&D tax offset rate	Current tax offset rate	Benefit impact
Below AUD20 million	18.5% (+25% corporate tax rate) = 43.5%	43.5%	No change

Businesses – turnover above AUD20 million (nonrefundable tax offset)

The R&D intensity test is the ratio of R&D expenditure to total expenses as reported in a company's tax return.

Turnover	R&D intensity	New R&D tax offset rate	Current R&D tax offset rate	Benefit impact
Between AUD20 million and AUD50 million	0%-2%	8.5% (+25% corporate tax rate) = 33.5%	38.5%	5% decrease
	Above 2%	16.5% (+25% corporate tax rate) = 41.5% (only applies to R&D expenditure increment above 2% R&D intensity)		3% increase (max)

Turnover	R&D intensity	New R&D tax offset rate	Current R&D tax offset rate	Benefit impact
Above AUD50 million	0%-2%	8.5% (+30% corporate tax rate) = 38.5%	38.5%	No change
	Above 2%	16.5% (+30% corporate tax rate) = 46.5% (only applies to R&D expenditure increment above 2% R&D intensity)		8% increase (max)

The cap for eligible R&D expenditure will increase from AUD100 million to AUD150 million per year, with no cap on the amount of refundable R&D tax offset.

Companies are required to register eligible R&D activities within 10 months of the end of the income year in which the activities were conducted.

Guidelines around incentive applications

The R&D Tax Incentive program is applicable to current investments. Claiming the benefit is a two-part process:

- ▶ The R&D activities are registered by lodging an application with AusIndustry.
- ▶ The R&D Tax Incentive Schedule is lodged in the company tax return using a unique registration number from AusIndustry.

Digital games tax offset

A 30% refundable Digital Games Tax Offset ("DGTO") can be claimed by eligible companies that spend a minimum of AUD500,000 on qualifying Australian development expenditure (QADE) incurred from 1 July 2022. The offset is capped at AUD20 million per company, per year. The DGTO is expected to support the international competitiveness of the Australian digital games production industry and create an incentive for international developers to invest in Australia.

The DGTO includes various detailed and extensive requirements, including particular inclusions, exclusions and integrity rules, all of which will require careful application and detailed record-keeping. In order to access the DGTO, a company must obtain a certificate from the Minister for the Arts (the Minister) or their delegate. There are three types of certificates that can be applied for including ongoing development, porting and completion certificates. The DGTO is then claimed by the company in its Income Tax Return once the relevant certificates are issued.

Eligible businesses must be either an Australian resident company or a foreign resident company with a permanent establishment in Australia. Games with gambling elements or that cannot obtain a classification rating will not be eligible. The digital game must be primarily developed to be made available to the general public for educational or entertainment purposes and must be made available for use over the internet, primarily played through the internet or only operate when a player is connected to the internet. The digital games tax offset (DGTO) is subject to various integrity measures and specified inclusions and exclusions, all of which will require careful consideration and substantiation requirements. Companies accessing the R&D tax incentive will not be able to claim expenditure under the DGTO that has been claimed for R&D purposes.

3. Eligibility requirements

Eligible R&D activities are categorized as either “core” or “supporting” R&D activities. Generally, only R&D activities undertaken in Australia qualify for the new R&D Tax Incentive program. Core R&D activities are broadly defined as experimental activities whose outcome cannot be known and that are conducted for the purpose of acquiring new knowledge. Supporting activities may also qualify if they are undertaken to directly support the core R&D activities. Exceptions that are required to pass a higher dominant purpose test are supporting R&D production trials and other “excluded” activities as defined. Software-related projects may also be core or supporting R&D activities unless their dominant purpose is one of internal administration, in which case they will be classified as excluded activities. An additional eligibility test may apply.

An eligible expenditure is defined as an expenditure incurred by an eligible company during an income year, including contracted expenditures, salary expenditures

and other expenditures directly related to R&D. R&D expenditures such as feedstock input costs, tax depreciation for assets used in R&D activities and an expenditure that is included in the cost base of an intangible depreciating asset for income tax purposes can be claimed. Core technology, interest expenses, some plant and equipment costs, and costs that form part of a tangible depreciating asset for income tax purposes are not eligible.

Eligible companies are those incorporated in Australia or foreign companies resident in a country that has a double taxation treaty with Australia carrying on business through a permanent establishment in Australia. An entity whose entire income is exempt from income tax is not eligible. No industry sectors are specifically excluded.

4. Intellectual property (IP) and jurisdictional requirements

Generally, companies must demonstrate that R&D activities are undertaken on their own behalf in order to claim the incentive. Activities conducted by the R&D entity for one or more foreign corporations that are related to the R&D entity (called foreign-owned R&D) may qualify for the R&D Tax Incentive, provided the R&D contract arrangement is undertaken with a company resident in a country with which Australia has a double taxation agreement and in accordance with a written agreement between the Australia entity and the foreign-related company. Eligibility of work performed outside the country requires preapproval through an Overseas Finding Application; however, this is only available to Australian-owned R&D activities, not foreign-owned R&D activities. The IP regimes are effective as of 1 July 2011. Foreign-owned R&D activities must be undertaken in Australia and cannot be undertaken overseas. An overseas finding cannot be applied for in respect of foreign-owned R&D activities.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Australia.

6. Role of governmental bodies in administering incentives

The R&D Tax Incentive operates on a self-assessment basis and is jointly administered by the Australian Taxation Office (ATO) and AusIndustry. AusIndustry regulates and monitors compliance activities in the assessment of the technical eligibility of activities, while the ATO regulates and undertakes compliance activities in relation to notional deductions and correlated tax offsets.

7. Administrative requirements

Companies must register annually with AusIndustry within 10 months of the relevant corporate financial year-end. An advance finding ruling process is available, which enables

companies to seek certainty on a project. An advance ruling provides companies with eligibility certainty for a period of up to three years.

Companies must maintain contemporaneous records to substantiate their R&D Tax Incentive claim. The company's records must be sufficient to show that the claimed activities took place and that they meet all aspects of the definition for either core or supporting R&D activities.

1. Overview

The Austrian government maintains a positive attitude toward the R&D incentives regime, and the policy of tax-based research subsidies in Austria has been in a state of flux for several years.

Austria promotes R&D activities with relatively generous tax incentives. In general, Austria spends about 3.23% of its GDP on R&D investment, higher than the average R&D investments in the 28 European Union (EU) Member States.¹ As of 2020, an estimated EUR5.1 billion in research subsidies was paid out to businesses.²

¹ *Statistics Austria*, January 2021.

² *Ibid.*

The Austrian tax authorities offer a 14% subsidy, or premium (known as *Forschungsprämie*), for qualifying R&D expenses.

For scientists moving to Austria from abroad and becoming tax residents in Austria, Austrian tax authorities offer a reduction of 30% of their individual tax base for a period of five years.

The Austrian Research Promotion Agency offers R&D incentives for qualifying R&D expenses in the forms of

cash, loans and guarantees. The percentage of the R&D premium varies depending on the types of R&D activities, and it may increase to 20% or higher for small and medium-sized enterprises (SMEs) and highly innovative projects or projects in which several companies collaborate with R&D institutions. For a basic research project, the R&D premium may cover up to 100% of expenses. R&D premiums are also available through the nine federal states in Austria. In addition, the European Commission's Horizon Europe program is available in Austria.

R&D premium

(Forschungsprämie)

Description of benefits

The subsidy of 14% is granted for qualifying R&D expenses incurred by SMEs and large businesses. Companies are entitled to the subsidy whether they are in a tax loss or profit position. The subsidy is paid in cash, via a credit to the company's tax account, by the Austrian

tax authorities immediately after approval has been given by the Austrian Research Promotion Agency (Forschungsförderungsgesellschaft, or FFG), the national funding body for R&D in Austria. The tax credit is transferable to any bank account.

Companies are eligible for two types of subsidies:

- In-house research subsidies
- Subsidies for outsourced (external or subcontracted) research, with the sponsor receiving a subsidy for ordering R&D activities

In-house research subsidies

In-house research subsidies are available to domestic companies conducting research activities internally. The amount of subsidies for in-house research is not capped, and companies are eligible for subsidies of 14% (previously 12%) of the qualifying R&D expenses. The incentive is provided in three stages:

Stage one: meeting the minimum requirement

Companies claiming in-house research subsidies must first obtain the FFG's approval that the R&D activities meet the required criteria. Companies must submit an application to the FFG at the end of the fiscal year providing details on the research project, including the project name, objective, methodology, share of total expenses and starting and ending dates. The FFG then sends a report to the tax office indicating whether the requirements have been met. The tax office reviews the report and determines whether the subsidy should be granted. At this stage, companies are not provided with any legal certainty on the amount of their assessment base for the tax credit, only on whether the R&D activities meet the required criteria.

Stage two: obtaining legal certainty

If companies want to increase their legal certainty at an earlier stage, they can request a confirmation of research from the tax office certifying that the required criteria have been met. The fee for applying for a confirmation of research is EUR1,000.

Stage three: receiving greatest possible legal certainty

The confirmation of research does not contain a ruling on the amount of the assessment base. Questions regarding the amounts of the assessment base are more often picked up within the scope of tax field audits. To clarify the base for an R&D incentive, companies may apply for a notice of determination from the Austrian tax office certifying the amount of the tax base for the research credit. Companies applying for a notice of determination must also submit a certification from an auditor on the correct calculation of the assessment base.

Subsidies for outsourced research

If a company does not conduct research itself, but instead outsources the R&D activity to a third party (e.g., a company or university), the company is eligible for subsidies for outsourced research amounting to 14% of the expenses, up to a total payment of EUR140,000 (for a base amount of EUR1 million). For outsourced research, the R&D activities may be performed outside Austria, but they must be performed within the EU or European Economic Area (EEA). Therefore, companies may engage a foreign company to conduct R&D activities, but only if the company is domiciled in the EU/EEA. A further prerequisite is that the contractor may not be controlled by the hiring company or be a member of the same tax group, as set out by Section 9 of the Austrian Corporate Income Tax Act.

This incentive benefits SMEs that do not conduct their research inhouse. Companies do not need to apply for FFG approval when claiming subsidies for outsourced research.

Guidelines around incentive applications

The R&D premium is applicable to retroactive, current and future investments. For 2021, claims should be made between the end of the fiscal year and the date when the tax assessment obtains legal force. As of 2022, claims must be filed within four years after the financial year-end (e.g., FY22 claims can be filed until the end of FY26). Companies claiming in-house research subsidies may apply in advance for a confirmation of research that all requirements for obtaining the subsidy have been met. Particularly in the case of projects spanning several years, it is recommended that companies apply for a confirmation of research. The prerequisite for applying is an ex-ante approval by the FFG.

Grants by the Austrian Research Promotion Agency

(Förderung der Forschungsförderungsgesellschaft)

Description of benefits

This governmental agency provides cash grants, guarantees, loans and advisory services. The amount granted varies, depending on the development phase and type of project, business and subject area. The grants must comply with EU guidelines on state aid.

Guidelines around incentive applications

The incentive is applicable to future investments. The application must be submitted to the FFG prior to the start of the project. Depending on the type of incentive, there may be specific application deadlines.

Grants by Austria's nine federal states

(Förderungen der Bundesländer)

Description of benefits

The nine federal states in Austria provide cash grants. The amount granted varies, depending on the development phase and type of project, business and subject area. The grants must comply with EU guidelines on state aid.

Guidelines around incentive applications

The incentive is applicable to future investments. The application must be submitted to the relevant state agency prior to the start of the project. Depending on the type of incentive, there may be specific application deadlines.

3. Eligibility requirements

Expenses must be incurred for research and experimental development activities that are performed on a systematic basis and apply scientific methods. This criterion is based on the definition of research contained in the Frascati Manual, which was published by the Organisation for Economic Co-operation and Development.

The FFG acts as an appraiser in the subsidies-awarding process. It reviews whether the research activities meet the Frascati Manual criteria. The FFG does not, however, review the correctness of the assessment base. The FFG's appraisal is not binding on the tax office. According to the tax authorities, the FFG's involvement does not create any costs on the part of taxpayers.

The following expenses are part of the taxable base, provided they are related to R&D:

- ▶ Salary and wages
- ▶ Direct expenses
- ▶ Financial expenditures
- ▶ Overhead costs

4. IP and jurisdictional requirements

There are no jurisdictional requirements related to intellectual property (IP).

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Austria.

6. Role of governmental bodies in administering incentives

The European Commission's Europe 2030 strategy sets targets for cutting greenhouse gas emissions and increasing the share of renewable energy and energy efficiency. Furthermore, the EU is working to integrate Europe's energy markets, ensure energy security, improve energy efficiency and decarbonize the economy. To achieve this goal, the domestic federal and state institutions work closely together to ensure that tax revenue is invested carefully.

Regarding the R&D premium, the FFG evaluates and provides approval that the R&D activities meet the required criteria. The Austrian tax authorities then pay the tax credit in cash if they determine, after reviewing the FFG's opinion that the requirements have been met, that the subsidy should be granted. The FFG is in effect acting as a consultant with the required technical skills for the tax authorities. The FFG is 100% owned by the Austrian state and is responsible for managing and financing R&D projects. However, Austria's nine federal states, not the FFG, manage their own grants.

7. Administrative requirements

The prerequisite for obtaining the statutory tax credit is the FFG's approval that all qualitative prerequisites set out by Section 108c paragraphs 7 and 8 of the Income Tax Act have been fulfilled. The approval may be requested for free via FinanzOnline, the official website of the federal Ministry of Finance. Companies applying must provide details on all expenses claimed for the fiscal year.

If the company has already received a confirmation of research from the tax office, it is not required to request another approval from the FFG for the same project, so long as it conducts R&D in the same manner.

8. Statutory reference

Cash grant: Section 108c of the Income Tax Act

(Advanced) Confirmation of research: Section 118a BAO (federal tax regulations)

1. Overview

The Belgian government remains a strong supporter of R&D and innovation at both the federal and regional levels, using R&D tax incentives and direct R&D grants to support these activities. In particular, Belgium offers investors a very attractive and comprehensive regime for R&D activities and the management of intellectual property (IP). The incentives are:

- ▶ An innovation deduction regime that is compliant with the Organisation for Economic Co-operation and Development (OECD) Base Erosion and Profit Shifting (BEPS) project

- ▶ The R&D investment deduction and the equivalent R&D tax credit, for qualifying investments in R&D and patents
 - ▶ The partial withholding tax exemption of 80% for scientific researchers, engineers or other innovative personnel
 - ▶ Incentives to employ highly qualified foreign employees
 - ▶ Direct cash grants and subsidies for R&D projects
 - ▶ Beneficial tax regime for income received for the transfer of IP rights from employees to their employers
- These incentives have been in place for a significant period of time.

* Although not based upon scientific analysis, EY clients report that these incentives deliver the most beneficial results to investors.

Cash grants

Description of benefits

Cash grants for R&D and innovation are provided and managed by the different regions (i.e., the Flemish, Walloon and the Brussels-Capital Regions). Depending on the region and on the amount of research (as opposed to development) in the R&D activities, the cash grants regime supports between 25% and 80% of the eligible R&D costs and may take the form of a subsidy or recoverable advance. Partnerships, especially those where one of the partners is a small or medium-sized enterprise (SME), are eligible for an additional 10%-15% funding, as long as the total grant percentage does not exceed the maximum set by the region. These grants may be provided in addition to tax incentives, and taxpayers may claim tax incentives and cash grants simultaneously. Although such grants are included in a company's taxable basis, they are exempt from corporate income tax. Taxpayers are required to obtain a preapproval (via an application for a specific project) to receive cash grants.

Guidelines around incentive applications

Cash grants are applicable to current and future investments or activities. An application for the grant should be submitted to the responsible government agency (VLAIO for the Flemish Region, SPW EER for the Walloon Region and Innoviris for the Brussels-Capital Region). The grant application is required to be submitted before the start of the R&D project(s). Costs are eligible for funding only after the application has been submitted.

Loans

Description of benefits

In the Flemish Region, PMV is an independent investment company in Flanders that offers financing solutions to all companies that operate in Flanders. They cover a company's entire development cycle, from its earliest inception to its growth and internationalization. Depending on the situation or the purpose of the SME or large company in question, PMV offers risk capital, investments via external funds, guarantees for capital loans or advantageous loans. For loans up to EUR700,000, standardized application procedures are available. For larger amounts, PMV offers tailor-made financing solutions. In the Flemish Region, PMV is an independent investment company in Flanders that offers financing

solutions to all companies that operate in Flanders. They cover a company's entire development cycle, from its earliest inception to its growth and internationalization. Depending on the situation or the purpose of the SME or large company in question, PMV offers risk capital, investments via external funds, guarantees for capital loans or advantageous loans. For loans up to EUR700,000, standardized application procedures are available. For larger amounts, PMV offers tailor-made financing solutions.

Whereas no maximum amount has been defined in theory, loans exceeding EUR20,000,000 are exceptional. Loans can extend over a long period ranging from three to 10 years. Loans can either be subordinated or non-subordinated with an interest rate of 3% and higher.

For companies based in the Limburg province, LRM offers risk capital (for which both SMEs and large companies are eligible) and three types of loans:

- ▶ The KlimOp loan (for startups and small enterprises), ranging between EUR50,000 and EUR250,000 at an interest rate of 3%-4% extending over seven years;
- ▶ The Plus loan (for SMEs), ranging between EUR250,000 and EUR600,000 at an interest rate of 6%; and
- ▶ The Doorbraaklening, ranging between EUR50,000 and EUR250,000 at an interest rate of 4% over two to eight years.

Loans are intended to finance tangible, intangible and financial investments, operating capital needs linked to the development of the business, the purchase of shares in an existing company or the acquisition of (part of) the goodwill in the company or to refinance existing debts over a longer period so that sufficient working capital can be retained to safeguard continuity and/or growth.

In the Walloon and Brussels-Capital regions, Sowalfin and finance & invest brussels provide access to financing for all companies active in these regions. Both institutes offer risk capital, guarantees for capital loans and advantageous loans. Loans are granted to startups and SMEs for both small and large investments. In general, they cover 50% of the requested capital with a maximum of EUR500,000 in Wallonia. On the other hand, guarantees for capital loans amount up to 75% of the corresponding capital loan. Additionally, both SMEs and large companies based in the Walloon region can request a loan or a guarantee from Sofinex to fund their internationalization efforts. The Sofinex loan covers 50% of the project cost with a maximum of EUR1,500,000 whereas the Sofinex guarantee covers 75% of the requested bank loan with a maximum of EUR5,000,000.

Guidelines around incentive applications

The subordinated loans and recoverable advances are applicable to current and future investments or activities. An application for the loan should be submitted to the responsible government agency. For future projects, the application must be submitted before the start of the R&D project(s). Costs are eligible for the loans only after the application has been submitted.

Investment deduction for R&D and patents

(De investeringsaftrek voor onderzoek en ontwikkeling (Dutch)/ La déduction pour investissement en matière de recherche et développement (French))

Description of benefits

The investment deduction for eligible R&D activities and patents entitles a Belgian company or a Belgian branch of a foreign company to apply a deduction in addition to the annual depreciation expense of qualifying assets. The investment deduction may be calculated either as a percentage on the acquisition value of the qualifying asset ("increased one-shot" deduction) or as a percentage on the annual depreciation amount, in which case the investment deduction is spread over the depreciation period ("spread" deduction).

The increased one-shot deduction is 13.5% (for tax years 2023¹ and 2024²) of the acquisition value of the asset (3.4% tax benefit based on a corporate tax rate of 25%). The spread deduction is 20.5% (for tax years 2023 and 2024) of the depreciation amount (5.1% tax benefit based on a corporate tax rate of 25%).

If the increased investment deduction exceeds the taxable basis, the excess balance may be carried forward without any time restrictions and can be offset against any future taxable income within certain annually applicable thresholds.

The investment deduction applies to tangible and intangible fixed assets used for R&D of new products and technologies that do not have a negative impact on the environment, including capitalized R&D expenses, and to patents for which only a one-shot deduction applies.

¹ Financial years ending 31 December 2022 or 30 December 2023 at the latest.

² Financial years ending 31 December 2023 or 30 December 2024 at the latest.

Guidelines around incentive applications

The investment deduction is applicable to current and future investments. The incentive must be claimed in the corporate income tax return. Form 275U needs to be enclosed with the corporate income tax return together with the other documents substantiating the conditions to claim the investment deduction.

Tax credit for R&D and patents

(Het belastingkrediet voor onderzoek en ontwikkeling (Dutch)/Le crédit d'impôt pour recherche et développement (French))

Description of benefits

As an alternative to the investment deduction, companies may instead opt for a tax credit that can be offset against the corporate income tax due. The tax credit is equal to the investment deduction multiplied by the standard corporate tax rate of 25%.

The tax credit may also be calculated either as a one-shot credit or spread over the depreciation period.

For companies with a financial year closing on 31 December 2022, the calculation basis of the R&D tax credit should be limited the first time. The limitation rule will apply to the extent that the R&D tax credit covers capitalized salary expenses, for which the R&D payroll withholding tax exemption has been claimed. The exempted payroll withholding tax will then need to be eliminated from the calculation base of the R&D tax credit.

Excess tax credits are carried forward and can be used, with certain limitations. The balance remaining after five years is refunded, which may result in a cash benefit.

The tax credit applies to tangible and intangible fixed assets used for R&D of new products and technologies that do not have a negative impact on the environment, including capitalized R&D expenses, and to patents for which only a one-shot credit applies.

Guidelines around incentive applications

The tax credit is applicable to current and future investments. The incentive must be claimed in the corporate income tax return. Form 275W needs to be enclosed with the corporate income tax return together with the other documents substantiating the conditions to claim the tax credit.

Innovation deduction (ID)

(De aftrek voor innovatie-inkomsten (Dutch)/La déduction pour revenus d'innovation (French))

Description of benefits

The ID is a tax incentive that provides for a deduction of 85% of the qualifying net IP income, effectively reducing the related maximum effective corporate tax rate to 3.8% (15% of the Belgian statutory corporate income tax rate of 25%). The ID applies to self-developed IP rights as well as IP rights acquired or licensed from related or unrelated third parties. The development or improvement of the IP assets in a qualifying R&D center is not required. However, the nexus ratio will limit the right of the taxpayer to apply the innovation deduction (see below).

For IP rights that require a request procedure (not applicable to copyright-protected software), taxpayers will be entitled to a conditional exemption equivalent to the ID pending the request. The amount of the exemption should be recorded on an unavailable reserve account. The exemption will become final provided that the request is granted.

EY Belgium has an informal alliance with an external IP advisor in assisting with the request procedure.

The ID can be applied regardless of the country in which the qualifying IP, good or service is protected. The globally earned qualifying income can be taken into account, provided that it is included in the taxable base of the Belgian company or permanent establishment (PE).

The ID applies to net income, i.e., gross IP income after deduction of current-year expenditures for the development of the IP asset, including expenditures for the acquisition of IP rights, expenditures in relation to the R&D conducted by the company, as well as R&D outsourced to related or unrelated parties. Prior-year expenditures incurred in financial years ending after 30 June 2016 should also be deducted. However, taxpayers may choose to spread the recapture of prior-year expenses over a period of seven years maximum.

The extent to which the ID can be applied depends on the nexus ratio (i.e., a BEPS Action 5-compliant formula with a 30% uplift to the qualifying expenditures). The purpose of this nexus ratio is to ensure that the ID is only available to the extent that qualifying expenditures were incurred by the taxpayer.

The nexus ratio serves only as a rebuttable presumption. Subject to conditions, taxpayers can prove that, due to exceptional circumstances, the nexus ratio does not correctly reflect the share of their own R&D activities in the overall R&D activities. To deviate from the nexus ratio, taxpayers will be required to obtain an advance tax ruling.

In principle, the calculation should be performed for each IP asset separately. Taxpayers should allocate expenditures and IP income to the various IP assets. An allocation by type of product or service, or by group of products or services, is allowed in case an allocation per IP asset is not feasible.

The amount of the current-year ID is not capped, and the unused ID can be carried forward indefinitely.

When applying the innovation deduction, a taxpayer should keep specific supporting documentation available for the tax authorities.

Taxpayers may request tax rulings to obtain legal certainty regarding the conditions and the calculation of the innovation deduction.

Guidelines around incentive applications

Form 275 INNO needs to be enclosed with the corporate income tax return. When applying the innovation deduction, a taxpayer should keep specific supporting documentation available for the tax authorities.

Foreign tax credit (FTC) for withholding tax on royalties received

(Het forfaitair gedeelte van de buitenlandse belasting (Dutch)/La quotité forfaitaire d'impôt étranger (French))

Description of benefits

The FTC is for foreign withholding tax on royalties of 15/85 of net income at the border. It is creditable against the corporate income tax due. In cases where the ID regime is applicable, the FTC is limited to the actual withholding taxes paid on royalties received.

For taxable periods ending as of 31 December 2023, the FTC will be limited to the actual withholding taxes paid on all royalties, regardless of whether the ID regime applies.

Guidelines around incentive applications

The FTC is claimed in the corporate income tax return. No specific form needs to be enclosed.

Partial exemption of professional withholding tax

(Vrijstelling doorstorting bedrijfsvoorheffing (Dutch)/Exonération du précompte professionnel (French))

Description of benefits

An 80% exemption of professional withholding taxes on wages paid to specific personnel with a PhD or master's degree in the scientific or engineering domain (e.g., sciences, applied sciences, exact sciences, medicine, pharmaceutical sciences, engineering, IT, architecture, product development) performing R&D activities can be applied.

An 80% exemption of professional withholding taxes on wages paid to specific personnel with a bachelor's degree in the scientific domain (biotechnics, health care, industrial sciences and technology, nautical sciences, science in business administration and business administration, with a focus on IT and innovation for the Flemish community and in paramedical and technical domains for the French community) performing R&D activities can also be applied. The total withholding tax exemption for bachelor's degrees is capped at 25% of the total withholding exemption applied for master's and doctoral degrees. This threshold is increased to 50% for companies that are qualified as small companies according to the Belgian Code of Company Law.

Guidelines around incentive applications

The exemption may be claimed directly through monthly withholding tax returns. The implementation of the withholding tax exemption requires preapproval from the Federal Science Department. New R&D projects and programs should be registered (notification procedure).

Expat tax regime – tax-free allowances for foreign executives and researchers

(Gunstregime voor buitenlandse kaderleden en onderzoekers (Dutch)/Expatriates: le régime fiscale applicable (French))

Description of benefits

Companies employing foreign executives and researchers who temporarily work in Belgium may benefit from a special tax regime.

The regime in principle is applicable until 31 December 2021, with a phaseout of two years.

A person who is classified as a foreign executive or researcher is considered to be a nonresident in Belgium from a tax point of view and, consequently, is taxed only on his or her income relating to professional activities carried out in Belgium. Moreover, certain expense allowances (called expatriate allowances) that relate to the temporary nature of the employment in Belgium are fully exempt. The standard maximum amount of this type of allowance is EUR11,250 per year, but for researchers the exemption can be increased to a maximum of EUR29,750 per year.

The increased exemption applies to “scientific research centres and laboratories, Belgian or foreign institutions (public or private) or autonomous departments of Belgian or foreign companies or of Belgian establishments of foreign companies whose activity consists solely of scientific or technical research in any field.” It is automatically applicable when the expat regime is granted.

In addition to these nontaxable allowances, the other major advantage of the special tax regime is that the expatriate is not taxable on that part of his or her remuneration that relates to his or her professional activity outside Belgium. The breakdown between the salary earned in Belgium and the salary earned outside of Belgium is usually (though not necessarily) calculated by comparing the number of days of professional activity spent in Belgium (nominator) with the total number of working days for the whole year or for a shorter time period (denominator).

Special tax regime applicable from 1 January 2022

As of 1 January 2022, a new tax regime for inbound taxpayers and researchers is in force. A more simplified and transparent new system should provide more legal certainty to employers and qualifying employees and directors.

According to the new rules, individuals living in Belgium will be considered Belgian tax residents and will be taxable in Belgium on their worldwide income. The new regime will be applicable conditionally. The qualifying employee or director:

- ▶ May not have been taxed as a resident in Belgium, lived closer than 150 km from the Belgium geographical border or been taxed as a nonresident of Belgium on professional income in the 60 months prior to the employment.
- ▶ Should earn a minimum annual gross remuneration of EUR75,000 – taxable in Belgium (regular gross salary and variable remuneration and benefits in kind may be considered to determine whether the EUR75,000 threshold is met). The remuneration threshold will not apply to researchers if they have a master's degree in specified expertise areas (natural sciences, applied sciences, medical sciences, agricultural sciences and engineering) or prove at least 10 years of relevant experience in these fields. This exemption is only available to taxpayers working under an employment relationship, not to directors, and only to the extent that the eligible degree effectively forms the base of the individual's employment in Belgium. Furthermore, at least 80% of the total professional time should be directly related to these R&D activities.

An employer can reimburse or compensate the employee for recurring additional "costs proper to the employer" (e.g., cost of living and housing, home leave) resulting from the assignment or recruitment from abroad. The tax-free character of the reimbursement is limited to 30% of the employee's gross remuneration (excluding the cost reimbursements itself), limited to a maximum amount of EUR90,000 per year. Additionally, some costs can still be reimbursed tax free by the employer (without any specific cap) (e.g., moving and relocation costs, costs for furnishing the accommodation in Belgium (up to one month of rent) and certain school fees (from the age of five)).

The new regime and its benefits will be available for five years starting from the first working day in Belgium. There is an option to apply for a three-year extension by filing a new request, which should be done within three months of the end of the five-year period.

Guidelines around incentive applications

The new incentive will be applicable for all employment or assignments starting as of 1 January 2022.

IP income – beneficial tax regime

(Auteursrechtelijke inkomsten (Dutch)/Revenus des droits d'auteur (French))

Description of benefits

Under this regime, income related to the cession and concession of IP income and related rights can principally be considered as movable income (up to EUR70,220 for income year 2023) and will be subject to tax differently than regular professional income. The income from IP will be taxable at a rate of 15% with a 50% lump sum cost deduction up to EUR18,720, and a lump sum cost deduction of 25% for IP income between EUR18,720 and EUR37,450. No cost deduction can be applied for IP income between EUR37,450 and EUR70,220. Otherwise, this income would be taxed as professional income at the progressive tax rates between 25% and 50%.

New conditions for income year 2023 and transitional regime

The amendments to this regime are effective beginning 1 January 2023, implying that a taxpayer's income can only be considered movable income if the taxpayer is holding a "work of art certificate" or if the taxpayer is assigning their work to a third party to communicate it to the public, to use it for public performance or to use it for reproduction. Several other conditions have been put forth as well.

Previously qualified employees who do not meet the new conditions can still apply the IP income during income year 2023 under the so-called transitional regime, in which the applicable thresholds will be halved (i.e., the income from IP will be taxable at 15% with a 50% lump-sum cost deduction up to EUR9,360 and a lump-sum cost deduction of 25% for IP income between EUR9,360 and EUR18,720 (income year 2023)). No cost deduction can be applied for IP income between EUR18,720 and EUR35,110.

Guidelines around incentive applications

The incentive is applicable to current and future activities.

Obtaining a tax ruling for this incentive was strongly recommended under the old regime; however, under the new tax regime, previously concluded rulings will principally become invalid as of 1 January 2023, except for what is mentioned for companies in the transition period. Furthermore, the transfer of IP rights also needs to be contractually stipulated.

3. Eligibility requirements

Cash grants

Eligible entities

- ▶ All Belgian resident entities that are subject to Belgian corporate income tax
- ▶ Belgian branches of nonresident entities that are subject to nonresident Belgian corporate income tax
- ▶ Any enterprise, from an SME to the Belgian branch of a multinational company, may request funding under the condition that the enterprise has a legal personality upon signing the agreement. Furthermore, the enterprise should have the capacity to exploit the result to a sufficient extent in the region providing the grant and hence create enough economic impact in the form of employment and investments. However, this does not exclude the possible partial application of the project results abroad.

Eligible R&D expenses

- ▶ Payroll costs of the employer
- ▶ Direct and indirect costs relating to the R&D project
- ▶ Large (depreciation) costs for equipment and other items specifically required for the R&D project
- ▶ Large subcontracting costs

Loans

Eligible entities

- ▶ All Belgian resident entities that are subject to Belgian corporate income tax
- ▶ Belgian branches of nonresident entities that are subject to nonresident Belgian corporate income tax
- ▶ Loans can finance new tangible, intangible and financial investments, fund operating capital needs linked to the development of the business, fund the purchase of shares in an existing company or the acquisition of part of the goodwill in the company and/or refinance existing debts over a longer period

Investment deduction or tax credit for R&D and patents

Eligible entities

- ▶ All Belgian-resident entities that are subject to Belgian corporate income tax
- ▶ Belgian branches of nonresident entities that are subject to nonresident Belgian corporate income tax

Eligible investments

- ▶ Tangible and intangible assets used for R&D of new products and technologies that do not have a negative impact on the environment
- ▶ Patents

Conditions to be met

- ▶ The investment should relate to new assets, which may be either acquired or self-developed.
- ▶ The investment should be used solely for professional business purposes.
- ▶ The investment must be capitalized under Belgian generally accepted accounting principles (BEGAAP) and should be depreciated (for tax purposes) over at least three years. Specific rules exist for research expenses because they can no longer be capitalized under BEGAAP.
- ▶ The right to use the asset may, in principle, not be transferred to another party.
- ▶ An R&D center must exist for certain qualifying investments.

ID

Eligible entities

- ▶ All Belgian-resident entities subject to Belgian corporate income tax
- ▶ Belgian branches of nonresident entities subject to nonresident Belgian corporate income tax

Eligible IP

- ▶ The ID applies to self-developed IP rights as well as IP rights (see below) acquired from or licensed from related or unrelated third parties
- ▶ Patents and supplementary protection certificates not commercialized before 1 January 2007
- ▶ Plant variety rights requested/acquired as of 1 July 2016
- ▶ Orphan drugs requested/acquired as of 1 July 2016 (limited to the first 10 years)
- ▶ Data/market exclusivity rights for medicinal products granted after 30 June 2016 (limited to the first 11 years)

- ▶ Copyright-protected software (including adaptations of existing software) resulting from an R&D project within the meaning of the R&D payroll tax exemption that did not generate income prior to 1 July 2016; the copyright-protected software must be self-developed by the Belgian taxpayer

Eligible income

- ▶ License income
- ▶ Embedded royalties included in the sales price of goods/services
- ▶ Embedded royalties related to the production process
- ▶ Indemnities for infringements (subject to conditions)
- ▶ Capital gains (subject to conditions)

FTC for withholding tax on royalties received

Eligible entities

- ▶ All entities in Belgium

Eligible activities/expenses

- ▶ The FTC applies to foreign withholding tax on royalties

Partial exemption of professional withholding tax

Eligible entities

- ▶ All entities in Belgium with a payroll structure

Eligible expenses

- ▶ Professional withholding tax paid via Belgian payroll

Eligible activities

- ▶ All activities in scope of the OECD's Frascati Manual description of research and development, along with outsourcing activities
- ▶ As from 2014, all activities in scope of the Commission Regulation 5EC, No 800/2008, under the description of "fundamental research," "technical research" and "experimental development" (issued on 6 August 2008)³

Expatriate tax regime

Eligible entities

- ▶ A qualifying employer is either a subsidiary, a branch or a PE of an international group of companies.

Eligible activities

- ▶ These concessions are available to foreign highly skilled employees and researchers who work temporarily in Belgium for a Belgian entity that is part of an international group of companies.

Eligible expenses

The expatriate tax regime – applicable until 31 December 2021 (with a two-year phaseout) – provides for the following reimbursement to qualify as nontaxable:

- ▶ Nonrecurring unlimited expenses, justified by actual expenses:
 - ▶ Moving costs to and out of Belgium
 - ▶ Settling-in costs in Belgium
- ▶ Recurring unlimited expenses, justified by actual expenses:
 - ▶ International or private school fees for children who attend primary or secondary school (university and childcare excluded)
- ▶ Recurring limited expenses, up to an annual ceiling of:
 - ▶ EUR11,250 or EUR29,750:
 - ▶ Difference in the cost of living and cost of housing between Belgium and the home country
 - ▶ Home leave (for travel by plane in economy class)
 - ▶ Losses incurred when the accommodation in the home country cannot be leased or can only be leased below its normal rental value
 - ▶ Emergency travel (e.g., serious illness or death of a close relative)
 - ▶ Exchange rate differentials
 - ▶ Differences in the income tax burden between Belgium and the home country (tax equalization)
 - ▶ Travel expenses of children studying abroad to visit their parents (maximum two trips per year)

The expatriate tax regime – applicable as of 1 January 2022 – provides for the following reimbursements to qualify as nontaxable:

- ▶ Recurring expenses, limited to 30% of the employee's gross remuneration (excluding the cost reimbursements), with a maximum of EUR90,000 per year:
 - ▶ Cost of living and housing
 - ▶ Home leave
- ▶ Nonrecurring unlimited expenses:
 - ▶ Moving and relocation costs
 - ▶ Costs for furnishing the accommodation in Belgium (up to one month of rent)
- ▶ Recurring unlimited expenses, justified by actual expenses:
 - ▶ Certain school fees (from the age of five)

³ Official Journal of the European Union, <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32008R0800&qid=1618445834583&from=EN>.

IP income

Eligible entities

- ▶ All entities in Belgium

Eligible expenses

- ▶ Compensation that is paid by the employer/third party for the transfer of IP rights from the employee/contractor to the employer is eligible.

Eligible activities

- ▶ This measure can only be applied insofar as the employees create IP rights (e.g., copyrights) during their employment/contractual agreement.

4. IP and jurisdictional requirements

ID

May work be performed outside the country?

- ▶ Yes, the R&D activities can be performed by the Belgian taxpayer in Belgium or abroad or outsourced to related or unrelated foreign parties.

Must the IP be registered/owned locally?

- ▶ IP rights held as owner, co-owner, usufruct, licensee or rights holder (economic ownership) qualify for the ID, irrespective of the jurisdiction where the IP right is obtained.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Belgium.

6. Role of governmental bodies in administering incentives

Cash grants

Each region has its own cash grant program, of which the responsible government agencies are:

- ▶ Flemish region: Flanders Innovation & Entrepreneurship, VLAIO – www.vlaio.be

- ▶ Walloon region: Walloon Public Service, Operational DG for Economy, Employment & Research (SPW EER), DGO 6 – <https://recherche.wallonie.be/>
- ▶ Brussels-Capital region: Brussels Institute for Research and Innovation, Innoviris – www.innoviris.brussels

Loans

An application should be submitted to the competent agency:

- ▶ Flemish region: Participatie Maatschappij Vlaanderen/ Limburgse Reconvertie Maatschappij – www.pmv.eu and www.lrm.be
- ▶ Walloon region: Société Wallonne de Financement et de Garantie des Petites et Moyennes Entreprises (Sowalfin) and Sofinex – www.sowalfin.be and www.sofinex.be
- ▶ Brussels-Capital region: finance&invest.brussels – www.finance.brussels

Investment deduction (or tax credit) for R&D and patents

To apply for an investment deduction (or tax credit) for R&D and patents, companies should obtain a certificate confirming that the investments do not have a negative impact on the environment. These certificates are issued by one of the competent authorities (depending on where in Belgium the company is located):

- ▶ Flemish region: omgeving.vlaanderen.be/verhoogde-investeringsaftrek-of-belastingkrediet-voor-onderzoek-en-ontwikkeling
- ▶ Walloon region: energie.wallonie.be or environnement.wallonie.be
- ▶ Brussels-Capital region: www.leefmilieu.brussels

ID

The patent application should be submitted to the competent agency:

- ▶ Belgian patent – the Belgian Office for Intellectual Property: economie.fgov.be/en/themes/intellectual-property/institutions-and-actors/belgian-office-intellectual

Specific applications should be submitted to the competent agency for plant variety rights, orphan drugs and data/market exclusivity rights.

No specific application needs to be submitted for copyright-protected software. Attestation of innovative character by the Belgian Science Agency is recommended.

FTC for withholding tax on royalties received

Not applicable

Partial exemption of professional withholding tax

Not applicable

Expat tax regime

To benefit from the new tax regime, the employee/director and employer must file a joint application within three months after the start of the Belgian employment, sending the application to impatriates@minfin.fed.be or via myminfin.be.

The authorities have three months to rule on the electronic application.

Employers must provide tax authorities, by 31 January each year, a list of all qualifying employees for the preceding year.

IP income

Not applicable

General

Various organizations provide advice and guidance to those wishing to start or expand their activities in Belgium. Foreign companies may contact the Service for Direct Investments:

- ▶ Invest in Belgium: ib.fgov.be
- ▶ Flemish region: investinlanders.be
- ▶ Walloon region: investinwallonia.be
- ▶ Brussels-Capital region: investinbrussels.com

7. Administrative requirements

Cash grants and loans

- ▶ Applications for cash grants are required to be filed in advance of the R&D project commencing. Taxpayers may claim tax incentives and cash grants; however, applications for each project are required to be filed separately. The different grants offered by the regions in Belgium to support and stimulate R&D projects may take the form of direct cash grants, recoverable advances or interest rebates. Although such grants are included in a company's taxable basis, they are exempt from corporate income tax.

Investment deduction (or tax credit) for R&D and patents

- ▶ Via the corporate income tax return (an advance tax ruling is possible)
- ▶ Certificate from regional authorities regarding environmental impact (see Role of government bodies in administering incentives above)

ID

- ▶ Via the corporate income tax return (an advance tax ruling is recommended)
- ▶ The taxpayer should keep specific supporting documentation available for the tax authorities.

FTC for withholding tax on royalties received

- ▶ Via the corporate income tax return

Partial exemption of professional withholding tax

- ▶ Up-front registration of R&D programs and projects

Expat tax regime

- ▶ The expatriate tax regime in Belgium is not granted automatically but must be requested jointly by the employer and the employee, within six months (three months under the new tax regime) following the start of the assignment in Belgium

IP income

- ▶ Obtaining a tax ruling

8. Statutory reference

Investment deduction (or tax credit) for R&D and patents

- ▶ Investment deduction: Article 68 of the Belgian Income Tax Code (ITC) and following
- ▶ Tax credit: Article 289 quarter ITC and following

ID

- ▶ Article 194 quinquies ITC (conditional exemption)
- ▶ Article 205/1 - 205/4 ITC (final deduction)

FTC for withholding tax on royalties received

- ▶ Article 285 ITC and following

Partial exemption of professional withholding tax

- ▶ Article 275 ITC

Expat tax regime

- ▶ Circular letter of 8 August 1983
- ▶ The new expat tax regime: Article 32/1 ITC

IP income

- ▶ Article 17 § 1, 5° ITC

The Brazilian government maintains its support of R&D activities through relevant tax incentives to companies that invest in R&D of innovative and technological initiatives.

Highlights

- ▶ Rota 2030 – The tax incentive established by Law 13.755/18 ends on 31 December 2023.
- ▶ IT Law – Companies that benefit from this incentive must undergo a reasonable assurance process annually.

1. Overview

The Brazilian government has been a strong supporter of R&D activities in various segments in Brazil. At the end of 2005, the government created a tax incentive for R&D, which commenced in 2006. Currently, the government offers super deductions of 160% to 200% to taxpayers with eligible R&D expenses, financial support to new R&D investments and accelerated depreciation on qualifying R&D assets. The government aims to achieve technological innovation, product innovation and enhanced R&D activities through the R&D incentive.

“Technological innovation” refers to the design of a new product or manufacturing process and addition of new functionalities or characteristics to the product or process that leads to incremental improvements and an effective quality or productivity gain. “Product innovation” refers to the improvement of new and/or existing products in the domestic or international markets. “Enhanced R&D activities” refers to basic research, applied research, experimental development, basic industry technology and technical support services.

*Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

R&D deduction – Law 11.196/05

Description of benefits

A super deduction of 160% to 200% is available to taxpayers with eligible expenses. The “standard” super deduction is 160% of eligible R&D expenses. If a company increases its number of contracted researchers during a calendar year when compared with the average number

of contracted researchers in the prior calendar year, the amount of the super deduction increases. If the number of contracted researchers increased up to 5%, an extra deduction of 10% is available (resulting in a total super deduction of 170%); if the number of contracted researchers increased by more than 5%, an extra deduction of 20% is available (resulting in a total super deduction of 180%). In addition, if a company registers intellectual property (IP) in Brazil, an extra 20% deduction is available.

The R&D deduction is applicable to expenses incurred by Brazilian entities, and contract research or greenfield investments are not normally eligible. Unused R&D deductions cannot be carried forward or carried back. To receive the R&D deduction, taxpayers are required to present tax clearance certificates to the tax authorities; however, no preapproval process is required to obtain the R&D deduction.

Taxpayers can also receive a reduction on federal excise tax (IPI) for eligible R&D activities. Under the IPI reduction, a 50% reduction is available on the IPI levied on instruments, equipment, machinery, apparatus and tools imported by Brazilian companies or dedicated to R&D activities performed in Brazil. To receive the IPI reduction, taxpayers are required to claim the incentive upon acquisition.

Legislation also provides for a super deduction of up to 250% of eligible expenses made available for innovation projects executed by Scientific and Technological Institutions (ICT), which was further explored through the enactment of Decree No. 9.283 in February 2018.

Scientific and Technological Institutions are entities of the direct or indirect public administration, or private nonprofit legal entities legally constituted under Brazilian laws, aiming to use the basic or applied scientific or technological research for the development of new products, services and processes. Innovation projects must be previously authorized by a permanent committee formed by members of the Ministry of Science, Technology and Innovations; Ministry of Development, Industry, Global Trade and Services; and the Ministry of Education. This tax incentive cannot be cumulated with the “standard” super deduction of 160% to 180% mentioned above.

According to Decree No. 9.283, public administration may now stimulate the development of cooperation projects among companies, ICTs and private nonprofit entities with a focus on generating innovative products, processes and services, as well as the transfer and diffusion of technology. This legislation extensively regulates the modus operandi of such partnerships, including the grant of economic subventions and mechanisms to promote innovation environments.

Guidelines around incentive applications

The R&D deduction is applicable for current-year investments. If a company incurs R&D expenses in 2022, it may apply for the incentive considering expenses incurred from January to December of 2022. The R&D deduction is claimed through the income tax return filed in July of the subsequent year.

Accelerated depreciation – Law 11.196/05

Description of benefits

R&D legislation allows companies to accelerate the depreciation, for tax purposes only, on R&D assets. Depreciation of 100% is available on eligible R&D assets upon the same year of acquisition.

Guidelines around incentive applications

Accelerated depreciation is applicable to current investments. The R&D deduction is claimed through the income tax return filed in July of the subsequent year.

IT Law – Law 8.248/1991

Description of benefits

Legal entities that manufacture information and communication technology goods, invest in R&D activities and comply with the basic production process are qualified under the terms of Law No. 8,248/1991 and can claim a tax credit up to 13.65% of the billing of incentive products.

The qualifying companies can also benefit from an IPI tax exemption on purchases of machinery, equipment, devices and instruments produced in the country, as well as their parts and spare parts, accessories, and raw materials that will be used exclusively on R&D projects.

Guidelines around incentive applications

Companies are required to invest 4% of the billing associated with incentive products in R&D projects to claim the tax credit. Technical and financial information associated with this credit must be reported annually to the Ministry of Science, Technology, and Innovations.

Law 13.969/19 amended Law 8.248/91 and established a new process in which companies that benefit from this tax incentive must annually conduct a reasonable assurance report with an auditing company registered with the Ministry of Science, Technology and Innovation.

Automotive R&D Incentive (Rota 2030) – Law 13.755/18

Description of benefits

Law 13.755/18 established several tax incentives for companies that produce or sell vehicles or auto parts. It allows up to a 2% reduction of IPI on vehicles that meet the requirements mentioned in the legislation, as well as an exemption for import tax on products not available via national production. In addition, if the company makes a minimum investment in R&D, a deduction of 10.2% to 12.5% of income tax and social contribution on profit is allowed.

Guidelines around incentive applications

Automakers or auto-part makers must request to participate in the program and commit to certain requirements to obtain the following benefits:

Reduction up to 2% IPI tax rate

To access this reduction, the company must comply with energy efficiency, structural performance and driving-assistive technology requirements defined in the legislation.

Exemption from import tax

The company must invest 2% of the customs value on R&D projects or priority projects defined by the government to support industrial and technological development for the automotive sector.

Deduction of 10.2% to 12.5%

Automakers or auto-part makers must commit to invest in R&D activities that meet the minimum percentage of gross revenue, based on the calendar years below:

- ▶ 2020 : 0.85%
- ▶ 2021: 1.00%
- ▶ 2022: 1.20%
- ▶ 2023: 1.20%

Funding Authority for Studies and Projects

Description of benefits

Financial support with reduced interest rates is available to new R&D investments of Brazilian companies. The fund provided by the government can provide such funding for up to 90% of the total project costs. The incentive requires a preapproval process to be followed.

Guidelines around incentive applications

Financial support is applicable to current and future investments. To claim the incentive for future investments, taxpayers are required to follow procedures set out by the government. In addition, taxpayers are also required to meet with specific requirements set by FINEP.

3. Eligibility requirements

R&D deduction

Eligibility is not limited to a specific industry. Under Law No. 11.196/2005, technological innovation is defined as “the conception of a new product or production process, as well as the inclusion of new functionalities or characteristics in the product or process resulting in additional improvements, effective quality or productivity increase, as well as competitiveness increase in the market.”

In general, innovation activities eligible for tax benefits are related to scientific and technological stages adopted by taxpayers in the development and implementation of products and/or processes, resulting in productivity gain and incremental improvements. Qualifying expenses include payroll costs, materials, machines, equipment, raw materials for tests and some local expenses directly related to the R&D in Brazil. Third-party costs can also be considered; however, there are specific rules to follow to obtain the incentive.

Rota 2030

Eligibility is limited to the automotive sector. Qualifying projects include the development and improvement of companies' products, evaluated according to the Frascati Manual, an international R&D guide, under the concepts of basic research, applied research and experimental development.

Qualifying expenses include payroll costs, materials, machines, equipment, raw materials and laboratory facilities directly related to the R&D in Brazil. Third-party costs can also be considered.

IT Law

Goods and services developed for information and communication technologies are eligible and are evaluated according to four main pillars:

1. Existence of a technical-scientific problem
2. Systematic execution
3. Existence of investigative activities
4. Existence of an element of technological novelty

Projects with the objective of training people inside or outside the company are also allowed.

Qualifying expenses include payroll costs, materials, machines, equipment, raw materials and laboratory facilities directly related to the R&D in Brazil. Third-party costs can also be considered.

4. IP and jurisdictional requirements

R&D deduction

The IP must be registered and owned locally to obtain the increased R&D tax incentive of 20%. However, the company can apply for the R&D tax incentive locally without registering IP in Brazil.

Furthermore, an exemption of the withholding income tax is available upon the remittance of the consideration destined to the registration and maintenance of intellectual property abroad.

Information Technology Law and Rota 2030

No additional benefits for IP

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Brazil.

6. Role of governmental bodies in administering incentives

The Ministry of Science, Technology and Innovations (MCTI) fulfills an important role in administering R&D incentives because it must approve and control the application of tax benefits by qualifying the applicable projects. According to Ministerial Order No. 2.794 from 2020, MCTI is also responsible for issuing an opinion report on whether innovation projects and expenditures comply with the R&D laws. Only MCTI has the appropriate skills to analyze the projects presented by companies. The Brazilian IRS maintains its audit role in relation to incentives with tax impact and may (or may not) investigate some accounting and fiscal aspects focused on R&D incentives.

7. Administrative requirements

Only companies that adopt the methodology of Actual Profit (*Lucro Real*) on a quarterly or annual basis may apply for the R&D tax incentives. Companies must fill out the income tax return annually to maintain compliance. In addition, companies that apply for these incentives should have tax clearance certificates that are valid for the full period (January to December of the respective year). In addition, companies must complete a specific R&D form and submit it electronically on an annual basis to MCTI.

8. Statutory reference

Canada

This chapter is based on information as of February 2023.

Innovative companies play an increasingly important role in driving Canada's economy by seizing global market opportunities. This has led to the creation of a wide variety of new grant programs and tax incentives in recent years. At the same time, however, some of the long-standing innovation incentives, such as the Scientific Research and Experimental Development (SR&ED) tax credits, have experienced stricter eligibility and documentation requirements. It is important for businesses to both understand the relevant incentives available to them and how to optimize their entitlement.

1. Overview

The federal SR&ED program is a tax incentive program designed to encourage economic development and job creation in Canada. The program is the largest source of federal funding for industrial R&D performed in Canada and is well-regarded by business. This tax incentive program (as opposed to a grant program) is demand-driven. There is no ceiling on how much the government may pay out to claimants in any particular year.

Legislation governing the program is contained in the federal Income Tax Act and Income Tax Regulations and is, therefore, the responsibility of the Department of Finance. However, the Canada Revenue Agency (CRA) is responsible

for the program's administration. In recent years, the CRA has been working on administrative improvements directed at simplifying the claims process, increasing the scientific capacity of the program and improving consistency with respect to processing SR&ED claims across the country and across various industries.

The federal government has provided tax assistance for R&D since 1944. Although investment tax credits (ITCs) were introduced for SR&ED expenditures in 1977, the program as it exists today was developed in the 1980s.

2. Incentives available

Name of incentive	Scientific Research and Experimental Development (SR&ED) tax credit*	Accelerated capital cost allowance (CCA) rate and Manufacturing and Processing (M&P) tax credit	Strategic Innovation Fund	Tax Holiday for Large Investment Projects
Type of incentive	▸ Tax credit	▸ Accelerated depreciation and tax credit on the R&D asset	▸ Primarily loans but cash grants awarded under exceptional circumstances	▸ Provincial income tax holiday on income from certain large investment projects

* Although not based upon scientific analysis, EY clients report that this incentive delivers more beneficial results to investors.

SR&ED tax credit

Description of benefits

A 15% federal tax credit is available on eligible activities and expenditures. An enhanced credit rate of 35% is available for small Canadian-controlled private corporations (CCPCs) on the first CAD3 million of expenditures per year. CCPCs in general must be private corporations, resident in Canada and not controlled directly or indirectly by one or more nonresident persons or public corporations. The 35% credit is 100% refundable.

For fiscal periods ending before 19 March 2019, the CAD3 million expenditure limit is reduced if the preceding year's taxable income for the corporation and associated corporations exceeds a threshold linked to the maximum small-business deduction limit for the year and if the taxable capital of the corporation (or associated group) for the preceding year exceeds CAD10 million. In addition, the annual expenditure limit must be shared among associated corporations. For fiscal years ending on or after 19 March 2019, the taxable income in the prior year is no longer a factor in determining the expenditure limit; only taxable capital, which now has a limit of CAD50 million. Unused R&D tax credits may be carried forward 20 years and carried back for three years.

Most provinces and territories offer R&D tax credits ranging from 3.5% to 30%, and several offer refundable credits.

Guidelines around incentive applications

SR&ED is applicable to retroactive and current investments provided they are claimed within 18 months of the fiscal year-end. To benefit from the SR&ED tax incentives, a claimant generally must carry on business in Canada in the year in which eligible activities and expenditures are claimed; perform eligible SR&ED work that is related to the business of the claimant; and complete and file Form T661, Scientific Research and Experimental Development Expenditures Claim, as well as Form T2SCH31 (Schedule 31), Investment Tax Credit – Corporations, or Form T2038 (IND), Investment Tax Credit (Individuals), as applicable. The reporting deadline is 12 months after the filing due date of the return for the fiscal period in which the expenditures were incurred.

Accelerated CCA rate and M&P tax credit

Description of benefits

To the extent that certain R&D assets are used in connection with a taxpayer's eligible manufacturing and processing activities, these assets may qualify for Class 53 (Class 29 before 2016) property classification. Class 53 assets may be depreciated over approximately four years; Class 29 over a three-year period. The same assets may also qualify for federal and/or provincial manufacturing or processing investment tax credits ranging from 4% to 10% (or more) of the qualifying expenditures. The 2018 Federal Economic Statement Update (FES) under the Accelerated Investment Incentive (AII) rules temporarily allows for the immediate expensing of Class 53 property acquired after 20 November 2018 and before 2024 that becomes available for use before 2028. Also note, the province of Quebec provides "Super/Bonus CCA" for eligible Class 53 property; for example, such property would receive an extra 30% deduction in Quebec the year after it was first available for use.

Certain R&D assets may be eligible for other accelerated depreciation property classes such as Class 50 computer hardware, which has a 55% capital cost allowance/depreciation rate. The new AII rules significantly increase the first-year capital cost allowance/depreciation deduction for Class 50 property from 27.5% currently to 82.5% of the cost of eligible property acquired after 20 November 2018 and before 2024 that becomes available for use before 2028. In addition, the province of Quebec provides "Super/Bonus CCA" for eligible property, including Class 50.

Guidelines around incentive applications

The opportunity for capital assets used in SR&ED activities to qualify for accelerated depreciation property classes (e.g., Class 53, 29 and 50) is applicable to projects in current, prior and future years. A taxpayer may amend prior-year corporate tax filings (i.e., revise capital asset classifications) to access classification opportunities to the extent that the years are not statute-barred. Alternatively, the undepreciated balance of the existing asset class can be reclassified to the accelerated class in the current year. With respect to property that is eligible for M&P tax credits, the credits must be claimed by taxpayers on their corporate tax returns (federal or provincial) within 18 months of the year the property was acquired.

Strategic Innovation Fund

Description of benefits

The objective of the Strategic Innovation Fund (SIF) is to accelerate economic growth, strengthen the role of Canadian businesses in regional and global supply chains, and attract investment that creates significant employment benefits for Canadians. Specifically, it accelerates technology transfer and commercialization of innovative products, processes and services; facilitates the growth and expansion of firms in Canada; attracts and retains large-scale investments to Canada; and advances industrial R&D through collaboration among academia, nonprofits and the private sector. The program is available to organizations of all sizes across all of Canada's industrial and technology sectors that are requesting more than CAD10 million in project funding. SIF primarily provides support in the form of favorable loans of up to 50% of eligible project costs (cash grants can be awarded under exceptional circumstances). The fund provides contributions to support distinct activity streams with specific objectives:

- ▶ Stream 1: encourage R&D necessary to accelerate technology transfer and commercialization of innovative products, processes and services
- ▶ Stream 2: facilitate the growth and expansion of firms in Canada
- ▶ Stream 3: attract and retain large-scale investments in Canada
- ▶ Stream 4: advance industrial research, development and technology demonstration through collaboration among academia, nonprofit organizations and the private sector
- ▶ Stream 5: support large-scale, national innovation ecosystems through high-impact collaborations across Canada
- ▶ Net Zero Accelerator initiative: support projects that focus on:
 - ▶ Decarbonization of large emitters
 - ▶ Clean technology and industrial transformation
 - ▶ Development of a Canadian batteries ecosystem

Guidelines around incentive applications

The incentive is fully discretionary and is applicable to future investments that have not yet been incurred. There is no defined application period for the SIF, and the application process follows a two-stage process: Statement of Interest (SOI) and a Detailed Application. This process applies to all streams as well as the Net Zero Accelerator initiative. The SOI is a high-level overview of the project and includes a project description that includes details on how it meets the fund's objectives. Applicants must demonstrate their basic corporate capability to complete the project.

Applicants will receive feedback on whether the SOI indicates potential for funding and if they should advance to the Detailed Application stage. Applicants will need to clearly demonstrate the benefits of their project in relation to key government priorities. Applications will be assessed based on the project's anticipated benefits, including innovation, economic and public benefits. Applicants will be subject to a comprehensive due diligence process. Successful applicants will be required to sign a Contribution Agreement. Recipients will be required to submit periodic reports, annual consolidated financial statements, repayment forecasts (if applicable), project status updates and reports of project benefits.

Tax Holiday for Large Investment Projects in Québec

Description of benefits

The objective of the tax holiday is to attract large investment projects to the province of Québec. It is available to corporations or partnerships that carry out certain large investment projects in Québec. The benefits include:

- ▶ A tax holiday on the income from its eligible activities relating to such large investment projects
- ▶ A holiday from employer contributions to the Health Services Fund (HSF) regarding the portion of wages paid to its employees attributable to the time they devote to such activities
- ▶ The tax holiday lasts 15 years

Guidelines around qualifying for the tax holiday

The main parameters of the tax holiday for large investment projects are:

- ▶ The minimum investment is set at USD100 million, or USD50 million if the investment is carried out in certain regions, and must be reached no later than the end of the 60-month period after the date of issue of the initial certificate.
- ▶ The total value of the tax holiday may not exceed 15% of the total eligible investment expenditures determined on the date when the holiday period begins.

3. Eligibility requirements

Scientific Research & Experimental Development

SR&ED is defined as a systematic investigation or search that is carried out in a field of science or technology by means of experiment or analysis that involves basic research, applied research or experimental development and includes work undertaken by or on behalf of the taxpayer with respect to engineering, design, operations research, mathematical analysis, computer programming, data collection, testing or psychological research where the work is commensurate with the needs and directly in support of the basic research, applied research or experimental development.

The work must be undertaken in Canada. Qualifying SR&ED expenditures may include labor, materials consumed or transformed, subcontracts (SR&ED performed on taxpayers' behalf), other expenses directly related and incremental to the SR&ED, and third-party payments. Only 80% of subcontractor and third-party costs is eligible. The SR&ED incentive is not limited to particular industries.

Strategic Innovation Fund

For streams 1, 2 and 3, the applicant must be a for-profit corporation incorporated under the laws of Canada and proposing to carry on business in Canada. Stream 4 is geared toward consortia that include academic institutions (e.g., Canadian universities, colleges, research institutes, not-for-profit entities). However, the stream 4 lead applicant must be an entity that is incorporated in Canada, carries on business in Canada and is proposing to conduct industrial research and technology demonstration activities. For stream 5, the lead applicant must be either a not-for-profit organization incorporated in Canada or a for-profit corporation incorporated in Canada, in collaboration with Canadian universities, colleges, research institutes, for-profit corporations (including SMEs) and/or not-for-profit entities. Net Zero Accelerator projects can qualify under all streams. As such, the requirements will depend on which stream best reflects the nature of the project and the applicant.

Each stream of the program, as well as the Net Zero Accelerator initiative, has its own project eligibility criteria. As part of the evaluation process, the government uses a Technology Readiness Level (TRL) scale to assess the maturity level of a particular technology.

For all streams, including the Net Zero Accelerator, eligible costs are those nonrecurring costs related to the particular project, including:

- ▶ Direct labor
- ▶ Overhead (limits apply)
- ▶ Subcontracts and consultants
- ▶ Direct materials and equipment
- ▶ Land and buildings
- ▶ Other direct costs

Tax Holiday for Large Investment Projects in Québec

To qualify under the tax holiday, applicants must demonstrate that the activities arising from their large investment are activities from an eligible activity sector:

- ▶ Manufacturing
- ▶ Wholesale trade
- ▶ Warehousing and storage (in particular, value-added distribution centers)
- ▶ Data processing and hosting
- ▶ Operation of eligible digital platforms

These activities follow the North American Industry Classification System (NAICS) codes.

4. IP and jurisdictional requirements

SR&ED-related activities must be carried on by the taxpayer in Canada. The SR&ED program does not require the claimant to own the intellectual property (IP).

The M&P activities related to Class 53/29 assets must be carried on in Canada.

Eligible SIF projects must also be based in Canada. The SIF program, however, requires recipients to own the background intellectual property or hold sufficient background IP rights to allow their project's activities to be carried out. In addition, they must hold sufficient rights to exploit the IP resulting from their project's activities. Recipients may be required to provide the government with information regarding their IP strategy as it relates to protecting the IP resulting from their project's activities.

Qualifying projects for the Tax Holiday for Large Investment Projects must be carried out in the province of Québec.

5. Technology or innovation zones

There are no defined technology or innovation zones providing R&D incentives in Canada. However, the provinces of Saskatchewan and Quebec have introduced commercial innovation incentives, better known as “patent box” incentives. These patent box incentives are intended to encourage corporations to commercialize patents and other innovations in their respective provinces by reducing the province’s tax on income earned from these innovations. More specifically, the patent box incentive will reduce the general provincial corporate income tax rates for an extended period (i.e., up to 10 years) applicable to an eligible corporation’s taxable income earned from the commercialization of qualifying IP in Saskatchewan, such as patents, plant breeders’ rights, trade secrets and copyright (computer programs and algorithms).

6. Role of governmental bodies in administering incentives

The legislation governing the SR&ED program is contained in the federal Income Tax Act and Income Tax Regulations, which are the responsibility of the Department of Finance.

CCA rates and the M&P tax credits are the responsibility of the Department of Finance (federal or provincial). The CRA is responsible for their administration, including review and assessment.

The Strategic Innovation Fund program is funded and managed by the federal department of Innovation, Science and Economic Development Canada.

The Tax Holiday for Large Investment Projects in Québec is administered by Investissement Québec and the Minister of Finance.

7. Administrative requirements

To claim a federal M&P credit, a claimant must complete and file Form T2SCH31 (Schedule 31), Investment Tax Credit – Corporations, or Form T2038 (IND), Investment Tax Credit (Individuals), as applicable. For provincial credits, each province has its own form that must be completed and filed with the taxpayer’s return for the applicable year.

The SIF program requires completion of a Statement of Interest form and a full detailed application.

The Tax Holiday for Large Investment Projects in Québec requires an initial certificate as well as annual certificates issued by the Minister of Finance.

Chile

This chapter is based on information as of February 2023.

To encourage R&D investments by corporate taxpayers, the Chilean government provides a tax credit of 35% on pre-certified R&D cash expenditures, excluding cash flows sponsored with public funds; the remaining portion of the expenditure may be deducted as an expense. The government also provides a relatively generous cash grants scheme to promote technological innovation.

1. Overview

The Ministry of Economy has defined as part of its strategy for Chile's development the goal of converting Chile into a hub of innovation and entrepreneurship in the Latin American region. For this purpose, it has implemented a number of Chilean Economic Development Agency (CORFO) programs designed to attract entrepreneurs and R&D investment to Chile and to connect Chile to the world's main technology markets.

Currently, corporate taxpayers are entitled to a 35% tax credit against their corporate tax liability, subject to a yearly cap of UTM15,000 (monthly tax unit, which is approximately USD1.1 million),¹ where the base is calculated by using the total amount disbursed in an R&D

contract with a registered research center excluding cash flows sponsored with public funds.

If taxpayers use in-house R&D resources, the base would be calculated using the amounts disbursed within the R&D certified project for current expenses (or expenses associated with an extraordinary pre-certification process) and an annual quota of fixed asset depreciation for assets acquired and destined to R&D activities. Disbursements incurred over and above the aforementioned limit may be deducted as expenses. These expenses may be deducted by taxpayers for a period of up to 10 consecutive commercial years, starting in the year in which the R&D contract or project is certified and the payment has been effectively made.

¹ Subject to UTM value increase and the USD exchange rate.

Although the Chilean Income Tax Law expressly regulated disbursements made in relation to R&D activities under the concept of allowable tax expenses, it was not until the enactment of Law No. 20.241 in January 2008 that the government clearly showed its attitude toward granting a tax benefit in relation to these activities. However, because of the law's restrictions, i.e., the limits for the total amount of credit available and the deductibility of the expense, and in particular, the requirement to only contract with an R&D registered center (which left companies unable to claim tax relief for in-house R&D projects), there was not much

uptake, as the benefits did not justify the costs. Because the number of investors applying for these tax benefits was lower than expected, the government modified Law No. 20.241 (via Law No. 20.570) to expand the tax credit available and introduce more flexibility to the R&D tax incentive regime, allowing, for instance, taxpayers to carry out R&D on an in-house basis. The modified law, which has been in force since March 2012, has led to more tax benefits being awarded, allowing a higher number of investors to make use of these new benefits.

2. Incentives available

Name of incentive	Tax incentive to private investment in R&D (Law No. 20.241, as modified by Law No. 20.570)*	CORFO grants and lines of credit
Type of incentive	<ul style="list-style-type: none"> ▶ Tax credits ▶ Tax deductions 	▶ Cash grants

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

Tax incentive to private investment in R&D

Description of benefits

To boost R&D in Chile, the Chilean Congress in March 2012 approved a new regulation, Law No. 20.570, that modified the R&D tax incentive regime enacted in 2008 (Law No. 20.241) by expanding the tax credit available and introducing more flexibility to the R&D tax incentive regime. The aforementioned incentives are summarized below.

R&D certified contract with a registered research center

- ▶ The tax credit against the taxpayer's corporate tax is equivalent to 35% of payments associated with R&D certified contracts entered into with a registered research center, with an annual cap of UTM15,000 (approximately USD1.1 million).²
- ▶ Taxpayers will be allowed to deduct as an expense any amounts paid (not deducted as a credit) and associated with R&D certified contracts entered into with a registered research center. In this case, 35% is taken as a tax credit and the remaining 65% is taken as a deduction. For these purposes, disbursements incurred in R&D contracts are considered to be necessary, even though they may not be related to the taxpayer's main line of business.
- ▶ If taxpayers enter into an uncertified contract, they will only be entitled to deduct 65% of the disbursements made in connection with the R&D contract as expenses and will not be entitled to the 35% tax credit. However, certification at a later date, in accordance with the procedures set forth in the law, will enable the taxpayer to access the tax credit benefit.
- ▶ This benefit would apply to disbursements incurred with the company's own expenses and excluding cash flows financed with public funds. According to the IRS' interpretations (Ruling No. 497/2020), this benefit also applies if the Chilean company receives funds from its parent company from abroad or from any other entity or third parties.
- ▶ Any remaining tax credit against corporate tax may be carried forward until extinction, by including the remaining tax credit in Form 22 of each year.
- ▶ A preapproval process is required to obtain the incentive.

R&D project (based on in-house R&D activities)

- ▶ The tax credit against the taxpayer's corporate tax is equivalent to 35% of the base composed of total payments made concerning current expenses in tandem with the annual quota of depreciation of fixed tangible property acquired within the scope of the R&D project, with an annual cap of UTM15,000 (approximately USD1.1 million).
- ▶ Taxpayers will be allowed to deduct as an expense any amounts paid, not deducted as a credit, in connection with an R&D certified project. In this case, 35% is taken as a tax credit, and the remaining 65% is taken as a deduction for CIT determinations. For these purposes, disbursements incurred in R&D projects are considered necessary, even though they may not be related to the taxpayer's main line of business.
- ▶ It should be noted that R&D projects may be carried out by taxpayers with their internal capacities or from third parties being able to associate for the presentation of such projects.
- ▶ Additionally, payments for contracts with legal entities for the rendering of services directly related to project activities may be deducted as an expense. According to the law, the only restriction is that at least 50% of these expenses must correspond to activities carried out within the national territory.
- ▶ If taxpayers begin making disbursements for an uncertified project (pending its approval), they will only be entitled to deduct 65% of the amount disbursed as expenses. This means the 35% tax credit benefit will not be awarded. However, certification at a later date will enable taxpayers to access the tax credit benefit.
- ▶ This benefit would apply to disbursements incurred with the company's own expenses and excluding cash flows financed with public funds. According to the IRS' interpretations (Ruling No. 497/2020), this benefit also applies if the Chilean company receives funds from its parent company from abroad or from any other entity or third parties.
- ▶ Any remaining tax credit against corporate tax may be carried forward until extinction, by including the remaining tax credit in the Form 22 of each year.
- ▶ A preapproval process is required to obtain the incentive. Only disbursements associated with a preapproved project would be counted within the incentives.
- ▶ It is relevant to consider that an exceptional pre-step approval process is recognized in the law through which taxpayers can file an affidavit before CORFO "informing that they are keen to file a R&D project." According to this procedure, taxpayers would be able to prepare a project that must be filed within 18 months. As soon as certain formal and substantial requirements are met, all disbursements incurred from the date in which the affidavit was filed would be counted for the different incentives.

² Subject to UTM value increase and the USD exchange rate.

Guidelines around incentive applications

The incentive is applicable to current investments. As the benefits consist of a tax credit and the possibility to deduct the related disbursements as an expense, the tax benefit will be determined according to net taxable income. Tax benefits are claimed annually through the regular tax form used to report income, Form No. 22. This form has to be completed in April of the year following when the disbursement took place.

Tax reform bill

Description of benefits

On 8 July 2022, Chile's president Gabriel Boric submitted to the Chilean parliament a Chilean tax reform package for discussion.

One of the proposals would enhance R&D tax incentives by modifying the R&D law. The following changes are the most important:

- ▶ The percentage of R&D disbursements that can be claimed as tax credits against corporate taxes increase from 35% to 50% for projects with a "positive direct environmental impact" (a new concept defined in the bill) or involving an advanced person (e.g., a person who has earned a PhD).
- ▶ The tax credit cap is tripled from USD1.1 million to USD3.3 million.
- ▶ The benefits of the law are extended indefinitely (previously they were planned to end by 31 December 2025).
- ▶ Application fees are eliminated.
- ▶ Taxpayers who already enjoy the benefits can access the new benefits automatically.
- ▶ Small and medium enterprises (SMEs) subject to the Pro-Pyme Tax Regime may also access the R&D tax credit (even when they do not have full accounting records). The bill also allows these taxpayers to receive a cash refund of the R&D tax credit in certain cases (e.g., tax loss position).

The proposed modifications are expected to be in force from 1 January 2023.

CORFO grants and lines of credit

Description of benefits

CORFO offers more than 50 programs and financial instruments aimed at stimulating entrepreneurship, innovation and competitiveness in the Chilean economy. Among others, some of the most relevant R&D-related instruments are listed below.³

Innova High Technology Program

- ▶ The objective of this program is to power, validate and scale research, development and innovation projects with high technological risk to allow them to scale globally.
- ▶ The beneficiaries are legal entities incorporated in Chile and individuals more than 18 years old who have initiated activities in a specific business that is subject to corporate income tax. The beneficiary must have at least three years of seniority and have made sales in the last 36 months (not necessarily in all).
- ▶ Funding consists of a maximum total grant of CLP400 million (approximately USD478,000) to support the R&D and innovation (R&D&I) projects with global scalability potential and high technological and commercial risk. CORFO co-finances 70% of the co-financing percentage of the total project cost.
- ▶ The expected results of this program are new products, services and/or processes technically validated at industrial scale, results protection and commercialization strategy designed and developed, and R&D&I capabilities strengthened.

Consolidate and expand innovation program

- ▶ This program seeks to support the national and international scaling up, at the commercial and production level, and the validation and technical packaging in the target markets, of a new or improved product (good or service) and process that required R&D, from the technical validation phase to the productive scale and/or commercial validation.
- ▶ The beneficiaries are private legal entities incorporated in Chile and public corporations created by law. It is required to have at least 18 months from the date of commencement of activities in a first category business line, which must be in force. Sales income must be accredited within the 18 months prior to the application (not necessarily in all months).

³ CORFO develops new programs and instruments every year, and some of the programs are discontinued. The requirements to apply for each of the individual programs are detailed on CORFO's website.

- ▶ Funding consists of a maximum total grant of up to CLP150 million (approximately USD180,000). CORFO co-finances 40%, 50% or 60% of the co-financing percentage of the total project cost, depending on the size of the corporation that applies.
- ▶ The expected results of this program are new or improved products (goods or services) and/or processes introduced in target markets, a business plan developed and validated, and innovation capabilities generated and/or increased in the company.

Create and validate R&D&I focus on sustainability program

- ▶ This program seeks to support the development of new or improved products (goods or services) and/or processes that require R&D, from the prototype phase to the technical validation phase on a productive scale and/or commercial validation, strengthening the company's innovation capabilities within the framework of climate technology solutions in water and energy.
- ▶ The beneficiaries are legal entities incorporated in Chile and individuals over 18 years old who have initiated activities in a business line subject to corporate income tax. It is required to have at least 18 months from the date of commencement of activities in a first category business line, which must be in force. Sales income must be accredited within the 18 months preceding the application (not necessarily in all months).
- ▶ Total maximum grants:
 - ▶ Individual project: CLP180 million (approximately USD214,500)
 - ▶ Collaborative project: CLP220 million (approximately USD262,000)
 - ▶ Co-financing percentage up to 80%, 60% or 40% of the total cost of the project
- ▶ The expected results of the program are new or improved products (goods or services) and/or processes requiring R&D developed; a proposal that enables the effective introduction of a product (good or service) to the market, defined and tested, and/or proposal for the productive implementation of the process, executed; and innovation capabilities in the company strengthened.

Guidelines around incentive applications

The incentives are applicable for future investments. Corporations, research centers, universities and other qualified persons must submit an application to CORFO in accordance with the specific requirements set out for each grant (which are available at the CORFO website).

Likewise, the National Research and Development Agency (ANID, for its acronym in Spanish) is the agency in charge of managing and executing the programs and instruments aimed at promoting, fostering and developing research in all areas of knowledge, technological development and scientific-technological innovation, in accordance with the policies defined by the Ministry of Science, Technology, Knowledge and Innovation.

Like CORFO, ANID offers a wide range of funding tenders during the year based on five central pillars: networks, strategy and knowledge; human capital; applied research; centers; and research projects.

3. Eligibility requirements

Taxpayers subject to the First Category of Income Tax (corporate tax) who declare their effective revenue based on full accountancy rules and who enter into an R&D contract with a duly authorized research and development center, or those who develop an R&D project using their own resources or from third parties, both duly certified by CORFO, are eligible.

"Research activities" are understood as methodical searches aimed at generating new knowledge in a scientific or technological field that may be categorized as basic research or applied research. "Development" is understood as a systematic study that takes advantage of existing knowledge gained from previous research or experience and is aimed at producing new materials, products or devices to implement new processes, systems and services or to substantially improve existing ones. Software developments are considered a development activity as long as the software development gives rise to greater knowledge to solve a scientific or technological uncertainty in a systematic way or to generate a substantial improvement and innovation in a current process, product and/or service.

Qualifying expenses eligible for tax credits/tax incentives for private investment in R&D are listed below.

R&D certified contract with a registered research center

- ▶ All expenses related to R&D contract payment qualify. Rights and procedures related to registering any IP right, when related to the R&D activity, also qualify.

R&D project (based on in-house R&D activities)

All disbursements related to the R&D project must be duly presented to CORFO upon application for certification or through the exceptional procedure described before (through which taxpayers express their will to file an R&D project to CORFO within the upcoming 18 months). In particular, the law presents some guidance:

- ▶ Eligible expenses include current expenses such as salaries and fees; direct expenses such as materials, chemical reagents, IT services and data analysis; service contracts with third parties directly related to project development (at least 50% must correspond to expenses incurred within the country); leasing, or subleasing, real estate or buildings necessary to develop the activities; expenses related to IP registration rights; and utility expenses, such as water services and electricity, which must not be more than 5% of the total expenses (although CORFO may authorize more of these types of expenses depending on each particular case).
- ▶ Expenses related to immovable property that are related to the project are eligible.

4. IP and jurisdictional requirements

There are no jurisdictional requirements related to IP.

5. Technology or innovation zones

There are no technology or innovation zones that provide R&D incentives in Chile.

6. Role of governmental bodies in administering incentives

The R&D tax incentive operates on a self-assessment basis and is jointly administered by the Chilean Internal Revenue Service (IRS) and CORFO. Under the incentive framework, CORFO is in charge of keeping a registry where the research centers may apply. Additionally, CORFO is in charge of certifying the R&D contracts entered into between a taxpayer and a research center or the R&D project that a taxpayer develops individually.

7. Administrative requirements

Research center registration

- ▶ A research center must apply for registration with CORFO. To do this, the center must attach documentation and evidence required by law and regulations to its application, as well as proof of payment of registration fees. To be registered, the center must at a minimum prove that it:
 - ▶ Has the necessary organization and means, material, and personnel to develop the R&D activities
 - ▶ Has been operating and exercising R&D activities for at least six months prior to the application
 - ▶ Has mechanisms that faithfully and clearly reflect the income and expenses that will be undertaken as part of the project
- ▶ In addition, the legal representative must file an affidavit stating that the records provided are authentic, truthful and are fully valid as of the date of submission.
- ▶ Concerning annual compliance, each May, the legal representative must inform CORFO of any substantial modifications that concern changes on the conditions under which the center applied or those that have helped it maintain registration. If no modifications have taken place, the legal representative must file an affidavit stating so.

Certification of R&D contracts with a research center

- ▶ Taxpayers who wish to benefit from the tax benefits must enter into a written R&D contract for an amount of more than UTM100 (approximately USD6,800).
- ▶ CORFO must certify the contract, a process in which an analysis will be conducted to verify that:
 - ▶ The contract's purpose is to develop R&D activities.
 - ▶ The activities to be developed are related to the center's resources, material and personnel in order to accomplish the objective.
 - ▶ The price of the contract is at market value.
- ▶ CORFO will be in charge of ensuring that the contract has been properly fulfilled. Tax benefits may be lost if CORFO determines that there has been a breach of contract.
- ▶ The IRS is empowered to review these contracts to verify whether the objectives are being executed in the terms agreed upon and that the projects being developed in relation to the organization and resources available to the respective research center are duly registered.

R&D project certification

- ▶ CORFO must certify the project for the taxpayer to access the benefit. Therefore, the taxpayer must complete an application with CORFO, in which the latter must verify that the taxpayer:
 - ▶ Has an R&D project that includes an R&D purpose, with a cost greater than UTM100, and has adequate capacity in material and personnel to develop the project
 - ▶ Has mechanisms that faithfully and clearly reflect the income and expenses that will be undertaken as part of the project
 - ▶ Has filed an affidavit stating that the records provided are authentic, truthful and fully valid as of the date of submission
 - ▶ Has verified that the costs correspond to the activities to be developed and reflect market values
- ▶ CORFO will be in charge of ensuring that the contract has been properly fulfilled throughout the duration of the project.
- ▶ Concerning annual compliance, the taxpayer must inform CORFO and the IRS regarding R&D projects that are ongoing or that have been executed in the past 12 months, identify the people to whom payments have been made under these projects and the amount of these payments, and give the total cost of each project certified by CORFO through an annual affidavit.

Sworn statements to be filed before the Chilean IRS

- ▶ According to the instructions provided by the Chilean IRS, the two sworn statements involved to use this benefit are the following:
 - ▶ **Sworn Statement No. 1841**
This form must be filed by every taxpayer that uses the tax benefit established in Law No. 20.241, but only in case the payment of disbursements related to projects and/or respective research and development contracts have been sponsored partially with public resources, all in accordance with the provisions of the final paragraph of article 5 and article 21 of Law No. 20.241 amended by Law No. 20.560 of 2012.

If the payment of a specific contract or project has been 100% sponsored with the taxpayer's own resources, said contract or project should not be informed in this sworn statement. Similarly, if all the research and development contracts signed by the taxpayer or all the projects developed by the taxpayer have been sponsored with their own resources, it is not obligated to present this sworn statement.

Deadline: 29 March of the year following when the disbursements took place

- ▶ **Sworn Statement No. 1840**

This form must be filed by the research centers or, when appropriate, by the sponsoring legal entity that concludes research and development contracts of those referred to in Article 3 of Law No. 20.241, all in compliance with the provisions of subsection eight of article 5 of said law.

Deadline: 29 March of the year following when the disbursements took place

8. Statutory reference

- ▶ Law No. 20.241
- ▶ Law No. 20.570 (amending Law No. 20.241)
- ▶ Decree No. 102, 2012 (regulations)

China Mainland

This chapter refers to the mainland China tax jurisdiction and is based on information as of February 2023.

A number of new tax regulations that significantly changed the landscape of R&D incentives in China have started to take effect since 2016. Although many preconditions have been relaxed to a certain extent, taxpayers are facing increased uncertainty in tax regulation interpretation and a more stringent ongoing monitoring and assessment process. In addition, new regulations have introduced updated application or filing procedures, which could take time for government authorities to digest and implement, especially when various authorities are involved in one application or filing step.

1. Overview

Most of the R&D incentives have been available in China for many years, and overall, the regime is maturing with constantly issued laws and regulations. However, as some regulations are still not explicit, authorities in different locations may have different interpretations and treatments regarding R&D incentives.

The government encourages R&D activities, while taking a stringent position on the review and assessment of R&D incentives. Government preapproval or record filing is required to claim R&D tax benefits. Taxpayers are required to submit all relevant information to the government as early as possible (including the R&D project budget, descriptions of specific R&D projects, categories of R&D expenditures, and management or board meeting

documents authorizing R&D project(s)), or retain such information in preparation for potential tax assessment in the future.

China offers incentives to taxpayers eligible for the Technologically Advanced Service Company (TASC) and the High and New Technology Enterprise (HNTE) status. TASC and HNTE refer to those companies with advanced technologies and qualified personnel to produce products or provide services. It also provides pretax super deductions of 175% to 200% on qualifying R&D expenses actually incurred during the year. In addition, China provides corporate income tax (CIT) exemption and reduction for the transfer of qualified technologies.

2. Incentives available

Name of incentive	Incentives for Technologically Advanced Service Companies (TASC) status*	Incentives for High and New Technology Enterprises (HNTE) status	R&D expenses super deduction	Incentives for qualified technology transfer income
Type of incentive	▶ Reduced tax rates	▶ Reduced tax rates ▶ Tax holiday	▶ Super deduction	▶ Tax exemption and reduction

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

Incentives for TASC status

(技术先进型服务企业)

Description of benefits

The following tax benefits are available to companies qualifying as TASCs nationwide from the beginning of 2017:

- ▶ A reduced CIT rate of 15%
- ▶ A zero value-added tax (VAT) rate treatment on qualified offshore outsourcing service income

A preapproval process is required to obtain the incentives.

Guidelines around incentive applications

The incentive is applicable for current investments. A company with TASC certifications may enjoy a 15% reduced CIT rate within the validation period of the certification. The application package should be submitted with the relevant forms in the CIT filing return, which include Form A107040 of the return.

Incentives for HNTE status

(高新技术企业)

Description of benefits

- ▶ A reduced CIT rate of 15% is available to HNTEs.
- ▶ For a qualified HNTE newly established in one of the five Special Economic Zones or the Shanghai Pudong New Area on or after 1 January 2008, the enterprise may be entitled to a tax holiday of "two years' exemption and three years' half deduction" from the first year in which it derives production or operating income.
- ▶ From 1 January 2018, tax losses may be carried forward by an HNTE up to 10 years (e.g., tax losses incurred in 2013 that have not yet been used by 2018 by an HNTE may be carried forward for another five years). For an enterprise with an HNTE qualification effective in 2022 Q4, the full amount of fixed assets other than houses and buildings newly purchased during the period from 1 October 2022 to 31 December 2022 may be deducted from the taxable income amount on a one-off basis in the current year and may conduct a 100% super deduction before tax.
- ▶ A preapproval process is required to obtain the incentive.

Guidelines around incentive applications

The incentive is applicable for current investments. A company with HNTE certifications may enjoy a 15% reduced CIT rate within the validation period of the certification. The relevant information or documents should be submitted for tax bureau review each year that HNTE status is requested, which is due within five months after the end of the tax year (the statutory annual filing deadline). The relevant forms in the CIT filing return should be submitted, including Form A107040 and Form A107041 of the return.

R&D expenses super deduction

(研发费加计扣除)

Description of benefits

- ▶ According to CIT Law, from 1 January 2018 to 31 December 2023, resident enterprises are allowed to deduct 175% of qualified R&D expenses for CIT purposes, among which the super deduction of R&D expenses for manufacturing enterprises shall be further raised from 175% to 200% (with retroactive effect from 1 January 2021). Moreover, the super deduction rate for qualified R&D expenses incurred during the period from 1 October 2022 to 31 December 2022 increased from 175% to

200% for eligible enterprises other than manufacturers and high-tech small and micro enterprises (SMEs).

- ▶ In addition, it is prescribed in PN 13 that eligible enterprises may choose to claim the super deduction of R&D expenses incurred in the first half of a year under the provisional CIT filing for the third quarter or the month of September (to be completed in October). If an eligible enterprise failed to claim the super deduction in the provisional CIT filing to be completed in October 2021, the super deduction can be claimed in the 2021 annual CIT filing to be filed by the end of May 2022.
- ▶ A documentation filing process is required to secure the incentive.

Guidelines around incentive applications

The incentive is applicable for current investments. The incentives related to the R&D expenses super deduction should be claimed during the annual CIT filing, which is due within five months after the end of the tax year (the statutory annual filing deadline). Companies can judge by themselves whether they are qualified for the incentive, and the related documents should be kept well for record and potential assessment by the tax authority in the future. In the meantime, the super deduction amount should be reflected in Form A107010 and Form A107012 of the annual CIT filing return.

Incentives for qualified technology transfer income

Description of benefits

- ▶ According to CIT Law, CIT can be exempted and reduced for qualified technology transfer income.
 - ▶ If the resident enterprise's income from its technology transfer does not exceed RMB5 million (about USD806,452), CIT may be exempted.¹
 - ▶ For the part of the enterprise's income exceeding RMB5 million, the enterprise income tax shall be half-exempted.
 - ▶ Furthermore, according to Caishui [2020] No. 61, for resident enterprises registered in the specific area of Zhongguancun Science Park, CIT may be exempted for qualified technology transfer income that does not exceed RMB20 million in a tax year and exempted 50% for the part exceeding RMB20 million.
- ▶ A documentation filing process is required in securing the incentive.

¹ Assuming USD100=RMB620.

Guidelines around incentive applications

The incentive is applicable for current investments. The incentives related to qualified technology transfer income should be claimed after the end of each tax year, and the claim is due no later than five months after the end of the tax year (the statutory annual filing deadline). The relevant forms in the CIT filing return should be submitted, including the Basic Information Form on Taxpayers, Form A107020 of the annual CIT filing return.

3. Eligibility requirements

Incentives related to HNTE status

Key considerations:

- ▶ The HNTE certificate must be obtained before applying for preferential tax treatment from the in-charge tax authority.
- ▶ The recognition of HNTE is jointly managed by the Ministry of Science and Technology (MOST), the Ministry of Finance (MOF) and the State Administration of Taxation (SAT), with MOST carrying out initial checks.
- ▶ HNTE status certificate is valid for three years from the date of issuance.

Major recognition criteria of HNTE:

- ▶ Core intellectual property (IP) rights ownership
- ▶ Products or services falling within the scope of the catalog of key high-technology and new-technological territories
- ▶ Headcount requirement for R&D personnel (no less than 10% of total headcount for R&D)

R&D expenses super deduction

See the table below for the scope of qualified R&D expenses.

Qualifying expenditures	Detailed explanation
Labor cost	<ul style="list-style-type: none"> ▶ Following expenditures for employees directly engaging in R&D activities: salaries, standard pensions funds, standard medical insurance, unemployment insurance, work-related injury insurance, maternity insurance and housing funds, stock options ▶ Service fee for external R&D personnel, including labor dispatching

- ▶ Minimum R&D expenses requirement (3% to 5% of R&D expenses over turnover for the preceding three accounting periods)
- ▶ Minimum revenue requirement from high-technology and new-technology products or services (60% of total annual revenue)
- ▶ Four analyses required on the amount and quality of proprietary IP, capability for commercialization, ability of execution and management of R&D activities, and growth of revenue and net assets

Incentives related to TASC status

Major recognizing criteria of TASC:

- ▶ For the CIT incentive:
 - ▶ Engaging in one or more of qualified technologically advanced outsourcing services (information technology outsourcing (ITO), business process outsourcing (BPO) and knowledge process outsourcing (KPO)), adopting advanced technologies or possessing strong research and development capacities
 - ▶ Minimum education level requirement for employees (50% graduates with an associate degree or above)
 - ▶ Minimum revenue requirement from qualified technologically advanced services (50% of annual total revenue)
 - ▶ Minimum revenue requirement from qualified offshore outsourcing services (35% of annual total revenue)
- ▶ For zero-VAT treatment on the qualified offshore outsourcing service income:
 - ▶ Providing qualified technologically advanced outsourcing services in ITO, BPO or KPO fields to overseas entities

Qualifying expenditures	Detailed explanation
Direct investment cost	<ul style="list-style-type: none"> ▶ Materials, fuel and power directly consumed for R&D activities ▶ Development and manufacturing costs of equipment and molds used for testing and experiments; costs of samples and prototypes that do not constitute fixed assets and expenses for general testing solutions ▶ Inspection fees for experimental products ▶ The expenditures for maintenance, adjustment, testing and rental cost on devices and equipment for R&D
Depreciation expenses	<ul style="list-style-type: none"> ▶ Depreciation expenses for devices and equipment for R&D
Amortization expenses of intangible assets	<ul style="list-style-type: none"> ▶ Intangible assets used for R&D, including: <ul style="list-style-type: none"> ▶ Software ▶ Patents ▶ Non-patented technologies (licensing, know-how, design and calculation method, etc.)
Designing fees for new products, etc.	<ul style="list-style-type: none"> ▶ Expenses incurred relevant to the below activities: <ul style="list-style-type: none"> ▶ Design of new products ▶ Formulation of procedures with new techniques ▶ Clinical trial for new pharmaceuticals ▶ On-site testing for exploration technology
Other costs directly related to R&D activities (capped at 10% of the total qualifying R&D expenditures)*	<ul style="list-style-type: none"> ▶ Expenditures for technical books and information ▶ Translation fees ▶ Expert consultation fees ▶ Insurance premium for R&D of high and new technology ▶ Expenditures for research, analysis, review, verification, identification, evaluation, assessment and inspection of R&D results ▶ Application, registration and agency fees for IP ▶ Travel and meeting expenses ▶ Welfare expenses ▶ Supplement pension funds ▶ Supplement medical insurance

* According to SAT PN [2021] No. 28, where an enterprise engages in multiple R&D projects in a tax year, the "other relevant expenses" directly incurred in R&D activities that are eligible for super deduction are subject to a cap of 10% of total qualifying R&D expenses and should be calculated as follows:

Upper limit of other relevant expenses for all R&D projects = Eligible R&D expenses for all R&D projects, excluding other relevant expenses × 10% / (1 - 10%)

This formula replaces the previous stipulation in this regard as prescribed in SAT PN [2015] No. 97 (PN 97, i.e., PN regarding issues related to policies for the super deduction of R&D expenses for CIT purposes) where the upper limit of other relevant expenses eligible for super deduction is required to be calculated on a project-by-project basis.

The new formula may allow an enterprise engaging in multiple R&D projects in a year to come up with a higher amount of upper limit of other relevant expenses comparing to the previous formula.

* SAT PN [2021] No. 28 announced a simplified version of subsidiary ledgers (i.e., format and explanatories are set out in Attachments I and II of SAT PN [2021] No. 28) to record qualifying R&D expenses. The enterprises may choose to adopt the simplified ledgers, the original subsidiary ledgers announced in PN 97 or ledgers designed on their own (data and logical relationships displayed in the simplified version should be included in the ledgers designed by the enterprises). The ledgers should be retained for tax authorities' future verification.

Incentives related to the qualified technology transfer income

Criteria for CIT incentives:

- ▶ The technology transferor must be a tax resident company within China.
- ▶ The technology transferred shall fall into the scope specified by the MOF and the SAT.
- ▶ The technology transfer within China shall be recognized by the provincial-level science and technology authorities or above.
- ▶ The transfer of technology to overseas shall be recognized by the provincial-level commerce authorities or above.
- ▶ There may be other criteria specified by the relevant in-charge authorities.

Scope of qualified technology transfer:

- ▶ Transfer of patent technology
- ▶ Transfer of computer software copyright
- ▶ Transfer of right of integrated circuits layout designs
- ▶ Transfer of new species of plant
- ▶ Transfer of biopharmaceutical products
- ▶ Transfer of exclusive technology use right with a period of no less than five years
- ▶ Transfer of other technology authorized by the MOF and SAT

4. IP and jurisdictional requirements

The IP must be registered and owned locally. The company claiming the R&D incentive must have effective ownership of the IP, or benefit from non-IP R&D results.

5. Technology or innovation zones

There are many National Economic and Technological Development Zones (NETD Zones) in China, and various preferential treatments of financial subsidies are provided to companies established inside the NETD Zones. R&D incentives provided by each NETD Zone are diverse, according to the different development status and development policies of each NETD Zone. There are no specific uniform R&D incentives to these zones other than the incentives listed.

R&D incentives are mainly provided by local authorities of NETD Zones by way of rewards or subsidies. The types of R&D incentives include land/office price reduction, one-off subsidy and financial subsidies to attract the R&D headquarters/center or technological companies, technology innovation project/program financing, additional subsidies to the original R&D incentives, subsidies to the talents engaging in scientific and technological innovation, and rewards for the technology innovation honors.

6. Role of governmental bodies in administering incentives

Incentives related to HNTE status

- ▶ Involved government agencies:
 - ▶ MOST, MOF and SAT
- ▶ The MOST, MOF and SAT are responsible for the guidance, management and supervision of the HNTE recognition procedures nationwide. The actual processing of application for recognition as an HNTE and the subsequent monitoring will be carried out by the recognition institutes at the provincial level set up by local offices of the MOST, MOF and SAT. When the company is granted the HNTE status, it shall submit the relevant application documents to the in-charge tax bureau to claim the relevant tax incentive for HNTE.

Incentives related to TASC status

- ▶ Involved government agencies:
 - ▶ MOF, SAT, the Ministry of Commerce (MOC), MOST and the National Reform and Development Commission (NRDC)
- ▶ Eligible companies should submit the application documents to the local science and technology authority, which will jointly manage the recognition of TASC with local authorities of commerce, finance, tax, and national reform and development. When the company is granted the TASC status, it shall submit the certificate and relevant application documents to the in-charge tax bureau in order to claim the tax incentive in its CIT annual filing.

R&D expenses super deduction

- ▶ Involved government agencies:
 - ▶ SAT, tax authorities at local levels and the science and technology authorities at city level or above
- ▶ There is no need for taxpayers to submit supporting documents to the in-charge tax bureau during the annual CIT filing in order to claim the super deduction for R&D expenses. However, it is required by China tax regulations that at least 20% of all taxpayers that applied for R&D expenses super deduction shall be assessed on an annual basis, during which supporting documentation may be required to be submitted for review purpose. The tax bureau may seek help from the science and technology authorities at the city level or above in the qualification assessment of R&D expenses.
- ▶ If the company and the tax authorities cannot agree on the allocation basis and amounts allocated for shared R&D expenses within a group, the involvement of the provincial-level tax authorities for a ruling may be required when the group has subsidiaries in different provinces, autonomous regions and cities.

Incentives related to the qualified technology transfer income

- ▶ Involved government agencies include tax authorities at local levels, science and technology authorities at provincial level or above and commerce authorities at provincial level or above.
- ▶ The company should submit the required documents to the in-charge tax authorities for a record to claim CIT exemption or reduction for qualified technology transfer income. The technology transfer within China shall be recognized by the provincial-level science and technology authorities or above, while the cross-border transfer of technology shall be recognized by the provincial-level commerce authorities or above.

7. Administrative requirements

Government preapproval or record filing is required to claim R&D tax benefits. Taxpayers are required to submit all relevant information to the government when necessary, including the R&D project budget, descriptions of specific

R&D projects, categories of R&D expenditures, and management or board meeting documents authorizing R&D project(s), or retain such information to get ready for potential tax assessment in the future.

7.1 Annual compliance requirements

Incentives related to HNTE status

- ▶ In general, HNTE companies should submit record filing form to the in-charge tax bureau before their annual CIT filing. Relevant documents, including the HNTE certificate and specified forms about R&D expenditure ratio and sales/service income analysis, etc., shall be retained for potential tax assessment in the future.

Incentives related to TASC status

- ▶ In general, TASC companies should submit relevant documents or information to the in-charge tax bureau during their annual CIT filing. For example, relevant documents include the total revenue on technologically advanced services and specified forms about the offshore outsourcing service revenue ratio.

R&D expenses super deduction

To enjoy the tax incentive, the following documents need to be retained to get ready for a potential tax assessment in the future:

- ▶ R&D super deduction form in the annual filing package
- ▶ Proposals and R&D expenses budgets
- ▶ Headcount and names of R&D professionals
- ▶ R&D expense super deduction form, which is used to record qualified R&D expenses, excluding those already booked as cost of intangible assets, actually incurred for a tax year
- ▶ Relevant board resolutions or resolutions of general manager meetings
- ▶ Contracts or agreements of relevant R&D projects
- ▶ R&D project progress explanatory reports and research results reports
- ▶ Other materials required by the in-charge tax bureau

The company may engage a qualified accounting firm or tax agent firm to issue special-purpose audit reports or verification reports to claim a super deduction.

Incentives related to the qualified technology transfer income

A company that makes a technology transfer transaction should submit relevant documents to the in-charge tax bureau for the record after the end of the tax year and before submitting CIT annual filing returns. Relevant documents include:

- ▶ Technology transfer agreement (copy)
- ▶ The registration certificate issued by the provincial level of science and technology department or above for transfer of technology within China or technology export registration certificate (or technology export permit) issued by the provincial level of commerce department or above for transfer of technology to overseas parties
- ▶ The information with regard to accumulation, allocation and calculation of technology transfer income
- ▶ Certificate for tax or fee actually paid
- ▶ Other information if required by in-charge tax authorities

7.2 The certification requirement

Incentives related to HNTE status

- ▶ The recognition of HNTE is carried out by the recognition institutes at the provincial level set up by local offices of the MOST, MOF and SAT. Typically, there are six steps in the HNTE recognition procedure:
 1. Online self-assessment
 2. Online registration
 3. Documents submission
 4. Assessment and HNTEs list confirmation by the MOST, MOF and SAT at the provincial level
 5. Public opinion solicitation
 6. Application for preferential tax treatments (if there is no objection incurred in Step 5) and the HNTE certificate is issued
- ▶ An HNTE certificate is valid for three years from the date of issue and shall be reapplied for once it has expired.

Incentives related to TASC status

- ▶ A company qualified for TASC should apply to the local authority of MOST. The recognition of TASC is jointly managed by local authorities of MOF, SAT, MOC, MOST and NRDC. Typically, there are seven steps in the TASC recognition procedure, subject to different provincial rules and practices:
 1. Online registration
 2. Online declaration and submission of documents
 3. Preliminary examination and recommendation by the prefecture-level offices of MOF, SAT, MOC, MOST and NRDC
 4. Assessment and TASC list confirmation by the provincial-level offices of MOF, SAT, MOC, MOST and NRDC
 5. Public opinion solicitation
 6. Submission to the state-level offices of MOF, SAT, MOC, MOST and NRDC for the record
 7. Announcement and TASC certificate issuance
- ▶ A TASC certificate is valid for three years from the date of issue but is eligible for renewal through a reassessment procedure three months prior to its expiration.

Qualified technology transfer income

- ▶ A registration certificate for the technology transfer contract is necessary when applying for tax incentives at the tax bureau. An agreement for technology transfer within China should be registered with the authorities of science and technology at the provincial level or above, while the cross-border technology transfer should be registered with commerce authorities at the provincial level or above.
- ▶ If the cross-border technology transfer agreement involves technology that was developed with government financial support, it should be subject to approval from departments of science and technology at the provincial level or above. The documents to be submitted mainly include the agreement, and scanned copies of the involved intellectual property certificates. The registration requirement may vary among authorities in different provinces.

Within the last several years, the call for tax benefits in Colombia for investments in R&D has attracted more public attention and resulted in a higher index of projects submitted and approved. In 2013, 54 projects were submitted and 21 approved; in 2022, 630 projects were submitted and 466 were approved. On 27 December 2016, Colombia approved a tax reform plan that took effect in fiscal year 2017. One of the key areas of the plan is the promotion of investments in science, technology and innovation through tax benefits. Under the plan, the tax deduction that existed until then of 175% for investments in scientific and technological projects was replaced by a 25% tax discount, a measure that has benefited companies and further enhanced the call for tax benefits. On 13 December 2022, Colombia approved a new tax reform plan that increased the tax discount from 25% to 30%.

1. Overview

R&D in Colombia is based upon the definitions proposed by the Organisation for Economic Co-operation and Development (OECD) contained in the Standard Practice for Surveys on Research and Experimental Development of 1963 (and updated in 2002), also known as the Frascati Manual.

Under these definitions, R&D is defined as those activities that consist of creative work “undertaken systematically to increase the stock of knowledge, including knowledge of mankind, culture and society, and the use of such knowledge to create new applications.” This definition of R&D was adopted by the Administrative Department of Science, Technology and Innovation (*Departamento*

Administrativo de Ciencia, Tecnología e Información, or COLCIENCIAS) in Colombia.

The concept of technological development refers to the application of research results “or any other scientific knowledge for the manufacture of new materials, products, to the design of new processes, production systems or services, as well as substantial technological improvement of materials, products, processes or legacy systems.” And, finally, the term “innovation” involves “the introduction of a new or significantly improved product (good or service) of a process, a new marketing method, or a new organizational method in business practices, the organization of the workplace or the external relationships.”

The Colombian government has promoted tax incentives for the scientific, technological and innovation development communities, providing different benefits that encourage these activities. In accordance with the Inter-American Development Bank, even though the investment in Latin America in these three concepts is relatively low in comparison with more industrialized countries, the investment has achieved a growing interest in regional governments. In Colombia in 2019, the investment was about 0.61% of the gross domestic product (Colombian Observatory of Science and Technology, or OCyT).

The introduction of tax incentives for scientific, technological and innovation development in Colombia was established with Law 6 of 1992, and the R&D incentives regime has since been expanded to include the following eligible activities: projects for investment in science and technology, and development and new medical products; patents, strategic programs and/or projects of research, technological development and innovation; business and external commerce development; and importation equipment and tools under certain conditions, among other activities.

In 2020, the country has begun to observe science, technology and innovation (CTI) from another perspective. This has been demonstrated by the reactivation of the commission of wise men and the transformation of COLCIENCIAS to the Ministry of Science, Technology and Innovation (MCTI). It also has been shown through the commitment to increase investments in science, technology and innovation activities (ACTI) to 1.5% of gross domestic product (GDP) and to analyze the role and contribution of CTI in public policy to resolve and strengthen the problems of society based on knowledge.

2. Incentives available

Name of incentive	Tax discount on income tax for investments in research, technological development and innovation*	Expedited government approval process	VAT exemption for imports in research, development and innovation	Tax exemption on new software with high scientific content	Exempt income for resources for science, technology and innovation, and payment of work performances related to these concepts	Financial support of strategic programs and/or projects of applied research, technological development and innovation
Type of incentive	► Tax discount	► Expedited government approval process	► Tax exemptions	► Tax exemptions	► Tax exemptions	► Financial support

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

Tax discounts on income tax for investments in research, technological development and innovation

Description of benefits

A 30% tax discount is offered for investments in science, technology and innovation projects, aiming to solve commercial problems, generate new knowledge, take advantage of new market opportunities or solve internal processes problems. The Colombian tax authorities establish a yearly budget for each round. The authority that makes this definition is the National Commission of Tax Benefits.

Guidelines around incentive applications

The incentive is applicable for current and future investments. Ministerio de Ciencias annually launches a call, which goes from March to July, for the allocation of quotas for the present fiscal year. The discount can be taken any year after qualification via a process through Ministerio de Ciencias.

VAT exemption for imports in research, development and innovation

Description of benefits

A value-added tax (VAT) exemption applies to equipment imported by research or technological development centers and basic education institutions, including elementary, middle or high schools or higher education institutions that are dedicated to the development of projects rated as scientific, technological or innovative.

Guidelines around incentive applications

The incentive is applicable to current investments. The tax benefit must be claimed in the fiscal year in which it occurs. The exemption must be registered in the VAT Return, Form 300. Institutions, R&D centers and the projects must be preapproved as eligible by Ministerio de Ciencias. Applications must be made electronically via the Ministerio de Ciencias website, www.minciencias.gov.co.

Revenue not taxed with income tax for natural persons, who work as employees, in the execution of research, technology and innovation projects

Description of benefits

Income derived from the development of scientific, technological and innovation projects, according to the criteria and conditions set by Ministerio de Ciencias, may be exempt from tax. The same treatment is applied to the compensation of individuals for the direct execution of work of scientific, technological and innovation purposes, provided that such compensation is derived from the respective resources for the project. The projects must accomplish the criteria and requirements stated by Ministerio de Ciencias.

Guidelines around incentive applications

The incentive is applicable to current investments. The tax benefit must be claimed in the taxable year corresponding to the investment. The exemption must be registered in the income tax return.

Financial support of strategic programs and/or projects of applied research, technological development and innovation

Description of benefits

Ministerio de Ciencias promotes the availability of a range of strategic programs and projects of applied research, technological development and innovation in the form of co-financing and financing.

Guidelines around incentive applications

The incentive is applicable to current and future investments. Ministerio de Ciencias chooses the programs and/or projects to which the tax benefit is available.

3. Eligibility requirements

To apply for the tax benefits, projects that are applicable for the R&D incentives must be preapproved by Ministerio de Ciencias. Qualifying activities include:

- ▶ Projects for investment in science and technology
- ▶ Software development
- ▶ Patents
- ▶ Strategic programs and/or projects of research, technological development and innovation
- ▶ Business and external commerce development
- ▶ Importing equipment and tools under certain conditions, among other activities

4. IP and jurisdictional requirements

There are no specific jurisdictional requirements related to intellectual property (IP) to get the benefits.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Colombia. Nevertheless, the technology or innovation zones that are constituted as Free Zones will benefit from a special rental rate of 20%, in addition to VAT and tariff exemptions.

6. Role of governmental bodies in administering incentives

Ministerio de Ciencias fulfills an important role in administering incentives, including approving, studying and controlling the application of the majority of the benefits by qualifying applicable projects and the benefited entities.

The Colombian Tax Authority (Dirección de Impuestos y Aduanas Nacionales, or DIAN) maintains its audit role on incentives with a tax impact.

The Department of Agriculture is required to recognize nonprofit entities that gain a tax benefit arising from donations in the agricultural industry.

The Department of National Education is required to recognize entities that gain an income tax deduction for investment in the education sector. To obtain the tax exemption on new software with high scientific content, the taxpayer must obtain a patent registration from the Superintendent of Industry and Trade.

Autoridad Nacional de Licencias Ambientales (ANLA, or National Authority of Environmental Licensing) has to approve R&D-related investments that involve environmental matters.

7. Administrative requirements

Ministerio de Ciencias administers the preapproval process mainly through its website. The information required to be submitted to Ministerio de Ciencias depends on the type of incentive applied for and the fulfillment of the parameters and conditions established by CNBT.¹ In addition, Ministerio de Ciencias, the Superintendent of Industry and Trade, the Department of Agriculture, the Department of National Education and ANLA manage processes related to certificates.

For any project presented in Ministerio de Ciencias in search of tax benefits, the taxpayer must structure the investment technically and financially. Technically, the problem to be solved must be answered with the execution of the project, defining the methodology of execution of the project and the objectives to be achieved. Financially, all the items of which the expense is composed must be detailed. The taxpayer should look for an R&D group recognized by Ministerio de Ciencias (in Colombia, there are approximately 4,000 groups) that will supervise the project to be presented.

Ministerio de Ciencias takes six months to evaluate the projects, and during that time it can request clarification requirements from the taxpayer.

8. Statutory reference

- ▶ Articles 57-2, 158-1, 256 and 428-1 of the Colombian Tax Code
- ▶ Decree 2755 of 2003
- ▶ Resolution 1855, 2010
- ▶ Law 450 of 2011
- ▶ Law 1607 of 2012
- ▶ Agreements 3 and 4 of 2011; Agreements 5, 6 and 7 of 2012 (Administrative Department of Science, Technology and Innovation)
- ▶ Law 1819 of 2016
- ▶ Law 2277 of 2022

¹ CNBT stands for Consejo Nacional de Beneficios Tributarios en Ciencia, Tecnología e Innovación, which translates to National Counsel of Tax Benefits on Science, Technology and Innovation. The main function of the CNBT is to establish the criteria and conditions to qualify the projects for tax benefits on science, technology and innovation purposes.

1. Overview

The Curaçao taxation system recognizes the importance of stimulating local R&D activities throughout the R&D life cycle, from development to the exploitation of successful R&D. The government of Curaçao emphasizes the importance of R&D and its willingness to stimulate these activities. As such, Curaçao has incentives to lower the tax burden for income from R&D activities and related investments. This includes a reduced profit tax rate for income from certain qualifying intangible assets and a tax holiday for qualifying taxpayers who perform R&D activities in relation to product and process innovation.

Innovation box

Description of benefits

Income from intellectual property (IP) in Curaçao may be subject to a reduced profit tax rate to the extent that the income is realized from intangible assets for which R&D is performed in Curaçao or from intangible assets developed for the account and risk of Curaçao tax-resident entities by a foreign unaffiliated enterprise.

As a general rule, a taxpayer may apply for a reduced effective tax rate of 0% for qualifying income from qualifying intangible assets upon filing the profit tax return. Definitions of "qualifying income" and "qualifying intangible assets" are discussed below. Non-qualifying income from non-qualifying intangible assets will, in principle, be taxed at the headline profit tax rate of 22%.

Guidelines around incentive applications

Qualifying intangible assets

Qualifying intangible assets are intangible assets from R&D activities for which the taxpayer obtained an R&D certificate issued by the Bureau of Telecommunication and

Post of Curaçao (in Dutch: "Bureau Telecommunicatie en Post," or BTP) and:¹

1. In respect of which a patent or breeder's right has been granted to the taxpayer or in relation to which the application process for a patent or breeder's right is ongoing
 2. Which has the form of copyrighted software
 3. In respect of which a permit to place a medicinal product on the market has been granted
 4. In respect of which the taxpayer obtained a supplementary protection certificate from a patent office or a similar body
 5. In relation to which the taxpayer obtained a registered utility model for the protection of innovation
- Or
6. Which is related to an intangible asset mentioned under points 1 to 5

The requirements mentioned under points 1 to 6 above will not apply to a taxpayer that can be regarded as a "small taxpayer" and has an R&D certificate from BTP for

¹ The following categories of assets may also qualify as "qualifying intangible assets" for the application of the IP regime if all other requirements are met: (a) an exclusive license to use an intangible asset ensued from R&D activities, for which an R&D certificate issued by BTP was obtained, in a certain way, for a certain period of time, or in a specific geographical region, and (b) a new intangible asset ensued from R&D activities of the taxpayer in relation to an existing intangible asset that was not developed by the taxpayer itself. Brand names, logos and comparable intangible assets will in no circumstance qualify as "qualifying intangible assets" for the application of the IP regime.

intangible assets with similar characteristics. A taxpayer will be regarded as a "small taxpayer" if:

- ▶ The amount of benefits received by the taxpayer in the course of the financial year and the four preceding financial years from intangible assets that have ensued from R&D activities for which the taxpayer obtained an R&D certificate issued by BTP (increased with the expenses to obtain mentioned benefits in those years) does not exceed ANG75 million.
- ▶ The total net turnover of the taxpayer (or of the group to which the taxpayer belongs) does not exceed ANG500 million according to the (consolidated) financial statements of the financial year and the four preceding financial years. For these purposes, net turnover means the proceeds from the supply of goods and services by the taxpayer (or the group to which the taxpayer belongs) after deduction of discounts and taxes levied on turnover.

The Curaçao Ministry of Finance released guidance on the innovation box regime in the form of a ministerial decree on 5 February 2022 (the Decree). The Decree, in general, provides BTP with guidelines on how to assess R&D certificate applications and under what circumstances an R&D certificate should be granted.

Qualifying benefits

The qualifying benefits from qualifying intangible assets will be equal to the following formula: K/T of the actual benefits received by the taxpayer from the qualifying intangible asset, not to exceed the total benefits from such qualifying intangible asset reduced with the threshold, where:

- ▶ *K* stands for the direct qualifying expenses.² Direct qualifying expenses are all expenses incurred in relation to the R&D activities for the development of the qualifying intangible asset by the taxpayer and/or the outsourcing of the R&D activities to a nonaffiliated entity for the development of the qualifying intangible asset by the taxpayer, multiplied by a factor of 1.3.
- ▶ *T* stands for all the direct expenses (including direct non-qualifying expenses) incurred by the taxpayer for R&D activities in relation to the development of the qualifying intangible asset.
- ▶ The *threshold* is equal to (a) the production and development costs of the qualifying intangible asset for which the taxpayer opted for the reduced effective profit tax rate of 0%, increased with (b) the production and development costs of the qualifying intangible asset that have been charged against the profits of preceding years, and reduced with (c) the production and development costs of the qualifying intangible asset that have been charged against the qualifying benefits of the qualifying intangible asset in previous years.

² Direct qualifying expenses do not include any expenses in relation to loans, accommodation or other expenses not directly related to the R&D activities that lead to the development of the qualifying intangible asset.

General examples

The following examples are used in the explanatory comments to the innovation box regime to illustrate the calculation of the qualifying benefits.

A taxpayer obtains benefits from a qualifying intangible asset as described above in the following scenarios.

Example 1 – no subsequent expenses in year 2

	Year 1	Year 2
K - Direct qualifying expenses	100	0
Total non-qualifying direct expenses	25	0
Total benefits from qualifying intangible asset	200	200
T - Total direct expenses year 1 and year 2	125	125
Threshold	125	0 (125 - 125)

Formula:

$$\frac{\text{Direct qualifying expenses} \times 1.3}{\text{total direct expenses}} \times \text{benefits} (\neq \text{threshold})$$

Calculation of the benefit applying the formula for **year 1**:

$$\frac{100 \times 1.3 \text{ (maximum 125)}}{125} \times (200 - 125) = 75$$

In year 1, the qualifying benefit from the qualifying intangible asset, amounting to 75, will be subject to the profit tax rate of 0%. The remaining benefit of 125 will be taxed at the regular profit tax rate of 22%.³

Calculation of the benefit applying the formula for **year 2**:

$$\frac{100 \times 1.3 \text{ (maximum 125)}}{125} \times (200 - 0) = 200$$

In year 2, the benefit of 200 from the qualifying intangible asset will therefore be entirely subject to the profit tax rate of 0%.

³ Please note that the expenses amounting to 125 are, in principle, deductible from the profits.

Example 2 – subsequent expenses in year 2

	Year 1	Year 2
Direct qualifying expenses	100	25
Total non-qualifying direct expenses	25	0
Total benefits from qualifying intangible asset	200	200
Total direct expenses year 1 and year 2	125	150
Threshold	125	25 (150 - 125)

Calculation of the benefit applying the formula for **year 1**:

$$\frac{100 \times 1.3 \text{ (maximum 125)}}{125} \times (200 - 125) = 75$$

In year 1, the qualifying benefit from the qualifying intangible asset, amounting to 75, will be subject to the effective profit tax rate of 0%. The remaining benefit of 125 will be taxed at the regular profit tax rate of 22%.

Calculation of the benefit applying the formula for **year 2**:

$$\frac{125 \times 1.3 \text{ (maximum 150)}}{150} \times (200 - 25) = 175$$

In year 2, the qualifying benefit from the qualifying intangible asset, amounting to 175, will be subject to the profit tax rate of 0%. The remaining benefit of 25 will be taxed at the regular profit tax rate of 22%.

Tax holiday

Description of benefits

The following tax benefits apply upon receiving a tax holiday for product and process innovation and the exploitation of IP:

1. Exemption from real estate tax on real estate property used by the taxpayer for the permitted activities for a total period of five years, to the extent that the investment does not exceed ANG10 million⁴ (10 years if the investment exceeds ANG10 million and at least ANG10 million has been invested within five years of receiving the tax holiday).

2. A reduced profit tax rate of 3% (instead of the regular 22% profit tax rate) for a period of five years, to the extent that the investment does not exceed ANG10 million (10 years if the investment exceeds ANG10 million and at least ANG10 million has been invested within five years of receiving the tax holiday).
3. Exemption from import duties and turnover tax on materials that are imported in relation to product and process innovation for a total period of three years.

Exemption for income tax on profits distributed by the taxpayer to its (indirect) shareholders or to individuals who are otherwise entitled to a share in the profits of the taxpayer is granted for a total period of two years following the financial year in which the profits are realized by the taxpayer.

Guidelines around incentive applications

For a taxpayer to obtain a tax holiday in relation to the abovementioned activities, the following conditions should be met:

- ▶ The activities of the taxpayer should consist exclusively or almost exclusively of process and product innovation or the exploitation of IP.
- ▶ The incorporation of the taxpayer and its qualifying activities must require an investment of ANG5 million or more.
- ▶ Said minimum investment must be invested within three years following the initial date on which the tax holiday is applied.
- ▶ The investment must generate at least 10 permanent full-time jobs for Curaçao residents.

To obtain the tax holiday, a written request has to be filed with the Sector of Fiscal Affairs. The Sector of Fiscal Affairs should decide whether to grant the tax holiday within three months of receiving the request. However, failure by the Sector of Fiscal Affairs to issue a decision within this time frame does not result in an automatic, ipso jure granting of the tax holiday status.

Additionally, once the minimum investment amount has been invested within said time frame, the taxpayer should request that the Sector of Fiscal Affairs confirm that all the tax holiday requirements have been met by the taxpayer. In this respect, the taxpayer will also have to submit audited financial statements with its request and provide all necessary information to make verification by the Sector of Fiscal Affairs possible.

⁴ The Curaçao local currency, ANG, is pegged to the US dollar. In this respect, USD1 equals ANG1.78.

3. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Curaçao.

4. Role of governmental bodies in administering incentives

For purposes of the innovation box regime, qualifying intangible assets are intangible assets ensued from R&D activities for which the taxpayer obtained an R&D certificate issued by a government institution, the Bureau of Telecommunication and Post of Curaçao.

For the tax holiday regime, a taxpayer is required to formally apply for the benefits by filing a written request with the Sector of Fiscal Affairs.

5. Administrative requirements

Taxpayers in Curaçao are required to maintain an administration from which their tax position, rights and obligations may be derived at all times, the organization of which allows the tax authorities to audit the information upon request. In this respect, the administration of a taxpayer should clearly and legibly contain, among others, all information relevant in relation to the application of the innovation box regime and the tax holiday regime. Reference is also made in Sections 2 and 4 to details on the administrative requirements to obtain the benefits of the innovation box regime and/or the tax holiday regime.

6. Statutory reference

1. Overview

IP box regime

The Cypriot Income Tax Law (ITL) provides for an intellectual property (IP) box regime, which is effective as of 1 July 2016.

The regime links the tax benefits with R&D expenses incurred by the taxpayer. Qualifying taxpayers are eligible to claim a tax deduction (calculated based on a nexus ratio) equal to 80% of qualifying profits resulting from the business use of the qualifying asset. A taxpayer may elect not to claim the deduction or only claim part of it.

R&D super deduction

A super deduction of 20% on the actual amount of the relevant R&D expenses is available for R&D expenses incurred during tax years 2022, 2023 and 2024 (including expenses of a capital nature).

This deduction is not available to taxpayers that claim a deemed deduction under the provisions of the IP box regime.

2. Incentives available

Name of incentive	IP box deduction	R&D super deduction	CIT exemptions	PIT exemptions	Notional Interest Deduction	Amortization of IP assets	Foreign tax credit
Type of incentive	► Tax deduction	► Tax deduction	► Tax exemption	► Tax exemption	► Tax deduction	► Amortization deductions	► Tax credit

Description of benefits

The following tax incentives are offered under the ITL:

- **IP box deduction:** 80% of the qualifying profits arising from a qualifying asset (subject to conditions, as discussed below) pushing the effective tax rate to as low as 2.5%.
- **R&D super deduction:** All expenses for scientific research, and all R&D expenses, as recognized by international accounting standards, that have been incurred by a person who carries on a business and has

the economic ownership of the relevant IP asset will be treated as tax deductible. An additional deduction equal to 20% of the actual amount of the relevant R&D expenses is available for R&D expenses incurred during the tax years 2022, 2023 and 2024 (including expenses of a capital nature) to taxpayers who do not claim a deemed deduction under the IP box regime.

- **CIT exemptions:** Gains from the disposal of IP assets are not subject to CIT, provided they are transactions of a capital nature (recommended to be confirmed in a tax ruling).

- ▶ Gains from the sale of shares are unconditionally exempt from CIT in Cyprus. This exemption applies regardless of the holding period, number of shares held or trading nature of the gain.
- ▶ Dividend income is conditionally exempt from tax.
- ▶ Foreign exchange (FX) differences are tax neutral for CIT purposes in Cyprus. Any FX gains should not be taxable, and FX losses should not be deductible.
- ▶ **Personal Income Tax (PIT) exemptions:**
 - ▶ **Lower of 20% or EUR8,550 exemption**
 - ▶ An individual can claim the above exemption on the remuneration generated from first employment in Cyprus if all the below apply:
 - ▶ The individual was employed outside of Cyprus for an employer not resident in Cyprus for three consecutive years prior to the commencement of their employment in Cyprus.
 - ▶ The exemption can be claimed for a maximum of seven years following the year of employment.
 - ▶ The exemption applies to employment that commenced after 26 July 2022 and up until 2027.
 - ▶ **50% exemption**
 - ▶ The 50% exemption is granted in any year in which the remuneration from first employment in Cyprus exceeds EUR55,000, regardless of whether in any tax year the said remuneration falls below EUR55,000, provided that during the first or second year of employment in Cyprus the said remuneration exceeded EUR55,000 annually.
 - ▶ The exemption is granted for 17 years, commencing as of the year of first employment in Cyprus.
 - ▶ The individual should have been resident outside of Cyprus for at least 10 consecutive years prior to the commencement of their employment in Cyprus.
 - ▶ The exemption applies to the employment that commenced after 1 January 2022.
- ▶ **Notional Interest Deduction (NID) on new equity capital:** This deduction applies to businesses that generate taxable income (income generated from IP activities should in general qualify). NID is restricted to 80% of the taxable income resulting from the use of the new capital before NID. NID does not apply in cases of tax loss or a break-even position.
- ▶ **IP amortization period:** All intangible assets (excluding goodwill), regardless of whether they are qualifying

assets, are eligible for amortization over their useful economic life for a maximum of 20 years (as determined by internationally acceptable standards the amortization period will be confirmed in a tax ruling).

- ▶ **Tax credits:** Foreign tax paid or withheld on profits and gains of a Cypriot tax resident company can be credited against any Cypriot tax payable, provided sufficient and appropriate evidence exists. Such tax relief cannot exceed the Cypriot tax payable on the same income or gain in the same income tax year. Any excess foreign tax credits that are not utilized cannot be set off against other sources of income and cannot be carried forward to future periods.

3. IP box eligibility requirements

Nexus formula

The qualifying profits per the IP box regime in Cyprus will be calculated using the following nexus ratio:

$$\text{Qualifying profits} = \frac{\text{Qualifying expenditure} + \text{Uplift expenditure}}{\text{Overall expenditure}} \times \text{Overall IP income}$$

Guidelines around the IP box regime

The nexus approach

On 14 October 2016, the Cyprus House of Representatives passed amendments to the Income Tax Law to align the current IP tax legislation with the provisions of Action 5 of the Organization for Economic Co-operation and Development's Base Erosion and Profit Shifting (BEPS) project.

The approach links the benefits of the regime with the R&D expenses incurred by the taxpayer.

Qualifying intangible asset (QA)

A QA is an asset acquired, developed or exploited by a person within the course of carrying out their business. QAs include patents, computer software and other IP assets that are legally protected and fall under one of the following de minimis criteria:

- ▶ Utility models, IP assets that provide protection to plants and genetic material, orphan drug designations and extensions of protection for patents
- ▶ Nonobvious, useful and novel assets, where the person using them for business purposes does not generate annual gross revenues exceeding EUR7,500,000 (in the case of a group of companies, not exceeding EUR50,000,000), which are certified as such by an appropriate authority in Cyprus or abroad

The following assets are specifically excluded from the IP box regime:

- ▶ Business names
- ▶ Brands
- ▶ Trademarks
- ▶ Image rights
- ▶ Other IP rights used for marketing of products and services

Qualifying expenditure (QE)

Qualifying expenditure includes:

- ▶ R&D expenditure incurred by the taxpayer (including R&D expense incurred by a foreign branch of the Cypriot IP holding company)
- ▶ Unrelated party R&D outsourcing expenditure
- ▶ Direct expenditure (salaries and other expenses relating to R&D)

Overall income (OI)

The overall income comprises the gross income earned from the qualifying asset during the tax year minus any direct cost incurred for generating the income.

It includes, but is not limited to:

- ▶ Royalties

- ▶ Licenses
- ▶ Compensation
- ▶ Income of disposal of a QA (excluding profit of a capital nature)

Uplifting expenditure (UE)

The UE is the lower of:

- ▶ 30% of the QE
- ▶ The total acquisition cost of the QA and any R&D costs outsourced to related parties

Overall expenditure (OE)

Overall expenditure means the total capital expenditure, either qualifying or not, relating to the creation of the qualifying IP (e.g., cost of acquisition of the qualifying asset plus the cost of outsourcing to related parties).

Where the calculation of qualifying profits results in a loss, only 20% of this loss may be carried forward and be eligible for group relief.

The taxpayer may forego the whole or part of the deduction in each year of assessment.

4. IP and jurisdictional requirements

“Qualifying intangible asset” means an asset acquired, developed or exploited by a person for business purposes and that is intellectual property (with the exception of IP related to marketing) and that is the result of R&D activities. A qualifying intangible asset includes an intangible asset for which there is only economic ownership.

There is no requirement that the R&D be performed within Cyprus for the expenditure to be classified as a QE.

5. Technology or innovation zones

There are no technology or innovation zones in Cyprus.

6. Role of governmental bodies in administering incentives

The competent authority is the Cyprus Tax Department (CTD). The possibility to benefit from the IP box regime is not subject to a prior administrative approval; however, a confirmation via a tax ruling from the CTD is strongly recommended.

7. Administrative requirements

Companies claim the relevant IP box or R&D super deduction as part of their income tax return (Form TD4) filing, which is due within 15 months from the end of the year of assessment (e.g., the 2023 income tax return is due by 31 March 2025).

8. Statutory reference

- ▶ IP box regime provisions can be found under Section 9(1)(k) of the ITL and Income Tax (Intangible Assets) Regulations No. 336/2016.
- ▶ R&D super deduction provisions can be found under Section 9(1)(d) of the ITL.

Czech Republic

This chapter is based on information as of February 2023.

There were several amendments to the Investment Incentives Act and related regulations. One amendment was the introduction of new levels of public support for the 2022-27 period.

EY contacts:

1. Overview

Subsidies and R&D relief programs are relatively consistent in the Czech Republic due to the competitive nature of the region.

The Czech Republic offers benefits, including a special deductibility of certain R&D costs. Unlike any foreign programs, there is no requirement that the entity claiming

the benefit must own the resulting R&D. Therefore, companies conducting contracted R&D activities for their customers may also apply this deduction. The deductible item for R&D may, to a certain extent, also be combined with other forms of support, such as investment incentives tax relief, making it an interesting tool in many respects.

R&D deduction

(Odčitatelná položka na výzkum a vývoj)

Description of benefits

Companies with R&D activities may apply a special deductible item with respect to R&D costs. Eligible costs are thus deducted twice – once as operating costs and, for the second time, as a special deduction. The R&D deduction could be increased to 110% for incremental eligible costs incurred in the tax period. There is no requirement that the entity claiming the benefit must own the resulting R&D. Therefore, companies conducting R&D activities on behalf of their customers who will become the intellectual property (IP) owners may also apply the deduction. Unused R&D tax credits may be carried forward for three years.

Guidelines around incentive applications

The R&D deduction is claimed via the standard corporate income tax return form assuming the R&D project documentation was approved within the statutory deadline for filing the corporate income tax return form (see Section 3). The form should be filed within the statutory deadline – i.e., six months after the end of the tax period if the company is subject to a statutory audit or is represented by a tax advisor based on a power of attorney; otherwise, four months following the end of the taxable period. Notification to the Tax Authority prior to commencement of the project is required; however, no advance approval is needed.

Investment incentives for R&D centers

(Investiční pobídky pro technologická centra)

Description of benefits

Investment incentives for R&D centers provide the following benefits:

- ▶ Corporate income tax holiday for 10 years
- ▶ Job creation grants of CZK200,000 (approximately USD8,900) per employee with the exception of the capital city, Prague
- ▶ Training and retraining grants of up to 70% of eligible training costs with the exception of the capital city, Prague
- ▶ Cash grants of up to 20% of capital expenditures (no more than CZK500 million/USD23 million) for R&D centers in case of strategic investment
- ▶ Real estate tax exemption for five years in special industrial zones

Total benefits (excluding training grants) received by the investor must not exceed the benefits cap, which is set as a percentage of the total value of the actual eligible expenses. As of 2022, the level of support is 20%-40% of the qualifying investment value for large enterprises (depending on region). Training grants are provided on top of this cap. The caps are increased by 10% for medium-sized enterprises and 20% for small enterprises. No incentives are provided in the capital city of Prague.

Guidelines around incentive applications

The incentives are applicable for future investments. The company launching or expanding an R&D center must apply for investment incentives before work on the investment begins. The application is filed with the governmental agency CzechInvest.¹ Investment incentives must be approved by the Czech government. After the specified requirements are fulfilled, the company can use the corporate income tax holiday in its standard corporate income tax return.

All investment incentive applications need to be approved by the Czech government and pass a cost-benefit test (the benefit of the investment must exceed the value of the support provided by the state).

The Czech Ministry of Industry and Trade is currently preparing an amendment of the Investment Incentives Act and related regulation, which could modify the qualifying conditions and approval process as of mid-2023. However, the draft amendment could still significantly change during the approval process. This summary thusly reflects investment incentive conditions that are effective, based on current incentives law, as of February 2023.

ESIF and national R&D funding programs

Description of benefits

European structural and investment funds (ESIF) and national R&D funding programs provide the following benefits:

- ▶ Diverse operational programs within ESIF and national funding programs (e.g., grants provided by the Technology Agency of the Czech Republic (TACR) and national ministries) offer cash grants related to R&D in almost all sectors.
- ▶ Cash grants, in some programs, are available not only to small and medium-sized enterprises (SMEs), but also to large enterprises.
- ▶ There is a high probability of acceptance of the submitted applications due to the high allocations in ESIF. In some of the programs provided by TACR, the probability is quite small.
- ▶ The opportunity exists for networking with academic and research organizations.

The rate of support available within ESIF operational programs and national funding programs always depends on the conditions defined in the calls for applications. The most decisive conditions for the final rate of support include the goal of the individual project, the location of the realization and the size of the applicant. For example, in the Operational Program Technologies and Application for Competitiveness (OP TAC), large enterprises can usually receive around 30% of the total proposed project budget. For SMEs, the limit is usually established around 50%. For publicly owned research organizations and universities, the limit can be higher. In OP TAC, cash grants are not available in the capital city of Prague. The rate of support in programs provided by TACR is similar to OP TAC. In some programs, applicants from the capital city of Prague are eligible applicants.

¹ CzechInvest collects, reviews and processes the investment incentives applications.

First calls from OP TAC were published in the second half 2022. The list of calls and their deadlines is available on the website;² however, the list and especially deadlines are updated on an irregular basis. TACR's list of calls and their deadlines is also available on its website.³

Guidelines for cash grants applications

The guidelines for cash grants applications differ per individual operational programs and calls for application. The funding providers responsible for management of individual programs set guidelines for the application process and implementation of the projects. The guidelines are always available on the websites of the respective authorities.

3. Eligibility requirements

R&D deduction

Eligible costs include personnel costs for employees involved in project implementation (including health insurance and social security costs), travel costs associated with the project, depreciation of assets used in direct connection with the project, external services related to R&D provided by public R&D institutions (such as universities and public research institutes) and other directly related operating costs, such as the costs of materials, supplies, energy, heating, gas and telecommunications. The certification of R&D results may not be included in qualifying expenses.

The notification of a company's intention to claim an R&D deduction has to be filed with the Tax Authority before the work on the R&D project begins. As regards the R&D project documentation meeting all legal requirements (including a description of the objectives and process of the particular R&D activity), it is now sufficient for this to be prepared and approved within the statutory deadline for filing the corporate income tax return (before it was needed

² <https://www.agentura-api.org/cs/op-tak/>.

³ <https://www.tacr.cz/programy-a-souteze/>.

prior to the R&D activity beginning). Expenses incurred prior to the notification being filed do not qualify for an R&D deduction. If there is doubt regarding deductibility, the company may request a binding ruling from the tax authorities that the relevant costs can be claimed as part of the R&D deduction.

Investment incentives for R&D centers

The key qualification conditions for R&D centers include the following:

- ▶ Creation or expansion of an R&D center.
- ▶ Investment in long-term tangible and intangible assets must be at least CZK10 million (approximately USD450,000), of which at least CZK5 million (approximately USD220,000) must be invested in new machinery.
- ▶ At least 20 new jobs must be created.
- ▶ The above conditions should be met within three years of the date the investment incentives decision was issued.
- ▶ The investment activities cannot be started before the investor applies for investment incentives via CzechInvest.

- ▶ Acquired assets and created jobs should be maintained for the duration of the incentives use period (10 years) and for at least five years from the finish of the investment project or the creation of the first job.
- ▶ Investment incentives cannot be provided to a company that relocated the same or a similar activity in the European Economic Area in the two years preceding its application for investment incentives or that has concrete plans to relocate such an activity within a period of up to two years after the investment is finished.

Special qualification conditions for investment incentives for R&D centers in the form of a tax holiday

The key special conditions stipulated by the Income Taxes Act should be met and include the following:

- ▶ The maximum amounts of tax depreciation, tax provisions and carryforward tax losses should be applied.
- ▶ The incentives recipient should be the first owner of the acquired assets (except for real estate).

- ▶ The taxpayer shall not be dissolved, subject to bankruptcy proceedings or merged with another entity.
- ▶ The taxpayer will not increase its tax base through non-arm's-length transactions with related parties.

Special qualification conditions for cash grants for strategic investments in the area of R&D centers

The special conditions for R&D centers include the following:

- ▶ The minimum amount invested in long-term tangible and intangible assets is CZK200 million (approximately USD8.9 million), of which CZK100 million (approximately USD4.5 million) represents new machinery.
- ▶ At least 70 new jobs must be created.

Eligible expenses for the investment incentive can be one of the following:

- ▶ The value of tangible assets (machinery, building and land) and the value of intangible assets are eligible provided that machinery represents at least 50% of the total tangible and intangible assets' value. Intangible assets should be acquired from unrelated parties at an arm's-length price. The machinery has to be produced no more than two years prior to the acquisition, acquired at a fair market value and not have been subject to tax depreciation before.

Or

- ▶ The value of wages incurred over the 24-month period following the month when a job was created and filled is eligible. The new job will qualify if it is created in the period from the day of applying for the investment incentives to the end of the third year after the issuance of the decision to grant the investment incentives. The value of monthly wages, including health and social security insurance paid by employer per employee for the purposes of cap calculation, is limited to three times the average wage in the Czech Republic.

ESIF and national R&D funding programs

The applicants must meet the criteria defined in individual calls for applications. For R&D cash grants, the funding providers are open to supporting predominantly applied research and experimental development the results of which are great potential for rapid application in new products, production processes and services. All applications are subject to the evaluation process.

4. IP and jurisdictional requirements

There is no specific jurisdictional requirement on the location of IP.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in the Czech Republic.

6. Role of governmental bodies in administering incentives

Local tax authorities administer the R&D tax credit as part of their standard agenda. Advanced rulings and tax audits may be delegated to specialized offices with the tax administration network.

CzechInvest administers the investment incentives. The Czech Ministry of Industry and Trade and the tax authorities regularly review the fulfillment of investment incentive conditions. All investment incentives have to be approved by the Czech government, which primarily evaluates whether the benefits of the project being supported exceed the support to be granted by the state.

Cash grants provided within ESIF are administered by designated Managing Authorities (usually the national ministries). The Agency for Entrepreneurship and Innovation (API), created by the Ministry of Industry and Trade, manages the most relevant program in terms of R&D – OP TAC. The Technology Agency of the Czech Republic is also an important player in the field of R&D cash grants funded by the national public funds.

7. Administrative requirements

R&D deduction

- ▶ Notification to the tax authorities prior to commencement of the project is required, while the full project including an annual update will only be required upon filing the tax return where the deduction is claimed.
- ▶ Documentation must be maintained to support claims (including time sheets and allocations of time spent on projects, regular project evaluation). A subsequent amendment of a corporate tax return to claim an R&D deduction retrospectively is generally not allowed.
- ▶ The Czech tax authorities may review fulfillment of the R&D deduction requirements during a tax audit.

Investment incentives for R&D centers

- ▶ Companies are required to apply for the investment incentives before the investment activities start. The application is filed with CzechInvest. Companies may claim a tax holiday or other forms of support (cash grant for asset acquisition, training/retraining grant, real estate tax exemption) if they have been approved for investment incentives from the Czech government and fulfilled investment incentive conditions.
- ▶ The tax holiday is claimed on the standard corporate income tax return form. The tax authorities review fulfillment of investment incentive conditions during a tax audit. The investment incentive recipient should provide sufficient documentation proving all these conditions have been met in the event of an audit.

ESIF and national R&D funding programs

- ▶ Companies must submit applications for cash grants before they incur costs related to the proposed action. The applications are submitted electronically via dedicated portals for applicants according to the instructions defined in the applicable guidelines for applicants. After the application is approved, the beneficiaries of funding are required to submit monitoring reports with payment requests providing an overview of the costs incurred in relation to the project. The costs reported are then reviewed by the funding provider with only eligible costs reimbursed to the beneficiary.

Denmark

This chapter is based on information as of February 2023.

The Danish government has introduced new incentives for R&D expenses that can result in up to a 130% deduction of the actual costs.

EY contacts:

René Lønne Arenfeldt
rene.l.arenfeldt@dk.ey.com
+45 25 29 65 63

Marcel Sikkema
marcel.sikkema@se.ey.com
+46 73 340 7782

1. Overview

The Danish government is generally accommodating when it comes to R&D incentives from a tax perspective. Costs related to R&D activities are generally deductible for tax purposes or may be depreciated. Furthermore, a tax credit regime for R&D costs is available to obtain a refund of

negative tax (loss) relating to R&D activities. Deductions for R&D expenses may exceed the actual costs with certain percentages (super deductions). New legislation has been passed that such costs may be deducted with 130% of actual costs in 2020-22.

2. Incentives available

Name of incentive	Tax allowance for experimental and research activities	Tax credit scheme
Type of incentive	► Tax allowance	► Tax credits

Tax allowances for experimental and research activities

(Udgifter til forskning og udvikling, LL § 8 B)

Description of benefits

Costs incurred in research and development (R&D) activities related to the taxpayer's business are in general fully tax-deductible in the year in which the cost was incurred. Alternatively, the taxpayer may choose to deduct the cost over a five-year period, including the year the cost was incurred. The incentive is not applicable for certain business assets, such as automobiles, ships and certain leased equipment.

The extent of R&D activities eligible for increased deductibility is not elaborated on in the legislation; accordingly, case law is currently developing to provide insight. EY Denmark is analyzing and monitoring the development in the case law in practice to formulate an opinion of the current position.

A case-by-case analysis should be performed to determine whether the costs budgeted/incurred qualify as R&D expenses as per the Danish case law.

Guidelines around incentive applications

To claim the incentive, taxpayers are required to file an annual corporate income tax return within six months following the end of the financial year (30 June if calendar year-end – special rules apply if year-end is in Q1). It is possible to apply for a reopening of previous income years and claim tax credits and super deductions.

Tax credit scheme

(Skattekreditordningen LL § 8 X)

Description of benefits

The tax credit for R&D activities enables companies to obtain a refund of negative tax (loss) relating to R&D activities. Hence, the tax value of a loss related to specific types of R&D costs can be refunded. The tax credit is calculated as 22% of up to DKK25 million of eligible R&D costs in the relevant income year – i.e., a cash refund of up to DKK5.5 million. Only actual incurred R&D costs qualify toward the tax credit, not the “super-deduction” element of deductions.

For entities jointly taxed according to the Danish mandatory joint taxation regime, the limitation of tax credits is calculated at the joint-taxation level.

Guidelines around incentive applications

The incentive is applicable for current, future and retroactive investments. The incentive must be claimed with the annual corporate income tax return. If the investment was made in a tax assessment year shorter than 12 months, there will be a proportional reduction.

Tax deduction (including super deduction)

Description of benefits

In 2018, the Danish government introduced an enhanced deduction of R&D expenses. The deduction is gradually increased from 100% to 110% as follows: income years 2018-19 = 101.5%; income year 2020 = 103%; income years 2021-22 = 105%; income years 2023-25 = 108%; and income years 2026 and onward = 110%.

However, as a COVID-19 stimulus measure, the Danish government has introduced an enhanced deduction in 2020-22 of 130%. The R&D costs subject to this increased deduction are capped at DKK845 million in 2020 and DKK910 million in 2021 and 2022 on a consolidated basis. R&D expenses exceeding these amounts are subject to 103% in 2020 and 105% deductions in 2021 and 2022. A political agreement points to an increased R&D deduction in the future (e.g., 130%) but nothing has been passed yet.

Guidelines around incentive applications

The deduction or credit applies to expenditures linked to qualifying R&D activities. R&D covers three types of activities – basic research, applied research and development:

- ▶ Basic research is experimental or theoretical work undertaken primarily to acquire new knowledge of the underlying foundation of phenomena and observable facts, without any particular application or use in view.
- ▶ Applied research is original investigation undertaken in order to acquire new knowledge. It is, however, directed primarily toward a specific and practical aim or objective.
- ▶ Development is the application of scientific or technical knowledge to produce new or significantly improved materials, mechanisms, products, processes, systems or services.

3. Eligibility requirements

Qualifying expenses related to R&D and tax credits should be based on a concrete assessment.

4. IP and jurisdictional requirements

There are no jurisdictional requirements related to intellectual property (IP).

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Denmark.

6. Role of governmental bodies in administering incentives

The R&D tax credit regime operates on an application basis. The Danish tax authorities will assess the application to rule on whether the cost qualifies under the tax credit regime.

7. Administrative requirements

The R&D tax credit regime operates on an application basis. The taxpayer must file an application to receive a tax credit, along with the tax return for the relevant year. The Danish tax authorities will assess whether the costs detailed in the application qualify.

Deduction of R&D costs is based on a self-assessment regime. The claim is made in the company's annual tax return for the relevant tax year that is submitted to the Danish tax authorities. In the case of a tax assessment, the Danish tax authorities may request documentation for the claimed deduction. Consequently, companies should maintain records, including detailed description of the R&D projects, to accurately substantiate the claim.

8. Statutory reference

Section 8B (deduction for R&D costs) and Section 8X (tax credits) of the Tax Assessment Act.

In existence for more than 30 years, the R&D tax credit has significantly increased in the past decade: the global tax credit granted more than EUR6 billion in France in 2020, whereas the cap was only EUR1 billion until 2005.

1. Overview

Over the last few years, the French government has been implementing several improved R&D incentives. These incentives can all be described as mature, with the introduction of a reduced corporate income tax (CIT) rate in 1983, the R&D tax credit in 1985 and the Innovative New Company status in 2004.

From a tax perspective, the main strands of the available R&D incentives are:

- ▶ The R&D tax credit, which is equal to 30% of eligible R&D expenses (e.g., salaries, social security contributions, running costs, depreciation, patents) incurred by the company
- ▶ The Innovative New Company status (*Jeune Entreprise Innovante*, or JEI), which allows companies conducting R&D projects in France to receive tax benefits and pay lower social security contributions for highly qualified jobs, such as engineers and researchers
- ▶ A reduced CIT rate of 10% instead of the standard CIT rate¹ applicable to revenues derived from patents

¹ Since 1 January 2022, the standard CIT rate is 25% regardless of the profit of the company. In addition to this standard CIT rate, an additional 3.3% social security contribution applies to the portion of the CIT liability exceeding EUR763,000, which gives an effective CIT of 25.83%.

In practice, companies benefiting from these incentives, especially when the tax benefit is substantial, are more likely to be subject to a tax audit. In particular, the R&D tax

credit has been under high scrutiny since 2011. Tax audits are hence getting more frequent, notably for significant tax credit claims (EUR500,000 and above).

2. Available incentives

Name of incentive	R&D tax credits*	Cash grants for collaborative R&D projects	Reduced CIT treatment of revenues derived from patents	Innovative New Company status	New entities and new buildings assigned to R&D activities	Accelerated depreciation of equipment and tools used for research operations
Type of incentive	▶ Tax credits	▶ Cash grants	▶ Reduced tax rates	▶ CIT exemption ▶ The territorial economic contribution (TEC) and property tax exemption	▶ Tax relief and allowance for TEC and property tax purposes	▶ Accelerated depreciation on qualifying R&D assets

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

R&D tax credit

(Crédit d'impôt recherche)

Description of benefits

Companies can receive a 30% tax credit on eligible R&D expenses. There is a credit rate of 30% for the first EUR100 million of qualified R&D expenses incurred during the tax year, plus 5% of any amount in excess of EUR100 million. The tax credit can be offset against CIT liability for the year of application and the next three years. A refund is available if the credit has not been totally offset after three years.

The main R&D expenses eligible for the tax credit are:

- ▶ Tax-deductible amortization of fixed assets, created or acquired as new and directly allocated to research activities
- ▶ Employee expenses
- ▶ Operating expenses determined by applying a flat rate of 75% to amortization of fixed assets and a rate of 50% to employee expenses; as of 1 January 2020, the rate is 43% for employee expenses

R&D expenses can be subcontracted to public or private entities. Subcontracted expenses are eligible up to EUR2 million (EUR10 million if the principal and the subcontractor are not dependent) and three times the amount of other R&D expenses incurred by the company.

Until 1 January 2022, R&D expenses subcontracted to public entities may be taken into account for double their amount. Additionally, the EUR10 million limit is increased by EUR2 million for expenses subcontracted to public entities.

As of 1 January 2022, treatment of R&D expenses subcontracted to public or private entities is harmonized:

- ▶ Subcontracted R&D expenses to public entities are no longer taken into account for double their amount.
- ▶ The EUR10 million limit is no longer increased by EUR2 million.

In order to compensate the harmonization of the treatment of subcontracted R&D expenses applicable to public or private entities, a new tax credit for cooperative research is introduced. This new tax credit is based on R&D expenses incurred as part of research cooperation agreements concluded between 1 January 2022 and 31 December 2025 with specific R&D organizations. It amounts to 40% (or 50% for small and medium-sized enterprises (SMEs)) of the eligible expenses up to €6 million per year. These expenses cannot simultaneously be used for the computation of the R&D tax credit.

To prevent the abuse of subcontracting schemes that allowed some taxpayers to benefit, several times, from the R&D tax credit, the Finance Act for 2020 introduced a new measure concerning subcontracting expenses. As from 1 January 2020, except under specific circumstances, the principal is eligible for the R&D tax credit on expenses concerning operations subcontracted to public or private subcontractors provided that they carry out the subcontracted operations themselves (i.e., that there is not a second level of subcontract).

Guidelines around incentive applications

The R&D tax credit is applicable for retroactive, current and future investments. The claim should take the form of the filing of a specific form (2069-A) along with the annual tax return of the company. Claims shall be submitted at the latest on 31 December of the second calendar year following the deadline for filing the specific form (i.e., R&D expenses incurred in 2019 have to be filed in 2020 and can be claimed until 31 December 2022).

Cash grants for collaborative R&D projects

(Subventions accordées aux projets de R&D collaboratifs)

Description of benefits

Cash grants are available for collaborative R&D projects. The cash grants cover all or part of the industrial R&D, R&D personnel costs and the depreciation of R&D equipment. The grants are attributed to a consortium of at least two companies, active in the industry sector, and one R&D laboratory or training center. Several incentives are related to sustain collaborative R&D activity and can reach up to EUR20 million depending on the size of the project (up to EUR50 million with certain projects). Preapproval is required to obtain the cash grants.

Guidelines around incentive applications

The cash grants are applicable for current and future investments. An application must be submitted to the relevant government authorities or government operators granting the cash through call for tender.

Reduced CIT treatment of revenues derived from patents

(Taux d'impôt sur les sociétés réduit applicable aux revenus issus de la propriété industrielle)

Description of benefits

Amortization allowances and financing costs are fully deductible from the taxable income subject to the standard CIT rate.²

In addition, subject to certain conditions and on an election basis only, French enterprises may benefit from a 10% CIT rate³ applicable to the net income notably derived from the licensing of patents (or software), after deduction of R&D expenses, and after the application of a nexus ratio comparing:

- ▶ 130% of the R&D expenses directly related to the creation, or the development of the qualifying patent, either by the claiming taxpayer or by non-related parties
- To
- ▶ 100% of the total R&D expenses incurred for the creation, the development, or the acquisition of the qualifying patent

Note that this election can be performed on an asset-by-asset basis or on a group-of-assets basis. This election will also be available at the level of French tax consolidated groups, subject to certain requirements.

The same tax treatment applies, still on an election basis, to the net income derived from the sublicensing of qualifying patents, and to the net gains derived from the transfer, to non-related parties, of qualifying patents, provided that the latter have not been acquired less than two years before. Sales between related parties are not eligible for the reduced CIT rate.

Guidelines around incentive applications

The incentive is applicable for current and future investments. To claim the incentive, there is no specific form to file; however, the election is made on the annual tax return of the company for each asset, good, or service, or category of good or service (including an appendix presenting the calculation methods used to determine the

² Since 1 January 2022, the standard CIT rate is 25%, regardless of the profit of the company.

³ This 10% CIT rate applies for tax years beginning on or after 1 January 2019, whereas prior to 2019, a 15% CIT rate applied. More generally, the French patent regime has been amended by the French Finance Act for 2019.

net income and the nexus ratio). As a matter of principle, the annual tax return must be filed within three months of the end of each accounting year.

Innovative New Company status

(Jeune Entreprise Innovante/JEI)

Description of benefits

The incentive benefits are as follows:

- ▶ Full exemption from CIT for the first profitable year and partial exemption (50%) for the second profitable year
- ▶ With the approval of the relevant local authorities, exemption from property tax and/or the TEC for seven years
- ▶ Exemptions for eight years from employer social security contributions for certain categories of employees involved in R&D operations

To receive the incentive, the company should have been incorporated within the past 11 years and no later than 31 December 2022. Going forward, companies incorporated from 1 January 2023 onward must have been incorporated within the last eight years to receive the incentive. The tax relief is subject to the EU de minimis ceiling (total aid may not exceed EUR200,000 over any three-year period).

Guidelines around incentive applications

The election for the Innovative New Company status is made on the company's annual income tax return. As a matter of principle, the annual tax return must be filed within three months of each account year-end. An advance ruling procedure is available to confirm eligibility.

New entities and new buildings assigned to R&D activities

(Allègements au titre de la contribution économique territoriale et de la taxe foncière)

Description of benefits

New companies and new buildings assigned to R&D activities may benefit from specific incentives for TEC and property tax purposes:

- ▶ As mentioned above, companies eligible for Innovative New Company (INC) status can benefit from a temporary exemption from property tax and TEC.
- ▶ Companies that perform certain types of activities within specific areas can benefit from a temporary TEC relief.

The tax relief is applicable to the operations performed until 31 December 2023 in areas qualified as regional aid areas and for SMEs in SME investment aid areas. Taxpayers are required to seek preapproval to obtain the TEC relief.

- ▶ As of 1 January 2016, companies that have new buildings directly assigned to R&D activities – and subject to taxes for the first time in 2016 – can benefit from a 50% reduction in basis of Business Contribution on Property (*cotisation foncière des entreprises*), known as BCP, which is the main component of the TEC, and property tax. The definition of R&D activities is similar to the one applied for the R&D tax credit.

Guidelines around incentive applications

The request to benefit from the exemption from property tax should be sent by companies eligible for INC status to the relevant property tax authority on plain paper, with a list of the properties concerned by the exemption. This request should be submitted before 1 January of the first year of application of the exemption.

The TEC relief is applicable to current and future investments. The request to benefit from the exemption from the local economic contribution has to be made on Form 1447-M-SD or Form 1447-C-SD for new companies. Form 1465-SD should be filed along with the forms. Form 1447-C-SD shall be filed no later than 1 January of the year that follows the year during which the company was created. Form 1447-M-SD shall be filed no later than the second working day following 1 May of the year preceding the year of taxation and for which the exemption is requested.

To benefit from the 50% reduction of BCP and property tax basis, the companies must seek approval from the relevant local authorities. In practice, the taxpayer must file a 6670-D form every fiscal year before 1 January.

Accelerated depreciation of equipment and tools used for research operations

(Amortissement dégressif des matériels et outillages destinés aux opérations de recherche)

Description of benefits

Equipment and tools mainly used for R&D operations can be subject to an accelerated amortization. The applicable coefficients are 1.5, 2 and 2.5, depending on the standard duration of amortization of the equipment or the tools for

tax purposes. The plant and equipment must be primarily (but not exclusively) used for R&D operations eligible for the R&D tax credit.

Guidelines around incentive applications

The incentive is applicable to current and future investments. The amortization has to be booked in the accounts of the company. Form 2055 should also be filed along with the company's annual tax return.

3. Eligibility requirements

To qualify as an eligible R&D activity, the following conditions must be met:

- ▶ The activity must be part of a recognized R&D process.
- ▶ The objective sought must meet the originality or substantial improvement criteria.

In addition, only these main activities are eligible:

- ▶ Fundamental research that contributes to the analysis of properties, structures and physics
- ▶ Applied research that aims to identify possible applications for the results of fundamental research or to find new solutions, allowing the company to reach a specific objective
- ▶ Experimental development that is carried out through the development of prototypes or pilot installations

R&D activities must outperform general practices used in the field of application and must rely on advanced professional skills from scientists and engineers, distinct from the know-how commonly used in the profession. Consequently, R&D activities cannot rely on the design and implementation of conventional solutions. Commercial relevance of the activities (new products or services) or the simple fact that the activity is new or innovative is not sufficient for R&D tax credit eligibility.

Expenses related to subcontracted R&D functions are also eligible. Indeed, companies can outsource R&D to private or public organizations, associations or individual experts. In all cases, the subcontractor is required to possess a certificate of approval delivered by the French Ministry of Higher Education and Research. For the R&D tax credit and the Innovative New Company status, qualifying expenses include personnel expenses, operating expenses, costs related to patent maintenance, costs related to defense and technological development monitoring, and expenses incurred for technological watch. However, the qualifying expenses are not limited to these.

The R&D incentives apply to all industry sectors, so long as there is an R&D activity performed in the French territory or in the European Union.

Specific eligibility requirements for each R&D incentive

R&D tax credit

In principle, R&D activities falling into the scope of the R&D tax credit are the scientific and technical activities for:

- ▶ Fundamental research
- ▶ Applied research
- ▶ Experimental development

The French Tax Code provides a list of expenses eligible for the R&D tax credit (e.g., personnel expenses, operating expenses, costs related to patent maintenance, costs related to defense and technological development monitoring, expenses incurred for technological watch and subcontracted R&D to a subcontractor approved by the Ministry of Higher Education and Research).

Cash grants for collaborative R&D projects

Important eligibility criteria include the economic impact these products may have on the French territory in terms of employment (notably job creation), investment (reinforcing industrial sites) and branch structuring.

Innovative New Company status

The company must fulfill the following conditions:

- ▶ Be no more than eight years old
- ▶ Be an SME, as defined by EU regulations (i.e., with fewer than 250 employees, a turnover not exceeding EUR50 million and/or an annual balance sheet total not exceeding EUR43 million)
- ▶ Be truly new
- ▶ Be independent
- ▶ Have R&D spending that accounts for at least 15% of expenses

The R&D expenses taken into account are the expenses eligible for the R&D tax credit (e.g., personnel expenses, operating expenses, costs related to patent maintenance, costs related to defense and technological development monitoring, expenses incurred for technological watch).

Reduced CIT treatment of revenues derived from patents

- ▶ Scope: (i) patents, (ii) associated industrial/manufacturing processes that can be viewed as an

essential element for the patent or patentable invention and that are licensed together with the related patent or patentable invention, and (iii) copyright-protected software

- ▶ Conditions: (i) intangible asset that qualifies as a fixed asset and (ii) only regarding the sales, a two-year holding period for IP rights acquired (taxation at standard CIT rate during the first two years following the acquisition) and no minimum holding period of IP rights resulting from the R&D activity of the licensing/seller company

4. IP and jurisdictional requirements

For jurisdictional requirements, please refer to the eligibility requirements specified for each incentive.

5. Technology or innovation zones

There are 54 “innovation clusters” in France that are spread across the country. They have been bringing together teachers, researchers and industry stakeholders to develop collaborative R&D projects – in all key technology sectors – that are eligible for state and local aid. Since 2009, 2,000 projects supported by innovation clusters have received financial support from the French State and local authorities (EUR7.5 billion granted since 2004 through direct financial aid and tax exemptions). Based on the most recent data available, nearly 10,000 companies now belong to a cluster in France.

6. Role of governmental bodies in administering incentives

R&D tax credit

- ▶ The R&D tax credit is managed by the French tax authorities and the French Ministry of Higher Education and Research.
- ▶ No preapproval is required. An advance ruling process is available to determine eligibility for tax credits; however, it is time-consuming, and taxpayers do not always receive responses during the process. As such, most taxpayers file for tax credits rather than going through the advance ruling process.

- ▶ There is an automatic tax audit if a tax credit exceeds EUR1 million. If the credit amount exceeds this amount, the tax audit tends to be significantly scrutinized (e.g., requiring supporting documentation for every project).
- ▶ Tests on controls (by government) are conducted on an average of 10% to 20% of the overall projects qualifying for the incentives, and taxpayers are advised to take consistent approaches in preparing documentation.
- ▶ Documentation must be prepared in the French language.
- ▶ The R&D tax credit rate has been increased from 10% to 30% since 2007.

Cash grants for collaborative R&D projects

Various public agencies deal with the collaborative R&D projects, namely:

- ▶ National Agency for Research (L'Agence Nationale de la Recherche): the agency finances R&D projects, including those involving private companies
- ▶ Bpifrance: the agency provides specific grants for identified projects (FUI, PSPC, Programme d'Investissements d'avenir) such as collaborative projects, strategic industrial innovation projects or zero-rate loans for innovation
- ▶ L'ADEME: the agency finances R&D projects in the renewable energies sector

7. Administrative requirements

R&D tax credit

- ▶ Detailed documentation is required for control purposes and should include detailed factual information (e.g., objective of projects, costs and calculation of the credits). The documentation also requires support on eligibility of the activity and R&D tax incentives related to the activity. This documentation has to be provided to the French tax authorities upon request, within the course of a tax audit. The company should file Form 2069 A each year with its tax return.

Cash grants for collaborative R&D projects

- ▶ A specific demand should be built, and an acceptance process of several steps has to be passed to be granted the money (reimbursable to administration most of the time in case of success).

TEC relief

- ▶ The requested forms (1447-M-SD/1447-C-SD and 1465-SD) should be filed with the relevant corporate tax offices by the aforementioned deadlines. The forms have to be completed as if the company did not benefit from a relief. Therefore, all the information required by the French tax authorities to assess the territorial economic contribution should be mentioned in the forms (e.g., address, nature, size of the premise, number of employees).

Reduced CIT treatment of revenues derived from patents

- ▶ Election should be made on the annual corporate tax return.

Innovative New Company status

- ▶ The election for the Innovative New Company status is made on the company's annual income tax return. An advance ruling procedure is available to confirm eligibility.

8. Statutory reference

- ▶ R&D tax credit: Section 244 quater B of the French Tax Code
- ▶ Innovative New Company status: Section 44 sexies – 0 A of the French Tax Code
- ▶ Reduced CIT treatment of revenues derived from patents: Section 238 of the French Tax Code
- ▶ Territorial economic contribution relief: Section 1465 of the French Tax Code
- ▶ Accelerated depreciation of equipment and tools used for research operations: Section 39 AA quinquies of the French Tax Code

Germany

This chapter is based on information as of February 2023.

The R&D incentives regime in Germany is predominantly based on two pillars: (1) nonrefundable cash grants, provided through various programs via a competitive application process and (2) an R&D tax credit (Forschungszulage, introduced 1 January 2020) that offers companies a legal entitlement to R&D funding, currently up to EUR1 million per year (per company group, max funding amount p.a. fixed until 1 July 2025).

Strong focus in the German funding landscape beyond the German R&D tax credit is on the topics of sustainability, energy transition and decarbonization as well as digitalization. Funding opportunities are particularly high for first movers and, thus, innovative projects.

1. Overview

Germany has made a commitment to spend around 3.5% of national gross domestic product per year on R&D activities until 2025 and to improve the conditions for R&D investment by the private sector. Therefore, generous public funding programs are in place to support private investment in innovation and research.

The majority of incentives for R&D activities are available in the form of nonrefundable cash grants, which have a positive influence on earnings before interest and tax (EBIT). Generally, the R&D incentives are provided on a “project basis” instead of a “company basis.” The majority of the funding instruments in the form of nonrefundable cash grants are discretionary in nature, and funding is available for R&D projects in specific areas. Especially in the area of sustainability and decarbonization, funding budgets have been increased in the past two years, and it is expected that this focus remains relevant for the

near future. Further, funding opportunities for innovative projects enabling circular economy approaches have improved.

To further foster R&D activities located in Germany, a tax incentive law for research and development (*Forschungszulagengesetz*, or FZulG), which came into force on 1 January 2020, introduced an R&D tax credit. As a consequence, taxable companies carrying out R&D activities can receive up to EUR1 million per year per company group in Germany for R&D projects starting after 1 January 2020, regardless of a company’s size or success. The amount will be credited against the tax liability or paid in cash if the tax credit exceeds the tax liability. Therefore, the R&D tax credit is relevant for all types and sizes of companies: startups and young companies in the build-up phase as well as mid-sized and large innovation-focused companies.

The R&D tax credit permits an ex-post application for funding and an improved predictability compared to the

nonrefundable cash grants, due to the legal entitlement to the R&D tax credit.

2. Incentives available

R&D cash grants

Description of benefits

R&D activities performed in Germany may be funded via nonrefundable cash grants at the regional, national and EU levels from various funding programs. The typical duration of a project is between 18 and 36 months. In principle, the funding quota ranges from 25% to 75% of eligible costs, depending on the size of the company, the research category of the project and whether the project is conducted in cooperation with other companies or research institutes.

Large companies may typically receive funding of up to 50% for eligible costs for industrial research projects, while the aid intensity for SMEs in this category may be higher. Large companies are often required to collaborate with other project partners to fulfill the funding requirements of different programs and receive funding.

Programs at the regional level (*Länder*) are mostly thematically open and aim to support the regional economy. National programs are open to a wide range of eligible industries and are therefore not limited to specific sectors. R&D funding in the form of nonrefundable cash grants is available to enterprises of all sizes, as well as to R&D institutions. Banks and financial services companies, however, are usually excluded from eligibility.

Generally, cash grant-based funding programs cover a variety of thematic areas, such as:

- ▶ Climate and energy, circular economy, and decarbonization
- ▶ Health and medical technology
- ▶ Nutrition
- ▶ Mobility and transportation
- ▶ Security
- ▶ Communication

Funding is granted to key technologies that act as innovation drivers, particularly:

- ▶ Information and communication technologies (ICT)
- ▶ Materials technologies
- ▶ Hydrogen technologies

- ▶ Biotechnology
- ▶ Nanotechnology
- ▶ Microsystems technology
- ▶ Production technologies
- ▶ Artificial intelligence
- ▶ Photonics
- ▶ Quantum technologies

The following cross-sectional technology topics currently receive particular attention from the funding authorities and the respective ministries:

- ▶ Internet of things and Industry 4.0
- ▶ Digitalization
- ▶ Disruptive technologies
- ▶ Sustainability, decarbonization and circular economy

The European Commission may also provide funding for R&D activities performed in Germany, as well as other EU Member States. European Commission programs typically require collaboration with partners from different European countries.

Guidelines around incentive applications

Non-repayable R&D cash grants are regularly awarded as part of a competitive process for a defined R&D project. Therefore, applications need to be submitted and successfully awarded before starting with the project.

One of the main selection criteria is the project's level of innovation as well as the expected impact. In addition, the effects of the incentive must be clearly stated.

Application procedures involve either a one- or two-stage process, depending on the respective funding program. Before the start of the application process, a consultation of a project's merits with the relevant funding agency is recommended. At the regional level, funding programs sometimes follow a one-step application process. In general, a two-stage application process applies for all national and regional R&D programs. For the first stage, the applicant submits only a short project outline to the funding agency in charge for valuation purposes. In general, the project outline provides a brief summary of the project idea, its technical risks, the necessity of funding, a work plan and a short plan detailing how the project will be financed and how the results will be exploited. If the project outline passes evaluation, the applicant is invited to submit a full project application, which the funding agency then assesses. The respective ministry in charge will make the final decision on whether the project will be funded.

R&D tax credit (*Forschungszulage*)

Description of benefits

All taxable companies, regardless of size and industry sector, are entitled to up to EUR1 million per year for R&D projects starting after 1 January 2020. The only condition is that they conduct R&D projects as defined per R&D definition of the EU state aid rules (currently General Block Exemption Regulation 2014, No. 651/2014).¹ The amount will be credited against the tax liability or paid in cash if the tax credit exceeds the tax liability.

Funding is open for three types of R&D projects: a company's own R&D projects, cooperative projects (e.g., with technology providers, universities, customers) and contract research. Contract research is funded at the level of the principal (i.e., the contracting party) and is only permissible if the R&D contractor is based in the EU/EEA.² Generally, R&D contracts are eligible for contracts with third parties as well as with group-internal entities. There are specific criteria that apply for contract research (e.g., presence of R&D project-specific agreements, clear tasks description, agreed budget or fees, risk lies with the contracting entity only). For intra-company contracts R&D-specific guidance has been provided by the Federal Ministry of Finance.

The funding will be provided on direct R&D personnel costs plus employer's social security contributions at a rate of 25% of eligible costs. For contract research, the 25% funding quota is applied on 60% of the contract value.

It is important to note that the maximum funding threshold of EUR1 million per company and year applies to the whole corporate group as defined in Section 290 Paragraphs 2 to 4 of the German Commercial Code (HGB).

¹ An amendment to the General Block Exemption Regulation is currently under discussion and expected to enter into force in 2023.

² The country in which the R&D contractor is based must provide administrative assistance in accordance with the EU Administrative Assistance Act (*EU-Amtshilfegesetz*) to the extent necessary to verify eligibility requirements. Commissioned R&D projects, or parts thereof, may not be subcontracted by the contractor.

Guidelines around incentive applications

The R&D tax credit permits an application for funding during the implementation as well as after the completion of the R&D project and consists of two steps:

- ▶ Assessment of the R&D character of the projects: Companies will need to apply for a certificate for each R&D project that shall be funded by a certifying body (the *Bescheinigungsstelle Forschungszulage* – outside the finance administration), confirming that the conducted activities qualify as R&D, based on the EU state aid definition. The certificate will serve as a base assessment notice for the tax authorities. The certification process is to be done for each R&D project via an online application tool. Within this tool, each R&D project needs a meaningful, comprehensive description of the content of the R&D project (4,000 characters max); the time, personnel and financial scope; and an indication whether it is own research, contract research or a cooperation project. The certificate will be automatically sent to the tax authority.
- ▶ Assessment of the amount of funding: After the end of the financial year, companies submit an application for the R&D tax credit – independently from annual income or corporate tax return – to the tax authorities, which determine the amount of funding. The R&D tax credit will be fixed and fully credited against the company's tax liability or paid in cash if the tax credit exceeds the tax liability at the next initial assessment of income tax or

corporation tax. The application has to be submitted at the tax office for the fiscal year after the end of the year in which the claim arose (at the latest, four years after the end of the calendar year in which the claim arose).

3. Eligibility requirements

R&D cash grants

All of the funding programs relate to future R&D activities and R&D-related expenditures. Generally, a company must not have started project implementation before the application for funds has been submitted and the funding authority has sent out the grant notification to the applicant. After the funding authority has approved the R&D grant, the company may start implementation of the project. The application/granting process usually takes between 6 and 12 months.

Qualifying activities include fundamental research, industrial research, experimental development and demonstration activities. The costs eligible for funding are project-related and include:

- ▶ Personnel costs
- ▶ Materials and equipment
- ▶ Travel costs
- ▶ Subcontractors
- ▶ Amortization
- ▶ Overheads

Funding for subcontracting costs is granted only if it can be proved that the subcontractor adds a compelling advantage to the project and the grant recipient is not able to implement the task by means of his or her own capacities. In general, the applicant is obliged to tender the subcontracting task and must obtain at least three offers. Stricter rules may apply on a case-by-case basis.

In principle, national funding guidelines require that the recipient of the R&D grant has its own legal entity in Germany (or in the case of funding at the state level, in the corresponding state) and that the R&D activities and eligible costs from the project are incurred in Germany. Further rules apply to the exploitation of project results.

Following the EU General Block Exemption Regulation (GBER) 2014, No. 651/2014, state support for R&D projects qualifying as experimental development with incentives exceeding EUR15 million per undertaking are generally subject to obligatory notification and approval by the European Commission. Please note: An amendment to the GBER was announced on 9 March 2023. It is expected that the new GBER will enter into force in 2023 and will be implemented in national funding law thereafter. One of the major changes is an increased maximum funding per R&D project that can be awarded by the national funding authorities within the framework of the GBER.

R&D tax credit (*Forschungszulage*)

Eligible projects must have started after 1 January 2020. Projects that started before or at that date are not eligible.

Eligible expenses may not be included in the basis for assessment for the R&D tax credit, provided that they have been or will be funded as part of other grants or state aid.

The R&D tax credit may not be provided for undertaking in difficulties (*Unternehmen in Schwierigkeiten*) or if unpaid reclaims for state aid are present (*offene Rückforderungen von Bei-hilfen*).

Eligible R&D activities need to be classified either as basic research, industrial research or experimental development (as per R&D definition of the EU general block exemption regulation). Pure product development, or "simple," routine R&D is not eligible. An assessment on a project-by-project basis is required.

Generally, only direct R&D personnel costs (plus employer's social security contributions) are eligible. However, in the case of contract research, 60% of the contract value is considered as eligible costs. Other costs (e.g., travel, material, overheads) are not eligible.

The applicant has to have the documentation (especially a description of R&D activities and milestones, documentation of personnel hours and contract research), requested by the respective law, and guidance available.

4. IP and jurisdictional requirements

Regarding R&D cash grants, the exploitation of the project results must predominantly take place within Germany (and/or in the corresponding regional state). In principle, several exploitation scenarios can be set up, but it is necessary to assess them on a case-by-case basis to be able to allow a final statement.

As the R&D tax credit offers a legal entitlement to R&D funding on the sole condition that the R&D projects performed constitute R&D as per the EU definition, exploitation of the project results is not a relevant criterion.

5. Technology or innovation zones

There are no technology or innovation zones in Germany.

6. Role of governmental bodies in administering incentives

R&D cash grants

The government (regional or national) and its different ministries (the ultimate funding authorities) are in charge of defining the funding programs. This leads to a large variety of programs, rules and procedures. Some programs are subject to specific deadlines, while others allow the ongoing submission of proposals. As stated before, the approval of the funding authority is necessary to start the project. Typically, the respective government ministries engage funding agencies to evaluate applications, to administer the call of funds and to monitor the beneficiaries' compliance with funding requirements.

The money granted by the funding authority is reimbursed after project costs are incurred. This means that the cash flow proceeds during the progress of the project. In practice, funding is claimed regularly on a national and regional level within the grant period. After the claim for

funds, where the eligible costs for the specific time frame are listed and the interim report is submitted to the funding authority and reviewed, the eligible costs are refunded. In general, cash grants are taxable.

Driven by the major policy goal to become carbon neutral by 2045 and the required need to decarbonize all industries and the energy supply in general, the number of funding programs and the budget targeting this goal will continue to increase. Therefore, funding opportunities for R&D as well as for investments in green and energy-efficient technologies (and the combination of both) are significant.

In addition to cash grant-based incentives, several loan-based schemes (especially from the KfW as a German state-owned investment and development bank) exist to support companies in investing in innovative energy-efficient and environmentally friendly machinery and processes. These programs do not necessarily require R&D activities as such.

Regarding future funding opportunities, specific funding programs have been introduced in accordance with current political goals. Associations, industry representatives and representatives of research organizations are regularly invited to contribute to the process of "topic finding." Therefore, it is advisable for companies to actively participate in this process to have a chance to place their R&D agenda in a political context and have a regular exchange of information with policymakers.

R&D tax credit

Companies will need to apply for a certificate from a certifying body (Bescheinigungsstelle Forschungszulage – outside the finance administration) confirming that the conducted activities qualify as R&D, based on the EU definition. The certificate will serve as a base assessment notice for the tax authorities. After the end of the financial year, companies submit an application for the R&D tax credit to the tax authorities, which determine the amount of funding. Since the R&D tax credit is thematically open, the role of the government is limited to procedural and law-specific questions (e.g., defining the maximum funding per company group or the definition of contract research). Given the learning curve during the first years, it is likely that there will be changes or amendments to the law and/or the currently defined rules and procedures. In February 2023, the Federal Ministry of Finance issued a letter providing more detailed guidance and clarifications on questions and ambiguities that arose during the first three years of the law being in force.

7. Administrative requirements

R&D cash grants and tax credit

After the acquisition of the cash grant or in preparation for applying for the tax credit, it is necessary to comply with the funding regulations and other project-specific conditions. A special focus is made on documentation requirements. Furthermore, the method of calculating eligible costs must comply with funding regulations. The administration of public funding requires effort and capabilities on the recipient's part in terms of organization and documentation, but if an administration system is established within the company right from the beginning, the process is manageable.

8. Statutory reference

- ▶ EU legislation
 - ▶ Communication from the Commission – Framework for State Aid for Research and Development and Innovation (2014/C 198/01)
 - ▶ Commission Regulation (EC) No. 651/2014 of 17 June 2014, declaring certain categories of aid compatible with the internal market in application of articles 107 and 108 of the Treaty (General Block Exemption Regulation)
 - ▶ Commission Recommendation of 6 May 2003, concerning the definition of micro, small and medium-sized enterprises (2003/361/EC)

Hong Kong

This chapter refers to the Hong Kong Special Administrative Region of China tax jurisdiction and is based on information as of February 2023.

Hong Kong introduced an enhanced tax deduction regime for qualifying R&D activities. The legislation was enacted on 2 November 2018 and took retrospective effect for expenditures incurred on or after 1 April 2018.

1. Overview

Under the Hong Kong tax law, an R&D expenditure is generally regarded as being capital in nature and hence disallowable unless it is specifically provided for deduction under certain tax provisions. The new law extended the R&D tax deduction regime to allow super deduction for certain qualifying R&D expenditures on qualifying R&D activities.

2. Incentive available

Name of incentive	Enhanced R&D deduction
Type of incentive	► Super deduction

Enhanced R&D deduction

Description of benefits

Qualifying R&D expenditures on a qualifying R&D activity will be eligible for a 300% deduction for the first HKD2 million, and the remainder will be deductible at 200% without limitation.

R&D expenditures that do not qualify for the above deduction will continue to be eligible for the normal 100% deduction if certain specified conditions are met.

Guidelines around incentive applications

As the incentive is statutory-based, the claims follow the corporate tax filing timeline. The enhanced tax deduction is claimed against taxpayers' taxable profits in the year the expenditure was incurred.

3. Eligibility requirements

Qualifying R&D activity is defined as follows:

- An activity in the fields of natural or applied science for the extension of knowledge
 - An original and planned investigation carried on with the prospect of gaining new scientific or technical knowledge and understanding
- Or
- The application of research findings or other knowledge to a plan or design for producing or introducing new or substantially improved materials, devices, products, processes, systems or services before they are commercially produced or used

Eligible R&D expenditures for the super deduction include staff costs and consumables. Other R&D expenditures may qualify for the 100% deduction if conditions are satisfied. The relevant R&D activities must be undertaken and carried on by a taxpayer wholly within Hong Kong. With respect to subcontracted-out qualifying R&D activities, the payments must be made to a designated local research institution to qualify for the enhanced deduction.

Any business carrying on qualifying R&D activities in Hong Kong is eligible for the enhanced tax deduction. No industry sectors are specifically excluded.

4. IP and jurisdictional requirements

Any intellectual property (IP) rights generated from the R&D activities must be fully vested in the claimant. In a cost-sharing arrangement where the IP is generated as a result of pooled R&D activities, a pro rata joint ownership with other participants would be sufficient.

5. Technology or innovation zones

There are no technology or innovation zones designated for providing R&D incentives in Hong Kong.

6. Role of governmental bodies in administering incentives

The enhanced R&D deduction claims are processed by the Hong Kong Inland Revenue Department (IRD). The IRD also monitors the R&D activities of the claimants to ensure they comply with the R&D enhanced tax deduction regime.

The Innovation and Technology Commission designates certain institutions as local research institutions and may give advice to the IRD regarding a deduction claim or an advance ruling application.

7. Administrative requirements

Companies are not required to seek government preapproval for the enhanced R&D tax deduction. Claimants are required to disclose additional detailed information in supplementary forms when filing their profits tax returns.

8. Statutory reference

Inland Revenue Ordinance, Section 16B and Schedule 45

Hungary

This chapter is based on information as of February 2023.

The Hungarian government encourages R&D-related activities and is very supportive of R&D investments. Numerous cash incentives and tax credit opportunities are available for setting up as well as operating R&D activities.

1. Overview

The R&D incentive regime in Hungary has become mature, well-known and well-used by companies. Further, the Hungarian government is introducing new elements and definitions to clarify uncertainties and facilitate R&D activities.

Currently, cash grants and tax incentives are available for R&D projects. The Hungarian R&D incentive regime could be beneficial for a wide range of investors depending on their fact patterns and business goals, and many of the elements of the incentive system may be combined to achieve optimum results.

The Hungarian government reduced the corporate income tax (CIT) rate to 9% in 2017. In light of this change and the mature R&D incentive regime, Hungary can provide a suitable and tax-efficient environment for R&D-related activities.

Types of incentives		Types of incentives	
Tax credits	<input checked="" type="checkbox"/>	Tax exemptions	<input checked="" type="checkbox"/>

2. Incentives available

Name of incentive	VIP cash grant	Corporate tax credit	Double deduction of R&D costs	Reduced social security contribution for researchers	Corporate tax exemption of 50% on royalty income	Reduced municipality business tax base and R&D tax base
Type of incentive	▶ Cash grants	▶ Tax credits	▶ Super deduction	▶ Tax credits ▶ Tax allowance	▶ Reduced tax rate	▶ Tax allowance

VIP cash grant

(A Kormány egyedi döntésével megítélhető regionális beruházási támogatás)

Description of benefits

A nonrefundable cash grant is available for investments and new job creation. The amount depends on the location and nature of the investments. The grant is paid out as costs are incurred, and the maximum cash grant amount is typically capped at a certain percentage of the total investment amount. Companies must seek preapproval to obtain cash grants. The minimum investment value is EUR10 million (or EUR5 million, depending on the location).

The government introduced a special R&D project cost-based (opex-based) cash grant in 2017. The minimum investment value is EUR1 million and 10 new R&D positions.

Guidelines around incentive applications

Cash grants are applicable to future investments. Companies may claim cash grants as they incur costs or capital expenditure (capex). They must maintain appropriate records and administration for the claims to be accepted by the Hungarian authorities.

Corporate tax credit

(Fejlesztési adókedvezmény)

Description of benefits

A tax credit is available to decrease CIT liability for a period of 13 tax years (based on operating expenses (opex) or new job creation). The maximum tax credit amount depends on the location and value of the investment and can decrease the annual CIT liability by 80%. The tax credit may be applied together with cash grants. The government takes into consideration the losses from initial operations and determines a 16-year period from the application, during which the tax credit can be used. Unused tax credits cannot be carried forward once this 16-year statutory deadline has lapsed. The minimum investment value is HUF1 billion (EUR2.8 million) for capex, and there is no entrance threshold for job creation.

There is a special opportunity for R&D investments with a significantly lower threshold of HUF100 million (EUR250,000) investment without the new job requirement.

Guidelines around incentive applications

The corporate tax credit is applicable to future investments. Companies may claim the CIT credit in their annual CIT return for 12 tax years from or following the year in which the investment is put into operation (i.e., maximum 13 years). The tax return is due by 31 May following the given tax year (assuming that the business year corresponds to the calendar year) and should be submitted to the Hungarian tax authority electronically.

Double deduction of R&D costs

(K+F költségek dupla levonhatósága)

Description of benefits

The direct costs of R&D or the depreciation of capitalized R&D costs incurred in a given tax year are deductible twice for CIT purposes: as an expense and as a CIT base deduction item.

Guidelines around incentive applications

The double deduction is applicable to past and current projects. Companies claim the double deduction of the eligible R&D costs in their annual CIT return. If a resident taxpayer provides R&D services directly for another resident taxpayer, then the deduction of the eligible R&D costs may be shared by the service provider and the customer based on their joint written statement. In some cases, companies can double-deduct recharged R&D costs from foreign entities. The tax return is due by the end of the fifth month following the given tax year and should be submitted to the Hungarian tax authority electronically.

A ruling can be obtained to secure R&D content and cost allocation method, which is generally accepted by the Hungarian Tax Authority.

Reduced social security contribution for researchers and R&D staff

(Szociális hozzájárulási adókedvezmény)

Description of benefits

A tax allowance is available to companies employing researchers with scientific degrees or academic titles (including students applying for these titles). Under the incentive, the social contribution tax on these employees' wages will be 0% (instead of 13%, the rate applicable as of 1 January 2022), capped at a gross monthly wage of HUF500,000 (EUR1,250) for researchers and HUF200,000 (EUR500) for PhD students. These allowances are available with no specific time limitation.

As of 1 January 2019, the companies are entitled to a 50% exemption of the social security contribution for R&D staff. This means a 6.5% savings on the R&D staff's gross wage (as of 1 January 2022) for the company. R&D content has to be proved and proper documentation is required, but there are no other eligibility conditions or other requirements to be fulfilled.

Guidelines around incentive applications

The incentive is applicable to current costs.

Reduced social security contribution

Companies may apply the R&D-related social security contribution allowance and credit in their monthly tax return, which is due by the 12th day of the month following the corresponding month and should be submitted to the Hungarian tax authority electronically.

Corporate tax exemption of 50% on royalty revenue

(50%-os társasági adóalap-kedvezmény jogdíjbevétel után)

Description of benefits

The incentive allows for 50% of the royalty profit (but is capped at 50% of the pretax profit) to decrease the CIT base. In some cases, part of the profit from the sale of goods or services qualifies as an "embedded royalty."

Guidelines around incentive applications

The incentive is applicable to current profits. Companies claim the 50% CIT exemption on royalty profit in the annual CIT return. Base erosion and profit shifting (BEPS) approaches should be applied (i.e., the nexus ratio, which is calculated based on the "in-house" R&D activity). There is an opportunity to apply pre-BEPS royalty rules up to the tax year ending no later than 30 June 2021 under certain circumstances. The tax return is due by the end of the fifth month following the given tax year and should be submitted to the Hungarian Tax Authority electronically.

Reduced municipality business tax base and R&D tax base

(Helyi iparűzési adóalap-kedvezmény és innovációs járulék alapkedvezmény)

Description of benefits

All direct costs of R&D in a given tax year are deductible from the municipality business tax base and from the base of the R&D tax. Royalty income is fully exempt.

Also, 10% of the R&D direct costs are deductible from the municipality business tax obligation in certain municipalities.

Guidelines around incentive applications

The incentive is applicable to current expenses. Companies claim the R&D-related municipality business tax base allowance and R&D tax base allowance in the annual municipality business tax and R&D tax returns, which are due by the end of the fifth month following the year when the costs are incurred. A municipality business tax return should be filed with the municipality where the companies carry out business activities, and the R&D tax return should be submitted to the state tax authority.

3. Eligibility requirements

R&D-related VIP cash grant

The VIP cash grant qualifies as state aid. The grants are provided to strategic investors accomplishing (i) R&D-related asset and infrastructural investments, or (ii) R&D projects. To qualify for grants involving R&D-related asset and infrastructural investments, a company is required to invest at least EUR10 million (or EUR5 million, depending on location). The qualifying expenses are the related capex costs. To qualify for grants involving R&D projects, a company is required to invest at least EUR1 million (opex-based) and to create at least 10 new R&D positions related to the R&D investment, of which 50% should require a higher professional qualification. The qualifying expenses are the payroll-related costs of the researchers, the amortization costs of the assets and the rental costs of the buildings. The eligible costs should be incurred within one to three years from the start of the project.

Corporate tax credit

The corporate tax credit qualifies as State aid. The minimum investment value is HUF1 billion (EUR2.5 million) for capex, and there is no entrance threshold for job creation.

A special corporate tax credit is available for R&D-related asset and infrastructural investments; this credit has a significantly lower threshold of HUF100 million (EUR250,000 investment without the new job requirement). The qualifying expenses are the related capex costs.

Double deduction of R&D costs

Qualifying R&D activities are activities carried out using the company's own assets and employees (either for its own purposes or on behalf of another entity) or activities carried out with another resident entity based on a specific R&D agreement. If the Hungarian entity is only financing the R&D, the results of the R&D activities must be used in Hungary to benefit from the deduction. Effective 1 January 2015, based on the decision of the taxpayer, the R&D tax base decreasing item can be allocated from a Hungarian-related party.

Reduced social security contribution for researchers

The company is required to be recognized as a research center and has to employ researchers and scholars (including students applying for scientific titles) as defined by the legislation. The social security contribution deduction can be used based on the gross wage costs of the research employees up to a certain limitation.

Corporate tax exemption of 50% on royalty profit

The company must receive royalties to receive the incentive. Half of the profit accounted for as a royalty as per Hungarian legislation decreases the CIT base (but is capped at 50% of the pretax profit). The BEPS approach (i.e., the nexus ratio) should be applied.

Reduced municipality business tax base and R&D tax base

There is a 100% exemption of royalty income from the municipality business tax base and R&D tax base.

4. IP and jurisdictional requirements

Qualifying intellectual property (IP) includes patents, software licenses and other categories similar to patents. Types of income include income from the use or sale of qualifying IP.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Hungary.

6. Role of governmental bodies in administering incentives

VIP cash grant

- ▶ Ministry of Foreign Affairs and Trade: donor
- ▶ Hungarian Investment Promotion Agency: operating agency

Corporate tax credit

- ▶ Ministry of Finance: decision-maker
- ▶ National Tax and Customs Administration: auditor of use of incentive

Double deduction of R&D costs and corporate tax exemption of 50% on royalty income

- ▶ National Tax and Customs Administration: auditor of use of incentive
- ▶ Hungarian Intellectual Property Office: authority to evaluate R&D content

Reduced social security contribution for researchers

- ▶ National Tax and Customs Administration: auditor of use of incentive

7. Administrative requirements

- ▶ The compliance process for obtaining the incentives or grants has become less onerous, especially for the VIP cash grant. The application processes are streamlined and the administration is fairly manageable.
- ▶ R&D tax credit is used through the CIT return.
- ▶ Double deduction from the CIT base and tax exemption in relation to royalties has to be indicated in the CIT return.
- ▶ The deduction and credit of the social security contribution has to be indicated in the social security contribution return.
- ▶ The National Tax and Customs Administration does not question R&D deductibility during a tax audit if a taxpayer has the written evaluation of the Hungarian Intellectual Property Office confirming the R&D content of the project.

8. Statutory reference

The listed incentives are regulated in the following acts and decrees:

- ▶ Act LXXXI of 1996 on Corporate Tax and Dividend Tax
- ▶ Act C of 1990 on Local Taxes
- ▶ Act LXXVI of 2014 on Scientific Research, Development and Innovation
- ▶ Decree No. 165/2014 (VII. 17.) of the Hungarian Government on Corporate Tax Credit
- ▶ Section IX of the Act CLVI of 2011 on Social Security Tax
- ▶ Decree No. 210/2014. (VIII. 27.) of Use of the Investment Promotion Fund
- ▶ Decree No. 332/2017 (XI.9.) on the detailed rules concerning the research and development qualification of certain activities

India

This chapter is based on information as of February 2023.

The R&D sector in India has witnessed robust growth in recent years due to the government's efforts to make India a global R&D hub. Because of incentivized investments and the launching of various flagship projects to attract investments from around the globe, many investors have either shifted or are planning to shift their R&D base to India. Further flagship projects, such as the Make in India and Digital India initiatives, introduction of a patent box regime, and a concessional tax rate scheme recently announced by the government, are playing a pivotal role in attracting investors to make India a global manufacturing and R&D destination.

EY contact:

Rahul Patni
rahul.patni@in.ey.com

1. Overview

The government of India has a progressive outlook toward R&D activities and continues to promote such activities, focusing strongly on manufacturing and developing innovative solutions in the manufacturing, science and technology fields. This is evident from the programs the government has launched, which cover the following objectives:

- ▶ Increase in support to R&D
- ▶ Improvement in pool of scientific manpower
- ▶ Improvement in India's R&D infrastructure
- ▶ Introduction of a patent box regime to encourage indigenous R&D with a view to make India a global hub
- ▶ Implementation of flagship programs at the national level to improve technological competitiveness of Indian industries
- ▶ Establishment of research facilities and centers of scientific excellence on par with some of the most globally renowned facilities

Further, the government has continuously supported R&D activities and seeks to provide an environment that offers the growth of a knowledge-based economy through implementing effective fiscal policies and incentivizing investments in R&D through tax and other benefits.

Types of incentives		Types of incentives	
Tax credits	<input type="checkbox"/>	Tax exemptions	<input checked="" type="checkbox"/>
Cash grants	<input checked="" type="checkbox"/>	Income tax withholding incentives	<input type="checkbox"/>
Loans	<input checked="" type="checkbox"/>	Patent-related incentives	<input checked="" type="checkbox"/>
Reduced tax rates/preferable tax rates	<input checked="" type="checkbox"/>	Financial support	<input checked="" type="checkbox"/>
Reduced social security contributions	<input checked="" type="checkbox"/>	Tax holiday	<input checked="" type="checkbox"/>
Accelerated depreciation on R&D assets	<input type="checkbox"/>	Expedited government approval process	<input type="checkbox"/>
Tax allowance	<input type="checkbox"/>	VAT reimbursement*	<input checked="" type="checkbox"/>
Infrastructure/land preferential price	<input type="checkbox"/>	Qualifies for Horizon Europe funding	<input type="checkbox"/>
Tax deduction (including super deduction)	<input checked="" type="checkbox"/>	Other	<input type="checkbox"/>

* VAT reimbursement – tax paid on R&D expenses is available as an input tax credit and can be used against tax payments.

The government also offers various tax benefits in the form of deductions on revenue expenditure, accelerated depreciation on capital expenditure and indirect tax benefits, such as customs duty exemptions on the import of specified goods for companies having an in-house R&D unit and concessional goods and services tax (GST) rates and exemptions available for research institutions.

The government has notified R&D services related to the pharmaceutical sector by an Indian service provider to a foreign service recipient as exports, thus, making them eligible for zero-rated benefits.

Besides the fiscal incentives provided by the federal government, various states in India offer incentives, such as stamp duty waiver and concessions, soft loans, and subsidies related to social security contributions.

In addition, the government has created a Technology Development Board to provide financial support to industrial concerns undertaking R&D activities in the field of technology.

Recently, the Finance Minister (FM) announced the proposals under the Fiscal Budget for 2023 to promote R&D in the following specified sectors:

1. Global hub for millets (Shree Anna)

To make India a global hub for Shree Anna, the Indian Institute of Millet Research in Hyderabad will be supported as a center of excellence for sharing leading practices, research and technologies at the international level.

2. Medical research

Facilities in select Indian Council of Medical Research labs will be made available for research by public and private medical college faculty and private sector R&D teams for encouraging collaborative research and innovation.

3. Pharma innovation

A new program to promote research and innovation in pharmaceuticals will be taken up through centers of excellence. The government of India shall also encourage industry to invest in research and development in specific priority areas.

4. Centers of excellence for artificial intelligence

For realizing the vision of “Make AI in India and Make AI work for India,” three centers of excellence for artificial intelligence will be set up in top educational institutions. Leading industry players will partner in conducting interdisciplinary research and developing cutting-edge applications and scalable solutions in the areas of agriculture, health and sustainable cities.

5. Lab-grown diamonds

Lab-grown diamonds (LGDs) are part of a technology- and innovation-driven emerging sector with high employment potential. These environmentally friendly diamonds have optically and chemically the same properties as natural diamonds. To encourage indigenous production of LGD seeds and machines, and to reduce import dependency, a research and development grant will be provided to one of the Indian Institutes of Technology for five years.

Since the aforementioned sectors are emerging sectors, R&D opportunities would be manifold. However, the Indian government has yet to release a detailed plan.

2. Incentives available

Name of incentive	Deductions for expenditure on scientific research by manufacturing entities*	Deductions for contributions for R&D	Tax holiday on export profits earned by units set up in Special Economic Zones (SEZs)*	Patent-related incentive	Funding for R&D activities in technology	Customs duty exemption and concession	GST concession (research institution)
Type of incentive	▶ 100% tax deduction for qualifying revenue and capital expenditure	▶ 100% tax deduction	▶ Tax holiday	▶ Reduced tax rates	▶ Cash grants ▶ Loans ▶ Financial support	▶ Tax exemptions ▶ Reduced tax rates	▶ Reduced tax rates withdrawn from 18 July 2022

*Although not based upon scientific analysis, general industry consensus is that these two incentives deliver the most beneficial results to investors.

Deductions for expenditure on scientific research

Description of benefits and eligibility requirements

A 100% deduction is available to all industries on revenue and capital expenditures (other than expenditures incurred for the acquisition of land) paid out or expended on scientific research related to the business. This deduction is

available even for companies that opt for the concessional tax rate of 22% or 15% announced by the government. Further, where any revenue expenditure is incurred within three years before business commences in order to pay salaries to employees engaged in scientific research or to purchase materials used in scientific research, all such expenditures to the extent certified by the Director General of Income Tax (Exemptions) (DGIT(E)), in concurrence with the Secretary, Department of Scientific and Industrial Research (DSIR), shall be allowed as a deduction in the year in which business commences.

Guidelines around incentive applications

The incentive is applicable to current and retroactive investments. To claim the deduction for retroactive investments, the expenses should be incurred within three years of the commencement of business. The deduction may be claimed in connection with retroactive investments in the year of business commencement by filing a tax return within the time prescribed and in the prescribed manner for the financial year in which the expenditure is incurred.¹ Further, an annual certificate stating the incentives claimed during the year needs to be filed with DSIR. Retroactive expenses incurred prior to the commencement of business may be claimed if they are certified by the DGIT(E) or Chief Commissioner of Income Tax (CCIT) and DSIR.

Deductions for expenditure on scientific research by manufacturing entities

Description of benefits and eligibility requirements

A 100% deduction is available for scientific research on in-house R&D expenditures as approved by the DGIT(E) and DSIR, including capital expenditures (other than land and buildings) by companies engaged in manufacturing and the production of articles and things, except for those articles or things specified in the Eleventh Schedule² or for companies engaged in the biotechnology business. Expenditures on scientific research include expenses incurred on performing clinical drug trials, obtaining approvals from regulatory authorities and filing patent applications. Net operating losses (NOLs) resulting from the deduction amount may be carried forward for eight years. The government of India has announced a scheme for a concessional corporate tax rate of 22% for existing domestic companies and 15% for new domestic companies incorporated on or after 1 October 2019 and commencing manufacturing on or before 31 March 2023, subject to satisfaction of certain conditions. However, companies opting for the concessional corporate tax rate

¹ Under current tax laws, the due date of filing an income return is 31 October following the end of the relevant financial year when transfer pricing provisions are not applicable. However, the date is further extended to 30 November following the end of the relevant financial year when transfer pricing provisions are applicable.

² Under current tax laws, the due date of filing an income return is 31 October following the end of the relevant financial year when transfer pricing provisions are not applicable. However, the date is further extended to 30 November following the end of the relevant financial year when transfer pricing provisions are applicable.

are not permitted to claim the tax deduction as mentioned above or set off carried-forward losses from earlier years pertaining to R&D expenses.

Guidelines around incentive applications

- ▶ The incentive is applicable to current and future investments. The deduction may be claimed in the year the expenditure is incurred by filing the details of the expenditure for the relevant financial year before the DSIR on or before 31 October with DSIR authorities and before the due date for filing the return of income with tax authorities for the relevant financial year.
- ▶ Specific DSIR approval is required to take advantage of super deduction benefits.
- ▶ Specific guidelines have been issued for the automotive industry.
- ▶ The company will be eligible for the super deduction only if it enters into an agreement with the DSIR for cooperation in an R&D facility and for audit of the accounts maintained for that facility.

Deductions for contributions for R&D

Description of benefits and eligibility requirements

Deductions may be granted only in relation to the approved entities to which a donation or contribution is being made. The deductions available are as follows:

- I. A 100% deduction is granted to assessees for any sums paid to a national laboratory, university or institute of technology, or specified persons with a specific direction that the said sum would be used for scientific research within a program approved by the prescribed authority. The prescribed authority in the case of a national laboratory, university or institute of technology is the head of the institution, and in the case of a specified person, it is the Principal Scientific Adviser to the government of India.
- II. A 100% deduction is available for contributions made to approved institutions (e.g., research associations, universities, colleges) to be used for scientific research. An approved institution is a research association, university or college that has been approved and notified in the Official Gazette by the Central Government.
- III. Up to a 100% deduction is available for contributions made to any company engaged in scientific research. However, the following conditions must be satisfied to claim the deduction:
 - ▶ The company must be registered in India.

- ▶ The main object of the company must be scientific R&D.
 - ▶ The company must be approved by the Chief Commissioner of Income Tax.
- IV. Up to a 100% deduction is available for contributions made to approved institutions (e.g., research associations, universities, colleges that undertake research in social science or statistical research) to be used for research in social sciences or statistical research.

To obtain approval, these entities must file the relevant forms before the prescribed authorities. NOLs resulting from the deductions can be carried forward for eight years. However, companies opting for the concessional corporate tax rates are not permitted to claim the abovementioned deductions.

Guidelines around incentive applications

The incentive is applicable to current and future investments. The deduction may be claimed based on the amount of contribution made to the approved entities by filing the income tax return and audit report within the prescribed time for the relevant financial year.

Patent-related incentive

Description of benefits and eligibility requirements

To provide an additional incentive to retain and commercialize existing patents and to develop new innovative patented products, income earned by royalty in respect of patents developed and registered in India will be taxable at a concessional rate of 10% (plus applicable surcharge and tax) without deduction of any expenses.

The following conditions must be satisfied to claim the benefit:

- ▶ The patent should be developed and registered in India.
- ▶ “Developed” is defined to mean “at least 75% of the expenditure incurred by the assessee for invention in respect of which patent is registered.”
- ▶ An eligible assessee is any person resident in India who is the true and first inventor of the invention and whose name is entered on the patent register as the patentee under Patents Act, 1970.
- ▶ Eligible income is income by way of royalty from patents developed and registered in India and includes the following:
 - ▶ Income from transfer of all or any rights in respect of patent

- ▶ Income from imparting of any information concerning the working of the patent
- ▶ Income from use of any patent
- ▶ Rendering of any services in connection with the activities referred to above
 - ▶ Lump-sum consideration for any of the above
- ▶ Eligible income excludes the following:
 - ▶ Consideration taxable as capital gains
 - ▶ Consideration for sale of products manufactured with the use of patented process
 - ▶ The patented article for commercial use patent

Tax holiday on export profits earned by units set up in SEZs

Description of benefits and eligibility requirements

Incentives are available for companies engaged in providing R&D services under a service arrangement by way of export of services to a foreign principal. Such companies may set up their units in SEZs to secure the tax holiday. SEZ units engaged in the export of goods and services from 1 April 2006 to 31 March 2021³ are eligible to claim a 15-year, phased tax holiday (see table below) on all export-linked profits earned.

Amount of deduction to SEZ unit	Period of deduction
100% of export profits	First five years
50% of export profits	Next five years
50% of export profits, provided the profits are transferred to a Special Economic Zone Reinvestment Reserve Account for the purposes of acquiring plant or machinery within three years	Next five years

Export profits of SEZ units are calculated as follows:

Profits of SEZ unit x [Export turnover of unit/Total turnover of unit]

However, the SEZ unit will not be eligible to claim the super deduction on research and development expenses as mentioned above.

³ On account the COVID-19 pandemic, the operation commencement date for the SEZ units claiming deduction was extended to 30 September 2020 for the units that received necessary approval by 31 March 2020.

Companies opting for the concessional corporate tax rates are not permitted to claim the tax holiday as mentioned above.

Amalgamation of SEZ units

The Central Government has amended the rules for merging SEZ units. The approval of SEZ authorities can be obtained subject to meeting the following conditions:

- ▶ Units belong to the same company or firm and fall within the same SEZ.
- ▶ After merger, block period for calculation of net foreign exchange (NFE) shall be from the date of commencement of production of the unit that commenced operations first.
- ▶ The income tax exemption period shall be considered from the date of start of operation of the first unit.

Guidelines around incentive applications

Incentives are available to any unit set up in SEZs provided such unit is not formed by splitting up or reconstructing existing businesses. In addition, such a SEZ unit must not be formed by the transfer of previously owned plant and machinery. An enterprise may claim the deduction or benefit by filing its income tax return within the time prescribed for the relevant financial year.

The unit in an SEZ can be set up for the following purposes:

- ▶ Manufacturing
- ▶ Providing services (which may include R&D services)
- ▶ Trading and warehousing

To set up a unit in an SEZ, preapprovals are required from the applicable development commissioner. A detailed application and procedural process is to be followed for seeking an approval.

Investment proposals in a SEZ qualifies for bringing in funds in India under the automatic route, and no prior approval is required from the Exchange Control and Regulatory authorities for infusion of funds in India

Funding for R&D activities in technology

Description of benefits

Support in the form of grants is provided by the DSIR to industrial R&D projects through its Technology Development Program (TDP). As per the project funding guidelines of the TDP, the Technology Development Board (Board) invests in the equity capital or gives loans

to industrial concerns and research associations that are attempting development and commercial application of indigenous technology or adapting imported technology to wider domestic applications. The Board also provides grants. However, this mode of funding is not particularly popular with multinational corporations, and grants are provided by the Board only in exceptional cases.

Guidelines around incentive applications

Indian companies, cooperatives and research associations are eligible to seek funding from the Board. Further, domestic R&D institutions, such as national and state laboratories, academic institutions, cooperative research associations, in-house R&D units recognized by the DSIR and commercial R&D companies recognized by the DSIR, can also apply for funding.

The most common form of Board funding is concessional loan assistance, which comes with a number of conditions, including payment of royalty on sales generated during the term of the loan.

A second mode of funding provided by the Board is equity participation. Conditions for securing funding by way of equity might include pledging of shares by promoters to the Board for a value equal to equity subscription by the Board.

Another mode of funding is Board grants, but the Board provides grants only in exceptional cases. The recipient of the grant may be required to pay the Board an amount equivalent to the grant received by it or share the profit proportionate to the grant received.

Customs duty exemption and concessions

Description of benefits and eligibility requirements

A concessional rate of basic customs duty is available on the import of specified instruments, equipment or components by research institutions, subject to conditions. Pursuant to the Budget 2023 announcements, this exemption is available until 31 March 2024; thereafter, the applicable basic customs duty as per the tariff rate would be payable unless the exemption is extended for a further period.

Further, a concessional rate of basic customs duty is available on the import of specified goods for use in the pharmaceutical and biotechnology sectors, subject to conditions. This exemption is available until 31 March 2023; thereafter, the applicable basic customs duty per the tariff rate would be payable.

Also, a basic customs duty exemption is available on the import of equipment, instruments, raw materials, components, pilot plant and computer software when imported into India for a project by a company having an in-house research and development unit, subject to conditions. Pursuant to the Budget 2023 announcements, this exemption is available until 31 March 2024; thereafter, the applicable basic customs duty per the tariff rate would be payable unless the exemption is extended.

Guidelines around incentive applications

Customs duty exemptions and concessions are applicable to the import of specified goods. No particular forms have been prescribed under the Indian customs legislation for claiming the aforementioned customs duty exemption or concessional rate of duty. However, certificates and approvals (as per relevant notification) would need to be produced to customs authorities at the time of clearing the imported goods to receive such exemption or concession, as the case may be.

Customs duty exemption and concession are available subject to conditions prescribed under the relevant notification, such as:

- ▶ The goods imported should not be sold or transferred within five to seven years from the date of importation.
- ▶ The entity importing the goods must be registered with DSIR.
- ▶ Certification is required from relevant authorities or agencies regarding use for R&D, installation in the R&D wing, value, etc.

GST concessional rate (research institution)

Description of benefits

A concessional rate of GST was applicable to research institutions for procurement of specified goods subject to certain conditions. However, with effect from 18 July 2022, the concessional rate has been withdrawn, and GST per the tariff rate is applicable to research institutions for procurement of specified goods.

Further, the supply of R&D services related to the pharmaceutical sector by an Indian service provider to a foreign service recipient can be considered export of services (subject to conditions in relevant notification) and hence eligible for benefits available to exports (avoiding a potential GST levy dispute by revenue authorities claiming the place of supply of such services to be in India).

3. Incentives offered under Central Government and state-level schemes

Central Government incentives – production-linked incentives (PLI) schemes

Since 2020, the Central Government has offered PLI schemes for sectors of strategic and economic importance. These schemes aim to encourage large-scale domestic manufacture in India, while also ensuring mass job creation opportunities. Under these schemes, approved applicants are provided a cash incentive equivalent to a fixed percentage of the sales of manufactured goods. The extent and duration of incentives differ by sector and are determined by the concerned ministry. These schemes may be renewed at the discretion of the concerned ministry. To date, PLI schemes for the following sectors have been released or announced:

- ▶ Key starting materials (KSMs), drug intermediates (DIs) and active pharmaceutical ingredients (APIs)
- ▶ Large-scale electronics manufacturing
- ▶ Manufacturing of medical devices
- ▶ IT hardware
- ▶ Pharmaceuticals drugs
- ▶ Telecom and networking products
- ▶ Food products
- ▶ White goods (ACs and LEDs, including their components)
- ▶ High-efficiency solar photovoltaic modules
- ▶ Automobiles and auto components
- ▶ Advance chemistry cell (ACC) battery
- ▶ Textile products
- ▶ Specialty steel
- ▶ Drones and drone components
- ▶ Semi-conductors and display fabs

Additional sectors are likely to be brought under the umbrella of PLI schemes in the future.

State-level incentives

States want to attract investments in new units and expand existing units to develop infrastructure, education and employment opportunities. For these purposes, all states offer a combination of incentives linked to the investment and/or job creation as well as the location within the state.

The types of incentives offered include:

- ▶ GST-linked and turnover-based incentives
- ▶ Stamp duty waiver and concessions
- ▶ Utility-linked incentives, such as exemption on electricity duty cost and power tariff rebate
- ▶ Financial assistance for filing patent and quality certification applications
- ▶ Interest subsidy
- ▶ Subsidies linked to social security contributions

These incentives are offered to specific activities and sectors as outlined in the state incentives policies and schemes. Their extent is determined by various factors that include the size of the eligible investment, location, employment generation and nature of products. R&D companies may be eligible to apply based on the criteria listed in the concerned state policy. Moreover, certain states have begun to recognize the importance of R&D activities and are offering incentives to standalone R&D units and manufacturing units that have set up a dedicated R&D center.

The incentives offered may vary from state to state with some states offering discretionary incentives to investments meeting specific thresholds (mega investments) or those of strategic importance.

4. IP and jurisdictional requirements

Where the Indian company carrying out research does not own the intellectual property (IP) (e.g., under a contract R&D model), there could be challenges in securing approvals for claiming 100% deduction, and it may not be effective to claim the deduction because it could be restricted to "net expenditure." Apart from this, there are no restrictions with respect to holding IP rights to secure tax-related benefits.

5. Technology or innovation zones

As discussed earlier, the Indian tax regime provides for a tax holiday on export profits earned by units set up in SEZs.

6. Role of governmental bodies in administering incentives

Incentives related to expenditure on scientific research, expenditure on scientific research by manufacturing entities and contributions to R&D

The government agencies involved in administering incentives are the DSIR, DGIT(E) and Principal Chief Commissioner of Income Tax.

The government of India established the DSIR, an autonomous body and India's largest R&D organization, with a broad mandate to promote industrial research and to carry out activities relating to technology development. The DSIR is part of the Ministry of Science and Technology and carries out the activities relating to promotion, development, use and transfer of indigenous technology. The DSIR has carried out various programs and initiatives aimed at promoting R&D. Because the government of India provides various incentives and benefits to the private sector for R&D, the DSIR also acts as a nodal agency for the approval of benefits claims. The DSIR approves all scientific R&D activities carried out by research associations, colleges, universities, etc. On completion of the R&D activity, the DSIR obtains a completion certificate from the research associations and considers a report of the activities carried out, results obtained and its further application for commercial exploitation.

Incentives related to export profits earned by units set up in an SEZ

Involved government agencies: Ministry of Commerce and Industry, Department of Commerce

The administration of each SEZ is governed by a three-tier administrative setup. The Board of Approval is the highest body, comprising 19 members from various ministries of the government of India and headed by the Secretary of the Department of Commerce. The Approval Committee at the zone level deals with approval of units in the SEZs and other related issues. Each zone is headed by a Development Commissioner, who is ex-officio chairperson of the Approval Committee.

The Board of Approval and the Central Government approve the setup of SEZs. Subsequently, units are permitted to be set up in the SEZ. All the proposals for setting up units in the SEZ are approved at the zone level by the Approval Committee, consisting of the Development Commissioner, Customs Authorities and representatives of state government. All post-approval clearances, including grants of importer-exporter code numbers, changes in the name of the company or implementing agency, and broad banding diversification, are given at the zone level by the Development Commissioner. The performance of the SEZ units is periodically monitored by the Approval Committee, and units are liable for penal action under the provision of the Foreign Trade (Development and Regulation) Act, in case of violation of the conditions of the approval.

Incentives related to funding for R&D activities

Involved government agencies: Technology Development Board, Department of Science and Technology

The government has constituted the Technology Development Board to manage and administer the fund created by the government for technology development and application.

The Board accepts applications for financial assistance from all sectors of the economy and approves the granting of funds to the industrial concerns after a detailed evaluation.

Incentives related to customs and GST

Involved government agencies: Central Board of Indirect Taxes and Customs

Benefits of concessional basic customs duty and GST (including customs in the form of exemptions) are administered through the arm of the Ministry of Finance (i.e., Central Board of Indirect Taxes and Customs), which issues necessary guidelines and notifications in this regard.

Patent-related incentive

Involved government agencies: Central Board of Direct Taxes

Regarding patent-related incentives, the Ministry of Finance has established the Central Board of Direct Taxes to issue guidelines and notifications to administer the incentives.

Incentives offered at the central (federal) level under the concerned PLI scheme

Involved government agencies: The concerned ministry at the federal level (e.g., the PLI scheme for food products is released by the Ministry of Food Processing Industries)

The concerned ministry releases the sector-specific PLI scheme document. The document states the validity period for the scheme and specifies the percentage of turnover offered as incentive. The quantum of incentive is based on the budget allocated. A Project Management Agency (PMA) is appointed for ascertaining the eligibility of applicants and disbursement of incentives to approved units.

Incentives offered by state governments under the respective state policy or scheme

Involved government agencies: State-level Ministry of Industries and Commerce and allied government agencies, such as Department or Directorate of Industries

The state issues the industrial policy through the above agencies, which state the nature and quantum of incentives offered to eligible units. The incentives are offered taking the respective state's budgetary allocation into consideration. The Department or Directorate of Industries also appoints a nodal agency within the state for evaluation of incentives applications made by a unit and disbursement of incentives to the approved units. Sector-specific industrial policies, such as policies for the IT industry or for manufacture of electronic products, may be issued by the concerned department within the state.

7. Administrative requirements

Incentives related to expenditure on scientific research, contributions to R&D and for units set up in the northeastern states of India

No particular forms have been prescribed under the tax laws for claiming a tax incentive. However, the assessee may claim the deduction by filing a tax return within the time prescribed for the financial year in which the expenditure is incurred.

Incentives related to expenditure on scientific research incurred by manufacturing entities

As noted, specific DSIR approval is required to secure the benefit of a weighted deduction of expenditures incurred by manufacturing companies with an in-house R&D facility. The DSIR, in most cases, conducts an inspection of the R&D unit before granting an approval. To secure a deduction for expenditures incurred by in-house R&D units, the following conditions must also be met:

- ▶ The R&D facility must not exist purely to carry out market research, sales promotion, quality control, testing, commercial production, style changes, routine data collection or similar activities.
- ▶ Separate audited accounts (i.e., certified by a chartered accountant) for each R&D center must be maintained for each approved facility.
- ▶ A yearly statement must show the progress of implementation of the approved program to be submitted to the DSIR.
- ▶ The amounts of expenditures as certified by the DSIR and advised to the DGIT(E) are entitled to the weighted deduction. The weighted deduction is available on the net expenditure.
- ▶ Assets acquired with respect to developing scientific R&D facilities shall not be disposed of without the approval of the DSIR.
- ▶ On completion of the R&D activity, a completion certificate must be given to the DSIR with a report of the activities carried out, results obtained and further application for commercial exploitation.

Incentives related to export profits earned by units set up in an SEZ

Units set up in an SEZ are governed by the terms of the letter of permission granted by the Development

Commissioner. Apart from the approval procedure listed earlier, compliances for an SEZ unit include the following:

- ▶ An annual performance report must be filed with the Development Commissioner of the SEZ. The annual performance report includes details of imports, exports, capital goods, external commercial borrowings, etc. The contents of the report have to be certified by a chartered accountant.
- ▶ Based on the annual performance report submitted by the unit, the Approval Committee undertakes an annual review of the unit's performance and compliance with the conditions of approval as provided in the letter of permission.

Patent-related incentive

The patent-based incentive can be claimed by filing a tax return within the time prescribed and in the prescribed manner for the financial year in which the expenditure is incurred.⁴

Incentives and concessions related to customs

Under customs legislation, there is a provision for conducting on-site audits, during which the authorities may check compliance with the conditions stipulated while granting and availing incentives and concessions by the assessee.

Incentives offered at the central level under the concerned PLI scheme

Application for approval under the PLI scheme must be made prior to commencement of commercial activities. The selection process is based on a series of rigidly defined criteria. If the application is approved, the government-approved PMA issues an approval letter to the applicant. Upon receipt of the letter, the applicant may proceed with filing of periodic disbursement claims.

Generally, the application process and formats for required forms are provided within the operational guideline document of the concerned scheme. These documents specify the following (among other things):

- ▶ List of eligible products that are considered under the concerned scheme
- ▶ Validity period of the concerned scheme and likelihood of extension

⁴ Under current tax laws, the due date of filing an income return is 31 October following the end of the relevant financial year when transfer pricing provisions are not applicable. However, the date is further extended to 30 November following the end of the relevant financial year when transfer pricing provisions are applicable.

- ▶ Categorization of businesses according to investment size, global presence and eligible products
- ▶ Eligibility criteria for consideration of the unit under the concerned scheme
- ▶ Information regarding the admissibility of the unit's fixed assets
- ▶ Timelines for undertaking the required investment and commencement of commercial activities
- ▶ Timelines for application for incentives and, upon approval, submission of requisite claim forms
- ▶ Other miscellaneous operational conditions for eligibility under the concerned scheme
- ▶ Format for submission of data required for application and periodic financial reports for claiming the eligible incentives
- ▶ Explanation of the process flow for approval and disbursement of incentives

Incentives offered by state governments under the respective state policy or scheme

An application for approval of incentives must be made prior to commencement of commercial activities. If the application is approved, the concerned state government issues a Certificate of Eligibility to the applicant. Upon receipt of the Certificate of Eligibility, the applicant can proceed with filing the periodic disbursement claims.

Generally, the application process and formats for required forms are provided within the operational guideline document of the concerned state policy or scheme. These documents specify the following (among other things):

- ▶ Eligibility criteria for consideration of the unit under the concerned state policy or scheme
- ▶ Information regarding the admissibility of the unit's fixed assets
- ▶ Timelines for undertaking the required investment and commencement of commercial activities
- ▶ Timelines for application for incentives and, upon approval, submission of requisite claim forms
- ▶ Other miscellaneous operational conditions for eligibility under the state policy or scheme, such as adherence to specified percentage of employees that must have been domiciled within the state
- ▶ Format for submission of periodic financial reports for claiming the eligible incentives
- ▶ Explanation of the process flow for approval and disbursement of incentives

Indonesia

This chapter is based on information as of February 2023.

There is no specific R&D-based tax incentive in Indonesia, although R&D undertaken in Indonesia is a deductible expenditure.

EY contact:

Ben Koesmoeljana
ben.koesmoeljana@id.ey.com

1. Overview

The general rule provided under Indonesian tax law is that only R&D activities that are conducted in Indonesia may be claimed as a tax deduction in calculating taxable income. These costs are limited to the reasonable amount of costs relating to R&D activities performed in Indonesia for the purpose of discovery of a new system or technology for development of the company.

In June 2019, the Indonesian government introduced super deduction tax incentives, including one that is related to R&D activities in Indonesia.

In November 2019, the Indonesian government issued an updated regulation on the tax allowance incentive (which is effective December 2019) to replace the 2015 version. However, the benefits under the updated tax allowance incentive, including the one related to R&D activities, are basically the same as the previous regulation. In this case, businesses conducting R&D on product development or manufacturing efficiency may be entitled to carry forward and claim tax losses for an additional two years under the tax allowance incentive scheme. To qualify for the additional two years (over and above the standard five years) of tax loss carryforward, the proportion of investment made in R&D must be at least 5% of the total investment within five years.

Types of incentives		Types of incentives	
Tax credits	<input type="checkbox"/>	Tax exemptions	<input type="checkbox"/>
Cash grants	<input type="checkbox"/>	Income tax withholding incentives	<input type="checkbox"/>
Loans	<input type="checkbox"/>	Patent-related incentives	<input type="checkbox"/>
Reduced tax rates/preferable tax rates	<input checked="" type="checkbox"/>	Financial support	<input type="checkbox"/>
Reduced social security contributions	<input type="checkbox"/>	Tax holiday	<input type="checkbox"/>
Accelerated depreciation on R&D assets	<input checked="" type="checkbox"/>	Expedited government approval process	<input type="checkbox"/>
Tax allowance	<input checked="" type="checkbox"/>	VAT reimbursement	<input type="checkbox"/>
Infrastructure/land preferential price	<input type="checkbox"/>	Qualifies for Horizon 2020 funding	<input type="checkbox"/>
Tax deduction (including super deduction)	<input checked="" type="checkbox"/>	Other	<input type="checkbox"/>

As under previous regulations, the tax allowance incentives are available for particular business sectors nationwide, while others are available for particular business sectors only in certain geographic regions (typically in less economically developed regions). Under the updated regulation, most business sectors previously eligible only in certain regions are now eligible for incentives in all parts of Indonesia – there are now only 17 business sectors remaining on the list for specific regions. This regulation also introduces the Online Single Submission (OSS) system

as the medium for applications for the tax allowance incentive.

Under the super deduction tax incentive, a domestic corporate taxpayer that carries out certain R&D activities in Indonesia could be eligible for a reduction in gross revenue of a maximum of 300% of the total expenses incurred for certain R&D activities in Indonesia. This is effectively a bonus deduction that is to be spread over a set period.

2. Incentives available

Name of incentive	Tax allowance	Super deduction
Type of incentive	<ul style="list-style-type: none"> ▶ Accelerated depreciation and amortization ▶ Reduced tax rates ▶ Investment allowance 	<ul style="list-style-type: none"> ▶ Reduction in gross revenue of a maximum of 300% of the total expenses incurred for certain R&D activities in Indonesia

Tax allowance

Description of benefits

Businesses conducting R&D on product development or manufacturing efficiency may be entitled to carry forward and claim tax losses for an additional two years (over and above the standard five years). This is available under the tax allowance incentive scheme, which is available for Indonesian companies or cooperatives that are seeking to make investments that are either new investments or for the purpose of expanding the current business in specific industries and/or provinces in Indonesia. The tax allowance incentives include:

- ▶ Accelerated depreciation and amortization

Category of tangible fixed asset	Accelerated useful life	Straight-line depreciation method	Declining balance depreciation method
Non-buildings			
Category 1	2 years	50%	100%
Category 2	4 years	25%	50%
Category 3	8 years	12.5%	25%
Category 4	10 years	10%	20%
Buildings			
Permanent	10 years	10%	
Nonpermanent	5 years	20%	

- ▶ A reduced tax rate of 10% for dividend paid to nonresidents (or the applicable tax treaty rate)
- ▶ An investment allowance in the form of a reduction of net income
- ▶ An extended time period in relation to the carrying forward of tax losses (can be up to five years, in addition to the standard five-year cap, subject to certain conditions that must be satisfied)

Normally, a tax loss may be carried forward for five years. Taxpayers granted with the tax allowance incentive may be entitled to carry forward and claim tax losses for two additional years if they conduct qualifying R&D activities on product development or manufacturing efficiency. In obtaining the tax allowance incentives, a preapproval process is required.

Guidelines around incentive applications

The tax allowance incentive is available for new or future investments, or investments for the purpose of expanding a current business.

Entities eligible for the tax incentives are required to claim them in the annual corporate income tax return, and they should be reflected in the corporate income tax calculation of that respective year. Entities that have obtained the tax allowance incentive approval are required to declare the approval and the incentive granted in a specific attachment with the corporate income tax return (Form 4A – *Daftar Fasilitas Penanaman Modal*, or List of Capital Investment Incentive).

Super deduction

Description of benefits

A domestic corporate taxpayer that carries out certain R&D activities in Indonesia could be eligible for a reduction in gross revenue of a maximum of 300% of the total expenses incurred for certain R&D activities in Indonesia. This is effectively a bonus deduction that is to be spread over a set period.

“Certain R&D activities” are defined as R&D activities conducted in Indonesia to produce invention, innovation, mastery of new technology, and/or transfer of technology for industrial development to increase the competitiveness of national industry.

On 9 October 2020, the Minister of Finance issued the implementing regulation regarding the 300% super tax deduction for R&D activities carried out in Indonesia. Under the implementing regulation, the maximum 300% reduction of gross revenue covers:

1. 100% reduction on the gross revenue for the costs incurred to conduct R&D activities
2. A maximum of 200% additional reductions to gross revenue for the accumulated costs incurred to conduct R&D activities within a certain period. The potential 200% additional reductions require various criteria to be met:
 - a. 50% if the R&D generates intellectual property (IP) rights in the form of patent or plant variety protection rights¹ (PVT rights) that is registered in the local patent or PVT office

¹ Plant variety protection rights (PVT rights) are special rights given by the state to the breeders and/or the holders of the PVT rights to use their own breeding results or provide a consent to other people or company to use the rights for a certain period.

- b. 25% if the R&D generates IP rights in the form of patent or PVT rights that are registered in both local and overseas patent or PVT offices
- c. 100% if the R&D reaches commercialization² stage
- d. 25% if the R&D that generates the IP rights in the form of patent or PVT rights (as defined in (a) and (b)) and/or reaches commercialization stage (as defined in (c)) is carried out by collaborating with a government R&D institution and/or higher education institution in Indonesia

The amount of additional reductions to gross revenue that can be utilized by the taxpayer is the percentage of additional reduction as stated in item (2) above multiplied by the accumulated R&D expenses for five fiscal years prior to the earlier of the time the taxpayer registered the IP rights (in the form of patent or PVT rights) or reaches the commercialization stage. The additional reduction on gross revenue shall be charged starting from when the taxpayer obtains the IP rights and/or reaches the commercialization stage.

² Commercialization is a production activity in Indonesia and the sale of goods and/or services as a result of the R&D.

3. Eligibility requirements

To qualify for the tax allowance incentive, the investment must be a new investment or an investment for the purpose of expanding a current business, with certain exceptions. Taxpayers with the tax allowance incentive conducting R&D activities on product development or manufacturing efficiency may be entitled to the incentive of claiming tax losses for two additional years, if the proportion of investment made in R&D is at least 5% of the total investment within five years. There are 166 business sectors that are eligible for the tax incentives. Additionally, 17 prescribed industries in certain areas and provinces (mostly outside Java) qualify for the tax allowance incentives.

To qualify for the additional super deductions, the R&D activities carried out in Indonesia are the ones that:

1. Are carried out by a taxpayer, other than a taxpayer that conducts its business based on a production sharing contract, contract of work or mining work cooperation agreement for which the taxable income is calculated based on special provisions in the contract that are different from the general provisions in the Income Tax Law
2. Started to be implemented after the time Government Regulation No. 45/2019 was enacted (26 June 2019)
3. Meet the following criteria:
 - a. They are intended to obtain a new invention.
 - b. They are based on a concept or an original hypothesis.
 - c. They have an uncertainty on the final result.
 - d. They are planned and have a specific budget.
 - e. They are intended to create something that can be freely transferred or traded in the market.
4. Are within a priority R&D area, with industrial focus and content in certain industry sectors (e.g., food, pharmaceuticals, cosmetics and medical equipment, military equipment, textile, leather, energy and agroindustry)

4. IP and jurisdictional requirements

There are no specific jurisdictional requirements related to IP.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Indonesia.

6. Role of governmental bodies in administering incentives

- ▶ OSS Institution
 - ▶ Businesses applying for the tax allowance incentive and super deduction on R&D activities are required to submit their application through the OSS system administered by the OSS Institution. The OSS Institution is a non-ministry government body that carries out government matters in the field of capital investment coordination. The OSS Institution issues business licensing for and on behalf of ministers, heads of institutions, governors or mayors to businesses through an integrated electronic system.
- ▶ The Ministry of Finance
 - ▶ The Minister of Finance provides the decision to accept or reject the request for tax allowance incentive after it receives the complete application, which is submitted through the OSS system.
- ▶ The Ministry of Research and Technology
 - ▶ The Ministry of Research and Technology shall evaluate the conformity between the submitted proposal with the proposal criteria and R&D criteria and coordinate with the ministries and/or government institutions, which supervise the relevant R&D field covering the activities in the taxpayer's application.
- ▶ Head of Capital Investment Coordinating Board
 - ▶ Head of Capital Investment Coordinating Board, for and on behalf of the Minister of Finance, issues the decision letter on the approval or the rejection for the request for tax allowance incentive.
- ▶ Directorate General of Taxation
 - ▶ The Directorate General of Taxation, for and on behalf of the Minister of Finance, issues the revocation letter on the tax allowance incentive that has been given to the taxpayer. For the super deduction on R&D activities, the Directorate General of Taxation shall receive a notification on the result of the evaluation from the Ministry of Research and Technology.

7. Administrative requirements

Taxpayers seeking to avail themselves of the tax allowance incentive will require approval from the Minister of Finance.

The general application process for the tax allowance incentive is as follows:

- ▶ The business applying for the tax allowance incentives is required to submit an online application before the starting of commercial production through the OSS system, which should be conducted:
 - a. Along with the registration to obtain Business Identification Number (Nomor Induk Berusaha (NIB)) for a new taxpayer
Or
 - b. Within one year after the issuance of business license by the OSS Institution for capital investment and/or expansion
- ▶ The application to obtain the tax allowance incentive that has been completely received will be forwarded by OSS system to the Minister of Finance as a recommendation to obtain the tax allowance incentive and the OSS system will notify the taxpayer that the application is being processed.
- ▶ The Minister of Finance accepts or rejects the request upon the submission of the complete application through the OSS system. In principle, the approval must be obtained for the relevant incentives to apply.
- ▶ The approval on the application to obtain tax allowance incentive shall be given by the Minister of Finance. The decision on the tax allowance incentive shall be carried out by the Head of the Capital Investment Coordinating Board for and on behalf of the Minister of Finance.
- ▶ If the OSS system is not available, the application can be submitted offline. The detailed procedures to submit an offline application when the OSS system is not available shall be issued by the Capital Investment Coordinating Board.

Taxpayers awarded the tax allowance incentive are required to submit an investment realization and production realization reports to the Directorate General of Taxation on an annual basis.

The tax allowance incentive can be utilized from:

1. The fiscal year when the taxpayer started its commercial production, for the 30% investment allowance

2. The month when the approval letter to obtain tax allowance incentive is issued for:
 - a. Accelerated depreciation on tangible fixed assets and accelerated amortization for non-tangible fixed assets
 - b. A reduced tax rate of 10% for dividend paid to nonresidents (or the applicable tax treaty rate)
 - c. Additional carryforward tax losses

The general application process for the super deduction on R&D activities is as follows:

- ▶ To obtain a maximum of 200% additional reduction on gross revenue, a taxpayer must file an online application via OSS by attaching a proposal for the R&D activities and a fiscal statement letter. If OSS is not available, the application can be submitted offline to the Ministry of Research and Technology by using a prescribed form as attached in the Minister of Finance regulation.
- ▶ The Ministry of Research and Technology shall evaluate the conformity between the submitted proposal with the proposal criteria and R&D criteria. It shall also coordinate with the ministries and/or government institutions that supervise the relevant R&D field covering the activities in the taxpayer's application.
- ▶ The taxpayer will be notified of the result through OSS (for an online application) or a notification letter (for an offline application). The notification on the evaluation result shall be copied to the Directorate General of Taxation as well as the ministries and/or government institutions that supervise the relevant R&D field.

A taxpayer that has received a notification that it has obtained a maximum of 200% additional reduction on gross revenue must submit an annual R&D expenses report via OSS to the Directorate General of Taxation and the Ministry of Research and Technology. A taxpayer that can utilize the additional reduction on gross revenue must submit an annual report via OSS for the calculation on the utilization of additional reduction on gross revenue to the Directorate General of Taxation. Both reports must be submitted by using prescribed formats as attached in the Minister of Finance regulation at the latest along with the submission of the taxpayer's annual corporate income tax returns for the relevant fiscal year.

8. Statutory reference

Article 6, Point 1.f of the Income Tax Law states that only costs relating to R&D activities performed in Indonesia can be claimed as a tax deduction in calculating the taxable income of an entity.

Ireland

This chapter is based on information as of March 2023.

The Irish government remains committed to attracting foreign direct investment into Ireland and enabling Ireland to compete with other jurisdictions. In this regard, the government has introduced a number of key changes to the Irish incentives landscape in recent years, including the Knowledge Development Box regime, for accounting periods commencing on or after 1 January 2016, and a 32% refundable corporation tax credit for the digital gaming sector, introduced in October 2021. In addition, the R&D 25% tax credit regime moved to a full volume basis from 1 January 2015.

EY contact:

Ian Collins
ian.collins@ie.ey.com
+353 1 221 2638

1. Overview

The Irish government has demonstrated support of the R&D tax credit regime and historically recognized its importance as part of the overall package to attract foreign direct investment into Ireland and enable Ireland to compete with other jurisdictions with similar incentives. To further reward and encourage innovation activities in Ireland, the Irish government introduced the Knowledge Development Box (KDB) in late 2015. It is the first patent box regime in the world to be compliant with the Organisation for Economic Co-operation and Development (OECD), having been designed to comply with the new international guidelines set out in the Action 5 report of the OECD's Base Erosion and Profit Shifting Action Plan.

The R&D tax credit regime provides for a 25% tax credit for expenditures on qualifying R&D activities. For accounting periods commencing on or after 1 January 2023, R&D tax credits can either be offset against any tax liability or refunded in cash. The 25% tax credit is in addition to the 12.5% corporate tax deduction for these expenses; therefore, the effective tax relief on such expenditures is 37.5%.

The KDB regime offers a 10% effective tax rate (subject to commencement order – current effective tax rate is 6.25%) for profits arising from patents and copyrighted software. It follows the modified nexus approach, thereby aligning the benefits available to where the substantial activity is undertaken by the taxpayer. The KDB regime is in addition to the R&D tax credit regime.

The digital gaming tax credit offers a 32% refundable corporation tax credit. The relief is available on minimum

eligible expenditures greater than EUR100,000 and up to EUR25 million per project on the design, production and testing of a digital game that has been issued with a cultural certificate from the Minister for Tourism, Culture, Arts, Gaeltacht, Sport and Media.

A range of other cash grants/financial supports is also available from Irish governmental agencies in the form of employment grants, capital grants, training grants and R&D grants.

* Although not based upon scientific analysis, EY clients report that this incentive delivers the most beneficial results to investors.

R&D tax credits incentive

Description of benefits

A tax deduction for R&D expenditures incurred and an additional R&D tax credit of 25% of qualifying spending can be relieved against any tax liability for the period or refunded in cash. Therefore, tax relief of up to 37.5% is available (i.e., a 12.5% trading deduction and 25% tax credit/cash refund), equating to EUR37.50 for every EUR100 spent on R&D.

The R&D tax credit is claimed in three instalments: 50% of the credit in Year 1, a further 30% in Year 2 and the remaining 20% in Year 3, regardless of whether the company is profitable or loss-making. Each year, the claiming company decides how to utilize the credit available in the period (i.e., whether to treat it as tax overpaid and allocate it against any tax liability or refund the amount in cash). The election applies to each installment separately, also when claiming installments from prior periods. Furthermore, there are no longer any caps applied on the cash refund elements of the claim. The company must make a claim for repayment to the Revenue Commissioners within 12 months of the accounting year-end in which the expenditure was incurred. The R&D tax credit regime is a self-assessment regime, and there is no requirement to obtain preapproval from the Revenue Commissioners.

Guidelines around incentive applications

R&D tax credits are applicable for current investments, and the claim should be made on the company's corporation tax return (Form CT1). The claim must be made within 12 months of the accounting year-end in which the expenditure was incurred.

RDI cash grants/financial support incentives

Description of benefits

Enterprise Ireland (EI) offers grants for R&D expenditures incurred by Irish-based manufacturing or internationally traded services companies. Grants for expenditures incurred on research, development and innovation (RDI) are also available from the Irish Industrial Development Authority (IDA) and are offered for both first-time foreign direct investment and companies currently located in Ireland. The level of grant assistance available from both

the IDA and EI can vary, depending on numerous factors, including the type of research activity. These grants are typically negotiated on a case-by-case basis, with a primary focus of job creation.

The grant funding is generally paid over the life of the project. The IDA or EI (or a sister company) will approve the grant funding before the company receives any cash payments.

Guidelines around incentive applications

The cash grants are applicable for current and future investments. These are claimed directly with the respective government bodies by completing the required documentation and providing the relevant information to the government body. The project for which funding is sought must meet the conditions of eligibility of the Industrial Development Acts and must also comply with EU State aid regulations. The IDA and EI will set out key milestones that will need to be achieved for the company to receive the funding for each of the agreed years. These milestones are usually agreed on a case-by-case basis with the agency in question.

Key employee tax credit incentive

Description of benefits

The R&D tax credit regime allows a company to reward its key R&D employees who perform at least 50% of their duties in the "conception or creation of new knowledge, products, methods and systems" in the relevant accounting period. Part of the R&D tax credit that the company could have used to reduce the company's corporation tax liability can be allocated to a key R&D employee. Subject to certain conditions, the key R&D employee incentive will effectively allow employees engaged in R&D to claim a credit equal to the amount surrendered by the employer against their income tax. If an employee cannot use the credit in full, it may be carried forward indefinitely until it is used or the employee leaves the company.

The key employee claiming the incentive must not be a director or an individual who holds a 5% or more interest in the company or associated company. The employee must make a claim with the Irish Revenue Commissioners for a refund of income tax paid. The effective tax rate of the employee cannot be reduced below 23%.

Guidelines around incentive applications

The key employee tax credit incentive is applicable for current investments. An individual making a claim under this section is required to file an income tax return (Form 11, Pay and File Income Tax Return) for the year of assessment to which the claim relates.

R&D tax credit on R&D buildings

Description of benefits

A tax credit is available for expenditures on the construction or refurbishment of a building or structure used for R&D activities. A 25% tax credit is available on the expenditure. The credit is in addition to any industrial buildings allowances that may be available. The credit operates similarly to the R&D tax credit available on other expenditures; i.e., the credit is claimed in three instalments: 50% of the credit in Year 1, a further 30% in Year 2 and the remaining 20% in Year 3. Each year, the claiming company decides how to utilize the credit available in the period (i.e., whether to treat it as tax overpaid and allocate it against any tax liability or refund the amount in cash). A claim for the repayment must be made by the company to the Revenue Commissioners within 12 months of the accounting year-end in which the expenditure was incurred.

To be eligible to claim the R&D tax credit on R&D buildings, at least 35% of the building must be used for R&D purposes over a four-year period. The credit is calculated by reference to the percentage of the building or structure used for qualifying R&D activities. The construction or refurbishment of the R&D building must qualify for industrial buildings allowances from a corporation tax perspective. There are no longer any caps applied on the cash refund elements of the claim.

Guidelines around incentive applications

The R&D tax credit on R&D buildings is applicable to current investments. The claim should be made on the company's corporation tax return (Form CT1). A claim must be made within 12 months of the accounting year-end in which the expenditure was incurred.

Allowances for capital expenditure on scientific research

Description of benefits

Tax depreciation allowances are available with respect to capital expenditure incurred during the course of scientific research. The allowance is equal to the amount of the capital expenditure incurred (i.e., 100%) and is granted in computing the profits of the trade. Unused allowances may be carried forward indefinitely. There is a clawback of the allowances when the assets cease to be used for scientific research. A claim for the tax depreciation allowances is made under the self-assessment regime.

Guidelines around incentive applications

The accelerated depreciation applies to current investments. The claim should be made on the company's corporation tax return (Form CT1). A claim must be made within two years of the end of the chargeable period in which the expenditure was incurred.

Knowledge Development Box (KDB)

Description of benefits

The KDB regime offers a 10% effective tax rate (subject to commencement order – current effective tax rate is 6.25%) for profits arising from qualifying assets. The main categories of qualifying assets are patents (including patents pending) and copyrighted software. The relief operates by providing a 50% deduction from qualifying profits resulting in the effective 10% tax rate.

Small and medium enterprises (SMEs) can access the KDB in respect of certain intellectual property (IP) without the need for the IP to be patented, subject to meeting the relevant qualifying criteria and obtaining the appropriate certification.

Guidelines around incentive applications

KDB benefits are available to companies for accounting periods commencing on or after 1 January 2016 and before 1 January 2027. A claim must be made in a company's corporate tax return within 24 months of the end of the relevant accounting period.

Digital Gaming Tax Credit (DGTC)

Description of benefits

The government introduced a 32% refundable digital gaming tax credit on eligible expenditures (net of grant assistance) between EUR100,000 and EUR25 million per project on the design, production and testing of a digital game. This new relief offers synergies with Ireland's established film and animation sectors. The DGTC must first be offset against the company's corporation tax liability with any excess credit remaining being cash refundable.

To qualify for the incentive, the game must be developed and completed in Ireland. The relief can be claimed annually throughout the development cycle of the game after obtaining an interim cultural certificate or at the end of the project, once a final cultural certification has been obtained.

Guidelines around incentive applications

DGTCs are available to companies that are tax compliant and maintain supporting documentation to substantiate the claim. The regime applies to qualifying expenditure incurred from 22 November 2022. The regime is due to run until 31 December 2025.

3. Eligibility requirements

The R&D activities being carried out must fall within one of the following categories:

- ▶ Basic research
- ▶ Applied research
- ▶ Experimental development

If a company subcontracts its R&D expenditures to a third party or university (or similar institution) to carry on qualifying R&D activities on behalf of the company, the costs that may qualify are restricted. In these situations,

the costs are restricted to the greater of EUR100,000 or 15% of the qualifying in-house expenditures. If a company subcontracts all its R&D activities to third parties, to the extent that its only function is managing and controlling the R&D activities, these activities are non-qualifying.

If a company subcontracts to a third party, it must notify the third party no later than the date of payment if that company intends to claim the R&D tax credit. In this regard, businesses may need to amend their general contractual terms and conditions to ensure compliance in this area.

Certain activities are specifically non-qualifying and include:

- ▶ Market research, market testing, market development, sales promotions or consumer surveys
- ▶ Routine testing and analysis for purposes of quality or quantity control
- ▶ Alterations of a cosmetic or stylistic nature to existing products, services or processes, regardless of whether these alterations represent some improvement

No industry sectors are specifically excluded. Once a company within the charge to Irish tax is carrying on qualifying R&D activities, it should be eligible to make a claim, provided the necessary conditions are met and the documentation to support the claim is available.

Eligibility requirements for the specific incentive types

R&D tax credits incentive

The R&D tax credit will be available with respect to expenditures incurred by the company while carrying on its qualifying R&D activities. The type of costs that may qualify include salary costs, expenditures incurred directly on R&D materials, subcontracted expenditures (subject to the restrictions set out above) and general overhead expenditures to the extent that it can be demonstrated that they directly support the company's R&D activities. In addition, plant and equipment used in the R&D activities may also be included in the claim.

Certain costs are specifically disallowable and include interest, depreciation, bank charges and marketing-type costs. To receive the R&D tax credit, the following conditions must be met:

- ▶ The company must be within the charge to Irish tax.
- ▶ The company must undertake qualifying R&D activities within the European Economic Area.

- ▶ The expenditure must be incurred by the Irish company and must not qualify for a tax deduction under the law of another territory.
- ▶ The Irish company is not required to own the IP to qualify for the R&D tax credit incentive.
- ▶ Any expenditure met directly or indirectly by the EU or State aid will not be treated as a qualifying expenditure.

RDI cash grants/financial support incentives

The main conditions of this incentive are as follows:

- ▶ The availability of grant aid/financial supports will generally depend on the location, quality and level of investment by the company into Ireland. For aid being sought by a company in relation to research, development and innovation projects in Ireland, the level of the grant depends on the size of the investment, the nature of the research and the level of innovation and risk associated with the research being undertaken.
- ▶ The level of grant aid would be negotiated on a case-by-case basis.

Key employee tax credit incentive

The main conditions of this incentive are as follows:

- ▶ The employee must be a “key employee,” which is defined as an employee who performs 50% of his or her duties in the “conception or creation of new knowledge, products, methods and systems” in the relevant accounting period.
- ▶ The employee must not be a director or an individual holding more than 5% of the ordinary share capital of the company.
- ▶ The effective tax rate of the employee cannot be reduced to below 23% as a result of the surrender of the credit to the employee.
- ▶ The employee must make a claim to the Revenue Commissioners for a refund of any tax paid.
- ▶ The employee may carry forward any unused credits indefinitely. The employee loses the unused credits upon leaving the company.
- ▶ The company may decide which key employees to reward.
- ▶ The company must have a corporate tax liability.
- ▶ If the company has outstanding tax liabilities in the accounting period in respect of which the credit arises, the company is not entitled to surrender any amount to the key employee.

R&D tax credit on R&D buildings

The main conditions of this incentive are as follows:

- ▶ The building must qualify for industrial buildings allowances.
- ▶ At least 35% of the building or structure must be used for R&D purposes over a four-year period. The credit is calculated by reference only to the portion of the building or structure used for R&D activities.
- ▶ The tax credit is clawed back if, within 10 years of the accounting period for which a credit is claimed, the building or structure is sold or ceases to be used for purposes of carrying on R&D activities.
- ▶ Any expenditure met directly or indirectly by EU or State aid will not be a qualifying expenditure.

Allowances for capital expenditure on scientific research

The main conditions of this incentive are as follows:

- ▶ Scientific research is defined as any activities in the fields of natural or applied science for the extension of knowledge. It does not apply to expenditures incurred on exploring for specified minerals, petroleum exploration activities or petroleum extraction activities.
- ▶ If an allowance is granted, no wear-and-tear allowances are available with respect to the plant or machinery.
- ▶ There is a clawback of the tax depreciation allowances if the assets representing capital expenditure on scientific research cease to be used for research purposes. The amount of the clawback is the lesser of the allowance granted or the value of the asset at the time of cessation.
- ▶ Capital expenditures on scientific research that are met directly or indirectly from money provided by the State or anyone other than the person claiming the allowance must be excluded.
- ▶ Where a company may qualify for a scientific capital allowance and the R&D tax credit, then both reliefs cannot be claimed in respect of the same expenditure.

Knowledge Development Box

KDB benefits are available in respect of profits arising from qualifying assets. Companies can obtain benefits if:

- ▶ The company carries on qualifying R&D activities in Ireland or outsources R&D to an unrelated third party anywhere in the world.
- ▶ The activities give rise to a qualifying asset (main categories being patents or copyrighted software).

- ▶ The income attributable to the qualifying asset is earned as part of an Irish trade.
- ▶ Qualifying profits are then effectively taxed at 10% (subject to commencement order – current effective tax rate is 6.25%).

Qualifying income and expenditure

Qualifying income arising from a qualifying asset includes any royalty or other sum received in respect of the use of that asset. In addition, if the sales price of a product or service includes an amount attributable to the asset, the portion of the income from those sales attributable to the value of the asset on a just and reasonable basis can also be included as income from the asset.

Qualifying expenditure (QE) means expenditure incurred by a company wholly and exclusively in the carrying on of R&D activities, where such activities lead to the development, improvement or creation of the qualifying asset. The definition is identical to the definition of “research and development activities” for the purposes of the R&D tax credit. Excluded from QE are outsourced costs to related parties and amounts paid for the acquisition of IP that are reflected in the value of the qualifying asset.

Robust supporting documentation is required to make a KDB claim, including tracking and tracing the appropriate income and expenditure items to the appropriate qualifying asset.

Digital Gaming Tax Credit

Key points to note about the DGTC regime:

- ▶ The rate of 32% is on eligible expenditures on the design, production and testing of a digital game.
- ▶ The relief is available on a minimum spend of EUR100,000 up to a maximum of EUR25 million per project or 80% of the total qualifying expenditure, whichever is lower.
- ▶ Digital games produced for advertising or gambling will not be eligible for the DGTC.
- ▶ DGTC is not available on expenditures for which the film credit, KDB or R&D tax credit was claimed.
- ▶ The claimant company must be a compliant taxpayer resident in the State.

- ▶ The claimant company must obtain a cultural certificate that proves that the project promotes Irish and/or European culture.
- ▶ The qualifying company must be incorporated and resident in the State or carrying on a trade in the State through a branch or agency.

4. IP and jurisdictional requirements

Effective date

The requirements apply to capital expenditures incurred on qualifying IP (e.g., on internally generated IP, IP acquired from a related party and/or IP acquired from a third party) after 7 May 2009.

Qualifying IP

The definition of qualifying IP is very broad and includes:

- ▶ Brands
- ▶ Brand names
- ▶ Domain names
- ▶ Service marks
- ▶ Publishing titles
- ▶ Secret processes or formulas
- ▶ Trademarks
- ▶ Trade names
- ▶ Trade dress
- ▶ Patents
- ▶ Copyrights
- ▶ Registered designs
- ▶ Design rights
- ▶ Inventions
- ▶ Know-how
- ▶ Some computer software
- ▶ Customer lists
- ▶ Goodwill directly attributable to the above

Types of income

Applicable income is income derived from the IP in the course of an Irish trade (e.g., through the sale of goods/ services and management, exploitation, licensing or development of the IP).

Calculation of income

Capital expenditures incurred on qualifying IP can be fully amortized (in line with the accounting treatment or, upon election, over 15 years). Companies may also opt for a fixed write-down period of 15 years at an annual rate of 7% of qualifying expenditures and 2% in the final year.

Determination of embedded IP income

The relief may be used to offset income of the trade of exploiting the intangible assets, and this “trade” is ring-fenced for the purposes of this relief. Therefore, excess allowances may be carried forward indefinitely, but may only be offset against future trading income of the same trade that is derived from the use of the specified intangible assets.

IP regime rate

For expenditures incurred prior to 11 October 2017, the tax amortization and any associated interest relief may not exceed what would be the amount of trading income from that trade excluding such allowances and/or interest. This effectively means that 100% of taxable profits of that trade can be relieved. For expenditures incurred on or after 11 October 2017, the tax amortization and any associated interest relief are capped at 80% of taxable profits (calculated before tax amortization and interest) for the exploitation of the intangible assets, thus resulting in a minimum net effective cash tax rate of 2.5% (i.e., 20% x 12.5%), in respect of expenditures incurred on or after that date. Any excess allowances and/or interest can be carried forward against future taxable profits of the same trade. From a consolidated group perspective, a book benefit may actually arise following the onshoring of IP previously held offshore in a zero-tax-rate jurisdiction.

Must the IP be registered/owned locally?

Legal ownership is not required, but it must be beneficially owned.

To the extent that expenditures on the development of an intangible asset within a company are regarded as capital expenditures for the purposes of the company’s trade, such expenditure will qualify for allowances under the scheme,

provided that the asset is recognized as an intangible asset under generally accepted accounting practices and is included on the list of specified intangible assets. Companies claiming relief on the assets under the IP regime may also claim KDB benefits; however, they cannot also claim the R&D tax credit on the same expenditure.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Ireland.

6. Role of governmental bodies in administering incentives

The R&D tax credit regime operates on a self-assessment basis and is administered by the Irish Revenue Commissioners. The Revenue Commissioners may seek the opinion of an external expert to assist them in determining whether the company’s activities are qualifying R&D activities. The Revenue Commissioners may also carry out an audit of the R&D tax credit claim, which includes a review of the technical information, supporting documentation and the claim’s financial aspect.

Digital Gaming Tax Credit

The claimant company must obtain a cultural certificate (either interim or final) from the Minister for Tourism, Culture, Arts, Gaeltacht, Sport and Media.

Grant funding

The IDA and EI are the two main government bodies that administer the grant-funding schemes. Depending on the grant funding being sought, there will be various types of documentation that must be provided to the granting body before a company is rewarded with the funding.

7. Administrative requirements

The R&D tax credit is a self-assessment regime. The claim is made on a company's corporation tax return. Companies have 12 months from the end of the accounting period in which the expenditure was incurred to file a claim with the Irish Revenue Commissioners. Companies must maintain contemporaneous records to substantiate their R&D tax credit claim. A company's records must be sufficient to show that the claimed activities took place and that they meet all aspects of the definition of R&D activities. The records maintained by companies are not required to be submitted to the Irish Revenue Commissioners unless formally requested.

Knowledge Development Box (KDB)

The KDB regime is a self-assessment regime. The must be made in a company's corporate tax return within 24 months of the end of the relevant accounting period.

Digital Gaming Tax Credit

Claims for the DGTC should be made on an annual basis. A company wishing to claim the incentive must obtain a cultural certificate before applying for the relief.

8. Statutory reference

- ▶ Statutory reference: Section 765, Section 766, Section 766A, Section 766B, Section 766C, Section 766D, Sections 769G-769R, Section 291A and Section 841A of the Taxes Consolidated Acts 1997
- ▶ Year of statutory regime for R&D tax credit: 1 January 2004
- ▶ Year of statutory regime for IP regime: 7 May 2009
- ▶ Year of statutory regime for DGTC: 22 November 2022

Italy

This chapter is based on information as of February 2023.

The 2023 Budget Law has not made any substantial changes to the benefit linked to the R&D tax credit compared to what has already been established for FY2022.

1. Overview

The Italian government has acknowledged in the last few years the opportunity to provide adequate stimulus to R&D activities and investments. As such, Italian tax law currently sets forth several kinds of R&D tax incentives and operational rules, some of which have been recently introduced or amended to make them more appealing. The process has also been largely inspired by similar provisions adopted in other countries, as well as by the work of the Organisation for Economic Co-operation and Development (OECD) in the field of R&D tax benefits (e.g., Base Erosion and Profit Shifting Action 5).

The Italian tax law currently provides for the following incentives:

- ▶ Tax credits for eligible R&D, innovation and design expenses. These incentives are temporary (available until 2022) although it is expected they will be extended. In fact, the current Budget Law for 2022 provides for the extension of the incentive through 2031, although with different requirements, percentages and maximum amount limits.
- ▶ Tax deductions related to the income derived from direct and indirect use of qualifying intellectual property (IP) (patent box regime). Currently, this incentive has no time limit on its application.

All the incentives described above can be combined with other tax and financial incentives.

Expenses for employees hired and involved in R&D activities may be eligible for tax deductions from the Italian Regional Tax (IRAP) taxable basis. Such benefits, however, are generally less significant in value.

Beyond the new tax framework for R&D and innovation incentives and the amendment of the procedure for benefiting from the patent box regime described in this Guide, the 2020 Budget Law and the 2021 Budget Law have also introduced or modified other tax incentives that are based on the same strategy for business support by Italian authorities.

In particular, for FY2020, the following tax credits are also available:

- a. Tax credit for investments in new ordinary tangible assets: the incentive is equal to 6% of the purchase cost, with a maximum eligible annual investment amount of EUR2 million.
- b. Tax credit for investments in new tangible technology assets related to the Industry 4.0 Plan: the incentive is equal to (i) 40% of the purchase cost for the portion of investments up to EUR2.5 million and (ii) 20% of the purchase cost for the portion of investments from EUR2.5 million to EUR10 million. No additional tax credit is provided for the portion of investments over EUR10 million.
- c. Tax credit for new software-related investments (i.e., software, information technology systems and platforms) related to the Industry 4.0 Plan: the incentive is equal to 15% of the purchase cost, with a maximum eligible annual investment amount of EUR700,000.

For the tax credits described in (b) and (c) above, a third-party appraisal is required. The assets must be purchased in the period from 1 January 2020 to 31 December 2020, with an extension to 30 June 2021, provided that purchase orders are accepted by the seller by 31 December 2020 and at least 20% of their price is paid within the same date. The tax credit applies in five equal annual installments (three equal installments for software-related investments), as of the year following the one in which the assets (i) come into operation and (ii) meet the requirements provided by the Industry 4.0 Plan.

For FY2021 onward, the tax credits at stake have been extended with some modifications and additions. In particular, for investments made from 16 November 2020 until 31 December 2022 (or 30 June 2023, if specific conditions are met), the following rules apply:

- a. For the tax credit for new ordinary tangible assets, for 2021 the incentive is equal to 10% of the purchase costs (15% for the investments related to the so-called "*lavoro agile*" or "smart working" methods). The maximum eligible annual investment amount is EUR2 million. For 2022, the percentage is 6%, with a maximum investment of EUR1 million.
- b. For the tax credit for new tangible technology assets, the 2021 incentive is equal to 50% for the portion of investments up to EUR2.5 million, 30% for the portion of investments between EUR2.5 million and EUR10 million, and 10% for the portion of investments between EUR10 million and EUR20 million. For 2022 investments, the incentive will be 40% for the portion of investments up to EUR2.5 million, 20% for the portion of investments between EUR2.5 million and EUR10 million, and 10% for the portion of investments between EUR10 million and EUR20 million.
- c. For the tax credit for new software-related investments, the 2021 incentive is 20% of the purchase cost, with a maximum eligible annual investment amount of EUR1 million.

For tax credits mentioned in (b) and (c) above, a third-party appraisal is required. The tax credits can be used to offset taxes and social security contributions and shall be used in three equal annual installments (i.e., there is a cap equal to one-third of the total amount). The entities with a global turnover of less than EUR5 million can use the tax credit in one shot.

Companies can still benefit from the old tax mechanism supporting the innovative tangible asset's investments (so-called "hyper-depreciation") in relation to the investments carried out in the 2017-19 period.

All of the abovementioned tax incentives are applicable to Italian companies as well as Italian Permanent Establishments (PEs) of foreign entities.

2. Incentives available

Name of incentive	R&D tax credit*	Patent box*	Regional tax (IRAP) deduction for R&D employees
Type of incentive	► Tax credit	► Tax deduction related to the use of qualifying IP/ execution of qualifying R&D expenses	► IRAP deduction for costs related to personnel employed in R&D activities

* Although not based upon scientific analysis, some EY clients report that these incentives deliver more beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances. The patent box regime is an important incentive for companies with significant qualifying IPs. The R&D tax credit is the most appreciated incentive by Italian taxpayers.

R&D, Innovation and Design tax credits

Description of benefits

Starting from the tax period following the one ongoing on 31 December 2019, three different tax credits are available:

1. Tax credit for R&D activities (R&D tax credit)
2. Tax credit for technological and digital innovation and ecological transition (Innovation tax credit)
3. Tax credit for design and aesthetic ideation activities (Design tax credit)

The above incentives are available to all enterprises resident in Italy (and also to Italian PEs of foreign companies) that invest in eligible activities, regardless of the legal form, the economic sector in which they operate (with some limitations for the Design tax credit), the size and the regime applied for income determination.

The incentives have been modified. In particular, while the rules in force until 2019 for the “old R&D tax credit” were based on the incremental approach (i.e., the benefit was calculated on the surplus of the annual R&D expenses with respect to the average R&D expenses for the years 2012-14), the rules for the “new” tax credits are based on the volume-based approach: the incentive is calculated by applying some incentive percentages (different for the three tax credits) on the total annual amount of the eligible costs (calculation basis).

Considering only the activities and expenses incurred in the financial year makes the new approach less complex, as companies do not have to track and reconcile the activities and expenses incurred in previous years (i.e., expenses in the three-year period 2012-14).

Starting from 2020, tax credits are not allowed for expenses related to R&D activities outsourced by foreign entities (including group entities) to Italian companies (and therefore re-charged by Italian companies to such foreign entities).

With reference to the calculation basis, this differs among the three tax credits. Indeed, there are several differences regarding some details of types of expenses and/or the eligible amounts. However, the main categories of relevant expenditures can be summarized as follows:

- ▶ Personnel costs related to researchers and technicians employed with subordinate or self-employment relationship or other relationship different from the employment contract, directly employed in R&D activities carried out within the enterprise
- ▶ Depreciation charges, costs of the financial or operating lease and other expenses related to movable tangible assets and software used in R&D projects
- ▶ Expenses for external research contracts concerning the direct execution of eligible R&D activities by the provider
- ▶ Depreciation charges related to the acquisition from third parties, also under license of use, of industrial property rights of an industrial or biotechnological invention, a topography of semiconductor products or a new plant variety, that are used directly and exclusively for carrying out the activities related to the R&D eligible projects (only for R&D tax credit)

- ▶ Expenses for consultancy services and equivalent services related to R&D eligible activities
- ▶ Expenses for materials, supplies and other similar products used in the R&D projects carried out internally by the enterprise, and also for the construction of prototypes or pilot plants

The tax benefit is equal to a percentage of the calculation basis. For FY2021:

- ▶ R&D tax credit: the percentage is 20% to apply to the relative calculation basis, net of the other incentives or contributions. The benefit cannot exceed EUR4 million (for FY2020, the benefit was 12% with a maximum of EUR3 million).
- ▶ Innovation tax credit: the percentage is 10% to apply to the relative calculation basis, net of the other incentives or contributions. The percentage is 15% for technological innovation aimed at reaching an ecological transition goal or a digital innovation “4.0”; the benefit cannot exceed EUR2 million (for FY2020, the benefits were 6% and 10%, respectively, with a maximum of EUR1.5 million).
- ▶ Design tax credit: the percentage is 10% to apply to the relative calculation basis, net of the other incentives or contributions. The benefit cannot exceed EUR2 million (for FY2020, the benefit was 6%, with a maximum of EUR1.5 million).

Starting from FY2021, a third-party appraisal is required.

The old R&D tax credit (based on the incremental approach) is still available with respect to activities and expenses incurred in FY16, 17, 18 and 19, although with slightly different rules in each FY.

To obtain the benefit with respect to the past years, provided that all the other requirements are met, an amended tax return must be filed with the IRA.

Guidelines around incentive applications

The three tax credits mentioned above are automatic and may be enjoyed by the taxpayer without approval in advance from the competent authorities.

A formal communication is sent to the Ministry of Industry, but this is not a required condition to obtain the benefit.

The tax position resulting from the tax return is irrelevant and does not have any impact on the benefit for the year (i.e., loss-making companies are not prevented from benefiting from the incentives).

The tax credits must be indicated in the tax return (i.e., the income tax return for FY21 “Redditi 2022” should show the tax credit obtained in FY21) and can be used to offset other tax liabilities (such as corporate income tax, social contributions and value-added tax) through the F24 form, in three equal installments during the FYs, starting from the tax year following that in which the tax credit was incurred, and after meeting the documentation requirements listed above.

The tax credits may not be claimed for refund.

The three tax credits can be cumulated and, unless otherwise stated, they can be combined with the other tax incentives set forth by law (including the patent box regime).

Tax amnesty for R&D credit

Law Decree No. 146/2021 (art. 5, paragraph 7 et seq.) provided for the possibility for companies to amend any irregularities incurred in relation to the R&D credit, pursuant to art. 3 of Law Decree No. 145/2013.

The mentioned Law Decree provides for the possibility to repay (in installments) the amount of the unduly used R&D credit, without application of penalties and interest, in the presence of certain conditions.

The amnesty applies to companies that, on the date of enactment of the Decree, 22 October 2021, have unduly used in compensation the tax credit arising from investments in R&D activities accrued from FY2015 to FY2019.

The amnesty procedure is reserved for companies that:

- ▶ In fiscal years from 2015 to 2019, have actually carried out, by bearing the relevant expenses, activities that are wholly or partly not qualifying as R&D activities for the purposes of the tax benefit
- ▶ In relation to FY2017, have benefited from the possibility of assigning the tax credit also to the resident commissioner, who carries out R&D activities on behalf of a nonresident entity, in a way that is not compliant with the authentic interpretation contained in the Budget Law 2019¹
- ▶ Have incurred errors in the quantification or identification of eligible expenses, in violation of the principles of pertinency and congruity, as well as in the determination of the historical average of reference

¹ Art. 1, paragraph 72, L. n. 145/2018 specified that “for the purposes of calculating the attributable tax credit, only eligible expenses relating to research and development activities carried out directly and in laboratories or facilities located in the territory of the Italian State take on relevance.”

Access to the amnesty is, on the other hand, excluded if the tax credit used for compensation:

- ▶ Is the result of fraudulent conduct, objectively or subjectively simulated circumstances, or false representation based on the use of false documents or invoices that document nonexistent transactions
- ▶ Is not supported by “suitable documentation” aimed at demonstrating the actual sustainment of expenses

The procedure also does not apply if there is a tax recovery or a tax assessment act that became final as of 22 October 2021.

Moreover, in the event that, following the activation of the amnesty procedure, the IRA assesses the presence of fraudulent conducts, the assessed party loses the benefit of spontaneous repayment without sanctions and interest. In such case, the amounts already paid are considered to be acquired as an on-payment on the amounts due.

The amnesty procedure is only completed following full payment of the amounts due. Correct completion of the amnesty procedure results in non-punishability for the crime of undue compensation (pursuant to art. 10-quater of Legislative Decree No. 74/2000).

Patent box

Description of benefits

On 21 October 2021, the Italian government fully repealed and replaced the former patent box regime through the publication of Law Decree No. 146/2021 on “urgent economic and tax measures” in the Italian Official Gazette. The decree is effective from the day following its publication (i.e., 22 October), and it has been converted into Law 17 December 2021, n. 215.

Subsequently, the Budget Law 2022 amended once again the patent box regime.

Based on the new provisions, the old patent box regime has been substituted by a new regime shifting the incentive from profit-based incentive (50% exemption of the income attributable to the IPs included in the perimeter of the regime) to a cost-based incentive by introducing a super deduction for R&D expenses (210% deduction of qualifying expenditures) connected to the qualified IPs.

The patent box changes should be effective for FY 2021. The Law Decree as amended by the Budget Law 2022 provides transition rules regulating cases where taxpayers are still under the old regime according to which taxpayers with a valid patent box option (exercised up to the FY 2020) based on the old provisions may still continue to apply such regime until the end of the old option.

Guidelines around incentive applications

Old patent box regime

The patent box regime introduced in 2014 was an elective tax regime granting a 50% exemption from corporate income tax and regional tax (IRES and IRAP) on income generated from the licensing or the direct exploitation of qualifying IP. The regime was eligible for taxpayers who perform R&D activities and is characterized by a five-year lock-in period. The election was renewable.

The regime had been broadly modified by Law Decree No. 50/2017, which also amended the implementing instructions. The following provisions had been introduced:

- ▶ Removal of trademarks from the list of qualifying IP
- ▶ Introduction of specific coordination measures (the so-called "grandfathering")
- ▶ Introduction of exchange of information rules related to the options that include the trademarks

The patent box benefit is intended for all persons earning business income (e.g., resident companies, Italian commercial partnerships and resident sole proprietors) in cases of direct use or exploitation of qualifying IPs, as well as in cases of indirect (licensing) use of the same intangibles. It was also intended for a nonresident entity that has a permanent establishment in Italy to which the qualifying IP can be attributed, provided the entity is resident in a country that has concluded a tax treaty with Italy that provides for the effective exchange of information.

The part of income that qualifies for the exemption is determined by multiplying the income deriving from the use (either direct or indirect) of qualifying IPs by a nexus ratio (determined on the basis of the R&D costs). The determination of the income differs in case of direct use rather than indirect use of the qualifying IPs. As for the direct use of the qualifying IPs, the related income is determined on the basis of the accounting data booked in the profit and loss statement, as adjusted for corporate income tax purposes. In case of indirect use of the IPs,

the income is determined as consideration received for the license to use the qualifying IPs (e.g., a royalty) net of related direct and indirect costs.

To determine the relevant income, the OECD recommends using the comparable uncontrolled price (CUP) and the profit split (PSM) methods (with specific reference to the residual PSM approach), which are considered to be the most reliable methods when computing the IP-related return qualifying for the patent box benefit.

Any relevant transfer pricing considerations supporting the computation of the IP income should be duly supported by an adequate analysis describing the functions, risks and assets involved in the exploitation of each IP.

Taxpayers may also refer to valuation techniques based on the financial practice. However, in such a case, the taxpayer should provide an adequate justification proving the unreliability of using the abovementioned preferred criteria and that the income computation thus obtained is in line with OECD principles. For more complex cases (i.e., where the adoption of only one valuation method does not allow a reliable result), the use of multiple methods is suggested.

As mentioned, qualifying income is determined for each IP by multiplying the income as determined above with the ratio between the following:

- a. Costs incurred for the development, maintenance and improvement of the IP (i.e., qualifying R&D expenditures)
- b. Overall relevant costs for the production of the IP (i.e., overall R&D expenditures)

The costs under (a) are those related to R&D activities carried out (i) directly by the entities electing for the regime, (ii) by outsourcing them to universities and other research institutes, or (iii) by outsourcing them to other third parties, including certain start-up companies.

The abovementioned costs also include (i) the costs incurred by a related party in connection with the outsourcing of R&D activities to third parties and simply recharged to the company and (ii) the costs related to R&D activities incurred by the company under a cost-sharing agreement, at least up to the amount of the proceeds arising from the recharge of the costs to the other parties of the cost-sharing agreement.

The costs mentioned under (b) include all the above expenses increased by (i) any relevant costs incurred with related parties for the development, maintenance and

improvement of the IP related to R&D activities and (ii) the quota of the overall intangible's acquisition or licensing cost in each fiscal year.

Furthermore, the amount of the costs under the (a) group could be additionally increased (uplift) by an amount equal to the difference between the costs under (b) and the costs under the (a) group. Such uplift is, in any case, capped up to 30% of the (a) costs.

Prior to the changes introduced by Article 4 of Decree Law No. 34/2019, one procedure for obtaining the tax benefit was available: the tax ruling procedure. With effect from FY2019, an alternative procedure has been introduced: the self-liquidation procedure.

To obtain the benefit of the patent box regime, the taxpayers can alternatively:

- ▶ File a tax ruling application to the IRA to preliminarily agree on the calculation methodology to be applied for the determination of the qualifying income for the tax benefit (tax ruling procedure). The taxpayer can use the tax benefit only after the tax ruling is signed. The ruling covers a period of five years from the year in which the taxpayer sends the appropriate formal request to activate the procedure. Once the ruling is signed, it is up to the taxpayer to calculate the benefit annually, according to the method agreed with the IRA.
- ▶ Determine autonomously the benefit (self-liquidation procedure), which then becomes automatic (i.e., no prior authorization is required). This choice must be reported in the tax return related to the fiscal year in which the patent box regime applies. The option is annual, irrevocable and renewable. In case of a subsequent tax assessment, penalties for filing an inaccurate or unfaithful tax return may not apply, provided that the taxpayer submits appropriate supporting documentation with respect to the criteria and methods adopted in the calculation of the relevant benefit. A specific protocol issued by IRA provides for a detailed description of the required supporting documentation. Moreover, as in the case of transfer pricing documentation, to benefit from this penalty protection, the taxpayer must state in the tax return relating to the fiscal year in which the patent box regime applies that it has prepared and kept the required supporting documentation. Relevant clarifications were provided by the IRA in Circular No. 28 of 2020.

In compliance with the OECD recommendations, both the direct nexus between R&D activities and the qualifying IP and the nexus between the qualifying IP and the related qualifying income must be traceable through a proper accounting or non-accounting system.

Unless otherwise stated, the benefit in question can be combined with other tax incentives set forth by law (e.g., the R&D tax credit).

New patent box regime

R&D costs incurred with third parties in relation to copyrighted software, patents, designs and models may be recognized for tax purposes for an amount equal to 210% of the relevant expenditure for both corporate income tax (IRES) and regional tax (IRAP). R&D costs incurred with related parties should not be eligible.

Beneficiaries under the new regime are the same as those under the old patent box regime.

Companies electing the new patent box regime are also allowed to claim the R&D tax credit provided by Law No. 160/2019.

The election for the new patent box regime will be irrevocable and last for five fiscal years, with the possibility of subsequent renewals. The Italian tax authorities issued specific regulation on 15 February 2022, including clarification and practical information on the new patent box regime.

Unlike the previous regime, it is no longer possible to request a ruling from the Italian tax authorities to define in advance the tax benefit.

Taxpayers may seek protection against penalties (ranging from 90% to 180%) imposed by the tax authorities if a deduction taken under the new regime is challenged. Taxpayers will have protection if they (i) draft a defensive file based on specifics detailed under separate guidelines to be issued by the tax authorities and (ii) notify the tax authorities of the possession of the mentioned documentation in the tax return related to the fiscal year for which the deduction is claimed.

Regional tax (IRAP) deduction for R&D employees

Description of benefits

Costs related to the personnel employed in R&D activities may be deducted from regional tax (IRAP) taxable basis. IRAP is calculated on the taxpayer's net production value (NPV), and the IRAP tax rate is generally 3.9% to 5%. The tax deduction is an alternative to other IRAP tax deductions related to labor costs and may not be used if the taxpayer elects other deductions. The deduction amount is limited to the employees' direct costs related to R&D activities. The benefit has been granted since 2005. As of FY15, labor costs related to employees hired under a permanent contract are fully deductible from IRAP taxable basis. The deduction is granted for the amount exceeding the other deductions related to labor costs, already operated by the taxpayer in the computation of the NPV.

Guidelines around incentive applications

The incentive is applicable to current and future investments. The incentive may be obtained via a direct tax deduction from IRAP taxable basis, and taxpayers may claim the incentive via the taxpayer's annual IRAP tax return (Modello IRAP).

According to the current tax regulations, the deadline for filing the Modello IRAP is generally the end of the 11th month following the financial year the return refers to (i.e., for periods ending 31 December, the deadline is 30 November).

3. Eligibility requirements

R&D, innovation and design tax credits

The tax credits related to R&D, innovation and design are related to different activities carried out by the company:

- a. R&D tax credit: the eligible activities consist of (i) fundamental research, (ii) industrial research, and (iii) experimental development as defined by the letters m), q) and j) of point 15, paragraph 1.3 of Communication No. 198/2014 of the European Commission. For the purposes of the tax credit, the activities concerned are those that pursue a progress or advancement of general knowledge or skills in a scientific or technological field and not merely the progress or advancement of the knowledge or skills of an individual enterprise.

- b. Innovation tax credit: the eligible activities must aim at the creation or introduction of new or significantly improved products or processes, compared with those already made or applied by the company. As an example, new or significantly improved products are defined as goods or services that are different compared to those already produced by the company, in terms of technical characteristics, components, materials, embedded software, user-friendliness, the simplification of the procedure for use, greater flexibility, or other performance and functional elements; for new or significantly improved processes, they are significantly improved compared with those already applied by the enterprise.
- c. Design tax credit: the eligible activities must aim at significantly innovating the company's products in terms of form and other nontechnical or functional elements, such as the characteristics of lines, contours, colors, surface texture or ornamentation. For these purposes, a product is any industrial or craft object, including components of complex products, packaging, presentations, graphic symbols and typefaces. This tax credit is mainly addressed to enterprises operating in the textile and fashion, footwear, eyewear, gold, furniture and ceramic sectors.

Patent box

Eligible IP includes the following:

- ▶ Software protected by copyright
- ▶ Industrial patents, already granted or in the process of being granted, including invention patents encompassing biotechnological inventions and relevant complementary protection certificates; patents for utility models; and patents and certificates for vegetable varieties and topographies of semiconductor products
- ▶ Models and designs capable of being legally protected

The Italian patent box regime initially also included the trademarks. But such provision was deemed not to be in line with OECD's commonly adopted standards, which expressly excluded trademarks from the list of eligible intangible assets. The abovementioned misalignment has been corrected with Law Decree No. 50/2017, which aligned the domestic patent box rules with international best practices. The decree, which includes implementing instructions related to the patent box, reflects the noted changes. According to the grandfathering provisions, the exercise of the option related to trademarks is valid for five financial years and shall not in any case be allowed after 30 June 2021. Such option is nonrenewable.

As eligible IP and the requirements for their existence and protection are concerned, reference should be made to the Italian, EU and international provisions as well as to those contained in EU regulations, treaties and international agreements on intellectual property, as applicable in the relevant jurisdictions.

Qualifying use of IP includes the following:

- ▶ Licensing for the use of any qualifying IP
- ▶ Direct use of any of the mentioned IP within the limit of the activities allowed to the taxpayer under the relevant IP rights

Qualifying activities include the following:

- ▶ Fundamental research to be intended as theoretical and experimental works aimed at obtaining new information to be used in the applied research and design field
- ▶ Applied research to be intended as research aimed at obtaining new information and know-how to be used for the development of new products, processes or services as well as for the improvement of existing products, processes and services in every scientific or technological field; experimental and competitive development work to be intended as the acquisition, the combination, the structuring and the use of existing commercial, technological and scientific know-how in order to develop or improve products, processes and services
- ▶ The definition also includes the activities aimed at the conceptual definition, the planning and documentation of new products, processes and services, as well as the tests and the experimentations aimed at obtaining the authorization to commercialize such products, processes and services. The experimental development also includes the creation of prototypes, the evidence, the realization of pilot products, the tests and the verification of new or improved products, processes and services and the realization of the necessary plants and equipment
- ▶ Design to be meant as the conception and planning of products, processes and services, including their external appearance (and of every component), and the brand development activities
- ▶ The conception and the realization of software protected by copyright
- ▶ The preventive research, test, market survey and other studies and actions also aimed at the adoption of systems to avoid counterfeiting, the deposit, the achievement and maintenance of the relevant rights, their renewal and their protection even in an associate form and with reference to the activities to prevent counterfeiting and the handling of litigation and relevant contracts.
- ▶ Presentation, communication and promotion activities, able to increase the distinctive features and the prestige of the brand and to contribute to the commercial success and the image of products or services, of design or of any other intangible capable of legal protection

IRAP deduction for R&D employees

- ▶ Eligible expenses include costs related to the employees directly involved in R&D activities. The employees can be hired under either a permanent or temporary contract. Eligible activities are either the basic research or R&D activities.

4. IP and jurisdictional requirements

According to the jurisdictional requirements related to IP, patent box rules set forth that the IP shall be directly owned by the taxpayer or used by the taxpayer (e.g., through a rent or lease), provided that R&D activities are carried out.

The ownership of the results of the R&D and innovation activities relevant for the related tax credits must be attributed to the company that carries out the eligible activities.

5. Technology or innovation zones

Italy has not identified technology or innovation zones with specific tax incentives.

However, for some zones in the South of Italy, the Italian law provides specific tax incentives or a strengthening of national tax.

With regard to the R&D tax incentives, for fiscal years from 2020 to 2023, companies operating in Southern Italy are entitled to the R&D tax credit at an increased rate ranging between 25% and 45% (depending on the size of the company), instead of the abovementioned ordinary rate of 12%. No enhanced percentage is provided for the innovation tax credit or the design tax credit.

In addition, a special tax credit for new investments in capital goods is available for companies operating in Southern Italy.

6. Role of governmental bodies in administering incentives

R&D tax credit

The competent authority is the IRA. The possibility to benefit from the R&D tax credit is not subject to a prior administrative approval and may automatically be exercised by the taxpayer. The IRA is entitled to verify afterward the correct identification and qualification of research, development, innovation and design activities with respect to the legal definitions, the correct identification and quantification of the expenses incurred as well as the correct calculation of the incentive. The IRA may refer to the Ministry of Industry to gather technical advice where needed.

Patent box

The competent authority is the IRA. The IRA is in charge of the tax ruling (if the taxpayer opts for the tax ruling procedure). The IRA is also entitled to carry out the tax audits (i) in case of the tax ruling procedure to verify compliance with the calculation with the signed tax ruling and the computation of the nexus ratio, and (ii) in case of the self-liquidation procedure, to verify both the eligibility requirements and the calculation of the benefit as well as compliance with all the formalities imposed for this type of procedure.

Regional tax deduction for R&D employees

The competent authority is the IRA. The tax authorities are entitled to carry on all the assessments deemed necessary to verify whether the annual tax return has been correctly filed and submitted. The areas that could be analyzed might also evaluate whether the benefit in question has been correctly determined and calculated.

7. Administrative requirements

R&D tax credit

The possibility to benefit from the R&D tax credit is automatic and can be directly exercised by the taxpayer, provided that eligible activities and investments have been carried out.

Starting from FY2018:

- ▶ An auditor must certify that the qualifying expenses have been actually incurred.
- ▶ Beneficiary companies must prepare and maintain a technical report concerning scope, objectives and results of the R&D, innovation and design activities performed (internally or externally commissioned) in each FY, which should be signed by the R&D responsible and the legal representative (for R&D internal activities).

Starting from FY2021, a third-party appraisal is also required in relation to the activities carried out by the company.

Patent box

In the case of the self-liquidation procedure, the taxpayer must opt for the patent box regime directly in the tax return where the tax benefit is indicated.

In the case of the tax ruling procedure, the procedure is more complex. Before starting the discussion with the IRA officers, the taxpayer must:

- ▶ Send a formal request indicating all the necessary information, whether related to the business model, the eligible IP, the calculation method proposed, etc., including an estimation of the benefit. This request must be sent by the end of the FY in which the tax benefit should start. The taxpayer can also send an initial request within this deadline and then, within a deadline set by law, send a supplement with the additional information.
- ▶ Indicate a specific option in the tax return of the FY of first application of the tax benefit.

Specific rules apply in case of renewal of the patent box regime at the end of the five-year validity of the tax ruling.

Regional tax deduction for R&D employees

- ▶ Compliance: specific documentation aimed at supporting the eligible expenses and activities must be prepared.
- ▶ Certification report: the documentation for the item above shall be certified by the taxpayer's board of auditors or by the taxpayer's auditing company or by an external independent auditor.

1. Overview

R&D tax incentives are a cornerstone of Japanese industrial policy and are designed to increase the competitiveness of Japanese industry. With the highest nominal corporate income tax rate in the world (and also the highest effective corporate tax rates), Japan's R&D incentives are an important policy measure for business. The Japanese R&D tax regime may be considered mature, as it was introduced in 1967. Initially, tax credits had been applied to incremental R&D expenditures. A tax credit of up to 10% was introduced in 2003 and applies generally on qualified R&D expenditures. The credit has been consistently granted over the past 10 years.

R&D incentives are granted in the form of tax credits against the national corporate tax liability and are subject to certain limitations. To promote the globalization and integration of Japanese companies in international markets and academic programs, offshore activities are also eligible for R&D incentives.

In addition to the already-available R&D tax incentives, previous tax reforms in 2020 and 2021 introduced open innovation and 5G investment-related incentives and additional measures for digital transformation and carbon neutrality. The 2023 tax reform has changed some of the rules.

R&D tax credit

Description of benefits

Under the current legislation, there are two types of R&D base credits: a tax credit for general R&D expenses and a tax credit for special open innovation R&D expenses. The tax credit for general R&D expenses can be used up to 25% of the corporate tax liability or up to 35% of the corporate tax liability under a three-year temporary measure. The tax credit for special open innovation R&D expenses can be used up to 10% of the corporate tax liability. The taxpayer can therefore potentially utilize a combined R&D base credit up to 35% (45%) of its corporate tax liability. The 2021 tax reform increased the combined available R&D base credit up to 40% (50%) with a COVID-19-related temporary measure. This measure is abolished under the 2023 tax reform.

R&D tax credit legislation includes the concept of an R&D venture company. An R&D venture company is a company with investment from a venture fund certified under the Act of Strengthening Industrial Competitiveness or a company with investment from a national university or research institute meeting specific conditions. Under the 2023 tax reform, the requirement to receive certification is abolished, and the scope of R&D venture companies is expanded. In case of an R&D venture company, the available base credit is 40% or up to 50% of the corporate tax liability under a two-year temporary measure and up to 10% on special open innovation R&D expenses (i.e., total of 50% (60%) of the annual corporate tax liability).

The base credit is a permanent measure in Japanese tax legislation.

Base credit

The base credit consists of the credit for general R&D expenses and the credit for special open innovation R&D expenses.

The credit for general R&D expenses is the amount of general R&D expenses multiplied by a certain ratio. The R&D credit ratio is determined as follows: the taxpayer calculates the incremental R&D ratio, which is (current R&D expenses minus average R&D expenses over the past three financial years) divided by average R&D expenses over the past three financial years. The taxpayer uses this incremental ratio in a specific formula to calculate the R&D credit ratio. The allowed range of the R&D credit ratio is 6% to 10%; however, a temporary measure expanded the range of the R&D credit ratio from 2% to 14% as an interim measure for financial years starting between 1 April 2021

and 31 March 2023. The 2023 tax reform decreases the lower limit from 2% to 1%. The formula to calculate the exact R&D credit ratio will also change to reward increased R&D spending.

The R&D credit ratio is between 12% and 17% for small and medium-sized companies for financial years starting between 1 April 2021 and 31 March 2023 and 12% for the following financial years. The 2023 tax reform extends this measure and adjusts the formula to calculate the R&D credit to reward increased R&D spending. If a company is newly established, or a company starts R&D activities in a financial year without R&D expenses over a certain period of time in previous financial years, the R&D credit ratio is 8.5% of the R&D expenses incurred (12% in case of small and medium-sized enterprises). This tax credit can be used for up to 25% of the corporate tax liability under general rules.

The 2021 tax reform introduced a COVID-19-related rule stipulating that if the taxpayer suffers a decrease of at least 2% in sales but increases its R&D spending, the taxpayer can use the above tax credit for up to 30% (rather than 25%) of the corporate tax liability. The 2% or more decrease in sales has to be demonstrated in comparison with the latest financial year that ended before 1 February 2020. The 2023 tax reform abolished this measure.

The tax credit for general R&D expenses includes an additional component as a temporary measure. This additional component is based on current R&D expenses over the annual average sales amount of the current fiscal year and the past three fiscal years multiplied by a certain percentage. The rate of tax credit under this additional component is up to 10% of the corporate tax liability. The taxpayer can decide whether to take the R&D credit under the already-existing temporary measure or under a new temporary measure, which also takes the incremental R&D ratio into account in a special formula.

The credit for the special open innovation R&D expenses regime aims to enhance innovation in Japan. Special open innovation R&D expenses are R&D expenses incurred in joint research with special R&D institutions or universities and research outsourced to such institutions (not including private companies). The taxpayer can calculate special R&D expenses on research outsourced to private companies. Regarding joint research, the tax credit is special R&D expenses multiplied by 30% (for expenses incurred in joint research with special R&D institutions or universities) or 20% (for expenses incurred in joint research with private corporations but 25% in case of an R&D venture company). Regarding research outsourced to other parties, the tax credit is 30% (for expenses in research outsourced to special R&D institutions or universities) or 20% (for expenses in research outsourced to other parties, including private corporations but 25% in case of an R&D venture company). External companies of special R&D institutions or universities are also included in the list of qualifying companies (external companies are established by special R&D institutions or universities for open innovation with third parties). If a corporate taxpayer incurs expenses in joint research with or outsources research to such external companies, the tax credit is 25% of the expenses. The 2023 tax reform expands the scope of R&D venture companies and includes a new measure. Under this new measure, if the taxpayer employs a highly qualified person (e.g., PhD holder) and meets specific conditions (relating to the activities of the highly qualified person, length of employment, etc.), the taxpayer can use 20% of the personal expenses of this highly qualified person under special open innovation tax credit. The total special open innovation tax credit available is for up to 10% of the corporate tax liability amount.

Carryforward or carryback of the excess credit is not permitted.

For contract R&D activities, the ability to take R&D credits can be limited. The taxpayer has to deduct fees received for contract R&D activities from R&D expenses to calculate R&D expenses for R&D credit purposes.

Open Innovation incentive

Description of benefits

Tax reform 2020 has introduced new measures to encourage companies to promote business innovation through investments in specific venture companies to achieve high productivity or to develop a new business. If certain conditions are met, the taxpayer can deduct up to 25% of the acquisition cost of specified shares (as defined by tax law). The taxpayer can utilize the deduction up to the taxable income of the financial year in which the deduction is claimed.

5G incentive

Description of benefits

Tax reform 2020 has introduced a new incentive for mobile telephone operators and companies authorized to introduce local 5G networks. The taxpayer will be entitled to a tax credit of 15% or special depreciation of 30% on the acquisition cost of qualifying facilities. The tax credit can be used up to 20% of the corporation tax liability.

Special measures to promote digital transformation

Description of benefits

The tax reform of 2021 introduced a new measure to promote business transformation-related digital investments (i.e., connectivity, use of cloud computing, replacement of legacy systems, cybersecurity). The taxpayer will be entitled to a tax credit of 3% to 5% or special depreciation of 30% on the acquisition cost of qualifying facilities. The tax credit can be used for up to 20% of the corporation tax liability (the 20% limit applies on a combined basis with the tax credit under *Special measures to promote carbon neutrality*). This benefit is a temporary measure. There is a set of procedures (certification of business plan by the relevant Ministry) to complete. Under the 2021 tax reform, the qualifying assets should have been acquired and put to use by 31 March 2023. The 2023 tax reform extends this deadline

to 31 March 2025 and brings some changes to the procedures related to the certification of business plan.

Special measures to promote carbon neutrality

Description of benefits

The 2021 tax reform introduced a new measure to promote carbon neutrality. The taxpayer will be entitled to a tax credit of 5% to 10% or special depreciation of 50% on the acquisition cost of qualifying facilities. Qualifying facilities include machinery and equipment to manufacture products to accelerate decarbonization and machinery and equipment to increase decarbonization and energy efficiency in the business operations of the taxpayer. The tax credit can be used for up to 20% of the corporation tax liability (the 20% limit applies on a combined basis with the tax credit under *Special measures to promote digital transformation*). This benefit is a temporary measure. There is a set of procedures (certification of business plan by the relevant Ministry) to complete, and the qualifying assets should be acquired and put to use by 31 March 2024.

3. Eligibility requirements

Eligible R&D expenses include the cost of material, salaries and wages and other related expenses of employees who have expert knowledge and skills and are engaged exclusively in experimental and research work, as well as a depreciation allowance for machinery and equipment used for such work. Personnel who have expert knowledge and skills refers to those having a technical background and who are directly involved in R&D activities (e.g., managers and assistants in charge of R&D activities). Administrative staff, janitors, security guards, etc., who may be involved in some way with R&D activities do not qualify.

Qualifying research expenses (QREs) are defined as expenses incurred in experimental and research work to manufacture products or to improve, design or invent techniques. The 2021 tax reform clarified that expenses incurred for research and experimental development as defined by the Frascati Manual could be treated as qualifying research expenses. Research activities may occur within or outside of Japan. Contract fees received do not qualify and are to be netted against QREs, while for contract fees paid, R&D credits may be taken.

The scope of eligible R&D expenses includes development costs for the internet of things, big data and artificial intelligence (AI) (i.e., service R&D or R&D for Industry 4.0). The 2021 tax reform introduced a new rule for the development of software to provide services to customers through the cloud. The tax reform explanation from the Ministry of Economy, Trade and Industry (METI) mentions some representative examples, such as a cloud-based software solution to provide production planning services by collecting, analyzing production data and using AI to make production plans, or a software solution to use AI drone technology to automate inspection of infrastructural assets. Under the new rule, expenses that are capitalized as fixed assets, inventory or deferred charges for tax purposes (i.e., cannot be expensed for tax purposes) during the development phase of software for in-house use are included in qualifying R&D expenses.

In addition, the 2021 tax reform has clarified that expenses incurred in R&D activities with the aim to improve the efficiency of its own operations can also be included in qualifying R&D expenses. The aforementioned METI explanation refers to a representative example where the taxpayer develops an algorithm, data platform or other tool to automate the operations of its own plans by deploying AI.

The 2023 tax reform brings changes to the scope of qualifying R&D expenses. Expenses incurred in changing the design of products cannot become qualifying R&D expenses, because there is no improvement in functionality. In addition, under the current rules, expenses incurred in developing a new service solution that collects and uses new data can become qualifying R&D expenses. Under the 2023 tax reform, expenses incurred in developing a new service solution that collects and analyzes already-existing data can also become qualifying R&D expenses.

Under a temporary measure for financial years ending by 31 March 2024, if certain indicators are not met (for example, there is no increase in average salaries and in taxable income and a specific investment ratio does not exceed 30% – i.e., domestic capital investment has to exceed at least 30% of the depreciation expense of the given FY), the access to certain credits such as R&D credits, 5G-related incentives, digital transformation and carbon neutrality-related tax benefits can be restricted in that financial year.

Regarding Open Innovation incentives, there are various and detailed conditions to be eligible for this tax benefit.

The taxpayer has to acquire specific shares in special companies (directly or through certain fund structures in which the taxpayer is a limited partner) in an undertaking with third parties to achieve high productivity or to develop a new business.

Specified shares are defined as shares issued by companies (including foreign companies) that conduct specific business activities as described by the Act of Strengthening Industrial Competitiveness and that are certified by the Ministry of Economy, Trade and Industry. The company in which the investment is made should already conduct its activities (startups do not qualify) and cannot be older than 10 years.

In addition, the taxpayer has to invest cash into the equity of the company in exchange for the specified shares (buying shares from another party does not qualify for the benefit). The cash investment has to be made between 1 April 2020 and 31 March 2022, and the amount of investment has to be at least JPY100 million or JPY500 million for foreign companies.

The 2023 tax reform introduces a new incentive. It will be possible to buy already-issued shares from other parties under this new incentive. The taxpayer is required to acquire a majority holding in the company. Investments into foreign companies will not qualify under the new incentive. The minimum investment amount should be at least JPY500 million, and the maximum amount of investment will be JPY5 billion.

There are also specific conditions to consider. For the already-existing incentive, the taxpayer has to record up to 25% of the acquisition cost to a special account, and there are potential trigger events when the taxpayer has to reverse the deducted amount to the corporate income tax base. Such trigger events include cases in which the taxpayer receives dividends on these specific shares or sells the specific shares. However, if the taxpayer holds the specific shares for more than five years, there is no requirement to consider trigger events any longer and to reverse the deducted amount.

The scope of trigger events for the new incentive will include the trigger events for the already-existing incentives and additional cases (e.g., when the taxpayer loses majority control in the company or the company merges into another entity). If the taxpayer holds the shares for at least five years, but there is a specific trigger event in year six or after, the taxpayer is required to add part of the originally deducted amount back into its taxable income but only to the extent of the amount attributable to the trigger event itself.

For 5G-related incentives, the taxpayer has to acquire specific qualifying facilities for specified advance information and telecommunications and put them into use between the date when the Act on Promotion on Dissemination of Specified Advanced Information and Telecommunication Systems takes effect and 31 March 2022. In addition to corporate income tax, a fixed asset tax (local tax) benefit is available. The tax base for fixed asset tax purposes is reduced by 50% for three years after the year of acquisition of specific qualifying facilities.

The tax incentive under *Special measures to promote digital transformation* requires that the taxpayer have its business adaptation plan certified by the relevant Ministry with legal oversight over the business of the taxpayer. The business adaptation plan should meet a wide scope of various conditions, including demand for a new product (service), increasing productivity, meeting specific financial targets, implementing new sales methods or methods to provide services, use of cloud technology, and the requirement to invest at least 0.1% of domestic net sales into qualifying assets, etc. The qualifying assets, broadly, are software, machinery, equipment and fixtures used together with the software. The maximum value of the qualifying assets cannot exceed JPY30 billion.

The tax incentive under *Special measures to promote carbon neutrality* requires that the taxpayer has its plan for medium and long-term environmental adaptation certified by the relevant Ministry with legal oversight over the business of the taxpayer. The environmental business adaptation plan should meet a wide scope of conditions, including improving carbon productivity (defined as value added (operating income plus labor expense and depreciation expense) divided by energy-derived CO₂ emissions) by a certain percentage over a certain period of time, making products that accelerate decarbonization and achieving certain financial parameters. The qualifying assets are facilities reducing emissions of greenhouse gases and production facilities that produce products that are sold to business operators and contribute to reducing emissions of greenhouse gases. The maximum value of the qualifying assets cannot exceed JPY50 billion.

4. IP and jurisdictional requirements

There are no jurisdictional requirements related to the location of intellectual property (IP).

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Japan.

6. Role of governmental bodies in administering incentives

The National Tax Agency administers the R&D tax credit, the Open Innovation incentive, the 5G incentive and the digital transformation and carbon neutrality-related tax incentives. The eligibility for the tax credit is scrutinized by tax authorities upon future tax audits.

7. Administrative requirements

To claim a tax credit, certain forms (schedules 6(6), 6(7), 6(8) and/or 6(9)) must be attached to the corporate tax returns, which are due two months after the fiscal year-end (a one-month extension is generally allowed).

To claim digital transformation and carbon neutrality-related tax incentives, the taxpayer is required to have its business adaptation plan certified by the relevant Ministry and the taxpayer also has to attach certain forms to the corporate tax return to report the qualifying investment and the tax credit to the tax authorities. The taxpayer is also required to file an annual update of the business adaptation plan with the relevant Ministry to show how the taxpayer is executing the plan itself.

The taxpayer has to provide a yearly report to the Ministry of Economy, Trade and Industry about the investments under Open Innovation and has to get a confirmation to be able to utilize the incentive. For 5G incentives, the taxpayer has to have a license for local 5G from the Ministry of Internal Affairs and Communication and a permit from the Ministry of Economy, Trade and Industry.

Lithuania

This chapter is based on information as of February 2023.

The Lithuanian government takes into account investors' needs and also offers financial support; therefore, the R&D incentive and patent-related incentive (introduced starting in 2018) contribute to the creation of a business-friendly environment. There are no official plans to eliminate the R&D incentive in the near future. Taxpayers are encouraged to approach the Research Council of Lithuania for explanations and guidance on what constitutes R&D, where such inter-institutional cooperation contributes to the maturity of the incentive.

EY contact:

Leonas Lingis

1. Overview

The Lithuanian R&D incentives were introduced starting 1 January 2008. In this respect, the tax authorities have already gathered knowledge regarding the practical application of the R&D incentive. Moreover, taxpayers are encouraged to approach the Research Council of Lithuania for explanations and guidance on what constitutes R&D, where such inter-institutional cooperation contributes to the maturity of the incentive.

When calculating corporate income tax (CIT), a super deduction of 300% of qualifying R&D costs – excluding depreciation or amortization costs of fixed assets – may be deducted from income for the tax period during which they were incurred, if the performed scientific research

and/or experimental development is related to the usual or intended activities of the entity that generated or will generate income or economic benefit.

Moreover, the Law on Corporate Income Tax allows accelerated depreciation of assets used in R&D activities.

To expand R&D investments in Lithuania and encourage the commercialization of products created in the R&D process, starting 1 January 2018, a new relief was introduced for taxpayers who have created intangible assets while being engaged in R&D activities. The taxpayer may apply a 5% tax rate to the taxable profit from the use, sale or other transfer of an intangible asset.

2. Incentives available

Name of incentive	The scientific research and experimental development incentive*	The scientific research and experimental development incentive	Patent-related incentive
Type of incentive	► Super deduction	► Accelerated depreciation on qualifying R&D assets	► Reduced CIT rate for taxable profit derived from intangible assets

*Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

The scientific research and experimental development incentive: super deduction

Description of benefits

When calculating corporate income tax, R&D costs – except for depreciation or amortization costs of fixed assets – may be deducted three times from income for the tax period during which the costs were incurred. The amount of tax losses resulting from the super deduction may be carried forward for an unlimited period of time provided that the entity carries out the activity due to which the losses were incurred; however, loss carryback is not permitted under current tax legislation. No preapproval is required to receive the incentive. It should be noted that R&D documentation (with certain methods and targets stipulated by the legislation) should be prepared and confirmed by the CEO or its authorized person and should be prepared based on Research Council of Lithuania rules.

Guidelines around incentive applications

The incentive applies only with respect to R&D costs incurred during the current period. The super deduction is claimed in the annual corporate income tax return for the tax period during which the R&D costs were incurred. The statutory period for adjusting the annual corporate income tax returns includes the current and three preceding tax periods.

The scientific research and experimental development incentive: accelerated depreciation on qualifying R&D assets

Description of benefits

Certain fixed assets used in the R&D activity may be depreciated with accelerated terms. Depending on the type of fixed asset, the depreciation period might be shortened from eight, five, four or three years to two years. The depreciation and/or amortization period shall not be shorter than stipulated by the Law on Corporate Income Tax. The amount of tax losses resulting from the accelerated depreciation may be carried forward for an unlimited period of time, provided that the entity carries

out the activity due to which the losses were incurred; however, loss carryback is not permitted under current tax legislation.

Guidelines around incentive applications

The incentive applies only with respect to R&D costs incurred during the current period. The accelerated depreciation is claimed in the annual corporate income tax return for the tax period during which R&D costs were incurred. The statutory period for adjusting the annual corporate income tax returns includes the current and three preceding tax periods.

Patent-related incentive: reduced CIT rate for taxable profit derived from intangible assets

Description of benefits

A patent-related incentive is an additional incentive next to the scientific research and experimental development incentive. Taxable profit from the use, sale or other transfer of an intangible asset may be taxed at a reduced 5% rate (please review Section 4 for more information about reduced tax rate). The intangible asset should be created in an R&D process and qualify for the scientific research and experimental development incentive described above and below in Section 4. A separate formula for the precise calculation of profit taxable at 5% has been established. The company should have the documents in order to support the calculation of profit taxable at 5%. No preapproval is required to apply the incentive. Losses resulting from the use, sale or any other transfer of an intangible asset may be carried forward for an unlimited period of time, but such losses may cover only the taxable profit from the use, sale or any other transfer of the intangible asset.

Guidelines around incentive applications

The relief shall apply when calculating the taxable profit for 2018 and subsequent tax periods. The reduced tax rate is claimed in the annual corporate income tax return for the tax period during which the taxpayer incurred profit from the use, sale or other transfer of the intangible asset. The statutory period for adjusting the annual corporate income tax returns includes the current and three preceding tax periods.

3. Eligibility requirements

To claim the R&D incentive, the performed R&D activity must be related to the usual or intended activities of the entity that generated or will generate income or economic benefit. In addition, the R&D activities performed must have an element of novelty and address scientific and/or technological uncertainty. The aim of an R&D project shall be scientific or technological progress, and the results shall be significant for not just the person that initiated and executed the project.

The following expenses may be included in calculating R&D incentives:

- ▶ Wages and business trips of employees who are directly involved in R&D works
- ▶ Costs of stock, materials and other current assets used for R&D activities
- ▶ Costs of acquisition of services directly related to R&D activities (consulting, leasing, repair, warehousing, telecommunications, etc.)
- ▶ Costs of acquisition of R&D activity from other natural persons or legal entities if the acquired R&D activity has been carried out in a state of the European Economic Area or a state with whom Lithuania has a treaty for the avoidance of double taxation
- ▶ Import and input value-added tax (VAT) from the abovementioned costs that may not be deducted for VAT purposes
- ▶ Costs of R&D activities that are based on accounting documents

The costs of R&D works should be reduced by the amount of support/funds received and used from the national budget, the State Social Insurance Fund Board budget, the Compulsory Health Insurance Fund budget, or other state or European Union funds.

Three types of R&D activity may qualify for the R&D incentive:

1. Basic research carried out in the acquisition of new knowledge about the essence of phenomena and/or observed reality without aiming, at the time of research, to use the obtained results for a specific purpose
2. Fundamental research carried out for acquiring knowledge and aimed at acquiring specific practical objectives or at solving tasks
3. Experimental development aimed at creating new materials, products and equipment; developing new processes, systems and services or essentially improving those already created or developed; and creating, developing or essentially improving solutions to problems based on the knowledge acquired through research and practical experience

4. IP and jurisdictional requirements

To apply a reduced tax rate of 5% for the profit from the use, sale or other transfer of an intangible asset, the following conditions should be met:

1. The intangible asset should have been created by the taxpayer while engaged in qualifying R&D activities.
2. Only the entity that created such intangible asset should receive income from the use, sale or other transfer of the intangible asset and incur all related expenses.
3. The asset should consist of computer software protected by copyright or an invention that meets patentability criteria.
4. The copyrights have emerged, a patent application has been filed, a patent has been obtained, a supplementary protection certificate has entered into force or an exclusive license has been granted.

As a general rule, the amount of taxable profit from the use, sale or other transfer of an intangible asset shall be calculated separately for each intangible asset (an exception applies for assets that were created using multiple intangible assets).

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Lithuania.

6. Role of governmental bodies in administering incentives

The Research Council of Lithuania determines the eligibility of R&D projects.

The State Tax Inspectorate governs R&D and patent-related incentives applications for tax purposes.

7. Administrative requirements

No prior review or approval of the tax authorities is required to claim an R&D tax incentive. R&D incentives are claimed in the annual corporate income tax return for the tax period during which R&D costs were incurred. The taxpayer must possess R&D documentation (with certain methods and targets stipulated by the legislation) confirmed by the CEO or its authorized person. However, the taxpayer is not required to submit the documentation until requested by the tax authorities in case of a tax audit. Also, a taxpayer may apply for approval from the Research Council of Lithuania that a certain project meets R&D eligibility requirements. However, such approval is not required.

There is no prior review or approval of the tax authorities to claim the patent-related incentive. The patent-related incentive is claimed in the annual corporate income tax return for the tax period during which the taxpayer earned profit from the use, sale or other transfer of an intangible asset. As such incentive is new and no detailed explanations are provided by the tax authorities, it is not currently clear what kind of documentation should be prepared to ground the application of such incentive; however, the taxpayer should have a separate calculation prepared.

8. Statutory reference

The Lithuanian R&D incentive was introduced in a new Article 17-1 of the Lithuanian Law on Corporate Income Tax, with effect from 1 January 2008. The additional tax relief related to patent regime was introduced in Article 5(7) of the Lithuanian Law on Corporate Income Tax, with effect from 1 January 2018. No changes are expected in the near future.

Luxembourg

This chapter is based on information as of February 2023.

The Luxembourg government has fostered a proactive entrepreneurial policy that, among other things, aims to promote entrepreneurship and define and implement support instruments and financing measures. Consequently, the number of budget measures dedicated to R&D and innovation has increased consistently over the years in an effort to encourage Luxembourg companies to develop their technological know-how, create new economic activities and generate additional added value.

1. Overview

The common Luxembourg incentives framework grants aid from 25% up to 100% of investments made in the context of R&D projects or programs. In addition to the R&D project or program incentive, the Luxembourg legislation provides for further incentives, including:

- ▶ A regime for technical feasibility studies (up to a maximum of 50%, 60% or 70% of total investment for large enterprises, medium-sized enterprises/private research organizations and small enterprises/private research organizations, respectively)
- ▶ Support for the construction or modernization of research infrastructures (up to a maximum of 50% of total investment)
- ▶ Support for young innovative companies (up to a maximum of EUR800,000 or up to EUR1.2 million when located in determined assisted geographical areas)
- ▶ Innovation aid for small and medium-sized enterprises (SMEs) of 50%; up to 100% with a maximum of EUR200,000 for innovation advisory and support services
- ▶ Aid for process and organizational innovation (15% for large companies/private research organizations effectively collaborating with SMEs in the aided activity and the collaborating SMEs incurring at least 30% of the total eligible costs; 50% for SMEs/small- or medium-sized private research organizations)
- ▶ Support for the construction or modernization of innovation clusters (up to a maximum of 50% of eligible costs, respectively 55% for clusters located in determined assisted geographical areas) and for the operation of innovation clusters (up to a maximum of 50% of eligible costs)

These measures demonstrate the Luxembourg government's general intention to promote Luxembourg as an attractive jurisdiction for R&D as well as intellectual property (IP) management activities.

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

Promotion of R&D and innovation

(Régimes d'aides à la recherche, au développement et à l'innovation)

The benefits are currently set out by the amended law of 17 May 2017 on the renewal of aid schemes for R&D and innovation (all enterprises). The allocation of aid is conducted by the Ministers of the Economy and of Finance, and aids are granted on a case-by-case basis.

R&D projects or programs

(Projets ou programmes de recherche-développement)

Description of benefits

When an enterprise (not considered to be in financial difficulty) or a private research organization, properly established on the territory of the Grand Duchy of Luxembourg, realizes an R&D project or program consisting of fundamental, industrial or experimental development research activities, it may benefit from aid that may not exceed the following amounts:

- ▶ Fundamental research: maximum 100% of eligible expenses
- ▶ Applied industrial research: maximum 50% of eligible expenses
- ▶ Experimental development activities: maximum 25% of eligible expenses

Provided that it does not exceed 80% of eligible costs, the aforementioned aid for industrial research and experimental development can be increased by:

- ▶ 10% when the beneficiary is a medium-sized enterprise or a private research organization fulfilling the criteria of a medium-sized enterprise
- ▶ 20% when the beneficiary is a small enterprise or a private research organization fulfilling the criteria of a small enterprise
- ▶ 15% if one of the following conditions is fulfilled:
 1. The project or program is based on an effective collaboration:

Between enterprises among which there is at least one SME, or is conducted in at least two EU Member States, or in one Member State and a contracting party to the Agreement on the European Economic Area (EEA), and no single company bears alone more than 70% of eligible costs

Or

Between a company and one or several research and knowledge dissemination organizations bearing at least 10% of the eligible costs and having the right to publish the results of their own research

2. The results of the project or program are widely broadcast through conferences, publications, open repositories, or free or open software.

It is granted under the form of a capital subsidy or a recoverable advance (i.e., a loan granted in one or several tranches and for which conditions of reimbursement depend upon the outcome of the project or program). In principle, capital subsidies and recoverable advances are paid in a lump sum after completion of the project or program. However, payments in one or more tranches may be granted in specific cases as the project or program progresses.

Guidelines around incentive applications

The application and the required appendices must be submitted before the start of the project or program, both in electronic format and in paper format, to the Ministry of Economy. The forms, as well as guidelines for filling in the forms, are available online.¹

Other incentives in relation with R&D and innovation

The law of 17 May 2017 provides for further incentives:

Technical feasibility studies

(Etudes de faisabilité technique)

When an enterprise (not considered to be in difficulty) or a private research organization, properly established on the territory of the Grand Duchy of Luxembourg, realizes a feasibility study prior to an R&D project or program, it may benefit from aid capped at 50% of the amount of eligible costs. The amount of the aid may be increased by 10% for medium-sized enterprises and medium-sized private research organizations and by 20% for small enterprises and small private research organizations.

The aid is granted under the form of a capital subsidy or a recoverable advance.

Guidelines around the incentive are available online.²

¹ <https://guichet.public.lu/en/entreprises/financement-aides/aides-recherche-developpement/rdi/aides-rdi.html>

² <https://guichet.public.lu/en/entreprises/financement-aides/aides-recherche-developpement/rdi/aide-etudes-faisabilite-technique.html>

Support for the construction or modernization of research infrastructures

(Investissement en faveur des infrastructures de recherche)

Upon conditions, aid of up to 50% of eligible costs can be granted for the construction or modernization of research infrastructures that perform economic activities. The access to the infrastructure shall be open to several users and shall be granted on a transparent and nondiscriminatory basis. Enterprises that have financed at least 10% of the investment costs of the infrastructure may be granted preferential access under more favorable conditions. To avoid overcompensation, such access shall be proportional to the undertaking's contribution to the investment costs, and these conditions shall be made publicly available.

The aid is granted under the form of a capital subsidy, a recoverable advance, an interest subsidy, a guarantee or a loan.

Guidelines around the incentive are available online.³

Support for young innovative companies

(Aides aux jeunes entreprises innovantes)

Private enterprises and private research organizations may be granted aid up to a maximum of EUR800,000, or up to EUR1.2 million when located in determined assisted geographical areas, if they are:

- ▶ An unlisted enterprise or private research organization, which has been registered for less than five years, was not formed through a merger (unless the enterprises that merged fulfilled the conditions to benefit from the support), did not take over the activity from another enterprise and has not yet distributed any profits
- ▶ An innovative company or innovative private research organization capable of demonstrating, by means of an assessment carried out by an external expert, that it will develop, in the foreseeable future, new or substantially improved products, services or processes compared to the state of the art in the sector concerned, and which present a risk of technological or industrial failure; or whose research and development expenses represent at least 10% of its total operating costs in at least one of the three years preceding the grant of the aid or, in the case of a startup company or private research organization

³ <https://guichet.public.lu/en/entreprises/financement-aides/aides-recherche-developpement/rdi/investissements-infrastructures-recherche.html>

with no financial history, in the current financial year, the figure being certified by an external auditor.

The aid is granted under the form of a capital subsidy, a recoverable advance or an equity contribution.

Guidelines around the incentive are available online.⁴

Innovation aid for SMEs

(Aides à l'innovation en faveur des PME)

SMEs may be granted an innovation aid of up to 50% of the eligible costs, which includes external consultancy costs, costs related to protecting patents and other intangibles, and secondment costs of highly qualified personnel coming from a research or knowledge dissemination organization or from a large enterprise (upon conditions). Aid may further be increased to 100% with a maximum of EUR200,000 for innovation advisory and support services.

The aid is granted under the form of a capital subsidy or a recoverable advance.

Guidance around the incentive is available online.⁵

Aid for process and organizational innovation

(Innovation de procédé et d'organisation)

Enterprises or private research organizations realizing process or organizational innovation may be granted aid of up to 15% for large companies or private research organizations and 50% for SMEs or private research organizations. Large companies or private research organizations may, however, only benefit from this aid if they effectively collaborate with one or several SMEs or small or medium-sized private research organizations, provided that the latter bear at least 30% of the eligible costs.

The aid is granted under the form of a capital subsidy or a recoverable advance.

Guidelines around the incentive are available online.⁶

De minimis aid scheme

(Régime d'aides de minimis)

A de minimis aid can be granted to enterprises that realize a project having an added value for the Luxembourg economy, including employment, in line with the diversification and economic development policies of the country.

The amount of the aid cannot exceed the following ceilings:

- ▶ EUR200,000 per group of associated companies over a period of three tax years, except with respect to enterprises in the sector of road freight transport
- ▶ EUR100,000 per group of associated enterprises performing road freight transport for hire over a period of three tax years

Guidelines around incentive applications

The application must be submitted in paper format to the Ministry of Economy and must contain determined information. The aid is, in principle, paid after completion of the project or of the expenses for which the aid has been granted; one or several installments may, however, be paid as the project or expenses progress.

Tax credits

Investment tax credit

(Bonification d'impôt pour investissement)

A tax credit of 13% is granted for additional investments in qualifying assets made during the tax year. Qualifying assets consist of depreciable tangible fixed assets other than buildings physically used in EU Member States, or in Iceland, Liechtenstein and Norway (the EEA). As of 1 January 2021, the provisions of the law have been amended to exclude space objects (any object launched or intended to be launched into outer space, the constituent parts of such an object, as well as its launcher and the parts thereof) from the condition of physically using the assets on the territory of Luxembourg or any other state that is party to the EEA, so that operators of space objects may nevertheless benefit from the investment tax credit. Certain assets are excluded from this tax credit, such as certain motor vehicles, assets that have a useful life of less than three years and secondhand assets. In addition, an 8% credit is granted for qualifying new investments up to EUR150,000, and a 2% credit is granted for investments over that amount. If investments are made to create jobs for disabled persons, these rates are increased to 9% and 4%, respectively. Investments may qualify for both credits.

The grant of the investment tax credit further applies to:

- ▶ Electric cars, i.e., passenger cars with zero emissions, functioning exclusively on electricity or on hydrogen fuel cells. The measure applies only to those cars whose date of first registration is after 31 December 2017.
- ▶ Acquired software rights, subject to certain limits and conditions. The investment tax credit on the acquisition of software rights is 8% for investment amounts not exceeding EUR150,000 and 2% for the investment exceeding that amount. The maximum amount of the tax credit for the acquisition of software rights cannot exceed 10% of the corporate income tax due for the tax year in which the financial year of the acquisition of the software ends.

The rates for the general investment tax credit are increased from 8% to 9% and from 2% to 4% for certain investments intended to protect the environment.

The above tax credits reduce corporate income tax and may be carried forward for 10 years.

Tax credit for hiring unemployed persons

(Bonification d'impôt en cas d'embauchage de chômeurs)

A monthly tax credit of 10% calculated on the monthly gross remuneration paid to persons who were unemployed can be offset against corporate income tax under certain conditions. The person hired must have been unemployed, registered with the National Employment Agency (Agence pour le développement de l'emploi, or ADEM) for at least the last six months, and the person must have been proposed by the agency's placement service. The employment contract must be either a permanent contract, a temporary contract of a minimum of 18 months or a temporary contract aiming to replace an employee who is on parental leave. Furthermore, the contract must be for at least 16 hours per week.

The tax credit is granted for a period of 12 months starting with the month of employment.

Guidelines around incentive applications

The tax credits are claimed through the completion of specific forms to be included in the annual tax return of the enterprise. In addition, regarding the tax credit for hiring unemployed persons, a certificate issued by the ADEM and confirming the placement and the continuation of the job must be joined to the tax return.

Special tax regime for expatriate highly skilled employees

(Encadrement fiscal des dépenses et charges en relation avec l'embauchage sur le marché international de salariés)

Description of benefits

A beneficial income tax regime is available for expatriate highly skilled employees, i.e., employees who are sent to work temporarily in Luxembourg on an assignment between intragroup entities. It also applies to employees who are directly recruited abroad by a Luxembourg company or by an enterprise established in another state party to the Agreement on the European Economic Area to work in Luxembourg. Under certain conditions, various costs directly related to the expatriation are tax exempt. Under the special tax regime, certain expatriate benefits and allowances are, up to certain limits, not taxable, such as:

- ▶ Moving and certain relocation costs to transfer the expatriate's domicile from abroad to Luxembourg
- ▶ Costs related to an installation of a dwelling in Luxembourg and expatriation (rent and utilities if the former accommodation is maintained in the home country or the housing differential if the former accommodation is not maintained), one annual home-leave trip and tax-equalization costs, 50% of the "impatriation premium" (i.e., an additional lump-sum premium paid by the employer to an expatriate due to the cost-of-living differential between the host state and the home state) not exceeding 30% of the employee's annual base salary)
- ▶ School fees for children of the expatriate and his or her spouse or partner when they move with one or both of their parents and therefore have to change schools

Guidelines around incentive applications

At the beginning of each calendar year (at the latest on 31 January) the employer must send a list of employees who benefited from the regime to the Luxembourg tax authorities.

Employees profit sharing regime

(Prime participative)

Description of benefits

As of tax year 2021, a new employee profit-sharing regime applies, in which employers will be allowed to allocate profit-sharing bonuses to (freely) selected employees. These profit-sharing bonuses benefit from a 50% exemption (i.e., only 50% of the gross amount will be taxable, subject to regular tax rates). The conditions for this preferential tax treatment to apply are:

- ▶ The employer realizes business profits, agricultural or forestry profits, or self-employment income.
- ▶ The employer keeps regular accounting records for the year of payment of the profit-sharing bonus as well as the preceding year.
- ▶ The total amount that can be paid to beneficiaries is limited to 5% of the annual profit of the employer for the financial year preceding the year of payment (the employer being the Luxembourg entity employing the beneficiary). If the employer is part of a fiscal unity, the 5% limit is determined on the aggregated profit of all companies that are part of this fiscal unity.
- ▶ The beneficiary is duly registered as an employee with the Luxembourg (or a recognized foreign) social security scheme.
- ▶ A maximum of 25% of the beneficiary's annual salary (excluding benefits) of the year of payment can be paid in the form of this profit-sharing bonus; 50% of this amount being then tax exempt.

If this profit-sharing regime is implemented, the employer will have specific reporting obligations toward the tax authorities (wage tax office).

Amounts paid under the profit-participating regime are deductible for the employer for corporate tax purposes.

Guidelines around incentive applications

At the time of provision, the employer must communicate in the prescribed form to the taxation office in charge of the withholding tax on salaries a list of the names of the employees benefiting during the tax year from this measure. This document will also include all the elements required to verify that the conditions relating to the exemption are met.

Co-funding of employees' vocational training

(Co-financement de la formation en entreprise)

Description of benefits

Private sector companies established in Luxembourg can apply for co-funding of their training program. Such co-funding amounts to 15%⁷ (taxable) of eligible training expenses. Investments in training are subject to the following ceilings:

- ▶ 20% of total salary costs for companies with no more than 9 employees
- ▶ 3% of total salary costs for companies with 10 to 249 employees
- ▶ 2% of total salary costs for companies with more than 249 employees

Eligible training expenses include:

- ▶ Participants' salaries
- ▶ In-house facilitators' salaries
- ▶ External facilitators
- ▶ Travel and accommodation expenses of participants and facilitators
- ▶ Fees paid to auditor approving the report included in the application file
- ▶ Training management software cost
- ▶ Fees for contributions to training institutions, based on a collective agreement or an interprofessional arrangement
- ▶ Training costs considered mandatory by the employer (but excluding training costs mandatory per law for certain sectors)

Guidelines around incentive applications

In order to benefit from such co-funding, employers are required to establish a training plan for a calendar year and to submit a co-funding application to the National Institute of Continuing Vocational Training by 31 May of the subsequent year. The application shall include details regarding the training covered (title, dates, duration, venue, number, gender, qualifications of participants, details of facilitators, format of the training, financial statement with relevant supporting documents as well as opinion and assessment note of the employee council). In addition, the application shall include specific certificates mentioning the total payroll expenses as well as number of employees.

⁷ 20% with respect to wages of nonqualified employees who have less than 10 years of service as well as of employees older than 45.

Guidelines around the incentive are available online.⁸

Aid scheme for businesses severely affected by the rise in energy prices

(Régime d'aides aux entreprises particulièrement touchées par la hausse des prix de l'énergie)

Description of benefits

Energy-intensive businesses may be granted aid to cover part of their extra costs for natural gas, electricity, heat and cooling during a determined period. The intensities and amounts of the aid are modulated according to the energy intensity and economic situation of the company. The more exposed the company is to the energy crisis, the higher the aid granted.

The amount of the aid is calculated based on the business's eligible costs (calculated for each month using a specific formula) and is capped at certain amounts.

Furthermore, under certain conditions, aid may be granted to applicants whose purchase of energy products and electricity amount to at least 2% of their turnover or production value in a determined period.

Businesses in the road freight transport, building and artisanal food production sectors that are highly dependent on fuels for transport and delivery may be granted aid when the monthly extra costs of diesel fuel are 25% higher than the average unit costs of diesel fuel incurred by the business during a determined reference period.

Aid may be granted to applicants operating a heat production plant or a biogas production plant or heat network if certain conditions are met.

Guidelines around incentive applications

The application for aid must be filed online within certain deadlines, depending on the type of aid.

Guidelines around the incentive are available online.⁹

⁸ <https://www.lifelong-learning.lu/Detail/Article/Aides/cofinancement-de-la-formation/en>

Medium-term and long-term loans granted by the SNCI

(Prêts à moyen et à long terme octroyés par la SNCI)¹⁰

Description of benefits

The SNCI (National Loan and Investment Body, a public-law banking institution that aims to encourage business investments, startups and research initiatives) grants medium-term and long-term loans to industrial enterprises and service providers whose activity represents a significant impact on economic development and whose equity amounts to at least EUR25,000. The loans are intended to finance:

- ▶ Professional equipment needed for production or service provision activities, including safety or environmental protection equipment
- ▶ Land used for professional purposes only

Parts of buildings used for nonprofessional purposes, automotive equipment and inventory may not be financed by medium-term and long-term loans.

Medium-term and long-term loans may only be requested for investment projects with a value of at least EUR100,000.

Guidelines around incentive applications

The loans are applicable to future investments. To receive loans, the applicant must send an application to SNCI with the following documentation:

- ▶ Description of the enterprise making the investment (including identity of shareholders and management, description of activities, main clients and suppliers, etc.)
- ▶ Detailed description, illustrated with figures, of the planned investment
- ▶ Financing plan
- ▶ Three- to five-year business plan
- ▶ (Audited) annual accounts of the business for the last three financial years

¹⁰ <https://www.snci.lu/products/medium-long-term-loans/>

Direct loan for research, development and innovation granted by the SNCI

(Prêt direct Recherche, Développement et Innovation octroyés par la SNCI)¹¹

Description of benefits

The SNCI grants direct loans for research, development and innovation (RD&I) to innovative SMEs that possess a valid business license for at least four years and have a substantial impact on national economic development.

The loans are intended to be granted to “innovative enterprises,” i.e., to enterprises that can demonstrate on the basis of a business plan that they will develop and commercialize products, services, processes or organizational methods that are new or substantially improved or changed as compared to the state of the art in the concerned industry sector, and which carry a risk of technical or industrial failure. The innovative character of the processes and organizational methods should be of a technological nature, except for the measures in favor of the protection of the environment, natural habitats, human and work environments. The innovative character of products or services should be of a technological, commercial and/or organizational nature. This loan cannot be combined with other SNCI instruments.

The amount of the RD&I loans takes into account the extent of the project and the size of the company, without exceeding, however, EUR250,000 and 40% of eligible costs. The company must co-finance with its own resources at least 35% of the investments and expenses. Additionally, the amount of the SNCI loan or loans cannot exceed the total amount of equity of the loan beneficiary. The maximum loan duration is 10 years and is fixed on the basis of the project requirements.

Guidelines around incentive applications

The loans are applicable to future investments. To obtain a loan, the applicant must send an application to SNCI before the start of the innovation project with the following documentation:

- ▶ Information regarding the applicant (creation date, shareholders, activity, main suppliers/clients, team)

¹¹ <https://www.snci.lu/products/direct-rdi-loan/>

- ▶ Project description (new product or service created, marketing strategy, project team, market, competition, and/or competitive advantage, project impact)
- ▶ Financial statements for the past three financial years (including liabilities owed to banking institutions and evolution of investments)
- ▶ Business plan or budget of the company covering at least three years that contains an income statement and cash flow analysis (operational cash flow, investment and financing)
- ▶ Plan of financing and/or disbursement for the said project

Loan for innovative enterprises granted by the SNCI

(Prêt entreprises novatrices octroyé par la SNCI)¹²

Description of benefits

The SNCI grants loans for “innovative enterprises” to young innovative SMEs that have a business license, have been in existence for less than eight years and have a substantial impact on national economic development.

The loans are intended to be granted to “innovative enterprises,” i.e., enterprises that can demonstrate on the basis of a business plan that they will develop and commercialize products, services, processes or organizational methods that are new or substantially improved or changed as compared to the state of the art in the concerned industry sector, and that carry a risk of technical or industrial failure. The innovative character of the processes and organizational methods should be of a technological nature, except for the measures in favor of the protection of the environment, natural habitats, human and work environments. The innovative character of products or services should be of a technological, commercial and/or organizational nature.

The amount of the loan takes into account the extent of the project and the size of the company, without exceeding EUR1.5 million and 35% of eligible costs. Additionally, the amount of the loans cannot at any time exceed the amount of shareholders' equity. The maximum loan duration is 10 years and is fixed on the basis of the project requirements.

¹² <https://www.snci.lu/products/loan-innovative-enterprises/>

Guidelines around incentive applications

The loans are applicable to future investments. To receive loans, the applicant must send an application to SNCI with the following documentation:

- ▶ Presentation of the applicant (creation date, shareholders, activity, main suppliers/clients, team)
- ▶ Project description (new product or service created, marketing strategy, project team, market, competition, and/or competitive advantage, project impact)
- ▶ Financial statements for the past three financial years (including liabilities owed to banking institutions and evolution of investments)
- ▶ Business plan or budget of the company covering at least three years that contains an income statement and cash flow analysis (operational cash flow, investment and financing)
- ▶ Plan of financing and/or disbursement for the said project

Equipment loan

(Crédit d'équipement)¹³

Description of benefits

The SNCI grants equipment loans to SMEs that have a business license for commercial activities, skilled trades, industrial activities and certain liberal professions, as well as other professions or activities covered by other specific legal permits.

Equipment loans are granted for financing assets (professional equipment, including safety or environmental protection equipment) and plots of land used for business purposes only. Parts of buildings acquired for nonprofessional use, vehicle fleet and stock (raw materials and finished products) are not eligible for cover by an equipment loan.

The equipment loan can cover between 25% and 60% of eligible investment costs that amount at a minimum to EUR12,500 (up to 75% in case of business startups and absent any minimum investment requirement in their first three years of existence). The amount of the loan is capped at EUR2.5 million per project, except in case of a special authorization from the Ministers of Finance and Economy.

¹³ <https://www.snci.lu/products/equipment-loans/>

Guidelines around incentive applications

To receive loans, the applicant must send an application to SNCI via its usual bank.

Depreciation by decreasing annual installments

(*Amortissement par annuités décroissantes*)

Description of benefits

Standard depreciation for wear and tear may be taken using the annual declining balance depreciation method, which may be calculated by applying a fixed rate to the book value (remaining value). The rate of the annual declining balance depreciation applicable to materials and equipment used exclusively in scientific or technical research activities may not exceed four times the rate that would be applied for straight-line depreciation, and it may not be greater than 40%.

If a taxpayer does not choose the method of the annual declining balance depreciation, but instead opts for the method of the linear depreciation (straight-line depreciation over the useful life of the asset), the depreciation of an asset for a given year can, upon request, be deferred until at the latest the end of the useful life of such asset. Using this option, for example, allows taxpayers to pay corporate income tax and therefore to use investment tax credits or other credits that are about to expire because the 10-year carryforward period is about to expire.

Guidelines around incentive applications

The annual declining balance depreciation on the R&D assets is applicable to current investments. To use the accelerated depreciation on the R&D assets, a specific appendix must be included in the annual income tax return with the following information:

- ▶ Acquisition or production date
- ▶ Acquisition or production price
- ▶ Ordinary useful life
- ▶ Amount of annual depreciation

Special depreciation

(*Amortissement spécial*)

Description of benefits

Special depreciation is *inter alia* applicable to fixed assets purchased or constructed for the purposes of protecting the environment, reducing waste or saving energy (e.g., implementation of new techniques for rational use of energy or implementation of new and renewable energy sources, as well as recovery of energy from industrial processes).

The acquisition or production cost of the investment must be at least EUR2,400 (excluding VAT). The special depreciation may not exceed 80% of the acquisition or production costs of the qualifying assets, and it may be taken during the financial year in which the purchase or formation of the fixed assets occurs, during one of the four subsequent years or on a straight-line basis in installments over five years. The special depreciation does not exclude the application of standard depreciation for wear and tear. Standard depreciation should be calculated on the net book value remaining after deduction of the special depreciation and should be based on the ordinary useful life.

The annual declining balance depreciation (see above) is excluded if special depreciation is used.

Furthermore, the application of the special depreciation does not exclude the grant of the investment tax credit.

Guidelines around incentive applications

The incentive is applicable to newly acquired or constructed fixed assets. To benefit from the special depreciation, the existence and conformity of the qualifying fixed assets must be certified by the ministers whose areas of responsibility include the environment, energy and labor, pursuant to an application to be filed with the tax authorities no later than three months after the close of the financial year in which the fixed assets were purchased or formed.

Furthermore, a specific application for the special depreciation must be appended to the annual income tax return and supported by the certificate of approval described above.

Value-added tax (VAT) incentives and considerations

Description of benefits

Franchise regime for small enterprises

In principle, a Luxembourg VAT-taxable person that supplies goods or renders services, who has an annual turnover, which does not exceed EUR35,000 on an annual basis and only realizes domestic supplies, may benefit from a franchise of VAT. This VAT-taxable person has no right to recover input VAT, but should not charge VAT on the invoices they issue and should inform the VAT authorities on an annual basis about the evolution of his turnover. The aim of this measure is to release small enterprises from the VAT compliance burden.

VAT exemption for education under conditions

The provision of children's or young people's education, school and university education, vocational training or retraining, including the supply of services and of goods closely related thereto, by private organizations recognized by the competent Luxembourg authorities are exempt from VAT. As such, no VAT should be charged by the qualifying organizations for the education. This exemption also covers tuition given privately by teachers and covering school or university education.

Subsidies not directly linked to a supply

Subsidies, when not directly linked to a supply, fall outside the VAT scope. Hence, if a company receives a subsidy that is not directly linked to the price of its supplies, no VAT is due. No VAT should, for instance, be due on the subsidy received to support the construction or modernization of research infrastructures.

Partial tax exemption of income derived from qualifying IP

(Exonération partielle des revenus produits par certains droits de propriété intellectuelle)

Description of benefits

Article 50ter of Income Tax Law

The Law of 17 April 2018 introduced, as from tax year 2018, a new IP regime (new Article 50ter of the Income Tax Law), which provides for an 80% tax exemption of the net income derived from qualifying IP, provided certain conditions are met.

In line with the nexus approach, qualifying IP assets are patents and other IP assets that are functionally equivalent to patents if those IP assets are legally protected under national or international provisions. Functionally equivalent assets comprise utility models and supplementary protection certificates on patents for pharmaceutical and plant protection products, as well as extensions of supplementary protection certificates for products intended for pediatric use, plant breeders' rights and orphan drug designations. Article 50 ter also includes copyrighted software in the list of qualifying IP assets, whereas marketing-related intangible assets such as trademarks or domain names no longer qualify under the new IP regime.

Under the nexus approach, the aforementioned assets are only eligible for the new IP regime if they result from an actual R&D activity undertaken by the taxpayer itself.

Based on the agreed nexus approach, the formula to be applied broadly corresponds to the proportion of qualifying expenditures compared to overall expenditures (nexus ratio) applied to an adjusted and compensated net eligible income from IP asset. The net eligible income is defined as the gross eligible income minus (i) the overall expenditures and (ii) the expenditures that are indirectly linked to a qualifying IP asset. The determination of the latter must be made in line with the general rules applicable to the determination of taxable income, taking into account all relevant facts and circumstances for a given case. The net eligible income must further be adjusted and compensated. According to the commentaries of the Law, the adjustment aims at ensuring that the net eligible income benefits from the partial tax exemption only insofar as it exceeds the amount of (direct and indirect) expenses in relation with the qualifying IP asset, while the compensation aims at offsetting the losses incurred by one qualifying IP asset with the profits incurred by another qualifying IP asset.

Guidelines around incentive applications

The tax exemption is claimed via the filing of a specific form to be added to the annual income tax return.

3. Eligibility requirements

The following R&D activities are eligible for the various R&D incentives:

- ▶ R&D projects or programs:
 1. Fundamental research that aims primarily to acquire new knowledge of the underlying foundations of phenomena and observable facts, without any direct commercial application or use in view.
 2. Industrial research that aims to acquire new knowledge and skills for developing new products, processes or services or for bringing about a significant improvement in existing products, processes or services. It comprises the creation of component parts of complex systems, and may include the construction of prototypes in a laboratory environment or in an environment with simulated interfaces to existing systems as well as of pilot lines, when necessary for the industrial research and notably for generic technology validation.
 3. Experimental development activity that consists of acquiring, combining, shaping and using existing scientific, technological, business and other relevant knowledge and skills with the aim of developing new or improved products, processes or services. This includes, among others, activities aiming at the conceptual definition, planning and documentation of new products.
- ▶ Technical feasibility studies: The evaluation and analysis of the potential of a project, which aims at supporting the process of decision-making by objectively and rationally uncovering its strengths and weaknesses, opportunities and threats, as well as identifying the resources required to carry it through and, ultimately, its prospects for success.
- ▶ Support for the construction or modernization of research infrastructures: Research infrastructures are facilities, resources and related services that are used by the scientific community to conduct research in their respective fields and covers scientific equipment or sets of instruments, knowledge-based resources such as collections, archives or structured scientific information, enabling information and communication technology-based infrastructures such as grid, computing, software and communication, or any other entity of a unique nature essential to conduct research. Such infrastructures may be “single-sited” or “distributed” (an organized network of resources) in accordance with Article 2(a) of Council Regulation (EC) No. 723/2009 of 25 June 2009 on the community legal framework for a European Research Infrastructure Consortium (ERIC).
- ▶ Support for young innovative companies: The beneficiary of the aid must demonstrate, by means of an evaluation carried out by an external expert, that it will in the foreseeable future develop products, services or processes that are new or substantially improved compared to the state of the art in its industry, and which carry a risk of technological or industrial failure; or whose R&D costs represent at least 10% of its total operating costs in at least one of the three years preceding the granting of the aid or, in the case of a startup enterprise without any financial history, in the audit of its current fiscal period, as certified by an external auditor.
- ▶ Aid for process and organizational innovation:
 1. Process innovation aims to implement a new or significantly improved production or delivery method (including significant changes in techniques, equipment or software), excluding minor changes or improvements, increases in production or service capabilities through the addition of manufacturing or logistical systems that are very similar to those already in use, ceasing to use a process, simple capital replacement or extension, changes resulting purely from changes in factor prices, customization, localization, regular, seasonal and other cyclical changes and trading of new or significantly improved products.

2. Organizational innovation aims to implement a new organizational method in an enterprise's business practices, workplace organization or external relations, excluding changes that are based on organizational methods already in use in the undertaking, changes in management strategy, mergers and acquisitions, ceasing to use a process, simple capital replacement or extension, changes resulting purely from changes in factor prices, customization, localization, regular, seasonal and other cyclical changes and trading of new or significantly improved products.

Eligible expenses include:

- ▶ R&D projects or programs:
 1. Costs of buildings and land, to the extent and for the duration period used for the project. With regard to buildings, only the depreciation costs corresponding to the life of the project, as calculated on the basis of generally accepted accounting principles, are considered eligible. For land, costs of commercial transfer or actually incurred capital costs are eligible.
 2. Personnel costs (researchers, technicians and other supporting staff to the extent employed on the project)
 3. Costs of contractual research, knowledge and patents bought or licensed from outside sources at arm's-length conditions, as well as consultancy or similar services used exclusively for the project
 4. Costs of instruments and equipment to the extent and for the period used for the project. Where such instruments and equipment are not used for their full life for the project, only the depreciation costs corresponding to the life of the project, as calculated on the basis of generally accepted accounting principles, are considered eligible.
 5. Additional overheads and other operating expenses, including costs of materials, supplies and similar products, incurred directly as a result of the project
- ▶ Technical feasibility studies: costs of the study
- ▶ Support for the construction or modernization of research infrastructures: investment costs in intangible and tangible assets
- ▶ Innovation aid for SMEs:
 1. Costs for obtaining, validating and defending patents and other intangible assets
 2. Costs for secondment of highly qualified personnel from a research and knowledge-dissemination organization or a large enterprise, working on research, development and innovation activities in a newly created function within the beneficiary and not replacing other personnel
 3. Costs for consultancy services provided by external consultants that are neither a continuous or periodic activity nor relate to the enterprise's usual operating costs, such as routine tax consultancy services, regular legal services or advertising

4. Innovation advisory and support services

- ▶ Aid for process and organizational innovation:
 1. Personnel costs
 2. Costs of instruments, equipment, buildings and land to the extent and for the period used for the project
 3. Costs of contractual research, knowledge and patents bought or licensed from outside sources at arm's-length conditions
 4. Additional overheads and other operating costs, including costs of materials, supplies and similar products, incurred directly as a result of the project

Costs and expenses relating to the launch and marketing of the products, services or procedures developed as well as interest payable on the financing obtained for research projects are excluded.

These aids are intended for craft and commercial businesses with a business permit granted by the Ministry of Small and Medium-Sized Businesses. They also apply to engineers and architects during their first three years of business (as of the date of their first Luxembourg or foreign business permit). However, certain activities are excluded from eligibility for the aid.

Specific eligibility requirements for each incentive are as below:

- ▶ Medium-term and long-term loans
 - ▶ Eligible entities include industrial enterprises and service providers with a significant impact on economic development and whose equity amounts to at least EUR25,000. The loans are intended for the financing of:
 1. Professional equipment needed for the production or service provision activities, including safety or environmental protection equipment
 2. Land used for professional purposes only
 - ▶ Parts of buildings used for non-professional purposes, private automotive equipment and inventory cannot be financed by medium-term and long-term loans. Medium-term and long-term loans may only be requested for investment projects with a value of at least EUR100,000.
- ▶ Annual declining balance depreciation on the R&D assets
 - ▶ Eligible entities include all entities or individual subjects exercising a commercial activity in Luxembourg and liable with this income to Luxembourg income tax, provided that the taxpayer who uses the asset is also the owner of the asset. Eligible assets include all assets except buildings. Higher depreciation rates for materials and equipment used exclusively in scientific or technical research activities are available.

- ▶ Tax exemptions
 - ▶ Eligible entities include all entities or individual subjects exercising a commercial activity in Luxembourg and with income liable to Luxembourg income tax. Eligible assets under the new IP regime include patents and other IP assets that are functionally equivalent to patents, including copyrighted software.
- ▶ Direct loan for RD&I
 - ▶ Eligible entities are any innovative SME, provided they have a valid business permit (issued in accordance with the law of 2 September 2011) for at least four years.
 - ▶ Eligible costs relate to investments made in depreciable assets and negative operational cash flows carried out within the project of business development. This includes costs related to equipment, machinery and professional facilities, personnel expenditures, patent filing fees, expenses related to contract research, use of data banks, technical libraries and laboratories, acquisition of patents/licenses, project feasibility studies, innovation support services like market research, implementation of new regulatory standards, testing and certification as well as a one-year budget related to marketing/promotion of new products/services. Production, distribution costs, land and buildings are, however, excluded.
- ▶ Loan for innovative enterprises
 - ▶ Eligible entities are young, innovative SMEs, provided they have a valid business permit (issued in accordance with the law of 2 September 2011), have been in existence for less than eight years and have a substantial impact on national economic development.
 - ▶ Eligible costs relate to investments made in depreciable assets and negative cash flows resulting from the business plan presented by the innovative enterprises. Eligible costs include, in particular, land, buildings or parts of buildings used exclusively for professional purposes, equipment, machinery and professional facilities, materials/supplies, personnel expenditures, patent filing fees, expenses related to contract research, use of data banks, technical libraries and laboratories, acquisition of patents/licenses, innovation support services like market research, implementation of new regulatory standards, testing and certification and costs of the commercial launch, as well as the required working capital.
- ▶ Equipment loan
 - ▶ Eligible entities are SMEs that have a business permit for commercial activities, skilled trades, industrial activities and certain liberal professions, as well as other professions or activities covered by other legal permits.
- ▶ Equipment loans are granted for financing professional equipment, including safety or environmental protection equipment and plots of land used for business purposes only.
- ▶ Special depreciation
 - ▶ Eligible entities are any commercial, industrial, mining or craft enterprises established in the territory of the Grand Duchy of Luxembourg.
 - ▶ Eligible costs are fixed assets purchased or constructed for the purposes of protecting the environment, reducing waste or saving energy (e.g., implementation of new techniques for rational use of energy or implementation of new and renewable energy sources, as well as recovery of energy from industrial processes). The acquisition or production costs of the investment must be at least EUR2,400 (excluding VAT). The depreciation may not exceed 80% of the acquisition or production costs of the qualifying assets.

4. IP and jurisdictional requirements

Effective date

The qualifying IP right must have been constituted, developed or improved after 31 December 2007 in the framework of R&D activities.

Qualifying IP

Qualifying IP includes the following:

- ▶ Software copyrights
- ▶ Patents
- ▶ Utility models
- ▶ Supplementary protection certificates on patents for pharmaceutical and plant protection products
- ▶ Extensions of supplementary protection certificates for products intended for pediatric use
- ▶ Plant breeders' rights
- ▶ Orphan drug designations

Under the new IP regime, only assets resulting from an actual R&D activity undertaken by the taxpayer itself are eligible.

IP not qualifying under the IP regime

- ▶ Trademarks
- ▶ Designs
- ▶ Domain names

Types of income

Eligible income includes:

- ▶ Income received for the use or the right to use a qualifying IP asset
- ▶ Capital gains derived from the sale of a qualifying IP asset
- ▶ Embedded IP income derived from the sale of products or services
- ▶ Indemnities received in the framework of a judicial proceeding or an arbitration involving a qualifying IP asset

Calculation of income

- ▶ Income from IP
 - ▶ The net eligible income is defined as the gross eligible income minus (i) the overall expenditures and (ii) the expenditures that are indirectly linked to a qualifying IP asset. The net eligible income is then adjusted and compensated and multiplied by the nexus ratio and the result hereof is reduced by 80%.
- ▶ Capital gains on the disposal of IP
 - ▶ Capital gains realized on the disposal of qualifying IP will benefit from an 80% exemption. The capital gain will remain taxable up to the extent of the expenses in direct connection with the income as well as depreciations and write-downs that have reduced the tax base of the taxpayer in the tax year of the disposal or any previous tax year. For the rules applicable under the new regime, please refer to the section above.
- ▶ IP regime rate
 - ▶ Corporate income tax/municipal business tax: for 2021, the general aggregated tax rate (consisting of corporate income tax, solidarity surtax and municipal business tax) applicable to the Luxembourg tax base amounts to 24.94% for companies registered in the municipality of Luxembourg.
- ▶ Net worth tax: full exemption for qualifying IP rights under the IP regime.

Can work be performed outside the country?

There are some restrictions regarding expenditures to be considered as qualifying expenditures.

Must the IP be registered or owned locally?

Yes.

5. Technology or innovation zones

(Investissement dans des pôles d'innovation/Gestion de pôles d'innovation)

Specific aid is foreseen for (i) the construction or modernization of innovation clusters and (ii) the operation of innovation clusters. An innovation cluster is defined as a structure or organized group of independent parties (such as innovative startups, SMEs, as well as research and knowledge dissemination organizations, nonprofit organizations and other related economic actors) designed to stimulate innovative activity through promotion, sharing of facilities and exchange of knowledge and expertise and by contributing effectively to knowledge transfer, networking, information dissemination and collaboration among the undertakings and other organizations in the cluster.

Its aim is to promote innovation by encouraging interaction, the sharing of facilities and the exchange of knowledge and expertise for the purpose of R&D or innovation as well as to contribute to technology transfer, networking and the dissemination of scientific and technical information between the enterprises and research organizations that compose the grouping. The aid can cover two types of expenses, such as investments in an innovation cluster and/or the costs for the operation of an innovation cluster. All enterprises and all private research and knowledge dissemination organizations established in Luxembourg are eligible for these schemes.

The recipient of the aid for the construction or modernization of an innovation cluster must be responsible for managing the installations and activities of the innovation cluster as well as access to the premises. Access to the cluster's premises, facilities and activities must be open to several users and be granted on a transparent and nondiscriminatory basis. Enterprises that have financed at least 10% of the investment costs of the innovation cluster may be granted preferential access under more favorable conditions. To avoid overcompensation, such access shall be proportional to the enterprise's contribution to the investment costs, and these conditions shall be made publicly available. The fees charged for using the cluster's facilities and for participating in the cluster's activities shall correspond to the market price or reflect their costs.

The eligible costs to the investment aid for the construction or modernization of innovation clusters shall be the investment costs in intangible and tangible assets. The eligible costs for the aid for the operation of innovation clusters comprise personnel costs and administrative expenses related to the following activities:

- ▶ Animation of the cluster to facilitate collaboration, information sharing and the provision or channeling of specialized and customized business support services
- ▶ Marketing of the cluster (e.g., promotion campaigns) to attract new members to the innovation cluster and to increase visibility
- ▶ Management of the cluster's facilities
- ▶ Organization of training programs, workshops and conferences to facilitate the transfer of knowledge, networking among the innovation cluster members and transnational cooperation

The investment aid for the construction or modernization of innovation clusters, as well as the aid for the operation of innovation clusters, shall not exceed 50% of the total eligible costs during the period over which the aid is granted. The investment aid for the construction or modernization of innovation clusters could, however, be increased by 5% if the cluster is located in certain assisted geographical areas.

Both the investment aid for innovation clusters as well as the aid for the operation of innovation clusters are applicable to the future project of the innovation clusters' operation. To receive the aid, the applicant must fulfill and submit the aid application to the Ministry of Economy before the start of the project in the company. Guidelines related to both incentives are available online.¹⁴

6. Role of governmental bodies in administering incentives

Ministry of the Economy

The Directorate of Research, Intellectual Property and New Technologies within the Ministry of the Economy is, together with the Ministry of Finance, in charge of granting incentives for research and innovation projects according to the law of 17 May 2017. Applications for R&D projects must be sent to this department. The Ministry of the Economy and the Ministry of Finance will jointly decide to grant an incentive after soliciting the opinion of a consulting commission if required. The Ministry of the Economy, together with the Ministry of Finance, is also in charge of aid schemes as provided for by the law of 9 August 2018 on aid schemes in favor of SMEs.

Luxinnovation GIE (National Agency for Innovation and Research)

Luxinnovation is an agency that offers support at all stages of innovation and research projects and provides customized services for project applicants (e.g., identification of the needs of the enterprise or the research organization, guidance on the appropriate funding tool, support for putting together aid application files).

Luxembourg Institute of Intellectual Property

The Luxembourg Institute of Intellectual Property (IPIL) is an economic interest group whose mission is to coherently bring together national and international expertise on IP and make that expertise available to the economic and institutional actors to be a driver of growth for Luxembourg. As part of its mission, the IPIL, among others, conducts studies and projects to advise the government and develops and provides support services to companies, research actors, public institutions and any other interested audience.

¹⁴ <https://guichet.public.lu/en/entreprises/financement-aides/aides-recherche-developpement/rdi/aides-poles-innovation.html>

SNCI

The SNCI is a public-law banking institution with legal personality whose capital is fully owned by the state of Luxembourg. The SNCI specializes in medium- and long-term financing of Luxembourg-based companies. The SNCI's financing instruments are investments in fixed assets, innovation and exports.

7. Administrative requirements

Applicants must submit a duly completed application for financial aid to the Directorate of Research, Intellectual Property and New Technologies within the Ministry of the Economy. Aid is, in general, paid out after completion of the investment program; one or several installments may, however, be paid as the investments or operations progress.

8. Statutory reference

The incentives related to R&D and innovation are governed by the amended law of 17 May 2017 relating to the promotion of R&D and innovation.¹⁵

The provisions related to the investment tax credit, the special regime for expatriate highly skilled employees, the employees profit-sharing regime, the accelerated and special depreciation, and the partial exemption of income derived from qualifying IP are embedded in the amended Law of 4 December 1967 on Income Tax.¹⁶

The VAT measures can be found in the amended law of 12 February 1979 on Value Added Tax.¹⁷

The application of the regime of medium-term and long-term loans, direct loans for RD&I, loans for innovative enterprises and equipment loans granted by the SNCI is further detailed on the SNCI's webpage.¹⁸

1. Overview

A wide range of incentives and financial assistance is offered to attract investments in R&D activities.

Companies providing R&D services are eligible for Pioneer Status (PS) or an investment tax allowance (ITA) for qualifying R&D capital expenditures. A double deduction is available for R&D revenue expenditures incurred by companies carrying out in-house R&D or expenditures related to the services of approved R&D service providers. There is also a variety of local government funding programs to support companies in various industries. Some tax incentives, especially PS, ITA and other tax incentives, are generally mutually exclusive, and taxpayers may apply for only one of the incentives. For the incentives mentioned below to be available, the R&D activities must be carried out in Malaysia.

Types of incentives	
Tax credits	<input type="checkbox"/>
Cash grants	<input checked="" type="checkbox"/>
Loans	<input type="checkbox"/>

2. Incentives available

Name of incentive	PS	ITA	Special incentive scheme*	Incentives for researchers to commercialize research findings	Double deductions	Financial assistance	R&D grants
Type of incentive	<ul style="list-style-type: none"> ▶ Tax holiday 	<ul style="list-style-type: none"> ▶ Tax allowance 	<ul style="list-style-type: none"> ▶ Tax exemption ▶ Tax allowance ▶ Cash grants 	<ul style="list-style-type: none"> ▶ Tax exemption 	<ul style="list-style-type: none"> ▶ Super deduction (200%) 	<ul style="list-style-type: none"> ▶ Financial support 	<ul style="list-style-type: none"> ▶ Cash grants

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

PS

Description of benefits

R&D PS incentive

Qualifying taxpayers are eligible for a 100% income tax exemption for 5 to 10 years (Pioneer Period) on eligible R&D income; therefore, the cash savings value potential depends on the amount of statutory income (income after deduction of allowable expenses and capital allowances) generated during the tax relief period. There may be certain conditions imposed, such as investments in fixed assets, local spending and/or R&D expenditures. Generally,

no specific intellectual property (IP) requirements are imposed. However, in practice, IP ownership requirements may be imposed depending on the facts of each case.

If the taxpayer suffers business loss during the Pioneer Period (pioneer loss), any unabsorbed pioneer loss after the end of the Pioneer Period is allowed to be carried forward up to a maximum of seven years of assessment.

PS requires taxpayers undertaking the R&D activities to seek approval from the authorities. Some of the activities that qualify for PS are:

- ▶ Contract R&D
- ▶ Industrial design services

Guidelines around incentive applications

PS is applicable to future investments only (i.e., only projects that have not yet commenced at the time of application are eligible). If projects have already commenced, the authorities take the view that the projects do not require an incentive. Therefore, the application for the incentive should be submitted before the commencement of the respective R&D activity or production of the product concerned. The incentive is claimed when the company files its corporate income tax return (i.e., Form C) for the particular year of assessment (YA). The deadline to submit the income tax returns for companies is seven months from the close of the accounting period.

ITA

Description of benefits

Taxpayers are eligible for 50% to 100% of ITA on qualifying R&D capital expenditures incurred within 10 years. The ITA can be offset against 70% of statutory income, and the cash savings value potential depends on the amount of qualifying capital expenditures expected to be incurred. There may be conditions imposed, such as investments in fixed assets, local spending and/or R&D expenditures. Generally, no specific IP requirements are imposed. However, in practice, IP ownership requirements may be imposed depending on the facts of each case. Unused ITA can be carried forward indefinitely. ITA requires taxpayers undertaking the R&D activities to seek approval from the authorities.

Guidelines around incentive applications

ITA is applicable to future investments. If projects have already commenced, the authorities take the view that the projects do not require an incentive. Therefore, the application for the incentives should be submitted before the commencement of the R&D activity or production of the promoted product.

The incentive is claimed when the company files its Form C for the particular YA. The deadline to submit tax returns for companies is seven months from the close of the accounting period.

For both PS and ITA, the Malaysian Investment Development Authority (MIDA) has identified a long list of activities and manufactured products as “promoted activities” and “promoted products.” The list is under constant review and is updated from time to time to bring it in line with the government’s investment policies.

IP incentive

Description of benefits

Qualifying taxpayers are eligible for a 100% income tax exemption on qualifying IP income for a period of up to 10 years. The exemption will only apply to income derived from IP developed in Malaysia, subject to the gazette order on the Modified Nexus Approach, which was yet to be released as of February 2023.

Guidelines around incentive applications

Upon approval of the application for the incentive, the incentive is claimed when the company files its corporate income tax return (i.e., Form C) for the particular YA. The deadline to submit the income tax returns for companies is seven months from the close of the accounting period.

Special incentive scheme

Description of benefits

The special incentive scheme is a pre-packaged incentive scheme approved by the Minister of Finance (MOF). It offers two types of incentives:

- Income tax exemption – for PS: taxpayers may be able to negotiate up to 100% income tax exemption for a specific period (e.g., 10 years). Unabsorbed pioneer loss after the end of the Pioneer Period is allowed to be carried forward up to a maximum of seven years of assessment.
- Qualifying capital expenditure – for ITA: taxpayers may be able to negotiate up to a 100% allowance on qualifying capital expenditures incurred for a specific period (e.g., 10 years). The allowance can be offset against up to 100% of statutory income. Any unused tax allowance may be carried forward indefinitely.

Guidelines around incentive applications

The special incentive scheme is applicable to future investments only. If projects have already commenced, the authorities take the view that the projects do not require an incentive. Therefore, the application for the incentive should be submitted prior to commencement of the R&D activity or production of the promoted product.

The incentive will be claimed when the company files its Form C for the particular YA. The deadline to submit tax returns for companies is seven months from the close of the accounting period.

Incentives for researchers to commercialize research findings

Description of benefits

Incentive for researchers to commercialize R&D findings

Researchers who undertake research focused on value creation will be given a 50% tax exemption for five years on the income that they receive from the commercialization of their research findings. Generally, no specific IP requirements are imposed. However, in practice, IP ownership requirements may be imposed depending on the facts of each case. The incentive requires the entity undertaking the R&D commercialization activities to seek approval from the authorities.

Guidelines around incentive application

The incentive is applicable to future investments only and for commercialization of resource-based and non-resource-based R&D findings of approved public research institutions. The commercialization includes the process of transforming ideas, knowledge or an invention into a product or process that has an industrial application or that is marketable. Approved public research institutions include the Malaysian Agricultural Research and Development Institute (MARDI), the Malaysian Palm Oil Board (MPOB), the Malaysian Rubber Board (MRB), the Malaysian Cocoa Board (MCB), Mineral Research Centre (PPM) and Forest Research Institute Malaysia (FRIM), as well as public institutions of higher learning, such as universities approved by the MOF.

The incentive will be claimed when the company files its Form C for the particular YA. The deadline to submit tax returns for companies is seven months from the close of the accounting period.

Incentive for investment in companies undertaking commercialization of public sector R&D

A company that invests in its subsidiary company engaged in the commercialization of resource-based R&D findings by a public research institute or public institute of higher learning in Malaysia is eligible for a tax deduction equivalent to the amount of investment made in the subsidiary company. This investment is to be in the form of equity or a cash contribution. Any loan or advance made by the investing company to the subsidiary is not eligible for the deduction unless converted to equity before the commencement of the tax relief period of the subsidiary.

Effective from 7 November 2020, the incentive was expanded to include investments in subsidiary companies engaged in the commercialization of non-resource-based R&D findings by a public research institute or a public or private institute of higher learning in Malaysia. The application for approval for the project of commercialization must be received by MIDA between 7 November 2020 and 31 December 2025.

Incentive for companies undertaking commercialization of public sector R&D

A subsidiary company that undertakes the commercialization of resource-based R&D findings by a public research institute or public institute of higher learning in Malaysia is eligible for PS, with an income tax exemption of 100% of statutory income for 10 years.

A subsidiary company that undertakes the commercialization of non-resource-based R&D findings by a public research institute or a public or private institute of higher learning in Malaysia is eligible for an income tax exemption of 100% of statutory income for 10 consecutive YAs.

Guidelines around incentive application

The incentive will be claimed when the company files its Form C for the particular YA. The deadline to submit tax returns for companies is seven months from the close of the accounting period.

Double deductions

Description of benefits

Taxpayers are eligible for a 200% deduction of qualifying R&D revenue expenditures for eligible R&D activities excluding capital expenditure. The double deduction is applicable only to revenue expenditures, including in-house R&D expenditure, cash contributions or donations made to approved research institutes and payments for the use of the services of approved research companies, contract R&D companies and R&D companies. Approval of each research project has to be obtained before claiming a double deduction on qualifying R&D revenue expenditures.

Effective 1 January 2021, for in-house R&D expenditure, the double deduction is only available if not more than 30% of the R&D expenditure is incurred outside Malaysia. If more than 30% of the R&D expenditure is incurred outside Malaysia, a single deduction will be granted.

Guidelines around incentive applications

The double deduction is claimed when the company files its Form C for the particular YA. The deadline to submit tax returns for companies is seven months from the close of the accounting period. R&D revenue expenditures that qualify for double deduction include raw materials and manpower used in research; technical services procured; travel costs; maintenance; and rental of motor vehicles, buildings and equipment.

Industrial Building Allowance for buildings used for R&D activities

Description of benefits

Industrial Building Allowance (IBA) can be claimed on qualifying capital expenditure incurred on a building used for the purpose of R&D activities. The qualifying expenditure includes capital expenditure incurred on alteration or renovation of rented premises.

The IBA claim consists of an allowance to set off against a company's adjusted income before arriving at statutory income for income tax purposes. The allowance rates for IBA are as follows:

- ▶ Initial allowance: 10%
- ▶ Annual allowance: 3%

Guidelines around the allowance claim

IBA is claimed when the company files its corporate income tax return (i.e., Form C) for the particular YA. The deadline to submit the income tax returns for companies is seven months from the close of the accounting period. The allowance is not mutually exclusive to other incentives claimed.

Financial assistance

Description of benefits

Financial assistance schemes currently include the International Collaboration Fund (ICF), Pre-Commercialization Funds and the Commercialization of Research and Development Fund. The amount of funding approved will be determined based on the merits of each application and the value potential varies depending on the fund approved. Applicants for the financial assistance schemes are required to submit their application to the respective authorities as follows:

- ▶ International Collaboration Fund: Ministry of Science, Technology and Innovation (MOSTI)
- ▶ Pre-Commercialization Fund: SMECapital
- ▶ Commercialization of Research and Development Fund: Malaysian Technology Development Corporation Sdn Bhd (MTDC)

Guidelines around incentive applications

Financial assistance schemes are applicable to future investments only, and only for projects approved by the relevant authorities. Applications for financial assistance should be submitted before the commencement of the proposed project. The majority of the financial assistance will be received based on the percentage of work done, and claims must be submitted to the relevant authorities.

R&D grants

Description of benefits

R&D grants are available under the special incentive package, which is a reimbursable dollar-for-dollar grant on qualifying R&D expenditures. There may be conditions imposed on R&D expenditures. To obtain a cash grant, taxpayers undertaking the R&D activities must gain approval from the authorities.

Further, the Budget 2023 announced an allocation of RM56 million to research grants and equipment procurement under the National Vaccine Development Program.

Guidelines around incentive applications

R&D grants are applicable to future investments. Grants are made based on a reimbursement basis and only for projects approved by the relevant authorities. The government may impose conditions based on the type of projects, such as percentage of R&D personnel involved, minimum level of fixed asset investment and/or minimum local spending levels. R&D grant claims are based on a reimbursement basis and must be submitted when the company incurs the expenditure.

3. Eligibility requirements

Under the Promotion of Investments Act 1986, R&D is defined as any systematic, investigative and experimental study that involves novelty or technical risk carried out in the field of science or technology with the object of acquiring new knowledge or using the results of the study for the production or improvement of materials, devices, products, produce or processes, but does not include:

- ▶ Quality control or routine testing of materials, devices or products
- ▶ Research in the social sciences or humanities
- ▶ Routine data collections
- ▶ Efficiency surveys or management studies
- ▶ Market research or sales promotion
- ▶ Routine modifications or changes to materials, devices, products, processes or production methods
- ▶ Cosmetic modifications or stylistic changes to materials, devices, products, processes or production methods

Qualifying expenditures include those incurred in R&D on the condition that the research is scientific in nature and is related to the business of the company.

Eligibility requirements for specific incentives are set out below.

3.1 PS

Eligibility criteria vary across different types of projects, and the government may impose additional conditions based on the type of project, such as percentage of R&D personnel involved, minimum level of fixed asset investment and/or minimum local spending levels. The following section lists the eligibility requirements for specific types of R&D operations.

Contract R&D companies

Contract R&D companies that fulfill the following criteria can apply for the various incentives:

- ▶ Contract R&D companies (i.e., companies approved as research and development status companies that provide R&D services in Malaysia only to companies other than their related companies) are eligible.
- ▶ Research undertaken should be in accordance with the needs of the country and bring benefits to the economy.
- ▶ At least 70% of the income of the company should be derived from R&D activities. Income generated from IP, if any, is excluded.
- ▶ For manufacturing-based R&D, the company must have an adequate number of full-time employees working in Malaysia with a degree or diploma in technical fields with relevant experience. Those employees must perform research and technical functions and comprise at least 50% of the company's total workforce.
- ▶ For agricultural-based R&D, the company must have an adequate number of full-time employees working in Malaysia with a degree or diploma in technical fields with relevant experience. Those employees must perform research and technical functions and comprise at least 5% of the company's total workforce.
- ▶ The company must incur an adequate amount of operating expenditure annually to support the company in conducting its R&D services, activities and business operations in Malaysia. The operating expenditure should include local services for insurance, legal, banking, information and communications technology (ICT), and transportation, if those services could be sourced from local/domestic service providers. However, this amount shall not include the cost of goods sold, depreciation, interest on borrowings or expenses that are not directly involved in the company's proposed activities.

3.2 ITA

Eligibility criteria vary across different types of projects, and the government may impose additional conditions based on the type of project, such as percentage of R&D personnel involved, minimum level of fixed asset investment and/or minimum local spending levels. The following section lists the eligibility requirements for specific types of R&D operations.

Contract R&D and R&D companies

Contract R&D and R&D companies that fulfill the following criteria can apply for the various incentives:

- ▶ Contract R&D (i.e., a company approved as a research and development status company that provides R&D services in Malaysia only to a company other than its related companies) and/or R&D companies (i.e., companies approved as research and development status companies that provide R&D services in Malaysia to their related companies or any other companies) are eligible.
- ▶ Research undertaken should be in accordance with the needs of the country and bring benefits to the economy.
- ▶ At least 70% of the income of the company should be derived from R&D activities. Income generated from IP, if any, is excluded.
- ▶ For manufacturing-based R&D, the company must have an adequate number of full-time employees working in Malaysia with a degree or diploma in technical fields with relevant experience. Those employees must perform research and technical functions and comprise at least 50% of the company's total workforce.
- ▶ For agricultural-based research and development, the company must have an adequate number of full-time employees working in Malaysia with a degree or diploma in technical fields with relevant experience. Those employees must perform research and technical functions and comprise at least 5% of the company's total workforce.
- ▶ The company must incur an adequate amount of operating expenditure annually to support the company in conducting its R&D services, activities, and business operations in Malaysia. The operating expenditure should include local services for insurance, legal, banking, ICT and transportation, if those services could be sourced from local/domestic service providers. However, this amount shall not include the cost of goods sold, depreciation, interest on borrowings or expenses that are not directly involved in the company's proposed activities.

Eligible companies may submit an application for approval of the incentive to MIDA.

3.3 IP incentive

Companies that fulfil the following criteria can apply for the incentive:

- ▶ Qualifying IP assets under this incentive:
 - ▶ Patent or utility innovation under the Patents Act 1983 or the equivalent law of any country or territory
 - ▶ Copyrighted software under the Copyright Act 1987
 - ▶ Family qualifying IPs, which are two or more qualifying IP rights that are interlinked in such a way that it is not possible to identify (i) which part of any expenditure incurred in the R&D resulting in the creation of those rights is incurred solely in the creation of a particular right or (ii) which part of any income derived using those rights is derived solely from using a particular right
- ▶ Royalties and licensing fees are exempted from income tax under this incentive. Sale of IP will not be considered as eligible IP income under this incentive.
- ▶ Companies must conduct R&D activities in Malaysia, where such R&D activities lead to the development, improvement, modification or creation of the qualifying IP asset.
- ▶ The IP must be registered and filed with MyIPO or any equivalent body outside of Malaysia.
- ▶ At least 30% of the companies' science and technical staff must have a degree or diploma with a minimum five years' experience in related fields.
- ▶ Companies must incur an adequate amount of operating expenditure annually to support their business operations in Malaysia. The operating expenditure should include local services for insurance, legal, banking, ICT and transportation, if those services could be sourced from local/domestic service providers. However, this amount shall not include the cost of goods sold or cost of sales, and expenses that are not directly involved in the company's proposed activities.

Eligible companies may submit an application to MIDA for approval of the incentive.

3.4 Special incentive scheme

- ▶ To receive benefits from the incentive, the company must be incorporated and resident in Malaysia.
- ▶ The benefits will be subject to conditions as stated by the MOF in the approval letter.
- ▶ The MOF or the Minister of International Trade and Industry will determine the commencement of the exempt period.

3.5 Incentives for researchers to commercialize research findings

Incentive for researchers to commercialize R&D findings

Eligible companies may submit an application for approval of the incentive for the commercialization project for resource-based research to MIDA.

To receive the benefit, the company should be incorporated in Malaysia, and the commercialization undertaking must be verified by the Ministry of Science, Technology and Innovation.

The effective date of the incentive shall be determined by the MOF or the Minister of International Trade and Industry.

Investment in companies undertaking commercialization of public sector R&D findings and companies undertaking commercialization of public sector R&D findings

- ▶ The investing company must be a Malaysian resident company incorporated under the Companies Act 2016 and locally owned with at least 70% Malaysian equity ownership.
- ▶ The investing company should own at least 70% of the equity of the company that undertakes the commercialization of the R&D findings.
- ▶ The company undertaking the commercialization projects must be incorporated under the Companies Act 2016 and locally owned with at least 70% Malaysian equity ownership.

Eligible companies may submit an application to MIDA for approval of the incentive.

3.6 Double deduction

Companies that fulfil the following criteria can apply for the incentive:

- ▶ A resident for tax purposes in Malaysia
- ▶ Carry on a business in Malaysia
- ▶ Undertake R&D activity in relation to its business in Malaysia, whether:
 - ▶ In-house within the business
 - Or
 - ▶ Outsourcing the R&D activity to an approved research institute or company, an R&D company, or a contract R&D company in Malaysia

- ▶ Undertake R&D activity that fulfils the definition of R&D and its qualifying criteria and:
 - ▶ Obtain approval for the R&D activity from the Director General of Inland Revenue of Malaysia (DGIR) for application for double deduction on in-house R&D expenditure
 - Or
 - ▶ Engage the services of an institute or company that is approved by the relevant Minister for double deduction on services expenditure

Foreign researchers may be employed; however, the company should endeavor to train Malaysian nationals.

Activities that involve only testing a product to conform its properties to the required standards for compulsory registration of the product as required by any laws in Malaysia (such as for agricultural chemicals and pharmaceutical products) are not considered R&D project activities for the purposes of claiming a double deduction.

3.7 Industrial Building Allowance for buildings used for R&D activities

- ▶ Qualifying building expenditure is incurred.
- ▶ Claimant company must be the business operator and the owner of the building or tenant of the building.

3.8 Financial assistance and R&D grants

The levels of benefits for the grants are subject to conditions as stated in the approval letter.

4. IP and jurisdictional requirements

There is no restriction at this time on where the IP must be held except for those conditions imposed by the authorities.

5. Technology or innovation zones

Malaysia Digital (MD)

Multimedia Super Corridor (MSC) Malaysia was the country's national ICT initiative designed to attract world-class technology companies while developing the local ICT industry. Fully supported by the Malaysian government, MSC Malaysia led the nation's transformation toward a knowledge economy over the past decade and a half.

On 4 July 2022, the government launched the MD initiative, which succeeded MSC Malaysia. This new initiative will drive digital transformations in focus areas that present high-growth potential, opportunities and importance. The government, through the Malaysia Digital Economy Corporation (MDEC) will award the MD Status to eligible companies that participate in and undertake MD activities.

The grant of MD Status entitles eligible companies to a set of incentives, rights and privileges from the government of Malaysia, namely the MD Bill of Guarantees (BoGs), subject to the necessary approvals and compliance with applicable conditions, laws and regulations.

Under the MD BoGs, MD Status companies are eligible to access or apply for benefits, including the following:

1. Foreign knowledge workers quotas and passes
2. Tax incentives
3. Exemptions from multimedia/ICT equipment import duty and sales tax
4. Competitive and ready infrastructure for business at MD Cybercities/Cybercentres
5. Exemption from local ownership requirements
6. Global sourcing of capital and funds
7. Use of MDEC as the one-stop agency for MD Status companies

To be eligible for MD Status, a company must:

- ▶ Be incorporated under the Companies Act 2016
- ▶ Be a resident in Malaysia
- ▶ Propose to or currently be carrying out one or more of the MD activities

To be eligible for tax incentives under the MD Initiative, a company must:

- ▶ Have been awarded the MD Status
- ▶ Not have issued any invoice for the promoted activities in Malaysia as of the date of application; a company that has issued an invoice may be eligible if it has at least 60% Malaysian equity ownership and has issued its first invoice for the promoted activities in Malaysia not more than 12 months prior to the date of application
- ▶ Not have been granted by the government of Malaysia a tax exemption for income from any activity on the date of application
- ▶ Not have a related company that has been granted a tax exemption for income from an activity that falls under the same item of the MD promoted activities

MDEC has indicated that the tax incentives under the MD BoGs are being reviewed and will be revised in due course. Pending further guidance/legislation, the conditions for the MD status tax incentives are as follows:

Conditions:	Category 1 (100% tax exemption)	Category 2 (100% tax exemption)	Category 3 (70% tax exemption)
To be met within 24 months from the date of award of MD Malaysia status and need to be complied with during the exemption period:			
1. Commencement of operation and undertaking of the approved MD Status promoted activities in Malaysia			
2. Full-time employees (comprising knowledge workers) with monthly base salary (must comply in Years 1 and 2 of the exemption period)	Two full-time employees with monthly base salary of RM5,000		
3. Annual operating expenditure (must comply in Years 1 and 2 of the exemption period)	RM50,000		

Conditions:	Category 1 (100% tax exemption)	Category 2 (100% tax exemption)	Category 3 (70% tax exemption)
4. Full-time employees (comprising knowledge workers) with monthly base salary (must comply in Years 3, 4 and 5 of the exemption period)	(i) 50 full-time employees with monthly base salary of RM5,000 Or (ii) 30 full-time employees with monthly base salary of RM10,000		(i) 30 full-time employees with monthly base salary of RM5,000 Or (ii) 20 full-time employees with monthly base salary of RM8,000
	Data center: 5 full-time employees with monthly base salary of RM5,000		N/A
5. Annual operating expenditure and investment in fixed asset (must comply in Years 3, 4 and 5 of the exemption period)	RM3.5 million		RM1 million
	Data center: RM10 million		
6. Percentage of Malaysian Knowledge Workers (for the full-time employees in item 5 above; must comply in Years 3, 4 and 5 of the exemption period)	70%		50%
7. Paid-up capital (must comply in Years 3, 4 and 5 of the exemption period)	RM500,000		RM250,000

Applications must be submitted to the MDEC.

Digital Ecosystem Acceleration Scheme (DESAC)

The DESAC incentive was proposed to support the comprehensive development of the national digital ecosystem for Digital Technology Providers and Digital Infrastructure Providers.

Companies undertaking qualifying activities qualify for the following incentives:

For Digital Technology Providers:

- ▶ New companies may be taxed at a reduced income tax rate of 0% to 10% for up to 10 years.
- ▶ Existing companies that diversify into new service activities or new service segments may be taxed at a reduced income tax rate of 10% for up to 10 years.

For Digital Infrastructure Providers:

- ▶ ITA of 100% on capital expenditure for qualifying activities for up to 10 years. This allowance can set off against up to 100% of statutory income.

The application period is from 30 October 2021 to 31 December 2025. However, as of 1 February 2023, no federal gazette orders or guidelines have been published relating to this proposal.

6. Role of governmental bodies in administering incentives

Various government ministries and/or agencies are involved in administering the R&D incentives. The main ministries and/or agencies are the following:

- ▶ MOF: MOF formulates and implements fiscal and monetary policies in Malaysia. MOF has the authority to grant tax incentives, including PS, ITA, special incentive scheme, incentives for research and commercialization of research findings, double deductions, and R&D grants.
- ▶ MOSTI: MOSTI leads the National Information and Communication Technology Department's function, multimedia and innovation. MOSTI evaluates and approves applications of the International Collaboration Fund.

- ▶ **MIDA:** MIDA is the government's principal agency for the promotion of the manufacturing and services sectors in Malaysia. It assists companies intending to invest in the manufacturing and services sectors and facilitates the implementation of their projects. MIDA also evaluates tax incentive applications for projects in the manufacturing and related services sectors.
- ▶ **MIRB:** MIRB acts as an agent of the government and provides services in administering, assessing, collecting and enforcing payment of income tax and other taxes. It advises the government on matters relating to taxation and works with the appropriate ministries and statutory bodies on such matters.
- ▶ **MTDC:** MTDC was set up in 1992 to promote the adoption of technologies by local companies via commercialization activities of local inventions or acquisition of foreign technologies. MTDC evaluates and approves applications for commercialization of R&D fund applications from companies.

7. Administrative requirements

- ▶ Applications for PS, ITA incentives or the special incentive scheme are required to be submitted to the relevant authorities (e.g., MIDA, MDEC).
- ▶ Applications for financial assistance should be submitted to the relevant authorities highlighted above.
- ▶ All double deduction claims should be submitted to the MIRB.
- ▶ The MIRB monitors and processes PS, ITA claims and certain incentive claims.

8. Statutory reference

- ▶ Promotion of Investments Act 1986
- ▶ Income Tax Act 1967 and its relevant rules, regulations and guidelines

Netherlands

This chapter is based on information as of 1 February 2023.

The best-known Dutch tax incentives are the R&D tax credit (WBSO) and the innovation box. The innovation box reduces the effective tax rate, whereas the R&D tax credit reduces the wage tax costs by allowing innovative businesses a partial reduction of wage tax.

Gerben Hellinga
gerben.hellinga@nl.ey.com
+31 88 40 78925

1. Overview

The Dutch program of incentives to stimulate R&D activities covers the whole R&D life cycle, from development to the exploitation of successful R&D. The government emphasizes the importance of R&D and its willingness to stimulate these activities. This is underlined by the cooperative attitude of the government organizations that are involved with implementing the various incentives. Dutch R&D incentives make a distinction between costs and investment-based incentives on the one hand, and a profit-based incentive on the other hand.

The Netherlands has several incentives to lower R&D costs and investments for an entrepreneur and/or company. This includes the R&D tax credit, which reduces wage tax on qualifying wage costs and other costs and expenses; an R&D deduction that allows for a fixed additional deduction for entrepreneurs; and the possibility of an innovation credit for small and medium-sized enterprises (SMEs) with technologically innovative projects.

Furthermore, qualifying profits can be taxed in the innovation box. Effectively, these profits would be taxed at a rate of 9%.

Types of incentives		Types of incentives	
Tax credits	<input checked="" type="checkbox"/>	Tax exemptions	<input type="checkbox"/>

2. Incentives available

Name of incentive	R&D tax credit (WBSO)	Innovation credit	Innovation box*	SME Innovation Incentive Scheme for Top Sectors (MIT)	Private-public partnerships project allowance for research and innovation (PPS)	One-time full amortization for R&D intangible assets	R&D deduction
Type of incentive	<ul style="list-style-type: none"> ▶ Tax credit ▶ Wage tax withholding incentives ▶ Reduced wage tax and social security contributions ▶ Based on wage costs and other costs and expenses 	<ul style="list-style-type: none"> ▶ Direct loans for technologically innovative projects 	<ul style="list-style-type: none"> ▶ Reduced corporate income tax rate 	<ul style="list-style-type: none"> ▶ Cash grants for SMEs for feasibility studies and R&D collaboration projects ▶ Knowledge vouchers 	<ul style="list-style-type: none"> ▶ Cash grants for partnerships between private and public parties 	<ul style="list-style-type: none"> ▶ Full amortization for R&D intangible assets (available for personal and corporate income tax) 	<ul style="list-style-type: none"> ▶ Fixed super deduction for personal income tax

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

R&D tax credit (WBSO)

(Afdrachtvermindering Speur- & Ontwikkelingswerk)

Description of benefits

The R&D tax credit reduces the wage withholding tax payable by the employer based on qualifying wage costs and other costs and expenses. The R&D tax credit is accumulated in 2023 as follows:

- ▶ The benefit for R&D entities from the R&D tax credit is 32% for the first EUR350,000 of the qualifying R&D wage costs and other costs and expenses for R&D. For (wage) costs and expenses that exceed EUR350,000, the deduction rate is 16%.
- ▶ Startups are eligible for an increased deduction of 40% of the R&D wage costs and other costs and expenses for R&D. An entity qualifies as a startup if it has been taxable for less than five years and has not received an R&D tax credit for a period of two years or more.

For other costs and expenses (such as for (raw) materials, prototype construction, investments in equipment) in an R&D project, taxpayers can calculate the amount of the tax credit by choosing one of two approaches: a fixed sum or actual costs and expenses. Under the fixed-sum approach, the amount is calculated by reference to the number of allocated R&D hours. The fixed-sum amount per calendar year is:

- ▶ EUR10 per R&D hour for the first 1,800 R&D hours per calendar year
- ▶ EUR4 per R&D hour for all R&D hours exceeding 1,800

Startups can apply an hourly rate of EUR29. Repayment is required in cases in which realized R&D hours and costs and expenses are less than forecast.

Under the actual costs and expenses approach, the amount is calculated on the basis of the estimated costs and expenses incurred by R&D work. Whether the fixed sum or actual costs and expenses approach is chosen, only those costs/expenses incurred as a result of carrying out "own R&D" (i.e., in-house) are eligible for the R&D tax credit.

Guidelines around incentive applications

The R&D tax credit is applicable for future activities and costs and expenses. To claim the R&D tax credit, an application should be filed with the Netherlands Enterprise Agency (Rijksdienst voor Ondernemend Nederland, or RVO), a department within the Ministry of Economy and Climate. The application should be filed in advance, prior to the start of the period covered by the application.

Four applications may be filed per calendar year. These applications must cover a minimum period of 3 months and a maximum period of 12 months within the same calendar year. The R&D tax credit for future activities can be claimed as long as the qualifying activities are performed.

Innovation credit

(Innovatiekrediet)

Description of benefits

With the innovation credit, the Ministry of Economic Affairs can help SMEs by granting a direct loan for "risky" innovation projects. Only projects that are technologically innovative and unique to the Netherlands are eligible. The credit is risk-bearing and therefore only has to be repaid if the development succeeds.

- ▶ Small companies can qualify for a 45% credit of the development costs.
- ▶ Medium companies can qualify for a 35% credit of the development costs.
- ▶ Large companies can qualify for a 25% credit of the development costs.

The maximum credit amount for clinical research projects is EUR5 million. The maximum credit for technical research projects is EUR10 million. Qualifying development costs are, among others, own labor costs, materials, depreciation, outsourcing costs, travel expenses and charges for patent applications. In the case of joint ventures, the maximum credit rates are raised to 50% (for SMEs) or 40% (for large companies). If the project is successful, the credit, including interest, must be paid back over a period of 10 years. Interest percentages are between 4% and 7%, depending on the risk. If the investment project is unsuccessful, the credit may not need to be repaid.

Guidelines around incentive applications

The incentive is applicable to current and future investments. Applications can be submitted throughout the year. Most of the requirements relate specifically to the project: it must be technologically innovative, have an outstanding business perspective, make a positive contribution to the Dutch economy and have a cost threshold of EUR150,000, and its phase of technical feasibility and market introduction should be completed within five years. The credit is granted by the Netherlands Enterprise Agency (RVO).

Innovation box

(Innovatiebox)

Description of benefits

Under the innovation box incentive, eligible R&D income will effectively be taxed at 9% instead of the statutory corporate income tax (CIT) rate of 25.8% (FY23 rate). Losses are deductible at the statutory rate of 25.8%, but future profit will be taxed at 25.8% for the amount of the loss related to the R&D allocated to the innovation box. Any net operating losses (NOLs) resulting from the incentive can be carried back for one year (for CIT) and carried forward indefinitely. However, tax carryforward losses can only be fully offset against the first EUR1 million of profits and only against 50% of the excess profits.

Guidelines around incentive applications

The innovation box is applicable to retroactive, current or future investments. The incentive can apply retroactively as long as the tax return has not yet been finalized, or the finalized tax return is still open for appeal. The innovation box is ultimately claimed in the CIT return. However, it is advisable to conclude an advance tax ruling with the Dutch tax authorities on the application for use of the innovation box.

Legislation was changed to bring the Dutch innovation box regime in line with the Action 5 (Harmful Tax Practices) recommendations of the Organisation for Economic Co-operation and Development's Base Erosion and Profit Shifting Action Plan. This legislation applies as of 1 January 2017. Grandfathering rules allow taxpayers to make use of the 2016 innovation box regime until the end of the last financial year prior to 1 July 2021.

SME Innovation Incentive Scheme for Top Sectors (MIT)

(Mkb-innovatiestimulering Regio en Topsectoren [MIT-regeling])

Description of benefits

MIT is the predominant Dutch incentive scheme for innovative SMEs. It is aimed in particular at SMEs that will engage in innovation and/or R&D collaboration projects and envisages stimulating innovation across regional boundaries. Cash grants are available for technical and commercial feasibility studies, knowledge vouchers and

R&D collaboration projects. MIT applications are commonly submitted to and processed by regional authorities (apart from knowledge vouchers, which are processed at the national level by the Netherlands Enterprise Agency).

Guidelines around incentive applications

MIT provides funding for the following activities:

- ▶ Feasibility studies: a cash grant of EUR20,000 to assess the technical and economic risks and opportunities of an intended innovation project is available on a "first come, first served" basis.
- ▶ Knowledge vouchers: a EUR5,250 small "voucher," or a EUR9,000 large "voucher" with which an SME can have a technical or scientific challenge addressed by a knowledge institution (e.g., a university), is available on a first come, first served basis.
- ▶ R&D collaboration projects: a grant of up to EUR350,000 is available for collaboration R&D and innovation projects between at least two SMEs.

Calls for proposals are announced nationally by the Dutch Enterprise Agency as well as regional authorities. Commonly, a two- to three-month submission window exists for each scheme every year.

Private-public partnerships project allowance for research and innovation (PPS)

(PPS-toeslag Onderzoek en Innovatie)

Description of benefits

The PPS is a partnership between public entities and private parties or investors. Cash grants of 40% are available on the private investment costs for the first EUR20,000, and 30% for the excess. To receive funding for the PPS, the cash grant has to be invested in the R&D project of the partnership. Companies are required to seek preapproval to obtain PPS.

Guidelines around incentive applications

The PPS is applicable for future investments. A specific form should be filed in advance with the Netherlands Enterprise Agency. The program consists of three instruments:

- ▶ PPS program allowance for the Top Consortia for Knowledge and Innovations (PPS-programma toeslag voor het TKI) – 2022 application deadline 25 May 2023.

- ▶ PPS project allowance for TKI (PPS-projecttoeslag voor TKI) – application deadline 26 September 2023.
- ▶ PPS project allowance for a partnership (PPS-projecttoeslag voor een samenwerkingsverband) – application deadline 26 September 2023.

PPS may be claimed for investments made by the private party, and the grants have to be invested during the R&D project.

One-time full amortization for R&D intangible assets

(Afschrijving ineens voor zelf ontwikkelde immateriele activa)

Description of benefits

Under this incentive, self-developed intangibles are fully amortized at the moment they are realized, instead of amortization over the intangible's entire life cycle. Any NOLs resulting from the amortization may be carried back one year (for CIT) and carried forward indefinitely. However, tax carryforward losses can only be fully offset against the first EUR1 million of profits and only against 50% of the excess profits. For personal income tax, any NOLs may be carried back three years and carried forward for six years.

Guidelines around incentive applications

The incentive is applicable to retroactive investments. The incentive should be claimed in the tax return. As long as the final tax assessment has not been issued, amendments to apply should be possible.

R&D deduction

(Afdrachtvermindering Speur- & Ontwikkelingswerk [WBSO] for individuals)

Description of benefits

The lump-sum deduction for an individual (entrepreneur) who performs R&D activities is EUR14,202 or EUR21,308 (2023 amount) for the first five years of an enterprise's life. Full adjustment of the deducted amount will take place if the total R&D hours are less than 500 per calendar year. Individuals (entrepreneurs) are required to seek preapproval (similar to the R&D tax credit) in order to obtain the R&D deduction. Any NOLs resulting from the deduction may be carried back for three years and carried forward for six years.

Guidelines around incentive applications

The R&D deduction is applicable for future activities. The R&D deduction should be claimed in the tax return. As long as the final tax assessment has not been issued, amended returns to apply for the deduction should be possible. To claim the incentive, an R&D declaration is required.

3. Eligibility requirements

R&D tax credit

Eligible expenses include any R&D costs (i.e., wage costs for R&D employees, other R&D-related costs, R&D investment expenses) and other expenses that are directly related to the R&D projects. R&D-related costs and R&D investment expenses must be linked exclusively to activities performed under an R&D declaration. Examples of such costs include specific equipment or instruments for R&D, specific equipment or instruments for the manufacturing of models, and trial batches or prototypes. Any specific software and computer equipment used for R&D also qualify. Investments in land are excluded.

Costs that are linked to activities performed under an R&D declaration include costs related to consumer goods, materials and raw materials; costs related to experiments, the production of trial batches, materials and parts regarding the manufacturing of prototypes by the taxpayer or by third parties; acquisition of licenses for specific software packages or information and communication technologies (ICT) tools; carrying out of measurements or testing of prototypes; and rental of equipment from third parties. Eligible costs exclude costs with respect to outsourced R&D, costs of hiring labor, financing costs, costs of acquiring or improving land, and costs forming a remuneration for the disposition of capital equipment for which the taxpayer was already awarded an R&D declaration.

Eligibility is not limited to specific industries. Specific eligibility for each incentive requires employee performance of the following R&D activities:

- ▶ Technical scientific research
- ▶ Development of new or partially new technical products, processes or software

Innovation credit

Loans will be granted only if the project is technologically innovative and fulfills the other requirements.

Innovation box

A distinction is made between “smaller taxpayers”¹ and other taxpayers. For smaller taxpayers, the incentive is granted for self-developed intellectual property (IP) for which the R&D activities are covered by an R&D declaration. For larger taxpayers, in addition to the R&D declaration, the taxpayer must be covered by one of the conditions listed below in Section 4 under “Qualifying intellectual property.”

PPS

Funds will be granted only to an entity approved in advance, in which private and public parties cooperate to perform R&D activities.

MIT

Grants will be provided only to SMEs to perform feasibility studies, have knowledge questions addressed or engage in R&D collaboration projects (minimum of two SMEs). The EU definition of SMEs applies when determining eligibility.

One-time full amortization for R&D intangible assets

The taxpayer has to self-develop the intangible asset.

R&D deduction

The individual has to obtain an R&D declaration, which may be granted if the hours spent on the enterprise amount to at least 1,225 hours, of which a minimum of 500 hours per calendar year are spent on R&D.

4. IP and jurisdictional requirements (innovation box)

Effective date

1 January 2023

Qualifying IP

A distinction is made between smaller taxpayers and larger taxpayers. For smaller taxpayers, a self-developed IP for which an R&D declaration has been granted to the taxpayer is sufficient. For larger taxpayers, in addition to the R&D declaration, one of the following requirements should be met:

- ▶ Their IP can be classified as software.
- ▶ A patent or a plant variety right has been granted to the taxpayer.
- ▶ An application for a patent or a plant variety right has been filed by the taxpayer.
- ▶ A license to trade and use certain non-chemical methods for crops protection has been granted to the taxpayer.
- ▶ A license to distribute medication for human or animal application within the EU has been issued to the taxpayer.
- ▶ A Supplementary Protection Certificate has been issued to the taxpayer by the Netherlands Patent Office.
- ▶ A registered utility model has been granted for the purpose of the protection of the innovation.
- ▶ A non-chemical method within the meaning of Article 18, Crop protection law and biocides, has been approved.
- ▶ An exclusive license has been granted to the taxpayer for the use of one of the abovementioned IPs, in either a certain way, during a certain term or certain geographical area.

Types of income

Embedded income in turnover derived from finished product, royalty income and capital gains realized by the sale of the IP.

Calculation of income

Based on the modified nexus approach, qualifying IP income = (qualifying expenditures x 1.3/overall expenditures) x IP income.

IP regime rate

Nine percent on qualifying income instead of the statutory CIT rate (25.8%).

Can work be performed outside the country?

Yes, under certain circumstances. Because of the modified nexus approach, outsourcing more than approximately 30% of the R&D to related entities will effectively reduce the qualifying IP income.

¹ A net turnover – calculated on the global group level if the taxpayer is part of a group – of less than EUR250 million over a five-year period and less than EUR37.5 million in gross revenues over a five-year period from all qualifying intellectual assets (calculated on the taxpayer level).

Must the IP be registered/owned locally?

No, it is sufficient if an exclusive license has been granted to the taxpayer that meets the requirements described under the header “Qualifying intellectual property.”

Other requirements

Companies must demonstrate their R&D activities to assess the actual amount of the profit that can be allocated to the innovation box. It is common practice that the amount of income that can be allocated to R&D (and thus the basis for the nexus calculation) is discussed with the tax authorities and confirmed in a ruling.

Grandfathering rules apply to taxpayers making use of the 2016 innovation box regime until the end of the last financial book year of the taxpayer prior to 1 July 2021 insofar as the pre-1 July 2016 IP still generates income, subject to meeting one of the following requirements:

- ▶ The 2016 innovation box regime remains applicable to IPs self-developed before 1 July 2016 if the taxpayer ultimately opts to apply the innovation box in the tax return for the fiscal year that includes 1 July 2016.
- ▶ IP developed before 1 January 2017 but after 31 December 2006 for which a patent or a plant variety right has been granted qualifies for the new regime; no additional R&D declaration will be required.
- ▶ A decree was published in relation to innovation box rulings concluded under 2016 legislation, entered into by “smaller taxpayers” (see footnote 1 in Section 3) with the Dutch tax authorities (BLKB 2016/225266 M). Normally, these rulings are discontinued in the event of a change in legislation. Upon request, innovation box rulings concluded by small taxpayers remain valid after 2016 for the remaining effective time of the ruling.

The grandfathering rules are applicable no later than the final fiscal year ending before 1 July 2021. As of 1 July 2021, only the new innovation box regime will be applicable.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in the Netherlands.

6. Role of governmental bodies in administering incentives

The innovation box, one-time full amortization for R&D intangible assets and R&D deduction fall under the jurisdiction of the Dutch tax authorities. Especially for the innovation box, the Dutch tax authorities are cooperative in obtaining a ruling that provides certainty for several years on applying the innovation box.

The R&D tax credit, innovation credit, the SME Innovation Incentive Scheme for Top Sectors and PPS fall under the Netherlands Enterprise Agency.

7. Administrative requirements

The R&D tax credit, innovation credit and PPS have to be obtained in advance by filing a request with the Netherlands Enterprise Agency. After the incentive is granted, progress in terms of realized worked hours, costs and investment has to be administrated and filed at the agency after the financial year has ended.

New Zealand has two key R&D tax incentives: the R&D tax incentive and the R&D loss tax offset. Since the introduction of the R&D tax incentive in 2019, it has become New Zealand's primary support mechanism for business R&D expenditure.

1. Overview

The R&D tax incentive was introduced in 2019. Most businesses operating within New Zealand should be eligible to claim a credit at a rate of 15% if they incur expenditures on qualifying R&D activities (other criteria apply; see the “Eligibility” section). If businesses have no or insufficient tax liability to utilize the tax credits, unutilized credits can be refunded up to the refund cap. The refund cap usually equals the total amount of employment-type taxes the business and its associates have paid to the government during the year.

The R&D loss tax offset was introduced in 2015. It allows

R&D-intensive companies to refund tax losses that result from R&D expenditures. Eligible companies are allowed to cash out up to 28% of any tax losses associated with their eligible R&D activities, subject to the restrictions specified below.

The R&D grants regime is a targeted R&D incentive aimed at increasing long-term economic growth by providing funding to businesses with eligible R&D activities. The R&D grants regime consists of the Callaghan Innovation Project and Student Grants and a range of industry-specific grants.

Types of incentives		Types of incentives

2. Incentives available

Name of incentive	R&D tax incentive	R&D loss tax offset	R&D grants
Type of incentive	▶ Tax credit and refundable tax credit	▶ Refundable tax credit	▶ Cash grant

R&D tax incentive

Description of benefits

- ▶ A 15% tax credit is available to most businesses undertaking R&D in New Zealand.
- ▶ R&D expenditures of NZD50,000 to NZD120 million per year will typically qualify (pathways exist to spend more or less but specific requirements apply).
- ▶ Foreign-reimbursed R&D can qualify as long as the overseas associate resides in a jurisdiction that has a double tax agreement with New Zealand.
- ▶ Up to 10% of total R&D expenditures per year can be incurred outside New Zealand.

- ▶ R&D tax credits can be refunded up to the refund cap, which typically equals the total amount of employment-type taxes the business and its associates have paid to the government during the year. Refunds for payments to approved research providers are uncapped.
- ▶ Remaining R&D credits may be carried forward indefinitely.

R&D loss tax offset

Description of benefits

To qualify, a company must be an unlisted tax loss-making resident of New Zealand that spends at least 20% of global associate labor expenditures on qualifying R&D in New Zealand.

A company may cash out the lesser of the following at a rate of 28%:

- ▶ NZD2 million
- ▶ A company's net loss for the year
- ▶ A company's total eligible R&D expenditures for the year
- ▶ 1.5 x a company's eligible R&D labor costs for the year

Certain events may trigger the repayment of any offset received. These events can include the sale of R&D assets or the liquidation, migration or sale of a company.

R&D grants

Description of benefit

Callaghan Innovation is currently offering two R&D grant programs: Project Grants and Student Grants.

- ▶ Project Grants are aimed at assisting businesses undertaking R&D for the first time. Businesses can receive multiple Project Grants. The grants normally fund 40% of eligible R&D expenditures on a project. Project amounts beyond NZD800,000 are funded at 20%.
- ▶ Student Grants are aimed at helping university students gain and develop skills in a business with an ongoing R&D program.

Other industry-specific R&D grant programs are also available. An example is the Sustainable Food and Fibre Futures fund, which provides up to NZD5 million in co-funding.

3. Eligibility requirements

R&D tax incentive

Eligibility of businesses

- ▶ Businesses cannot be controlled by a Crown Research Institute, District Health Board, Callaghan Innovation or a tertiary education organization.
- ▶ A business needs to conduct a core R&D activity in New Zealand and own the results or be able to use the results of the R&D activities without further consideration.
- ▶ A business cannot receive certain types of exempt income.

Eligible activities

Eligible R&D activities include "core" or "supporting" activities. Core R&D activities utilize a systematic approach to generate new knowledge or a new/improved good, process or service and require the resolution of a scientific or technological uncertainty. Core R&D activities must occur in New Zealand.

Supporting activities include other activities that are solely or mainly in support of and integral to a core R&D activity.

Eligible expenditures

Eligible expenditures include most costs incurred on an eligible R&D activity. This typically includes salaries, materials, contractor payments and depreciation loss incurred on assets while used in R&D. Expenditure on the development of internal use non-administrative software is capped at NZD25 million per year. Ten percent of the total R&D expenditure can be incurred overseas.

R&D loss tax offset

New Zealand-resident unlisted loss-making companies that meet certain wage intensity criteria are eligible. The NZ IAS 38 definition of R&D applies, subject to certain activity and expenditure exclusions.

The R&D loss tax offset regime and the new R&D tax incentive are not mutually exclusive, but they have different R&D definitions and eligibility criteria.

R&D grants

Eligibility requirements are specific to each grant.

4. IP and jurisdictional requirements

- ▶ **R&D tax incentive:** IP resulting from R&D activities must be owned by the company or an associate that resides in a jurisdiction that has a double tax agreement with New Zealand, or the company must have access to the R&D results at no further consideration. Where applicable, the IP requirements can be met by a joint venture.
- ▶ **R&D loss tax offset:** IP resulting from R&D activities must vest (solely or jointly) in the company.
- ▶ **R&D grants:** There are no specific IP requirements.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in New Zealand.

6. Role of governmental bodies in administering incentives

The R&D tax incentive and R&D loss tax offset regimes are administered by Inland Revenue.

The R&D grants are administered by Callaghan Innovation or other industry-specific government departments.

7. Administrative requirements

R&D tax incentive: Businesses that are likely to spend less than NZD2 million on R&D activities must apply for general approval of their R&D activities (due by the seventh day on the second month after the end of their income year), then file a supplementary return with their income tax return. Businesses that spend NZD2 million or more on R&D activities can opt out of the general approval process and into the significant R&D performer alternate application process. A significant R&D performer application must be filed by the last day of the sixth month of the relevant income year. Significant R&D performers must obtain a certificate of compliance from an R&D certifier. This certificate is filed with the tax authority.

R&D loss tax offset: Applications must be made by the due date of a company's corresponding income tax return.

R&D grants: Requirements depend on the grant received.

8. Statutory reference

R&D tax incentive: Income Tax Act 2007 and Tax Administration Act 1994

R&D loss tax offset: Income Tax Act 2007, subpart MX

R&D grants: Crown Entities Act 2004 and Ministerial Direction (December 2015)

Year of statutory regime:

R&D tax incentive: From 2019-20 income year

R&D loss tax offset: For income years beginning on or after 1 April 2015

The SkatteFUNN scheme is a tax incentive for companies carrying out qualifying research and development (R&D) and rewards both internal R&D as well as procured R&D. R&D costs of up to NOK25 million can be claimed. The scheme is designed to motivate businesses to carry out more R&D, ultimately for the benefit of the public. The incentive is provided through a tax credit of 19% on qualifying expenditure. If the company is not in a taxpaying position, or the deductions claimed through SkatteFUNN exceed tax payable, the excess amount will be contributed as a cash payment to the taxpayer.

1. Overview

Norway introduced a tax credit scheme in 2002 as part of its R&D incentives framework, making it the first Nordic country to include such a scheme in its tax law. Taxpayers may claim deductions of up to 19% of the qualifying expenditure. The deduction is either used to obtain reduced tax liabilities and social security contributions, or contributed as a cash payment if the taxpayer is not in a taxpaying position. This direct deduction is calculated in accordance with the rules provided by the Norwegian Tax Authorities for user-led R&D projects. To benefit from the deduction, the Research Council of Norway must approve the R&D project. The deduction may be taken in addition to regular deductions for taxable income.

The introduction of the tax credit scheme was the result of a proposition made by the Hervik Commission¹ in a green paper for the Ministry of Trade, Industry and Fisheries in 2000 (NOU 2000:7). Prior to this green paper, there had been a political consensus to focus on R&D incentives to facilitate investment and innovation in Norwegian industry and to reach the Organisation for Economic Co-operation and Development (OECD) R&D average.

¹ The Hervik Commission was appointed by the Norwegian government to suggest policy measures aimed at encouraging industry to invest more in R&D.

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

Tax credit scheme

(SkatteFUNN)

Description of benefits

Taxpayers may claim deductions of up to 19% of the qualifying expenditure. The deduction is either used to obtain reduced tax liabilities and social security contributions or contributed as a cash payment if the taxpayer is not in a taxpaying position.

Guidelines around incentive applications

The incentive is applicable to current and future investments. To secure the tax deduction, taxpayers are required to submit an application for preapproval to the Research Council of Norway. The deduction is claimed within the corporate income tax return (Form RF-1053). Qualifying expenditures can only be claimed from the tax year in which the application was approved. To guarantee that an application will be processed ahead of the tax year-end (31 December) an application must be submitted to the Research Council by 1 September in the tax year.

Cash grants/financial support

(Økonomiske tilskudd)

Description of benefits

Governmental agencies or partially state-owned organizations, such as Innovasjon Norge (Innovation Norway), provide cash grants or financial support. The amount granted varies with the development phase and the kind of project, business and subject area. Giving a general estimate is therefore difficult. However, such grants must be in compliance with the European Free Trade Association (EFTA) Surveillance Authority guidelines on state funding, based on the EU regulation on state funding, thus limiting the amount.

As an example, this means that the cost coverage regarding Industrial Research and Development Contracts (*Industrielle Forsknings-og Utviklingskontrakter*, or IFU) and Public Research and Development Contracts (*Offentlige forsknings-og utviklingskontrakter*, or OFU) is limited to 70% for small businesses, 60% for medium-sized businesses and 50% for large businesses in the preliminary project phase. In the development/prototyping phase, it is limited to 45% for small businesses, 35% for medium-sized businesses and 25% for large businesses.

Guidelines around incentive applications

The incentive is applicable to current and future investments. To receive the incentive, taxpayers are required to obtain preapproval from Innovation Norway.

Loans and warranties

(Lån og garantier)

Description of benefits

Innovation Norway also offers support, such as loans and warranties. The same benefit applies as cash grants/financial support.

Guidelines around incentive applications

The incentive is applicable to current and future investments. To receive the incentive, taxpayers are required to obtain preapproval from Innovation Norway.

3. Eligibility requirements

Qualifying expenses include all expenses that are deductible according to the general tax rules, provided that the expenses are related to R&D projects. Qualifying activities include development of new goods, services or manufacturing processes. There is no limitation regarding types of industries, and the incentives are available as long as the projects meet with the requirements as presented.

Tax deduction schemes through SkatteFUNN have certain eligibility requirements:

- ▶ The company must be subject to taxation in Norway, although if it is in a tax loss position, the allowance is paid in cash.
- ▶ The projects must be in compliance with the requirements in Sections 16-40 and 16-41 of the Norwegian Taxation Act and related regulations.
- ▶ The projects must be purposeful, limited and beneficial to the company applying.
- ▶ The company cannot be considered an "undertaking in difficulty."

4. IP and jurisdictional requirements

There are no jurisdictional requirements related to intellectual property (IP).

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Norway.

6. Role of governmental bodies in administering incentives

The SkatteFUNN tax credit scheme is administered by the Research Council of Norway in collaboration with the Norwegian Tax Authorities.

Cash grants, financial support, loans and warranties are administered by Innovation Norway, 51% of which is owned by the Ministry of Trade, Industries and Fisheries. Innovation Norway also manages funds from the Ministry of Local Government and Modernisation, the Ministry of Agriculture and Food, the Ministry of Foreign Affairs and the county governors.

7. Administrative requirements

The Research Council of Norway deals with the preapproval process for tax deduction schemes. The council also manages the submission of the annual reports, which has a deadline of 1 March annually, for tax deduction schemes. Innovation Norway manages the preapproval processes for cash grants, financial support, loans and warranties.

8. Statutory reference

- ▶ Statutory reference - Sections 16-40 and 16-41 in the Norwegian Taxation Act
- ▶ EU No. 651/2014 Article 2 (18)
- ▶ Year of statutory regime - 2002

The government's 2022 Strategic Investment Priority Plan (SIPP) categorizes R&D activities into three tiers. For R&D, it qualifies for Tier I and Tier III.

Tier I includes R&D activities classified as "Innovation Drivers," such as conduct of clinical trials, including drug trials (e.g., Contract Research Organization or CRO); establishment of Centers of Excellence, innovation centers, business incubation hubs, smart cities and fabrication laboratories (fablabs)/co-working spaces; and development of mobility solutions and digital trade. Tier I also includes commercialization of new and emerging technologies, uncommercialized patents on products and services, and products of locally undertaken R&D. This includes startup and startup enablers under the Innovative Startup Act.¹

¹ Board of Investments (BOI) Memorandum Circular No. 2021-001, *General Policies and Specific Guidelines Implementing the 2020 IPP*.

On the other hand, Tier III² of the 2022 SIPP covers R&D and activities adopting advanced digital production technologies of the fourth industrial revolution, such as but not limited to, robotics; artificial intelligence (AI); additive manufacturing; data analytics; digital transformative technologies; nanotechnology; biotechnology; production and/or adoption of new hybrid seeds; and other Industry 4.0 technologies.

Tier III also covers highly technical manufacturing and production of innovative

² Application for registration under Tier III must be accompanied by an endorsement from the Department of Trade and Industry (DTI) - Competitiveness and Innovation Group (CIG) or any other institutions as may be identified by the BOI Board. For space-related infrastructures, the application must be accompanied by an endorsement from the Philippine Space Agency.

products and services, including, but not limited to, manufacture of equipment, parts and services; commercialization of intellectual property (IP), R&D products/services, aerospace, medical devices, and Internet of Things (IoT) devices and systems; full-scale water fabrication; and advanced materials.

Establishment of innovation support facilities is also covered by Tier III, including, but not limited to, R&D hubs, Centers of Excellence, science and technology parks, innovation incubation centers, tech startups, startup enablers, incubators and accelerators, and space-related infrastructures.³

³ BOI Memorandum Circular No. 2022-007, *Specific Guidelines to Implement the 2022 Strategic Investment Priority Plan*.

1. Overview

The Philippine government recognizes the economic benefits of undertaking R&D activities and grants incentives to encourage R&D investments in the Philippines. Incentives are granted to promote specific industries and generally to benefit all persons engaged in R&D activities. R&D incentives in the Philippines have been in force since the early 1990s and are being reinvented to suit the needs of developing industries and preferred areas of investment.

Even with the passage of the Tax Reform for Acceleration and Inclusion (TRAIN) Law, the provisions on deductibility of R&D expenditures were retained. In general, R&D expenditures may be treated either as ordinary and

necessary expenses deductible from gross income at 100% or as deferred expenses ratably distributed over a period of no less than 60 months, at the election of the taxpayer. Donations to research institutions or organizations accredited by the Philippine Council for NGO Certification (PCNC) are exempt from donor's tax provided that no more than 30% of the donation is used for administrative expenses, and under certain conditions. Donations for R&D activities of the government and accredited non-governmental organizations (NGOs) are also deductible against the donor's gross income, subject to certain conditions.

With the recently enacted Corporate Recovery and Tax Incentives for Enterprises (CREATE) Act, enterprises may register with any Investment Promotion Agency (IPA) to enjoy an income tax holiday (ITH) and special income tax regime or enhanced deductions, and other incentives, subject to the following qualifications:

- ▶ Engage in a project or activity included in the Strategic Investment Priority Plan (SIPP)

- ▶ Meet the target performance metrics after the agreed time period
- ▶ Install an adequate accounting system
- ▶ Comply with the e-receipting and e-sales requirements
- ▶ Submit annual reports of beneficial ownership and related parties

2. Incentives available

Name of incentive	R&D expense deduction	ITH and Special Corporate Income Tax (SCIT)/Enhanced Deductions (ED)	Exemption from donor's tax
Type of incentive	▶ Tax deductions	▶ Tax holiday and special tax rate or enhanced deductions for R&D enterprises	▶ Tax exemptions for donations to accredited research institutions

R&D expense deduction⁴

Description of benefits

In general, R&D expenditures paid or incurred during a tax year in connection with the taxpayer's trade, business or profession may be treated as ordinary and necessary expenses, which are not chargeable to a capital account, or as deferred expenses ratably distributed over a period of no less than 60 months (beginning with the month in which the taxpayer first realizes benefits from such expenditures), at the election of the taxpayer.

R&D expenditures may be treated as deferred expenses if the following three conditions are met:

- ▶ They are paid or incurred in connection with the taxpayer's trade, business or profession.
- ▶ They are not treated as ordinary and necessary expense.
- ▶ They are chargeable to the capital account, but not chargeable to the property of a character that is subject to depreciation or depletion.

No deduction for R&D expenditures shall be permitted unless the taxpayer provides sufficient evidence, such as official receipts or other adequate records, showing the amount of the expense being deducted and the direct connection or relation of the expense being deducted to the development, management, operation and/or conduct of the trade, business or profession of the taxpayer. Furthermore, the claimed deduction will be permitted only if the appropriate withholding tax due has been remitted to the Bureau of Internal Revenue (BIR).

Guidelines around incentive applications

The tax deduction applies to current investments. The R&D expense is shown as an allowable deduction from gross income in the taxpayer's income tax return and its attachments (i.e., schedule of itemized deductions). The

annual income tax return is filed on or before the 15th day of the 4th month following the close of the taxpayer's taxable year. The deduction must be claimed in the year when the expense is paid or incurred.

ITH and SCIT/ED

Description of benefits

With the passage of the CREATE Act, incentives are now performance-based, time-bound and targeted. The availability period for incentives will be based on both the location and industry of the registered project or activity. Location is prioritized according to the level of development. Meanwhile, the industry tiering is prioritized according to the national industrial strategy specified in the SIPP such that activities that offer technology transfer and can introduce new industries that would allow the economy to flourish may enjoy longer years of incentives.

Enterprises including individuals, partnerships, and corporations – which include one-person corporations, the Philippine branch of a foreign corporation and regional operating headquarters – that are engaged in IT R&D activities and registered with any IPA (e.g., Philippine Economic Zone Authority, Board of Investments, Subic Bay Metropolitan Authority) or the Fiscal Incentives and Review Board (FIRB) during the effective period of the CREATE Act may be entitled to four- to seven-year ITH plus 10-year 5% SCIT on gross income or enhanced deductions for export enterprises or five-year enhanced deductions for domestic market enterprises.

The enhanced deductions are as follows:

- ▶ Additional 10% for buildings and 20% for machineries and equipment as depreciation allowance
- ▶ 50% for direct labor expense
- ▶ 100% for R&D costs – this only applies to R&D directly related to the registered project or activity of the entity and shall be limited to local expenditure incurred for salaries of Filipino employees and consumables and payments to local R&D organizations
- ▶ 100% for training expense
- ▶ 50% for domestic inputs purchased

⁴ CREATE Act provides incentives known as "Enhanced Deductions" for export and domestic market enterprises registered with an IPA. Please see discussions under ITH and SCIT/ED.

- ▶ 50% for power expense
- ▶ Maximum of 50% of reinvested profit as a reinvestment allowance – this can only be availed of by enterprises in the manufacturing industry
- ▶ Enhanced net operating loss carryover incurred during the first three years from the start of commercial operations, which may be carried over as deduction from gross income within the next five consecutive taxable years immediately following the year of such loss

CREATE defines R&D as experimental or other related projects or activities:

- ▶ Whose outcome cannot be known or determined in advance based on current knowledge, information or experience, but can only be determined by applying a systematic progression of work based on principles of established science and proceeds from hypothesis to experiment, observation and evaluation, and leads to logical conclusions
- ▶ That are conducted for the purpose of generating new knowledge, including new knowledge in the form of new or improved materials, products, devices, processes or services

The abovementioned incentives may be claimed only on income derived from the registered activity of the registered business enterprise. Income derived from non-registered activities shall be subject to the 20%/25% regular corporate income tax, and no ED can be deducted from the gross income.

Additional two-year ITH shall be given to projects or activities located in areas recovering from armed conflict or a major disaster and three-year ITH to projects or activities registered prior to effectivity of the CREATE Act, or under the incentive system provided therein that shall completely relocate from the National Capital Region within the duration of their incentives.

Qualified expansion projects⁵ or activities may be granted an ITH for three years, provided that the application for tax incentives for a qualified expansion project or activity shall be approved by the FIRB or concerned IPA.

⁵ “Qualified expansion project” refers to a project of an existing enterprise that would involve the installation of additional facilities or equipment, or infusion of additional investment that will result in increase in capacity of the same or similar activity within the same existing plant or facilities of the enterprise, and additional benefits to the economy. It shall include modernization and rehabilitation resulting in the upgrade of the registered product or service. The resulting increase in capacity or upgrade of the registered product or service shall be determined in the SIPP.

Upon positive recommendation of the FIRB, the President of the Philippines can approve, in the interest of national economic development, extraordinary incentives for up to 40 years, provided that the ITH does not exceed 8 years; thereafter, a 5% SCIT may be granted.

To be granted the modified set of incentives or financial support package, the project must have a comprehensive sustainable development plan and minimum investment capital of PHP50 billion or minimum local employment generation of at least 10,000 personnel within three years, among other conditions.

The CREATE Act provides transitory provisions for enterprises registered prior to the effective period thereof, depending on the incentives granted, as follows:

Current incentives	Transitory period
A. Granted only an ITH	Allowed to continue to avail of the ITH for the remaining period For those that have not yet availed of the ITH, period specified in the terms and conditions of their registration
B. Granted ITH and entitled to 5% tax on gross income earned (5% gross income tax (GIT)) after the ITH	Allowed to avail of 5% GIT based on Subsection (C) (i.e., for 10 years)
C. Currently availing of the 5% GIT	Continue to avail of 5% GIT for 10 years

Existing registered business enterprises (RBEs) granted an ITH and entitled to the 5% GIT after the ITH may be allowed to use the ITH for the period specified in the terms and conditions of their registration. Thereafter the RBE may avail of the 5% GIT provided both incentives are within the 10-year limit.⁶

Existing export enterprises shall have the option to reapply and avail of the 10-year 5% SCIT subject to conditions or qualifications set forth in the SIPP and performance review.

⁶ Section 1, Rule 18 of the Implementing Rules and Regulations of the CREATE Incentives.

Guidelines around incentive applications

The Certificate of Entitlement to Tax Incentives (CETI) is a requirement for all registered business enterprises to use the ITH or preferential rate granted by the CREATE Law.⁷ The CETI shall be applied with the concerned Investment Promotions Agency (IPA) prior to the filing of the annual income tax return (AITR). The CETI, among other documents, shall then be attached to the AITR and filed on or before the 15th day of the fourth month following the close of the taxpayer's tax year.

Exemption from donor's tax

Description of benefits

In general, gifts in favor of an accredited research institution or organization shall be exempt from donor's tax provided that no more than 30% of the gift is used by the research institution or organization for administration purposes. Donations to an accredited NGO organized and operated exclusively for scientific, research and educational purposes shall be 100% deductible from the taxable business income of the donor subject to the accredited NGO's compliance with the level of administrative expense and use requirements. If the accredited NGO fails to comply with the level of administrative expense and use requirements, its donors shall be entitled to a limited deduction in an amount not exceeding 10% in the case of an individual, and 5% in the case of a corporation, of the donor's taxable income derived from trade, business or profession as computed without the benefit of the deduction claimed. Preapproval is required to obtain the incentive.

Guidelines around incentive applications

The tax exemption is claimed by filing with the BIR a Certificate of Donation stating that no more than 30% of the donation will be used by the accredited NGO for administration purposes. The Certificate of Donation must be filed with the donor's tax return within 30 days of the date the donation is made.

⁷ Revenue Memorandum Circular No. 28-2022. This repeals Certificate for Entitlement to ITH, now CETI.

Other incentives

In addition to the above incentives, registered business enterprises may enjoy the following:

1. Duty exemption on importation of capital equipment, raw materials, spare parts or accessories
2. VAT exemption on importation and VAT zero-rating on local purchases of goods and services directly and exclusively used in the registered project or activities of a registered export enterprise.

3. Eligibility requirements⁸

The tax code does not provide for a specific definition of R&D allowable as a deduction or deferred expense. R&D expenditures incurred in connection with the taxpayer's trade, business or profession are generally deductible from gross income, except for the following:

- ▶ Any expenditure for the acquisition or improvement of land, or for the improvement of property to be used in connection with R&D of a character that is subject to depreciation and depletion
- ▶ Any expenditure paid or incurred for the purpose of ascertaining existence, location, extent or quality of any deposit of ore or other mineral, including oil or gas

For resident foreign corporations, the R&D activity must relate to a trade or business conducted in the Philippines.

Nonresident foreign corporations that are taxed based on their gross income may not claim a deduction.

4. IP and jurisdictional requirements

There is no specific jurisdictional requirement on the location of IP.

⁸ The SIPP shall define the coverage of the tiers and provide the conditions for qualifying an IT activity.

R&D, as defined under the CREATE Act, pertains to experimental or other related projects or activities whose outcomes cannot be known or determined in advance on the basis of current knowledge, information or experience, but can only be determined by applying a systematic progression of work based on principles of established science and proceeds from hypothesis to experiment, observation and evaluation, and leads to logical conclusions that are conducted for the purpose of generating new knowledge, including new knowledge in the form of new or improved materials, products, devices, processes or services.

5. Technology or innovation zones

There are several IT zones throughout the Philippines. An enterprise engaged in IT service activities, such as IT R&D, may register with the PEZA to enjoy the incentives under Republic Act No. 7916 or the Special Economic Zone Act of 1995, as amended by the CREATE Act. Incentives available to these enterprises include an ITH, and after the ITH period, the 5% SCIT on gross income earned in lieu of all national and local taxes or ED at the option of the qualified registered export enterprises or ED only for qualified domestic market enterprises; exemption from import duties and taxes on imported capital equipment, raw materials, spare parts or accessories directly and exclusively used in the registered project or activity and are not produced or manufactured locally in sufficient quantity or of comparable quality and at reasonable prices; and value-added tax (VAT) exemption on importation and VAT zero-rating on local purchases of goods and services directly and exclusively used in the registered activity or project.

6. Role of governmental bodies in administering incentives

The BIR may evaluate claims for R&D expense deductions and exemptions from donor's tax as part of a tax audit investigation.

The grant of incentives to enterprises engaged in IT R&D activities may be evaluated by the IPA or the FIRB on a case-by-case basis. However, the BIR may evaluate the proper administration of the incentives in a tax audit investigation.

7. Administrative requirements⁹

No BIR preapproval is required to claim R&D expense deductions as provided under the tax code. However, the following requirements must be complied with:

- ▶ The expense is directly attributable to the development, management, operation and/or conduct of the trade or business of the taxpayer.

- ▶ The expense was incurred during the taxable year.
- ▶ The expense is substantiated with sufficient evidence, such as official receipts or other adequate records, showing the amount of the expense being deducted and the direct connection or relation of the expense being deducted to the development, management, operation and/or conduct of the taxpayer's trade, business or profession of the taxpayer.
- ▶ The withholding tax due on the expense must be paid.

For exemption from donor's tax and full deduction of the donation to a qualified institution, Section 13(C) of Revenue Regulations No. 02-03 states that the donor engaged in business shall give a Notice of Donation on every donation worth at least PHP50,000 to the Revenue District Office that has jurisdiction over its place of business within 30 days after receipt of the qualified institution's duly issued Certificate of Donation. The certificate shall be attached to the said Notice of Donation, stating that no more than 30% of the donation/gifts for the tax year will be used by such qualified institution for administration purposes.

⁹ BOI Memorandum Circular No. 2021-001, *General Policies and Specific Guidelines Implementing the 2020 IPP*. The registered facilities that conduct clinical trials or Contract Research Organization must submit a copy of Permit to Conduct Clinical Trial from the Food and Drug Administration before the conduct of each clinical trial.

8. Statutory reference

R&D expense deduction

- ▶ Statutory reference: Section 34 (l) of the National Internal Revenue Code of 1997, as amended by TRAIN Law and further amended by the CREATE Law
- ▶ Year of statutory regime: 2021, 2018, 1997

Exemption from donor's tax and contribution expense deduction

- ▶ Statutory reference: Sections 101(A)(3), 101(B)(2) and 34(H)(2)(c) of the National Internal Revenue Code of 1997, as amended by TRAIN Law and CREATE Law
- ▶ Year of statutory regime: 2021, 2018, 1997

ITH and SCIT/ED

- ▶ Statutory reference: Republic Act No. 11534 (CREATE Law), 2020 Investment Priorities Plan BOI Memorandum Circular No. 2020-50, BOI Memorandum Circular No. 2021-001 (General Policies and Specific Guidelines to Implement the 2020 Investment Priorities Plan), Executive Order No. 226 (or the Omnibus Investment Code of the Philippines), Republic Act No. 7916 (or the Special Economic Zone Act), as amended, and Guidelines for the Registration of Information Technology (IT) Enterprises and the Establishment and Operation of IT Parks/Buildings (2000)
- ▶ Year of statutory regime: 2021, 2020, 2017, 2000

This publication contains information in summary form and is therefore intended for general guidance only. It is not intended to be a substitute for detailed research or the exercise of professional judgment. We have relied upon our understanding of current Philippine tax laws, regulations, rules and issuances of the relevant tax authorities as of this date. Should these laws, regulations, rules and issuances change, some of the issues and/or conclusions discussed in this memorandum may change as well. Neither SGV & Co. nor any other member firm of the global EY organization can accept any responsibility for loss to any person acting or refraining from action as a result of any material in this publication. Recent years marked a significant step in terms of R&D grants and incentives rules in Poland. Several changes have been enacted that will attract new investors or encourage companies already present in Poland to implement further undertakings.

Many instruments were transformed into new schemes, offering a higher volume of support (e.g., R&D tax relief – the amount of qualifying R&D expenses that may be deducted has increased; from 2022 onward, taxpayers may deduct up to 200% of eligible employee expenses and 100% of other eligible expenses). Other new instruments implemented in 2022 are becoming increasingly popular.

In 2019, the package of incentives was extended by the Innovation Box regime, aimed at incentivizing innovative R&D activities by taxing profits from qualified intellectual property

rights (qualified IP) at a preferential 5% rate instead of the standard CIT rate of 19%.

In 2022, the tax relief package was expanded by new tax reliefs:

- ▶ Robotization relief – designed to allow up to 50% of eligible costs to be deducted from the tax base
- ▶ Prototype tax relief – designed to allow a deduction of up to 30% of eligible costs from the tax base
- ▶ Relief for innovative employees – designed to reduce the value of advance payments on payroll tax of employees spending at least 50% of their working time on R&D.

Under the new European Union (EU) financial perspective 2021-27 and the National Recovery Plan, Poland is to receive the largest pool of support ever. The first calls for proposals were launched in the first quarter of 2023. Additionally, it is expected that new rules regarding the Multi-Annual Support Program (MASP) will be announced and implemented in the first half of 2023. New entry criteria will be similar to the criteria applicable to the Polish Investment Zone, which means that a governmental cash grant will become more accessible.

1. Overview

The R&D incentives system in Poland provides for tax incentives and cash grants (direct grants). The National Research and Development Center is responsible for the implementation of several measures dedicated to supporting R&D projects, especially by channelling the EU funds to funding R&D and innovation.

Positive changes in terms of the R&D incentives regime are being observed both in terms of direct grants and tax incentives, making the Polish R&D support system competitive and attractive for entrepreneurs. R&D tax relief, the Innovation Box, robotization and automation relief, prototype tax relief, and relief for innovative employees are already here, and some cash grants under the new EU financial perspective are available to support R&D projects conducted by entrepreneurs independently

or in cooperation with research units, including those that can be augmented by investments in R&D infrastructure and implementation of innovations or green solutions. The cash grants programs provide the possibility to secure reimbursement of up to 80% of projects' costs.

In terms of R&D tax relief, starting in 2022, it is possible to deduct up to 200% of employee costs of the R&D work carried out and 100% of other eligible costs. An entity with the formal status of an R&D center (RDC) may be able to deduct 200% of all eligible cost categories. The mechanism used for the R&D tax relief is based on the fact that costs associated with research and development activities have a double effect on the amount of the income tax base. For the first time, these costs are standard tax-deductible costs. Second-time costs are deducted at the time of deduction from the tax base under the R&D relief.

Types of incentives	
Tax credits	<input checked="" type="checkbox"/>

2. Incentives available

Name of incentive	Incentives under the framework of Polish Investment Zone (PIZ)*	MASP	RDC status	R&D tax relief – additional decrease in tax base by R&D costs*	Robotization relief	Prototype tax relief	Relief for innovative employees	Copyright remuneration scheme	Innovation box	Grants from EU funds
Type of incentive	▶ Tax exemption	▶ Cash grant	▶ Super deduction	▶ Super deduction	▶ Super deduction	▶ Super deduction	▶ Reduction of advance payments on payroll tax of employees	▶ Payroll tax reduction	▶ Preferential tax rate	▶ Cash grant

* Although not based upon scientific analysis, EY clients report that this incentive delivers the most beneficial results to investors.

Incentives for new investments under the framework of Polish Investment Zone (PIZ)

(Polska Strefa Inwestycji)

Description of benefits

This relatively new concept to support investments, partially based on former Special Economic Zones, was introduced in mid-2018 and was modified at the beginning of 2023. There is a possibility to receive a CIT exemption throughout Poland after fulfilling certain criteria – specific for a given location. The instrument allows for CIT exemption for income generated by activities covered by a decision on support and conducted within the territory of the investment. This instrument allows for up to 15 years of CIT exemption when quantitative and qualitative criteria are met.

Guidelines around incentive applications

To obtain the incentive, taxpayers must apply for a decision on support, which is issued by an area administrator (one of 14 entities with a defined geographic area under governance).

The incentive is applicable for future investments, as investments cannot start before an application for decision on support is submitted. Tax exemption must be disclosed in the annual tax return submitted to the tax authorities (forms CIT-8 or PIT-36 and CIT-8S or PIT/SE, respectively).

Governmental cash grant under the Multi-Annual Support Program (MASP)

(Program wspierania inwestycji o istotnym znaczeniu dla gospodarki polskiej na lata 2011-2030)

Description of benefits

The MASP provides governmentally funded cash support for investments considered crucial to the Polish economy. The program is currently undergoing some changes, and the updated version should be approved later in 2023. Based on expected new rules, support generally will be offered to the following categories of investments:

- ▶ **Strategic** – manufacturing investment of at least PLN160 million of eligible capex and creation of at least 50 new jobs
- ▶ **Innovative** – manufacturing or service investment of at least PLN7 million of eligible capex, creation of at least 20 new jobs, and implementation of a new or significantly improved product or process
- ▶ **Business services center** – investment in modern business services with eligible capex of at least PLN1 million and creation of at least 100 new jobs
- ▶ **Research and development services center** – investment in an establishment dedicated to carrying out R&D services with eligible capex of at least PLN1 million and creation of at least 10 new jobs for university graduates

Depending on the type of investment, the level of support might be based on either:

- ▶ Costs of new investment expenditures
- ▶ Number of new jobs

In general, the support may amount to:

- Up to 25% of eligible investment expenditures (depending on the size of an enterprise-investor, investment location and the number of qualitative criteria fulfilled)
- Up to PLN20,000 per new job created (depending on the size of an enterprise-investor, investment location and the number of qualitative criteria fulfilled)

Because the above information is based on draft amended rules of the cash grants program, there may be changes in the final wording.

Guidelines around incentive applications

The cash grants are applicable to future investments, which cannot start before applying for the aid. The application consists of two main documents: "Information about the project form," which requires information about the investor and the project, and "Incentive effect analysis," which has to present the investor's decision-making process and justify that the pursued aid incentivizes them to implement the investment in Poland.

The grants are paid in tranches in accordance with a schedule agreed to with the Ministry of Economic Development and Technology. It is required that at least 15% of a grant is spent on cooperation with educational and scientific entities.

R&D tax relief

(Ulga B+R)

Description of benefits

R&D tax relief allows for an additional decrease in tax base by applying a super deduction of certain categories of R&D expenses borne by a taxpayer carrying out R&D activities. The deduction is calculated with reference to the amount of costs incurred for conducting R&D.

From 2022, 200% of employee costs of the R&D work carried out and 100% of other eligible costs may be additionally deducted from the tax base (200% of total eligible costs for entities holding the R&D center status).

If the additional deduction exceeds the company's tax base for a given year, the excess can be either consumed through relief for innovative employees or carried forward for six consecutive years after the year in which costs were incurred. The relief also can be applied retroactively – up to five years back.

Guidelines around incentive applications

Claims for R&D tax relief are made through the annual tax return. Proper records of R&D eligible costs have to be kept, and amounts of costs must be disclosed in the annual tax return submitted to the tax authorities (CIT-BR or PIT-BR appendix to CIT-8 or PIT-36 form, respectively).

Prototype tax relief

(Ulga na prototyp)

Description of benefits

The prototype tax relief allows qualifying costs related to the technological startup and implementation of a new product developed by a taxpayer into the market. The relief is intended only for manufacturing activities (not services). The prototype tax relief provides the possibility to apply an additional 30% deduction of the costs of trial production of a new product and of implementing a new product on the market to be deducted from the tax base. The deduction is limited, as it must not exceed 10% of income for a given tax year.

Guidelines around incentive applications

Claims for prototype tax relief are made through the annual tax return. Proper records of eligible costs have to be kept, and costs must be disclosed in the annual tax return submitted to the tax authorities (form CIT-8 or PIT-36).

Relief for innovative employees

(Ulga na innowacyjnych pracowników)

Description of benefits

Tax relief for innovative employees allows for faster deduction of unsettled R&D tax relief. Taxpayers whose income for a given tax year is lower than the available deduction from R&D relief are able to settle the excess in the following year by reducing advances on income tax (PIT and flat-rate income tax) deducted monthly from the income of their employees due to, for example, the employment relationship, performance of services under a contract of mandate or for a specific work, or copyright. The relief applies only to employees directly working on the implementation of R&D activities for at least 50% of their work time.

Guidelines around incentive applications

The tax relief for innovative employees may be applied starting from the month following the month in which a company submitted its annual income tax return for a given year until the end of the tax year in which the tax return was submitted. The amount of the relief is limited to the product of the undeducted amount and the tax rate applicable to that taxpayer in a given tax year.

Robotization relief

(Ulga na robotyzację)

Description of benefits

The robotization tax relief allows the deduction of an additional 50% of eligible robotization costs from the tax base. The credit applies to tax-deductible costs: depreciation and amortization incurred in connection with assets fulfilling applicable definitions of an industrial robot and peripherals, as well as staff training costs and lease fees incurred in 2022 through 2026. The effective return on investment after taking advantage of the credit will be up to 9.5% of the incurred expenses.

Guidelines around incentive applications

Claims for robotization relief are made through the annual tax return. Proper cost records have to be kept, and the information on applied deductions must be disclosed in the annual tax return submitted to the tax authorities (CIT-RB or PIT-RB appendix to CIT-8 or PIT-36 form, respectively).

Copyrights remuneration scheme

(Struktura wynagrodzeń w oparciu o przeniesienie praw autorskich)

Description of benefits

Employees who transfer the copyright to their works to their employer are entitled to apply tax deductible costs increased to 50%. These increased deductible costs reduce taxable personal income of employees; therefore, growth in net salary can be observed without any additional costs to the employer. The deduction is calculated with reference to the amount of work devoted to conducting inter alia R&D works or creative activity in the field of computer programming. The maximum amount of the benefit per employee depends on the salary but must not exceed approximately PLN38,000 per year. Guidelines around incentive applications

Implementation of the scheme requires relevant documents and processes to be implemented by a company willing to offer this benefit to its employees, including specific clauses to the employment contracts regarding transfer of proprietary rights to an employer; procedures for recognizing, verifying and valuing the works; and processes to transfer the value of the works reported by each employee to their monthly salary.

RDC status

(Centrum badawczo-rozwojowe)

Description of benefits

The Ministry of Economic Development and Technology may grant RDC status for entrepreneurs who carry out R&D activities, which brings the benefit of higher tax deductions within the R&D relief; additional categories of eligible costs; and exemption from real estate, agricultural and forest tax.

Guidelines around incentive applications

The formal status of an RDC may be obtained, at the earliest, in the second tax year of taxpayer's activity. To obtain the status, companies must submit an application to the Minister of Economic Development and Technology, along with attachments proving fulfilment of entry conditions (including audited financial statements for the recent tax year).

Grants from EU funds

(Wsparcie z funduszy Unii Europejskiej)

Description of benefits

By the end of 2022, all the operational programs (including a program called European Funds for Smart Economy, or FENG) setting out rules for funding R&D projects and investments through European funds have been approved by the European Commission. The main assumptions of FENG are:

- ▶ Support for the entire R&D process (development of R&D infrastructure, carrying out R&D works, implementation of innovations)
- ▶ Support for enterprises at every stage of development
- ▶ Cooperation between science and business
- ▶ Focus on national intelligent specializations

Compared to the Smart Growth Operation Program (POIR), which supported R&D previously, the FENG is characterized by:

- ▶ Modular support (obligatory modules: R&D works or innovation implementation; additional modules: R&D infrastructure, digitalization, greening of enterprises, internationalization, competencies)
- ▶ Digital and green transformation of enterprises
- ▶ Improvement of employees' competencies
- ▶ Support for mid-caps

The National Centre for Research and Development is responsible for managing the program regarding large enterprises, their consortia, and the consortia of small

and medium-sized enterprises (SMEs) with research organizations.

The Polish Agency for Enterprise Development is responsible for servicing SMEs and SME consortia.

EU cash grants for R&D works

Support is granted according to the EU's rules on support for R&D projects. The maximum aid level depends on the company's size and the type of R&D work that is conducted by the entity. The grant is calculated based on the volume of R&D expenditures.

The basic maximum levels of support are as follows:

	Entity size					
	Micro/small		Medium		Large	
	Basic	With additional bonus*	Basic	With additional bonus*	Basic	With additional bonus*
Industrial research	70%	80%	60%	75%	50%	65%
Experimental development	45%	60%	35%	50%	25%	40%

* Maximum aid levels may be reached if additional requirements regarding the dissemination of results of the project are met.

Aid amounts applicable to modules other than R&D range from 20% to 80%, depending on the scope of a module/initiative, size of an enterprise and location of the project.

Guidelines around incentive applications

The support is applicable to future projects and investments, which cannot start before the application for support is filed. The application for funding must include detailed information, including the justification of an innovation, a complete research plan, the definition of market demand and a plan for implementation of results of a project into the market. Once the application is submitted, it is evaluated against a set of pre-defined access and scoring criteria. The grants are paid in accordance with a schedule agreed upon between the aid beneficiary and the institution responsible for granting support.

3. Eligibility requirements

Incentives for new investments: PIZ and the MASP

In principle, the following capital expenditures may be treated as eligible:

- ▶ Investment expenditures:
 - ▶ Purchase of land
 - ▶ Purchase of construction works and materials
 - ▶ Purchase of fixed and intangible assets
 - ▶ Financial lease of other fixed assets
 - ▶ Lease of land and buildings
 - ▶ Two-year employment costs of newly created jobs

In the case of investments of large enterprises, all assets must be new for their costs to be eligible.

The main entry conditions for PIZ are as follows:

- ▶ An investment must not begin prior to applying for the aid.
- ▶ The new investment must be executed.
- ▶ Minimal investment costs are required within a PIZ and vary depending on the unemployment rate in a location (in comparison to the average unemployment rate in the country), the type of investment (industrial

or in the business services sector) and the enterprise size, from PLN200,000 to PLN100 million. In the case of investment in an existing establishment, minimum investment thresholds are reduced by 50%.

- ▶ The required number of qualitative criteria has to be fulfilled – between 4 and 6 (out of 12 or 13) – depending on the location and type of investment.

Based on the most up-to-date draft of the amended program, the basic entry conditions for the MASP for large enterprises* are as follows:

Investment type	Entry criteria
Strategic	PLN160 million and 50 new jobs
Innovative	PLN7 million and 20 new jobs
Business services center	PLN1 million and 100 new jobs
R&D services center	PLN1 million and 10 new jobs for university graduates

*There is a possibility to apply reduced entry conditions to investments of SMEs, in the case of investments in existing establishments or in specifically defined disadvantaged locations.

R&D tax relief

The taxpayer must conduct activities in the scope of R&D works as defined in the tax law.

Eligible expenses include costs borne during R&D work covering:

- ▶ Research (basic research and applied research)
- ▶ Development works (prototypes, pilot projects and demonstration projects)

R&D tax relief allows for an additional decrease in tax base by certain categories of R&D expenses that were incurred and treated by a taxpayer as tax deductible:

- ▶ Wages and social contributions of employees involved in R&D activities
- ▶ Commodities and raw materials
- ▶ Expertise, opinions, advisory services and similar services, as well as results of research provided by scientific units (related to R&D activities)
- ▶ Costs of using the R&D equipment (also, purchase of services related to the use of R&D equipment)
- ▶ Tangible and intangible assets depreciation
- ▶ Administrative costs of obtaining and maintaining a patent (e.g., payments to Patent Office for prolongation of patent)

Taxpayers with RDC status may additionally treat as eligible:

- ▶ Depreciation of buildings used to conduct R&D activity
- ▶ Expertise, opinions, advisory services and similar services, as well as results of research conducted by entities other than scientific units

The R&D tax relief may be applied once company processes fall within R&D activity and the costs connected to them have been identified and properly evidenced.

Prototype tax relief

In the case of trial production, eligible costs include:

- ▶ The purchase price or production cost of new fixed assets necessary to launch a trial production of a new product
- ▶ Costs of improving fixed assets to adapt them to starting up trial production of a new product
- ▶ Costs of materials and raw materials purchased exclusively for the purpose of trial production of the new product

In the case of launching a new product on the market, eligible costs include:

- ▶ Costs of research, expert opinions and preparation of documentation necessary to obtain a certificate, permit, etc.
- ▶ Costs of product life cycle analysis
- ▶ Costs of an environmental technology verification system

Relief for innovative employees

The relief for innovative employees is an instrument complementary to the R&D relief and is available to companies that carry out R&D activities and incur related costs, but their tax base in a given tax year is not sufficient to use the entire claim resulting from R&D relief. The relief for innovative employees can be applied in the following year only to advances on payroll tax related to salaries of employees whose engagement in R&D activities amounts to at least 50% of their work time.

RDC status

Criteria that must be met by an entrepreneur to obtain RDC status are as follows:

- ▶ Must obtain net revenues (excluding value-added tax) from the sale of goods, products and financial operations for the previous financial year in the amount of at least:
 - ▶ PLN5 million, and whose net revenues from sales of research and development services produced by itself, classified as services in the field of scientific research and development works, within the meaning of the provisions on the Polish classification of products and services or industrial property rights, constitute at least 20% of net revenues
 - ▶ PLN2.5 million but less than PLN5 million, and whose net revenues from the sale of R&D services generated by it, classified as research and development services, as defined in the provisions on the Polish classification of products and services or rights industrial property, are at least 70% of net revenues
 - ▶ Fulfilment of the above has to be confirmed by an audited financial statement and auditor report.
- ▶ Must apply accounting regulations
- ▶ Must submit declarations confirming lack of arrears in taxes and social security and health insurance contributions

Robotization relief

The relief provides a possibility to apply a 50% increase to tax-deductible costs related to investments in robotization of activities. Eligible costs cover:

Costs of purchasing new:

- ▶ Industrial robots
- ▶ Machines and peripheral devices for industrial robots functionally related to them (e.g., tracks, turntables, controllers, cleaning stations)
- ▶ Machines, equipment and other things functionally related to industrial robots to ensure ergonomics and safety for humans (e.g., sensors, controllers, relays)
- ▶ Machines, equipment and systems for remote management, diagnosis, monitoring or servicing of industrial robots (e.g., sensors, cameras)
- ▶ Devices for human-machine interaction

- ▶ Training of staff who will operate the purchased industrial robots
- ▶ Software for robots and related equipment

Copyrights remuneration scheme

- ▶ The scheme (increased tax-deductible costs) may be applied to employees' income derived from the transfer of copyrights to works resulting from specifically defined activities, including R&D, creative activity in the field of computer programming, journalistic activity.
- ▶ The employment contract has to foresee division of the salary in part related to standard employment duties and royalty for transfer of copyrights.
- ▶ The works created must meet definitions in the Copyright Act.

Grants from EU funds

EU cash grants for R&D and innovation

Depending on the scope or goal of a project, the main categories of eligible expenditures may be:

- ▶ Wages and social contributions of employees involved in R&D activities
- ▶ Subcontractors' works related to R&D activities
- ▶ Other direct costs, including:
 - ▶ Depreciation and the use of research equipment, intangible assets, buildings and land
 - ▶ Materials and products used in R&D works
 - ▶ Other operating costs
- ▶ Indirect costs (e.g., administrative costs, costs of remuneration of management staff, traveling expenses)
- ▶ Purchase or own development of fixed and intangible assets necessary to establish or expand R&D infrastructure
- ▶ Purchase or own development of fixed and intangible assets necessary to implement R&D results into business activities
- ▶ Staff training
- ▶ Promotion of new solutions in foreign markets
- ▶ Costs driven by digitization of production, processes, products, services, business models and cybersecurity
- ▶ Expenses to boost the company's transformation toward sustainable growth and the circular economy

4. IP and jurisdictional requirements

The Innovation Box regime (IP Box) was implemented in 2019 into the Polish tax system.

The IP Box is aimed at incentivizing innovative R&D activities by taxing profits from qualifying intellectual property rights (qualifying IP) at a preferential 5% rate instead of standard CIT rate of 19%.

The preferential 5% tax rate might be applied to the “qualified income” obtained from the qualifying IP created, developed or improved by a taxpayer as part of R&D activity.

Qualifying IP rights, protected under national or international law, include:

- ▶ Rights for inventions (patents)
- ▶ Protection rights for utility models
- ▶ The rights in registration for industrial designs
- ▶ The rights in registration for topographies of integrated circuits
- ▶ Additional protection rights for patents for medicinal products and plant protection products
- ▶ The rights in registration for authorized medicinal and veterinary products
- ▶ The rights in registration for new varieties of plants or animals
- ▶ The rights to computer software

Qualified income is calculated according to the formula:

Qualified income = nexus indicator x income from qualified IP rights

Nexus is calculated in the following way:

$$\frac{(a + b) * 1.3}{a + b + c + d}$$

Where the letters correspond to:

- a. Costs of conducting R&D activity related to qualified intellectual property rights
- b. Costs of acquisition of results of R&D works from an unrelated entity
- c. Costs of acquisition of results of R&D works from related entity
- d. Costs of acquisition of qualified intellectual property rights

The types of income from qualifying IP rights include:

- ▶ Fees and royalties under license agreement for qualifying IP
- ▶ Income from sale of qualifying IP
- ▶ Income from the qualified IP embedded in the sale price of products and services
- ▶ Compensation for infringement of rights arising from qualifying IP obtained in litigation, including court proceeding or arbitration

5. Technology or innovation zones

There are no technology or innovation zones in Poland; however, tax incentives are provided through PIZ.

6. Role of governmental bodies in administering incentives

Incentives for new investments under the framework of PIZ

Exemption can be granted on the basis of a decision on support within PIZ issued by 1 of 14 area administrators (on behalf of the Ministry of Economic Development and Technology). Investors apply for the decision on support on an individual basis.

Cash grant under MASP

To benefit from the MASP, an investor must apply for a grant and begin negotiations with the Polish Investment and Trade Agency (PITA) and the Ministry of Economic Development and Technology. The application is evaluated by PITA, then the Ministry, as well as the Interministerial Team for Investments of Major Importance to the Polish Economy. Support is granted in the form of a cash grant based on a bilateral agreement between the Minister and the investor.

RDC status

The Ministry of Economic Development and Technology administers the matter and is responsible for evaluating applications and granting the RDC status. Investors apply for RDC status on an individual basis, as there is no formal call or invitation involved.

R&D tax relief

There is no formal call or invitation involved. However, taxpayers should consider securing the relief (e.g., scope of activities, details regarding eligibility of costs) via an individual tax ruling issued by the Director of National Tax Information. The deduction is disclosed in the annual tax return by taxpayers. Tax authorities may review the deduction during a regular tax audit. In Poland, the

statutory limitation period is five years.

Robotization relief

There is no formal call or invitation involved. However, taxpayers should consider securing the relief (e.g., scope of investment, details regarding eligibility of costs) via an individual tax ruling issued by the Director of National Tax Information. The deduction is disclosed in the annual tax return by taxpayers. Tax authorities may review the deduction during a regular tax audit. In Poland, the statutory limitation period is five years.

Prototype tax relief

There is no formal call or invitation involved. However, taxpayers should consider securing to the relief (e.g., scope of activities or investment, details regarding eligibility of costs) via an individual tax ruling issued by the Director of National Tax Information. The deduction is disclosed in the annual tax return by taxpayers. Tax authorities may review the deduction during a regular tax audit. In Poland, the statutory limitation period is five years.

Relief for innovative employees

There is no formal call or invitation involved. The reduction of payroll tax advances is applied on an ongoing basis in monthly tax calculations. However, taxpayers should consider securing the relief via individual tax ruling issued by the Director of National Tax Information. Tax authorities may review the deduction during a regular tax audit. In Poland, the statutory limitation period is five years.

Copyrights remuneration scheme

There is no formal call or invitation involved. The deduction is applied on an ongoing basis in monthly payroll calculations and reported to tax authorities. Final settlement takes place within the annual personal tax return filed by employees. Tax authorities may review the deduction during a regular tax audit.

Innovation Box

There is no formal call or invitation involved. However, taxpayers should consider securing the incentive (e.g., scope of activities, details regarding eligibility of costs) via an individual tax ruling issued by the Director of National Tax Information. The deduction is disclosed in the annual tax return by taxpayers. Tax authorities may review the deduction during a regular tax audit. In Poland, the statutory limitation period is five years.

7. Administrative requirements

Incentives for new investments under the framework of PIZ

To allow monitoring of the status of meeting the conditions set in the decision on support within PIZ, the company must submit reports to the area administrator, including information on progress in achieving the level of eligible costs and level of new jobs created in accordance with the investment. The period covered by each report may differ, but the reports are usually required to be submitted on a quarterly basis.

Cash grant under MASP

By 30 September of each year in which the support is granted, the investor shall submit to the Ministry of Economic Development and Technology a financial and substantive report covering the period from the beginning of the investment to the date of the report, including the performance of contractual obligations and a year-end forecast.

By 31 March of each year in which the support is granted, the investor shall submit to the Ministry of Economic Development and Technology a financial and substantive report for the previous year that covers the number of jobs created, maintained employment and the total amount of incurred eligible costs from the date of the beginning of the investment.

R&D status

Each year, entrepreneurs must submit to the Ministry of Economic Development and Technology financial statements with auditor reports, a description of the R&D activities of the past year, and statements confirming they have no outstanding tax or social security liabilities.

R&D tax relief

A company reports deductions resulting from R&D tax relief together with the annual CIT settlements. There is no specific separate reporting apart from having internal justification and documentation supporting classification of certain costs as eligible R&D expenditures.

Robotization relief

A company reports deductions resulting from robotization relief together with the annual CIT settlements. There is no specific separate reporting apart from having internal justification and documentation supporting classification of certain costs as eligible robotization expenditures.

Prototype tax relief

A company reports deductions resulting from prototype tax relief together with the annual CIT settlements. There is no specific separate reporting apart from having internal justification and documentation supporting classification of certain costs as eligible prototype expenditures.

Relief for innovative employees

There is no specific separate reporting apart from having internal justification and documentation supporting application of the incentive – records of eligible R&D costs and timesheets proving engagement of particular employees in R&D activities.

Copyrights remuneration scheme

A company implements increased deductible costs every month and should disclose them in the employee annual tax settlement. The company also should have a procedure of recognizing creative works and methods of calculating time spent on creative works.

Grants from EU funds

Support is available through calls for proposals, followed by an application evaluation done according to specified evaluation criteria.

Reports on project progress and the refund of incurred costs should be submitted at least once every six months.

8. Statutory reference

Incentives for new investments in PIZ

PIZ regulations are introduced by the Act on supporting new investments of 10 May 2018 (Journal of Laws of 2023, item 74) and Regulation of Council of Ministers of 27 December 2022 on state aid granted to certain entrepreneurs for the implementation of new investments (Journal of Laws of 2022, item 2861).

Cash grant under MASP

MASP regulations are introduced in the “Program of support of investments of considerable importance for the Polish economy for years 2011-2030,” adopted by the Council of Ministers on 5 July 2011. The program was revised on 1 October 2019. Another revision is expected to be adopted in Q2 2023.

RDC status

RDC status is regulated by the Act on certain forms of support for innovative activity of 30 May 2008 (Journal of Laws of 2022, item 2474).

R&D tax relief

R&D tax relief is regulated in article 18d of Polish CIT Act (Journal of Laws of 2022, item 2587) and article 26e of Polish PIT Act (Journal of Laws of 2022, item 2647).

Robotization relief

Robotization relief is regulated in article 38eb of Polish CIT Act (Journal of Laws of 2022, item 2587) and article 52jb of Polish PIT Act (Journal of Laws of 2022, item 2647).

Prototype tax relief

Prototype tax relief is regulated in article 18ea of Polish CIT Act (Journal of Laws of 2022, item 2587) and article 26ga of Polish PIT Act (Journal of Laws of 2022, item 2647).

Relief for innovative employees

Relief for innovative employees is regulated in article 18db of Polish CIT Act (Journal of Laws of 2022, item 2587) and article 26eb of Polish PIT Act (Journal of Laws of 2022, item 2647).

Copyrights remuneration scheme

Regulation on the copyright remuneration scheme is provided in article 22 of Polish PIT Act (Journal of Laws of 2022, item 2647).

Innovation Box

Innovation Box regime is regulated in article 24d of Polish CIT Act (Journal of Laws of 2022, item 2587).

Grants from EU funds

Rules for grants from EU funds are stated in the Operational Program documents and implementing documentation.

Portugal

This chapter is based on information as of February 2023.

The Portuguese government is very supportive of R&D activities, and the related incentives programs are being maintained and reinforced. R&D and innovation are seen as cornerstones of Portuguese economic development.

EY contacts:

Pedro Paiva
pedro.paiva@pt.ey.com

Francisco Hamilton Pereira
francisco.hamilton-pereira@
pt.ey.com
+35 193 791 2749

1. Overview

The Portuguese government has introduced several R&D incentive programs to attract investors to the country and encourage companies to undertake R&D activities. The incentives in force may be provided in the form of cash grants, tax credits or income from the sale or granting of the temporary use of industrial intellectual property (IP) rights. Pharmaceutical companies can benefit from these and other specific incentives.

To stimulate R&D activities, Portugal has created a competitive package of cash grants and tax incentives, which may be applied simultaneously. It is possible to receive a nonrefundable cash grant with the R&D tax credit.

The cash grant program (SI I&DT) set for R&D projects is based on European Union-funded incentives. A new program is available for the period from 2022 to 2027.

The program awards a cash grant of 25% to 80% of the eligible R&D expenses. The cash grant is awarded by project and per call and is nonrefundable for amounts up to EUR1 million. For cash grants above EUR1 million, the program awards a nonrefundable cash grant of up to EUR1 million and a hybrid form of an incentive for the portion exceeding EUR1 million. This hybrid includes a nonrefundable cash grant for 75% of the incentive exceeding EUR1 million and a refundable incentive for the remaining 25%.

The R&D tax credit (SIFIDE) consists of a tax deduction to companies' tax liability of 32.5% of expenses incurred in that period plus an incremental rate of 50% of the increase in expenses incurred during that period compared to the average from the previous two fiscal years up to EUR1.5 million. This benefit was extended until 2025.

Portugal

These incentives have been in place for a significant amount of time. SIFIDE is one of the most mature regimes, dating back to 1997. Cash grants were approved in 2007.

In 2012, the Ministries of Health and Finance signed an agreement with the pharmaceutical industry to reduce the expenses of the National Health System (commonly known as SNS) for drugs used in an ambulatory environment. To reduce SNS' expenses, pharmaceutical companies are granting a special discount on the medicine that they sell to the SNS, which is known as the Special Contribution on the Pharmaceutical Industry (SCPI).

The agreement between the Ministries of Health and Finance and the pharmaceutical industry foresees the

possibility of deducting the full amount of R&D expenses related to the SCPI, in order to stimulate investment in R&D activities in Portugal.

Portugal has also introduced a patent box regime that follows the "modified nexus approach" set out by Action 5 of the Organisation for Economic Co-operation and Development (OECD) Base Erosion and Profit Shifting (BEPS) Action Plan. Accordingly, the gains obtained from the disposal or lease of patents and other industrial IP rights subject to registration and developed in Portugal will benefit from a reduced tax rate since the eligible income will be adjusted downward by up to 85%.

Types of incentives	
Tax credits	<input checked="" type="checkbox"/>

2. Incentives available

Name of incentive	R&D cash grant (SI I&DT)*	R&D tax credit (SIFIDE)	Portuguese non-habitual resident individuals regime	Deduction from income derived from patents and industrial IP developed in Portugal	R&D deduction regarding the SCPI
Type of incentive	▶ Cash grant	▶ R&D tax credit	▶ Personal income tax favorable tax regime (20% flat tax rate on employment income plus other exemptions)	▶ Patent-related incentives	▶ Tax deduction

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

R&D cash grant (SI I&DT)

(Sistema de Incentivos à Investigação & Desenvolvimento Tecnológico)

Description of benefits

Portuguese legislation includes a financial incentive for research and technological development (R&TD) activities promoted by companies. This measure aims to promote the development of R&TD and demonstration projects at individual companies or consortia led by companies. The measure also aims to support company activities related to training and building capacity of internal R&TD competencies and enhancement of R&TD results. The measure is meant to strengthen R&D in businesses, as well as the relationship between companies and knowledge centers, accelerating the transfer and use by companies of R&TD technologies, knowledge and results.

Based on previous call for applications, the conditions of this incentive are:

- ▶ Minimum investment of EUR100,000
- ▶ Minimum incentive rate of 25%, which can be increased by 20% for micro and small companies, 10% for medium companies, 25% for industrial investigation activities and 15% when verified as one of the following situations:
 - ▶ Collaboration (coordination) with other companies
 - ▶ Collaboration (coordination) with research organizations
 - ▶ Wide dissemination of research results
- ▶ Nonrefundable grant for attributed incentive amounts below EUR1 million
- ▶ For attributed incentives above EUR1 million, a nonrefundable grant of up to EUR1 million is awarded; for the exceeding amounts, 75% of the exceeding amount is granted as a nonrefundable incentive and the remaining 25% is conceded as a refundable loan

The refundable amount will be attributed as a non-interest-bearing loan, which will be refundable after three years on a semester basis for four years. Prior application and approval are required to benefit from this cash grant.

Guidelines around incentive applications

The incentive is applicable to future investments. The deadlines are related to the application periods set by the grants managing authority.

R&D tax credit (SIFIDE)

(Sistema de Incentivos Fiscais à Investigação e Desenvolvimento Empresarial)

Description of benefits

SIFIDE is a tax incentive system for corporate R&D that aims to provide companies in Portugal with a way to promote R&D, especially to boost productivity, economic development and the qualifications of the workforce. The SIFIDE tax credit consists of two components:

- ▶ A base rate of 32.5% applicable to R&D expenses of the current tax year
- ▶ An incremental rate of 50% on expenses incurred during the period, in comparison with the simple average of the two previous tax years, with a limit of EUR1.5 million

According to the Portuguese tax legislation, for taxpayers that are small and medium-sized enterprises (SMEs) that have not completed two fiscal years or benefited from this incremental rate, an increase of 15% to the base rate will apply. Tax credits that are not deductible because of insufficient tax payable in the period in which they were granted may be deferred up to the 12th immediate tax year. Preapproval from the Portuguese Innovation Agency (ANI) is required to obtain the incentive. SIFIDE is an incentive that should be maintained by the government until at least 2025.

Guidelines around incentive applications

The incentive is applicable to current investments and may be applied retroactively. The SIFIDE tax credit can be claimed through the annual corporate income tax return (*Formulário Modelo 22 de IRC*). The application for the SIFIDE tax credit has to be submitted by 31 May of the year following the year in which the expenditure was incurred.

Portuguese non-habitual resident individuals regime

(Regime dos Residentes não Habituais em Portugal)

Description of benefits

Portuguese tax legislation grants a favorable tax regime applicable to foreign employees engaged in R&D activities who may relocate to Portugal.

This special tax regime is applicable to individuals who become tax residents in Portugal under Portuguese domestic legislation in a given year, if they have not been considered and taxed as tax residents in Portugal in the previous five years.

The status of non-habitual resident is not automatically granted. Individuals should file a request with the Portuguese tax authorities.

According to the Portuguese Personal Income Tax (PIT) Code, individuals are deemed resident for tax purposes in Portugal if, among other conditions:

- ▶ They are physically present in Portugal for more than 183 days in any calendar year, continuously or not.
- ▶ They have a home in Portugal on 31 December that appears to be their permanent residence.

Or

- ▶ Their spouse is tax resident in Portugal.

This special regime applies for a consecutive 10-year period that is nonrenewable.

The main feature of the Portuguese non-habitual resident individuals regime is that the employment and business or professional income arising from a Portuguese source and derived from "high-added-value" activities of a scientific, artistic or technical nature is taxed at a flat rate of 20% on net income plus an extraordinary surcharge between 0% and 3.5%, depending on the amount of the net income. Stated differently, there is no income cap. The regime may be applied for a period of 10 years. From the moment in which the individual is taxed at a flat tax rate of 20% plus the extraordinary surcharge on net income, it is no longer possible to make deductions from taxable income. If the individual has other types of income taxed at a higher rate, it is possible to make a deduction related to the same income. Preapproval is required from the Taxpayers Registration Services' Administration (DSRC) to obtain the incentive.

Guidelines around incentive applications

To receive the incentive, the applicant should file the formal non-habitual tax residents form. The deadline for filing the application is 31 March of the year following the year in which the individual becomes a non-habitual resident.

Patent box – deduction from income derived from patents and industrial IP developed in Portugal

(Rendimentos de patentes e outros direitos de propriedade industrial)

Description of benefits

The patent box regime was amended to align it with the “modified nexus approach” contained in the OECD’s BEPS Action 5 recommendations. The new patent box regime provides (in proportion to incurred eligible expenses) for an exclusion of up to 85% from the taxable basis in relation to income derived from contracts of transfer or of temporary use of patents, industrial designs or models, and rights over software programs.

To benefit from this regime, several conditions should be met, namely:

- ▶ IP is effectively used for activities carried out by the licensee.
- ▶ If the licensee is a related company, the IP is not used to create deductible expenses for the taxpayer.
- ▶ The licensee is not domiciled in a tax haven.

Guidelines around incentive applications

The incentive is applicable for investments made after 1 July 2016. To receive the deduction, the IP should be registered, but no application is needed to benefit from this tax deduction. The deduction can be claimed through the annual corporate income tax return (*Formulário Modelo 22 de IRC*). The tax return has to be submitted by the end of the fifth month after the end of the company’s fiscal period.

R&D deduction regarding the SCPI

(Certificação de Despesa em I&D na Indústria Farmacêutica)

Description of benefits

The Ministries of Health and Finance in 2012 signed an agreement with the pharmaceutical industry to reduce the expenses of the SNS for drugs used in an ambulatory environment. Under the agreement, pharmaceutical companies are granting a special discount, the SCPI, for the medicine that they sell to the SNS.

The agreement between the Ministries of Health and Finance and the pharmaceutical industry foresees the possibility of deducting R&D expenses related to the SCPI to stimulate investment in R&D activities in Portugal.

The amount of the deduction must be certified by the last day of January of the following year by an accounting firm.

Guidelines around incentive applications

To benefit from this incentive, the company must formalize its adherence in writing to the Portuguese Pharmaceutical Industry Association (APIFARMA) if the company is an associate of APIFARMA, or to the National Authority of Medicines and Health Products (INFARMED I.P.) if the company is not an associate of APIFARMA.

3. Eligibility requirements

R&D cash grant (SI I&DT)

Eligible expenses include:

- ▶ Costs of specialized personnel of the promoter dedicated to R&TD, including contracted fellows
- ▶ Acquisition of patents from external sources or by those so licensed
- ▶ Raw materials and components needed for the construction of pilot plants and for the construction of prototypes
- ▶ Acquisition of services from third parties, including technical, scientific and consulting assistance
- ▶ Acquisition of instruments and technical and scientific equipment indispensable to the project (only the amount with respect to the value of depreciation related to its period of use in the project is eligible)

- ▶ Acquisition of specific software for the project (only the amount with respect to the value of depreciation related to its period of use in the project is eligible)
- ▶ Costs associated with the promotion and disclosure of the results of projects related to the process or product innovation that has commercial application
- ▶ Travel and stays abroad that result from needs strictly related to scientific and technological development of the project activities
- ▶ Costs associated with the certification of the system by Management of Research, Development and Innovation, such as consulting fees and training
- ▶ Expenses resulting from the services of chartered accountants (TOC) or statutory auditors (ROC)
- ▶ Allocation of indirect costs

Qualifying activities include:

- ▶ Industrial investigation – planned or critical investigation intended for the acquisition of new knowledge; e-capacities for developing new products, processes or services; or for the introduction of significant improvements in existing products, processes or services, including the creation of complex system components necessary for industrial investigation for validation of generic technology
- ▶ Experimental development – acquisition, combination, conception and use of existing knowledge, scientific techniques and technologies for the elaboration of plans and devices or the conception of new or improved products, processes and services

Qualifying industries include entities that are identified according to the Portuguese Classification of Economic Activities (CAE) as pertaining to industry, commerce, services, tourism, energy, transport and logistics, or construction.

In addition, to apply for the R&D cash grant (SI I&DT), a company must meet the following eligibility requirements:

- ▶ The company must be established in Portugal; some limitations may apply to non-convergence regions, such as Lisbon or Algarve.
- ▶ The company must present a balanced economic situation by meeting a financial autonomy ratio higher than 15% (if SME) or 20% (if non-SME).
- ▶ The company must have no tax or social security debts.
- ▶ The project should correspond to a minimum eligible expense of EUR100,000.

- ▶ The project will qualify for the cash grant for a maximum length of two years in individual projects or three years in projects developed by a company consortium (the project can continue after these time limits, but the cash grant will not cover it).
- ▶ The company must assign a technical manager to the project.
- ▶ The project must start after the submission of the application.

R&D tax credit (SIFIDE)

Eligible expenses include:

- ▶ The acquisition cost of new tangible fixed assets, with the exception of buildings and land, connected with R&D activities
- ▶ Expenses related to personnel directly involved in R&D activities (PhD costs are eligible at 20%)
- ▶ Expenses involving directors and professionals participating in the management of R&D institutions
- ▶ Operating expenses of up to 55% of wages of personnel directly involved in R&D activities
- ▶ Costs regarding the subcontracting of R&D activities from public entities or from entities recognized as possessing R&D capabilities
- ▶ Expenses incurred to raise capital for institutions that perform R&D and contributions to investment, private or public funds that are targeted to finance entities dedicated to R&D
- ▶ Costs regarding registry and maintenance of patents
- ▶ Costs associated with the acquisition of patents that are related to the development of R&D activities (only eligible for SMEs)
- ▶ Costs of R&D audits
- ▶ Expenses with demonstration actions that result from supported R&D projects

Qualifying activities include:

- ▶ Basic research
- ▶ Applied research
- ▶ Experimental development

Qualifying industries include entities that are engaged in agricultural, industrial, commercial or service-related activities as a core or supplementary business.

In addition, the company must meet the following eligibility requirements to apply for R&D tax credits (SIFIDE):

- ▶ Companies must be established in Portugal.
- ▶ Companies must have no debts to the tax authorities or social security.
- ▶ Indirect methods cannot determine taxable income.

Portuguese non-habitual resident individuals regime

Eligibility requirements are as follows:

- ▶ The R&D employees are physically present in Portugal for more than 183 days in any calendar year, continuously or not.
- ▶ They have a home in Portugal on 31 December that appears to be their permanent residence.
- ▶ The individual's spouse is tax resident in Portugal.
- ▶ R&D employees must perform a "high-value-added" activity for the purposes of applying for this regime; this includes architects, engineers, artists, auditors and tax advisors, physicians, teachers, psychologists, dentists, other professionals, board members of certain companies and senior executive employees.

Deduction from income derived from patents and industrial IP and rights over software programs developed in Portugal

To be eligible for the deduction, patents, industrial designs or models, and rights over software programs must be registered.

R&D deduction regarding the SCPI

Eligible expenses include:

- ▶ The acquisition cost of new tangible fixed assets, with the exception of buildings and land, connected with R&D activities
- ▶ Expenses related to personnel directly involved in R&D activities
- ▶ Expenses involving directors and professionals participating in the management of R&D institutions
- ▶ Operating expenses of up to 55% of wages of personnel directly involved in R&D activities
- ▶ Costs regarding the subcontracting of R&D activities from public entities or from entities recognized as possessing R&D capabilities
- ▶ Costs regarding registry and maintenance of patents
- ▶ Costs associated with the acquisition of patents that are related to the development of R&D activities (only eligible for SMEs)
- ▶ Costs of R&D audits

4. IP and jurisdictional requirements

Effective date

The patent box regime applies to assets related to qualifying registered IP (e.g., on internally generated IP, IP acquired from a related party and/or IP acquired from a third party).

Qualifying IP

The qualifying IP includes:

- ▶ Patents
- ▶ Drawings or industrial models
- ▶ Rights over software programs

Types of income

Income derived from IP, such as royalties, compensation and capital gains.

Calculation of income

Only 15% of income contributes to the determination of taxable income. This income must proceed from the assignment or temporary use of patents, drawings and industrial designs, and rights over software programs subject to registration, including those resulting from IP infringement. Income is defined as the positive difference between the income and gains earned in the tax period in question and expenses or losses incurred or borne in that same tax period by the taxable person for carrying out R&D activities that have resulted, or have benefited, from the industrial property right to which the income is attributable.

The deduction to taxable income must not exceed the amount obtained by applying the following formula:

$$DQ / DT \times RT \times 85\%$$

DQ = eligible expenses incurred to develop the assets protected by the industrial IP, which correspond to the expenses and losses incurred or borne by the taxpayer with R&D activities conducted by the taxpayer that resulted, or which have benefited from, the industrial IP rights concerned, as well as concerning the employment of such activities with any other entity, provided it is not in a special relationship

DT = total expenses incurred to develop the assets protected by the industrial IP, which correspond to the expenses and losses incurred or borne by the taxpayer with R&D activities conducted by the taxpayer that resulted, or which have benefited from, the industrial IP rights concerned, as well as concerning the employment of such activities with any other entity, including with entities with which it has a special relationship, as well as, when applicable, the expenses for the acquisition of the industrial IP rights

RT = total income derived from IP, which means the positive difference between income earned from contracts whose purpose is the sale or temporary use of industrial IP rights and the expenses incurred in the development of R&D activities, in the same tax year and in previous periods of taxation

IP regime rate

From July 2016 onward, corporate income derived from contracts related to the transfer or temporary use of property rights on patents, industrial designs and rights over software programs will contribute to the determination of taxable profit for just half of its value.

Can work be performed outside the country?

Yes, the work can be performed outside of Portugal, under certain conditions.

Must the IP be registered/owned locally?

The IP must have local ownership. The regime will not be applied if the buyer is resident in a tax haven.

IP and jurisdiction requirements

Corporate income derived from contracts related to the transfer or temporary use of property rights on patents and industrial designs will contribute to the determination of taxable profit for just half of its value.

To benefit from this regime, several conditions must be met, including:

- ▶ The buyer must use the rights in an activity of commercial, industrial or agricultural nature.
- ▶ The use of rights by the purchaser does not materialize on goods or services that result in deductible expenses to the selling entity (or another entity that forms part of the same Consolidated Group of Taxation) if the purchaser is a related entity.
- ▶ The purchaser must not be resident in a tax haven.
- ▶ Patents, industrial designs or models, and rights over software programs must be registered.
- ▶ Capital gains can benefit from the reinvestment regime.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Portugal.

6. Role of governmental bodies in administering incentives

The R&D tax credit (SIFIDE) operates on a self-assessment basis, through an application, and is administered by the ANI (*Agência Nacional de Inovação*, or National Innovation Agency). The ANI determines whether the company's activities qualify.

The AICEP (*Agência para o Investimento e Comércio Externo de Portugal*, or Agency for Investment and Foreign Trade) and IAPMEI (*Agência para a Competitividade e Inovação*, or Agency for Competitiveness and Innovation) are the two main governmental bodies that administer the cash grant funding regimes. These entities collect and decide on the applications for the R&D cash grant (SI I&DT).

7. Administrative requirements

For the R&D cash grant, companies must present an application prior to the start of the R&D project.

For the R&D tax credit, companies must present an application each year, up to seven months after their fiscal year-end.

The status of non-habitual resident is not automatically granted. Individuals should file a request with the Portuguese tax authorities.

8. Statutory reference

- ▶ *Regulamento específico do domínio da Competitividade e Internacionalização*, Ordinance No. 57-A/15 and following amendments
- ▶ *Código Fiscal do Investimento*, approved by Decree-Law No. 249/2009 and subsequent amendments
- ▶ *Código do Imposto sobre o Rendimento das Pessoas Coletivas*, Law No. 2/2014, from 16 January and following amendments
- ▶ Agreement between the Portuguese State, represented by the Ministers of Finance, Economy and Health, and the Pharmaceutical Industry

Romania

This chapter is based on information as of February 2023.

A 50% super deduction for corporate income tax purposes in respect of qualifying R&D expenses is available, and 50% of the fiscal value of an asset used for R&D purposes may be deducted during the first year of use under the accelerated tax depreciation regime. Moreover, a corporate income tax exemption is available for taxpayers that exclusively perform R&D and innovation activities, as well as related activities. In addition, a salary income tax exemption is available for salary income earned as a result of performing activities in applied R&D or technological development fields.

EY contacts:

1. Overview

Currently, there are four R&D incentive programs in Romania:

- ▶ Corporate income tax exemption for taxpayers that exclusively perform R&D and innovation activities, as well as related activities
- ▶ Super deduction (for corporate income tax purposes) on qualifying R&D expenses
- ▶ Accelerated depreciation on qualifying R&D assets
- ▶ Salary income tax exemption in respect of activities performed in applied R&D or technological development fields

The provisions regulating the corporate income tax exemption were introduced in the Romanian Tax Code in January 2017; currently, no guidelines or norms to apply these provisions have been issued.

The super deduction on R&D consists of an additional deductible allowance for corporate income tax purposes of 50% for eligible expenses related to R&D activities (which must belong to the category of applied research and/or technological development). The incentive has been available for some time; however, due to the lack of clarity of the legislative provisions (e.g., the related application norms were not aligned with the provisions of the Tax Code), it was often not applied by companies performing R&D activities. The updated application norms that were published in July 2016 brought several amendments and clarifications. In December 2022, the norms were further amended, bringing some clarifications into the application of the R&D incentive. For large taxpayers, a certification of the R&D activities is required to be performed (based on a specific procedure) by a designated R&D expert nominated by the Ministry of Research, Innovation and Digitalization.

Types of incentives	
Tax credits	<input type="checkbox"/>
Cash grants	<input type="checkbox"/>
Loans	<input type="checkbox"/>
Reduced tax rates/preferable tax rates	<input type="checkbox"/>
Reduced social security contributions	<input type="checkbox"/>
Accelerated depreciation on R&D assets	<input checked="" type="checkbox"/>
Tax allowance	<input type="checkbox"/>
Infrastructure/land preferential price	<input type="checkbox"/>
Tax deduction (including super deduction)	<input checked="" type="checkbox"/>

The salary income tax exemption with respect to activities performed in applied R&D or technological development fields is available for employees carrying out an R&D activity based on an individual labor contract, a work relationship, a special statute provided by law, or an assignment agreement concluded with or at a public or private entity/institution included in the national system for R&D. This incentive, which was included in Emergency Government Ordinance No. 32/2016 published in the Official Gazette of Romania on 30 June 2016, applies to salary income derived from August 2016.

Types of incentives	
Tax exemptions	<input checked="" type="checkbox"/>
Income tax withholding incentives	<input type="checkbox"/>
Patent-related incentives	<input type="checkbox"/>
Financial support	<input type="checkbox"/>
Tax holiday	<input type="checkbox"/>
Expedited government approval process	<input type="checkbox"/>
VAT reimbursement	<input type="checkbox"/>
Qualifies for Horizon Europe funding	<input checked="" type="checkbox"/>
Other	<input type="checkbox"/>

For fiscal depreciation purposes, taxpayers subject to corporate income tax may opt to use the accelerated depreciation method for technological equipment, machinery, tools and installations, computers and peripherals, and patents. Both companies and the government are familiar with administering the accelerated depreciation provision, as it has been available for a long time (not only for assets used for R&D activities).

2. Incentives available

Corporate income tax exemption

(Scutirea de la impozitul pe profit)

Description of benefits

In January 2017, a corporate income tax exemption was introduced for taxpayers that exclusively perform R&D and innovation activities, as well as related activities. The exemption is available for newly setup taxpayers for the first 10 years of their activity; or, for taxpayers that were already set up when these provisions entered into force, for 10 years from the entry into force of these provisions.

Guidelines around incentive applications

The corporate income tax exemption provision was introduced in the Romanian Tax Code since January 2017. So far, no norms or guidelines for applying this provision have been issued.

Accelerated depreciation method

(Metoda amortizarii accelerate)

Description of benefits

Under the accelerated depreciation method, a maximum of 50% of the fiscal value of the asset may be deducted during the first year of use, while the rest of the asset's value may be depreciated over the remaining useful life. The accelerated depreciation applies also to equipment used for R&D purposes.

Guidelines around incentive applications

The accelerated depreciation incentive applies to future investments. The accelerated depreciation method is claimed in the quarterly or annual corporate income tax (CIT) returns (i.e., Forms 100 and 101). The depreciation method should be chosen before the assets start to be depreciated.

Additional deductions for eligible R&D expenses

(Deducere suplimentara pentru cheltuieli eligibile aferente activitatilor de cercetare-dezvoltare)

Description of benefits

By law, the 150% super deduction can be applied only to expenses incurred in relation to applied research and technological development. Under the incentive, the taxpayer would benefit from an additional deduction for CIT purposes representing 50% of R&D expenses.

Guidelines around incentive applications

As a condition for being granted the supplementary deduction, the R&D activity must belong to the category of applied research and/or experimental development. The super deduction is claimed in the quarterly or annual CIT returns (i.e., Forms 100 and 101). In general, the super deduction should be claimed upon the recognition of the R&D expenses.

Income tax exemption on salary income attributable to activities performed in applied R&D or technological development fields

(Scutirea de la plata impozitului pe venit pentru veniturile realizate din salarii si asimilate salariilor ca urmare a desfasurarii activitații de cercetare-dezvoltare aplicativa și/sau de dezvoltare tehnologica)

Description of benefits

Income earned as a result of performing activities in applied R&D or technological development fields will be exempt from Romanian salary income tax (10%).

Guidelines around incentive applications

The exemption is available for employees carrying out an R&D activity based on an individual labor contract, a work relationship, a special statute provided by law or an assignment agreement concluded with or at a public or private entity/institution included in the national system for R&D. This incentive applies to salary income derived from August 2016.

To benefit from the tax exemption on salary income and assimilated income, several conditions specifically provided by the law must be cumulatively met (see eligibility requirements below). For assigned personnel who are carrying out R&D activities in Romania, the eligibility requirements must be fulfilled by the income payer.

3. Eligibility requirements

Corporate income tax exemption

To benefit from the corporate income tax exemption, taxpayers must exclusively perform R&D and innovation or other related activities.

R&D and innovation activities include:

- ▶ Scientific research, which in turn includes fundamental and applied research. Fundamental research implies experimental or theoretical activities undertaken mainly for acquiring new knowledge regarding fundamental phenomena and observable facts, without the particular aim of immediate practical application or use. Applied research implies the original investigation undertaken for acquiring knowledge with a specific practical objective.
- ▶ Experimental development, which is defined as the systematic activity, starting with knowledge resulting from research and/or practical experience, that has the purpose of developing new materials, products or devices, the setup of new processes, systems and services or the substantial improvement of the existing ones.
- ▶ Innovation based on scientific research and experimental development. Innovation is defined as the implementation of a new product, service or process or the substantial improving of it, or involves the implementation of a new marketing or business method in practice, in the workplace organization or external relationships.

Accelerated depreciation method

The accelerated depreciation method can be applied in connection with technological equipment, machinery, tools and installations, computers and peripherals, and patents. There is no specific limitation on the activity in applying the incentive.

Additional deductions for eligible R&D expenses

For additional deductions, eligible expenses include the following:

- ▶ Depreciation expenses of new tangible fixed assets created or acquired by taxpayers that are used in R&D activities and related expenses regarding maintenance of and repairs to such assets performed by third parties
- ▶ Expenses incurred with salaries of personnel directly involved in R&D activities
- ▶ Depreciation expenses of intangible assets acquired by taxpayers that were used in R&D activities
- ▶ Operating expenses, including costs of consumables, expenses for materials that are included in inventory, raw materials expenses, expenses with animals used in experiments, and similar products used in R&D activities
- ▶ Overhead expenses, which can be allocated directly or proportionally (considering an allocation key) to the results of an R&D activity

The R&D activities should be included in a project detailing at least the following: (1) the scope and objective of the R&D activities, (2) the field of R&D, (3) the time period, (4) sources allocated to the project (e.g., financing sources and, if applicable, the team and research infrastructure), (5) budget, (6) the category of the expected result (e.g., studies, technologies, IT products) and (7) innovative character.

If the R&D expenses are carried out by several taxpayers through collaboration, association or agreement, the tax incentives are individually computed for each taxpayer, depending on each member's eligible expenses.

The R&D activities can be performed in Romania or in another EU or European Economic Area (EEA) Member State. No industry sectors are specifically excluded.

Given that the allowance is applicable only to certain specific types of R&D activities, a detailed analysis should be performed before reaching a conclusion with respect to eligibility (as the eligibility criteria are not straightforward). *Moreover, The Registry of Experts for Research & Development Activities (REXCD) was set up by the government for classifying the R&D activities. Starting with 1 January 2023, large taxpayers are obligated to request certification of the R&D activity by a designed expert from REXCD to benefit from this incentive.*

Income tax exemption on salary income attributable to activities performed in applied R&D or technological development fields

To benefit from the tax exemption on salary income and assimilated income, several conditions must be cumulatively met, including the following:

- ▶ R&D project details as defined by the law
- ▶ Time sheet related to the R&D project
- ▶ The applicable legislation defines the term “R&D project,” which must contain the following elements: the purpose, the domain of R&D, the objective, the period when the R&D project is undertaken, the type of funding sources (public/private/national/external), the budget expressly mentioning the expenses with the salary income and assimilated income related to the allocated personnel, the novelty or innovation of the result, the result indicators defined by the law (which should be quantified through the R&D project).

The tax exemption is allowed even if the objectives of the R&D project are not accomplished.

Also, details are provided with respect to the supporting documentation that must be prepared and made available to apply the exemption.

4. IP and jurisdictional requirements

Regarding the additional deduction, R&D activities can be performed in Romania or in another EU or EEA Member State.

5. Technology or innovation zones

There are no technology or innovation zones related to R&D incentives in Romania.

6. Role of governmental bodies in administering incentives

Incentives are applied directly by relevant taxpayers. Appropriate application of these incentives by taxpayers is checked by the tax authorities during profits tax audits.

The Registry of Experts for Research & Development Activities was set up by the government, which may be consulted for classifying the R&D activities.

7. Administrative requirements

Additional deductions related to R&D expenses must be presented on a distinct row in the annual profits tax return and also separately in the Corporate Income Tax Register. Also, please refer to the requirements detailed in the “Eligibility requirements” section above in relation to the additional deductions for eligible R&D expenses and for the salary income tax exemption in respect of activities in applied R&D or technological development fields (e.g., the requirement that the R&D expenses be included in a project). There is no specific administrative requirement for the accelerated depreciation method.

8. Statutory reference

- ▶ Corporate income tax exemption: Article 22¹ of the Tax Code and Government Ordinance No. 57/2002
- ▶ Accelerated depreciation method: Article 28 of the Tax Code
- ▶ Additional deductions: Article 20 of the Tax Code and the norms regarding the deductions for R&D expenses in the computation of the tax result, approved via Order 1056/4435 of 5 July 2016
- ▶ Salary income tax exemption: Article 60, point 3 of the Tax Code and Order No. 2326/2855/2017, effective 5 September 2017, on qualifying as applied R&D and/or technological development activity

Singapore

This chapter is based on information as of February 2023.

The 250% tax deduction for qualifying R&D expenditure incurred on qualifying R&D activities performed in Singapore, R&D cash grant schemes and the intellectual property development incentive remain in place.

In 2020, the Monetary Authority of Singapore (MAS) announced the launch of the enhanced Financial Sector Technology and Innovation Scheme, or FSTI 2.0.

1. Overview

Since 2008, the government has strengthened its focus on R&D and has continually revisited the available R&D programs and support mechanisms. These R&D incentives are used as a key policy enabler to boost productivity and ensuring Singapore's success in building its innovation capacity to compete globally.

Discretionary R&D incentives in Singapore have been in existence for more than 20 years and are relatively mature in terms of the underlying policy and drivers. By contrast, statutory R&D incentives were introduced in year of assessment¹ 2009.

The government currently offers a super deduction for qualifying R&D expenditures on R&D activities performed in Singapore. Government cash grants are also available to cover a portion of qualifying costs for approved R&D projects undertaken in Singapore.

¹ Year of Assessment refers to the year in which income tax is calculated and charged as defined by the IRAS for individuals and companies. The chargeable income and the associated income tax are determined on a preceding year basis.

2. Incentives available

Name of incentive	Enhanced R&D deduction*	RISC, IDS and FSTI 2.0 cash grants	Intellectual Property Development Incentive
Type of incentive	▶ Super deduction	▶ Cash grants	▶ Reduced tax rates

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

Enhanced R&D deduction

Description of benefits

As one of the primary R&D incentives in Singapore, the enhanced R&D deduction currently provides a 250% enhanced deduction on qualifying R&D expenditures from years of assessment 2019 to 2025 incurred on qualifying R&D projects performed in Singapore.

For R&D projects performed overseas, the R&D incentive provides a 100% deduction on qualifying R&D expenditures incurred on qualifying R&D projects relating to the

claimant's trade or business. Unused losses may be carried forward indefinitely, subject to satisfaction of the shareholding test.

Guidelines around incentive applications

As the incentive is statutory-based, the claims follow the corporate tax filing timeline. The enhanced tax deduction is claimed against taxpayers' taxable profits in the year the expenditure was incurred. Corporate tax returns are filed on a preceding-financial-year basis.

Cash grants

Description of benefits

Some of the common grants applicable to R&D, such as the Research Incentive Scheme for Companies (RISC), Innovation Development Scheme (IDS), Enterprise Development Grant and enhanced Financial Services Technology Innovation (FSTI 2.0) grant, are government cash grants that co-fund the qualifying R&D expenses incurred by companies to set up/expand innovation labs and develop talent in FinTech/technology sectors.

The support level varies from scheme to scheme. Generally, eligible expenditures include manpower-related costs, equipment and materials, professional services and intellectual property rights.

Notably, the maximum support under the newly announced enhanced FSTI 2.0 scheme has been raised to 70% (typically at 30% to 50%) of total qualifying costs.

Guidelines around incentive applications

Cash grants are applicable for future investments, and, typically, support is granted only on (parts of) projects that have not commenced.

Intellectual Property Development Incentive

Description of benefits

The incentive was introduced to encourage the use and commercialization of intellectual property (IP) rights arising from R&D activities. An approved Intellectual Property Development Incentive (IDI) company is eligible for a reduced corporate tax rate of either 5% or 10% on qualifying IP income derived by the company during the qualifying incentive period. For further details, please refer to Section 4 below.

Guidelines around incentive applications

Similar to the cash grants, being a discretionary incentive, the IDI may be granted for future investments and only incremental expansion, upon application to and approval from the authorities.

3. Eligibility requirements

Enhanced R&D deduction

R&D is defined as any systematic, investigative and experimental study that involves novelty or technical risk carried out in the field of science or technology with the objective of acquiring new knowledge or using study results for the production or improvement of materials, devices, products, production or processes (with specified exclusions).

Eligible expenditure includes staff costs, consumables and contracted R&D expenditure, net of government grants or subsidies. Where the R&D work is contracted to an R&D organization and a breakdown of the expenditure is not available, the qualifying R&D expenditure can be deemed to be 60% of the payments made to the R&D organization.

Any business carrying on qualifying R&D projects in Singapore is eligible for the enhanced tax deduction. No industry sectors are specifically excluded. However, research in the social sciences or the humanities cannot be claimed unless they are activities that support a qualifying project.

To claim the R&D tax deduction, the claimant must be the beneficiary of the R&D activities. From year of assessment 2019 to 2025, only those activities performed in Singapore are eligible for the 250% enhanced deduction. However, qualifying R&D expenditures associated with overseas activities are eligible for a 100% base R&D deduction, so long as the R&D activities performed are related to the claimant's trade or business.

Cash grants

There are no published eligibility criteria for cash grants.

There is also no eligibility restriction on specific industries; however, as it is a discretionary incentive, grants are provided selectively to R&D labs/centers and large projects in certain strategic technology areas identified by the Singapore government.

Different grants may also be offered by different agencies based on the industry classification of the company.

4. IP and jurisdictional requirements (patent box regime)

IDI

The IDI was introduced with effect from 1 July 2018 to encourage the use and commercialization of IP rights arising from R&D activities. An approved IDI company is eligible for a reduced corporate tax rate of either 5% or 10% on a percentage of qualifying IP income derived by it during the qualifying incentive period.

The incentive period is limited to an initial period not exceeding 10 years and may be further extended for a period or periods not exceeding 10 years each (with the earliest effective date being 1 July 2018).

The IDI is aligned to the OECD modified nexus approach and uses R&D expenditures incurred by the approved company (includes outsourced third-party R&D expenditures and R&D undertaken by the company itself) as a proxy to determine the level of benefits accorded under the IDI.

Qualifying IP income refers to royalties or other income receivable by the approved IDI company as consideration for the commercial exploitation of qualifying IP rights (IPR) (i.e., patents and copyrights subsisting in software) elected into the IDI. Election of qualifying IPR into the IDI is irrevocable.

As the IDI is a discretionary incentive administered and awarded by the Singapore Economic Development Board, eligible companies are required to fulfill substantive commitments in areas of business spending, fixed assets expenditures, creation of skilled jobs and the requisite qualitative aspects, such as contributing to the advancement of capabilities and other ancillary economic spin-offs for the wider Singapore economy.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Singapore.

6. Role of governmental bodies in administering incentives

The qualifying R&D expenditure claim is processed and verified by the Singapore tax authority – the Inland Revenue Authority of Singapore (IRAS) – for the enhanced R&D deduction. The IRAS also monitors the activities that are claimed to ensure compliance with the enhanced R&D deduction regime.

The Singapore Economic Development Board (EDB), Monetary Authority of Singapore (MAS) and Enterprise Singapore administer the discretionary R&D incentives, including cash grants.

7. Administrative requirements

Companies are not required to seek government preapproval for the enhanced statutory R&D tax deduction.

To be eligible for the enhanced tax deduction, a company must submit the claim in its income tax return and tax computation, along with the completed R&D claim form, by the annual filing deadline of 30 November or 15 December.

All claimants are required to complete an R&D claim form, which includes a detailed description of each R&D project claimed, based on prescribed guidelines. If a company wishes to claim more than 60% of the sum payable to an R&D organization, the claimant must submit to the IRAS copies of invoices issued by the R&D organization detailing a breakdown of the expenditure items.

For discretionary incentives, approval must be granted by the respective statutory agencies.

For the R&D cash grant, claims may be made on a half-yearly basis using the prescribed format as provided by the relevant authority once the R&D cash grant has been awarded. Companies are also required to submit a yearly progress report and a final report at the end of the project.

8. Statutory reference

Income Tax Act, Sections 2, 14D, 14DA and 43ZI

Slovak Republic

This chapter is based on information as of February 2023.

In recent years, Slovakia significantly amended its legislative framework for investment incentives. The changes were made to create a more investment-friendly environment by providing clearer definitions, setting strict deadlines and providing a more robust framework for the approval process of the investment aid.

EY contacts:

Richard Panek
richard.panek@sk.ey.com
+421 2 333 39109

Cyril Chovanec
cyril.chovanec@sk.ey.com
+421 2 333 39182

The latest addition to the investment incentive framework was the introduction of the super tax deduction for tax depreciation and amortization on capital expenditures (capex) spent on assets related to Industry 4.0. The scheme offers a super deduction of up to 55% of yearly depreciation and amortization, favors profit-making companies that recognize positive tax base and is expected to be utilized predominantly in instances in which general investment aid cannot be used due to a low number of jobs created.

Given the variety of the incentives available, it is important for businesses to understand their mechanics and subsequently choose the one that proves to be the most suitable to them.

1. Overview

Slovakia has long been overlooked as a location for performing R&D activities in the European Union due to undercapitalization of the R&D sector. Nevertheless, foreign direct investment has accelerated the pace of innovation in industry and services in Slovakia. Moreover, the Slovak government has strengthened its focus on R&D in recent years, offering targeted stimuli to support R&D activities with the aim of supporting projects with high added value to increase the development of a knowledge-based economy.

As of 2009, a unified system to stimulate R&D was introduced through Act No. 185/2009 Coll. on Research and Development Incentives, setting rules and procedures for providing incentives for R&D activities carried out by business entities (micro, small, medium-sized and large enterprises) in all industries. According to the act, the eligible costs of R&D projects that qualify for incentives can be supported either by cash grants from the state budget or income tax relief (via a tax credit). The Ministry of Education (for cash grants) and Ministry of Finance (for tax credits) are responsible for administering and providing the incentives.

Other	<input type="checkbox"/>

Besides the direct stimuli on R&D, an enterprise may apply for stimuli from the state budget under general investment aid, upon which the establishment or expansion of a center for innovation and technology may be supported by various types of incentives, including cash grants, tax credits, transfer of immovable assets or exchange, replacement of immovable assets, or rent at a price lower than the market price.

As of 1 January 2015, taxpayers can apply for an additional deduction (the so-called super tax deduction) of R&D costs via their corporate income tax (CIT) return, thereby decreasing their tax base and final tax liability. This deduction is not subject to an approval process and requires preparation of an R&D project plan, which does not have to be submitted to the tax authorities in advance.

As of 1 January 2018, Slovak legislation introduced a special tax regime related to some intangible assets consisting of partial tax exemption of revenues generated from such assets as a result of the taxpayer's own development activities. The exemption applies in tax periods during which the intangibles are tax depreciated. Similar to the super tax deduction, no prior approval is needed for this incentive; however, taxpayers should share some information about the patent/developed software and be ready to present evidence of incurred costs and additional details within eight days upon the request.

2. Incentives available

R&D subsidy	R&D income tax relief	Investment aid for technological centers*	Subsidy on scientific and technical services	Super tax deduction for R&D costs	Super tax deduction for Industry 4.0 capex	Patent box

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

R&D subsidy

(Dotácia na výskum a vývoj)

Description of benefits

The R&D subsidy is designed to:

- ▶ Support basic and applied research and experimental development
- ▶ Develop project feasibility studies

The maximum amount of grants ranges from 25% to 100% of eligible costs, depending on the type of R&D project and size of the enterprise.

Guidelines around incentive applications

The R&D subsidy is applicable to future investments. To claim a subsidy, taxpayers must submit a request to the Ministry of Education, which has the discretion to accept or deny the request. Work on the project should not begin prior to the submission of the incentive request to the Ministry of Education. The maximum duration of basic and applied research and experimental development is three years.

R&D income tax relief

(Úľava na dani z príjmu)

Description of benefits

Similar to the R&D subsidy, R&D income tax relief is available (in the form of a tax credit) to companies that pursue projects involving basic and applied research, experimental development and feasibility studies. In determining the amount of the tax credit, the government takes into account the direct and indirect R&D expenses incurred by the taxpayer, the size of the company and the type of project. Once the credit amount is determined, it is applied proportionally to the tax base.

The tax credit may be applied for up to three consecutive tax years (the first tax year is the year when the decision on the approval of granting the incentive is issued by the Ministry of Education).

Guidelines around incentive applications

The R&D tax credit is applicable to future investments. Taxpayers must submit a request to apply the credit to the Ministry of Education, which presents the claim to the Ministry of Finance for its approval. The credit is claimed via the CIT return. The deadline for filing the CIT return is the end of the third month following the relevant fiscal year. Work on the project should not begin prior to submission of the request to the Ministry of Education. The maximum duration of basic and applied research and experimental development is three years.

Investment aid for technological centers

(Investičná pomoc pre technologické centrá)

Description of benefits

Investment aid may be granted upon the submission of a request for investment aid for the establishment or expansion of a center for innovation and technology and its approval by the Ministry of Economy and the Slovak government. Because there is no legal entitlement to the provision of state aid, the Ministry of Economy and the government have the discretion to accept or deny the request.

Investment aid can be provided in the form of:

- ▶ Income tax relief
- ▶ A subsidy for the acquisition of tangible and intangible fixed assets
- ▶ A contribution for the creation of new jobs
- ▶ A transfer or rent of immovable assets from the state or municipality at a price lower than the general value of the asset or rent lower than according to official appraisal

The investor may request aid in one or several forms; the total aid, however, may not exceed the maximum amount of aid permissible in the given region.

The amount of aid can be up to 50% of eligible costs and depends on the region where the project is realized and on the size of the enterprise.

Guidelines around incentive applications

The incentive is applicable to future investments. Work on the investment project should not begin prior to submission of the investment plan to the Ministry of Economy. Investment project requirements stipulated by legislation should be met by the end of three years after the investment aid was approved (an extended period of five years should apply to large investment projects in the sense of Commission Regulation (EU) No. 651/2014).

Subsidy on scientific and technical services

(Dotácia na vedecko-technické služby)

Description of benefits

A subsidy on scientific and technical services may be granted upon successful application to the specific funding programs of the Ministry of Education, usually administered by the Slovak Research and Development Agency.

Specific funding programs have predefined amounts of funds, and the funding amounts vary by the type of program. This is a minor scheme, meaning that the funds available typically do not exceed hundreds of thousands of euros. Taxpayers are required to obtain approval from the Ministry of Education to obtain the subsidy.

Guidelines around incentive applications

The incentive is applicable to future investments. The subsidy is available for scientific activities such as the collection, monitoring and analysis of data; consultancy in the R&D; patenting and licensing activities; and activities supporting international scientific cooperation. Specific funding programs are published on the website of the Central Information Portal for research, development and innovations. Based on the published programs, a request is filed with the relevant authority, i.e., the Ministry of Education, the Slovak Academy of Sciences or other central state authority. There is no legal entitlement to the subsidy.

Super tax deduction for R&D costs

(Odpočet výdavkov (nákladov) na výskum a vývoj)

Description of benefits

Taxpayers can claim the R&D super tax deduction – i.e., additional tax deduction – for qualifying R&D costs, meaning that eligible costs can be deducted from the tax base more than once. From the 2022 tax period onward, the base rate of the super deduction of R&D costs was reduced to 100% (refund of 21 euro cents for each EUR1 of R&D costs) from the previous rate, 200%, which applied to 2020 and 2021.

On top of the base R&D super deduction, an additional incremental deduction of 100% of the year-on-year increase (measured against the prior two years) can be claimed by taxpayers on tax returns. Finally, any unused R&D super deduction can be carried over. The period for utilization of unused super deduction has been extended from four to five years. The five-year period applies to R&D projects commencing on or after 1 January 2020.

Guidelines around incentive applications

The deduction is applied in the CIT return, and no approval process is necessary beforehand. In other words, if a taxpayer has fulfilled the required conditions, it can apply the tax deduction without the difficulties associated with the administratively burdensome request and approval process.

Taxpayers interested in the super tax deduction of R&D costs must prepare a written R&D project plan and have it signed by an authorized signatory. Until 2019, the R&D project plan had to be prepared and signed by an authorized signatory prior to incurring costs for which the super deduction was claimed. Conversely, an R&D project plan for R&D projects commencing on or after 1 January 2020 needs to be prepared and signed by the authorized signatory until the deadline for submission of the corporate income tax return. Since the corporate income tax return is generally due within three to six months from the end of the tax period – depending on whether an extension of the deadline is sought – taxpayers should no longer be under time pressure when it comes to preparation of the R&D project plan.

The R&D project plan must define the object of R&D (the starting and expected completion dates of the project, the objectives of the project that are attainable during the implementation period and measurable after its completion, total estimated costs of the project, etc.). The project plan is not required to be submitted to the tax authorities, but the taxpayer must be ready to provide it within eight days upon request in case of a tax audit.

For the deduction to be applied, separate accounting evidence must be kept documenting all costs related to the R&D project.

Super tax deduction for Industry 4.0 capex

(Odpočet výdavkov (nákladov) na investície)

Description of benefits

Taxpayers eligible for this scheme can benefit from an additional tax deduction from 15% to 55% for tax depreciation or amortization on capex spent on assets related to Industry 4.0.

The Industry 4.0 super tax deduction rate depends on the:

- ▶ Contemplated amount of the total eligible capex during the period from 2022 to 2025 or from the financial year commencing in 2022 until the end of the financial year commencing in 2025 (the latter applies if the taxpayer reports on a financial year basis)
- ▶ Multiplier ratio between the (i) contemplated amount of the total eligible capex during the period set forth by the investment plan and (ii) average annual capex spending on assets related to Industry 4.0 during the period from 2019 to 2021 or from the financial year commencing in 2019 until the end of the financial year commencing in 2021, measured in percentage

The minimum total eligible capex contemplated in the investment plan is EUR1 million, and the minimum multiplier ratio is 700%. The maximum Industry 4.0 super tax deduction rate of 55% means a refund of 11.55 euro cents for each EUR1 of eligible capex spending.

Guidelines around incentive applications

This is a temporary instrument that will reward capex spent in the period from 2022 to 2025. Its aim is to fuel capex on assets bringing higher added value and fostering future growth of the Slovak economy upon the transformation to Industry 4.0. Only businesses that already carried on business in Slovakia prior to 2019 can benefit from this scheme.

The list of the assets eligible for the Industry 4.0 super tax deduction is included in the Income Tax Act. The Industry 4.0 super tax deduction rate can be claimed over the depreciation or amortization period, but it cannot be claimed over more than 10 consecutive tax periods following the period in which the asset was put in use. The deduction is claimed via the CIT return.

For the purpose of this scheme, an investment plan addressing the eligible capex spending must be drawn up. The investment plan is not required to be submitted to the tax authorities, but the taxpayer must be ready to provide it within eight days upon request during a tax audit.

The Industry 4.0 super tax deduction came in effect on 1 January 2022.

Patent box

Description of benefits

Under the patent box regime, taxpayers can enjoy a partial tax exemption of income generated from some intangible assets created by a taxpayer's own development activities in the territory of Slovakia.

The exemption of 50% applies to income generated from provision of right to use (licensing) a patent, design, utility model or computer program (software) created by a taxpayer in Slovakia.

The same exemption of 50% also applies to income generated from the sale of products in which a patent, utility model or design created in Slovakia has been used (embedded royalty). These intangibles could be used in own production or in production by third parties that were provided the right to use the intangibles in their manufacturing process.

The exemption resulting in the taxation of the eligible income at the effective tax rate of 10.5% applies in tax periods during which the respective intangibles are tax amortized.

Guidelines around incentive applications

The deduction is applied in the CIT return, and no approval process is necessary beforehand. In other words, if a taxpayer has fulfilled the required conditions, it can apply the tax exemption without the difficulties associated with the administratively burdensome request and approval process.

Taxpayers interested in the patent box regime must maintain evidence of development costs, capitalized development costs and costs for intangibles developed by third parties that were used in the development process. The evidence is not required to be submitted to the tax authorities, but the taxpayer must be ready to provide it within eight days upon request (even outside the tax audit procedure).

3. Eligibility requirements

Generally, incentives may be granted to any entity from any industry; however, specific requirements regarding entity and industry may be stipulated by the particular funding program.

Specific eligibilities for each incentive are below.

R&D subsidy and R&D income tax relief

Qualifying expenses include direct costs (e.g., wage costs, costs of business trips, costs of repairs, procurement, expenses) and indirect costs (e.g., depreciation of assets or costs of utilities), depending on the type of R&D project.

Companies are required to meet one of the following conditions after incentive approval:

- ▶ The entity applying for an incentive creates a new working position, whereby the new workplace focuses on R&D and will continue to carry out such activity for at least five years after provision of the incentive.

Or

- ▶ An existing workplace focusing on R&D is expanded using the funds of the entity applying for an incentive, whereby the expanded workplace must continue to carry out such activity for at least five years after provision of the incentive and the recipient of the incentive must not

decrease its own annual R&D-related expenses below the level spent before provision of the incentive.

Investment aid for technological centers

Qualifying activities include the establishment or expansion of a center for innovation and technology. Specific conditions for granting investment incentives are as follows for claims submitted in 2023 (special measures designed to combat the adverse consequences of the energy crisis were implemented):

- ▶ The acquisition of tangible and intangible assets is specified separately for each type of requested investment aid (at least EUR50,000).
- ▶ The investment project must have already led to the creation of at least five new jobs.
- ▶ Employees must be remunerated by the multiple of average gross monthly wage for the relevant workplace applicable for the previous calendar year in a specific Slovak district, with the multiplier of 1.7.

Further, the following conditions should be met:

- ▶ The applicant must maintain a clean criminal record.
- ▶ The applicant cannot have arrears to Slovak tax, customs, social security and public health insurance authorities.
- ▶ The project must comply with all conditions attached to the approval of the investment aid, no later than within three years (five for investments over EUR50 million) from issuance of the approval.
- ▶ All subsidized job positions must be filled in line within the decision issued (however, no later than within three years from the project completion) and maintained for a period of five years (or three years in case of SME).
- ▶ The project operation must be maintained for a minimum period of five years (three years in case of SME) from its completion without change of its location.

Qualifying expenses include:

- ▶ Capex on or rental costs of new tangible fixed assets (e.g., land, buildings and plant/machinery) acquired under market conditions
- ▶ Capex on intangible fixed assets (e.g., patents, licenses, know-how or unpatented technical knowledge), acquired under market conditions, excluding intangible fixed assets acquired from related parties
- ▶ Salaries of employees employed with connection to the investment project (calculated as the total salary costs for 24 months)

Subsidy on scientific and technical services

Qualifying activities include scientific and technical services (e.g., scientific knowledge sharing, licensing, advisory, research, technical standardization and education).

Qualifying expenses include direct costs (e.g., wage costs and costs of business trips).

Super tax deduction for R&D costs

Qualified costs include costs directly associated with the R&D project – e.g., salaries, asset depreciation charges, materials, utilities, software licenses and certifications. Indirect costs, such as general overheads (HR, finance) and costs for outsourced services, licenses (other than licenses for specific software directly used for R&D activities) and costs of intellectual property (IP) acquired from a person other than the person holding a certificate of competency to perform R&D issued by the Slovak Ministry of Education, would not qualify for an additional deduction. Incurred costs that are only partially related to the implementation of the R&D project are only partially qualified for the R&D allowance.

Super tax deduction for Industry 4.0 capex

The Industry 4.0 super tax deduction can be claimed only for:

- ▶ Capex not funded from public finances
- ▶ Capex for which R&D super tax deduction is not claimed

The assets eligible for Industry 4.0 super tax deduction, inter alia, include:

- ▶ Equipment, machinery, automation technology and communication technology
- ▶ Software used in conjunction with the eligible assets listed by the Income Tax Act, such as software for the management of the production and logistics process aimed to optimize the production and supply chain, process automation and data exchange systems in manufacturing technologies leveraging embedded sensors, intelligent robots, 3D printers, cloud computing/ cognitive computing, and software facilitating creation of a smart factory
- ▶ So-called technical improvements of the above (refurbishments of the pre-existing assets resulting in better performance, new features, etc.)

Patent box

The exemption is applicable during the tax periods in which the capitalized costs of development of intangible assets are tax amortized. Thus, the condition for application of the exemption is the correct accounting of development costs and their subsequent amortization. The exemption is applicable only when intangibles are developed in the territory of Slovakia.

4. IP and jurisdictional requirements

There are no jurisdictional requirements related to IP.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Slovakia.

6. Role of governmental bodies in administering incentives

The decision on the amount of R&D incentives is at the discretion of the government and depends on available state budget resources, with the exception of the super tax deduction for R&D costs, the super tax deduction for the Industry 4.0 capex and application of the patent box, which can be applied without prior consent and with no connection to budget resources. The Ministry of Education administers the R&D subsidy, R&D income tax relief and the subsidy on scientific and technical services, with help from the Slovak Innovation and Energy Agency (SIEA) and the Slovak Research and Development Agency. The Ministry of Economy administers investment aid for technological centers. Any incentives granted in the form of a tax credit are granted by the Ministry of Finance.

7. Administrative requirements

The approval process of an application for R&D subsidy and R&D income tax relief includes the following:

- ▶ The application is filed under particular funding programs with the Ministry of Education before commencement of work on the project (the application should meet all conditions stipulated by law, including all obligatory attachments).
- ▶ The Ministry of Education evaluates the project and seeks two independent expert opinions in determining its decision on approval of the incentives.
- ▶ If the amount of incentives does not exceed EUR2 million, the Ministry of Education issues the decision on whether the incentives are granted.
- ▶ If the amount of incentives exceeds EUR2 million, the government is required to make the approval.
- ▶ If the project exceeds the state aid notification threshold, the granting of the incentive is subject also to approval by the European Commission.
- ▶ Agreement for granting incentives is concluded with the Ministry of Education.

Applicants for the R&D subsidy and R&D income tax relief are obliged to register with the Public Partners Register held by the Ministry of Justice.

The approval process for an application of investment aid for technological centers includes the following:

- ▶ The investment project is filed with the Ministry of Economy (the investment project should meet all conditions stipulated by law, including all obligatory attachments) prior to the commencement of work on the respective project.
- ▶ The Ministry of Economy will evaluate the regional impact of the investment and arrange for an independent expert to prepare a report evaluating whether the conditions for investment aid have been met.
- ▶ The Ministry of Economy issues a proposal for investment aid.
- ▶ The Ministry consults on the requested aid with the Ministry of Finance and/or Ministry of Labor, Social Affairs and Family. The Ministry will then prepare an overall report on the investment aid.

- ▶ If supported by the other ministries, the Ministry of Economy issues the offer, which includes the actual amount of investment aid offered.
- ▶ The beneficiary files a request for investment aid based on the offer received.
- ▶ The Ministry of Economy approves the request.
- ▶ The government approves the request if not subject to state aid notification to the European Commission.
- ▶ If the project exceeds the state aid notification threshold, the granting of the incentive is also subject to approval from the European Commission.
- ▶ The decision is issued to the beneficiary.
- ▶ The beneficiary is required to prepare and present annual monitoring reports on realization of the project and a final evaluation report within three months of the conclusion of the investment project. Furthermore, the annual reports on the use of investment are required to be submitted for at least five years after the investment project is finalized, and also during the entire period of use of the tax credit (i.e., up to 10 years). The annual monitoring reports and final evaluation report must be reviewed and confirmed by an external auditor. The audited financial statements are required to be enclosed with annual reports on use of the investment.

8. Statutory reference

- ▶ Act No. 185/2009 Coll. on Research and Development Incentives
- ▶ Act No. 172/2005 Coll. on the organization of state support of R&D
- ▶ Act No. 57/2018 Coll. on Regional Investment Aid
- ▶ Act No. 595/2003 Coll. on Income Tax Act
- ▶ Commission regulation (EC) No. 651/2014 declaring certain categories of aid compatible with the common market in application of Articles 107 and 108 of the Treaty (general block exemption regulation)
- ▶ Regulation No. 195/2018 Coll. on maximum intensity of investment aid (amended regulation approved by the government)

Slovenia

This chapter is based on information as of February 2023.

R&D and investment allowances are corporate income tax reliefs that may reduce a company's tax bill if the company is liable for corporate income tax in Slovenia. When claiming R&D tax relief, the taxpayer has to prove to the tax authorities that the project and its expenses qualify as R&D. Given that this can be challenged by the tax authorities, taxpayers more often use the general investment tax relief (40% of investments, excluding office furniture and certain vehicles), for which no supporting documentation is required and cannot be used together with the R&D tax relief.

According to the Financial Administration of the Republic of Slovenia (FURS), less than 1% of taxpayers used the R&D tax relief in 2017, compared with 21% who used investment tax relief, mainly due to the substantial supporting documentation requirement.

1. Overview

R&D incentives are used to recognize the significant contribution that R&D plays in building globally competitive companies and as a tool to attract foreign investors. There are several incentives to attract R&D activity in Slovenia.

Types of incentives		Types of incentives	
Tax credits	<input type="checkbox"/>	Tax exemptions	<input type="checkbox"/>
Cash grants	<input checked="" type="checkbox"/>	Income tax withholding incentives	<input type="checkbox"/>
Loans	<input checked="" type="checkbox"/>	Patent-related incentives	<input type="checkbox"/>
Reduced tax rates/preferable tax rates	<input type="checkbox"/>	Financial support	<input checked="" type="checkbox"/>
Reduced social security contributions	<input type="checkbox"/>	Tax holiday	<input type="checkbox"/>
Accelerated depreciation on R&D assets	<input type="checkbox"/>	Expedited government approval process	<input type="checkbox"/>
Tax allowance	<input type="checkbox"/>	VAT reimbursement	<input type="checkbox"/>
Infrastructure/land preferential price	<input checked="" type="checkbox"/>	Qualifies for Horizon Europe funding	<input checked="" type="checkbox"/>
Tax deduction (including super deduction)	<input checked="" type="checkbox"/>	Other	<input type="checkbox"/>

2. Incentives available

Name of incentive	General R&D tax relief*	Cash grants	Financial support – reimbursable means	Loans
Type of incentive	► Super deduction	► Cash grants	► Financial support	► Loans

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

General R&D tax relief

(*Olajšava za vlaganja v raziskave in razvoj*)

Description of benefits

As of 1 January 2022, taxpayers can receive a triple tax deduction for investments in R&D. Under this incentive, a 100% corporate income tax (CIT) base deduction is available on R&D investments and certain expenses incurred. The R&D tax relief, tax relief for investments in the digital and green transition, and general investment tax relief cannot be claimed at the same time. Similarly, any R&D investments funded from the budgets of the Republic of Slovenia or the European Union (EU) should also be excluded. The unused amount of the tax relief can be carried forward for five tax periods, where the tax base shall first be reduced by the oldest unused tax relief. The taxpayer has to evaluate whether the project and its expenses qualify for R&D tax relief.

A general limitation of tax base reduction after utilization of tax reliefs and tax losses carried forward took effect as of 1 January 2020. The maximum reduction of tax base is limited to 63% of the tax base for a tax period, which means setting a minimum effective corporate tax rate of 7%.

Guidelines around incentive applications

R&D tax relief is applicable for investments in a tax period and is claimed with the CIT return. As the incentive is statutory-based, the claims follow the corporate tax filing timeline. In order to claim R&D tax relief, a prescribed form (in Slovene: "*Obrazec za uveljavljanje davčne olajšave za vlaganja v raziskave in razvoj za davčno obdobje (oddo)*") should be submitted with the CIT return. The form specifies all costs from various projects and programs and is filed as an appendix to the CIT return. Additionally, a taxpayer should provide a more detailed report on relevant R&D investments, to be submitted on request by the tax authorities.

Cash grants

(*Nepovratna sredstva*)

Description of benefits

Cash grants are a form of state aid. Therefore, in line with common European rules on state aid, a cash grant should

be implemented as a public tender. Every public tender is published in the Official Gazette of the Republic of Slovenia. Cash grants are usually provided as a subsidy.

On 17 December 2020, the European Council decided to adopt the next long-term EU budget for the period 2021-27. The European Commission has started committing the funds under the next Multiannual Financial Framework as of 1 January 2021, following the adoption of the relevant sector-specific rules as well as of the annual budget for 2021 by the European Parliament and the Council. Over the planned seven years, Slovenia is to receive nearly EUR4.5 billion under the new Cohesion Policy and Common Agricultural Policy. Additionally, Slovenia is eligible for EUR5.2 billion under the Recovery and Resilience Facility (RRF), of which EUR1.6 billion is available as grants and EUR3.6 billion as loans. The facility is the centerpiece of the Next Generation EU, a temporary recovery instrument to help repair the immediate economic and social damage brought about by the COVID-19 pandemic.

The National Recovery and Resilience Plan (NOC) was adopted by the government on 28 April 2021, confirmed by the Commission on 1 July 2021, and adopted by the Council on 28 July 2021. To this end, the plan consists of 52 investments and 34 reforms. They will be supported by EUR700 million in loans and EUR1.5 billion in grants, which is EUR286 million less than initially agreed upon between the parties due to the increased Slovenian GDP in 2021. Until August 2023, it will be possible to increase the volume of the use of repayable funds if there is a demonstrated need and if the conditions are appropriate. Forty-two percent of the plan will support climate objectives and 21% of the plan will foster the digital transition. All reforms and investments have to be implemented within a tight time frame, as the Regulation on the RRF foresees they have to be completed by the end of 2026. Given the limited resources, other investments, measures and projects that could not be placed in the plan will be financed from other funds, under other funding schemes and from the state budget. In addition to direct actions by the Ministry, companies will be able to obtain resources via the Slovene Enterprise Fund, Slovenian Regional Development Fund, SPIRIT, Slovenian Tourist Board and SID Bank. Moreover, Slovenia will be allowed to use EUR312 million until the end of 2023 under the REACT-EU mechanism.

Furthermore, following the adoption of programs prepared according to the new cohesion policy, the public agency SPIRIT¹ introduced several public tenders, including “Incentives for research and development projects of the NOC,” which aims to contribute to the green transition by co-financing at least 95 R&D projects of consortia of enterprises focused on the transition to a circular economy. Approximately EUR45 million is available for fiscal years 2023-26. The deadline for submitting the application was 3 April 2023. On 5 August 2022, SPIRIT introduced the public tender “Support for start-ups, micro, small and medium-sized enterprises in strategic sustainable and circular business transformation in 2022-2025,” under which EUR18 million in grants is available for at least 200 projects in the intensive process of sustainable and circular business transformation with the main objective of increasing the productivity and competitiveness of Slovenian enterprises.

As part of international initiative EUREKA, four public tenders, led by the Ministry of Economic Development and Technology, are open. The successful applicants will receive co-financing of the Slovenian part of the international R&D projects (at least two independent project partners, one from Slovenia and one foreign partner), which are approved at the meetings of the EUREKA program by the Committee of High Representatives of the EUREKA program (network project) or in the framework of the cluster strategic initiative. The ultimate goal of any project to receive the EUREKA designation is for it to be a new product, process or service. Under the framework of the clusters (smart) initiative, a call was opened for organizations collaborating internationally on the R&D of advanced manufacturing projects. The deadline for the R&D and innovation project application under the Eurostars program was 13 April 2023. Under the framework of the clusters (CELTIC-NEXT) initiative, a call for projects in the information and communications technology field was open until 21 April 2023. An open call for network projects application lasts from 1 January 2020 to 31 December 2025.

Guidelines around incentive applications

Cash grants are intended to accelerate growth for innovative companies that are located in Slovenia. To qualify for a specific cash grant, the company must fulfill conditions specified in each public tender.

Financial support – reimbursable means

(Povratna sredstva)

Description of benefits

All forms of financial support are a form of state aid. Therefore, in line with common European rules on state aid, financial support should be implemented as a public tender. Every public tender is published in the Official Gazette of the Republic of Slovenia. The Ministry of Finance regularly publishes a list of open state aid. Financial support can be provided as a loan, guarantee or capital increase (venture capital funds).

On 23 November 2017, Slovenia launched implementation of financial instruments within a framework of the implementation of the cohesion policy of the 2014-20 period. In this respect, EUR253 million is earmarked from reimbursable European funds that are available to Slovenia within the 2014-20 financial framework until 2023 for the purpose of financing development and entrepreneurship. Financial intermediaries additionally have made EUR150 million available because of the need for financial leverage and reuse of repayments. In total, EUR400 million will be available for enterprises and other end users. These funds will be managed by the SID Bank. Financial instruments are expected to promote investments and current operations with debt and equity financing. Accordingly, private operators will transfer all the benefits (e.g., lower interest rate, lower required insurance, a moratorium on repayment of a loan, longer maturity of loans) that they will obtain from the SID Bank to the final recipients (companies, public institutes, municipalities and individuals). The funds will be transferred to research, development and innovation projects and investments; small and medium-sized enterprises (for the startup of the company and the early-growth phase and for the growth and development of the company); and energy efficiency and urban development projects. Additionally, Slovenia is eligible for loans in the amount of EUR3.6 billion under RRF to support public investments and reforms to address the economic and social impact of the COVID-19 pandemic, as well as the challenges posed by the green and digital transitions.

¹ SPIRIT is a public agency of Slovenia for the promotion of entrepreneurship, innovation, development investment and tourism.

Guidelines around incentive applications

Financial support is intended for new investments or activities that are not yet started or realized. To qualify for specific financial support, the company must fulfill conditions specified in a public tender. No preapproval is required before the start of the activities.

Loans

(*Posojila*)

Description of benefits

Legal entities established in Slovenia that are performing R&D activities (industrial research and experimental development) and/or investing in tangible and intangible assets for the purpose of R&D activity and that aim to introduce new products or solutions to the existing market (or when entering new markets) may obtain a loan from SID Bank with more favorable terms and conditions. Loans granted are regarded as state aid. The interest rate is usually based on the rating of the company, the quality of the submitted insurance collateral, loan maturity and other risk parameters.

A new “loan fund” called RRI-3 is implemented under three different aid schemes – i.e., temporary framework, de minimis aid and General Block Exemption Regulation (GBER). The aim of RRI-3 is to promote the development of new and improved products, services or processes that may be new to businesses or the market. It is intended for sole proprietors, small and medium-sized enterprises, large enterprises and cooperatives. The loan fund allows financing from EUR100,000 to EUR15 million, maturity from 6 to 12 years, interest rates lower than market rates and all types of insurance. The temporary framework is also tailored to the needs of companies affected by COVID-19.

Guidelines around incentive applications

Loans are applicable to future investments. The eligible company must submit an application to the specified institution before the project has started. The project must be carried out in Slovenia.

If the conditions specified in the tender are fulfilled, an application without preapproval is sufficient. The amount of the incentives is usually limited, hence the tender may be closed before the end of the calendar year.

3. Eligibility requirements

General R&D tax relief

The design of the R&D regime is strongly based on the Organisation for Economic Co-operation and Development (OECD) 2015 Frascati Manual and interpretations contained therein.² For R&D to qualify for tax relief, a company must be carrying on a project that seeks an advance in science or technology. The company must be able to state what the intended advance is and to show how, through the resolution of scientific or technological uncertainty, the project seeks to achieve this.

The advance being sought must constitute an advance in the overall knowledge or capability in science or technology, not a company’s own state of knowledge or capability alone. Once the advance in science or technology has been articulated, the scope of the R&D project has been defined and the project activities falling within the definition of R&D for tax purposes have been identified, the tax rules in the Slovenian Corporate Income Tax Act set out expenditures that may be eligible for relief and conditions that must be satisfied for the expenditure to qualify for relief. Any business carrying on qualifying R&D projects may claim general R&D tax relief.

Qualifying expenses for the general R&D tax relief are those incurred for internal and external R&D activities. For internal R&D activities, the following costs should be stated:

- ▶ Costs of material
- ▶ Service costs
- ▶ Labor costs
- ▶ Purchasing cost of R&D equipment

For external R&D activities, the following costs should be stated:

- ▶ Costs of contracts with external experts and researchers performing the work on R&D projects or programs
- ▶ Costs of contracts for performing R&D activities concluded with R&D organizations and other parties that are registered for performing R&D activities

² OECD (2015), Frascati Manual 2015: Guidelines for Collecting and Reporting Data on Research and Experimental Development, OECD Publishing, Paris, <http://dx.doi.org/10.1787/9789264239012-en>.

Cash grants and financial support

Eligibility requirements are different for each tender. Usually, a cash grant is given up to a certain percentage of the total value of the investment or project; therefore, an applicant has to secure a portion of the resources. Additionally, eligible costs, which can be included in a cash grant or financial support request, are defined.

Loans

Any legal entity established in Slovenia that is carrying out eligible activities in Slovenia may file an application for a loan at the SID Bank. The loan may cover up to a specific percentage of the eligible costs for a project.

4. IP and jurisdictional requirements (patent box regime)

There are no jurisdictional requirements related to intellectual property (IP). Slovenia has not implemented a patent box regime.

5. Technology or innovation zones

Incubators have been developed in Slovenia in the past 20 years. Among the different types of incubators, technological parks are especially important for R&D activities because mostly high-tech companies are incubated. University incubators focused on applied technologies and the transfer of theory into practice are also especially important. Incubators can apply for specific allocated funds from the Slovene Enterprise Fund (SPS) and for other public tenders organized by SPS or SPIRIT. Additionally, they can apply for EU funds. Incubators provide business premises for newly established companies on more favorable conditions and provide them with advisory, management and administrative services.

The Slovene Association of Technology Parks and Incubators integrates eight business or entrepreneurship incubators, three university incubators and two technological parks. The purpose of the organization is the formation of common interests and representation to the competent ministries, experience and knowledge exchange and transfer among members, cooperation in EU projects, and comparison to related institutions in developing environments and common promotion.

Only newly established high-tech companies can apply to be integrated into technological parks. Entrepreneurial incubators are designed for all other types of newly established companies. To receive incentives, the incubators have to meet conditions set in the Supportive Environment for Entrepreneurship Act to apply for state funds. Newly established companies can benefit from more beneficial conditions and services provided by an incubator only for a limited period, usually up to three years.

An incubator must be registered in the record of innovative environment subjects, led by SPIRIT. Subscription or renewal should be done on an annual basis based on a public invitation.

6. Role of governmental bodies in administering incentives

General R&D tax relief

Eligible projects are not subject to prior evaluations or approvals by the tax authorities or other governmental bodies. However, if in the course of a tax audit the tax authorities determine that R&D expenses were unjustified (i.e., that those expenses should not be deducted from the taxpayer's taxable base), they may reassess the tax base and impose late-payment interests on underpaid tax. Penalties for a tax offense may also be imposed in certain circumstances. The relative statute of limitations for the reassessment of the tax base is five years, while the absolute statute of limitations is 10 years. The relative statute of limitations for the right to assess a penalty depends on the gravity of the offense and varies from 3 years for a tax offense to 5 years for a severe tax offense, while the absolute statute of limitations is 6 to 10 years.

Cash grants and financial support

Cash grants and financial support programs are run by different public institutions (different public funds or agencies or SID Bank) and/or by the competent ministry.

The SPS was established to improve access to financial resources for different development – business investments of micro, small and medium-sized enterprises – via financial engineering, which is mainly based on financial instruments with refundable means (loans, guarantees for loans, subsidized interest rates, venture capital), allowing for the combination of financial resources from different financial institutions.

The Slovenian Research Agency (ARRS) was established to select and finance research and infrastructure programs that provide a public service in the research field and to manage young researchers' projects and other projects assigned to ARRS as part of the National Research and Development Programme and the annual plan of the Ministry of Education, Science and Sport.

Loans

The terms and conditions of every public tender for loans (program of public tender) require approval from the Ministry of Finance before being published on the website of SID Bank and before becoming binding. Applications are, however, approved by SID Bank.

7. Administrative requirements

General R&D tax relief

To be eligible for R&D tax relief, the company must submit the prescribed form with the CIT return. However, the company must have prepared a special business plan or development project documentation, which should be submitted to the tax authorities only upon request. If the tax authorities are not sure whether specific costs or investments can be classified as investment in R&D, they may request a preliminary opinion from the ministry competent for technology, which should issue the opinion within 30 days of the request.

According to information obtained from the tax authorities, an option to request prior opinion regarding eligibility of the project for R&D tax relief should be available to taxpayers. In such a case, the taxpayer would submit a request for opinion to the tax authorities, and the tax authorities would forward the request to the ministry responsible for technology to obtain the opinion for the taxpayer.

Cash grants, financial support and loans

The Slovenian Ministry of Economic Development and Technology regularly publishes information about international or EU public tenders focused on innovation projects and related research. Eligibility requirements for each tender are different and subject to prior approval by the European Commission or other designated body.

At the national level, subsidies for innovative companies, guarantees for bank loans, and refundable or nonrefundable funding for companies performing R&D activities are offered by specified institutions (the competent ministry, SPIRIT, ARRS, SPS, SID Bank). Similarly, eligibility requirements for tenders depend on a particular tender and competent body offering the incentive.

The objective of such incentives is to increase business investments in R&D to promote the integration of the Slovenian economy into international scientific research programs, to promote employment and training of researchers and developers, and to construct a proper national innovation system.

Cash grants and financial support

All cash grant and financial support requests must be sent to the institution that runs the applicable program by the specified date. In accordance with the rules of specific public tender, the institution may approve the grant application within the set deadline after the final date for sending the request.

Loans

An application for a loan with the accompanying enclosures has to be submitted to the specified institution (SID Bank or SPS).

R&D incentives in South Africa aim to provide an enabling environment for research and knowledge production that promotes the strategic development of basic sciences and priority science areas, through science promotion, human capital development, the provision of research infrastructure and relevant research support, in pursuit of South Africa's transition to a knowledge economy.

1. Overview

Regarding the super deduction and accelerated depreciation incentives, the South African government's objective is to incentivize R&D that represents innovation coming out of the country and to encourage businesses to invest in R&D in South Africa. Advancements and improvements are not incentivized if they cannot be proven to be innovative and representative of global advancement.

The R&D regime has been available since November 2006, and legislation has since been updated to require preapproval for the super deduction. This tax incentive currently has a sunset clause of 1 January 2024 (previously 1 October 2022); however, National Treasury and the Minister of Science and Innovation are currently assessing an additional extension beyond this date to 31 December 2033 in their next round of proposed amendments to legislation.

Some of the other main proposed amendments include a period to submit new applications that will allow taxpayers to include certain qualifying costs incurred prior to application submission. Currently, only those qualifying costs incurred from the date of application submission are considered for the super deduction. In addition, revisions are proposed to the R&D definition to make it simpler to understand and adjudicate, ensuring an easier application process. Lastly, it is being proposed that the exclusion of R&D activities involving internal business processes, which are not mainly intended for sale or licensing, be relaxed to allow more taxpayers to qualify for the R&D incentive.

Currently, taxpayers incurring expenditures directly attributable to scientific or technological R&D can claim 150% of qualifying expenditures preapproved by the Department of Science and Innovation (DSI). New and unused R&D machinery or plants will qualify for a three-year write-off (50%, 30% and 20%) if they meet certain criteria.

The incentive is available to businesses of all sizes and in all sectors as long as they are registered in South Africa. To qualify for the deduction, the R&D activities against which the expenditure is incurred must be preapproved by the Minister of Science and Innovation.

Types of incentives	
Tax credits	<input type="checkbox"/>
Cash grants	<input checked="" type="checkbox"/>
Loans	<input type="checkbox"/>

With regard to cash grants, the Support Programme for Industrial Innovation (SPII) is designed to promote technology development in South Africa's industry, through the provision of financial assistance for the development of innovative products and/or processes. SPII is focused on the development phase, which begins at the conclusion of basic research and ends at the point when a pre-production prototype has been produced.

The Technology and Human Resources for Industry (THRIP) program is intended to leverage collaborative partnerships between government and industry (working with academia) for research and development in science, engineering and technology on a cost-sharing basis, to produce highly skilled human resources and technology solutions for improved industry competitiveness.

2. Incentives available

Name of incentive	Section 11D*	Section 12C(1)(gA)	Support Programme for Industrial Innovation (SPII)	Technology and Human Resources for Industry (THRIP)
Type of incentive	▸ Super deduction	▸ Accelerated depreciation on qualifying R&D assets	▸ Cash grants	▸ Cash grants

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

Section 11D

Description of benefits

Since November 2006, a super deduction equal to 150% is allowed per year for qualifying direct R&D costs. The incentive is contained in Section 11D of the Income Tax Act, No. 58 of 1962 (Income Tax Act). As a result of amendments to Section 11D that took effect on 1 October 2012, taxpayers must obtain preapproval of projects from an R&D Adjudication Committee to qualify for the super deduction. If a company is in an assessed loss position, the additional deduction will increase the assessed loss. The loss can be used against future taxable income and can be carried forward indefinitely.

Guidelines around incentive applications

The super deduction is applicable for current and future investments. Since the preapproval process was introduced, retrospective claims can only be included in tax returns covering periods before October 2012. Once tax returns have been assessed, they prescribe after three years.

Preapproval needs to be obtained from the DSI; upon approval, certain expenditures incurred on the approved project(s), applicable from the date of filing the application, will be eligible for the 150% deduction at the time of filing the tax return.

Section 12C(1)(gA)

Description of benefits

Under Section 12C(1)(gA) of the Income Tax Act, capital expenditures incurred to develop, construct or purchase new and unused assets that are solely and directly used in the conduct of qualifying R&D activities qualify for accelerated depreciation at a rate of:

- ▶ First year asset is in use: 50%
- ▶ Year two: 30%
- ▶ Year three: 20%

If a company is in an assessed loss position, the allowance deduction will increase the assessed loss. The loss can be used against future taxable income and can be carried forward indefinitely.

Guidelines around incentive applications

The incentive is applicable for current and future investments. The accelerated depreciation commences in the year the asset was brought into use. No preapproval is required to claim the accelerated allowance.

SPII

Description of benefits

The SPII, which is administered by the Department of Trade, Industry and Competition (DTIC), provides financial assistance in the form of cash grants for the development of innovative products and/or processes. The SPII is focused specifically on the development phase, which begins at the conclusion of basic research and ends at the point when a pre-production prototype has been produced. The SPII offers two schemes as described below.

- ▶ SPII Product Process Development (PPD) scheme: this scheme applies to small, very small and micro enterprises and to individuals in the form of a non-taxable and non-repayable grant. It provides for a grant (maximum ZAR2 million per project) that ranges between 50% and 85% of the qualifying costs incurred during the technical development stage. The percentage is based on the percentage ownership by certain disadvantaged groups.
- ▶ SPII Matching scheme: this scheme is available to all enterprises and individuals. It provides for a non-taxable and non-repayable grant (maximum ZAR5 million per project) that ranges between 50% and 75% of the qualifying costs incurred during the technical development stage. The percentage is based on the percentage ownership by certain disadvantaged groups.

Guidelines around incentive applications

The incentives are applicable for qualifying future projects. A complete application must be submitted to the DTIC.

THRIP

Description of benefits

The THRIP, which is administered by the DTIC, provides financial assistance in the form of cash grants for research and development in science, engineering and technology that is conducted collaboratively between industry and government (working with academia). The THRIP is focused specifically to increase the number of people with appropriate skills in the development and management of research-based technology for industry.

THRIP is a cost-sharing grant of up to ZAR5 million per year for a period of three years for approved projects engaged in applied research and development in science, engineering and/or technology.

Guidelines around incentive applications

The incentives are applicable for qualifying future projects. A complete application must be submitted to the DTIC.

3. Eligibility requirements

Section 11D

Eligible expenditures include all expenditures actually incurred by a taxpayer directly and solely with respect to R&D undertaken in South Africa if those expenditures are incurred in the production of income and in the carrying out of any trade.

No deduction shall be allowed for expenditures incurred with respect to the following:

- ▶ Market research, market testing or sales promotion
- ▶ Routine testing, analysis, collection of information or quality control in the normal course of business
- ▶ Development of internal business processes, unless they are mainly intended for sale or for granting the use of or right of use or for granting permission to use thereof to persons who are not connected persons in relation to the person carrying on the R&D
- ▶ Social science research, including the arts and humanities
- ▶ Oil and gas or mineral exploration or prospecting, except R&D carried on to develop technology used for that exploration or prospecting
- ▶ The creation or development of financial instruments or products
- ▶ The creation or enhancement of trademarks or goodwill
- ▶ Patent, trademark and other intellectual property (IP) registration costs

The criteria to qualify for the R&D super deduction are as follows:

- ▶ Discovery of non-obvious scientific or technological knowledge, related to discovery of something that already exists in nature (e.g., the genetic makeup of a virus); qualification of activities under this category appears to be rare, based on authorities' interpretation
- ▶ The development of:
 - ▶ Functional designs related to design of physical objects (e.g., the design of a piece of equipment)
 - ▶ Inventions related to new products or processes (most R&D activities in South Africa fall under the invention category)
 - ▶ Computer programs related to developing software (the software must be developed for license or sale)
 - ▶ Knowledge essential to the use of such invention, design or computer program

- ▶ Development or significant improvement of any invention, design, computer program or knowledge if that development or improvement relates to any of the following:
 - ▶ New or improved function
 - ▶ Improvement of performance
 - ▶ Improvement of reliability
 - ▶ Improvement of quality
- ▶ Creating or developing a multi-source pharmaceutical product as defined in the World Health Organization Technical Report Series, No. 937
- ▶ Conducting a clinical trial as defined in the guidelines for good practice in the conduct of clinical trials with human participants in South Africa issued by the Department of Health (2006)

Section 12C(1)(gA)

The criteria to qualify for the accelerated depreciation incentive are as follows:

- ▶ Assets need to have been acquired by the taxpayer under an agreement formally and finally signed by all parties on or after 1 January 2012.
- ▶ Assets were thereafter brought into use by the taxpayer solely and directly for purposes of Section 11D R&D.

SPII

The criteria to qualify for cash grants are as follows:

- ▶ Development should represent a significant advancement in the field of technology
- ▶ Development and subsequent production must take place within South Africa
- ▶ IP must reside in a South African-registered company
- ▶ Participating businesses must be South African-registered enterprises
- ▶ Government-funded institutions (e.g., the Council for Scientific and Industrial Research) do not directly qualify for support but may participate as a subcontractor
- ▶ There may be no simultaneous applications from the same company

The qualifying costs in SPII are as follows:

- ▶ Personnel-related costs
- ▶ Travel expenses (defined maximum)
- ▶ Direct material
- ▶ Capital items and tooling
- ▶ Software (not general software)
- ▶ Documentation
- ▶ Testing and trials
- ▶ Licensing costs
- ▶ Quality assurance and certification
- ▶ Patent costs
- ▶ Subcontracting and consulting

The following are non-qualifying costs/projects:

- ▶ Projects receiving other government funding
- ▶ Military projects
- ▶ Projects in which SPII contribution is not significant (at least 20% of project costs)
- ▶ Production and commercialization costs
- ▶ Marketing and administrative costs
- ▶ Costs for product/process development for a single client
- ▶ Costs for basic and applied research
- ▶ Costs for projects that, at the time of application, are more than 50% (70% for PPD) complete
- ▶ All costs incurred prior to submitting a duly completed application

THRIP

The criteria to qualify for cash grants is as follows:

- ▶ The project must be applied research in the fields of science, engineering and/or technology whose outputs could make a significant contribution toward improving the applicant's competitive edge.
- ▶ The project intention should be to innovate in terms of either of the following:
 - ▶ Lead to the creation and transfer of new knowledge into a process or product (prototype)
- Or
 - ▶ Transfer of existing knowledge into a new process or product to benefit the applicant

- ▶ The project must have clearly defined scientific and technology outputs plus human resource outputs expected for each year of support.
- ▶ The project must demonstrate all of the following:
 - ▶ Causality (demonstrable output or outcome)
 - ▶ Implementation (the way in which the output or outcome will be used by the applicant)
 - ▶ Additionality (the degree to which the research would not have been undertaken without THRIP) that will follow from THRIP support

The qualifying costs in THRIP are as follows (all are subject to certain limitations):

- ▶ Personnel
 - ▶ Technical research assistant remuneration (including post-doctoral fellows)
 - ▶ Remuneration for the research leader at the Higher Education Institute (HEI)
 - ▶ Specialist, technical, scientific, consultation or contracting personnel (must not be employees of the HEI where the project is based)
- ▶ Running cost and overheads
 - ▶ Overheads (printing, fax and telephone)
 - ▶ Material/consumables
- ▶ Local travel (including accommodation)
- ▶ Local conferences and workshops
- ▶ International travel (including accommodation)
- ▶ Bursary grants
- ▶ Costs of registration and litigation of applicants

The following are non-qualifying costs/projects:

- ▶ Value-added tax
- ▶ Rental of facilities of the HEI
- ▶ Journal/literature subscription fees
- ▶ Professional organization subscription fees
- ▶ In-kind contributions
- ▶ Contributions from companies owned wholly or partly (more than 25%) by the HEI receiving the grant
- ▶ Donations
- ▶ Services and/or products (including salary cost) provided by the project's industrial partners and their shareholders and/or employees (except through Technology Innovation Promotion through the Transfer of People (TIPTOP))

4. IP and jurisdictional requirements

Effective date

- ▶ Super deduction: November 2006
- ▶ Accelerated depreciation: November 2006
- ▶ Cash grants: April 1993

Qualifying IP

Inventions, functional designs and computer programs qualify as IP.

Can work be performed outside the country?

Expenditures related to work done outside the country will not be eligible for the super deduction. Only expenditures incurred in South Africa will be eligible. Development and subsequent production must take place within South Africa in order to be eligible for SPII assistance.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in South Africa.

6. Role of governmental bodies in administering incentives

Under the amendments to Section 11 made by the Taxation Laws Amendment Act, No. 24 of 2011 (effective 1 October 2012), the R&D Adjudication Committee consisting of officials from the National Treasury, DSI and South African Revenue Service is required to preapprove projects before the super deduction can be claimed. The DTIC administers the SPII and THRIP programs.

7. Administrative requirements

Section 11D

Taxpayers may still claim the deduction under the previous legislation to the extent that the expenditure is incurred prior to 1 October 2012. Any expenditure thereafter has to pass through a preapproval process. The preapproval process consists of the submission of a preapproval application form, approval or rejection by the adjudication committee, and the submission of progress reports.

The compliance process is detailed below:

- ▶ Submission of preapproval application form to the DSI
- ▶ Progress update report filed annually for approved projects still ongoing 12 months after the close of the year of assessment in which approval was granted:
 - ▶ Progression of the project (what stage it is in)
 - ▶ Technological uncertainties overcome or advancement achieved
 - ▶ Type of R&D activities performed
 - ▶ Universities and contractors used in the process
 - ▶ Description of work performed in and outside of South Africa
 - ▶ Types of records kept
 - ▶ R&D expenditure to date
 - ▶ The R&D's sources of funding
 - ▶ Employment created
 - ▶ Skills developed (training)
- ▶ Notification of change document indicating any material change(s) made to any ongoing project, program or technological area that has been approved, with the form only needing to be submitted for any material changes in the project before the progress report is due

SPII

All South African-registered enterprises engaged in pre-competitive development activity in manufacturing, services or related industrial fields, or software development, that intend to lead to commercialization of the product being developed, may apply for SPII assistance.

- ▶ Application form must be submitted to the DTIC
- ▶ If approved, claims are on achievement of milestones as agreed in the contractual terms and conditions with the DTIC

THRIP

All South African-registered enterprises that have a partnership with at least one partner being a South African research institution:

- ▶ Higher education institutions (public)
- ▶ Science engineering and technology institutions
- ▶ National research facilities

The duration of the partnership must be equal to or more than the period of the THRIP project.

The project must include at least four registered South African students at fourth-year level of study or higher who must be involved or trained through the research being conducted.

8. Statutory reference

- ▶ Super deduction: Section 11D of the Income Tax Act, No. 58 of 1962, as amended by the Taxation Laws Amendment Act, No. 24 of 2011
- ▶ Accelerated depreciation: Section 12C(1)(gA) of the Income Tax Act

South Korea

This chapter is based on information as of February 2023.

R&D tax incentives in South Korea aim to encourage R&D activities and investment in tangible assets and R&D facilities that enhance productivity and competitiveness of the country's industries. Of the various R&D tax incentives available, the tax credit for R&D expenditures and integrated tax credit for investment are the most notable. The South Korean government is increasingly promoting investment in R&D, innovation and value creation to respond to the significant changes in both the domestic and global economy.

1. Overview

The R&D tax incentives regime in South Korea is mature, having existed for more than 10 years. The Tax Incentives Limitation Law (TILL) that currently governs R&D tax incentives was enacted on 1 January 1999.

Types of incentives	
Tax credits	<input checked="" type="checkbox"/>
Cash grants	<input type="checkbox"/>

2. Incentives available

Name of incentive	Tax credit for R&D expenditures	Tax credit for investment in R&D facilities
Type of incentive	▶ Tax credit	▶ Tax credit

Tax credit for R&D expenditures

Description of benefits

The following three types of tax credits are available under the tax credit regime for qualifying R&D expenditures for companies in South Korea:

- ▶ Tax credit for R&D expenditures in national strategic technologies (technologies that are critical to the purpose of national economic security and have a great ripple effect on the economy, social security values and industries), which applies to R&D expenditures incurred from 1 July 2021 to 31 December 2024^(*)^(**)
 - ▶ 30% of R&D expenditures; 40% of R&D expenditures for small and medium-sized enterprises (SMEs)
 - ▶ Three times the share of R&D expenditure to total sales amount, which is capped at 10%

- ▶ Tax credit for R&D expenditures in new growth sectors or to secure source (original) technologies, which applies to R&D expenditures incurred until 31 December 2024^(**)
 - ▶ 20% (25% for certain qualified medium-sized mature enterprises (MMEs) listed on the Korea Securities Dealers Automated Quotation (KOSDAQ) Stock Market) of R&D expenditures; 30% of R&D expenditures for SMEs
 - ▶ Three times the share of R&D expenditure to total sales amount, which is capped at 10% (15% for certain qualified MMEs listed on the KOSDAQ Stock Market) of R&D expenditures
- ▶ Ordinary tax credit for R&D expenditures^(***)^(****):
 - ▶ Large corporations: the tax credit would equal the greater of (i) 25% of current-year R&D expenditures exceeding the prior-year R&D expenditures, or (ii) 50% of the share of R&D expenditures out of total revenue, which is capped at 2% of R&D expenditures.

- ▶ MMEs: the tax credit would equal the greater of (i) 40% of current-year R&D expenditures exceeding the prior-year R&D expenditures, or (ii) 8% of current-year R&D expenditures.
- ▶ SMEs: the credit would equal the greater of (i) 50% of current-year R&D expenditures exceeding the prior-year R&D expenditures, or (ii) 25% of current-year R&D expenditures. In the first fiscal year where companies no longer qualify as an SME, a tax credit of 15% applies for the tax years ending within three years from the date of the tax year in which the SME does not qualify for the first time; a tax credit of 10% then applies for the tax years ending within two years from the end of the aforementioned period.
 - (*) The tax credit scheme was effectuated as of 28 December 2021.
 - (**) A company may select and apply either the tax credit for R&D expenditures in national strategic technology or the tax credit for R&D expenditures in new growth engine sectors or to secure source (original) technologies, even if satisfied at the same time.
 - (***) A company is allowed to elect to apply the tax credit for R&D expenditures in new growth engine sectors or to secure source (original) technologies or the ordinary tax credit for R&D expenditures.
 - (****) Please note, (ii) should apply if companies incurred no R&D expenditures during the four preceding fiscal years, or the R&D expenditures made during the immediately preceding year is less than the average annual R&D expenditures during the four preceding fiscal years.

Unused tax credits for R&D expenditures can be carried forward for up to 10 years for the ordinary tax credit, the tax credit in R&D expenditures in new growth engine sectors or to secure source (original) technologies, and the tax credit for R&D expenditures in national strategic technologies. Amendment of a prior tax credit applied for and claimed is available so long as the amended corporate income tax (CIT) return for claiming a refund of the tax credit is filed within five years of the original filing due date.

Guidelines around incentive applications

A domestic corporation may apply for the tax credit for qualifying R&D expenditures made during the current fiscal year. To apply for and claim the tax credit for R&D expenditures, a domestic corporation is required to file, along with its annual CIT return, an application form (Form 1 under the TILL), a detailed statement of R&D expenditures (Form 3 under the TILL) and an R&D plan to the competent tax office within three months of the end of its fiscal year.

Tax credit for investment in R&D facilities and assets

Description of benefits

The TILL stipulates the integrated tax credit for investment of business-purposed fixed assets. Under the integrated tax credit for investment, an additional tax credit (10% for SMEs, 5% for MMEs and 1% for large corporations) of the investment amount in business-purposed fixed assets, including R&D facilities or fixed assets, may be available. The tax credit ratio will be increased to 12% for SMEs, 6% for MMEs and 3% for large corporations for the listed investment of facilities in new growth sectors or to secure source (original) technologies, and to 16% for SMEs and 8% for large corporations for the listed investment of facilities in national strategic technologies. For an investment of facilities to be recognized as in a new growth sector or to secure source (original) technologies or national strategic technologies, and therefore be eligible for a higher tax credit ratio, prior approval must be obtained from the deliberative committee on research and development tax credits technology.

In addition, if the amount invested in the current taxable year exceeds the average annual investment or acquisition amount for the preceding three years, an additional deduction will be granted for the amount equivalent to 3% (4% for facilities for commercialization of national strategic technologies) of the excess amount (limited to twice the basic additional tax credit).

Unused tax credit for investment in R&D facilities can be carried forward for up to 10 years. Amendment of a prior tax credit applied for and claimed is available so long as the amended CIT return for claiming a refund of the tax credit is filed within five years of the original filing due date.

Guidelines around incentive applications

A domestic corporation may apply for a tax credit for investment in R&D facilities or fixed assets that has been made to construct or deploy qualifying R&D facilities during the current fiscal year. To apply for and claim the tax credit for investment in R&D facilities, a domestic corporation is required to file, along with its annual CIT return, the application form (Form 1 under the TILL) to the competent tax office within three months of the end of its fiscal year. A domestic corporation also shall manage R&D expenditures in new growth sectors or to secure source (original) technologies separately from ordinary R&D expenditures.

3. Eligibility requirements

Qualifying R&D activities include those conducted in a dedicated R&D center of the corporation or the corporation's internal R&D department, both of which should be registered with the government (i.e., Ministry of Science and Information & Communication Technology (ICT) in South Korea).

Eligible R&D expenditures are defined as contracted, salary and materials expenditures that are directly related to R&D. Additionally, manpower development expenditures are also viewed as qualifying R&D expenditures so long as they are incurred by dedicated R&D centers or R&D departments. Ineligible expenditures include (but are not limited to) the following:

- ▶ General management and supporting activities
- ▶ Market research and promotional activities or general quality testing
- ▶ Repetitive information gathering activities
- ▶ Activities to improve management or staff efficiency
- ▶ Legal and administrative activities such as protection of patent rights, etc.
- ▶ Exploration and investigation activities related to reserves of natural resources including minerals
- ▶ Research activities on contract basis

For the tax credit for investment in R&D facilities, qualifying R&D facilities include (but are not limited to) the following:

- ▶ Facilities for qualified research and experiments
- ▶ Facilities for qualified vocational training

4. IP and jurisdictional requirements

R&D activities resulting in new intellectual property (IP) may be performed outside of South Korea, and the IP does not have to be registered or owned locally. However, the company claiming the R&D incentives must be the beneficiary of the results of the R&D activities and be incorporated in South Korea.

Temporary tax benefits for technology transfers among Korean residents are available (Korean patent box regime). Under this regime, when SMEs and MMEs transfer qualified patents, technologies, etc., to a Korean resident, 50% of the transfer gain from such transfer is exempt from tax. In cases where SMEs and MMEs lend qualified patents, technologies, etc., 25% of the related income from such lending is exempt from tax. The temporary tax benefit applies to transfers and leases that take place until 31 December 2023.

5. Technology or innovation zones

If qualified, the companies located within an R&D Special Zone as prescribed under the Special Law on the Promotion of R&D Special Zones are able to enjoy certain tax exemptions.

6. Role of governmental bodies in administering incentives

Each year, the Korean National Tax Service reviews R&D tax incentive applications that have been submitted with its annual CIT return and processes the R&D tax credit claims. The R&D tax credit claims may also be subject to written information requests or a tax audit in the future. From 2020, a domestic corporation can make a request to the Korean National Tax Service for pre-examination about applicability of R&D tax credit claims. The National Tax Service will examine and determine the type of R&D expenditure qualifying for the tax credit for the corporation that applies.

7. Administrative requirements

According to the Basic Research Promotion and Technology Development Support Act, a dedicated R&D center or R&D department set up by a company should be registered with the Ministry of Science and ICT to benefit from R&D tax incentives.

8. Statutory reference

- ▶ Tax credit for R&D expenditures – Article 10 of the TILL
- ▶ Temporary tax benefits for technology transfer – Article 12 of the TILL
- ▶ Tax credit for investment in R&D facilities – Article 24 of the TILL

Tax benefits regarding R&D and innovation activities have always received preferential treatment in the Spanish tax system. In-depth reform of the Spanish Corporate Income Tax (CIT) Law has taken place for tax periods starting as of 1 January 2015, which not only maintained the previous R&D tax regime, but also introduced some improvements.

1. Overview

Spanish R&D tax/labor incentives take the following forms:

- ▶ Tax deferrals and accelerated depreciation on the R&D assets
- ▶ Tax credits provided for expenses and investments related to R&D and technological innovation (TI) activities
- ▶ Patent-related incentives consisting of a partial exemption and tax allowances
- ▶ Reduced social security contributions

2. Incentives available

Name of incentive	Tax credit for R&D expenses*	Reduced social security contributions	Patent box regime*
Type of incentive	► Tax credits	► Partial exemption	► Partial tax exemption

*Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

Tax credit for R&D expenses

Description of benefits

- Spanish companies may benefit from a tax credit equal to 25% of R&D expenses incurred in the tax year. If the expenses incurred exceed the average amount of those costs in the preceding two years, the rate of 25% applies to an amount equal to the average, while a rate of 42% applies to the excess.
- The tax credit base is formed of R&D expenditures and amounts invested in fixed and intangible assets (excluding real estate and land) directly related to R&D activities.

- For investments made in tangible and intangible assets (excluding buildings and land), an additional tax credit is applicable equal to 8% (applicable to the aforementioned investments) as long as such investments exclusively relate to R&D activities.
- There is an additional 17% tax credit available against the gross tax due for the company's staff expenses related to skilled researchers exclusively assigned to R&D activities.
- The expenditure must be individualized by projects. The amount of R&D expenses will be reduced by 100% of the subsidies received to encourage such activities, which are allocated to the tax period as income.

- ▶ The Spanish CIT Act also states that the execution of TI activities gives the right to apply a tax credit on the expenses incurred in a tax period related to TI activities. The percentage of the tax credit applicable is 12%.
- ▶ For tax years beginning in 2020 and 2021, the percentage applicable to TI activities related to new or substantially improved production processes in the value chain of the automotive industry will be increased by 38 points for small and medium-size enterprises (SMEs). For large companies, the base percentage will be increased 3 points, provided that (i) they establish an effective collaboration with an SME (subcontracting does not qualify) and (ii) at least 30% of the project expenditure is borne by the latter.
- ▶ This incremental tax credit is only applicable to the expenses incurred as of 25 June 2020 and has two caps: (i) an absolute cap of EUR7.5 million per project and (ii) a relative cap, in combination with any additional subsidy awarded to the project, of 50% of the project expenditure for SMEs and 15% for large companies.
- ▶ The application of this enhanced percentage requires companies to obtain a reasoned report issued by the Ministry of Science and Innovation.
- ▶ If the amount of the R&D tax credits for the fiscal year exceeds 10% of the tax due, the tax credits may offset up to 50% of the gross tax due. Otherwise, the tax credits may offset only up to 25% of the gross tax due. Unused credits may not be carried back but may be carried forward for 18 years.
- ▶ As of 2015, the CIT Law sets forth a new statute-of-limitations period of 10 years (previously four years).

Option to exclude the limit and get the refund of the tax credit (monetization procedure)

- ▶ As of 1 January 2013, if the taxpayer complies with certain specific requirements, it can apply the following option regarding the R&D tax credits generated (monetization procedure): the taxpayer may elect not to be subject to the annual limitation on tax credits (25%-50%) but apply the full tax credit with a 20% discount. Additionally, the non-applied tax credits (after the 20% discount and due to the lack of CIT due) can be claimed for reimbursement to the Spanish tax administration. In such a case, interest for late payment will not apply.
- ▶ The limit established for this option is EUR1 million for TI activities and EUR3 million for R&D activities plus TI activities, at the level of the group of entities in terms of Article 42 of the Spanish Commercial Code.

To apply this option, certain conditions should be met:

- ▶ Only up to one year must have elapsed from the period in which the R&D tax deduction was generated without

applying the tax credit.

- ▶ The company must maintain or increase (i) its general average workforce size or (ii) the specific average workforce exclusively carrying out R&D activities, from the end of the period where the tax incentive was generated until 24 months elapsed from the tax year when this option (monetization procedure) is applied.
- ▶ During the following two periods since the CIT return where this option was applied, an amount at least equal to the tax credit to be applied or refunded under this option (monetization procedure) must be assigned to R&D expenses or fixed or intangible assets that are exclusively assigned to R&D activities.
- ▶ Finally, the company must obtain a duly reasoned report, issued by the competent authority, about the qualification of the activities carried out by the company as R&D/TI activities.
- ▶ As of 2015, an additional amount of EUR2 million can be subject to this option (monetization procedure) annually for those taxpayers whose R&D expenses are higher than 10% of the turnover.

Guidelines around incentive applications

Incentive credits are applied in the annual CIT return. Corporate income tax is filed during the 25 days following the six-month period from the taxpayer's financial year-end.

Reduced social security contributions

Description of benefits

- ▶ This is a government incentive regulated by Royal Decree 475/2014 that allows firms to reduce 40% of social security payments for employees dedicated full-time to research, development and technological innovation activities.
- ▶ The relief is compatible with other government-aided R&D and innovation programs (subsidies and subsidized loans), except aid programs exclusively related to hiring of personnel. This reduced contribution is compatible with other social security incentives. Also, the relief is compatible with R&D tax credits when the reduced social security contribution and the tax credit are not applied to the same expense (the taxpayer can elect the incentive to be applied). However, as an exception, the reduced social security contributions and R&D tax credits can be applied over the same expense for entities qualified as "Innovative SME" (*PYME innovadora*).

Guidelines around incentive applications

- ▶ The reduced social security contributions can be applied automatically by informing the Social Security Treasury of the date the company wants to apply this benefit, as stated in Royal Decree 475/2014.
- ▶ Companies applying this incentive to 10 or more employees need to undergo a validation process with a certification entity registered with the National Accreditation Body (ENAC) and then request a reasoned report from the Ministry of Science and Innovation guaranteeing compliance with exclusive dedication to research, development and technological innovation activities. The reasoned report must be submitted to the Social Security Treasury no later than six months after the end of the fiscal year in which the relief was applied.
- ▶ Starting 1 September 2023, the employees will only be eligible for the incentive in the first three years of the contract.

Patent box regime

Description of benefits

In accordance with the Spanish CIT Law, revenues deriving from the assignment of the right to use or exploit certain intangible assets benefit from a reduction in the CIT taxable base up to 60%. The qualifying intellectual property (IP) must have been developed (at least partially) by the licensor.

There is patent box relief, provided that:

- ▶ The assigning entity has created the assets to be assigned.
- ▶ The rights to use the assets are used by the assignee in the pursuit of an economic activity.
- ▶ The assignee is not resident in a country or territory that does not levy taxes or is considered a tax haven.
- ▶ If a single assignment agreement includes the provision of accessory services, a distinction must be made therein of the consideration payable for those services.
- ▶ The assignor must make the necessary book entries to determine the income and expenses, direct and indirect, corresponding to the assets under assignment.
- ▶ The relief is calculated on the basis of income (positive difference between revenues derived from the assignment of the right of use/exploit of certain intangibles and certain deductible amounts as amortization, impairments or expenses related to the intangible).
- ▶ The general framework is based on the “nexus or link approach” endorsed by the G20/OECD: the tax incentive (up to 60% reduction) will be linked to the “qualifying

costs” (i.e., excluding the outsourcing costs with related parties and the intangible assets acquisition costs), meaning that the qualifying income should be multiplied by the following ratio:

- ▶ The expenses (excluding any financial expenses and the depreciation of buildings) incurred by the licensing entity directly related to the creation or development of the IP assets, including those derived from the outsourcing to third parties. These expenses will be increased by 30% with the limit of the amount included in the denominator; divided by
- ▶ The expenses (excluding any financial expenses and the depreciation of buildings) incurred by the licensing entity related to the creation of the IP, including those derived from the outsourcing, and if applicable, from the acquisition of such IP.
- ▶ The income is calculated on a cumulative basis, meaning that the income subject to the incentive must be calculated considering all the expenses (i.e., capital and operating) and revenues related to the asset from its inception.
- ▶ The patent box regime may also apply to income deriving from the transfer of the intangible asset, unless the transfer is carried out between group entities.
- ▶ The assignee may be a resident in a territory that does not levy taxes or is a tax haven, provided such jurisdiction is a Member State of the European Union (EU) and the taxpayer proves that the transaction is carried out for valid business reasons.

Guidelines around incentive applications

Incentive credits are applied in the annual CIT return, which is filed during the 25 days following six months from the taxpayer’s financial year-end.

3. Eligibility requirements

R&D tax credits

Qualifying activities are those dealing with scientific investigation and research for the manufacture of new materials or products, technological improvement of existing methods, new software, etc. Activities that do not entail significant scientific or technological novelty; activities relating to industrial production and the provision of services or distribution of goods and services; or activities relating to exploration, drilling or prospecting for minerals and oil and gas are not deemed to be R&D or technological innovation activities.

R&D investments must take place in Spain or in a Member State of the EU or European Economic Area (EEA). R&D expenses connected to the production of income generally qualify as R&D expenses without restriction, except for investments made in land or property. Expenses incurred by the taxpayer, including the depreciation/amortization of the assets used in R&D activities, shall be deemed to be R&D expenses if they are directly related to and are specifically and separately recorded against a specific project. As of 2015, the CIT Law broadens the requirements to be eligible in respect of software developments.

Regarding TI activities, eligible expenses include those that are connected with technological diagnosis; industrial designs; acquisitions related to patents, know-how and designs; and attainment of certificates (e.g., ISO 9000, GMP). Expenses incurred in IT activities shall be deemed IT expenses if they are directly related to and are specifically and separately recorded per project. As of 2015, the CIT Law includes animation and video games projects as an eligible activity for the tax benefit as IT activities.

All industries that are incorporated in Spain (or a permanent establishment) are qualified when the R&D investments take place in Spain, or in a Member State of the EU or EEA. No industry sectors are specifically excluded.

Reduced social security contributions

The relief applies to any personnel/researcher with at least 85% of annual working hours dedicated to R&D and innovation activities. Eligible research, development and innovation activities are regulated by article 35 of the CIT Law. Management, administration or marketing activities are not included.

Any private company without social security penalties can benefit from this incentive.

Companies applying this incentive to 10 or more employees need to undergo a validation process with an ENAC-registered certification entity and then request a reasoned report from the Ministry of Science and Innovation guaranteeing compliance with exclusive dedication to research, development and innovation activities. The reasoned report must be submitted to the Social Security Treasury no later than six months after the end of the fiscal year in which the relief was applied.

4. IP and jurisdictional requirements

Effective date

The new patent box regime is applicable as of 1 January 2018 but includes grandfathering provisions for intangible assets created before 1 July 2016 allowing the interim application of the precedent regimes until 30 June 2021.

Qualifying IP

Qualifying IP includes patents, utility models, supplementary protection certificates for medicinal and phytopharmaceutical products, legally protected designs arising from R&D or technological innovation activities and copyrighted advanced software arising from R&D activities.

Types of income

Income derived from the assignment of the right of use or exploit (or transfer if carried out after 29 September 2013) of certain intangibles.

Calculation of income

Accounting income

IP regime rate

The tax incentive (up to 60% reduction) is linked to the "qualifying costs" (i.e., excluding the outsourcing costs with related parties and the intangible assets acquisition costs), meaning that the qualifying income should be multiplied by the following ratio:

- ▶ The expenses (excluding any financial expenses and the depreciation of buildings) incurred by the licensing entity directly related to the creation or development of the IP assets, including those derived from the outsourcing to third parties. These expenses will be increased by 30% with the limit of the amount included in the denominator; divided by
- ▶ The expenses (excluding any financial expenses and the depreciation of buildings) incurred by the licensing entity related to the creation of the IP, including those derived from the outsourcing, and if applicable, from the acquisition of such IP.

Can work be performed outside the country?

The assignee must not be resident in a country that does not levy taxes or is considered a tax haven. From 29 September 2013, if the assignee is a resident in a country or territory that does not levy taxes or is considered a tax haven, but is a Member State of the EU, the taxpayer may prove that the transaction is carried out for valid business reasons.

Must the IP be registered/owned locally?

The registration requirement of qualifying assets depends on their nature and is ruled by the specific national and international legislation.

5. Technology or innovation zones

Some regions in Spain have improved their R&D incentives. As an example, the government encourages innovation and technical research in the Canary Islands by providing incentives to the R&D expenses incurred therein. In this sense, the regime is identical, but both the tax credits and the limits of the deduction are increased by 80% with at least 20 units of increase, with regard to the rest

of the Spanish state. All industries are eligible for the incentives as long as the R&D work attempts to advance the underlying science or technology, creates new or improved products or processes, is innovative, is undertaken through systematic investigation and is documented.

Additionally, the Basque Country has its own R&D regime that improves the tax benefits of the standard federal regime. In this context, the general tax credit is 30% and 20% for TI; however, if the expenses incurred exceed the average amount of those costs in the preceding two years, the rate of 30% applies to an amount equal to the average, while a rate of 50% applies to the excess. Furthermore, an additional 20% tax credit may apply to certain R&D expenses, and a 10% tax credit will apply to tangible and intangible investments (except real estate and land) associated with R&D activities. There is no limit on application of the tax credit on the gross tax due albeit the reimbursement (monetization procedure) is not possible in case of lack of the gross tax due. The unused credits may be carried forward for 15 years.

6. Role of governmental bodies in administering incentives

R&D tax credits

The taxpayer may request a ruling (reasoned report) from the Ministry of Science and Innovation (or related institutions). This report would confirm or deny the R&D nature of the expenses and investments carried out by the taxpayer. The report is binding on the tax authorities. As a general rule, the request for a report should be sent with a technical analysis issued by an official certifying entity. The authorities have three months to issue the report; however, the expiration of the term has no effects for the authorities or the taxpayer, and the reports are usually issued in a longer period of time. To apply the optional regime regarding R&D tax credit (monetization procedure), the company must obtain such reasoned report on whether its activities qualify as R&D activities in any case.

The taxpayer may also request a pre-agreed valuation report of the expenses related to the project from the tax authorities. This report should be requested prior to the project commencement, and the tax authorities have six

months to respond. Expiration of the term without tax authority response implies that the tax authorities accept the taxpayer's proposal.

Reduced social security contributions

Companies applying this incentive to 10 or more employees need to undergo a preapproval process with an ENAC-registered certification entity and then request a reasoned report from the Ministry of Science and Innovation guaranteeing compliance with exclusive dedication to research, development and innovation activities. The reasoned report must be submitted to the Social Security Treasury no later than six months after the end of the fiscal year in which the relief was applied.

Patent box regime

As of 29 September 2013, the taxpayer can request from the tax authorities, before transactions are carried out, a valuation of the revenues and expenses related to the assignment as well as of the income to be generated from a transfer. In addition, the taxpayer can request an agreement on the qualification of the assets under one of the qualifying categories.

7. Administrative requirements

No preapproval or specific annual compliance is required for the R&D credits and patent box regime, with the exception of the duly reasoned report in order to apply the optional R&D regime (monetization procedure) and the reduced social security contributions to 10 or more employees, as explained above.

8. Statutory reference

- ▶ Tax credit for R&D expenses:
 - ▶ Articles 35 and 39.2 of CIT Law 27/2014, 27 November
 - ▶ Article 38 of CIT Regulation approved by Royal Decree 634/2015, 10 July
- ▶ Reduced social security contributions:
 - ▶ Royal Decree 475/2014, 13 June
- ▶ Patent box regime:
 - ▶ Article 23 of CIT Law 27/2014, 27 November
 - ▶ Articles 39-44 of CIT Regulation approved by Royal Decree 634/2015, 10 July

Sweden

This chapter is based on information as of April 2023.

Sweden is one of Europe's top spenders in research and development; as of 2016, it ranked as the third-largest spender in R&D among Organisation for Economic Co-operation and Development countries (3.255% of gross domestic product). To continue to incentivize this significant business investment in R&D, Sweden introduced an R&D incentive in 2014 for companies carrying out qualifying research and development. The incentive provides a reduction in the employer's social security contributions on staff involved in R&D. In addition to this, Sweden has implemented an expatriate tax regime for key foreign personnel with a scientific/technical background.

1. Overview

Currently available incentives include:

- ▶ A reduction in social security contributions for R&D employees engaged in commercially performed R&D (under certain conditions)
- ▶ An expatriate tax regime with 25% tax relief for foreign key personnel who are experts and scientists with knowledge and skills that are scarce in Sweden. The tax relief used to be available for up to three years but is now available for up to five years from the employee's first day in Sweden (this entered into effect on 1 January 2021 but is applicable for stays beginning after 31 May 2020).

Please note that Swedish tax policy follows the generally accepted accounting principles (GAAP) set by the Swedish Accounting Standards Board (Bokföringsnämnden), which means that there are no specific tax rules with regard to R&D income and expense. According to Swedish GAAP, R&D income and expenses should be taxable or deducted as ordinary income or expenses. In certain specific cases, such expenses can be capitalized.

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

Reduced social security contributions for tasks concerning commercially performed R&D

(Sänkt arbetsgivaravgift för forskning i kommersiellt syfte)

Description of benefits

The Swedish government provides a reduction in contribution amounts for social security charges for R&D employees. Social security charges are currently rated at 31.42%. The reduction of the contribution amounts to

approximately 20%, from April 2020 onward, and 10% for previous periods, of the salary of the R&D employee. As of 1 July 2021, the maximum reduction in social security charges is set to SEK1,225,652 per group of companies, per month. This maximum reduction in social security charges shall vary on a yearly basis depending on changes to yearly social security rates; however, the maximum reduction shall not fall beneath SEK1,200,000 per group of companies, per month (SEK14.4 million per year). The total percentage of social security contribution shall not fall below the retirement pension fund charge at 10.21%; if so, the deduction is adjusted.

Companies that do not have a permanent establishment in Sweden can only deduct 9.59% with a maximum reduction in social security charges of SEK600,000 per month as of 1 July 2021. This deduction percentage shall also vary on a yearly basis depending on changes to yearly tax rates, with a maximum of 10%.

To use the incentive, taxpayers are only required to dedicate a minimum of 50% (a minimum of 15 hours per month) of the working hours of R&D employees to R&D activities. No preapproval is required.

Before 1 July 2021, the maximum reduction in social security charges was set to SEK919,239 per group of companies, per month, and the taxpayer was required to dedicate a minimum of 75% of the working hours of R&D employees to R&D activities. Before 1 April 2020, the maximum reduction in social security charges was set to SEK230,000 per group of companies, per month.

The government has proposed a new bill that aims to strengthen the R&D deduction. Pending approval, the changes are proposed to enter into force on 1 July 2023, and apply to accounting periods after 30 June 2023. The new bill aims to increase the maximum total deduction from SEK600,000 to SEK1.5 million per month from the employer's contributions that may be made for persons who work with research or development. This means that the ceiling for the reduction of the general salary contribution for people who work in research or development is raised accordingly, raising the maximum benefit from SEK1,225,652 per group of companies, per month to SEK3 million (SEK36 million per year).

Guidelines around incentive applications

The incentive is applicable to retrospective, current and future investments. A company can look back up to six calendar years to amend employer returns, which for 2023 is back to January 2017 – allowing for a claim for the years 2017, 2018, 2019, 2020, 2021, 2022 and current year 2023. The reduction should be claimed on a monthly basis through the company's employer return. The total base for social security contributions, as well as the claimed reduction, must be reported in the company's employer return.

Expatriate tax regime for certain foreign experts

(Expertskatt)

Description of benefits

Twenty-five percent of the salary and benefits for individuals who have been granted expatriate taxation classification is exempt from taxation and social security charges. Additionally, moving expenses to and from Sweden, some travel expenses to the home country, and school fees are exempt.

Guidelines around incentive applications

To receive the incentive, preapproval is required from the Taxation of Research Workers Board (Forskarskattenämnden) within the National Tax Administration. Two different application forms are available: one is to apply for tax relief based on the level of remuneration, and the other is to apply for tax relief on other grounds.

3. Eligibility requirements

Qualifying R&D activities are systematic, with commercial objectives. To fulfill the research requirement, companies shall develop new knowledge. To fulfill the development requirement, companies shall develop new products, services and production processes through the use of research material, or companies shall substantially enhance the quality of existing products, services and production processes. A substantial enhancement requires an alteration resulting in an essential improvement to quality, use, formation, production or provision. Furthermore, the development activity needs to be directly related to the research result. Projects conducted under public regime are not eligible for the incentives.

Reduced social security contributions for tasks concerning commercially performed R&D

To qualify for a reduction of social security contributions, the employee must be tasked with business-oriented systematic and qualified research or development activities during at least 50% of working hours (ordinary production work does not qualify), with a minimum of 15 hours per month. The employee must be below the age of 65. Further, the salary must be paid from an employer that is tax resident in Sweden (including a permanent establishment of a foreign person in Sweden).

Expatriate tax regime for certain foreign experts

The expatriate tax regime is, since 1 June 2020, granted for a maximum of five years and is available for foreign employees intending to work in Sweden for no longer than five years. The individual may not be a Swedish citizen or a foreign citizen who has lived or resided in Sweden during the last five years. The employer must be established in Sweden or be a foreign corporation with a permanent establishment in Sweden. The expatriate tax regime is available only for experts/specialists, key personnel, scientists and employees with a monthly salary in excess of a certain level (two price base amounts). It requires preapproval from the Taxation of Research Workers Board (*Forskarskattenämnden*). Application for tax relief must be submitted to the board by the employer or foreign person within three months of the start of employment. Decisions by the board may be appealed to county or national administrative courts. Employers, in reporting income to tax authorities, must include the key persons' tax-free amounts. All other reporting by employers follows standard procedures.

It should be noted that there is no legal means for extending the application period in individual cases. Applications received by the board just one day after the stipulated deadline will be considered late and will be rejected. It is therefore important to file the application on time.

4. IP and jurisdictional requirements

Sweden does not have any intellectual property (IP) tax incentives.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Sweden.

6. Role of governmental bodies in administering incentives

- ▶ The Swedish Tax Agency (Skatteverket) manages questions concerning the reduction of social security contributions for employees tasked with R&D.
- ▶ The Taxation of Research Workers Board (*Forskarskattenämnden*) grants expatriate taxation classification for foreign individuals.

7. Administrative requirements

The employer must submit a base of calculations for the reductions and the amount of reductions for social security fees in the payroll tax return. The employer must be able to provide the Swedish Tax Agency with information to assure that the requirements are met if subjected to screening. This includes information concerning the number of working hours, the number of working hours dedicated to R&D, and information about the specific R&D work performed by each individual employee.

The employee or employer may submit the application to the Taxation of Research Workers Board to be granted expatriate taxation classification for foreign key personnel or scientists. The application must have been received by the Taxation of Research Workers Board no later than three months from the date when the employee started working in Sweden.

8. Statutory reference

- ▶ The right to reduction of social security contributions is effective as of 1 January 2014 and can be found in the Social Security Contributions Law, Chapter 2, paragraphs 29-31.
- ▶ The legislation regarding the expatriate tax regime has been in effect since 2001 and can be found in the Swedish Income Tax Act, Chapter 11, paragraph 22-23a.

Switzerland

This chapter is based on information as of January 2023.

The Federal Act on Tax Reform and Retirement and Survivors' Insurance Financing (TRAF) entered into force on 1 January 2020. This was the biggest transformation of corporate taxation law in Switzerland in decades and affects virtually all companies (legal entities, partnerships and sole proprietorships). Existing cantonal and national tax regimes were abolished, and the reform introduced new internationally accepted measures to ensure the attractiveness of Switzerland as a business location. In addition to transitional arrangements for affected companies, targeted measures have been introduced to provide an Organisation for Economic Co-operation and Development (OECD)-compliant tax regime in the field of R&D as well as intellectual property (IP).

1. Overview

The global competition for the most attractive research locations has greatly intensified, and through a targeted research and innovation policy, Switzerland is further increasing its attractiveness.

Switzerland has several incentives to promote R&D activities and investments for companies. This includes financial contributions (grants), tax holidays and reduced tax bases for patent-related income. In general, Swiss

corporate income tax (CIT) rates are very attractive compared with other countries. Swiss taxes are deductible (i.e., a taxable expense), so the statutory tax rates have to be distinguished from the effective tax rates. The effective tax rates on profits before tax in Switzerland for ordinary taxed companies on the level of federal, cantonal and communal CIT range from about 11.2% to 22.8%.

Financial contributions/cash grants

Description of benefits

Science-based innovation is directly promoted in Switzerland in the interests of business and society. Various departments and institutions of the public sector have budgets at their disposal. With innovation projects, networking, training and coaching, they specifically promote cooperation between science and the economy. However, some funding is only available on a subsidiary basis, so projects are only supported if they could not be achieved without funding or if potential remained untapped. In addition, many funding initiatives are specifically designed for cooperation between companies and research institutions such as universities or for consortia.

Guidelines around incentive applications

The beneficiary must fulfill various operational conditions (e.g., innovative project, export-oriented, maintenance and creation of jobs) and project-related conditions (e.g., innovation of the company, national or international target markets, or economic importance for the respective canton and Switzerland). The objective is also to guarantee sustainable development of the company.

Tax holidays

Description of benefits

Various cantons may grant tax holidays for important expansion projects of an existing company or with respect to the new establishment, when such projects are of major economic importance to the respective canton. Such economic importance is basically given if new jobs are derived and capital investments are delivered via such development or establishment projects. In the case of reorganizations, the respective canton may grant a tax holiday if the company can demonstrate that such reorganization is necessary for the maintenance of jobs and that investments in the canton will be realized.

Tax holidays are granted on the CIT and capital tax on a cantonal and communal level. However, if the company is located in certain areas in the cantons of Aargau, Appenzell Ausserrhoden, Appenzell Innerrhoden, Berne, Basel-Landschaft, Fribourg, Glarus, Grisons, Jura, Lucerne, Neuchâtel, St. Gallen, Schaffhausen, Solothurn, Thurgau, Ticino, Uri, Vaud, Valais and Zurich, a tax holiday on a federal level can also be obtained. In any case, there is a maximum available relief of 100% for a maximum of 10 years. Additionally, the real estate transfer tax triggered by the change of ownership may also be waived on purchases of real estate or industrial land, depending on the cantonal practices, which can vary.

Guidelines around incentive applications

The quantity of tax holidays depends on the investments of the company and creation or maintenance of new employment in the respective canton. Any federal tax holiday may not exceed an amount corresponding to the cantonal tax holiday amount (percentage and time period). Consequently, the cantonal authorities should be addressed first.

Tax holidays require a formal application. This includes fundamental documentation related to capital budgeting, future employment and a detailed business plan. For the cantonal and communal tax holiday, the respective administrative office for economic development is the competent authority, together with the cantonal tax authority. The federal tax holiday is assessed by the State Secretariat for Economic Affairs (SECO).

The final decision on tax holidays is linked to certain terms and conditions during and after the time period of the tax holiday. Typically, the company must report that it implemented the promised investments according to its business plan during the period of the tax holiday. Furthermore, the company is obliged to continue its business activity for a defined length of time.

Patent box

Description of benefits

As of 1 January 2020, TRAF has entered into force on the federal level, and based on this, the implementation of the patent box is mandatory at the cantonal level. In the patent box, net profits from domestic and foreign patents and similar rights are taxed separately, with a maximum relief of up to 90% for qualifying patent profits (the rate is at cantonal discretion, and proper documentation is key). The benefit may be subject to limitation due to minimum taxation regulations. The patent box regime only applies to qualifying patent income, to the extent that the R&D expenditure in relation to the registered patent (or similar IP, such as supplementary protection certificates or first applicant protections) occurred at the company applying for the patent box regime (modified nexus approach as provided under Action 5 of the OECD base erosion and profit shifting (BEPS) project). The capital gains on the disposal of such registered patents among affiliated companies also qualify for the patent box. The term further includes income arising from the use of registered patents among affiliated companies. Furthermore, only registered patents and equivalent rights are included in the definition of patent income. All other IP-related income – e.g., income derived from brands, copyrighted software and non-patent-protected inventions or know-how – does not qualify for the patent box regime. In addition, an entry taxation, respectively an entry mechanism, for the patent box (which may differ from canton to canton) is applicable.

Guidelines around incentive applications

Application of the patent box is claimed within the annual tax return. For tax assessment purposes, a breakdown of income and costs by segment/source must be drawn up. This must be enclosed with the tax return. Furthermore, if a product-based approach is used to reflect income from embedded patents, it must be stated which qualifying patents are contained in the product. Changes in the composition of the qualifying patents contained in a product must be recorded and documented in a suitable manner.

To assess the entry costs, the expenses for the patent (e.g., R&D activities and acquisition costs) have to be determined. In most cantons, the costs of the last 10 years are relevant; for other cantons, different time frames may apply. Therefore, an overview of the qualifying expenses must be filed with the tax authority.

R&D super deduction

Description of benefits

The R&D super deduction is an optional measure at the cantonal level, and a maximum R&D super deduction of 50% is applicable for qualifying domestic R&D costs. The range of qualifying R&D is much broader than for the patent box – i.e., the R&D activity does not have to lead to a patent. However, expenses for market launch and market exploitation of products do not qualify as R&D activities. The applicability of the R&D super deduction is geographically restricted to R&D activities that are physically performed in Switzerland. Contract R&D activities performed by affiliates or third parties within Switzerland also qualify for the super deduction, provided that the principal is not entitled to the R&D super deduction itself.

The super deduction is calculated based on personnel costs plus a flat-rate surcharge of 35% for other costs (determination for own R&D expenses) and 80% of the expenses for domestic contract R&D activities carried out by third parties or affiliates. The benefit may be subject to limitation due to minimum taxation regulations.

Guidelines around incentive applications

The taxable person shall submit proof that the requirements for the R&D super deduction are met by enclosing the following information and documents with the annual tax return: research or project description, including time frame and budget; identification of relevant employees and connected personnel expenses; copy and cost allocation of research contracts; description of scientific goals; and characterization of activity as novel, creative, uncertain, systematic, and transferable and/or reproducible. Specific characteristics of projects may trigger further documentation requirements.

Accelerated depreciation on assets

Description of benefits

The method of depreciation basically should be in line with usual business practices. However, the tax authorities in Switzerland have published the rate of depreciation that is usually acceptable and therefore treated as business-related expense. Some cantons provide the possibility to account a one-off depreciation under certain conditions (depends on different cantonal practices).

Note on TRAF

TRAF, a wide-ranging reform of Switzerland's corporate tax system, entered into force on the federal level in 2020. It targeted the following objectives: safeguarding the tax appeal of Switzerland as a business location, promoting the international acceptance of Switzerland's corporate tax legislation and ensuring sufficient tax revenues to finance public activities. With respect to R&D incentives, TRAF introduced, among other measures, the following:

- ▶ An OECD-compliant (i.e., follows the modified nexus approach) patent box at the cantonal level
- ▶ Tax incentives for Swiss local R&D (i.e., an R&D super deduction up to a maximum of 50% of the relevant domestic R&D costs) at the cantonal level

Besides the abovementioned innovation-based incentives, the most important changes on the federal and cantonal levels include the following, which may affect all corporate entities:

- ▶ Abolishment of historic tax regimes (holding, mixed company, domicile company, principal and Swiss Finance Branch) and disclosure of hidden reserves upon transition
- ▶ Notional interest deduction (NID), optional at the cantonal level
- ▶ Mandatory overall limitation of tax relief at 70% or less, at the cantons' discretion
- ▶ Adjustments in taxation of dividend income from qualifying participations for individuals
- ▶ Capital tax relief, optional at the cantonal level
- ▶ Adjustments of the capital contribution principle
- ▶ Extension of the flat-rate tax credits on foreign companies' permanent establishments
- ▶ Reduction of cantonal income tax rates (change based on cantonal law)

Note on BEPS 2.0

Switzerland plans to implement the global minimum taxation agreed on by the OECD and the G20 countries under BEPS 2.0 Pillar 2 by means of a constitutional amendment. Based on this, a temporary ordinance will be issued to make sure that the global minimum taxation can come into force on 1 January 2024. The law will subsequently be enacted by ordinary due procedure. Based on the ordinance, the tax liability for companies affected by BEPS 2.0 Pillar 2 will increase to at least the level of the global minimum taxation in all cantons. Partial relief can be provided for companies with substance in Switzerland in the form of personnel costs and tangible assets (substance-based income exclusion).

Currently, it seems likely that the R&D super deduction and the patent box in Switzerland will not be deemed to be

“qualified refundable tax credits.” Should this assessment be confirmed, these tax incentives will reduce the covered taxes under BEPS 2.0 Pillar 2. In effect, for companies affected by the global minimum taxation, tax advantages obtained through the R&D super deduction or the patent box could be limited. It remains to be seen if the legislator will modify the current incentives to maintain their relative attractiveness.

Note on association status for participation in the EU's Horizon Europe

At the time of publication, the Swiss Federal Council has been mandated by Parliament to continue negotiations with the EU on Switzerland's association with Horizon Europe. Currently, researchers in Switzerland can participate in the majority of the joint programs. However, they do not receive funding from the European Commission. Therefore, the Swiss Federal Council approved direct funding of the affected research projects.

3. Eligibility requirements

Financial contributions and tax holidays

Corporate requirements

- ▶ A growth strategy, ideally affiliated with an innovative and/or export-oriented project
- ▶ Guaranteed overall financing and long-term sustainability
- ▶ Retention and creation of jobs
- ▶ Sustainable corporate development

Project-related requirements

- ▶ Innovativeness of the line of business
- ▶ National and international target markets and no distortion of competition
- ▶ Economic importance for Switzerland
- ▶ Planned investments in research, technology, facilities, etc.

Specific requirements for tax holidays

- ▶ Reorganization of existing company
- ▶ Early contact with the responsible project manager of the economic promotion department
- ▶ A business plan
- ▶ A statement of the respective cantonal tax authorities and the local community
- ▶ Capital investments and maintenance or creation of employment

Patent box

A significant operational infrastructure (company-owned/ company-occupied offices, qualified personnel, etc.) must be located at the registered office or permanent establishment of the company.

The patent box regime only applies to qualifying income from registered patents and equivalent rights, provided the R&D expenditure in relation to the registered patent (or equivalent right) occurred at the company applying for the patent box regime (modified nexus).

The definition of a patent relies on the European Patent Conventions (EPC 2000) and the Patent Act (PatG). Patents based on foreign law also qualify for the patent box. Equivalent rights include topographies, but not non-patent-protected inventions of small and medium-sized enterprises (SMEs) or copyrighted software. As an exception, software is included if it is part of an integral (patented) invention or if it is patented abroad.

R&D super deduction

The definition of R&D in Switzerland is generally based on the relevant R&D publications by the OECD and allows for a broad definition of R&D. Deductibility is tied to the scientific definition of research and development, which is typically interpreted based on the Frascati criteria, meaning that any R&D activities must be, cumulatively, novel, creative, uncertain, systematic, and transferable and/or reproducible.

4. IP and jurisdictional requirements

Tax holidays

A tax holiday at the federal level is restricted to certain defined areas in the cantons of Aargau, Appenzell Ausserrhoden, Appenzell Innerrhoden, Berne, Basel-Landschaft, Fribourg, Glarus, Grisons, Jura, Lucerne, Neuchâtel, Schaffhausen, St. Gallen, Solothurn, Thurgau, Ticino, Uri, Vaud, Valais and Zurich.

Patent box

Only companies with a registered office or permanent establishment in Switzerland may make use of the patent box rules.

R&D super deduction

Only R&D activities that are physically performed in Switzerland qualify for the R&D super deduction. Consequently, inter alia, R&D activities performed by foreign branches do not qualify for the R&D super deduction.

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in Switzerland.

6. Role of governmental bodies in administering incentives

The Swiss tax authorities are cooperative when taxpayers seek to obtain advance tax rulings. It is very common in Switzerland to provide the tax authorities with the relevant background information and the corresponding tax consequences by a written application. The authorities will then review the proposed tax appraisal and, if they agree, show their (pre-)approval by countersignature. Such a procedure provides certainty for several years with regard to the envisaged settlement and/or reorganization, etc., for both parties (taxpayer and tax authority).

Please note that because of the current tax transparency measures based on BEPS (Actions 5 and 13), at least some rulings may be subject to information exchange.

7. Administrative requirements

Financial contributions and tax holidays require a request to the respective cantonal and, if applicable, federal authorities. After the incentive is granted, the competent authority monitors the course of the project and the development.

The R&D super deduction and the patent box are to be claimed at the latest when filing the tax return for the respective period. Detailed compliance and documentation requirements apply. Best practice includes considering the benefits of obtaining respective advance tax rulings to reach an agreement on tax parameters of projects before implementation to achieve legal certainty.

8. Statutory reference

- ▶ Financial contributions: Legislation and published (or unpublished) practices
- ▶ Tax holiday: Federal and cantonal legislation and published (or unpublished) practices
- ▶ Patent box: Federal and cantonal tax law and published (or unpublished) practices
- ▶ R&D super deduction: Federal and cantonal tax law and published (or unpublished) practices
- ▶ Accelerated depreciation on assets: Federal and cantonal tax law and published (or unpublished) practices

Thailand

This chapter is based on information as of February 2023.

Similar to other countries, Thailand is increasingly emphasizing the importance of an innovation-driven economy by encouraging both the public and private sectors to invest more in R&D activities.

To do so, the Thai government has released and revamped a number of tax incentive schemes to extend support in the areas of science, technology, R&D, and development and innovation. This is part of the nation's policy to guide Thailand from a middle-income country to a high-income country by 2027.

1. Overview

The Thai government strongly encourages research and technology invention to enhance the country's competitiveness to achieve sustainable development in the long run, and it aims to attract foreign investors by providing R&D incentives to both approved Thai R&D service providers and Thai R&D service users. Currently, a 200% deduction and an accelerated depreciation rate of 40% are available for eligible expenditures incurred on R&D activities carried out in Thailand and R&D-qualified machinery and equipment, respectively. To receive the Thai R&D service provider status, companies or government entities must obtain approval from the Revenue Department (RD).

The government also provides tax holidays and nontax incentives to companies providing eligible R&D services or incurring qualifying R&D expenditures.

Apart from the above, the Thai government has recently set up a fund worth THB10,000 million to subsidize investment projects, particularly for startup businesses, engaging in the targeted industries that involve the use of new high technology. The chosen projects will receive a subsidy from the government for qualifying R&D expenditures.

Other financial support is also available from the National Science and Technology Development Agency (NSTDA) in the form of soft loans.

2. Incentives available

Name of incentive	R&D additional deduction incentive	Accelerated depreciation	The Board of Investment (BOI) tax incentive*	BOI nontax incentive	Soft loans
Type of incentive	▶ Additional deduction	▶ Accelerated depreciation on qualifying R&D assets	▶ Tax holiday	▶ Nontax incentives	▶ Loans

* Although not based upon scientific analysis, some EY clients report that this incentive delivers the most beneficial results to them; however, the applicability of the incentives depends on the taxpayers' facts and circumstances.

R&D additional deduction incentive

Description of benefits

Generally, Thai corporate entities are allowed to take a 100% tax deduction for expenses related to R&D activity. Pursuant to Royal Decree No. 598, which took effect on 25 February 2016, Thai corporate entities may take an additional 100% tax deduction (a double deduction) for R&D expenses paid to authorized government agencies or private R&D service providers.

Corporate entities that claim a deduction under this regulation are not entitled to claim a partial or full deduction under the investment promotion law.

Guidelines around incentive applications

The additional deduction is applicable to current investments and is claimed through an annual corporate income tax (CIT) return. To claim the R&D additional deduction incentive (i.e., double deductions), the R&D service provider is required to obtain an authorized R&D service provider status by submitting the application to the RD, and the service recipient is also required to have its R&D project certified by the NSTDA. Given that this incentive operates on a self-assessment basis, it is recommended that companies maintain all of their supporting documents (e.g., project papers, service receipts) in case they are requested or the incentive is challenged by the RD.

Accelerated depreciation

Description of benefits

Pursuant to Royal Decree No. 319, when acquiring new R&D equipment and machinery, the depreciation value (for the purpose of corporate income tax calculation) will be set at 40% of the asset cost at the acquisition date (depreciation tax for machinery is normally 20% for five years, with the balance to be depreciated over the next four years). To utilize this incentive, the following conditions must be met:

1. Such machinery or equipment must exclusively be for R&D activities, not for manufacturing or providing services.

2. Such machinery or equipment must be used for basic industrial research, applied research or product quality testing.
3. Such machinery or equipment must be brand-new with a life span of two or more years and have a minimum product cost of at least THB100,000.

Any losses incurred from the accelerated depreciation may be carried forward for five consecutive years.

Guidelines around incentive applications

The depreciation is applicable to current and future investments. Claiming the R&D double deduction incentive is based on a self-assessment process. Companies claiming the incentive can include qualifying accelerated depreciation expenses in their CIT computations and submit the annual CIT return (IT.50) to the RD without preapproval from the RD. (Note: the timeline for filing IT.50 is within 150 days from the end of an accounting period.)

BOI tax incentive

Description of benefits

Companies engaging in R&D business may receive benefits as follows:

- ▶ Exemption of CIT for up to eight years but can be extended to up to 13 years if the amount of R&D and/or human development investment/expenditure reaches a certain threshold (discussed below)
- ▶ Withholding tax exemption on dividend distribution during the tax exemption period and up to six months after the tax exemption period expires
- ▶ Double deduction on expenses related to transport, electricity and water supply depending on investment location
- ▶ Exemption of import duty on materials imported for use in the R&D process
- ▶ Exemption or reduction of import duty on new machinery
- ▶ Exemption of import duty on raw or essential materials used in the manufacturing of export products

In addition, companies applying for the BOI promotion (regardless of which business activities) may be entitled to additional years of CIT exemption (to be applied on top of the base incentive) if they incur investment/expenditures in R&D activities and/or human resource development and/or enhancing capabilities of local suppliers as follows:

1. Additional one year of CIT exemption if the total qualifying investment/expenditure in R&D and/or human resource development accounts for at least 1% of the total sales revenue of the first three years of operation or is at least THB200 million, whichever is less
2. Additional two years of CIT exemption if the total qualifying investment/expenditure in R&D and/or human resource development accounts for at least 2% of the total sale revenue of the first three years of operation or is at least THB400 million, whichever is less
3. Additional three years of CIT exemption if the total qualifying investment/expenditure in R&D and/or human resource development accounts for at least 3% of the total sale revenue of the first three years of operation or is at least THB600 million, whichever is less
4. Additional four years of CIT exemption if the total qualifying investment/expenditure in R&D and/or human resource development accounts for at least 4% of the total sale revenue of the first three years of operation or is at least THB800 million, whichever is less
5. Additional five years of CIT exemption if the total qualifying investment/expenditure in R&D and/or human resource development accounts for at least 5% of the total sale revenue of the first three years of operation or is at least THB1 billion, whichever is less

The maximum period of CIT exemption is eight years, except for the promoted activities, which have a base incentive that already comes with an eight-year CIT exemption and a maximum period of CIT exemption of 13 years.

If companies applying for the BOI promotion incur qualifying R&D investment/expenditure (regardless of the activities being conducted in-house, engaging external local consultants and/or occurring in overseas institutions) of at least 1% of the total sales revenue of the first three years of operation or at least THB200 million, whichever is less, the CIT exemption amount that such companies will be entitled to is unlimited.

Furthermore, manufacturing companies applying for the BOI promotion and relocating their R&D facility to Thailand may be entitled to additional CIT exemption for up to five years. Under this scheme, the promoted companies must commence their R&D activities within three years from the BOI certificate issuance date or the date of the request for project amendment being approved. The application must also be filed with the BOI by the last business day of 2023.

Any losses incurred during the BOI tax exemption period can be used to offset against the net taxable profit for up to five consecutive years after the tax exemption period. To receive the BOI tax incentive, an application must be submitted to the BOI for approval. Companies are also required to provide a description of the scope of the R&D process, the number of researchers, their qualifications and R&D experience.

Guidelines around incentive applications

The BOI tax incentive is applicable to current and future investments. For a BOI-promoted company to use the BOI tax incentives in relation to CIT exemption for BOI business, the company must submit the request form for CIT exemption to the BOI for approval within 120 days after the end of an accounting period.

BOI nontax incentive

Description of benefits

With the BOI nontax incentive, companies may receive benefits as follows:

- ▶ Unlimited (but reasonable) number of visas and work permits for qualifying expatriates
- ▶ Eligibility to own land¹
- ▶ No foreign ownership restriction²
- ▶ Eligibility to remit money in foreign currency

Guidelines around incentive applications

The BOI nontax incentive is applicable to current and future investments. To claim the BOI nontax incentive, the

¹ Generally, a foreign investor is not eligible to own land under the Thai Land Code. However, the BOI-promoted company is able to own land for BOI business regardless of the percentage of foreign shareholder.

² Generally, a foreign-majority-owned company (i.e., a company that has foreigners holding more than 50% of its shares) is not allowed to engage in certain business activities, e.g., trading and service business, unless specific license is obtained.

company must receive approval on its eligibility from the relevant authorities such as the Land Department, Ministry of Commerce and Bank of Thailand.

Soft loans

Description of benefits

Companies engaged in an R&D project can receive a soft loan of up to THB30 million (but not more than 75% of project revenue) from the NSTDA. To receive soft loans, the R&D project should be related to product or production process development, reverse engineering, and the building or refurbishing of laboratories. Companies applying for a soft loan must be Thai-majority-owned companies and qualified as SMEs – i.e., having registered capital of not more than THB200 million (larger companies may be able to qualify for this grant on a case-by-case basis). In addition, the NSTDA must approve the R&D activity. The period of loan repayment is seven years starting from the first loan received.

Guidelines around incentive applications

The soft loan is applicable to current and future investments. The NSTDA and the financial institutions must consider and approve the grant of soft loans.

3. Eligibility requirements

Qualifying R&D activities are defined as follows:

- ▶ Basic research – theoretical or operational activities that are conducted to explore new knowledge from basic natural phenomena and factual observation, without initially considering the application
- ▶ Applied research – research to explore new knowledge with an objective to put it into practice for specific use
- ▶ Experimental development – a systematic operation based on the knowledge from research and/or experience with the objective of producing new materials, products or inventions; to install new procedures, systems and services; or to substantially improve the existing products

In addition to the above, the scope for R&D activities under the BOI also includes the demonstration development which is referred to the research and development that further develops/enhances the result from the experimental development by testing the production process at an industrial level to verify the creditability of such result.

Eligibility requirements for specific incentive types are as follows:

R&D additional deduction incentive

The R&D additional tax deduction is available only for payments to eligible Thai R&D service providers. To qualify as a Thai R&D service provider, a company should be engaged in basic research, applied research and experimental development activities and must receive approval from the RD.

Accelerated depreciation

Accelerated depreciation is applicable for machinery and related equipment used for an R&D project, provided that such machinery has never been used and the acquisition cost of the machinery exceeds THB100,000 with a minimum useful life of two years.

BOI tax incentives

- ▶ The BOI application must be submitted to the BOI for approval, along with a description of the scope of the R&D process, the number of researchers, their qualifications and R&D experience.

- ▶ The debt-to-equity ratio must not exceed 3:1 for application submission purposes.
- ▶ If the total investment amount, excluding cost of land and working capital, is more than THB2 billion, a feasibility study (in the format prescribed by the BOI) must be submitted to the BOI, along with the BOI application.
- ▶ R&D service providers that are BOI-approved must strictly comply with any conditions attached to the BOI certificate.

Soft loans

- ▶ Soft loans for R&D projects will be available to support qualified costs, including salary costs, consultancy costs, training costs incurred for the project, expenditures incurred directly on R&D materials, and general overhead expenditures related to the R&D project.
- ▶ To apply, the companies must be Thai-majority-owned, have registered capital of less than THB200 million and have a maximum of 200 employees.
- ▶ Larger companies may be able to qualify for this grant on a case-by-case basis.
- ▶ The companies must never receive other government financial support for the same R&D project.

4. IP and jurisdictional requirements

There are no jurisdictional requirements related to intellectual property (IP).

5. Technology or innovation zones

Thailand has established the Eastern Economic Corridor, which is a special economic zone covering three provinces in eastern Thailand (Chonburi, Chachoengsao and Rayong) with an aim to attract certain industries into the designated areas to form clusters and offer support that each industry specifically needs. One of the promoted zones in EEC area is the Eastern Economic Corridor of Innovation (EECi), an innovation hub located in Wangchan District, Rayong Province. Its ultimate goal is to support the transformation of Thailand into a country that thrives on innovation and enhances the quality of its people's lives by putting them on a sustainable and self-sufficient path. Qualifying investment projects inside the EECi can be entitled to a CIT exemption of up to 13 years if conditions are met.

6. Role of governmental bodies in administering incentives

The relevant government agencies are as follows:

- ▶ Claims for R&D additional deductions may be reviewed by the Thai tax authority as part of its tax investigations or audits
- ▶ Accelerated depreciation: RD
- ▶ BOI tax incentive: BOI
- ▶ BOI nontax incentive: BOI
- ▶ Soft loans: NSTDA and Thai financial institutions

7. Administrative requirements

Given that the R&D incentive operates on a self-assessment basis, it is recommended that companies maintain all of their supporting documents (e.g., project papers, service receipts) in case they are requested or the incentive is challenged by the RD.

For BOI tax and nontax incentives, the BOI application must be submitted to the BOI for approval, along with a description of the scope of the R&D process, the number of researchers, their qualifications and R&D experience. R&D service providers that are BOI-approved must strictly comply with any conditions attached to the BOI certificate.

For a BOI-promoted company to use the BOI tax incentives in relation to CIT exemption for BOI business, the company must submit the request form for CIT exemption to the BOI for approval within 120 days after the end of an accounting period.

No preapproval is required for foreign-majority-owned companies to claim additional deductions on the cost of engaging approved R&D service providers.

Tunisia

This chapter is based on information as of February 2023.

Aware of the importance of R&D and innovation activities, Tunisia offers a range of tax and financial incentives on those activities to attract more local and foreign investors.

These incentives have been provided via several legal texts but mainly within Law No. 2016-71 of 30 September 2016, relating to the investment law; Governmental Decree No. 2017-389 of 9 March 2017, relating to financial incentives for the benefit of investments carried out under the investment law; and Law No. 2017-8 of 14 February 2017, relating to an overhaul of the system of tax benefits. The Decree-Law No. 2021-21 of 28 December 2021, relating to the finance law for 2022, and Decree-Law No. 79-2022 of 23 December 2022, relating to the finance law for 2023, introduced further tax incentives granted for R&D.

Financial incentives

Description of benefits

Premium for the increase of added value and competitiveness

According to Article 19 of the investment Law No. 2016-71 of 30 September 2016, the premium for the increase of added value and competitiveness is granted for:

- ▶ Direct investment operations in priority sectors and economic sectors

- ▶ Economic performance in the fields of:
 - ▶ Material investments in the control of new technologies and improvement of productivity
 - ▶ Intangible investments
 - ▶ Research and development
 - ▶ Employee training leading to the certification of skills

Premium for R&D investments by companies located in business parks

According to Article 8 of the 1992 law on the creation of business parks, R&D investments by companies located in business parks are eligible for a bonus, with the rate and terms set by current tax legislation.

Guidelines around incentive applications

According to Article 3 of Governmental Decree No. 2017-389 of 9 March 2017, relating to financial incentives for the benefit of investments made under the investment law, direct investment operations benefit from premiums provided in Article 19 of the abovementioned law for the premium for the increase of added value and competitiveness as follows:

1. The premium granted for the implementation of direct investment operations¹ in priority sectors and economic sectors

- ▶ Priority sectors are characterized by their strategic vocation and capacity to increase the pace of growth or high employability and are a priority of the development plans.

These sectors are fixed by Appendix 1 of Governmental Decree No. 2017-389 of 9 March 2017. The premium granted to priority sectors is 15% of the cost of approved investments, with a maximum of TND1 million.

- ▶ Economic sectors are activities which are mainly based on the valorization of structural and agricultural resources as well as natural and cultural reserves through manufacturing and employment in the production areas. They contribute to the development of value chains through the radical transformation of the nature of the product.

These sectors are also fixed by Appendix 1 of Governmental Decree No. 2017-389 of 9 March 2017. The premium granted to economic sectors is 15% of the cost of approved investments, with a maximum of TND1 million.

2. The premium for the economic performance

The premium is granted to the following investments, as listed in Appendix 1 of Decree No. 2017-389, dated 9 March 2017:

- ▶ Tangible investments for monitoring new technologies and improving productivity: The premium is 50% of the cost of the approved investment with a maximum of TND500,000.

- ▶ Intangible investments: The premium is 50% of the cost of the approved investment, including the premium for studies expenses related to R&D, with a maximum of TND500,000. The studies premium is limited to TND20,000.
- ▶ Expenses related to R&D: The premium is 50% of approved R&D costs, with a maximum of TND300,000.
- ▶ Employee trainings leading to competency certification: The premium is 70% of the training costs for Tunisian employees that lead to a certification of skills according to international standards, with a maximum of TND20,000 per year for each enterprise.

According to Article 3 of the Decree:

- ▶ The tangible investments premium for monitoring new technologies and the premium for intangible investments are granted at the incorporation phase.
- ▶ The tangible investments premium for improving productivity is granted to direct investment operations as defined in Article 3 of the investment law.

Tax incentives

Description of benefits

Additional deduction of tax allowance from the tax base for R&D expenses

Under Article 21 of the Finance Act for 2022, enterprises included in the framework of agreements with public establishments of scientific research, public establishments of higher education and research, or other establishments and public companies authorized to research under the legislation and regulations can deduct from the tax base an additional tax allowance of 50% for R&D expenses. The company's contribution to the total R&D expenses covered by the agreement should not be less than 10%. The overall amount of the deducted allowance should not exceed TND200,000.

Under Article 27 of the Finance Act for 2023, for projects concerning the green and blue economy, circular and sustainable development, the maximum percentage of additional tax allowance is increased to 50%, and the maximum threshold is also increased from TND200,000 to TND400,000.

¹ According to Article 3 of Law No. 2016-71 of 30 September 2016, relating to the investment law, direct investment operations are defined as a new and autonomous project created to produce goods or provide services, or an expansion or renewal operation carried out by an existing company within the framework of the same project, allowing the enterprise to increase its production capacity, technological capacity or competitiveness.

Deduction of revenues and profits reinvested in innovating sectors

According to Article 74 of the Personal Income Tax and Corporate Income Tax Code (PITCITC), and subject to the minimum tax provided for by Law No. 89-114 of 30 December 1989, are fully deductible and within the limit of the income or profit subject to tax, revenues and profits reinvested as part of the subscription within the initial capital or the increase of capital of enterprises undertaking investments that allow the development of the technology or its monitoring and the innovation investments within all economic sectors. However, investments in the financial sector, energy (other than renewable energies), mining, real estate development, on-site consumption, trade and telecoms operators are not eligible for this deduction.

Exemption or suspension of certain duties and taxes for R&D investments by companies located in business parks

According to Article 8 of the 1992 law on the creation of business parks, R&D investments by companies located in business parks are eligible for (1) the exemption from customs duties and suspension of value-added tax (VAT) on imported equipment that does not have locally manufactured substitutes and that is necessary for these investments and (2) the suspension of VAT on locally manufactured equipment.

Guidelines around incentive applications

For guidelines around incentive applications, please refer to Section 3. Eligibility requirements specified for each incentive.

3. Eligibility requirements

Conditions to benefit from the premium for an increase of added value and competitiveness

The benefit from this premium is subject to complying with the following conditions set out in Article 7 of Governmental Decree No. 2017-389 of 9 March 2017:

- ▶ Filing an investment declaration with the competent services in accordance with the regulations before beginning the direct investment
- ▶ Implementation of the investment plan of financing with a minimum of the investor's own capital funds of 30% of the investment cost
- ▶ Keeping the accounts according to the Tunisian Enterprises Accounting Legislation
- ▶ Implementation of investments by using new equipment or imported used equipment, provided that they are evaluated and controlled by the competent technical services
- ▶ Confirming that the tax position of the investor is in order at the date of incentive filing and during the incentive benefit period
- ▶ Creating at least 10 permanent jobs for projects created in economic sectors and priority sectors
- ▶ Submitting a written request to the Tunisian Investment Authority (TIA), or the investment structure concerned and territorially competent, no later than one year from the date of filing the declaration of investment supported by a feasibility study of the project
- ▶ Regularizing the situation with regard to the social security funds

Conditions to benefit from the additional deduction for innovation expenses

The conditions for applying for an additional deduction of innovation expenses will be fixed by decree, which has not yet been published.²

Conditions to benefit from the incentive granted to innovative sectors for financial reinvestment

Receiving an incentive for financial reinvestment in innovative sectors is subject to complying with the following conditions fixed by Articles 72 and 75 of PITCITC and Article 111 of the Tax Rights and Procedures Code (TRPC):

- ▶ Filing an investment declaration with the services concerned by the sector of activity in accordance with the regulations
 - ▶ Realizing a financing scheme of the investment, including a minimum of the investor's own funds in accordance with the legislation and regulations
 - ▶ Producing, in support of the annual declaration of the tax, a certificate justifying the entry in effective activity delivered by the competent services
 - ▶ Regularizing the situation with regard to the social security funds
 - ▶ Keeping the accounts according to the Tunisian Enterprises Accounting Legislation
 - ▶ Issuing new shares or stocks
 - ▶ Not decreasing the subscribed capital for five years, starting from 1 January of the year following that of the release of the subscribed capital, except in the case of a reduction for losses cancellation
 - ▶ The beneficiaries of the incentive presenting, in support of the personal income tax (PIT) or corporate income tax (CIT) returns, a release certificate of the subscribed capital or any other equivalent document
 - ▶ Not disposing any of the shares or stocks that gave rise to the deduction, before the end of the two years following that of the release of the subscribed capital
 - ▶ Non-stipulation in the agreements concluded between the companies and the subscribers or investors of guarantees out of the project or remunerations that are not linked to the results of the project object of the subscription operation
- ▶ Allocating profits or income reinvested in a special account in the liabilities that is not distributable, except for the sale of shares that gave rise to the deduction, and this is for legal entities and individuals operating in industrial or commercial activity or a non-commercial profession as defined in the PITCITC . Profits or reinvested earnings provided for in this indent are income or profits generated by an accountancy compliant with accounting legislation in force and not distributed or allocated for other purposes and within the limits of income or profits subject to PIT or CIT
 - ▶ Filing an investment declaration within the competent services in accordance with the regulations
 - ▶ Creating an investment plan of financing with a minimum of the investor's own capital funds of 30%
 - ▶ Producing, in support of the annual CIT return, a certificate justifying the effective start of operational activity issued by the competent authorities
 - ▶ The beneficiary of the benefit must either have filed all the tax returns due and not prescribed or be liable for tax debts to the state that have been subject to a recovery schedule by the tax receiver

4. IP and jurisdictional requirements

For jurisdictional requirements, please refer to Section 3. Eligibility requirements specified for each incentive.

5. Technology or innovation zones

Competitiveness poles in Tunisia were created in 2005 to support innovative projects by promoting synergies between different industrial and research partners. Competitiveness poles bring together research and training centers and companies around local innovation projects with a regional, national and/or international vocation. These poles are always presented as a new form of industrial organization focused on improving the attractiveness of the territory to which they are attached. Competitiveness poles are the subject of significant support from Tunisia, both in terms of valuation and financially. The following poles are currently operating:

- ▶ The Technopole of Sidi Thabet specializing in biotechnology
- ▶ The Sfax Technopole specializing in information and communication technology (ICT) and multimedia
- ▶ The industrial and technological pole of Gabes specializing in eco-industries and eco-technologies
- ▶ The Technopole of Borj Cedria specializing in renewable energy, water, and environment and plant biotechnology
- ▶ The Competitiveness Pole of Bizerte specializing in the food industry
- ▶ The Industrial and Technological Complex of Medenine specializing in ICT
- ▶ The Technopole of Sousse specializing in mechanics, electronics and computer science
- ▶ The El Ghazela pole specializing in communication technologies
- ▶ The pôle de compétitivité de Bizerte

6. Role of governmental bodies in administering incentives

The financial incentives granted by the investment law are supervised and controlled by the competent administrative services, which can intervene at any time to withdraw the incentives in case of noncompliance. Article 21 of the investment law provides for certain cases where the incentives may be withdrawn from their beneficiaries, including:

- ▶ Noncompliance with the investment law or its implementing regulations, including those of Governmental Decree No. 2017-389 of 9 March 2017
- ▶ Non-realization of the investment program during the first four years from the date of declaration of investment, extendable once for a maximum of two years, determined by the authority
- ▶ Illegal misuse of the investment's initial purpose

Noncompliance with the conditions set out in the investment law and Governmental Decree No. 2017-389 of 9 March 2017 may involve not only the withdrawal of the incentives but also their reimbursement under the procedures set out in Article 22 of the law.

The procedure for withdrawing incentives starts with the TIA conducting a hearing either by its own initiative or at the suggestion of the departments related to the financial incentives. The TIA then issues an opinion on the withdrawal and refund of incentives, which can both only be made by the Minister of Finance, in accordance with the procedures of the Public Accountancy Code.

Innovative sectors

The approval of the nature of investments in innovative sectors shall be granted by the Minister of Finance after consulting a commission incorporated for that purpose, and of which the composition and methods of operation are fixed by the Ministerial Ruling of the Minister of Finance dated 5 April 2017.

7. Administrative requirements

No preapproval or specific annual compliance is required for the R&D incentives.

8. Statutory reference

Law No. 92-81 of 3 August 1992, on the creation of economic activity parks

Law No. 2016-71 of 30 September 2016, concerning the investment law

Implementing texts of the investment law:

- ▶ Government Decree No. 2017-388 of 9 March 2017, setting the composition and organizational arrangements of the Higher Council of Investment, the administrative and financial organization of the Tunisian Investment Authority, and the Tunisian Investment Fund and the rules of its operation
- ▶ Government Decree No. 2017-389 of 9 March 2017, on financial incentives for the benefit of investments made under the investment law (supplemented by Government Decree No. 572 of 20 June 2018)
- ▶ Government Decree No. 2017-390 of 9 March 2017, on the establishment, organization and operating

procedures of a management unit by objectives for the realization of the project of revision of the authorizations of the exercise of economic activities and fixing the nomenclature of Tunisian activities (amended by Government Decree No. 2020-756 of 31 August 2020)

- ▶ Government Decree No. 2018-417 of 11 May 2018, on the publication of the exclusive list of economic activities subject to authorization and the list of administrative authorizations required for the implementation of projects, the related provisions and their simplification

Law No. 2017-8 of 14 February 2017, recasting the system of tax benefits

Implementing texts of the law recasting the system of tax benefits:

- ▶ Decree 2017-1334 of 5 April 2017, setting the composition and operating procedures of the commission responsible for determining the nature of investments that allow the development of technology or its mastery and innovation investments
- ▶ Decree 2017-419 of 10 April 2017, setting the lists of equipment and the conditions for benefiting from the incentives in Articles 3, 4 and 5 of Law No. 2017-8 of 14 February 2017, relating to the overhaul of the system of tax benefits (amended by Government Decree No. 2017-1281 of 23 November 2017 and Government Decree No. 2018-613 of 17 July 2018)

Decree-Law No. 2021-21 of 28 December 2021, relating to the finance law for 2022

Decree-Law No. 79-2022 of 23 December 2022, promulgating the Finance Act for 2023

Personal Income Tax and Corporate Income Tax Code

Code of Fiscal Rights and Procedures

Türkiye

1. Overview

In recent years, many regulations have been introduced to increase competitiveness and economic development in Türkiye. These regulations are intended to encourage R&D and human resource investments (i.e., investments in researchers and scientists) with the ultimate aim of reinforcing the technological development level of the country.

The first regulation introduced for the R&D incentive regime was Law No. 4691 (for Technology Development Zones), which became effective in 2001. Furthermore, the R&D reduction regime was added to the Corporate Tax Code in 2004 (Law No. 5746) to support R&D activities. The regime became effective on 1 April 2008 and is designed to provide reductions, exemptions, supports and other incentives to taxpayers carrying out eligible R&D activities. In addition, Law No. 5746 allows for the 100% R&D deduction, income tax withholding incentive, social security premium support, stamp duty exemption, customs duty exemption and VAT exemption to taxpayers with eligible R&D activities.

Within the scope of Law No. 6676 (effective as of 1 March 2016) on the “Amendment of the Law on Supporting of Research and Development Activities and Certain Laws and Decree Laws,” also known as the “R&D Reform Package,” changes and additional supports have been introduced regarding the current R&D supports. Under Law No. 6676, design activities have been included in the scope of the incentives and supports for R&D activities in the R&D Law No. 5746 and Technology Development Zones Law No. 4691. Also, Law No. 6518 introduced corporate tax and value-added tax (VAT) exemptions to deliveries and services to be performed as of 1 January 2015 related to the inventions within the scope of R&D activities.

On 3 February 2021, Law No. 7263, which includes some changes on R&D and innovation activities in Technology Development Zones (Law No. 4691) and R&D/design centers (Law No. 5746), was published, and the validity period of mentioned laws has been extended to 31 December 2028.

2. Incentives available

Name of incentive	R&D expense deduction	Tax exemptions	Cash grants	Income tax withholding incentives	Social security premium support	Stamp and customs duty exemptions
Type of incentive	► Super deduction	► CIT and VAT exemption	► National and international cash grants	► Income tax withholding incentives	► Reduced social security contributions	► Tax exemptions

R&D expense deduction

Description of benefits

Taxpayers are granted the R&D expense deduction incentive mainly in two ways: through R&D/design centers and through R&D and innovation projects. The R&D expense deductions through both types are applied against the corporate income tax (CIT) base, and taxpayers may deduct 100% of R&D expenditures from the CIT base. In addition, taxpayers can avail a depreciation at a rate of 20% for five years for the R&D asset. Any amount that could not be deducted due to insufficient profit in the related period

may be carried forward indefinitely. To receive the R&D and design deduction, a company must employ a minimum of 15 full-time-equivalent personnel for the R&D centers (30 for some sectors) and minimum of 10 full-time-equivalent personnel for design centers.

Half of the increase of the R&D and innovation expenses of the current year (compared with the previous year) is also considered within the scope of the R&D reduction if the R&D center achieves at least a 20% increase compared with the previous year in any of the following indicators:

- Ratio of the R&D or design expenditure to the total turnover

- ▶ Number of national or international patents registered
- ▶ Number of projects supported internationally
- ▶ Ratio of the number of researchers with a graduate degree to the total R&D personnel
- ▶ Ratio of the number of designers with a graduate degree to the total design personnel
- ▶ Ratio of the number of total researchers to the total R&D personnel
- ▶ Ratio of the total designers to the total design personnel
- ▶ Ratio of the turnover generated from new products derived from R&D or design activities to the total turnover

On the other hand, one of the major changes within the scope of Law No. 7263 is that, in Technology Development Zones, for corporate taxpayers whose earnings are exempted from the annual declaration and whose deduction amount benefit from the annual declaration in R&D/design centers is TRY1 million and above, 2% of the amount subjected to the exemption/deduction will be placed in a temporary balance sheet account and be used:

- ▶ To purchase venture capital investment fund shares to invest in resident entrepreneurs
- Or
- ▶ As capital for venture capital investment trusts or other entrepreneurs operating in incubation centers

With this law, the government has aimed to support entrepreneurs.

Guidelines around incentive applications

The R&D deduction is applicable for current investments. The amounts of R&D deduction calculated over the expenses incurred as of the advance tax periods of the taxpayer can be deducted from the income in the tax return of the related advance tax period.¹ The final and certain amounts of R&D deduction are calculated at the end of the year and deducted from the income in the corporate tax return, which can be submitted to the tax office until 25 April (fourth month following the month the fiscal period ends).

Tax exemptions

Description of benefits

Technology Development Zones (TDZ) incentives: in Türkiye, there are 97 Technology Development Zones (TDZs), and 82 of them have been opened to active

¹ Statutory due dates for filing the advance tax returns in Türkiye are as follows: Q1: 17 May 2021; Q2: 17 August 2021; Q3: 17 Nov 2021; Q4: 17 Feb 2022.

business. TDZ incentives are provided to businesses operating in the TDZs. Gains derived by taxpayers operating in TDZs exclusively from software, R&D and design activities carried out in these zones are exempt from income and corporate tax until 31 December 2028. The incentives provide either R&D expense deduction (R&D incentives) or tax exemption from corporate tax and VAT for income derived from R&D and software activities in TDZs. Other forms of support for R&D activities in TDZs are payroll income tax exemption, stamp tax exemptions and social security premium support for R&D personnel wages.

On the other hand, in October 2017, decision of the Council of Ministers No. 2017/10821 was issued. Within the scope of the decision, exemption of corporate and income tax from sale, transfer and leasing of intangible rights acquired in Technology Development Zones depends on two important criteria:

1. Affiliation of intangible right to patent or equivalent certificate (such as patent certificate, utility model certificate, design registration certificate, copyright registration certificate, integrated circuit topography registration certificate, breeder's right registration certificate of new plant varieties)
2. Restriction of earning with the share of qualified expenditures in total expenditure

Type of expenditure	Qualified expenditure	Total expenditure
Expenditures made by taxpayer and directly related to intangible rights	Including	Including
Benefits and services provided by unrelated institutions	Including	Including
Interest expenses	Excluding	Excluding
Building costs	Excluding	Excluding
Any cost element not directly related to software, design and R&D activities	Excluding	Excluding
Purchasing price of intangible rights (including license fees and similar prices)	Excluding	Including
Benefit and service price provided by related resident persons domestic	Including	Including
Benefit and service price provided by related resident persons abroad	Excluding	Including

The Council of Ministers has been authorized to apply the exemption at the time the application for patent right is made provided that the application is made until the end of the corporate tax return filing date of the year in which the income is generated.

Exemption on intellectual property (IP) rights: corporate tax and VAT exemptions apply to the transfer, sale and leasing of patented inventions or inventions with utility model certificates. The corporate tax exemption applies to 50% of the income derived from the transfer, sale or leasing of these intangible rights from 1 January 2015.

Furthermore, the corporate tax exemption applies to 50% of the income attributed to the intangible rights derived from the sale of invented manufactured products.

Finally, if the intangible patented right is used in the manufacturing of any other product, 50% of the income attributable to the intangible right gained as a result of the sales of the manufactured product is exempted from corporate tax.

Guidelines around incentive applications

TDZ incentives: gains derived by taxpayers operating in TDZs exclusively from software, R&D and design activities carried out in these zones are exempt from income and corporate tax until 31 December 2028. If the R&D deduction is applied, then VAT or income tax exemption cannot be used. To benefit from R&D deduction in a TDZ, there must be an R&D project approved by the Scientific and Technological Research Council of Türkiye (TÜBİTAK). A preapproval is required to receive the incentives in a TDZ.

Exemption on IP rights: receiving a patent upon the examination of the Turkish Patent Institute or utility model certificate as a result of a positive research report is a condition for benefiting from exemption. Not exceeding the period of protection offered for the patent and utility model certificate is another condition.

Cash grants

Description of benefits

TÜBİTAK has many different support programs; for large-scale firms, SMEs, university-industry collaborations and others. The support ratio that TÜBİTAK provides may

change according to the program code applied. However, in any case, it provides up to 60% in a cash grant to certain portions of the eligible R&D expenses. Preapproval from TÜBİTAK is required to obtain the cash grants. Cash grants are not subject to corporate tax provided that the cash grant amount is recorded to a "fund" account in the balance sheet. R&D expenditures corresponding to this fund amount cannot be used as a deduction from the corporate tax base.

Guidelines around incentive applications

The cash grant is applicable for current investments. Companies that will benefit from cash grants for their R&D projects must submit a financial report to TÜBİTAK, and tax returns are not used to benefit from cash grants. The financial report, consisting of the expense forms, documents and necessary attachments related to the supported projects, other supporting forms and complementary financial documents, should be submitted to TÜBİTAK by 30 September (following the first financial period) and by 31 March (following the second financial period), respectively.²

For cash grants in the employment of "programs to be supported," personnel in question must have been recruited and employed for the first time after (and including) the date of 1 March 2016. Furthermore, the amount of supports that can be provided for each R&D or design center is limited to 10% of the total number of personnel employed at the R&D/design center in the month in question.

Income tax withholding incentives

Description of benefits

Income tax calculated on wages earned by the R&D and assisting personnel shall be canceled at 95% for personnel with a doctorate degree or at least one graduate degree in one of the basic sciences, 90% for those with a graduate degree or an undergraduate degree in one of the basic sciences, and 80% for other personnel by deducting from the tax accrued over the withholding tax return to be submitted.

² Financial and technical reports are prepared for two periods: 1 January-30 June (first period) and 1 July-31 December (second period).

To be accepted as an R&D center, a company must continuously employ a minimum of 15 (30 for some sectors and 10 FTE for design centers) full-time-equivalent personnel in quarters (the advance taxation period). The income tax withholding incentive will not be applicable in the following situations:

- ▶ In cases where the project is terminated or where project support has ended, as of the termination date, the R&D and innovation activities will also be deemed to have been ended.
- ▶ In cases where the R&D center does not continuously employ 15 and design center 10 full-time-equivalent personnel (30 in some sectors) in the advance taxation period, the incentive will not be applicable.

The number of full-time-equivalent support staff that benefit from the incentives for income tax withholding may not exceed 10% of the total number of full-time-equivalent R&D/design personnel. Fractions in calculations are rounded up to the whole number. If the full-time-equivalent number of support staff exceeds 10% of the total number of full-time R&D or design personnel, the staff to benefit shall be determined by starting from the wage of the support staff member with the lowest gross wage. If the wages of those within the scope of benefit are equal, the determination shall be performed by the employer. A preapproval process is required to obtain the incentive.

Within the scope of new regulations on Law No. 5746 and Law No. 4691, a maximum of 75% of the total working hours spent outside the R&D/design center or Technology Development Zone by R&D/design personnel can also be considered in calculating the income tax withholding incentive and social security premium support by the end of 2023.

But with the Presidential Decree dated 20 March 2023 this rate can be applied as 100% for just "informatics personnel", which has been described as "the graduates of the four-year Computer, Electronics or Software related departments of the faculties or higher education institutions whose equivalence in these fields have been accepted by the Higher Education Council, and the graduates of the Faculty, Vocational School and Vocational High Schools other than the above-mentioned fields, Software, Design (Chip Design, System Design)", between 1 April 2023-31 December 2023 (including these dates)

Additionally, if PhD graduate staff employed in R&D/design centers teach R&D and innovation at universities, or if they mentor entrepreneurs in TDZs, their work will be assessed within the scope of the incentive for income tax withholding, provided they do not exceed eight hours per week.

Guidelines around incentive applications

The incentive is applicable for current investments: 95%, 90% and 80% of the income tax calculated over the wages of R&D and support staff shall be canceled by deducting from the tax accrued over the withholding tax return to be submitted. A withholding tax return is submitted until the 23rd of the month following the month the wages are paid (e.g., a withholding tax return related to July is submitted 23 August).

Social security premium support

Description of benefits

For R&D, design and support personnel who work in an R&D or design center on R&D and innovation projects, half of the social security employer's share calculated on the remunerations received by R&D, design and support personnel in return for R&D and design work can be paid from a fund to be placed in the Ministry of Finance budget.

The full-time-equivalent support personnel who benefit from the employer share insurance premium cannot exceed 10% of the number of total full-time-equivalent R&D personnel. If the number of the support personnel exceeds 10% of the total full-time-equivalent R&D personnel, the insurance premium employer's share incentive is applied starting from the wage of the support personnel member with the lowest gross salary. If the gross salaries are the same, the support personnel to benefit from the insurance premium employer's share incentive shall be determined by the employer. Preapproval is required to receive the support.

Within the scope of new regulations on Law No. 5746 and Law No. 4691, a maximum of 75% of the total working hours spent outside the R&D/design center or Technology Development Zone by R&D/design personnel can also be considered in calculating the income tax withholding incentive and social security premium support by the end of 2023. But with the Presidential Decree dated 20 March 2023 this rate can be applied as 100% for just "informatics personnel", which has been described as "the graduates of the four-year Computer, Electronics or Software related departments of the faculties or higher education institutions whose equivalence in these fields have been accepted by the Higher Education Council, and the graduates of the Faculty, Vocational School and Vocational High Schools other than the above-mentioned fields, Software, Design (Chip Design, System Design)", between 1 April 2023-31 December 2023 (including these dates)

Guidelines around incentive applications

The incentive is applicable for current investments. Tax returns are not used to benefit from social security premium support. Social security premium support may be applied to premiums accrued due to the monthly premium and service documents issued in the scope of Law No. 5510. Monthly premium and service documents are submitted until the 23rd of the month that follows the month the wages are paid.

Additional support for 'programs to be supported'³

Description of benefits

In case of employment of new R&D/design or software personnel with at least an undergraduate degree in basic sciences (physics, chemistry, biology, mathematics or other programs to be determined by the Ministry of Science and Technology upon the opinion of the Council of Higher Education) at an R&D/design center or TDZ entrepreneur company, the part equal to the monthly gross amount of the minimum wage will be paid from the fund to be placed in the budget of the Ministry for two years.

Guidelines around incentive applications

To benefit from this support, the following requirements must be considered:

- ▶ Personnel to be hired must first be recruited to the company following the date of 1 March 2016 (inclusive).
- ▶ The support provided to each R&D/design center of TDZ entrepreneur company is limited to 10% of total number of recruited personnel during the related month.
- ▶ Salary payment documents must be submitted to related institution (Industry and Technology Ministry for R&D/design centers or Management Company for TDZ company).
- ▶ The supported and paid amount must be followed on "Special Funds" account.

Accelerated depreciation on R&D assets

Description of benefits

The depreciation rates and periods to be applied for new machinery and equipment, if acquired before 1 January 2024, and used exclusively for R&D, innovation or design activities, can be calculated by considering half of the useful life periods determined and announced by the Ministry of Finance.

Guidelines around incentive applications

Taxpayers should be operating within the scope of one of the following:

- ▶ Technology Development Zones Law No. 4691
- ▶ Law No. 5746 on Supporting Research, Development and Design Activities
- ▶ Law No. 6550 on Support of Research Infrastructures

New machinery and equipment must be exclusively used in R&D, innovation or design activities.

Stamp duty exemption

Description of benefits

A range of documents (e.g., contracts and payroll slips) issued in relation to R&D, design and innovation activities (including the documents issued for the wage payments made to R&D or design personnel) are exempt from stamp tax. For applying the stamp tax exemption, preapproval from the authorized government entities (i.e., TÜBİTAK) is sufficient.

Goods imported from foreign countries in the scope of R&D projects are exempt from customs duties, and all kinds of funds, while papers issued and transactions conducted within this scope are exempt from stamp duty and fee.

³ "Basic sciences" has been changed to "programs to be supported" within the scope of Law No. 7263.

Guidelines around incentive applications

The incentive is applicable for current investments. The wages of R&D and support personnel are exempted from stamp tax, and the amounts of exemption are not shown in the withholding tax return in any separate section. For the other documents regarding R&D activities, it is sufficient to deliver the list determining and supporting performed transactions in scope of the R&D activity confirmed by the applied public institution and foundation to the institutions and foundations carrying out transactions during the transaction to implement the stamp duty exemption.

Customs duty exemption

Description of benefits

Goods imported from foreign countries within the scope of R&D or design projects are exempt from customs duties, and all kinds of funds, while papers issued and transactions conducted within this scope are exempt from stamp duty and fee.

Guidelines around incentive applications

The incentive is applicable for current investments. Enterprises that have R&D or design center certification must apply to the Customs and Trade Ministry using an e-application. Enterprises benefiting from project-based support and incentives must apply to the institution or organization that provides cash support.

Value-added tax exemption

Description of benefits

New machinery and equipment deliveries made for the exclusive use of R&D, innovation and design activities are exempted from VAT.

- ▶ R&D and design centers within the scope of the Law on the Support of Research, Development and Design Activities Law No. 5746
- ▶ Technology development zone and specialized technology development zone, covered by the Technology Development Zones Law No. 4691
- ▶ Research laboratories covered by Law No. 6550 on Supporting Research Infrastructures

Guidelines around incentive applications

Within three years from the beginning of the calendar year following the date of delivery of the machinery and equipment taken within the scope of exception; in the case of use or exclusion from the activities of R&D, innovation and design activities, the tax that is not taken in time shall be collected from the buyer by applying the tax penalty and interest. The taxation with the tax not taken in time will start from the beginning of the calendar year following the date in which the statute of limitations, the condition of the taxpayer or the order in which the punishment is to be cut down has come to fruition.

3. Eligibility requirements

Qualifying activities include the following:

- ▶ Obtaining new technical information for the development of science and technology with the aim of clarifying the ambiguities in scientific and technological fields
- ▶ Developing new products, materials, supplies, devices, equipment, procedures and systems through new methods and producing new techniques and prototypes through design and drawing studies
- ▶ Performing software activities based on new and original designs
- ▶ Researching and developing new productions, methods, processes and procedures
- ▶ Researching new techniques and technologies that decrease the cost of a product while increasing its quality, standard or performance
- ▶ Measuring the usability of the products obtained during the phase of final product formation and testing them within and outside of the enterprise, then making necessary adjustments
- ▶ Performing design activities for increasing, developing and differentiating the products with the potential to create added value and competitive advantage

The following expenses are considered within the scope of R&D, design and innovation activities:

- ▶ Personnel expenses (i.e., salaries and wages)
- ▶ Raw material and supplies expenses
- ▶ General expenses
- ▶ Benefits and services obtained from the outside (cannot exceed 50% of total R&D and innovation expenses)
- ▶ Depreciation
- ▶ Taxes, duties and charges that are directly related to R&D activities

The incentives are not limited to a specific industry or entity.

4. IP and jurisdictional requirements

The IP that emerges at the end of the R&D project can also be registered or owned abroad. However, to benefit from the R&D incentives, R&D activities should be performed in Türkiye.

5. Technology or innovation zones

See “Tax exemptions” under Section 2 for a description of TDZ incentives.

6. Role of governmental bodies in administering incentives

Entities wishing to receive R&D or design center certificates should prepare an application including the information and documents required by the Republic of Türkiye Ministry of Industry and Technology. Entities that do not have R&D or design center certificates should obtain approval from TÜBİTAK or other authorized government institutions for R&D projects to benefit from R&D deductions. TÜBİTAK also provides cash grants for R&D projects. To benefit from TDZ incentives, taxpayers performing software development, design or R&D activities must apply to Management Company of related Technology Development Zone.

7. Administrative requirements

To benefit from R&D or design incentives through R&D or design projects, taxpayers should have an R&D or design center certificate or obtain approval from TÜBİTAK or other authorized government institutions.

To receive support and incentives under the R&D and Design Law and obtain an R&D/Design Center License, taxpayers must meet the following minimum requirements:

- ▶ Employ at least 15 full-time equivalent R&D personnel (30 for some sectors) for R&D centers, 10 full-time equivalent design personnel for design centers
- ▶ Perform R&D or design activities in Türkiye

- ▶ Have adequate R&D/design management and technological assets, human resources, intellectual property, project and information resources management capability and capacity
- ▶ Have eligible projects with the subject, duration, budget and personnel needs defined
- ▶ Be organized in a separate unit and located within a single campus or physical space

R&D expense deduction

Entities that would like to have an R&D/design center certificate should prepare an application including the information and documents required by the Republic of Türkiye Ministry of Industry and Technology. Entities are required to receive an approval from TÜBİTAK or other authorized government institutions for new R&D activities to receive the R&D expense deduction on a project basis.

Documents related to the process of the R&D and innovation projects conducted within R&D centers and R&D projects should be submitted to the affiliated tax offices with annual income and corporate tax returns to benefit from the R&D deduction. Expenses made within R&D/design centers or R&D projects and included in the R&D deduction should be certified by a sworn-in certified public accountant.

Tax exemptions

TDZ incentives: to receive this incentive, taxpayers must apply to the Ministry of Finance. For information purposes, they must attach documentation proving the employment of the taxpayers in the region and their fields of occupation to the application. The associated entrepreneurs must provide the Ministry of Finance a list approved by the managing company of all the researchers, software engineers and R&D personnel it employs, with descriptions of their functions, attributes and duration of their employment on the R&D projects, on a monthly basis.

Exemption for IP rights: to receive the exemption, taxpayers need to issue a valuation report (in the first year of entitlement to tax exemption, the valuation report for the assessment of the value of the invention in case of transfer or sale by taking into account the value added created by the invention). The valuation report to be prepared by the taxpayer shall contain the values that will be determined separately according to the determined methods (cost-based methods, market method, income-based methods and other valuation methods) and calculations about the determination of these values with respect to patented inventions or inventions with utility model certificates.

Cash grants

There are two main phases of the operation of cash grants provided by TÜBİTAK:

- ▶ The application and evaluation phase: the company applies for the project, which is then accepted for preliminary examination by a TÜBİTAK expert and sent to independent examiners who will prepare evaluation reports. Upon completion of evaluation reports, the relevant technology group committee discusses the project proposal in order to grant a final decision of acceptance or rejection.
- ▶ The monitoring and granting phase: for accepted projects, the project agreement is signed by the company and TÜBİTAK. Afterward, the company is required to send financial and technical reports to TÜBİTAK semiannually during the project. Expenses done by the firm within the scope of project must be examined and approved by a sworn-in certified public accountant. The financial and technical situation of the project is evaluated by independent examiners who are experts/academicians in the field of the project topic. The accepted amount of expenses is multiplied by the program's grant ratio, and the respective amount of grant is deposited to the company's account.

Cash grants are not subject to corporate tax provided that the cash grant amount is recorded to a "fund" account in the balance sheet. R&D expenditures corresponding to this fund amount cannot be used as deduction from the corporate tax base.

Income tax withholding incentives

In R&D or design centers, the income tax withholding incentive will be applied from the date when the R&D or design center certificate is issued. For R&D/design and innovation projects supported by public bodies and foundations established by law or international funds, or managed by TÜBİTAK, it is as of the date when the support decision letter is issued or when the project contract is enforced. In TDZs 100%, in R&D/design centers 80% to 95% of income tax withholding calculated on wages earned by R&D and support personnel are exempted.

Social security premium support

As long as the income tax exemption is applied for personnel, half of the employer's insurance premium calculated over the exempted wage amounts will be funded by the Ministry of Finance.

Stamp duty exemption

To apply the stamp tax exemption, it is sufficient to submit the project proposal detail list or support decision letter or project agreement to institutions and organizations that conduct the transactions, such as notary, state offices, other public institutions and organizations during the transaction.

To apply the customs duty exemption, enterprises that have an R&D or design center certificate must apply to the Customs and Trade Ministry using an e-application, and enterprises benefiting from project-based support and incentives must apply to the institution or organization that provides cash support.

8. Statutory reference

- ▶ For TDZ incentives: Law No. 4691, which became effective on 6 July 2001 (revised on 10 August 2016) and will be in force until 31 December 2028
- ▶ For R&D incentives: Law No. 5746, which became effective on 1 April 2008 (revised on 10 August 2016) and will be in force until 31 December 2028
- ▶ Law No. 7263, which includes changes regarding R&D and innovation activities in TDZs and R&D/design centers
- ▶ Cash grants (provided by TÜBİTAK): TÜBİTAK Regulation on Technology and Innovation Support Programs, 1995
- ▶ Exemption for IP rights: Law No. 5520, Article 5/B

From 1 April 2023, the Research and Development Expenditure Credit (RDEC) rate increases from 13% to 20%, providing a net RDEC benefit of 15%, up from 10.5%. Conversely, from 1 April 2023, the small and medium-sized enterprise (SME) super deduction rate decreases from 130% to 86%, reducing the cash repayment net benefit from 33% to 19%.

Additionally, from 1 April 2023, the corporation tax rate increases to 25% from 19%, and new qualifying R&D cost categories are being introduced being: cloud computing, data licences and mathematics.

1. Overview

Available incentives include R&D tax relief, an R&D tax credit and an R&D allowance (for capital expenditures). An incentive is also available that provides a reduced effective rate of corporation tax of 10% on certain profits derived from qualifying patents and other similar intellectual property (IP) rights (the patent box).

R&D tax relief is currently available for large companies as an RDEC claim. A 13% tax credit is available for qualifying expenditures from 1 April 2020, which increases to 20% on expenditures incurred from 1 April 2023.

SMEs are eligible to claim a more generous enhanced deduction. The criteria for qualification as an SME, however, are complicated. To qualify as an SME, a company must have fewer than 500 employees, an annual turnover not exceeding EUR100 million or an annual balance sheet total not exceeding EUR86 million, and no more than 25% of the company share capital owned by large enterprises. Other specific circumstances can prevail, but this is a particularly complex area of legislation.

An R&D capital allowance is available for capital expenditures incurred on R&D assets. A first-year allowance of 100% is available in relation to qualifying expenditures. This allowance is set out within Section 437 of the Capital Allowances Act 2001.

The UK tax authorities typically play a helpful role in the claim and audit process, and as such, these incentives are considered something taxpayers should be utilising. The incentives are treated the same as any other tax rules; they are strictly enforced and audited like other expenses. The tax authorities may audit the expenditure incurred and the eligibility of the activities undertaken.

The UK R&D regime is a mature scheme. Companies have been eligible to claim under the large company scheme since 1 April 2002, and the SME regime commenced in 2000.

The corporation tax rate within the UK is 19% for expenditures incurred; the rate increases to 25% from 1 April 2023 for companies with profits greater than £250,000. Companies with less than £50,000 profit do not have an increased rate, continuing to pay corporation tax at 19%. Companies with between £50,000 and £250,000 in profits are subject to a tapered tax rate.

The UK patent box regime has been available to companies since 1 April 2013. The regime has been adapted to incorporate the “modified nexus” approach required by the Organisation for Economic Co-operation and Development in accordance with the outcome of Action 5 of the BEPS project. While the regime is relatively new, as with R&D, the UK tax authorities typically play a helpful role in the election and computation process, and as such, this incentive is considered something taxpayers should be utilizing. However, the patent box is part of the usual corporation tax framework; therefore, tax authorities may audit the calculation and the qualifying criteria on which it is based.

In addition to tax incentives, the UK government and associated agencies offer a number of grant and loan schemes aimed at stimulating overall economic growth, the transition to net zero and R&D in priority technology domains. These are typically implemented through scheduled “competitions” for applications, judged on a competitive basis for millions of British pounds in funding. Specific programs include:

- ▶ Innovate UK: Funded by the Department for Business, Energy & Industrial Strategy (BEIS), Innovate UK connects technology communities (academia, research establishments, industry) and allocates circa £1 billion in direct grant funding every year on R&D projects run by companies of all sizes in a wide range of technology sectors.
- ▶ BEIS grants: Additional funding streams with a strong focus on economic growth and sustainability are offered directly through BEIS. Of particular interest is the Net Zero Innovation Portfolio, a fund worth £1b, which

is aimed at helping the UK transition to net zero. The funding is focused on the areas identified in the 10-point plan for a green industrial revolution, which includes offshore wind; energy storage; hydrogen; and carbon capture, usage and storage.

- ▶ Local funding: Through local authorities, loans and cash grant funding are made available to support capital and revenue investments, including R&D projects focused around economically challenged regions, the creation of sustainable new jobs and training/upskilling of workforces. In particular, projects with elements of R&D stimulation (e.g., via infrastructure investment) and environmental protection are well-received.

There are also a number of other complementary local grant schemes available across the UK regions (Scotland, Wales, Northern Ireland) that focus primarily on R&D and job creation.

2. Incentives available

Name of incentive	Super deduction	Tax credits	Research and development allowance (RDA)
Type of incentive	▶ An enhanced deduction over and above the usual corporation tax deduction	▶ A credit to operating income as a percentage of qualifying spend	▶ First-year allowance on qualifying capital expenditure

Super deduction

Description of benefits

A governmental allowance is available for companies that incur qualifying expenditures during the resolution of technological and scientific uncertainties. In general, the R&D scheme is available for eligible revenue spending (separate large company and SME schemes are available), and the research and development allowance (RDA) scheme is available for eligible capital spend (available to all companies). The R&D incentive available for SME companies was an enhanced deduction of 130% of qualifying spend, which reduced to 86% on expenditure from 1 April 2023. This deduction is available before tax

as a deduction against taxpayers’ profits chargeable to corporation tax.

A cash refund may be obtained for SMEs making a claim if the enhanced deduction exceeds the company’s tax base for that given year. The cash refund was calculated at a rate of 14.5%, reduced to 10% from 1 April 2023, which provides up to £33.35 cash back for every £100 of qualifying eligible expenditures (£18.60 from 1 April 2023). However, loss making SMEs with a R&D intensity above 40% will still be entitled to a cash refund rate of 14.5%, providing up to £26.97 cash back for every £100 of qualifying eligible expenditure. The R&D intensity is calculated as the ratio of a company’s qualifying R&D expenditure for a period to its total expenditure in the same period.

From 1 April 2021, the amount of payable tax credit is subject to a pay-as-you-earn (PAYE) and national insurance contribution (NIC) cap. This cap is calculated as £20,000 plus three times the company's PAYE and NIC contributions. If the payable credit is below £20,000 or the company meets specific test criteria, this cap will not be applicable. The test requires the company to be creating or actively managing its IP and for its expenditure on connected party costs to be less than 15% of its overall R&D expenditure.

Guidelines around incentive applications

The super deduction is applicable to qualifying expenditures, expensed to a company's profit and loss account. The claim must be filed within two years of the end of the accounting period to which it relates; therefore, companies may file amended claims up to the first anniversary of the filing deadline for the tax return.

Tax credits

Description of benefits

Large companies incurring qualifying R&D expenditures are entitled to elect to make an RDEC claim. A 13% (currently 10.5% post-tax) taxable credit is available for qualifying expenditures from 1 April 2020; the rate increases to 20% on expenditure incurred from 1 April 2023 (15% post-tax, up to a maximum of 16.2% for companies with less than £50,000 profit). Under the tax credit scheme, a repayable credit may be available in certain circumstances. The repayable credit is available to companies with no current-year corporation tax liability.

The initial tax credit (known as the set-off amount available to the company, which is calculated as 13% of the qualifying R&D expenditure, increasing to a rate of 20% on expenditure incurred from 1 April 2023) is subject to corporation tax and pay-as-you-earn (PAYE) and national insurance contributions (NIC) caps, and is also reduced by any current-year corporation tax payable or other tax liabilities of the entity. There are some other restrictions but, subject to there being a positive set-off amount once all restrictions have been made, a repayable credit will be available. If the PAYE and NIC caps limit the credit available, the amount it is limited by is carried forward to the next accounting period.

Guidelines around incentive applications

The tax credits are applicable for current investments. Claims must be filed within two years of the end of the accounting period to which they relate; therefore, companies may file amended claims up to the first anniversary of the filing deadline for the tax return.

RDA

Description of benefits

Capital expenditures on R&D attract a first-year allowance of 100% on the qualifying expenditures. This includes expenditures on plants, machinery and buildings (but not land) used for the purposes of carrying out R&D activities. The RDAs give businesses an enhanced rate of capital allowances in the accounting period in which the expense is incurred.

Guidelines around incentive applications

The RDA applies to current investments and is claimed through the corporation tax return. The claim must be filed within two years of the end of the accounting period to which it relates; therefore, companies may file amended claims up to the first anniversary of the filing deadline of the tax return.

3. Eligibility requirements

For there to be R&D for the purpose of the tax relief, a company must be carrying on a project that seeks an advance in science or technology. The advance being sought must constitute an advance in the overall knowledge or capability in a field of science or technology, not a company's own state of knowledge or capability alone. Qualifying expenses include staff costs, externally provided workers (subcontract expenditure for SMEs only), materials used up in the R&D process (consumables),¹ software and software licenses, utilities (water, fuel and power), and payments to universities or other research organizations to do R&D. There is no restriction in relation to the type of industry the entity must belong to in order to make a claim.

¹ From 1 January 2015, raw materials used in sold products are no longer eligible R&D costs.

For accounting periods beginning on or after 1 April 2023, data license and cloud computing services can be included as qualifying expenditure for the R&D claim, and R&D activities undertaken within the field of pure mathematics will be allowable.

In addition, for accounting periods beginning on or after 1 April 2024, and subject to revision once final legislation is published, the R&D schemes are to be refocused toward innovation undertaken in the UK; as such, the externally provided workers and payments to universities or other research organizations must be either UK expenditure or qualifying overseas expenditure. Qualifying overseas expenditure is defined as that attributable to activity undertaken overseas that is necessary due to geographical, environmental or social conditions not present or replicable in the UK. Cost of the work and availability of workers are specifically excluded as factors.

4. IP and jurisdictional requirements

There is no requirement that the company receiving the R&D incentive (whether it be an R&D tax relief, an R&D tax credit or an R&D allowance) must own the intellectual property arising from the R&D expenditure. There is also no requirement that the R&D be performed within the UK for the expenditure to be eligible for the incentives available.

Patent box regime

Overview

The patent box regime provides for an effective rate of corporation tax of 10% on profits derived from qualifying patents and certain similar IP rights. It applies to such profits arising after 1 April 2013 (phased in over four years). There are no restrictions on when a patent was granted, and profits earned while a patent is pending (up to six years) can be included in the accounting period of the grant.

While the corporation tax rate increased to 25% from 1 April 2023, the patent box rate stayed unchanged at 10%, effectively increasing the benefit available through the regime by two-thirds.

If the qualifying criteria are met (see below), the calculation of the benefit starts with the identification of relevant income. The types of income are very broad. For example, a product only needs to contain one patented component for all the income from sale of that product to fall within the regime. Income may also derive from the license of patents (and potentially other rights licensed alongside the patent and for the same purpose) and the use of patented technology within a business (i.e., exploitation within the business rather than monetization through sales of products or licenses), in which case a notional royalty calculation for the value of the patented technology is undertaken to determine the relevant income.

An important point to note is that the R&D tax regime and the patent box work side by side. In other words, where a company has taken advantage of one of the R&D incentives, this does not dilute its patent box benefit.

Qualifying IP

The patent box regime is available to UK companies that hold or exclusively license granted UK or European patents (in addition to patents granted by a number of other selected European Economic Area member states that have similar examination and patentability criteria to the UK). Other types of qualifying IP rights include plant breeders' rights, community plant variety rights and marketing authorizations for pharmaceuticals where the product benefits from regulatory data protection. The regime cannot be accessed by holding rights such as copyrights, trademarks or designs.

Qualifying development

The patent box company, or a group member, must have created or significantly contributed to the creation of the patented invention or have performed a significant amount of activity to develop the patented invention, any product incorporating the patented invention or any process incorporating the patented invention. If a group member has performed the development activity, the patent box company must be actively managing the resultant patent rights.

Regime changes: the 'modified nexus' approach

From 1 July 2016, the UK patent box regime has been changed to align with the outcome of Action 5 (Harmful Tax Practices) of the BEPS project. From 1 July 2016 (or 1 July 2021, if a company was grandfathered under the old rules), the company must break down its overall patent box profit into separate profit streams attributable to individual patents, products or product families and then apply a "nexus fraction" to each resultant profit stream.

The nexus fraction applied to each profit stream looks at the level of R&D undertaken by the company itself (which includes R&D performed under externally provided worker arrangements), plus R&D contracted out to third parties by the company, relative to the total R&D (i.e., the R&D undertaken by the company, the R&D contracted out to third parties and the R&D subcontracted out to group members) plus any acquisition costs related to each patent/product or product family in question.

Under the modified nexus regime, the location and structuring of the R&D activity within a wider group is therefore very important in determining the level of ultimate benefit.

R&D activity performed outside the country

R&D activity can still be performed outside the country for patent box purposes, although the impact on the nexus fraction will depend on the facts and circumstances, in particular whether it is subcontracted or carried out under an externally-provided worker arrangement and whether it is undertaken by a connected or unconnected party.

Proposed legislative changes may restrict the ability to claim R&D tax credit relief for R&D undertaken outside the UK from 1 April 2023 (see Section 3 above). However, the definitions for patent box purposes are not proposed to follow this change, meaning that R&D expenditure that is no longer eligible for the R&D tax credit scheme should still be tracked for the purposes of the patent box nexus fraction.

5. Technology or innovation zones

There are no technology or innovation zones in the United Kingdom.

6. Role of governmental bodies in administering incentives

Companies may file both an R&D claim and an RDA claim annually within their corporation tax returns. HM Revenue & Customs, the UK governmental body, then reviews it. Eligibility is determined by an engineer within the company, the so-called competent professional. HM Revenue & Customs is also responsible for reviewing patent box claims.

7. Administrative requirements

The claim must be filed within two years of the end of the accounting period to which it relates. Therefore, companies may file amended claims up to the first anniversary of the filing deadline for the tax return.

New administrative requirements will be introduced for accounting periods beginning on or after 1 April 2023. These include requiring a standard form to be completed on the submission of an R&D claim.

The US research credit is a permanent, nonrefundable federal income tax credit, and its importance continues to be recognized in the eyes of many clients. They place a high value on the credit, and they are willing to invest more into the process that they are employing to calculate and document it. However, P.L. 115-97, commonly known as the Tax Cuts and Jobs Act (TCJA), contains a provision for expenditures paid or incurred in tax years beginning on or after 1 January 2022 that requires capitalization and amortization of research expenditures. Historically, these costs have been fully deductible, or capitalizable and amortizable, at the taxpayer's option. Although there is bipartisan support for repealing or delaying the required amortization of research expenses, no legislation has been passed as of April 2023.

1. Overview

In the US, a nonrefundable tax credit is available under Internal Revenue Code (IRC) Section 41 for certain qualified research expenses (QREs) incurred in the US that exceed one of two computed base amounts. This tax credit may be used by a business to reduce its federal tax liability. The QREs eligible for the research credit are a subset of research and experimental expenditures as defined under IRC Section 174, as QREs are generally measured as direct expenses of R&D without including overhead expenses or indirect expenses. QREs generally include wages, supplies, a portion of contract or third-party expenses, and costs to rent or lease computers (which typically include cloud-hosting expenses) incurred for qualified research performed within the US.

Other federal US R&D-related incentives include a payroll tax credit for certain small businesses, an orphan drug

credit (ODC), and cost recovery regimes for R&D expenses and assets. These incentives are discussed in further detail below.

Approximately two-thirds of the states also offer a research credit for state tax purposes. Many states model their research credit on the federal credit; however, the credit is generally permitted only for QREs incurred within the state, and the state credits can vary dramatically between jurisdictions. For example, some states do not require a business to increase its QREs (as the federal credit does) in order to receive a credit. Often the types of expenses that qualify for the credit are different, and the percentages of QREs used to compute the credit also differ. For most businesses, their federal research credits are larger than their state research credits, but that is not always the case.

Recent legislative actions have brought about two significant changes to the federal research credit. The first change establishes a permanent status for the credit, while the second introduces a specific benefit aimed at 'eligible small businesses.' As a result, certain startup companies can now claim a research credit against the employer's payroll tax liability or the alternative minimum tax (AMT) of sole proprietorships or partnerships.²

Generally, most state research credits continue to be permanent.

2. Incentives available

Name of incentive	Credits and R&D cost recovery
Type of incentive	<ul style="list-style-type: none"> ▶ Research credit ▶ Orphan drug credit ▶ Payroll tax credit ▶ Cost recovery for research and experimental (R&E) expenditures ▶ Special cost recovery for R&D assets

Research credit and other related incentives

Description of benefits

Research credit

Federal and state research credits for certain QREs incurred in the US may be used by a business to reduce its federal and state tax liabilities. These are statutory tax incentives with specific amounts and applicability defined in the statute at either the federal or state level. In general, the federal credits are nonrefundable, while some state credits are refundable. In addition, some state credits may have the potential to be purchased or sold to the benefit of the taxpayer.

The federal research credit is designed to reward a business for performing research in the US and for increasing its spending on research; thus, a taxpayer must determine the increment of its current-year QREs over a computed base amount to claim the research credit.

¹ This chart is for federal purposes only. Various states may offer additional research incentives (e.g., cash grants, loans). Please check with your local EY Quantitative Services (QS) professional for a complete state-by-state list.

² Under the TCJA, corporate AMT was repealed for tax years beginning after 31 December 2017. Therefore, the AMT offset provision only applies to partnerships and sole proprietorships for tax years beginning 2018 and after.

IRC Section 41 provides two methodologies for computing the research credit:

- ▶ **Regular credit:** The regular credit is computed by measuring spending as a percentage of a business's gross receipts. Thus, if a business is increasing its QREs as a percentage of gross receipts measured against a historic period (generally 1984-88), it will likely be eligible for the regular credit. Generally, the credit is equal to 20% of a business's QREs over a base amount determined by the business's history. The base amount cannot exceed 50% of a taxpayer's current year QREs.
- ▶ **Alternative Simplified Credit (ASC):** The ASC is a much simpler way to compute the research credit. Generally, the credit is equal to 14% of a business's increase in QREs in the current year, over 50% of the average QREs for the prior three years.

Generally, a taxpayer must reduce the current year deduction and, if the credit exceeds the current year deduction, the year's capitalized amount of expenditures that are included in QREs by the amount of the year's credit. However, IRC Section 280C allows a taxpayer to preserve the current year deduction or capitalized amount if the taxpayer elects to claim a reduced research credit. The net benefit of the reduced research credit that taxpayers can elect under IRC Section 280C was indirectly increased by the lower corporate tax rate passed under the TCJA. The IRC Section 280C reduced credit is net of the highest tax rate. Prior to the TCJA, the highest tax rate was 35%, and post-TCJA the new rate is 21%, meaning that pre-TCJA, taxpayers claiming the reduced ASC credit only recognized a tax credit benefit that equated to 65% of the research credit and now, taxpayers will recognize a benefit that equates to 79% of the research credit, a 21.5% increase. For taxpayers claiming a reduced regular credit, they will recognize a benefit that equates to 15.8% of the research credit instead of 13%.

For tax years beginning on or after 1 January 2022, the TCJA made a conforming statutory amendment to IRC Section 280C(c) that makes it applicable to capitalized QREs only (and not the current year deduction) if the amount of the gross research credit exceeds the amount allowable as a deduction for the current year QRE amortization (i.e., one-tenth of current year QREs).

In general, the research credit cannot be used to offset more than 25% of the regular tax liability. Unused research credits must be carried back for one year and then carried forward for 20 years.

Orphan drug credit

The ODC is a nonrefundable federal income tax credit available for a percentage of qualified clinical testing expenses (QCTEs) paid or incurred by a taxpayer to develop drugs for a "rare disease or condition." QCTEs include costs incurred to test an orphan drug after the drug has been approved for human testing by the Food and Drug Administration (FDA) but before the drug has been approved for sale. The ODC is generally not allowed for clinical testing conducted outside the US unless there is an insufficient US testing population and the testing is conducted by a US person or by another person not related to the taxpayer. The ODC is equal to 25% of QCTEs incurred in the tax year and 50% of QCTEs incurred prior to 1 January 2018.

A research credit and ODC cannot be claimed for the same expenses.

Payroll tax credit

Certain qualified small businesses may claim the research credit against their federal payroll tax liability. The Inflation Reduction Act (IRA) of 2022 (H.R. 5376) modified the payroll tax credit, for tax years beginning after 31 December 2022, to increase the maximum allowable payroll tax credit to USD500,000 (for tax years beginning before 1 January 2023, the annual maximum is USD250,000). Beginning in 2023, up to USD250,000 can be applied against Social Security payroll tax, and up to USD250,000 can be applied against Medicare payroll tax. This is a favorable rule for certain eligible startup companies that do not have a federal income tax liability because they may be eligible to use their research credit to offset up to USD250,000 (or USD500,000 for tax years beginning after 31 December 2022) of their federal payroll tax liability.

Guidelines around incentive applications

The research credit can be computed for QREs in the current year and can be computed and claimed retroactively for QREs paid in prior years. Current year research credits are claimed on the original corporate income tax return by completing Form 6765 and electing either the regular credit or the ASC.³ The Form 6765 must be filed by the due date of the return with extensions.

³ The latest version of the Form 6765 was revised in December 2020, and the latest version of the Form 6765 Instructions was revised in January 2023.

A research credit claimed retroactively on QREs paid in prior years may be filed by amending the income tax return for the open year for which the credit is being claimed. Taxpayers claiming a research credit on an amended return must provide additional, detailed information in relation to the research credit claim pursuant to a recent Chief Counsel Memorandum released by the IRS (CCM 20214101F). In general, taxpayers may claim the incentive retroactively for three years. Taxpayers with historic losses (i.e., tax years in which they were not taxable) can retroactively claim a research credit for such periods and carry forward the credit to an open, amendable tax return or current year return.

A current year ODC is claimed on the original corporate income tax return by completing Form 8820. Taxpayers that are not partnerships, S corporations, estates or trusts, and whose only source of this credit is from those pass-through entities, are not required to complete or file the Form 8820. Instead, such taxpayers can report the ODC directly on Form 3800.

The IRS released Form 8974 and Form 6765 to allow qualified small businesses to claim the credit against their federal Form 941 payroll tax liability for tax years beginning on or after 1 January 2016.

For questions regarding incentive applications, please contact one of the named individuals in this document.

Research expenditures

Overview

For tax years beginning before 1 January 2022, a tax deduction was permitted under IRC Section 174 for 100% of R&D expenses for federal and state tax purposes. However, as a result of 2017 US tax reform, for tax years beginning after 31 December 2021, IRC Section 174 is significantly modified. Amounts defined as specified research or experimental expenditures are now required to be capitalized and amortized ratably over a five-year period if the research is conducted in the US. Further, expenditures attributed to research that is conducted outside the US will be required to be capitalized and amortized ratably over a 15-year period. The amortization period begins at the midpoint of a taxpayer's year. Therefore, the first year's amortization deduction is 10% of

the amount paid or incurred in the taxable year (or 3.33% if the research is conducted outside the US). A taxpayer cannot recover capitalized costs sooner than the end of the applicable amortization period. The amendments to IRC Section 174 also require that all software development activities be included in the required capitalization and amortization regime under IRC Section 174. As noted in the introduction, there is bipartisan support for repealing or delaying the required amortization of research expenses, but no legislation has been passed as of April 2023.

Additionally, personal property used in connection with research and experimentation is eligible for a five-year recovery period under IRC Section 168(e)(3)(B)(v).

3. Eligibility requirements

For the federal research credit, "qualified research" includes research for the purpose of developing new or improved "business components." Business components are defined as products, processes, computer software, techniques, formulas and inventions, whether held for sale or lease by the taxpayer or used in the taxpayer's trade or business. The credit is available for in-house and contract expenses incurred for qualified research. Qualified research consists of R&D activities involving a process of experimentation designed to eliminate uncertainty in the development process. The R&D must relate to the function, performance, reliability or quality of the business component and must be based on engineering or on biological, chemical, physical or computer sciences.

Qualifying expenses for the federal research credit (and most state credits) are defined as taxable wages paid to employees directly involved in R&D, consumable supplies used directly in R&D, 65% of amounts paid to third parties for research services, and amounts paid or incurred for the rental or lease of computers used in qualified research, which typically include cloud-hosting expenses.

4. IP and jurisdictional requirements

There is no specific jurisdictional requirement on the location of intellectual property (IP).

5. Technology or innovation zones

There are no technology or innovation zones providing R&D incentives in the US.

6. Role of governmental bodies in administering incentives

Generally speaking, the taxing authorities may audit research credits claimed by any taxpayer after the filing for the credit. Although there is no special audit or preapproval process required for the federal research credit (and most state credits, though some do require applications), there are special procedures, such as pre-filing agreements (PFAs), available to taxpayers that wish to have their federal research credit audited in advance of filing their tax returns. Additionally, in 2017, the Internal Revenue Service issued a directive to its audit teams that provided alternative guidance for calculating QREs that covers taxpayers that also expense research and development under Financial Accounting Standards Board Accounting Standards Codification Topic 730. The directive was revised in 2020. In 2021, the Internal Revenue Service issued field advice that imposes additional requirements on research credit claims made on amended returns.

7. Administrative requirements

As with any credit, a taxpayer must maintain business records to support credits claimed. There are no special procedures for research credits.

8. Statutory reference

- ▶ Federal research credit: IRC Section 41
- ▶ Federal R&D expenditures: IRC Section 174
- ▶ State credits and R&D expenditures: various provisions based on each state's statutory framework
- ▶ Orphan drug credit: IRC Section 45C
- ▶ Accelerated recovery for R&D assets: IRC Section 168(e)(3)(B)(v)

Vietnam

This chapter is based on information as of February 2023.

Incentives for R&D have been consistently among the most favorable in Vietnam, given that R&D activities are important to the country's development. Eligibility requirements for obtaining incentives, however, are strictly set out.

EY contact:

Huong Vu

1. Overview

Vietnamese regulations do not provide specific incentive schemes for R&D activities. However, R&D activities are important criteria in the evaluation and qualification of projects in the high-tech sector, which is highly encouraged and incentivized by the government. In addition, the government encourages activities of scientific research and technological development and the application of results

from scientific research and technological development of which R&D activities may be included as an important activity. Currently, the Vietnamese government provides incentives for the high-tech sector and for science research and the technology deployment sector through tax exemptions, financial support, reduced tax rates and a tax holiday.

Types of incentives		Types of incentives	
Tax credits	<input checked="" type="checkbox"/>	Tax exemptions	<input checked="" type="checkbox"/>
Cash grants	<input type="checkbox"/>	Income tax withholding incentives	<input type="checkbox"/>
Loans	<input checked="" type="checkbox"/>	Patent-related incentives	<input type="checkbox"/>

Accelerated depreciation on R&D assets	<input checked="" type="checkbox"/>	Expedited government approval process	<input type="checkbox"/>
Tax allowance	<input type="checkbox"/>	VAT reimbursement	<input type="checkbox"/>
Infrastructure/land preferential price	<input checked="" type="checkbox"/>	Qualifies for Horizon Europe funding	<input type="checkbox"/>
Tax deduction (including super deduction)	<input type="checkbox"/>	Other (free training)	<input checked="" type="checkbox"/>

2. Incentives available

Name of incentive	Incentive for the high-tech sector	Incentives for science research and technology development*	Incentive for establishment of innovation centers and R&D centers
Type of incentive	<ul style="list-style-type: none"> ▶ Reduced tax rates ▶ Tax exemptions ▶ Tax holiday ▶ Financial support ▶ Preferential land lease fees 	<ul style="list-style-type: none"> ▶ Reduced tax rates ▶ Tax exemptions ▶ Tax holiday ▶ Financial support ▶ Preferential land lease fees 	<ul style="list-style-type: none"> ▶ Reduced tax rates ▶ Tax exemptions ▶ Tax holiday ▶ Financial support ▶ Preferential land lease fees ▶ Accelerated depreciation on R&D assets**

* Although not based upon scientific analysis, EY clients report that this incentive delivers the most beneficial results to investors.

** This rule is newly introduced in the Law on Investment; no detailed guidance has been released yet.

Incentives for the high-tech sector

Description of benefits

The incentives for the high-tech sector should be classified under the following categories:

- ▶ Category 1: application of high-tech; high-tech incubation; high-tech enterprise incubation
- ▶ Category 2: high-tech enterprise; agricultural enterprise applying high technology
- ▶ Category 3: production of high-tech products

▶ Corporate income tax (CIT):

- ▶ Category 1: a reduced tax rate of 10% applies for 15 years* (can be extended to 30 years at the prime minister's approval applicable to large-scale and high or new technology); four years of CIT exemption and nine years of 50% CIT deduction.**
- ▶ Category 2: a reduced tax rate of 10% applies for 15 years*; four years of CIT exemption and nine years of 50% CIT deduction.**
- ▶ Category 3: there is no CIT incentive scheme applicable.

- * Applicable from the first year of making revenue and only after the respective certificate is granted by the competent authorities.
- ** Applicable from the first year of making profit and only after the respective certificate is granted by the competent authorities. If a company does not make a profit within the first three years, tax holiday will start from the fourth year counting from the first year of making revenue.

After tax is finalized at year-end, net operating losses (if any) must be carried forward totally and continuously for a maximum period of five years counting from the year following the year the losses arise. Carryback of losses is not permitted.

- ▶ **Value-added tax (VAT):** VAT exemption applies to transfers of technology.
- ▶ **Import duty:** exemption from import duty on imported goods to create fixed assets used in an R&D project; tax exemption of five years is available on import duty for raw materials, materials and component parts that are not yet able to be domestically produced for qualified projects. An import duty refund is also available for some specific cases where goods are not subject to import tax but the tax has been paid for the importation of such goods.
- ▶ **Land leasing incentives:** the exemption and reduction rate of the land lease fee depends on the location of investment project.
- ▶ **Land use tax:** exemption from non-agricultural land use tax.
- ▶ **Funding schemes from the national high-tech development program:** funds are available for training, R&D or trial production. Note that this kind of incentive is not applicable for Category 3.

To receive the above incentives, taxpayers must obtain certification from the Ministry of Science and Technology.

Guidelines around incentive applications

The high-tech sector incentives are applicable to current and future investments on a self-assessment basis. As long as the project qualifies as a high-tech project, the incentives may be applied. The company must apply for certification from the competent authority to certify that the project is applying high tech, carrying out high-tech R&D activities or being a high-tech enterprise, or high-tech incubation enterprise.

The CIT incentive rate is applied and reflected in the company's tax returns. Form No. 03-TNDN (for final return on an annual basis) is used to claim the CIT incentives. Enterprises are permitted to adjust their tax declaration prior to the tax authority deciding to conduct a tax audit on the enterprises.

Incentives for science research and technology development

Description of benefits

A qualifying enterprise in the scientific research and technology development sector will be entitled to the following incentives and support:

CIT

- ▶ A reduced tax rate of 10% applies for 15 years (up to 30 years if approved by the Prime Minister) from the first year of making revenue. Companies are also entitled to four years of CIT exemption and nine years of 50% CIT deduction counting from the first year of making profit. If a company does not make profit within the first three years, the tax holiday will start from the fourth year counting from the first year of making revenue.
- ▶ The income under the following scenarios is exempted from CIT:
 - ▶ Income earned from performance of contracts for scientific research and technological development shall be eligible for tax exemption during the implementation period of that contract but not for more than three years from the date on which the revenue is earned.
 - ▶ Income derived from the sale of products that are results of new technologies applied in Vietnam for the first time shall be eligible for tax exemption but not for more than five years from the day on which the revenue derived from the sale of such products.
 - ▶ Income derived from the sale of experimental products during the experimental production period. Such incentive is only permitted when some requirements by laws are satisfied.
- ▶ Companies are permitted to use profits before tax to establish a fund for scientific and technology development. The amount paid into the fund may not exceed 10% of the total taxable income for the assessable tax year.

VAT

- ▶ A 5% VAT rate may be applied to scientific and technological services such as services to support scientific research and technology development; services related to application of scientific research and technology development results under the science and technology service contract.
- ▶ Machinery, equipment and materials that are not yet able to be produced in Vietnam and imported for scientific research and technology development are not subject to VAT at the import stage.

Import duty

- ▶ An exemption is applicable on import duty on imported goods and those that are not yet able to be produced in Vietnam and imported for direct use for scientific research and technology development.
- ▶ An exemption is applicable on import duty on imported goods to create a fixed asset of the respective project. There is a five-year exemption of import duty on raw materials, materials and component parts that are not yet able to be domestically produced.

Land incentives

- ▶ The exemption and reduction rate of land lease fee depends on the location of the investment project.

Land use tax

- ▶ A 50% reduction of non-agricultural land use tax is available. However, if the R&D project is located in areas having socioeconomic difficulties, there is a chance to apply for an entire exemption from non-agricultural land use tax.

Stamp duty

A stamp duty exemption applies when registering for a land use right and house ownership¹ for an R&D project.

Other support

- ▶ Being considered to receive the ownership or right of use of state-owned scientific results.
- ▶ Being entitled to enjoy a credit incentive for investment in accordance with regulations.
- ▶ Getting priority and free use of equipment in national laboratories, high-tech incubation establishments, high-tech enterprise incubation establishments or research institutions.²
- ▶ Getting priority in procedures such as registering for IP protection and certifying and registering for circulation of products produced from results of science and technology to develop new products.
- ▶ Being rewarded for achievements in science and technology activities and commercialization of products produced from the results of science and technology.

¹ Decree 13/2019/ND-CP, Article 16, Clause 4.

² Decree 13/2019/ND-CP, Article 16, Clause 2.

Incentives for establishment of innovation centers and R&D centers

Description of benefits

Under the new Investment Law (passed by the National Assembly on 17 June 2020 and effective from 1 January 2021) and the Decision No. 29/2021/QĐ-TTg (dated 6 October 2021 and issued by the Prime Minister prescribing special investment incentives) (hereinafter referred to as "Decision No. 29"), the government has provided special investment incentives and assistance with a view to encouraging the development of some investment projects that exert significant socioeconomic effects. These especially affect projects related to R&D activities, including:

- ▶ The establishment (including the expansion) of innovation centers and R&D centers with total investment capital of at least VND3 trillion and disbursing at least VND1 trillion within three years from the issuance date of the investment registration certificate or the approval for investment guidelines. The National Innovation Center, established under the Prime Minister's decision, also is entitled to special investment incentives and assistance.³
- ▶ The establishment of investment projects in sectors subject to special investment incentives, which have investment capital of VND30 trillion (~USD1.3 billion) or more and disburse at least VND10 trillion (~USD430 million) within three years from the date of the Investment Registration Certificate (IRC) issuance or in-principle approval. These investment projects must be high-technology projects at a certain level. The level of high-technology project is defined based on the level of high-technology product revenue, R&D expense and personnel.

Special investment incentives

Under the Law on Corporate Income Tax as amended by the new Investment Law and the Decision No. 29, the maximum incentive available under this scheme is a reduction of the CIT rate from 20% to 5% for a period of 37.5 years, 6 years of CIT exemption and 13 years of a further CIT reduction of 50% (i.e., reduced to 2.5%).⁴

Other investment incentives have not been clearly regulated.

³ Clause 2(a) Article 20, Law on Investment No. 61/2020/QĐ14 dated 17 June 2020.

⁴ Clause 4 Article 75, Law on Investment No. 61/2020/QĐ14 dated 17 June 2020.

Guidelines around incentive applications

Incentives for science research and technology development are applicable provided that the company is issued a certificate of scientific and technological operation and registration by the competent Science and Technology Authority, in accordance with the current regulation.

The CIT incentive rate is applied and reflected in the company's tax returns. Form No. 03-TNDN (for final return on an annual basis) is used to claim the CIT incentives. Enterprises are permitted to adjust their tax declaration prior to the tax authority deciding to conduct a tax audit on the enterprises.

3. Eligibility requirements

- (a) High-tech enterprise:** to be certified as a high-tech enterprise, the following conditions must be met:
- ▶ Manufacturing products listed as high-tech products are given priority in accordance with current regulations.
 - ▶ Eco-friendly, energy-saving solutions should be applied to manufacturing and quality control in accordance with Vietnam's technical regulations and standards (or international standards if no Vietnam technical regulations and standards are available).
 - ▶ The enterprise's revenue from high-tech products must account for at least 70% of its total annual net revenue.
 - ▶ The enterprise's total expenses for research and development activities conducted in Vietnam must account for at least 0.5%, for an enterprise with total funding sources greater than VND6 trillion and more than 3,000 employees; 1% for an enterprise with total funding sources greater than VND100 billion and more than 200 employees; and 2% for other enterprises.
 - ▶ The number of research and development staff members holding a university or higher degree must account for at least 1% of the enterprise's total number of employees for an enterprise with total funding sources greater than VND6 trillion and more than 3,000 employees; 2.5% for an enterprise with total funding sources greater than VND100 billion and more than 200 employees; and 5% for other enterprises.
- (b) High-tech incubation enterprise:** to be certified as a high-tech incubation enterprise, the following conditions must be met:
- ▶ The enterprise must use technology under the list of high technology given priority in accordance with current regulations.

- ▶ The enterprise must have technical infrastructure and professional managerial staff that meet the high-tech incubation or high-tech enterprise incubation requirements.
- ▶ The enterprise must have technological, intellectual property (IP), legal, financial and business administration consultants.
- ▶ The enterprise is capable of cooperating with production, research and training institutions in high-tech incubation or high-tech enterprise incubation activities.

(c) High-tech application project: to be certified as a high-tech application project, the following conditions must be met:

- ▶ Applying qualified high technologies – i.e., encouraged high technologies (list in Decision 38/2020/QĐ-TTg)
- ▶ Qualified purpose of applying high technologies
- ▶ Use of high-tech research results for technology renewal, product renewal or increase of the added value of products
- ▶ Trial production of high-tech production
- ▶ Mastering and adaptation of imported high technologies to Vietnam's practical conditions
- ▶ Meeting quantitative criteria:
 - ▶ Employees with a college or higher degree directly involved in R&D of technologies, experiment, trial production: at least 1%-5% of its total workforce, depending on the size of investment capital and total workforce of the project. The number of employees with a college degree does not exceed 30% of the total workforce directly involved in the activities.
 - ▶ Total average expenditure for R&D of technologies, experiment, trial production: at least 0.5%-2% of added value created by the project in Vietnam, depending on the size of investment capital and total workforce of the project. The details of expenditure for R&D and technology application activities of the projects are specified in Circular 04/2020/TT-BKHCHN.
 - ▶ Quality control system meets one of the national standards TCVN ISO 9001, HACCP, CMM, GMP or equivalent (depending on the characteristics of the project that apply national or international standards)
 - ▶ Applying eco-friendly, energy-saving solutions to manufacturing and quality control in accordance with Vietnam's technical regulations and standards (or international standards if no Vietnam technical regulations or standards are available); being encouraged to apply international standards on environment and energy-saving (ISO 14000, ISO 50001 or equivalent)⁵

⁵ Circular 32/2011/TT-BKHCHN and Circular 04/2020-TT-BKHCHN.

- (d) Production of high-tech products:** to be certified as production of high-tech products, the following conditions must be met:
- ▶ Manufacture of products or providing services that are listed as high-tech products (list in Decision 38/2020/QĐ-TTg).
 - ▶ Products have superior quality and properties and high added value, are environment-friendly and can substitute imports.
 - ▶ Technological line is advanced and operates under programmed control. The technological line's main parts are of new technologies applied to the project's operation domain updated within five years of the time of investment.
 - ▶ Quality control system meets one of the national standards TCVN ISO 9001, HACCP, CMM, GMP or equivalent (depending on the characteristics of the project that apply national or international standards).
 - ▶ Applying eco-friendly, energy-saving solutions to manufacturing and quality control in accordance with Vietnam's technical regulations and standards (or international standards if no Vietnam technical regulations or standards are available); being encouraged to apply international standards on environment and energy-saving (ISO 14000, ISO 50001 or equivalent).⁶

(e) Science research and technology development organization

To qualify, there are certain requirements for organizational and operational charter by laws.

- ▶ Human resources for science and technology:
 - ▶ Each scientific and technological organization must have at least five persons with a university degree or higher working full time and part time in which there is at least 30% having professional skills in accordance with the key areas applied for operation registration and at least 40% working full time.
 - ▶ The head of scientific and technological organization must have a university degree or higher with management experience and appropriate professional capacity.
- ▶ Must have qualified material and technical facilities as specified by laws.
- ▶ Scientific and technological organizations with foreign capital must meet the requirement specified in the Law on Science and Technology, such as the establishment must be approved by the Minister of Science and Technology.

(f) Science and Technology Enterprise

An enterprise may be granted a Certification of Science and Technology Enterprise if it:

- a) Has been established and operated under provisions of the Law on Enterprises
- b) Has the capacity for creating or applying the science and technology results that were assessed and recognized by the competent authority under the applicable regulations
- c) Has the revenue from production and trading of products produced from the science and technology results accounting for at least 30% of its total revenue

An enterprise that has been established for less than five years may be granted a Certificate of Science and Technology Enterprise if satisfying requirements specified in points (a) and (b) above.

4. IP and jurisdictional requirements

A scientific research and technology development enterprise is protected with IP rights and transfer results of science and technology activities in accordance with laws on IP and technology transfer.

The Ministry of Finance's Circular No. 219/2013/TT-BTC, dated 31 December 2013, guides the implementation of the Law on Value Added Tax and is effective from 1 January 2014. Transfers of technology are subject to VAT exemption. In cases of a technology transfer contract including transfer of machinery and equipment, the transfer of the asset within such technology transfer contract is not subject to VAT.

5. Technology or innovation zones

Vietnam currently has three high-tech industrial parks: Hoa Lac High-Tech Park (in Hanoi), Saigon High-Tech Park (in Ho Chi Minh) and Da Nang High-Tech Park (in Da Nang).

5.1. Investment incentives in high-tech parks

The general investment incentives for projects located in high-tech parks are covered in tax law and its guiding documents, and Circular 83/2016/TT-BTC. Moreover, there is particular investment incentive scheme applicable for each high-tech park. In particular, Decree 74/2017/

⁶ Circular 32/2011/TT-BKHCHN and Circular 04/2020/TT-BKHCHNb.

ND-CP and Circular 32/2018/TT-BTC provides a specific investment scheme for Hoa Lac High-Tech Park, and Decree 04/2018/ND-CP provides a specific scheme for Da Nang High-Tech Park. For Saigon High-Tech Park, currently there are no specific regulations like other high-tech parks.

The below are tax incentives and other support for enterprises in the high-tech sector:

CIT: a reduced tax rate of 10% applies for 15 years from the first year of making revenue; four years of CIT exemption and nine years of 50% CIT deduction from the first year of making profit or the fourth year from year of making revenue, whichever is earlier. Moreover, the tax rate reduction of 10% may be extended up to 30 years for the following investment project having a huge investment scale:

- ▶ Huge investment scale project of at least VND4 trillion located in Hoa Lac High-Tech Park
- ▶ Huge investment scale project of at least VND3 trillion located in Da Nang High-Tech Park

Import duty: exemption from import duty on imported goods to create fixed assets of investment project; tax exemption of five years is available on import duty for raw materials, materials and component parts that are not yet able to be domestically produced.

Land leasing incentives: the exemption and reduction rate of the land lease fee depends on the specific scheme of a particular high-tech park authority.

Land use tax: exemption from non-agricultural land use tax.

5.2. Requirements for investment projects in high-tech parks

An investment project that meets the following conditions will be considered to invest in the high-tech parks:

- ▶ Its operation are high-tech sectors being encouraged to invest in accordance with current regulations as follows:
 - ▶ Information technology
 - ▶ Biotechnology
 - ▶ New material technology
 - ▶ Automation technology
- ▶ Products of the project produced in the high-tech parks are in the list of high-tech products encouraged to be produced, which are announced by the management of high-tech parks based on the list regulated by the applicable regulations.

The list of high technologies prioritized for development investment and the list of high-tech products eligible for development promotion are detailed under Decision 38/2020/QĐ-TTg.

- ▶ Expenses for R&D work under the project include total expenses for R&D work performed in Vietnam accounting for at least 5% of annual total turnover, or expenses for R&D activities carried out in Vietnam accounting for at least 1% of annual total turnover.
- ▶ The number of personnel with a university or higher degree who are directly engaged in the project's R&D work accounts for at least 5% of the project's total number of personnel.
- ▶ The project's technological chain is at an advanced level and satisfies the following requirements: production activities are specialized and organized with automation methods, of which at least a third of automatic devices are controlled under set programs, and they are arranged in a working space that satisfies industrial sanitation standards required by Vietnamese law.
- ▶ The project's quality management system reaches specialized international standards (e.g., ISO 9000/2001, CMM or GMP); it applies to a computerized corporate administration system.
- ▶ The project abides by environmental standards and technical regulations in its operation domain as required by Vietnamese law. It is encouraged to apply for international environmental standards such as ISO 14000 or equivalent standards.

6. Role of governmental bodies in administering incentives

The role of the tax authorities (i.e., the Provincial Tax Department where the company is located) in administering tax-based R&D incentives includes the following:

- ▶ On the receipt of an application for an Investment Certificate, licensing authorities will perform an assessment and may indicate whether the tax incentive is applicable to the investment project.
- ▶ After obtaining the Investment Certificate, the enterprise will further apply to the relevant Science and Technology authority (i.e., Provincial Science and Technology Department where the company is located) for this authority to evaluate and certify that it is a high-tech project or scientific research and technology development project. This certification will be the basis for the enterprise to enjoy relevant incentives.
- ▶ For enterprises, this is a self-assessment regime (i.e., enterprises self-declare and pay tax in accordance with local regulations).
- ▶ The relevant tax authorities monitor and conduct tax audits on the tax compliance of the enterprise.
- ▶ Customs authorities (i.e., the Provincial Customs Department and the General Department of Customs) monitor and conduct customs audits on the enterprise's import duties.

7. Administrative requirements

7.1 High-tech sector

To be certified as a high-tech project and enjoy the incentives, the company has to apply for certification from the Ministry of Science and Technology (i.e., applying high tech, carrying out high-tech R&D or being a high-tech enterprise).

Application for a certification of an enterprise applying high tech or carrying out high-tech R&D activities (operation certificate)

The application dossiers are required to be submitted to the Ministry of Science and Technology. A dossier is made in two sets, including one original set and one copy.

An organization's dossier of application for an operation certificate consists of the following:

- ▶ An application for the certificate (Standard Form of Ministry of Science and Technology)
- ▶ A notarized copy of the business registration certificate, investment certificate, science and technology enterprise certificate, or certificate of registration of scientific and technological operations
- ▶ A written explanation regarding the high-tech application project or high-tech R&D scheme (for high technologies on the list of those prioritized for development investment)
- ▶ The managing agency's written certification of the contents presented in the written explanation (for organizations managed by ministries, ministerial-level agencies or government-attached agencies) or a written certification of the provincial-level Science and Technology Department of the locality in which the organization carries out high-tech application or R&D operations (for organizations not managed by ministries, ministerial-level agencies or government-attached agencies)

An individual's dossier of application for an operation certificate consists of the following:

- ▶ An application for the certificate, made according to a form set by the Ministry of Science and Technology, enclosed with two 4x6 cm photos
- ▶ A copy of the individual's valid identity card or passport
- ▶ A written explanation about the high-tech application project or high-tech research and development scheme (for high technologies on the list of those prioritized for development investment)
- ▶ A written certification of the contents presented in the written explanation, given by the provincial-level Science and Technology Department of the locality in which

the individual carries out high-tech application or R&D operations

An operation certificate is valid from the date of its issuance until the completion of a project or scheme.

Application for a high-tech enterprise certification

Dossiers of application for high-tech enterprise certificates are required to be submitted directly to the Ministry of Science and Technology. A dossier is made in two sets, including one original set and one photocopied set, and it consists of the following:

- ▶ An application for high-tech enterprise recognition, made according to a form set by the Ministry of Science and Technology
- ▶ A notarized copy of the business registration certificate, investment certificate, or science and technology enterprise certificate
- ▶ A written explanation about the enterprise's satisfaction of all the conditions in accordance with the law

A high-tech enterprise certificate is valid for five years from the date of its issuance. Regulations do not provide guidance for certificate renewal.

Application for high-tech incubation enterprise

Dossiers of application for high-tech incubation enterprise are submitted to the Ministry of Science and Technology. The application dossier includes but is not limited to the following:

- ▶ Application Request Form (standard form)
- ▶ Explanation of capacity of high-tech incubation enterprise
- ▶ Commitment letter and explanation letter for the capacity of financial mobilization
- ▶ Other documents required by law and the competent authority

Application for certification of project manufacturing high-tech products

Dossiers of application for certification of project manufacturing high-tech products are submitted to the Ministry of Science and Technology. The application dossier includes but is not limited to the following:

- ▶ An application for the certificate (Standard Form of Ministry of Science and Technology)
- ▶ A written explanation to satisfy the requirement of a project manufacturing high-tech products (standard form of Ministry of Science and Technology)
- ▶ A notarized copy of the business registration certificate, investment certificate, etc.
- ▶ Other documents required by laws and the competent authority

7.2 Science research and technology development

To be certified as a scientific research and technology development project, the company is required to apply for certification by the Ministry of Science and Technology. An application dossier for the certification is required, including the application letter, business registration certificate or investment certificate, and a detailed explanation of the project.

7.3 Establishment of innovation centers and R&D centers

The current regulations are not clear on the procedure for the investors to apply to obtain the incentives and assistance mentioned in Section 2 above in respect of establishment of innovation centers and R&D centers. We expect details to be issued in the regulations implementing the new Investment Law and Law on Corporate Income Tax.

7.4. Investment projects located in high-tech parks

The investment projects in high-tech parks are required to be issued the Investment Registration Certificate (IRC) by the competent authority. Such certificate should specify the investment incentives that are applied for the investment project. The application for issuance of the IRC is regulated under the law on investment and its guiding documents.

8. Statutory reference

	R&D, innovation and technology collaboration grants (International Collaboration Division)	<ul style="list-style-type: none"> ▸ Cash grants 	<ul style="list-style-type: none"> ▸ Bilateral parallel support programs: Israeli government has concluded more than 40 binational R&D agreements with countries, states, provinces and regions that enable Israeli companies to enter into joint R&D projects with foreign companies. Support includes grants of up to 50% of approved R&D budget, or in accordance with incentive program applicable to joint project. ▸ Binational funds: Israel Innovation Authority operates binational funds, whereby Israel and foreign country allocate dedicated funds to finance joint R&D projects between companies in Israel and in partner country. The funds operate under provisions set out in bilateral agreements. There are currently five binational funds (with the US, Canada, South Korea, India and Singapore). ▸ Multinational corporation collaboration: this program encourages strategic relationships and collaborations between the parties. The support includes grants of 20% to 50% from the approved R&D budget. It also encourages assistance and support from a multinational foreign corporation in the form of consulting, services and resources (in kind) and the possibility of sharing the intellectual property that will be created in the joint project with the multinational corporation – through an agreement between the partners in the project. ▸ Horizon 2020: Israel is “associated country” to EU’s Horizon 2020 program, which enables Israel to participate in Horizon 2020 program under same conditions as EU Member States. ▸ New Enhanced European Innovation Council (EIC) Pilot: it offers in a single place: EUR2.7 billion in funding for the period 2018-20, opportunities for networking, mentoring and coaching, and strategic advice to upgrade the innovation ecosystem in Europe. ▸ EIC Accelerator Pilot: the EIC Accelerator Pilot builds on the SME Instrument Phase II and provides grant-only support as well as support in the form of blended finance (combining grant and equity). The EIC Accelerator Pilot offers small and medium-sized business innovation grants for innovation development and demonstration purposes: an amount in the indicative range of EUR500,000 to EUR2.5 million (70% of total cost of the project as a general rule). Equity of up to EUR15 million per company (EUR100 million total budget for equity in 2019-20 pilot phase). Free-of-charge business coaching (optional) to support and enhance the company’s innovation capacity and help align the project to strategic business needs. Access to a wide range of other business acceleration services and facilitated access to risk finance, to facilitate the commercial exploitation of the innovation.

Jurisdiction	Names of incentives	Incentive types	Description of benefits
	Cash grants/ financial support	▸ Cash grants	▸ Governmental agencies (such as Innovation Norway) and partially state-owned organizations provide cash grants or financial support. The amount granted varies with development phase and type of project, business and subject area.
	Loans and warranties	▸ Loans	▸ Innovation Norway also offers loans and warranties in same manner as cash grants/ financial support.
Poland	Incentive for Polish Investment Zone (PIZ)	▸ Tax exemption	<ul style="list-style-type: none"> ▸ Allows for CIT exemption of up to 15 years for income generated by activities covered by a decision on support and conducted within the territory of the investment. ▸ State aid for an investment project can be up to 50% (depending on the location, an additional 20 or 10 percentage points are granted to small and medium-sized enterprises, respectively) of the eligible investment costs or two-year employment costs.
	Multi-Annual Support Program (MASP)	▸ Cash grants	▸ Cash grants are provided to investments that are key to the Polish economy, under the following categories: strategic, innovative, Business Services Center, and Research and Development Services Center. Level of support is based on (i) costs of new investment expenditures or (ii) two-year employment costs of newly created jobs.
	R&D tax relief – additional decrease in tax base by R&D costs	▸ Super deduction	<ul style="list-style-type: none"> ▸ From 2022, 200% of employee costs of the R&D work carried out and 100% of other eligible costs may be additionally deducted directly from the tax base (200% for entities holding R&D center status). ▸ Although with lower additional deduction levels, the incentive has been present in the Polish tax system since 2016, and it is possible to apply it retrospectively (up to five years).
	Prototype tax relief	▸ Super deduction	▸ The prototype tax relief allows for an additional deduction of 30% of the costs of trial production of a new product and of implementing a new product on the market from the CIT tax base (limited to a maximum of 10% of taxable income in a given year).
	Relief for innovative employees	▸ Reduction of advance payments on payroll tax of employees	▸ In cases where a taxable income is insufficient to take full advantage of the R&D relief claim that is due, the taxpayers are able to utilize the remaining part of it in the following year by reducing advances on personal income tax deducted monthly from the income of their employees who are involved for at least 50% of their work time in R&D works.

	Financial support – reimbursable means	<ul style="list-style-type: none"> Financial support 	<ul style="list-style-type: none"> The Ministry of Finance regularly publishes a list of open state aid. Financial support can be provided as a loan, guarantee or capital increase (venture capital funds). On 23 November 2017, Slovenia launched implementation of financial instruments within a framework of the implementation of the cohesion policy of the 2014-20 period. In this respect, EUR253 million is earmarked from reimbursable European funds that are available to Slovenia until 2023 for the purpose of financing development and entrepreneurship. Financial intermediaries additionally have made EUR150 million available because of the need for financial leverage and reuse of repayments. Together, EUR400 million will be available for enterprises and other end users. These funds will be managed by the Fund of Funds d.d. (SID Bank). Financial instruments are expected to promote investments and current operations with debt and equity financing. Accordingly, private operators will transfer all the benefits (e.g., lower interest rate, lower required insurance, a moratorium on repayment of a loan, longer maturity of loans) that they will obtain from the SID Bank to the final recipients (companies, public institutes, municipalities and individuals). The funds will be transferred to research, development, and innovation projects and investments; small and medium-sized enterprises (for the startup of the company and the early-growth phase and for the growth and development of the company); as well as for energy efficiency and urban development projects. Slovenia is eligible for loans in the amount of EUR3.6 billion under the Recovery and Resilience Facility to support public investments and reforms to address the economic and social impact of the COVID-19 pandemic, as well as the challenges posed by the green and digital transitions.

	Patent box	<ul style="list-style-type: none"> ▶ Patent-related incentive 	<ul style="list-style-type: none"> ▶ Switzerland has implemented a mandatory cantonal patent box. The patent box is a preferential IP regime offering lower taxation of income from qualifying IP rights (domestic and foreign patents and similar rights). The patent box income is taxed separately with a maximum reduction of up to 90% (quota at cantonal discretion). The benefit may be subject to limitation due to minimum taxation regulations. ▶ The preferentially taxed income must be directly attributable to qualifying IP rights, which relate to actual R&D activity meeting substantial activity requirements (Nexus Approach). All other IP-related income, e.g., income derived from brands or R&D failing the substantial activity requirements, does not qualify for the patent box regime. ▶ Taxpayers transitioning into the patent box are subject to an entry taxation of historic R&D expenses (different cantonal regulations on entry taxation). ▶ Furthermore, the use of the patent box comes with several key documentation requirements for taxpayers.
	R&D super deduction	<ul style="list-style-type: none"> ▶ Super deduction 	<ul style="list-style-type: none"> ▶ The R&D super deduction is an optional measure at cantonal level providing a super deduction on CIT of up to max. 50% for qualifying domestic R&D expenses. The benefit may be subject to limitation due to minimum taxation regulations. ▶ Qualifying R&D projects must be novel, creative, uncertain, systematic, transferable and/or reproducible and physically performed in Switzerland. ▶ The super deduction is calculated based on personnel expenses for qualifying R&D plus a flat-rate surcharge of 35% for other costs and 80% of expenses for domestic contract R&D carried out by third parties or affiliates.
	Accelerated depreciation on assets	<ul style="list-style-type: none"> ▶ Possibility to account a one-off depreciation under certain conditions (depends on different cantonal practices) 	<ul style="list-style-type: none"> ▶ The method of depreciation basically should be in line with usual business practices. However, the tax authorities in Switzerland have published the rate of depreciation that is usually acceptable and therefore treated as business-related expense. Some cantons provide the possibility to account a one-off depreciation under certain conditions ▶ (depends on different cantonal practices).

EY | Building a better working world

EY exists to build a better working world, helping to create long-term value for clients, people and society and build trust in the capital markets.

Enabled by data and technology, diverse EY teams in over 150 countries provide trust through assurance and help clients grow, transform and operate.

Working across assurance, consulting, law, strategy, tax and transactions, EY teams ask better questions to find new answers for the complex issues facing our world today.

EY refers to the global organization, and may refer to one or more, of the member firms of Ernst & Young Global Limited, each of which is a separate legal entity. Ernst & Young Global Limited, a UK company limited by guarantee, does not provide services to clients. Information about how EY collects and uses personal data and a description of the rights individuals have under data protection legislation are available via ey.com/privacy. EY member firms do not practice law where prohibited by local laws. For more information about our organization, please visit ey.com.

About EY's Tax Services

Your business will only succeed if you build it on a strong foundation and grow it in a sustainable way. At EY, we believe that managing your tax obligations responsibly and proactively can make a critical difference. Our 50,000 talented tax professionals, in more than 150 countries, give you technical knowledge, business experience, consistency and an unwavering commitment to quality service – wherever you are and whatever tax services you need.
